KANT (Immanuel), regius profeſſor of logic, metaphyſics, and moral philoſophy, in the univerſity of Königſberg, in Pruſſia. This diſtinguiſhed philoſopher was born on the 22d of April, 1722, of reputable parents, but who were unable to afford him a claſſical education, at their own expence: he was, therefore, at an early age placed in an excellent public ſeminary; which is ſupported partly by voluntary contributions, and partly by the alms or little pecuniary preſents given by houſekeepers to the boys; who, dreſſed in blue cloaks, on certain days in the week, chaunt their hymns or other ſongs of devotion in the public ſtreets, before every reſpectable houſe; and are accompanied by one of their uſhers. From the eleemoſynary money, thus collected by deputations conſiſting of from twenty to thirty ſcholars in each, they are clad, fed, and inſtructed; whence the whole inſtitution is called the *Pauper-houſe*.

Theſe introductory circumſtances will, perhaps, ſerve to explain ſeveral of the peculiarities and eccentricities in the character of this illuſtrious man; who, by his rigid manners, as well as by his ſtoical precepts, has alike excited the attention and admiration of his unbiaſſed cotemporaries.—The writer of theſe lines would not have ventured to engage in ſuch an arduous taſk, had he not, at an early age, been a pupil of Kant; a companion of his leiſure hours; and, though too young to penetrate into the depth of his abſtruſe reſearches, an attentive obſerver of the actions occurring within the ſphere of this extraordinary genius. Beſides, he has attended ſeveral courſes of the profeſſor's lectures, between the years 1778 and 1781, when he quitted the *alma mater* of Königſberg, being then in the nineteenth year of his age: during this period he ſtudied, under Kant, logic, metaphyſics, the philoſophical law of nature, geographical natural hiſtory, and maxims of education (*pædagogicum*); each of which branches was taught in a diſtinct courſe of lectures.

In tracing the gradual developement of a mind that has given the world ample proofs of tranſcendent abilities,

---

* Leang-Vu-Ty, before he was emperor, was known by the name of Siao-Yuen. His virtues, political and military, had raiſed him to the dignity of prime-miniſter. Cloaking his ambition under various pretences, he ſucceeded in depriving two of his ſovereigns of their life and crown. Having attained the throne, he governed with extreme judgment, application, and activity. At length, being infatuated with the reveries of the bonzes, he retired to a monaſtery, and almoſt entirely abandoned the reins of government. Murmurs were raiſed on every ſide. Heu-King, prince of Ho-Nan, immediately came at the head of an army, and took poſſeſſion of the imperial city of Nan-King. The emperor was brought into his preſence; ſtruck with his venerable age, and firm, tranquil countenance, the rebel durſt not take his life on the ſpot, but condemned him to be ſtarved in priſon. In ſpite of the endeavours and ambitious projects of Heu-King, the crown deſcended to a ſon of Leang-Vu-Ty: the dynaſty of Leang, founded by him in the year of our Lord 502, reigned 54 years, and gave four emperors.

† Soui-Ven-Ty, before he was emperor, was a powerful prince in the north, known by the name of Yang-Kien. Being informed that the emperor Tchang-Tching-Kung, of the dynaſty of Schin, had rendered himſelf odious to his ſubjects by his infamous and criminal debaucheries, he put himſelf at the head of a numerous army, and traverſed the ſouthern part of China, and, without reſiſtance, entered the imperial city of Nan-King. On his arrival, the cowardly and voluptuous Tchang-Tching-Kung diſappeared; and, for fear of falling into the hands of the enemy, went and threw himſelf into a well. Yang-Kien remained in peaceable poſſeſſion of the empire. In the fifteenth year of his reign, he reſolved to name a ſucceſſor, and fixed upon his eldeſt ſon, a prince without any abilities. Yang-Ty, his ſecond ſon, enraged at this preference, and inflamed with a luſt of dominion, opened his way to the throne by the death of his father and brother. Sui-Ven-Ty founded, A.D. 590, the dynaſty of Sui, which, in 28 years, had three emperors.

‡ In the language of the Tartars, to die, and to return, are ſynonimous. Thus, to expreſs that a man is dead, they ſay, *petere he*, he is returned.

§ Yong-Tſing-Vang, when he aſcended the throne, took the name of Yong-Tching:—he did not falſify the advantageous opinion entertained of him by Kang-Hy. During his government, he conſtantly diſplayed great vigilance, application, and firmneſs. The only ſpot on his annals is his inhumanity towards four of his brothers, ſome princes of the blood, and an entire family of chriſtian princes. The Chineſe hiſtorians will not impute as a crime his having driven from the empire all the miſſionaries who had been admitted by his father; but the Chriſtians of Europe will not be equally indulgent. After a reign of 13 years, this prince left the throne to his ſon, by whom it is filled at this day.

‖ This mourning of twenty-ſeven days is kept by the princes in the interior of the palace. The public mourning laſts 100 days.

many difficulties preſent themſelves to the biographer, who is not leſs actuated by truth than perſonal regard towards a man, from whoſe oral and written inſtructions he has derived the firſt leſſons of prudence and wiſdom. Although the data in the life of Kant are but few, from which the diſcerning reader might diſcover the links of a great and almoſt boundleſs chain, yet there will be found ſome characteriſtics, marking the peculiar propenſities of the juvenile philoſopher.—When Kant commenced his literary career, both at the ſchool before mentioned, and at the univerſity of Königſberg (namely, between the years 1734 and 1744, and for ſome time after that period), it was cuſtomary to invite the fathers of the College of Jeſuits to all public diſputations, which were then held in the univerſity every *ſemeſtre*, or half-yearly, in what is termed the *Auditorium Maximum*. In theſe polemical diſcuſſions, wit and ſophiſtry rivalled each other; and he who could moſt pertinaciouſly adhere to the *forms* of his ſyllogiſms, however ſophiſtical the arguments, generally carried away the palm from the diſputants. The ſtudents of the univerſity, as well as thoſe of the different ſchools advanced in learning, together with the moſt reſpectable inhabitants of the city, had free acceſs to theſe literary tournaments. Our Kant, being naturally of an inquiſitive diſpoſition, and poſſeſſing acute powers of perception, devoted himſelf to the ſtudy of mathematics, in combination with natural and experimental philoſophy. Animated by the high reputation which his countrymen Leibnitz, Wolf, Bernouilli, and others, had acquired both at home and abroad, after having repeatedly tried his powers of reaſoning on abſtruſe ſubjects of divinity, which afforded him little ſatisfaction, he ſoon relinquiſhed the idea of qualifying himſelf to perform the duties and ceremonies of that ſacred profeſſion, and turned his attention excluſively to the inveſtigation of the different theories and proofs advanced by other philoſophers "on the living or moving powers of bodies." His firſt treatiſe on this ſubject appeared at Königſberg in 1746, 8vo. pp. 220, in the German language, with two plates. In this juvenile production, which is modeſtly entitled *Reflections*, he ſucceſſively combats the hypotheſes of Leibnitz and Deſcartes; the former of whom had introduced the ſimple propoſition, "that the mere velocity of bodies, even ſuch as are in actual motion, ſerves as a rule for aſcertaining their power;" and the latter had erroneouſly adopted the *ſquare of velocities* in ſuch computation. At this time, Kant was in the twenty-ſecond year of his age, and ſupported himſelf at the univerſity, chiefly by repeating the philoſophical lectures of different profeſſors, whom he alſo attended, to the more wealthy and leſs able ſtudents. Thus, he obtained conſiderable celebrity, both as a private tutor and as a very promiſing mathematician and naturaliſt, who was not born implicitly to adopt the erroneous notions of his predeceſſors. This feature of his character is ſufficiently evident from the following motto, which he borrowed from Seneca, and prefixed to his firſt eſſay; *Nihil magis præſtandum eſt, quam ne pecorum ritu ſequamur antecedentium gregem, pergentes, non qua eundum eſt, ſed qua itur.*

Although Kant did not, for many years, derive great emolument from either his writings or his inſtructions, yet his frugality, which nearly bordered on parſimony, enabled him to live at his native college with credit and reſpect, without any public ſalary or appointment. During this interval, he cloſely purſued his favourite ſtudy, the philoſophy of natural hiſtory, and occaſionally indulged in metaphyſical ſpeculations. His leiſure hours were employed in the acquiſition of modern languages, eſpecially the French and Engliſh, which latter he acquired without a teacher, principally with a view to examine the merits of Locke, Berkley, Reid, Hume, and Beattie; whoſe different philoſophical works were deſervedly, and ſtill are highly, eſteemed on the Continent. After inveſtigating the principles of theſe excellent writers, and finding himſelf diſappointed in his reſearches after a conſiſtent analyſis of the powers and faculties of the human mind, or what is commonly termed a ſyſtem of metaphyſics, he ſuſpended his enquiries on this important ſubject for a ſeries of years; delivered ſemeſtrial, or half-yearly, courſes of lectures on pure and practical mathematics; and amuſed himſelf with the more pleaſing contemplation of the planetary bodies and their revolutions. Thus, after an interval of nine years, he publiſhed his General Hiſtory of Nature, or Theory of the Celeſtial Bodies, founded on Newtonian Principles; dedicated to the late Frederic the Great of Pruſſia: of which a new and improved edition (by the author) lately appeared in Germany.—In the ſame year, 1755, he completed the following Latin treatiſes; in which he gave the firſt ſpecimens of his philoſophical and critical talents: *Principiorum metaphyſicorum nova elucidatio*; and *Diſſertatio de principiis primis cognitionis humanæ*; both 4to. *Regiomonti*. Theſe were ſucceeded by his *Monadologia phyſica*; 4to. 1756.—Soon after their appearance, Kant preſented the world with an ingenious and elaborate Hiſtory of the moſt remarkable Events produced by the Earthquake which convulſed an extenſive Part of the Globe, towards the Cloſe of the Year 1755; 4to. Königſberg, 1756.—Next, in the order of time, are his New Theory of Motion and Reſt, illuſtrated with Experiments on this Subject in Natural Philoſophy, 8vo. 1758:—Reflections upon Opticiſm, 4to. 1759:—An Outline of a Courſe of Lectures on Phyſical Geography; with an Attempt to ſolve the Problem, Whether Weſterly Winds are, for this Reaſon, accompanied with Moiſture in Pruſſia; becauſe they blow over an extenſive Sea, 4to. Königſberg, 1759:—Demonſtration of the Sophiſtical Subtlety contained in the four Syllogiſtic Figures, 8vo. 1762:—An Attempt towards introducing the Propoſition of Negative Magnitudes into Philoſophy, 8vo. 1763:—Enquiries into the Perſpicuity of the Principles relative to Natural Religion and Morals; or, an Eſſay on the Evidence required in Metaphyſical Sciences; being an Anſwer to the Prize Queſtion propoſed by the Royal Academy of Sciences at Berlin, for the Year 1763:—On the only poſſible Method of proving the Exiſtence of the Deity, 8vo. Königſberg, 1763:—Obſervations on the Effect of the Beautiful and the Sublime, 8vo. Königſberg, 1764:—Dreams of a Ghoſt-ſeer (Fanatic), illuſtrated by Dreams in Metaphyſics, 8vo. 1764:—Remarks ſerving to explain the Theory of Winds, 4to. 1765.—Theſe *eleven* treatiſes, laſt mentioned, are printed in the German language.

After a period of five years, Kant produced the outline of what is now called the *Critical Syſtem*; the principles of which are contained in the following work: *De mundi ſenſibilis atque intelligibilis forma et principiis*, 4to. Regiomonti, 1770.—The memorable occaſion on which this abſtruſe enquiry was written, deſerves to be ſtated. By the ſtatutes of the univerſity of Königſberg, every new profeſſor, when raiſed to the academical chair, is obliged to publiſh and defend an inaugural diſſertation, before he is admitted to exerciſe his public functions, or to become a member of the ſenate. It is further worthy of remark, that the new theory herein developed, though ingeniouſly oppoſed by three of the moſt expert diſputants of the univerſity, was ably defended by Marcus Herz, a gentleman of the Jewiſh nation, who then ſtudied medicine and philoſophy at Königſberg, and has ſince given many ſtrong

proofs of his proficiency by ſeveral publications, which, by the Germans, are conſidered as *claſſical:* he is at preſent one of the firſt phyſicians at Berlin, aulic counſellor, and a member of the Supreme College of Health.

In conſequence of this elaborate and profound elementary work, the name of Kant reſounded in the univerſities of Germany, eſpecially thoſe of the proteſtant perſuaſion; and the ſtrenuous advocates or followers of Ariſtotle, Deſcartes, Leibnitz, Wolf, Baumgarten, and other authors, began to feel the inſtability of their ſyſtems, and to apprehend a general reform in philoſophy. At the ſame time a general alarm ſpread through the German ſchools; where dogmatiſm on the one hand, and ſcepticiſm on the other, had long prevailed, to the great detriment and diſgrace of learning. Kant, from this period, purſued his critical labours with redoubled vigour; entered into a philoſophical correſpondence with ſeveral of the firſt literary characters of the age, particularly with Lambert, then preſident of the Royal Academy of Sciences at Berlin; and whoſe endeavours not only tended to accompliſh the ſame great object, but who had, in his Coſmological Letters, propoſed theories which perfectly coincided with thoſe of Kant, previouſly publiſhed in his General Hiſtory of Nature.—We have the letters interchanged by theſe two great men before us, forming part of the ſecond volume of Immanuel Kant's Miſcellaneous Works, edited by Prof. Tieftrunk, of Halle, in three large volumes, 8vo. 1799, third edition. It clearly appears from their mutual communications, that both were led to purſue the ſame path of philoſophiſing; with this difference only, that Lambert conſidered *time* and *ſpace,* or rather the phenomena which take place in time and ſpace, as *real* objects of perception; whereas Kant maintains, that they are merely *two eſſential forms of the mind.* Thus, *time* is the neceſſary condition of all intuitive perceptions, and the idea we have of it ſerves to aſcertain the impreſſions received by the *internal* ſenſes; ſuch as the imagination, memory, reflection, &c. On the contrary, *ſpace* is the characteriſtic of all external perceptions, being determined by the medium of the external ſenſes, and chiefly by thoſe of touch, viſion, and hearing. No thinking perſon will deny the truth and accuracy of this diſtinction; for the neceſſity and importance of ſuch diviſion cannot be queſtioned, unleſs by thoſe who are decided enemies to all innovation, or blind adherents to Ariſtotle and the ſchool-men.

Although the Latin treatiſe, laſt mentioned, contained the elements of a comprehenſive ſyſtem, yet, as many new and abſtruſe propoſitions were not illuſtrated by examples, the whole theory remained for about *eleven* years in a manner confined to the univerſity of Königſberg; where it was publicly taught and exemplified by Kant, in his logical and metaphyſical courſes. During this period the author employed himſelf almoſt excluſively in the elucidation of the *Critical Syſtem*; and we meet with no other publication between the years 1770 and 1781, than a ſhort eſſay, On the different Races of Man, in 1775.—When the philoſophers of Germany had nearly forgotten the bold attempt made by Kant, in his Inaugural Diſſertation, he unexpectedly rouſed them from their dogmatical ſlumber. The Critique of Pure Reaſon at length appeared in 1781; a work which promiſed a total and beneficial reform in every philoſophical department. For a long time, however, after its publication, it had been unaccountably neglected, or, at leaſt, miſunderſtood. This was ſurely not in conſequence of the difficulties with which the ſtudy of it, as well as of every metaphyſical ſubject, is neceſſarily attended; but of a certain indifference to philoſophy, and of a confirmed taſte for ſhallow and popular diſcuſſions, which Kant directly oppoſed. But, as ſoon as the work was more ſtudied and inveſtigated, and had found ſeveral ſucceſsful commentators, a revolution in philoſophy immediately commenced. It ſoon met with numerous admirers and friends; and even its opponents could not withhold their admiration from this maſterly production. They ſaw themſelves every-where driven from their ſtrong holds, and obliged to erect new fortifications for the defence of thoſe philoſophical tenets, which they wiſhed to maintain. Nay, many of the enemies of this ſyſtem became its friends; and the invaluable part of it, which treats of morals, met with an almoſt univerſal approbation. All the different branches of philoſophy were examined with greater ardour; and new ſources of knowledge, which formerly had ſcarcely been conceived, were now expoſed to view. The limits of this ſcience were more accurately defined, and the laudable reſearches after ſtable and ſimple principles, and after a rigid method, gave to philoſophical enquiries a certainty, and an intereſt, of which they had hitherto been deſtitute. Long before this period, doubts had ariſen in reflecting minds, concerning the ſyſtems of Leibnitz, Wolf, and Locke; but theſe had never been unfolded with ſufficient clearneſs, nor had a better theory been ſubſtituted for that which was to be relinquiſhed. Here all ſyſtems were examined with a critical acumen, and a ſolid foundation was laid for a new one. This new philoſophy in a ſhort time found friends and adherents, even among ranks of people who had not devoted themſelves to ſcience, or leaſt of all, to metaphyſics. It excited in Germany a ſound philoſophic ſpirit of enquiry, of which the preſent age was ſcarcely deemed capable. It contains ſuch an immenſe ſtore of new ideas and views, that, hitherto, only a ſmall part of theſe materials can be conſidered as digeſted; and even, in a diſtant age, new branches of knowledge may ſhoot forth from it.

The work itſelf is arranged with a ſyſtematic ſpirit, and written with a noble philoſophic impartiality. The ſtyle is ſomewhat obſcure; the conſtruction and arrangement of the periods, in many places, are ungraceful, heavy, and overloaded; but a reader who has a tolerable underſtanding, and an intereſt for truth, is ſufficiently recompenſed by the originality of thought, and by the new and ſtriking images with which it abounds. The celebrated author diſcovers all the talents requiſite to a reformer of philoſophy, eſpecially in our age:—not merely an admirable acuteneſs, and a rare talent of making *himſelf* the object of *his* reflection, but alſo a knowledge in mathematics and natural philoſophy, of which he had formerly given proofs; a nice ſenſibility of the beautiful and ſublime; and, in general, a cultivated manly taſte; a thorough acquaintance with the different ſyſtems of philoſophy that prevailed before his time; and a refinement of feeling which is truly honourable.

Such is the character given of this profound work, by one of the firſt German critics, the Rev. Dr. Stäudlin, profeſſor of divinity at Göttingen, in his claſſical work entitled, *On the Spirit and Hiſtory of Scepticiſm,* in two vols. 8vo. 1794. And, in order to convince the northern compilers of the *Encyclopædia Britannica,* that in their ſupplement they have inſerted an erroneous and illiberal account of the Critical Philoſophy, we ſhall previouſly obſerve, that the Kantian ſyſtem ought to be examined on the ſtrength or ſtability of thoſe principles on which it is founded; that it is unjuſt and abſurd to compare its individual parts with thoſe of other philoſophical theories; and that ſuch contracted minds as are incapable of reaſoning in the abſtract, of diſtinguiſhing the perceptions of enſe from

intuitive operations of reaſon, or of conceiving the wide difference between experimental knowledge, and that derived from operations of the underſtanding, or of the judging faculty—ſuch perſons are not qualified either to underſtand or to criticiſe metaphyſical propoſitions. Hence, we may eaſily account for the numerous and diſſonant opinions which have, during the laſt twenty years, appeared in Germany, and other countries, reſpecting the merits or demerits of the Critical Syſtem. We admit that the philoſophy of Kant, in all its details, requires a long and painful ſtudy; that his language is ſometimes obſcure, his phraſeology is often inverted, and his reaſonings are ſubtle; but we deny, that ſuch ſtudy is unproductive of real advantage: on the contrary, we are firmly perſuaded, that enquiries into the ſource and limits of human knowledge, are highly beneficial to the deareſt intereſts of mankind; but, at the ſame time, we allow that ſuch ſpeculative diſquiſitions are not adapted to the imbecility either of youth, or of old age. What appears to one perſon "a wonderful jargon," may, nevertheleſs, be perfectly intelligible to another, who commiſerates the ſelf-ſufficiency of the Scottiſh editor when he, in the plural number, requeſts the reader "to reflect that it is not ours." On this occaſion, we ſhall quote Baumgarten; who, ſpeaking of Ariſtotle and other acroamatic writers, expreſſes himſelf in the following appropriate words: "Et vere habent et hoc inter alia commodi, quod

Ignavum, fucos pecus, a præſepibus arcent,

profanumque vulgus vel tacentes doceant, eſſe non nihil in ſcientiis, quod non quivis a furno redux, vel lacu noverit, quamprimum ipſi libuerit, Philoſophum agere."

It would be ſuperfluous, in this place, to enter into the motives which induced the Scotch compilers of their *Encyclopædia* (Supp.), to give an unjuſt and unfavourable account of Kant's ſyſtem; but we have good reaſon to think that, by their own confeſſion, they were the moſt incompetent judges of the ſubject; as they neither underſtood the German language, nor the outline which Mr. Nitſch publiſhed in the year 1796, entitled A general and introductory View of Profeſſor Kant's Principles concerning Man, the World, and the Deity, ſubmitted to the Conſideration of the Learned.—There alſo appeared another View, by Dr. Willich, under the title of Elements of Critical Philoſophy, containing a conciſe Account of its Origin and Tendency; a View of all the Works publiſhed by its Founder, Profeſſor Immanuel Kant; and a Gloſſary for the Explanation of Terms and Phraſes, 8vo. 1798.—From theſe two publications, we conceive an *unprejudiced* reader might derive a tolerably correct idea of the Critical Syſtem, provided he be not an utter ſtranger to metaphyſical reaſoning: in the former he will find a diſtinct analyſis of the firſt principles, on which the new philoſophy is founded; and to the latter is prefixed a conciſe hiſtory of its origin, together with an account of the moſt celebrated theories which prevailed in Germany, previouſly to the publication of Kant's Critique of Pure Reaſon. It cannot, however, be denied, that the title of this work, as well as the nomenclature which its author has adopted, is unintelligible to thoſe who pertinaciouſly ſcoff at every new term, or mode of explanation, different from that which they have been taught to employ by their ſchoolmaſter. Thus, the northern editor (who pretends to have received his account of the Critical Philoſophy from an illuſtrious Frenchman, but we believe from the notorious alarmiſt Barruel) does not appear to underſtand Kant's diviſion of human knowledge into *two* diſtinct ſources, namely, that *à priori*, which is purely intellectual, being neither derived from, nor confirmed by, experience; and that *à poſteriori*, for which we are indebted to our ſenſes, or, in other words, to external perceptions. Now, it is not very difficult to conceive that, by the conſtitution of the human mind, we poſſeſs a certain faculty of comparing, combining, and reflecting on ſubjects which lie far beyond the circle of experience: ſuch, for inſtance, are the ideas of a Supreme Intelligence and its divine attributes; of immortality; of conſcious rectitude in our actions; of the principles of equity and juſtice, both as to ourſelves and others: nay, it includes all thoſe ſubjective operations of the mind, which are performed in an uniform manner by all mankind, and to which the fanatic or lunatic only forms an exception. In illuſtration of this fact, we appeal to every reader of common ſenſe, whether he requires any previous experience to decide, that *ſafety* is in general preferable to *danger*; that *reward* is always more deſirable than *puniſhment*; and that *patient ſearch* after truth is a more praiſe-worthy quality in intellectual beings, than either premature deduction, obſtinate adherence to exploded doctrines, or that ſelf-ſufficient mode of reaſoning, which is peculiar to the contracted mind of the pedant, or the illiberal enthuſiaſt. Hence Kant's diſtinction between experimental and pure intellectual knowledge widely differs from the obſcure notions of Ariſtotle; who indeed ſpeaks of *general forms*, or *formal cauſes*, in the mind, but he does not conſider them diſtinctly with a view to aſcertain the true ſource of human knowledge. It is, however, not an eaſy matter to perſuade thoſe who are ſeized with a mixture of political and religious frenzy, and to convince them that abſtract reaſoning in metaphyſics ſhould never be extended to, or confounded with, the eſtabliſhed tenets of church and ſtate: ſuch infuriated perſons, in all ages and countries, ſee through magnifying glaſſes; which ſhew ſedition, atheiſm, and anarchy, where none of theſe conſequences are apprehended by the calm obſerver. Hence they are utterly unqualified to write upon any other ſyſtem of philoſophy except that which is conſonant with their narrow minds, and by which their grovelling or intereſted views are more immediately ſupported. But, when party ſpirit, together with that faſhionable mania of a revolutionary age, which has convulſed the ſocial circles of Europe during the laſt fifteen years, have again ſubſided, the name of Kant, together with his ſound critical doctrines, will be duly revered.—In juſtice, therefore, to one of his commentators, it ought to be obſerved, that the Scotch reviewer of this philoſophy, after ſophiſtically pointing out the "futility of the ſyſtem, of which (according to him) the fundamental principles are not new;" after endeavouring to ſhew "the improper uſe of terms with its conſequences; groundleſs or falſe aſſertions, bad logic, &c.;" is anxious to perſuade the world that the "*tranſcendental philoſophy* of Kant inverts the order of nature, and is as little calculated to promote the progreſs of ſcience as the ſyllogiſtic ſyſtem of Ariſtotle, which was likewiſe built on *categories* or *general forms*." That ſuch aſſertion is egregiouſly falſe, will be allowed by every novice, who has only learnt to diſtinguiſh between abſtract reaſoning and demonſtration *in concreto*; between the manner of acquiring experimental or phyſical knowledge, and that of ſtudying or teaching the principles of metaphyſical ſcience;—provided the latter, in the preſent ſtate of things, deſerve that denomination. Without adhering to Kant's definitions of *knowledge à priori*, and *knowledge à poſteriori*, the Scottiſh critics continually confound the former with the latter; though they could not fail to underſtand, that our ideas *à priori* are produced *with* experience, but they are not produced *by* it, or do not proceed *from* it: as, therefore, they are conſtitutional in the human mind (though *not innate*), being only the forms of the mind, they are diſtinguiſhed by two marks,

namely, by their being *univerſal* and *neceſſary*, ſo that the contrary of ſuch ideas is impoſſible. Hence twice two is four, &c. among all nations, and in all ages of mankind. In ſhort, we meet with a fund of paradoxical and contradictory aſſertions in the reviews of thoſe very men; who, for want of underſtanding his propoſitions, chiefly deal in abſurd invectives and declamations againſt Kant. Such conduct, however, is highly injurious to the progreſs of true ſcience, and ſtamps diſgrace on the publications in which it is recorded. Thoſe readers who are inclined to doubt the truth of this accuſation, may eaſily convince themſelves of the juſtice of our remarks, by reſorting to the Supplement to the Enc. Brit. vol. II.; where, in the 357th page, No. 20. the critical philoſophy of Kant is ſtrangely compared with the inductive reaſoning of Bacon; a man whoſe talents we all revere, but whoſe excellent doctrine of induction is applicable chiefly to phyſical, and not to metaphyſical, demonſtrations: further, in the next paragraph, the reviewer boldly aſſerts, that "the diſtinction between knowledge *à priori*, and knowledge *à poſteriori*, is as old as ſpeculation itſelf; and the mode in which Kant illuſtrates that diſtinction, differs not from the illuſtrations of Ariſtotle on the ſame ſubject."—After groſsly comparing the general forms of the human mind to the form of the ſtatue in the rough block of marble; a compariſon which the Stagyrite, or ſome of his talkative diſciples, may probably have made 2000 years ago;—and after inaptly contraſting Kant's general forms or general ideas, with thoſe of Plato; then again confounding this propoſition with the probable meaning of Ariſtotle, "that particular ſenſations give occaſion to the intellect to form general ideas;"—the Caledonian editor ſagaciouſly obſerves, that "his (namely Kant's) doctrine on this ſubject differs not eſſentially from that of Locke and Reid, and many other eminent metaphyſicians of modern times." Thus, it will be evident that the object of the Scottiſh critics was to perplex the reader with a variety of heterogeneous notions, and to leave him in doubt and confuſion.

Whether we have contributed in ſome degree to the elucidation of the *critical ſyſtem*, by the preceding remarks and illuſtrations, muſt be decided by the unbiaſſed reader; but, we truſt, our good intentions will not be queſtioned. We are convinced, that ſuch ſyſtem leads neither to atheiſm, nor to immorality: on the contrary, the moſt able philoſophers of France and Germany have not only ſtudied the works of Kant, but have declared his doctrines, from the pulpit, to be conſonant with both moral and religious duties. Hence, we ſhall proceed to enumerate the different publications which he produced in the German language, ſince the year 1781, or the memorable æra of the elementary book before criticiſed.—*Prolegomena*; or, introductory Obſervations applicable to every future Syſtem of Metaphyſics that may deſerve the Name of a Science; 8vo. pp. 222; Riga, 1783. This is a conciſe and perſpicuous abſtract of the preceding *Critique* in an analytical method, which the author has here adopted, with a view to return by the ſame path on which he had before advanced ſynthetically.—Reflections upon the Foundation of the Powers and Methods which Reaſon is entitled to employ in judging of its Stability; 8vo. Königſberg, 1784.—Ideas for an Univerſal Hiſtory, in a Cofmopolitical View; and Reply to the Queſtion, What is Illumination of Mind? Theſe two Eſſays were originally inſerted in the Berlin Monthly Magazine for November and December, 1784.—Fundamental Principles of the Metaphyſics of Morals, 8vo. Riga, 1785; (2d edit. 1792).—On the Volcanoes in the Moon; *ibid.* for March, 1785.—On the Injuſtice of printing ſpurious Editions of Books; *ibid.* for May, 1785.—Definition of the Idea connected with the Expreſſion, *a Race of Men*; Berlin Monthly Magazine for November, 1785.—On the probable Origin of Human Hiſtory; *ibid.* for January, 1786.—What is underſtood by the Expreſſion, to become familiar with the Origin of our Thoughts? *ibid.* for October, 1786.—Metaphyſical Principles of Natural Philoſophy, 8vo. Riga, 1786; (2d edit. 1787, pp. 182).—Some Remarks on Mr. Jacob's Examination of a Work written by M. Mendelſſohn, and entitled *Morning Hours*, publiſhed in 1786, and reprinted in Kant's Miſcellaneous Works; vol. III. pp. 89 to 98.—Fundamental Principles of the Critique of Taſte; 8vo. Frederic Nicolai, the Author and Publiſher: 1797.—On the Power of the Mind to overcome morbid Senſations by mere Reſolution; in Reply to the Aulic Counſellor and Profeſſor Hufeland: 1797.—Anſwer to the reiterated Queſtion, Whether the Human Race is in a progreſſive State of Improvement? 1798.—Conteſt between the Faculties: namely, 1. between the Theological and Philoſophical Faculties; 2. between the Juridical and Philoſophical Faculties; and 3. between the Medical and Philoſophical Faculties: 1798.

Beſide theſe ſmaller tracts, Profeſſor Kant has publiſhed various other performances, which are not contained in the collection of his miſcellaneous works above quoted; and have been ſeparately printed. Of this claſs are, his Project for a perpetual Peace; a Philoſophical Attempt; 8vo. pp. 104; Königſberg, 1795; and which has alſo been tranſlated into French and Engliſh.—Metaphyſical Elements of Juriſprudence; 8vo. pp. 299; Königſberg, 1797.—Metaphyſical Elements of Ethics, or Doctrinal Virtue (*Tugendlehere*); 8vo. Königſberg, 1797.—As the tendency of the laſt-mentioned work has been maliciouſly miſrepreſented by the Scottiſh editor, or his aſſociates, as leading "naturally to atheiſm," we think it our duty to add a few words on the ſubject. Kant is ſaid to make the following ſtrange obſervation: "As it would be abſurd to ſwear that God exiſts, it is ſtill a queſtion to be determined, whether an oath would be poſſible (or rather *admiſſible*) if it were made thus; *I ſwear on the ſuppoſition that God*

exiſts." The true meaning of the author, however, is not *ſuppoſition*; becauſe the German word *vorauſſetzung*, when uſed in a philoſophical ſenſe, ſignifies previous *admiſſion*, or taking it for granted that, &c. In this ſenſe, Kant's *formula juramenti* is perfectly reconcileable; becauſe a perſon who does not admit the exiſtence of the Deity, ſhould on no account be allowed to ſwear; for, if he be ſuffered to avail himſelf of an oath, it will be an abuſe of that ſacred invocation, and conſequently his promiſe will not be binding. Hence Kant juſtly remarks that "all *ſincere* oaths, taken with reflection, have very probably been taken in no other ſenſe."—We do not profeſs to defend the accuracy of Kant's phraſeology; but only to ſhew in what manner the hyper-critic may diſtort the moſt ſolid and harmleſs reaſoning, partly by abruptly ſelecting ſuch paſſages as may ſerve the baſe purpoſe of perverting the ſenſe of the whole inference; partly by tranſlating words ſo as to change their ſignification: for the German term above quoted, is never uſed in an *objective* ſenſe, in which it would be literally ſuppoſition; on the contrary, it is always employed *ſubjectively*, and expreſſes neither more nor leſs than what we have before advanced. Thus, we believe it to be alike unjuſt and illiberal to beſtow ſuch invectives as "mire of atheiſm—deteſtable doctrines," &c. on the writings of a man who is reſpected by diſtant nations, not only for his profound erudition; but alſo for the purity of his manners through a long and active life of ſeventy-eight years. Had he been guilty of the leaſt immoral tranſaction—had he eſpouſed the cauſe of democracy, atheiſm, or any other junto of fanatics—his numerous friends and admirers would no doubt have been reproached with his errors by inimical enthuſiaſts; eſpecially by thoſe alarmiſts who have lately amuſed the public with Proofs of Conſpiracies, and Memoirs of Jacobiniſm, which the writers themſelves believed only during their political fits, and while they were deprived of their ſenſes.

Let theſe obſervations ſuffice for the defence of the Critical Syſtem, which will probably ſtand long after its adverſaries, and their ſcurrilous refutations, have been conſigned to oblivion. We ſhall conclude with giving a ſhort ſketch of the author's peculiar habits and conduct through life.

Kant is of a middle ſtature, rather thin, though well formed, and of ſufficient bone. His head is uncommonly large; the front elevated, his eye lively, beſpeaking great acuteneſs and penetration; but the face is diſproportionately ſmall to the ſize of his head. In his countenance there is an air of dignity mingled with complacency; and, when ſmiling, the grave philoſopher appears to be loſt in the cheerful aſpect of the philanthropiſt. His private character perfectly correſponds with this external deſcription: the writer of theſe pages well remembers the affable and courteous manner in which Kant received him, when he applied for his immatriculation as *Civis academicus*, on the 7th of March, 1778, before he had completed the fifteenth year of his age; and on which occaſion Kant preſided as Dean of the Philoſophical Faculty. In the following year, the profeſſor was elected *Rector Magnificus*, being the higheſt dignity in the academical ſenate, with which he has, ſince that period, been repeatedly inveſted; a new preſident being choſen every ſix months. During a reſidence of nearly four years at Königſberg, he found Kant uniformly beloved and reſpected both by the ſtudents and other profeſſors. If this great man were not parſimonious in his domeſtic economy, and poignant in his ſatire among his beſt friends, he would form an exception to all mankind: for the ſtrict morality and ſtoiciſm, which he inculcates by his precepts as well as by his example, are univerſally admired. Kant is no admirer of the fair ſex, and has ever lived in celibacy it is, however, remarkable, that he is peculiarly attached to Engliſh company, and ſcarcely viſits any houſes in his native city, excepting thoſe of Green, Hay, Motherby, Barkley, and other Engliſh merchants; with moſt of whom he has been in habits of friendſhip during the laſt thirty or forty years of his life; and almoſt every evening amuſes himſelf with a ſocial game of whiſt, or ombre. His remarks are, on all occaſions, ſparing, but ſometimes pointedly acute; and his wit, eſpecially when directed to females, is often wounding. During the laſt three or four years, we underſtand, he has reſigned his academical chair, and lives more retired than uſual; his health is nevertheleſs good; as his mode of life is exemplarily regular. He retires to reſt at nine o'clock in the winter, and ten o'clock in the ſummer; riſing at five o'clock in the former, and four o'clock in the latter ſeaſon. Daily exerciſe on foot, ſerenity of mind, temperance in eating and drinking, conſtant employment, and cheerful company, have prolonged the life of Kant to the 79th year of his age: though his body is weak, the powers of his mind are ſtill unimpaired; and the whole of his moral conduct is the beſt refutation of the foul and abſurd tendency, which ignorant or malevolent men have falſely aſcribed to the principles of the *Critical Philoſophy*.

KAO-TCHEOU-FOU, a city of China, in the province of Quang-tong. In its vicinity is found a kind of marble, that repreſents, naturally, rivers, mountains, landſcapes, and trees: it is cut into ſlabs, and made into tables, &c. Kao-tcheou-fou has one city of the ſecond claſs, and five of the third, under its juriſdiction.

KATABA, a town of Arabia, in Yemen, defended by a citadel. It is ſituate in a fertile country, near a river which runs into the ſea at Aden, 75 miles N. of Aden. Long. 44. 39. E. Lat. 13. 54. N.

KAYSERSECH, a town of Germany, in the electorate of Treves, 12 miles W. of Coblentz, and 36 N.E. of Treves. Long. 6. 48. E. Lat. 50. 21. N.

KEMNAT, a town of Germany, in Bavaria, 26 miles N. of Amberg. Long. 11. 58. E. Lat. 49. 49. N.

KENTAIFFE, Mount, a ridge of mountains, in the S. part of Thibet, bordering on Hindooſtan Proper. On the W. ſide of this ridge are the two heads of the Ganges, and from its E. ſide iſſues the Burrampooter.

KENTZINGEN, a town of Suabia, in the Briſgau, ſeated on the river Elz, 13 miles N.W. of Friburg.

KERKUK, a town of Curdiſtan, the capital of a government and reſidence of a pacha. It is ſurrounded with walls, and defended by a caſtle; 95 miles E. of Moſul, and 120 S.E. of Betlis.

KETTLE, a veſſel of copper, tin, iron, or other metal, calculated for boiling, melting, or cooking different articles in, over a common fire. The following deſcription of a kettle for boiling inflammable fluids, by Mr. T. P. Smith, appears in the Tranſactions of the American Philoſophical Society. "When we conſider," ſays Mr. Smith, "the many unhappy accidents that occur from veſſels containing inflammable fluids boiling over and ſetting fire to the buildings in which manufactories of them are carried on, it muſt ſtrike us as a matter of importance to form a veſſel which ſhould be ſo conſtructed as to prevent any of thoſe accidents, and yet of ſo ſimple a form as to render it fit for general uſe. Impreſſed with theſe ideas, I take the liberty of offering for your approbation the following plan:

"Let A B C D (Plate 34) repreſent a large kettle, B E, a ſpout running out to the diſtance of three or four feet, commencing at B, four or five inches from the brim of the kettle, and the termination of it E, juſt as high as the

brim A. Let the bottom of this ſpout be covered with wet ſponges or rags. Now ſuppoſe the kettle to be filled up to B with any fluid, then as ſoon as it commenced boiling it would riſe in the kettle, and in riſing but a ſmall perpendicular height would paſs a conſiderable diſtance up the ſpout B E: here the liquor would ſoon cool, and of conſequence fall back into the kettle, and the whole ſubſide to its original height. This would occur as often as the fluid roſe above B, as the evaporation from the wet ſponges or rags would keep B E conſtantly cool.

"It would perhaps be beſt to paſs the ſpout through the ſide of the building into the open air, as thereby the evaporation would be increaſed, and conſequently the ſpout kept at a lower temperature; in this caſe it might be covered.

"In caſe of the fluid to be boiled poſſeſſing a very ſtrong elective attraction to caloric or the matter of heat, the ſpout might be extended to the width of the diameter of the kettle, or a projecting ſhelf might be formed all round it, lined below with wet ſponges or rags.

"In conformity to the wiſh of the ſociety, I procured a veſſel of the form here propoſed. I firſt tried the experiment with water, it boiled very rapidly, but every time the water roſe into the ſpout it immediately ſubſided, although the ſpout had for ſome time been directly expoſed to the heat of one of Lewis's furnaces: I afterwards attempted it with oil; but before the oil boiled the ſoldering of the veſſel, which was made of tin, melted."

KEUSCHBERG, or KIADE, a town of the electorate of Saxony, in Miſnia, remarkable for a victory obtained by Henry the Fowler over the Huns, in 933. It is ſix miles S.E. of Merſburgh.

KIA-KING-FOU, a city of China, in the province of Tche-kiang, remarkable for its ſtreets, ornamented by beautiful piazzas, that ſhelter paſſengers from the ſun and rain. Seven cities of the third claſs are dependent upon it.

KIANGARI, a town of Turkey in Aſia, chief place of a ſangiacat, in Natolia. It is defended by a caſtle, on a rock; and is 256 miles E.S.E. of Conſtantinople. Long. 34. 19. E. Lat. 39. 54. N.

KIEMA, a promontory of Switzerland, on the W. ſhore of the lake of Zug. It is remarkable, that the ground belongs to the canton of Lucern, the timber to that of Zug, and the leaves to that of Schweitz.

KIEN-NING-FOU, a city of China, in the province of Fo-kien. At the time of the conqueſt of China by the Tartars, it ſuſtained two ſieges, in the laſt of which it was taken, and all the inhabitants were put to the ſword. It was afterwards re-eſtabliſhed by the ſame Tartars that deſtroyed it, and has eight cities of the third claſs under its juriſdiction. It is 260 miles S.E. of Nanking.

KILCALMONIL, a town of Scotland, in Argyleſhire, and in the peninſula of Kintire, 17 miles N. of Campbelton.

KILGARREN, a town of Pembrokeſhire, with a market on Wedneſday. It had formerly a caſtle, now in ruins; and near it is a remarkable ſalmon-leap, where that fiſh is caught in great abundance. Above this place, are large works for fabricating tin plates. It is ſeated on the Tyvy, 30 miles N. of Pembroke, and 227 W.N.W. of London. Long. 4. 40. W. Lat. 54. 4. N.

KILHAM, a town in the eaſt riding of Yorkſhire, with a market on Saturday, 36 miles N.E. of York, and 200 N. of London. Long. 0. 36. W. Lat. 54. 5. N.

KILIA, a fortified town of Turkey in Europe, in Beſſarabia; ſeated on an iſland, at the mouth of the Danube. It was taken by the Ruſſians in 1790, but reſtored at the ſubſequent peace. It is 86 miles S.W. of Bialogorod, and 290 N.E. of Conſtantinople. Long. 28. 46. E. Lat. 45. 22. N.

KILLANY BAY, a bay of Ireland, on the eaſt coaſt of the iſland of Arran more, in the county of Galway. Long. 9. 36. W. Lat. 52. 44. N.

KILLBEGGAN, a borough of Ireland, in the county of Weſtmeath, 14 miles E. of Athlone, and 42 W. of Dublin. Long. 7. 55. W. Lat. 53. 23. N.

KILLFENORA, a town of Ireland, in the county of Clare, and ſee of a biſhop, founded in the twelfth century, united to Killaloe in 1752. It is 12 miles N.W. of Ennis.

KILLINAULE, a town of Ireland, in the county of Tipperary, 14 miles N. of Clonmell. Long. 7. 26. W. Lat. 52. 27. N.

KILN-DRYING, a proceſs by which vegetable ſubſtances, ſuch as hops, grain, &c. are deprived of their moiſture and rendered fit for keeping, heat being applied to them in a kiln properly conſtructed for the purpoſe. The important practice of kiln-drying corn in wet weather, firſt attempted by Mr. John Palmer, of Maxſtock, near Coleſhill, in Warwickſhire, is deſcribed, in the following terms, in the Tranſactions of the Society for the encouragement of Arts, Manufactures, and Commerce, who preſented their ſilver medal to Mr. Palmer for his ingenuity.

"The weather proving extremely rainy," ſays Mr. Palmer, "and my corn then ſtanding, taking much damage, I determined upon cutting it wet, and thraſhing it immediately, and then drying it on a kiln: in conſequence of this, I collected as many men as were ſufficient for the purpoſe, and employed them as follows, *viz.*

"I cauſed a part of my men to cut the corn in the common method with ſickles, and bind it into ſheaves. A ſecond part I employed to load it on waggons, and carry it to the barn; and as many as could work in the barn, to thraſh it. The next morning I winnowed it, and carried it to a malt-kiln to be dried; which operation was always completed in leſs than twenty-four hours.

"As it is impoſſible for me to ſend you two ſheaves of the corn harveſted as above deſcribed, I have ſent you the produce of two ſheaves and upwards, which I declare to be a fair ſample of the produce of four acres and upwards.

"A timber ſtove or a hop-kiln, will anſwer the purpoſe of drying corn equally well; or the malt-kiln (Pl. 34).

The Expence per Acre was as under ſtated:

	£.	s.	d.
Reaping and carrying to the barn - -	0	12	0
Thraſhing and winnowing - - -	0	12	0
Kiln-drying - - - - - -	0	5	0
	£. 1	9	0

"N. B. Only a part of the above ſum ſhould be charged to my new method of harveſting corn, *viz.* the extra expence, which is as follows:

"Five ſhillings per acre for drying, and four ſhillings for the extra trouble of thraſhing it.

"After the wheat above mentioned was thraſhed in the common method of flails, and dried, I ſo far completed a machine for thraſhing, that I thraſhed a very conſiderable quantity of wheat, and ten acres of barley, with it, carried from the field in November; and it was dried in the manner deſcribed in my claim. I did not however ſtate this to the Society, becauſe I had taken out a patent, dated the 6th day

of December, 1799, for my thraſhing machine; and was that day going to London to give in my ſpecification, dated the 4th of January, 1800.

"Part of the ſtraw of the four acres, deſcribed in my claim, was uſed for thatch immediately after it was thraſhed and part ſtacked in ſmall narrow ridges, for litter for my fold-yard.

"The grain was very well ſeparated from the ſtraw by the flails; but that thraſhed by the machine was completely cleared, though in a very wet ſtate. This would not be the caſe with the common machines of the North.

"The quantity of wheat upon an acre was about 21 buſhels, which is nearly as much as there would have been if it had been dried by fine weather. When the advantage of getting in an acre of wheat per day, in ſeaſons like the laſt, is properly conſidered, and making it immediately uſeful, at the ſmall additional expence of 9s. per acre, there can be but little doubt reſpecting its utility; for probably theſe men could not be employed at any other work."

The above was accompanied with three certificates, which teſtify that Mr. Palmer did harveſt four acres of wheat and upwards in the year 1799; that his plan is likely to be of general advantage; and that his thraſhing machine is in high repute, and anſwers every end purpoſed.

KIMPOLUNG, a town of Turkey in Europe, in Moldavia, on the river Moldava, 92 miles N.E. of Coloſwar.

KIN, a town of Perſia, in the province of Segeſtan, ſituate at the foot of a chain of mountains, near the lake Zare, 320 miles E. of Iſpahan.

KINDASSA, a town of Hindooſtan Proper, in the country of Molwa, 172 miles E.N.E. of Ougein. Long. 78. 42. E. Lat 24. 15. N.

KINE-POX, another name for the Cow-pox. See Cow-Pox, *Supp.*

KINGSTEIN, a ſtrong fortreſs of Norway. See Frederickstadt.

KING TE-TCHING, a town of China, in the province of Kiang-ſi and diſtrict of Jao-tcheou-fou. It is famous for its beautiful porcelain, is computed to contain a million of inhabitants, and extends a league and a half along the banks of a river, which here forms a kind of harbour, about a league in circumference.

KINROSS-SHIRE, a county of Scotland, ſurrounded by the ſhires of Perth and Fife. It is about 30 miles in circuit, its length and breadth being nearly equal; and ſends one member to parliament, alternately with the county of Clackmannan.

KINTAIL, a peninſula in Roſsſhire, between Loch Garron and Loch Duich. It forms the S.W. corner of the county.

KIN-TCHEOU FOU, a city of China, in the province of Hou-quang. Its diſtrict contains two cities of the ſecond, and 11 of the third claſs.

KIN-TCHING, the capital of the iſland of Lieou-kieou, in the China Sea, and of all the iſlands under that appellation. The king's palace, reckoned to be four leagues in circumference, is built on a neighbouring mountain. Kin-tching is ſeated in Cheonli, the ſouth part of the iſland. Long. 127. 30. E. Lat. 26. 2. N.

KIO-FEOU, a city of China, in the province of Chang-tong and diſtrict of Yen tcheou fou. It is celebrated as the birth-place of Confucius, ſeveral monuments to whoſe memory are ſtill to be ſeen here.

KIRCHBACH, a town of Germany, in the duchy of Stiria, 14 miles S.E. of Gratz.

KIRCHBERG, a town of Germany, in the circle of Upper Rhine, and county of Sponheim, 22 miles W.N.W. of Creutznach, and 41 W. of Mentz. Long. 6. 58. E. Lat. 49. 59. N.

KIRCHBERG, a town of Suabia, capital of a territory of the ſame name, ſubject to the houſe of Auſtria. It is ſeated on the Danube, nine miles S. of Ulm. Long. 10. 12. E. Lat. 48. 16. N.

KIRCHHAYN, a town of Germany, in the principality of Heſſe Caſſel, ſituate on the Wohra, 35 miles S.S.W. of Caſſel.

KIRCHHEIM, a town of Suabia, capital of a lordſhip, 18 miles S.W. of Augſburg, and 25 E.S.E. of Ulm.

KIRCHHEIM POLAND, a town of Germany, in the circle of Upper Rhine, and principality of Weilburg, 16 miles W. of Worms, and 28 N.W. of Manheim. Long. 7. 49. E. Lat. 49. 39. N.

KIRDORF, a town of Germany, in the principality of Upper Heſſe, 11 miles E. of Marpurg.

KIRIN, one of the three departments of E. Chineſe Tartary, bounded on the N. by the river Saghalien, on the E. by the ſea of Japan, on the S. by Corea, and on the W. by Leaotong. This country, which is extremely cold, from the number of foreſts by which it is covered, is ſcarcely inhabited. It contains only two or three ill-built cities, ſurrounded by mud walls. The valuable plant ginſeng grows here; and the emperor ſends hither the criminals baniſhed by the laws.

KIRIN, the capital of the province of Kirin, in E. Chineſe Tartary, ſituate on the river Songari, which is here called Kirin. It is the reſidence of a Mantchew general, who is inveſted with the authority of a viceroy.

KIRKPATRICK, a town in Dumbartonſhire, lying E. of Dumbarton. It is ſaid to be the birth-place of the tutelary ſaint of Ireland. The veſtiges of the Roman wall, built by Antoninus, extend from the frith of Clide at this place, to the frith of Forth. It is called, by the country people, Graham's Dike.

KIRN a town of Germany, in the circle of Upper Rhine, ſituate on the Nahe, 17 miles W. of Creutznach. Long. 7. 6. E Lat 49. 50. N.

KIRSHEHR, a town of Turkey in Aſia, capital of a diſtrict, in Natolia. It was formerly a conſiderable city, and called Diocæſarea. Salt is made in the neighbourhood. It is 84 miles N.E of Cogni. Long. 34. 15. E. Lat. 39. 10. N.

KIRSOVA, a town of Turkey in Europe, in Bulgaria, on the Danube, 76 miles S W. of Iſmail. Long. 28. 4. E. Lat. 44 47. N.

KISHENAGUR, a town of Hindooſtan Proper, in Bengal, 45 miles N. of Calcutta, and 50 S. of Moorſhedabad.

KISMISH, a fertile iſland at the entrance of the gulf of Perſia, 50 miles long and five broad It is well inhabited, and has been remarkable for its pearl fiſhery. Its E. end is 12 miles S. of Gombroon.

KISSINGEN, a town of Germany, in the biſhopric of Wurtzburg, in the environs of which are ſome medicinal and ſalt ſprings. It is 24 miles N. of Wurtzburg. Long. 10. 3. E. Lat. 50. 5 N.

KISTNA, a river of Hindooſtan, which riſes on the E. ſide of the Gauts, forms the boundary between the Deccan and the peninſula, and falls into the bay of Bengal, S. of Maſulipatam.

KISTNAGHERI, a town and fortreſs of the peninſula of Hindooſtan, in Myſore. This town was attacked by the Britiſh troops under Colonel Maxwell, in 1789; he carried the lower fort and ſuburb, without much difficulty; but the garriſon in the upper fort made ſo deſperate a reſiſtance,

that, after two hours' vigorous aſſault, he found it neceſſary to deſiſt from the attempt. It is 54 miles S.E. of Bangalore, and 66 W.S.W. of Arcot.

KITCHEN (*Encycl.*) Under that article we gave ſome account of the kitchen fitted up at the Foundling, under the direction of Count Rumford, which at that period might be conſidered as an experiment. The matron of that charity, however, has ſince drawn up the following particulars, which have been publiſhed by the Society for bettering the Condition of the Poor, &c. Theſe may have the effect of ſhewing how far the trial has ſucceeded.

"The kitchen (ſays the writer) has now had a fair trial, having been in conſtant uſe for above a twelvemonth. The ſaving to the hoſpital in fuel is very conſiderable, being about twenty-five chaldrons of coals a-year. The quantity annually conſumed has been hitherto 35 chaldrons; at preſent it is only 10. There were two cooks in the old kitchen, and they had a ſevere and hot ſervice: one cook, in the preſent kitchen, has a very eaſy one; and the food, particularly the roaſt beef, is better dreſſed than formerly.

"There are difficulties which attend the uſe of all new and valuable inventions at firſt. In this kitchen they were very few, and they were ſoon obviated; and the cook now manages her new kitchen, with much more eaſe and ſatisfaction to herſelf, than ſhe did her old one. The kitchen (the ſize of the room being 17 feet by 21), contains a large iron boiler divided into two parts, one of 82, and the other of 41 gallons; at the further end of which, and juſt above it, is a ſteam-box; which, with the waſte ſteam of the boiler, and without any addition of fuel, is capable of dreſſing 200lb. weight of potatoes. This double boiler and box will dreſs a dinner for above 400 perſons. They are both ſerved by one ſmall fire, which does not conſume, for a day's dinner, more than a peck of coals and a peck of cinders, the price of the peck of coals (reckoning them as dear as 2*l.* 12*s.* a chaldron) being *four pence*: the cinders are ſaved from the conſumption of the former day. On the other ſide of the room, there are two leſſer boilers, one of them divided into two parts; and in the centre of the wall, oppoſite the windows, is the roaſting machine *, which is five feet deep, two feet wide, and fifteen inches high. In this, on the roaſt-meat days, the dinner, being 112lb. of beef for the officers and children, is now dreſſed in four hours and a half, with a peck of coals and a peck of cinders; (ſee ROASTER, *Supp.*) Sixteen months have paſſed ſince this roaſter has been in conſtant uſe for dreſſing large dinners; I have juſt had the flue of the chimney cleaned: the duſt which was taken out (and that not more than a peck), was a mixture of ſmall aſhes and ſoot; but more of the former than the latter. Indeed there did not appear to be any real ſoot found among it. This can only be accounted for by the circumſtance, of all the ſmoke being actually conſumed and uſed in heating the roaſter, inſtead of being diſcharged, as is uſual, out of the chimney, to aſſiſt in increaſing and darkening the atmoſphere of London. The dampers mentioned by Count Rumford, in page 153 of his ſixth Eſſay, were put up before the kitchen was finiſhed, and have been of great uſe. I think the new kitchen does not require ſo much repair as the old one. The iron bars, at the bottom, are not burnt out near ſo ſoon as they uſed to be in the fire-place under the old boilers. They generally wanted repairing once in ſix weeks; there are four fire-places in the new kitchen, and in 16 months they have wanted only ſix new bars."

Theſe boilers would be very uſeful in all pariſh work-houſes. They would cauſe a very conſiderable ſaving of fuel, and almoſt as much of food; the waſte by evaporation, being, in general, much more than can be ſuppoſed, without an actual experiment made. In the uſual mode of boiling, the waſte by ſteam is about one-fifth. That this vapour carries with it a conſiderable part of the food and nouriſhment, may be eaſily aſcertained by any one, who paſſes by any of the kitchens in London, where much ſoup is made; he will find the atmoſphere around loaded with the waſte of a great deal of valuable nouriſhment. There is another advantage belonging to theſe boilers, which is, that by means of the double rim, which is impervious to ſteam, they not only preclude waſte in the food, but prevent its being contaminated by ſmoke; an inconvenience, to which the kitchens and cookery of the poor are peculiarly ſubject.

The double rim is filled by water, into which the projection of the cover of the boiler deſcends, ſo as abſolutely to preclude any communication with the outward air or ſmoke.—The benefit of this double rim may be obtained without an entire new boiler, by making the double rim of lead, ſoldered round the mouth of the old copper, and fitting the cover to it. The expence is about a guinea for a common ſized copper. It anſwered very well, when tried in the poor-houſe at Auckland.—The double rim would be very uſeful alſo in ſmaller boilers, eſpecially if intended for ſoup. Mr. Hopkins of Greek ſtreet, Soho, afterwards made one of ten quarts, for a village ſoup ſhop at Langley in Buckinghamſhire.

Of the cautions in the uſe of Count Rumford's kitchens, one of the moſt neceſſary, and the moſt difficult to procure attention to, relates to the quantity of coal to be uſed †. If,

---

* "Enquiries having been made reſpecting the dimenſions of the iron-work and flues of the roaſter and boilers, I add this note.—The roaſter is 60 inches deep, 26½ wide, and 16 high: the grate, which is under the roaſter and ſupplies it with heat, is 22 inches long, 10 inches wide, and 14¾ high; the aſh-hole under the grate is 23 inches high; and the doors of this and of the other grates and aſh-holes are each 10 inches wide, and 7½ high. The two pipes, for forcing hot air into the roaſter, are two inches and three quarters diameter. The lower flue of the roaſter is 15 inches high, and four and a half wide, and winds partly under it; and the upper flue is alſo four inches and a half wide, ſpreading in a ſemicircle over the top of the roaſter.—The larger boiler is 60 inches long, by 36 wide, and 19 inches high: the grate under it is 24 inches long, 15½ wide, and 14 inches high; and the aſh-hole under the grate 18 inches high. The lower flue is ſix inches ſquare, winding partly under the boiler; the upper one eight inches high, and 5½ wide.—Of the leſſer oblong boiler the length is 36 inches, the width 24, and the height 18 inches: of the grate under it, the length is 17 inches, the width 10, and the height 14 inches; the aſh-hole is 14 inches high. The ſize of the ſteam-box, which is ſupplied by the waſte ſteam of the large boiler, is 44 inches long, 24 wide, and 18 high; the falſe cullender bottom being placed five inches above the bottom of the box."

† "The neceſſity of limiting the quantity of fuel (ſays the worthy editor of the Reports) to be uſed, cannot be too ſtrongly or too frequently enforced; and it ſhould be obſerved, that large coal is not ſo proper to mix with the cinders,

inſtead of the peck of coals, which is all that is neceſſary for one of theſe boilers, the cook follows her acquired inſtinct, and lays on twice the quantity, or more, the operation, inſtead of receiving benefit, is prejudiced, and the roaſter very much injured by the waſte of coals. Where coals are uſed without limitation, there is very little chance of theſe boilers or roaſters anſwering.

Three roaſters, after the model of that at the Foundling, have been put up at Chriſt's hoſpital; and now, when (inſtead of nine buſhels of coals, formerly uſed on roaſting days) they are limited to ſomething leſs than one buſhel, being about a tithe of the former conſumption, this quantity anſwers very well dreſſing 560 lb. weight, the allowance of their roaſt-meat days.

In thoſe caſes where public bodies may be induced to adopt Count Rumford's kitchen, it is preſumed that they may think proper to refer to the account of the Foundling kitchen; for which ſee our original article KITCHEN.

The following is the ſpecification of a patent granted to Mr. Walker, of Rathbone Place, Mary-le-bone, for a portable kitchen, for dreſſing and cooking victuals. It is dated May 12, 1801.

"The whole is to be made of caſt or wrought iron, with a fire place in the centre, incloſed with a door, aſh-hole under, a cloſet on each ſide, one of which will ſerve for the purpoſe of baking, &c. the other to contain two ſpits, racks, &c. complete, the top to be uſed for the purpoſe of a broiling plate heated by the ſame fire, the ſmoke conveyed through an iron funnel, in which is fixed a ſmoke-jack to turn the ſpits."

No further verbal deſcription is given, but the reader is referred to the drawings, for which ſee Pl. 34. where *a* is a funnel for ſmoke; *b*, the top which can be uſed as a boiling plate; *c*, a place for fire; *d*, the aſh-hole; *e*, a cloſet to roaſt meat in or broil; *f*, a hot cloſet or oven.

KITCHEN-GARDEN *(Encycl.)* Under the article GARDENING, we have ſpoken fully on the different requiſites for a kitchen-garden. We wiſh, nevertheleſs, further to obſerve, that the moſt important points in this, as well as every other branch of horticulture, conſiſts in digging and manuring the land *well*; and, above all, in the proper *watering of gardens*, for which the implements commonly employed appear indeed to be very inadequate. The filling, and carrying, of theſe veſſels to the ſpot where they are to be uſed too, are attended with great labour and loſs of time. To remedy theſe inconveniencies, different machines have been invented: one of the moſt ingenious and uſeful, is that contrived by M. Sylveſtre, and of which an accurate repreſentation is given in Pl. 35.

It conſiſts ſimply of a caſk, capable of holding a ſufficient quantity of water, for the purpoſe of irrigating the garden. The hinder part of this veſſel is furniſhed with a cock that communicates with the watering pipes, and the caſk is ſupported on a ſtrong frame, with one or two wheels, calculated for walks about eighteen inches wide. The carriage may be drawn by a mule or an aſs, and requires a perſon to guide the animal, to ſupport the veſſel when it is liable to be overturned, and to open and ſhut the cock as often as is neceſſary. Thus, one man will be able to water a conſiderable ſpace of ground in a ſhort time, and to ſprinkle that fertilizing fluid in an equable and regular manner.

KITE, a well-known ingenious paper machine, originally contrived to ſerve as a toy for children, but which has lately been applied to the more uſeful purpoſe of conducting the electric matter of the atmoſphere from the clouds.

Different *electrical kites* have been conſtructed by Cavallo, and other philoſophers; and, though ſuch contrivances are not very difficult, yet there are ſome fixed principles, which ought to be obſerved in manufacturing electrical kites to a certain degree of perfection. To accompliſh this object, we have given a repreſentation of it in Pl. 34. The following are the neceſſary rules, given in a treatiſe publiſhed in German, by the late Profeſſor Lichtenberg, of Göttingen, and copied into the Domeſtic Encyclopædia.

The body of the kite conſiſts of a long ſlender lath, *a*, *b*, and a wooden bow, *d*, *a*, *e*. The former muſt be made of ſlender dry deal, properly planed, about five feet in length, one inch in breadth, and half an inch thick, ſo that it may neither be too heavy, nor too light to reſiſt ſtrong guſts of wind.

The bow *d*, *a*, *e*, is formed of a ſound hoop, that may be taken from a dry caſk; or it may conſiſt of ſplit cane or whalebone, rendered perfectly ſmooth, and of equal thickneſs. Particular attention, however, is requiſite to adapt it to the proper ſize; for if too weak, it will not be ſufficiently elaſtic to expand the cord *c*, *c*. The dimenſions of the bow muſt likewiſe be carefully adjuſted to thoſe of the lath *a*, *b*; and as the utility of the machine in a great meaſure depends on the accuracy of ſuch proportions, we ſhall briefly ſtate the rules by which they may be eaſily aſcertained.

The two ends of the bow are firſt to be contracted by means of the cord, which ought to be properly ſtretched. The middle of the bow muſt be exactly fitted to the lath *a*, ſo that one inch only of the latter project; and the place which is interſected by the ſtring *c*, *c*, ſhould be accurately marked. The lath, from this mark to its extremity *b*, ought

---

as coal-duſt that will hardly burn on a common fire. In every inſtance, that has come to my knowledge, of theſe kitchens not having ſucceeded, the failure has been owing to the improper waſte of fuel. The operation of the fire is ſo much increaſed by the manner in which the grates and flues of theſe boilers and roaſters are arranged, that the uſe of the ſame quantity of fuel in them, as in a common boiler, will very ſoon deſtroy all the iron-work, by the intenſeneſs of the heat. In one inſtance, where a Rumford boiler of fifty gallons had not anſwered, but was quite worn out at the end of five months, my firſt enquiry reſpected the quantity of coal uſed; and, by the anſwer, I found that there had been *ſix times* as much coal applied there, as is uſed in the Foundling kitchen for a boiler of more than twice that ſize. The wonder then was that the apparatus had laſted ſo long; but, upon examining it, this was explained; I found a hole broken between the flues, and that the ſtones (that are taken out to clean the flues), had not been properly put in again. By theſe means much of the heat had eſcaped; but enough had remained, to deſtroy entirely ſeveral ſets of bars in the grates, and to burn out the bottom of the boiler.—Many ſimilar inſtances might be quoted, to ſhew the neceſſity of keeping ſtrictly to the quantity of coals; which, for either the roaſter or boiler at the Foundling, is a peck of coal-duſt, mixed with a peck of cinders; and with this little quantity of fuel, there is warm water kept in the boiler the whole day, merely by the heat that remains after the dinner has been dreſſed."

to extend ſomewhat further than double the length of its upper part.

Having found the proportion between the length of the lath, and the ſemi-circle of the bow, every thing depends upon the proper joining of theſe two eſſential parts. Hence a ſuperficial excavation ſhould be made at about an inch from the extremity of the lath *a*, and a ſimilar cut in the centre of the bow; both are then to be brought into contact, and faſtened with ſtrong thread or ſilk.

The extremities of the hoop ſhould now be made exactly of equal length; when one end is to be tied with thin packthread to the bow at *d*, about half an inch from the point; and, after having made ſmall excavations into the lath *f*, on all its ſides, one arm of the hoop *d* ought to be drawn cloſe to the tranſverſe piece; the packthread twiſted ſeveral times round *f*; and at length tied to the other arm at *e*. Now the two ſides from *d* to *f*, and from *f* to *e*, ought to be meaſured; if they happen to be unequal, the difference may be adjuſted by pulling the thread towards the ſhorter ſide. Next, the thread is to be extended from *e* towards *a*, where it ſhould be turned round ſeveral times; and thence conducted to *d*, the place in which it is faſtened, ſo that it will form the angle *d*, *a*, *e*, as repreſented in the figure.—A ſmall inciſion muſt further be made in the part of the lath marked *b*, to which the thread is extended in the direction from *d* to *b*, and thence again to *e*, where it is ultimately ſecured.

Thus the ſkeleton of the kite will be arranged; and it now remains to aſcertain its equilibrium, which may be effected in the following manner: the end of the lath projecting at *a*, ſhould firſt be rounded by the knife, and placed on a table, when the oppoſite end *b* is to be poiſed on the tip of the finger. If both ſides of the bow are in perfect equilibrium, the ſkeleton is then complete; but, if either of them incline to one ſide, the want of ſymmetry may be remedied by cutting or ſhaving off the preponderating ſide of the lath, ſo as to reduce it to an equipoiſe. The frame, thus finiſhed, is next to be covered either with ſilk ſtuff, or thin paper previouſly oiled, that it may reſiſt the effects of moiſture; and to prevent folds either in the ſilken or paper cover, they ſhould be wetted before they are applied, and afterwards dried in a cool place. In order to ſecure the whole covering to the frame, narrow ſlips of ſilk or paper ſhould be paſted acroſs the lath, and over the packthread in all the parts marked *g*; and, when the whole is perfectly dry, its equilibrium muſt again be adjuſted, by putting ſuch additional pieces on the light ſide, as may be requiſite to reſtore the balance.

In conſtructing electrical kites, it is of the utmoſt conſequence to apply the ſtrings *h*, *h*, below the body of the machine to its proper place: when the latter is *five* feet long, the cord ought to be *eleven*, one end of which ſhould be paſſed through the two holes of the lath; namely, one in the direction of the uppermoſt ſlip marked *g*, *g*, and the other through the central part of the bow: then two ſimilar holes muſt be perforated through the lath where the lowermoſt ſlip is denoted at *g*, that is, at a little diſtance from each other; and, after properly drawing out the ſtring, ſo as to form an obtuſe angle over the body of the kite, it ought to be well ſecured behind, and afterwards tied with a knot, exactly in the middle, to make both parts of equal length. Another difficulty might ariſe from the uncertainty of determining the exact point of the cord laſt mentioned, at which the main ſtring governing the kite ſhould be applied. Hence the following general rule requires attention; namely, that according to the impetuoſity of the wind, the principal ſtring muſt be faſtened higher towards the head of the kite, with a view to facilitate its riſing; and, on the contrary, lower towards the middle, in leſs blowing weather. The moſt adviſable method will be, to tie the leading cord at a few inches only from the upper hole, and to aſcertain its exact ſituation by experience.

The tail of the kite, *k*, *k*, now remains to be fixed, and is perhaps the moſt critical part of the whole machine. If it be too ſhort, the latter inſtantly deſcends; and, if it be too long, its weight prevents the kite from riſing. The moſt effectual way to avoid both extremes, will be to make the tail ſeven times the length of the frame: fine packthread ſhould be choſen for this purpoſe, and double or triple ſolded ſlips of paper, two or three inches long, ought to be tied into the pendant ſtring, at ſhort intervals; when the latter is to be affixed to the body of the kite at *b*.

With reſpect to the flying of this machine, an open place and a fine day ſhould be ſelected, when a gentle breeze agitates the air: after launching it againſt the wind, the perſon who holds the ſtring ought to advance ſpeedily to the diſtance of thirty or forty yards; and gradually to relax the whole clue, according as the riſing is more or leſs rapid. In order to adapt kites to the *attraction of lightning from the clouds*, a thin metallic point is to be affixed to the higheſt end *a*, and connected with the ſtring of the machine by means of a thin wire: in this application, however, the greateſt caution is neceſſary; and thoſe who amuſe themſelves with experiments of ſuch precarious nature, ought by no means to make the firſt attempt during thunder-ſtorms, but only when the ſky is ſerene: nor ſhould any perſon affix a metallic point, or wind the wire round the ſtring, or even moiſten it, unleſs he be perfectly acquainted with the principles on which their joint action depends. Hence, ſmaller kites which do not aſcend too high, muſt be firſt employed, till we become better acquainted with the rules of flying, and of faſtening the machinery: thus, every danger may be obviated, and this apparently puerile contrivance, be rendered ſubſervient to a very uſeful purpoſe. See the articles LIGHTNING and ELECTRICITY.

KITTERY, a town of the United States, in the diſtrict of Main. It is famous for ſhip-building, and ſeated on the E. ſide of the mouth of Piſcataqua River.

KITZINGEN, a town of Franconia, on the Maine. It is large and handſome, and owes its riſe to a noble convent of Benedictines, founded in the year 745, by Duke Pepin. It is 10 miles E.S.E. of Wurtzburgh, and 34 N.N.W. of Anſpach. Long. 10. 4. E. Lat. 49. 40. N.

KIUTAJA, or CUTAJA, a town of Turkey in Aſia, the reſidence of the begler-beg of Natolia. Near it are ſome warm baths, much eſteemed in ſeveral diſorders. It is ſituate at the foot of a mountain, near the river Purſak, 136 miles S.S.E. of Conſtantinople. Long. 30. 44. E. Lat. 39. 14. N.

KIZBUHL, a town of Germany, in the Tyrol, on the river Acha, 36 miles E. of Inſpruck. Long. 12. 27. E. Lat. 47. 25. N.

KLATTAU, a town of Bohemia, built in the year 775, and ſurrounded with walls in the year 1000. There are ſome ſilver mines in the neighbourhood. It is 46 miles S.W. of Prague. Long. 14. 6. E. Lat. 50. 30. N.

KLETTENBERG, a town of Switzerland, ſeated on the Aar, three miles from Waldſchut. The ſpiritual juriſdiction belongs to the Biſhop of Conſtance; the ſovereignty to the cantons. Long. 8. 12. E. Lat. 47. 35. N.

KLUNDERT, a ſtrong fortreſs of the United Provinces, in Holland, near the arm of the ſea, called Hollands Diep. It was taken by the French, in 1793, after a gallant reſiſtance; but they were obliged to evacuate it ſoon after. It is nine miles S.E. of Williamſtadt.

KNITTELFELDT, a town of the duchy of Stiria, on the river Muehr, 78 miles S. W. of Vienna. Long. 14. 57. E. Lat. 47. 29. N.

KNOXVILLE, a town of the United States, capital of the diſtrict of Hamilton and the whole ſtate of Tenaſſee. It is ſeated on the river Holſton, 494 miles W.S.W. of Richmond, in Virginia. Long. 84. 8. W. Lat. 35. 58. N.

KOANG-FIN-FOU, a city of China, in the province of Kiang-ſi. Its juriſdiction contains ſeven cities of the third claſs.

KOBI, called by the Chineſe CHAMO, a vaſt deſert of Chineſe Tartary, which occupies almoſt all the ſouth extremity of the country of the Kalkas. It is more than 100 leagues from E. to W. and almoſt as much from N. to S.

KOEI-TCHEOU-FOU, a commercial city of China, in the province Setchuen. Its diſtrict contains one city of the ſecond claſs, and nine of the third.

KOEI-YANG, the capital of the province of Koeitcheou, in China. The remains of temples and palaces ſtill announce its former magnificence. It is 420 miles N.W. of Canton.

KOLA, a town of the Ruſſian government of Archangel, capital of Ruſſian Lapland. It has a good harbour on the river Kola, near a bay of the ſame name in the Frozen Ocean. Long. 32. 26. E. Lat. 68. 34. N.

KOLYVAN, a government of the Ruſſian empire, comprehending a part of Weſtern Siberia, and formerly included in the government of Tobolſk. Its capital, of the ſame name, is ſeated on the Oby, near the mouth of the Berda, and was known, before the inſtitution of this government, under the name of Berdſkoi Oſtrog. This country has very productive ſilver mines, which have been called the Potoſi of Ruſſia. They lie between the Oby and Irtyſh, near the mountains which form the frontiers of Siberia, and ſeparate that country from Chineſe Tartary.

KOM, a large and populous town of Perſia, in the province of Irac, with a celebrated moſque, an aſylum for debtors, who are protected and ſupported. It is 150 miles N. of Iſpahan. Long. 51. 14. E. Lat. 34. 20. N.

KONGSWINGER, a town of Norway, on the frontiers of Sweden. It is ſeated near the river Glomme, at the foot of a ſteep rock, on which ſtands an impregnable citadel; at laſt Charles XII. who reconnoitered it, thought it prudent to decline attempting a ſiege.

KONG-TCHANG-FOU, a city of China, in the province of Chen-ſi. It is ſurrounded by inacceſſible mountains, where a tomb is ſeen, which the Chineſe pretend to be that of Fo-hi. Its diſtrict contains three cities of the ſecond, and ſeven of the third claſs. It is 700 miles S.W. of Pekin.

KONIGSBERG, a town of Franconia, belonging to the Houſe of Saxe-Weimar, three miles N.E of Schweinfurt. Long. 10. 44. E. Lat. 50. 5. N.

KONIGSBERG, a town of Upper Saxony, in the marquiſate of Bradenburg, 47 miles S. of Stetin. Long. 14. 40 E. Lat. 52. 50. N.

KONIGSEGG, an ancient caſtle of Suabia, in a principality of the ſame name, eight miles N.W. of Ravenſburgh.

KONIGSGRATZ, a town of Bohemia, with a biſhop's ſee, ſeated on the Elbe, 35 miles S.W. of Glatz, and 115 N. by W. of Vienna. Long. 16. 8. E. Lat. 50. 6. N.

KONIGHSHOFEN, a ſtrong town of Franconia, with a biſhop's ſee, 25 miles N.N.W. of Bamberg. Long. 10. 46. E. Lat. 50. 24. N.

KONIGSTEIN, a town of Upper Saxony, in the territory of Miſnia, with an impregnable fort. It is a place of confinement for ſtate priſoners, and is ſeated on the Elbe, ten miles S.E. of Pyrna, and ten S.W. of Dreſden. Long. 13. 43. E. Lat. 51. 2. N.

KONIGSTEIN, a town of Germany, in the archbiſhopric of Mentz, with a ſtrong fort, twelve miles N.E. of Mentz. It ſurrendered to the French in 1796. Long. 8. 25. W. Lat. 50. 5. N.

KONIGSTUTER, a town of Germany, in the territory of Brunſwick Wolfenbuttle, with a celebrated abbey. Long. 11. 7. E. Lat. 52. 25. N.

KONITZ, a town Weſtern Pruſſia, ten miles N.W. of Culm, and fifty S.W. of Dantzic. Long. 18. 16. E. Lat. 53. 36. N.

KOOCH, a town of Hindooſtan Proper, in the country of Agra, ſixty miles E. of Gwalior, and ninety-five S.S.E. of Agra.

KOONJOOR, a town of the Deccan of Hindooſtan, in the province of Oriſſa, eighty-ſix miles N.N.W. of Cattack, and 163 W.S.W. of Calcutta.

KOPYS, a fortified town of Lithuania, ſeated on the Dnieper, eighteen miles N. of Mohilef. Long. 31. 2. E. Lat. 54. 32. N.

KORSAW, or KOSOA, a town of Denmark, in the iſle of Zealand, with a fort, forty-five miles W. by S. of Copenhagen. Long. 11. 10. E. Lat. 55. 29. N.

KOSAL, or KOSTA, a fortified town of Sileſia, near the river Oder, ſeventeen miles N. of Ratiſbon. Long. 17. 54. E. Lat. 50. 26. N.

KOSTROM, a town of Ruſſia, capital of a government to which it gives name. It is ſituate on the Volga, ſurrounded by a ſtrong wall, 168 miles N.E. of Moſcow, and 380 E.S.E. of Peterſburgh. Long. 41. 14. E. Lat. 57. 30. N.

KOSTROM, a government of the Ruſſian empire, formerly included in that of Moſcow. It is divided into the provinces of Koſtrom and Unſha. The capital of the former is Koſtrom, ſeated at the mouth of the Volga; the capital of the ſecond is Makarief, ſituate on the Unſha.

KOTTA, a town of Hindooſtan Proper, in the country of Malwa, ſeated on the Jeſul, 100 miles S.E. of Agimere, and 215 S. of Delhi. Long. 76. 20. E. Lat. 25. 15. N.

KOUEI-TE-FOU, a city of China, in the province of Ho-nan. The inhabitants are remarkably mild, and treat ſtrangers with uncommon hoſpitality. It is ſeated between two large rivers, 312 miles S. of Pekin. Long. 115. 29. E. Lat. 34. 30. N.

KOUS, or COSS, a town of Egypt, on the eaſt bank of the Nile, once a place of great wealth and trade, being the ſtaple of commerce between the Nile and the Red Sea. It is eighteen miles S. of Dendera, and forty-five N.N.E. of Eſne.

KOWNO, a town of Lithuania, ſeated on the Wilna and Niemen, 40 miles W. of Wilna. Long. 24. 12. E. Lat. 54. 56. N.

KRAANENBERG, a town of Weſtphalia, in the duchy of Cleves, ſeated on the declivity of a hill, betwen Nemeguen and Cleves. Its name, which ſignifies Crane-hill, is derived from the number of cranes that uſed to aſſemble round the caſtle, when the adjacent plain was a moraſs. It is celebrated for an image of the Virgin, pretended to be miraculous.

KRAINBURG, a town of Bavaria, ſeated on the Inn, 35 miles E. of Munich.

KRAINBURG, a town of Germany, in the duchy of Carniola, ſeated on the Save, 18 miles N.W. of Laubach. Long. 14. 5. E. Lat. 56. 15. N.

KRAINOWITZ, a town of Upper Sileſia, between Ratibor and Troppaw. Long. 17. 49. E. Lat. 50. 7. N.

KRAINSLAW, a town of Poland, in the province of Red Ruſſia and palatinate of Chelm, 110 miles S.E. of Warſaw. Long. 23. 0. E. Lat. 51. 15. N.

KRANICHFELD, a town of Upper Saxony, in the princi-

pality of Altenburg, 12 miles S.E. of Erfurt, and 48 W. of Altenburg. Long. 11. 4. E. Lat. 50. 43. N.

KREKITH, a corporate town in Carnarvonſhire, with a market on Wedneſday. It is ſeated on the Iriſh Sea, near Traeth Amawer Bay, where a caſtle formerly ſtood, now in ruins. It is 13 miles S. by E. of Carnarvon, and 237 N.W. of London. Long. 4. 18. W. Lat. 52. 57. N.

KREMPEN, a ſtrong town of Denmark, in Holſtein, with a caſtle. It is five miles north of Gluckſtadt, and 30 N.W. of Hamburg. Long. 9. 15. E. Lat. 53. 58. N.

KREMS, a town of Auſtria, ſeated on the Danube, 35 miles weſt of Vienna. Long. 15. 40. E. Lat. 48. 18. N.

KREUTZENACH, a town of Germany, in the circle of Lower Rhine, with a caſtle, on an eminence. It was once an imperial city, and is ſeated on the Nahe, 20 miles S.W. of Mentz.

KRUMLAW, a town of Germany, in Moravia, 50 miles S.W. of Olmutz. Long. 16. 49. E. Lat. 48. 46. N.

KRUTZOW, a ſtrong town of Lithuania, ſeated on the Sofz, 30 miles S.W. of Mozciſlaw. Long. 32. 4. E. Lat. 54. 8. N.

KRYLOW, a ſtrong town of Poland, in the palatinate of Kiof, ſeated on the Dnieper, 140 miles S.E. of Kiof. Long. 33. 50. E. Lat. 48. 50. N.

KUBESHA, a ſtrong town of Aſia, in the country of the Leſguis, ſituate on a hill, between high mountains. Its inhabitants call themſelves Franki (Franks, a name common in the eaſt to all Europeans), and relate, that their anceſtors were brought hither by ſome accident, the particulars of which are forgotten. The common conjecture is, that they were caſt away upon the coaſt; but others ſay, that the Greeks and the Genoeſe carried on, during ſeveral centuries, a conſiderable trade, not only on the Black Sea, but on the Caſpian, and were acquainted with the mines contained in theſe mountains, from which they drew, by their trade with the inhabitants, great quantities of ſilver, copper, and other metals. In order to work theſe upon the ſpot, they ſent hither a number of workmen, to eſtabliſh manufactures. The ſubſequent invaſion of the Arabs, Turks, and Moguls, during which the mines were filled up, and the manufactures abandoned, prevented the ſtrangers from effecting their return; ſo that they continued here, and formed a republic. What renders this account the more probable is, that they are ſtill excellent artiſts, and make very good fire arms, ſabres, coats of mail, and ſeveral articles in gold and ſilver, for exportation. They have, likewiſe, for their own defence, ſmall copper cannons, of three pounds calibre, caſt by themſelves. They coin Turkiſh and Perſian ſilver money, and even rubles, which readily paſs current, becauſe they are of the full weight and value. In their valleys, they have paſture and arable land, as well as gardens; but they purchaſe the greater part of their corn, truſting chiefly for ſupport to the ſale of their manufactures, which are much admired in Turkey, Perſia, and the Crimea. They are generally in good circumſtances, and are a quiet inoffenſive people, but high ſpirited and independent. Their town is conſidered as a neutral ſpot, where the neighbouring princes can depoſit their treaſure with ſafety. They elect yearly twelve magiſtrates, to whom they pay unlimited obedience; and, as all the inhabitants are on a footing of the moſt perfect equality, each individual is ſure to have, in his turn, a ſhare in the government. In 1725, their magiſtrates acknowledged the ſovereignty of Ruſſia, but without paying any tribute. Long. 67. 59. E. Lat. 42. 30. N.

KUFSTEIN, a ſtrong town of Germany, in the Tyrol, with a caſtle, on a rock. It is ſeated on the Inn, 46 miles S. by E. of Munich. Long. 12. 5. E. Lat. 47. 26. N.

KUHLSHEIM, or KULTZHEIM, a town of Germany in the electorate of Mentz, 32 miles E.N.E. of Heidelberg.

KUNERSDORF, or CUNNERSDORF, a town of Upper Saxony, in the Middle Marche of Brandenburg, near which the King of Pruſſia was defeated by the Ruſſians, in 1759. It is three miles E.N.E. of Francfort on the Oder.

KUR, a river of Perſia, which riſes in mount Caucaſus, and paſſing by Teflis, falls into the Caſpian Sea.

KURSK, a government of the Ruſſian empire, formerly part of that of Belgorod. Its capital, of the ſame name, is ſeated on the Tukor, which falls into the Seine or Sem.

KUSISTAN, or CHUSISTAN, a province of Perſia, bounded on the north and eaſt by Irac-Agemi, on the ſouth by Farſiſtan, and on the weſt by Irac-Arabia. Suſter is the capital.

KUTTENBERG, a town of Bohemia, ſeated near a mountain, remarkable for its ſilver mines, 35 miles S.E. of Prague. Long. 15. 37. E. Lat. 49. 56. N.

KUTTORE, a country of Aſia, between the N.E. part of Cabul, and the N.W. of Caſhmere. The Mahometans call it Caferiſtan, or the Land of Infidels. It has a town and fortreſs of the ſame name, 100 miles N.E. of Cabul, and 280 N.W. of Lahore. Long. 70. 17. E. Lat. 35. 27. N.

KUYNDER, or FORT KUYNDER, a ſea-port and fortreſs of the United Provinces, in Frieſland, ſituate on the weſt ſide of the river Kuynder, at its entrance into the Zuyder Zee, 23 miles ſouth of Lewarden. Long. 5. 24. E. Lat. 52. 50. N.

KYLBURG, a town of Germany, in the electorate of Treves, ſeated on the Kyll, 16 miles N.W. of Treves. Long. 6. 37. E. Lat. 50. 1. N.

KYNETON, a town in Herefordſhire, with a good trade in narrow cloth, and a market on Wedneſday. It is 15 miles N.W. of Hereford, and 149 W.N.W. of London. Long. 2. 50. W. Lat. 52. 12. N.

KYNETON, a village in Somerſetſhire, N.E. of Somerton. It is naturally paved, for half a mile, with one ſmooth rock, which looks like ice.

L.

LAA, Laab, or Lahab, a town of Germany, in Auſtria, ſeated on the river Teya, twenty-ſeven miles N. W. of Vienna. Long. 16. 9. E. Lat. 48. 48. N.

LABADIA, a ſtrong town of Italy, in the peninſula of Rovigo, ſubject to the Venetians. It is ſeated on the river Adige, twenty miles N. W. of Ferrara. Long. 11. 54. E. Lat. 45. 39. N.

LABIA, a town of Turkey in Europe, in Servia, ſixty-two miles S. W. of Niſſa.

LABOUR (*Encycl.*). The *price* of labour has at all times varied; and, as the poorer claſſes feel with additional rigour every evil ariſing from the preſſure of the times, different expedients have been deviſed, with a view to alleviate their burthens, ſupply their wants, and render them more comfortable.

From theſe inveſtigations, it appears that, in the middle of the 14th century, the uſual price of labour was 2d. per day; and wheat was ſold at from 3s. 4d. to 4s. per quarter.

In the middle of the 15th century, the pay of a labourer per day was 3d.; and wheat coſt from 5s. to 5s. 6d. per quarter.

In the earlier part of the 16th century the price of labour roſe to 3½d. and that of a quarter of wheat to 7s. 6d. About the middle of the 17th century, the pay of a labourer, upon an average, was (in Eſſex) 13d.; and corn had riſen to 40s. per quarter.

Toward the latter end of the 18th century, the daily pay of a labourer was from 14d. to 18d. in the country, and from 2s. to 2s. 6d. in the metropolis; while the price of wheat was 48s. per quarter.—We forbear to ſtate the average pay of labour during the late exorbitant prices of grain, and every other article of food; when all proportion between *merit* and *reward* appeared to have been ſuſpended.

The payment of *daily* wages, however, ſerves but imperfectly to aſcertain the *real* price of labour, as a conſiderable portion of work is performed by the piece; ſo that a labourer in general earns from 3d. to 6d. per day more than by the common pay. For, without this, or ſome ſimilar method, the reward of labour would be inadequate to the maintenance of thoſe numerous perſons who poſſeſs no other means of providing for their infirm wives, or helpleſs children. And we conceive, that if their wages could be ſo regulated as to riſe and fall with the price of wheat, conſiderable benefit would thus reſult to ſociety.

The rapid increaſe of *poor-rates* throughout the kingdom can be attributed only to the low and inſufficient recompence of labour, in conſequence of which the poor are obliged to reſort to the pariſh for relief. Indeed, when the average price of wheat for the laſt ten years is conſidered, we preſume not to exceed the limits of moderation in ſaying, that no *country labourer*, in the full poſſeſſion of his health and ſtrength, ought to be paid leſs than the value of a half-peck loaf per day, according to the price of wheat, and a proportionable ſum by piece-work. In populous towns, however, an addition of twenty per cent. ſhould be allowed, if vegetables and butchers' meat are ſold at the preſent unreaſonable prices.

The curious and philanthropic reader, who feels an intereſt in this popular enquiry, will be fully gratified by a peruſal of Mr. Davies's "Caſe of Labourers in Huſbandry ſtated and conſidered, &c." and Sir F. M. Eden's "State of the Poor, &c." in which the ſituation of the labouring claſſes is clearly developed.

By the 2d and 3d Edw. VI. c. 15, all labourers who combine or conſpire together concerning their work or wages, incur a penalty of 10l. for the firſt offence, which ſum is doubled in caſe of repetition; and if the money be not paid, they are to be ſet in the pillory. Juſtices of the peace, and the ſtewards of courts leet, &c. are likewiſe empowered by the 4th Edw. IV. c. 1, to hear and determine all complaints relative to the non-payment of labourers' wages; which, by the ſtat. 5 Eliz. c. 4, are to be annually ſettled for every county by the ſheriffs and juſtices of the peace, in every Eaſter ſeſſion, and in corporations, by the chief magiſtrates, under certain penalties in caſe of neglect. And ſuch aſſize, when made, is ordered by the 1 Jac. I. c 6. to be proclaimed.

Beſides theſe laws in behalf of the labouring claſſes, others have been enacted for the benefit of the employer. Thus, by the ſtat. 4 Eliz. all perſons who are fit for labour are compellable to ſerve by the day during the ſeaſon of making hay and the corn-harveſt; but thoſe labourers who have obtained proper teſtimonials, are permitted to go into other counties. It is further provided, that ſuch labourers, from the middle of March to the middle of September, ought to work from five o'clock in the morning till ſeven or eight at night, being allowed two hours for breakfaſt and dinner, and half an hour for repoſe during the three hotteſt months: in the other ſix months of the year they are obliged to work from twilight to twilight, excepting one hour and a half for breakfaſt and dinner, on the penalty of forfeiting one penny (at preſent it ſhould be two pence) for every hour's abſence.

An excellent mode of encouraging labour amongſt the poor, is the diſtribution of bounties on their earnings. The following account of a plan for allowing the poor a bounty on their work, by Thomas Hall, eſq. is publiſhed by the Society for bettering the Condition of the Poor.

"In my neighbourhood, in Hampſhire," ſays Mr. Hall, "there has been for near twenty years back, a bounty allowed the poor on their work; which has been found to produce very good effects in the increaſe of induſtry. In this way the ſum of 3s. a-week, thus diſpenſed by the overſeers in the aid and encouragement of the induſtry of a family of ſix perſons, has, as a bounty on work, eventually produced them the comfortable income of 9s. a-week; whereas, in the common mode, 3s. a-week would have gone but a very little way to their maintenance. By the advice of a manufacturer, the bounty is now proportioned to each ſhilling earned; ſo as to apply to the quality of the work, as well as to the quantity."

Observations.—It is preſumed that in this manner great part of the able-bodied poor might be ſupported at half the expence that is now incurred on their account; and that better order and regularity would be kept up among them, and the national ſtock of induſtry increaſed. The plan is ſimple and eaſy in its execution; and the meaneſt cottage may, by the bounty propoſed, become a working houſe for

one family, ſo long as it is wanted.—We cannot help making an obſervation, connected with this ſubject, as it relates to induſtry and the encouragement of it, that if pariſh certificates were granted for a limited period, as for two or more years, there would be eight or ten granted under ſuch a limitation for one that is granted in the preſent mode; and thereby the number of induſtrious people in the nation would be much increaſed, it being found that certificated labourers are in general more active and induſtrious than ſettled inhabitants, reſident in their own pariſhes. See the articles, CHARITY, HOUSE of INDUSTRY, POOR, &c.

LABOURD, a late territory of France, part of that of Baſques. It abounds in fruit, and the inhabitants are ſaid to be the firſt that went to fiſh for whales. It is now included in the department of the Lower Pyrenées.

LACK, or BISCHOF'S-LACK, a town of Germany, in Carniola. Here is a great deal of iron, ſteel, quickſilver, and corn; and a large quantity of linen is ſent hence to Fiume and Trieſt. It is 26 miles weſt by north of Laubach, and 35 north of Trieſt. Long. 14 7. E. Lat. 46. 31. N.

LADOGA, a lake in Ruſſia, between the gulf of Finland and the lake of Onega. It is 150 miles long and 90 broad, and eſteemed to be the largeſt lake in Europe. Among the fiſh with which it abounds are ſeals. It is full of quickſands, which, being moved from place to place by the frequent ſtorms, cauſe ſeveral ſhelves which often prove fatal to the flat-bottomed veſſels of the Ruſſians. This induced Peter the Great to cut a canal 67 miles in length, from the S.W. extremity of this lake to the river Neva, by which it has a communication with the gulf of Finland.

LAGNASCO, a town of Piedmont, 24 miles ſouth of Turin.

LAHN, a river of Germany which riſes in Heſſe Caſſel, and flowing by Marpurg, Wetzlar, and Naſſau, falls into the Rhine, above Coblentz.

LAHORE, a province of Hindooſtan Proper, bounded on the weſt by Candahar, on the north by Caſhmere, on the eaſt by Sirinagur and Delhi, and on the ſouth by Moultan. It is often called Panjab, or the country of Five Rivers. It is very extenſive and remarkably fertile; affording, in addition to all the neceſſaries of life, wine, ſugar, and cotton wool. In the tract between the Indus and the Chelun are ſalt mines, wonderfully productive, and affording fragments of rock ſalt, hard enough to be formed into veſſels, &c.

LAHR, a town of Weſtphalia, in the biſhopric of Munſter, 12 miles N.W. of Munſter.

LAHR, a town of Germany, in the principality of Naſſau-Saarbruck Uſingen, 18 miles S.S.E. of Straſburg, and 19 N. of Friburg.

LAINO, a town of Naples in Calabria Citeriore, near a river of the ſame name. Long. 16. 11. E. Lat. 31. 25 N.

LAJOON, a town of Perſia, in the province of Mezanderan, near the coaſt of the Caſpian Sea, 20 miles E. of Reſht.

LAI-TCHEOU-FOU, a city of China, in the province of Chang-tong, with a convenient harbour on the Yellow Sea. Its juriſdiction contains two cities of the firſt, and five of the third claſs.

LALAND, a ſmall iſland of Denmark, in the Baltic, lying ſouth of Zealand, from which it is ſeparated by a narrow channel. It is fertile in corn, with which it ſupplies Copenhagen. Naxkow is the capital.

LALANG, an iſland near the north coaſt of the iſland of Sumatra, in the ſtraits of Malacca. Long. 99. 20. E. Lat. 1. 45. N.

LAMA (*Encycl.*). The following curious account of the ceremonies employed at the *burning of the body of a deceaſed Lama*, among the Calmuc Tartars, which never before appeared in Engliſh, was written by Mr. Nitſchmann, who attended Profeſſor Pallas, of Peterſburgh, during his travels through the Ruſſian empire, as draftſman; and who made a drawing on the ſpot, from which the engraving (ſee Pl. 36.), repreſenting the chief part of the ſcene, was executed.

In the year 1772, the chief lama of the Derbet horde of the Calmucs, on the Wolga, named Abagai, died at his reſidence not far from Sarepta, in the ninety-fourth year of his age, after a tedious illneſs. When this event was made known, all the *Labans*, or *Gellongs*, that is, prieſts, then preſent, aſſembled to deliberate how they ſhould diſpoſe of the body, according to the rules preſcribed in their ſacred books; and an account of this remarkable death was immediately tranſmitted to the prince of the horde, Zebek Ubuſchi, and to his miniſters. He was viſited alſo by all the prieſts, who requeſted that he would order the one next in rank to the deceaſed to repair to his late reſidence, for the purpoſe of carrying into execution the command of the ſacred books. This office fell to the lot of Samptan, or Dajantſhi lama, who had received the latter title of honour on account of his having lived in a monaſtery, or hermitage, till he had attained to that rank. Early in the morning, next day, he ſet out for Sarepta with a numerous train of prieſts, as the intended ſucceſſor of the deceaſed lama.

As on ſuch occaſions each prieſt receives a conſiderable part of the property left by the deceaſed lama, the number aſſembled was exceedingly great; ſo that, in the courſe of a day and a half, above ſeventy gellongs, and many others of inferior rank, were collected. For thoſe of the higheſt rank a ſufficient number of horſes, partly ſaddled and partly unſaddled, were provided and diſtributed among them according to their dignity. There was alſo plenty of ſheep and other animals, intended to be killed for food. The Dajantſhi lama then called the prieſts together to regulate the funeral ceremonies. For that purpoſe the ſacred books, which had till that period been kept cloſely ſhut up, were produced; and after all the circumſtances attending the lama's death, together with the time, had been compared with the rules in theſe books, it was concluded that the body ſhould be burnt.

The place appointed by the new lama for performing the ceremony was the Moo-Chammur, or ſummit of a ſandy hill, near Sarepta; from which the hut of the deceaſed, where ſtrict guard was kept to prevent any one from approaching it, was diſtant only a few hundred paces. The foundation of a furnace was then accurately meaſured out by the lama himſelf; and the earth was dug up with great care and ſolemnity by the gellongs and prieſts; for no perſon of any other condition durſt put a hand to the work. During this labour the lama, accompanied by the moſt diſtinguiſhed of the prieſts, returned to the habitation of the deceaſed, where they ſat down in a circle, and prayed from books with great earneſtneſs and fervour. While they were thus employed, the deceaſed was ſtripped of his uſual clothing, and his yellow ornaments, *jamön chubzuſum*, were put upon the body; together with a yellow lackered five-pointed crown, called *volo-malachai*. His throne, on which he had breathed his laſt, with a devout benevolent aſpect, ſitting croſs-legged, with his hands folded, was raiſed up, and after his wide yellow dreſs had been ſpread out around it, he was ſuffered to remain in that ſtate. The entrance of the habitation was covered by a particular kind of curtain, and guards were placed on each ſide to prevent the common people from looking in when the prieſts entered or went out.

In the mean time the prayers were continued at intervals; and, on a certain ſignal being given, the people aſſembled without were ſuffered to go in one by one, uncovered, in or-

der that they might pay their laſt reſpects to the deceaſed, by kneeling and touching his yellow robe with their foreheads. As the number collected was, however, too great, the new lama at length went out, and beſtowed his benediction on all thoſe within his reach, by laying his roſary *(erken)* on their heads; but as the throng around him increaſed more and more, he diſtributed a general benediction among the whole multitude, by waving the roſary, after which he returned to pray with deep ſighing and ſobbing. Such of the people as had not obtained the lama's benediction, ſhewed their reſpect and veneration by walking round the hut of their deceaſed, and as it were deified lama; and counting their beads amidſt continual ſighs, while they repeated by way of prayer, the monoſyllables *om ma ni pat me chang*; and every now and then, in going round, threw themſelves down, with their faces towards the earth, before the door of the hut.

After ſome time two ſingular figures, made of dough, were brought out from the hut, on wooden trenchers, and borne towards the place deſtined for the furnace. They had each two legs and two arms; but, in other reſpects, they bore a greater reſemblance to devils than to men.

While prayers were performing in the hut of the deceaſed, the reſt of the prieſts ſat together in circles, diſperſed here and there, filled with conſternation, and viewing attentively what was going on. A deputation, appointed by the new lama, made a diſtribution to the prieſts, according to their rank, of the cattle and other property left by the deceaſed; and, by command of the prince, ſix hundred rubles, in ready money, were collected from the horde, to defray the expence of the funeral, and to be divided among the prieſts.

The four ſides of the foundation, dug for the furnace, in which the body was to be burnt, were directed towards the four cardinal points. On the north, ſouth, and eaſt ſides, large fire holes were dug, and covered towards the ſide of the furnace with earth, that the wood might lie under the covering, and not within the furnace itſelf, to prevent any of the aſhes of the wood from being mixed with the aſhes of the body. The bottom was then conſtructed of tiles, which had been conveyed on horſeback by gellongs from the diſtance of ſome werſts; and, inſtead of lime, clay was employed to cement them. When the furnace was raiſed about a foot above the earth, a large iron tripod, made for the purpoſe, was fixed in the middle of it, and one of the gellongs immediately placed himſelf in the furnace, croſs-legged, on the tripod, in order to try whether it would anſwer the intended purpoſe. A kind of hut was then erected around the furnace with poles, which were covered up to the top with pieces of old felt. This hut was about eighteen or twenty feet in height; and at the top was a large opening, to afford a paſſage to the flame and the ſmoke.

All the prieſts who were preſent, after viewing the furnace, went in proceſſion, accompanied by the new lama, to the habitation of the deceaſed, where the fifteen prieſts who were to officiate put on the dreſs peculiar to their office. This dreſs conſiſted, firſt, of a ſort of ſhirt, called *bitſchan majak*, which the prieſts uſe inſtead of breeches and ſtockings. It is worn next the ſkin, and is gathered in plaits, and faſtened round the middle by means of a broad girdle. Over this was put the *ſch ibi chubzuſun*, which is a ſhort red ſhirt without ſleeves, and open at the breaſt; alſo the *gika majak*, a piece of red cloth placed around the body in folds above the firſt ſhort *majak*, and faſtened by means of a red ſaſh; the ſecond *majak* muſt hang down almoſt to the heels. The chief lama alone had a *jamohn chubzuſun*, or red ſhirt, with ſhort ſleeves, which was faſtened by means of a broad yellow girdle. In the laſt place all of them had a *tſchogi chubzuſun*, or large ſquare piece of ſilk, which, except a border two ſpans in breadth, conſiſted of red and yellow patches, four inches ſquare, diſpoſed chequer-wiſe. Some, however, had this piece of ſilk entirely yellow. It was thrown over the ſhoulders, ſo as to reach the ground behind; and the two corners of it before were faſtened over each other on the breaſt. The arms, head, and legs, during the ceremony, were bare; and each had wound his roſary around his arm; all which gave them a very terrible appearance.

After they had put on their dreſs, a certain kind of veſſel, called *ordu charaſch*, was brought forth, and put into the hands of the *Bakſki*, or inſtructing prieſt, who walked next to the lama; and who, inſtead of the variegated piece of ſilk, had one entirely red. Another ſmall metal veſſel, of coſtly workmanſhip, containing ſacred water, mixed with ſpices and ſugar, and ornamented at top with a very beautiful peacock's feather, was delivered to the lama, and borne by him at the head of the proceſſion. Eight of the gellongs, dreſſed as above deſcribed, ſupported the bier, and the other five had in their hand each a bell. The habitation of the deceaſed was torn open behind with the utmoſt expedition, and the body, after the large yellow ſilk cloth ſuſpended from its ſhoulders had been thrown entirely over it, and the high-ſpiked crown had been put on its head, was taken out, and placed, in a ſitting poſture, on a bier made for the purpoſe. The bier was borne by the eight gellongs, and the proceſſion moved towards the furnace in the following order: firſt, the lama, then the bakſchi, after him the dead body, then the five gellongs with their bells, and, in the laſt place, the remainder of the muſic and the people. During the proceſſion the lama, every now and then, dipped the peacock's feather in the ſacred water, and ſprinkled it every-where around him.

The inſtruments of muſic, beſides the bells, were three long copper trumpets, which emitted, at moſt, two or three baſs notes, and which followed behind. They were full three yards in length, and therefore were ſuſpended by rings to two poles, and, in that manner, carried by two men. There were alſo four drums ſuſpended from a pole; and two muſicians, with braſs cymbals, which were beat in the ſame manner as the Turkiſh.

The people, who had aſſembled in crowds on all ſides, were kept off by prieſts appointed for that purpoſe, and armed with ſtrong cudgels. As ſoon as the proceſſion reached the furnace, the muſicians placed themſelves in a ſemicircle before the entrance of the hut, and made a loud noiſe with their inſtruments. The body of the deceaſed lama was then carried with great ſpeed into the hut, and placed on the tripod, after the crown and yellow covering had been taken from it. Both theſe articles were afterwards conveyed back, with the ſame proceſſion and muſic, to the habitation of the new lama. The next operation was to complete the conſtruction of the furnace, which was done with great privacy. Two pieces of iron were put round the neck of the deceaſed, projecting ſo far on each ſide, that the ends of them could be built into the wall. Theſe ſerved to keep the body upright in the midſt of the fire. The top of the furnace was arched in a ſloping manner over the head of the dead body; and on the weſt ſide, where there were no fire-holes, a ſquare opening was left at top, through which, while the body was in a ſtate of combuſtion, tallow and other inflammable ſubſtances were poured. The wood deſtined for fuel was all cut exactly of the length of the fire-holes, and a great quantity of butter, incenſe and reſin, was intermixed with it. Near the furnace was placed a kettle, in which the butter was melted with the other ingredients: and on both ſides of the furnace there were ſmall altars, covered, as uſual, with ſacred veſſels and lamps. A

magnificent throne was prepared on the weſt ſide for the officiating lama; and, when every thing was ready, the lama put on the yellow wrapper of the deceaſed, placed his crown on his head, and ſeated himſelf on the throne. The gellongs, who had laid aſide their ſacerdotal habits, and aſſumed their uſual dreſs, ſat down in a circle around him. Each had a bell in his left hand, and a book lying before him, on his knees; and on a ſignal given by the lama, the ſmall lamps on the altar, and the wood in the three fire-holes of the furnace, were immediately lighted. The two figures of dough already mentioned appeared alſo on one of the altars. The fire was lighted about ſeven o'clock in the evening, amidſt prayers, ſinging, and the noiſe of bells and muſical inſtruments, which was ſometimes interrupted by converſation between the lama and the bakſchi, reſpecting ſome paſſages of the ſacred books. The prieſts who kept guard were, in the mean time, ſtrictly forbidden to ſuffer any perſon to peep in through the holes in the tent. Wood was continually thruſt into the fire-holes; and the lama, by means of a ladle with a long handle, furniſhed at the fore part with ſmall ſpouts, poured ſome of the greaſe which ſtood near him through the aperture upon the body, by which means the fire was ſo ſtrengthened, that the flames roſe in a continued column to the height of eighteen or twenty feet above the furnace. It was found neceſſary, therefore, to enlarge the aperture in the top of the tent, to prevent it from being deſtroyed. The gellongs alſo, were ſoon obliged to ſtand ſo far back, that every thing which took place within the tent, or hut, could be plainly ſeen. At certain times the lama threw the bark of trees, daubed over with reſin, and pieces of conſecrated white ſilk, into the top of the furnace; and as he was expoſed to great heat by ſtanding ſo near it to pour the fat over the body, a ſcreen was held conſtantly before his face by one of the gellongs, which ſecured him from the flames, but permitted him to ſee the aperture in the top of the furnace. The prayers offered up in the Tangut language, while the body was burning, became always longer, and were uttered with a louder tone of voice. They were intermixed with the ringing of bells, the clapping of hands, ſnapping of fingers, thruſting the fingers through each other, and then drawing them back, great contortion of the eyes and face, and various movements of the head.

This formidable fire was kept up for three hours, after which the furnace was ſuffered to ſtand ſome hours to cool. One can ſcarcely believe with what ſtrength the fire was maintained by the air which paſſed through the furnace; and the different aromatic ſubſtances which were thrown into it prevented any diſagreeable effect from the ſmoke, or the ſmell of the body. Next morning, when the furnace had cooled, it was opened with great ſecrecy, under cover of the tent, and the body, ſhrivelled like a mummy, being taken out, was divided in portions among the prieſts. Some of the poor people alſo, who were able to force their way through the crowd, obtained ſmall bits of the little which was left. This burnt ſubſtance of the lama's body *(lamain-dſhunder)* is conſidered by the ſuperſtitious people, as a ſacred medicine; and it may therefore be ſaid, that the lama is gradually conſumed by his own worſhippers.

This mode of burning the body produces ſcarcely any aſhes, as the ſkin, fleſh, and bones, are ſo baked, by continually pouring fat over it, that the whole maſs has the appearance of a cinder, and is equally friable. The few aſhes, however, which remain, are carefully ſcraped, together with the aſhes in the fire-holes, and are preſerved by the prieſts. After the furnace was opened, it was entirely raſed to the foundation, and not a ſingle ſtone of it left. All the materials were carried in a cart to the other ſide of the Wolga, where the horde at that time reſided. All the four corners of the ſpot where the furnace had ſtood, high flags (*mani*) were erected; and at the end of ſome weeks, when the horde returned to the diſtrict of Sarepta, a ſmall ſtone chapel was conſtructed in the middle of the four flags, and filled in the inſide with inſcriptions, images, rags of old clothes, and the like, and ſurrounded by a ditch. This formed the concluſion of the whole ceremony.

LAMBALE, a town of France, in the department of the North Coaſt. It is the chief town of the late duchy of Penthievre, and gave the title of princeſs to the unfortunate lady who was maſſacred at Paris, in 1792, for her inviolable attachment to her unhappy miſtreſs, the late queen of France. Lambale has a good trade in cattle, linen, and parchment, and is 37 miles N.W. of Rennes. Long. 2. 21. W. Lat. 48. 27. N.

LAMBESC, a town of France, in the department of the Mouths of the Rhone, nine miles N. of Aix. Long. 5. 31. E. Lat. 43. 40. N.

LAMBETH, a village in Surrey, on the Thames, oppoſite Weſtminſter. Here the Archbiſhop of Canterbury has an ancient palace. By the vaſt increaſe of buildings, Lambeth is now joined to the metropolis, in a direction to each of the three bridges. Here is a manufacture of artificial ſtone, which anſwers every purpoſe of ſtone carving, and extends, not only to ſtatues from the fineſt models, but to every kind of architectural ornaments. Here likewiſe are extenſive works for vinegar and home-made wine, a patent ſhot manufactory, and numerous timber yards, ſupplied with almoſt incredible ſtores of foreign timber.

LAMBORN, a town in Berks, with a market on Friday; ſeated on a river of the ſame name, ſeven miles N. by W. of Hungerford, and 68 W. of London. Long. 1. 26. W. Lat. 51. 30. N.

LAMEGO, a town of Portugal, in Beira, with a biſhop's ſee, and a ſtrong citadel. It contains two cathedral churches, an hoſpital, four convents, and about 4500 inhabitants. In this town the ſtates aſſembled to confirm the election of Alfonſo Henriquez, the firſt king of Portugal, and enacted the fundamental laws, now forgotten. It is 50 miles N. of Liſbon. Long. 7. 30. W. Lat. 41. 12. N.

LAMLASH, a town of Scotland, on the eaſt coaſt of the iſle of Arran, ſituate on a bay to which it gives name, and which, Mr. Pennant ſays, forms the ſafeſt harbour in the univerſe, with depth of water for the largeſt ſhips.

LAMMERMUIR, a mountainous ridge in Scotland, which divides the county of Berwick from that of Haddington for above twenty miles. Theſe mountains are bleak and barren, affording but ſcanty paſture for ſheep. Scoutra Hill is the moſt elevated of this ridge.

LAMO, a kingdom and iſland of Africa, on the coaſt of Melinda, between the iſland of Pate and Cape Formoſa. Its capital, of the ſame name, is well fortified. The king and government being Mahometans, are frequently at war with the reſt of the inhabitants, who are pagans. In 1589, the king of this iſland, being accuſed by the Portugueſe of having betrayed the governor of the coaſt, was ſeized with four of his ſubjects, in his own capital, and carried to Pate, where they were publicly executed, in the preſence of the king of that iſland, and of ſeveral kings of the neighbouring iſlands; ever ſince which, Lamo has been tributary to the Portugueſe.

LAMPEDOSA, a deſert iſland on the coaſt of Tunis, 12 miles in circumference. It is 50 miles from Tunis, and 112 from Malta; and has a good harbour, where ſhips water. Long. 11. 0. E. Lat. 36. 10. N.

LAMPSACO, an ancient town of Natolia, with a Greek

archbiſhop's ſee. It is now an inconſiderable place, ſeated on the ſea of Marmora, ſix miles from the Dardanelles. Long. 27. 20. E. Lat. 40. 12. N.

LAMPSPRINGE, a town of Lower Saxony, in the biſhopric of Hildeſheim, ſituate at the ſource of a ſmall river, called Laine, 17 miles ſouth of Hildeſheim.

LANCASTER, a town of Pennſylvania, 41 miles long and 40 broad. In 1790, it contained 36,147 inhabitants.

LANCASTER, the capital of a county of the ſame name, in Pennſylvania. Beſides its churches, and other public buildings, it contains a college founded in 1787, and named Franklin college, after the late Dr. Franklin. It is a place of conſiderable trade, ſeated on the Coneſtogo Creek, near the river Suſquehannah, 66 miles W. by N. of Philadelphia. Long. 76. 17. W. Lat. 40. 2. N.

LAND (*Encycl.*) The following account of "*A Method of gaining Land from the Sea,*" by the Rev. Henry Bate Dudley, of Bradwell Lodge, in the pariſh of Tillingham, is inſerted in the Tranſactions of the Society for the Encouragement of Arts, Manufactures, and Commerce; who conferred on the ingenious and enterpriſing writer their gold metal.

"A tract of land," ſays Mr. Dudley, "which I incloſed on the ſame line of coaſt within this pariſh about eleven years ago, being already under a profitable courſe of tillage, I was induced to undertake the preſent incloſure as a leſſee of the collegiate eſtate of St. Paul's. The front line of embankment againſt the ſea is nearly one mile in length, and, with the returning banks on each wing to the old wall, forms an incloſure of contents, as expreſſed in the certificate already in your poſſeſſion. The whole of the embankment is compoſed of earth alone, borrowed from the irregular ſalting land in the front, called *chatts*, and taken at the limited diſtance of twelve feet from the baſe of the new work, to leave a ſufficient foreland for its protection. I found, from experience, in my former embankment, that I had not given it a ſufficient angular declenſion in front, for an eaſy aſcent and deſcent of the waves. This error was therefore corrected in the laſt work. I began it on a baſe of thirty-two feet, and wrought it to the height of ſeven feet, leaving it a plane of five feet on the top, and making the land-ſide of the embankment as nearly perpendicular as the ſecurity of the baſe would allow.

"Within, on the land ſide, is cut a ditch, twelve feet wide, five feet deep, and four feet at bottom; the earth from which was thrown into the mound. My former ſea-embankment, in Bradwell pariſh, had nearly given way to the great inundating tide of February, 1792, from this erection of new earth being made on the ſurface. To guard againſt ſimilar danger in the preſent work, a ſpit-deep trench, ſix feet wide, was previouſly cut along the centre of the whole line, on which the mound was to reſt; this, by admitting the new earth into an incorporative adheſion with the baſe ſoil, renders a future ſeparation almoſt impoſſible. Before this, the main rills had been filled and rammed, to give theſe parts equal ſolidity with the reſt.

"The whole operation was performed by a gang of twelve ſea-wallers, with barrows and planks only, at 1l. 10s. the marſh-rod, of twenty feet, and perfectly incloſed in ſeven months: but it muſt be obſerved, that the ſoil, compoſed of rich vegetable matter, is without one particle of ſtone or gravel, and cuts with iron-edged ſcoop-tools, ſo as to load the barrows with great facility. At each end of the front line is laid an out-fall gutter, or ſluice, through the whole embankment, five feet in width, by three feet deep, clear in the run; and another of ſmaller dimenſions in the centre, for diſcharging the land-waters freely to ſea. The conſtruction of theſe aqueducts is too well known to require further deſcription here: probably, however, the little addition given to thoſe erected on this occaſion may be found of ſome uſe. Obſerving it often happen, that, either from accident or deſign, the outward lid of the ſea-ſluices remained open, and admitted the tide to the great injury of the freſh waters within the marſhes, I introduced here a light fly-lid within the centre of each ſluice, which is out of reach, and yields to the ſlighteſt preſſure of the water going out; but ſhuts cloſely againſt that of the tide, when it paſſes inward of the external flap. Theſe ſluices are laid upon as ſolid a foundation as can artificially be made on ſuch ſoils, to prevent the crabs, and other ſea-fiſh, from undermining them, which muſt otherwiſe be the caſe. The frame and flooring are of fir, which lies under water as durable as oak.

"The land thus incloſed is partitioned into four nearly equal parts, by new-cut ditches, twelve feet wide, five deep, and four at the bottom, which, with ſmall interſecting rills, from various parts, give the whole a good drainage of its ſalts, on the fall of heavy rains: and, by a courſe recently made from a diſtant brook, each diviſion of this land is now amply ſupplied with freſh water. Not leſs than 800 South-Down ſheep, and from ſixty to eighty horſes, are almoſt conſtantly grazed, and even winter thereon remarkably well. The eſtabliſhed opinion of the beſt farmers of the country was, that land, thus taken from the ſea, would not grow corn under thirty years at leaſt after their incloſure. But as no experiment had been made, by which this fact could be clearly aſcertained, as ſoon as I had ſhut out the ſea from a part of it, about ſix yards ſquare were immediately dug, and ſown with horſe beans and oats, which, though the ſummer proved very dry, and conſequently unfavourable, produced of each a fair return of ſound good corn; and the laſt harveſt the ſame ſpot being ſown with wheat, yielded an excellent crop. The next ſpring I mean to try it with barley and turnips. My firſt incloſed lands in this pariſh have produced two ſucceeding crops of fine oats, and are now growing to a very promiſing breadth of rape for ſeed.

"It may here be remarked, that the lower oozy parts of the new incloſure, on which no vegetable ever grew before, begin to be coated with various graſſes; and as the ſaline parts die away in other ſpots, for want of their natural moiſture, freſh graſſes replace them, ſo that the whole is now nearly covered with grazing plants of good quality, amongſt which appear the different *clovers*, *treſoil*, and *rye-graſs*, &c. Hence I conclude, but contrary to the general opinion, that though all theſe grew artificially from ſeed ſown, it does not follow of neceſſity that they cannot be produced without. I think that the natural operation of the ſun and air upon certain ſoils will alone effect it; and my experience in lands taken from the ſea confirms very ſtrongly this opinion."

The Rev. J. H. Wright, in a certificate, which accompanies the above account, alleges that the Rev. Henry Bate Dudley had completed an embankment, with all the ſluices and other neceſſary works appertaining thereto, and had thereby effectually obtained 206 acres of land from the ſea, which he had ſubdivided by twelve-feet ditches into four ſpacious marſhes. For other means by which this important object may be effected, ſee EMBANKMENT, *Supp.*

LAND *for Cottagers.* The following extract from an account of the advantages of cottagers renting land, by the earl of Winchilſea, is publiſhed by the Society for bettering the Condition of the Poor.

"Upon my eſtate in the county of Rutland," ſays his lordſhip, "there are from ſeventy to eighty labourers, who keep from one to four cows each. I have always heard that they are hard-working induſtrious men. They manage their land well, and pay their rent very regularly. From what I have ſeen of them I am more and more confirmed in the opi-

nion I have long held, that nothing is ſo beneficial both to them and to the land owners, as their having land to be occupied either for the keeping of cows, or as gardens, according to circumſtances.

" By means of theſe advantages the labourers and their families live better, and are conſequently more fit to endure labour; they are more contented, and more attached to their ſituation, and acquire a ſort of independence, which makes them ſet a higher value upon their character. In the neighbourhood in which I live, men ſo circumſtanced are almoſt always conſidered as the moſt to be depended upon and truſted: the poſſeſſing of a little property certainly gives a ſpur to induſtry; as a proof of this, it has almoſt always happened to me, that when a labourer has obtained a cow, and land ſufficient to maintain her, the firſt thing he has thought of has been, how he could ſave money enough to buy another; and I have almoſt always had applications for more land from thoſe people ſo circumſtanced. There are ſeveral labourers in my neighbourhood, who have got on in that manner, till they now keep two, three, and ſome four cows, and yet are amongſt the hardeſt working men in the country, and the beſt labourers.

" With regard to the profit they make of a cow, thoſe who manage well might, as the prices of the market were two or three years ago, have cleared twenty pence a-week *, or 4*l.* 6*s.* 8*d.* per ann. by each cow; ſuppoſing the rent of the land, levies, expences of hay-making, &c. to coſt them 4*l.* excluſive of houſe-rent. This clear profit, over and above rent, &c. may now be ſet at 2*s.* a-week, or 5*l.* a-year at leaſt; ſo as to make the whole 9*l.* a-year, on a ſuppoſition that all the produce is ſold. Whether, however, this calculation is too low, or how it is, I cannot ſay; but certainly thoſe who have a cow, appear to be (in compariſon with thoſe who have none) much more than 2*s.* per week richer. It may probably be owing to the ſuperior induſtry of thoſe families.—I muſt obſerve, that they keep ſheep during the winter upon their cow paſture, at the rate of two, and in ſome caſes three, at 2*s.* 6*d.* each, for each cow-paſture. This is included in the above eſtimate of profit. The ſkim-milk is alſo valued. Some of them, where the land is not

---

* " The profit of a cow to a family of the deſcription in queſtion, is ſtated by Lord Winchilſea at only 1*s.* 8*d.* a-week; but the value of a cow, ſuppoſing her to give only ſix quarts of milk a-day (which muſt be allowed to be a low average, if the cow be properly kept), will be worth, at a penny a quart, 3*s.* 6*d.* a-week, or 9*l.* 2*s.* a-year; ſetting the profit of the calf againſt the loſs ſuſtained while the cow is dry. Three acres of land, of the quality of 30*s.* an acre, will in general keep a cow in good condition the whole year, by admitting about an acre to be parted off, for mowing in the ſummer, to furniſh a little hay for the winter: to this rent muſt be added, for tithes and parochial rates, perhaps, 14*s.* more, making the whole charge 4*l.* 4*s.* which is not half the value of the produce; and if a further allowance be made for the labour attending the object, there will ſtill be left at leaſt 30 per cent profit; and in every other article of a cottager's conſumption, he is obliged to purchaſe at 30 per cent loſs. But, when it is conſidered that milk is the natural food for children, that it is of a nutritious quality, and that, where there is a cow, a pig is generally an appendant to her, the advantage is ineſtimable." Mr. Kent (who makes the foregoing remarks) has been for many years ſo impreſſed with the propriety and good policy of this plan, that he has never failed of giving it all the encouragement he poſſibly could; and flatters himſelf, that, in the different eſtates which he has had the regulation of, with the aſſiſtance of his partners, Meſſrs. Claridge and Pearce, they have been inſtrumental in eſtabliſhing a great deal of real comfort; but no-where upon ſo extenſive a ſcale, as in the courſe of the laſt year, upon the great property of the Earl of Egremont in Yorkſhire. His lordſhip, who is conſidered not only as one of the moſt liberal encouragers of all rational experiments in agriculture, but a ſteady friend to the working farmer and induſtrious labourer, gave them, on this occaſion, *carte blanche*; and their feelings were highly gratified, in being able to accommodate a conſiderable number of men, of the deſcription in queſtion, with the means of ſupporting their families, in a much more comfortable manner, than they were before enabled to do. This ſeems to be the true and beſt exerciſe of power; and when it is further conſidered, that much good may often be done, merely by parting off a few acres from a large farm, or by breaking up one farm out of twenty, which may frequently be done, without injury to any perſon, it is rather a matter of ſurpriſe, that this thing is not oftener done than it is! But though the before-mentioned plan is confeſſedly good, it is very often defeated for want of capital in the cottager, which has induced him to recommend another ſcheme for keeping cows for them, in his opinion, preferable to the former, as it may have a more general tendency to improvement, and does not require any capital, nor is attended with any riſk. The hint is taken from the weſtern dairies. In moſt parts of Wiltſhire and Dorſetſhire, there are few farmers but what let off a dairy, upon the following plan:—The farmer finds, keeps, and renews a certain number of cows to a ſub-tenant, at a fixed price, generally from five to ſix pounds a cow yearly, allowing the calf into the bargain. The management of the dairy is done by the ſub-tenant.—Why ſhould not every farmer, in a leſs degree, accommodate ſuch of his labourers as have a family of children in the ſame way? There is no farmer, but has ſome land better adapted for cows than for any other ſtock; there is no farmer, but keeps two or three cows for his own family.—Why ſhould he not keep one or two in addition for his labourers? The wife or daughter of the labourer would milk them, without being attended with any inconvenience. The farmer would run no riſk, as the rent of the cow might be ſtopped out of the labourer's weekly pay. No loſs could be ſuſtained, as he could not make a better return from any other ſtock than this. The power of doing good in this way, without loſing any thing by it, is offered to every farmer; and the great objection to cottagers keeping cows, namely, that of their injuring the farmers' fences by running in the lanes, is, by this mode of letting, done away. As to the allowance that ſhould be made, we would propoſe that it ſhould be 2*s.* a-week, the year round, beſides the farmer's retaining the calf. This would certainly be better for a poor man, than even renting land; for, as was obſerved before, no money would be requiſite in the firſt inſtance.—The milk of the cow would be more certain, by her being more regularly kept, and having greater ſcope and change of food; and no time in mowing and making hay for her, would be loſt by the labourer. The public is indebted to Mr. Kent for a valuable work, entitled, " Hints to Gentlemen of landed Property;" in which, above twenty years ago, he pointed out the diſadvantages to which cottagers are ſubject in the purchaſe of all the neceſſary articles of life, the want of proper habitations for them, and the expediency, not to ſay neceſſity, of gentlemen of fortune paying more attention to the ſituation of the labourers, who work on their eſtates.—See p. 228 of Mr. Kent's book to the end.

good, do not pay ſo much. I put down 4*l.* ſuppoſing the land * tolerably good; and it is certainly more advantageous to them to occupy good land at a high rent, than poor land at a low one. They all agree, that two cows are more than twice as profitable as one: particularly where the ſuckling of calves is the ſyſtem purſued. The generality of the people near me ſuckle calves; ſome make butter, and a few make cheeſe; ſome buy the ſupernumerary lambs of the farmers, and rear them by hand; and where they have more than one or two cow-gates, ſtock with ſheep at the rate, in ſummer, of three for a cow-gait. Thoſe who have families, and only one cow, generally make butter for the ſake of having ſkim-milk for their children, which is an article rarely to be obtained by the poor. When a labourer has the offer of a cow-gait, and land for winter proviſion, and has not money enough to purchaſe a cow, he generally applies to his employer, who will, in all probability, advance him ſome money; and the inhabitants of the pariſh, if the man has a good character, frequently ſubſcribe to ſet him up, from charitable motives, and from a perſuaſion that by this means his family will never want relief from the pariſh: and this is ſo much the caſe, that when a labourer dies, and his ſon takes his land and ſtock, he in ſome caſes maintains the widow †. I know of ſeveral inſtances of labourers' widows, now paſt work, who are maintained by their ſons, but could not otherwiſe have lived without pariſh relief.

"When a poor man's cow dies, it is certainly a great diſtreſs; and ſometimes the owner is obliged to aſk aſſiſtance to replace her. Somehow or other, they always contrive to get one; as I ſcarcely ever knew a cow-gait given up for want of ability to obtain a cow, except in the caſe of old and infirm women, who are left without children: for they cannot, without ſome aſſiſtance, live upon the profits of a cow, nor can they manage it properly. Should a caſe of this ſort occur, the pariſh officers would act very unwiſely in refuſing aſſiſtance, as a very trifling allowance, together with the cow, would enable a woman to live; whereas, by refuſing any aſſiſtance, they oblige the woman to part with her cow, and then ſhe muſt have her whole ſubſiſtence from them."

To what is here ſaid on a ſubject which we have alſo urged under the articles COTTAGER and COW (*Supp.*), the following obſervations are annexed.

"When a labourer is poſſeſſed of cattle, his children are taught early in life the neceſſity of taking care of them, and acquire ſome knowledge of their treatment; and, if he has a garden, they learn to dig and weed, and their time is employed in uſeful induſtry, by which means they are more likely to acquire honeſt and induſtrious habits, than thoſe who are bred up in the poverty and lazineſs which we too often ſee; for I believe it is a certain fact, that extreme poverty begets idleneſs.

"In the neighbourhood of large towns, and in countries where there is hardly any thing but arable land, the value of graſs land is too great to allow of labourers renting it with advantage ‡; a garden, however, may be allotted to them in almoſt every ſituation, and will be found of infinite uſe to them. In countries, where it has never been the cuſtom for labourers to keep cows, it may be difficult to introduce it; but where no gardens have been annexed to the cottages, it is ſufficient to give the ground, and the labourer is ſure to

---

* The quantity of land, which is let for the ſupport of a cow in this county, varies much according to the goodneſs of the land. In one pariſh, the cow-paſture, which contains 114 acres, feeds during the ſummer 100 cows; in another it contains forty-two acres, and feeds ſeventeen cows; in another thirty-five acres, and feeds twenty-five cows. The price varies much; but, in general, the cottager can afford to pay as much as the farmer can, or, in my opinion, ought. In another pariſh there is no cow-paſture; but the cottagers have incloſed land, ſome having fields to themſelves, others uniting, and grazing, and manuring two fields alternately: the rents in all theſe caſes varying according to the quality of the land, the quantity aſſigned to them, and the time when they were firſt let. The cottagers, whoſe cows have the run of a cow-paſture, have ſmall fields for hay: theſe alſo vary much in quantity and quality, and conſequently in price. Where the quantity of land is more than is requiſite for their cow, or cows, they keep ſheep of their own, or let the paſturage to a butcher. Where there is no meadow land, which is the caſe in one pariſh near me, they have fields of about ſix acres of ploughing ground, where they raiſe winter proviſion for the cow.—The rent of the new-built cottages is from 20*s.* to 30*s.* for the houſe, and 5*s.* for the garden, which is about a rood of land, and frequently not ſo much.

† In the pariſh of Burley, and the two adjoining pariſhes of Hambledon and Egleton, where there are a great number of labourers who keep cows, the rate collected for the relief of the poor laſt year did not on an average amount to 6*d.* in the pound. No rents are better or more regularly paid on my eſtate, than thoſe for the cottagers' land. There has not been, for ſeveral years back, any arrear of them.—In theſe pariſhes there are ſeveral labourers with very large families, and ſeveral aged perſons paſt work, who muſt have had relief from the pariſh if they had not cows: they do not receive any parochial aid; the ſums raiſed for the relief of the poor, in thoſe pariſhes, being for thoſe who, from various circumſtances, are not poſſeſſed of cows. The lowneſs of the rates, in theſe inſtances, may therefore be fairly imputed to the cuſtom of letting land to labourers.—With regard to the amount of the poor's-rate, the beſt way to judge of the management of the poor, is to aſcertain the number of inhabitants, and the annual ſum raiſed for the poor: this will ſhew what proportion of theſe perſons can maintain themſelves, and what are paupers. The following is an account of the number of inhabitants, and of the ſums raiſed for the poor, and alſo of the amount of the poor's-rate per pound, in theſe three pariſhes, from Eaſter, 1796, to Eaſter, 1797.

	Number of inhabitants.	Sums raiſed for the poor.	Amount in the pound.
Burley -	225	38 12 1	3½*d.*
Egleton -	144	15 11 5	4¾*d.*
Hambledon -	335	74 16 6	6¼*d.*
	740	129 0 0	

‡ As land cultivated as a garden will produce a greater quantity of food for man than in any other way, and as four fifths of the labour beſtowed upon their gardens will be done by the labourers at extra hours, and when they and their children would otherwiſe be unemployed, it may not be too much to ſay, that 100,000 acres, allotted to cottagers as garden ground, will give a produce equal to what 150,000 acres cultivated in the ordinary way would give; and that, without occupying more of the time they would otherwiſe give to the farmers who employ them, than the cultivation of 20,000 acres would require.

know what to do with it, and will reap an immediate benefit from it. Of this I have had experience in ſeveral places, particularly in two pariſhes near Newport Pagnell, Bucks, where there never had been any gardens annexed to the labourers' houſes, and where, upon land being allotted to them, they all, without a ſingle exception, have cultivated their gardens extremely well, and profeſs receiving the greateſt benefit from them.

"Thoſe very ſmall ſpots of a few ſquare yards, which we ſometimes ſee near cottages, I can hardly call gardens: I think there ſhould be as much as will produce all the garden ſtuff that the family conſumes, and enough for a pig with the addition of a little meal. I think they ought to pay the ſame rent that a farmer would pay for the land, and no more. I am perſuaded that it frequently happens, that a labourer lives in a houſe at 20*s.* or 30*s.* a-year, which he is unable to pay, to which, if a garden of a rood was added, for which he would have to pay 5*s.* or 10*s.* a-year more, that he would be enabled, by the profit he would derive from the garden, to pay the rent of the houſe, &c. with great advantage to himſelf.

"Whoever travels through the midland counties, and will take the trouble of enquiring, will generally receive for anſwer, that formerly there were a great many cottagers who kept cows, but that the land is now thrown to the farmers; and if he enquires ſtill further, he will find, that, in thoſe pariſhes, the poor's-rates * have increaſed in an amazing degree, more than according to the average riſe throughout England. It is to be hoped, that as the quantity of land required for gardens is very ſmall, it will not excite the jealouſy of the farmers."

That exemplary, and truly benevolent prelate, the biſhop of Durham, has alſo given an account of three cottagers keeping cows, and renting land in Rutlandſhire.

"Among the cottagers," ſays the biſhop, "on Lord Winchilſea's eſtate in the county of Rutland, which I have very lately viſited, I have ſelected for the ſociety three examples of the benefit of cottagers renting land. They are as follows:

1. "A day labourer, his wife, and eight ſmall children.

2. "An old man of fourſcore, and his wife of nearly the ſame age.

3. "The firſt and ſecond of theſe families have each two cows, and the old ſingle woman has one cow, with land to keep them on. They have each of them gardens. With this benefit, and that of his labour, the day labourer has bred up ten children, two of which are put out to ſervice; and he is now maintaining himſelf, his wife, and his other eight children, without any call for parochial relief. The two old people cannot make any thing of their labour; but yet, with the benefit of their cow and garden, and the exertions which theſe call forth, and with a little occaſional aſſiſtance that the old man and his wife receive from their ſon, and which the other old woman has from her younger neighbours, they all appear to enjoy much more comfort than old age in general poſſeſſes. They ſatisfied me that, but for the cow and the garden, they could not have ſubſiſted without parochial relief.

"I have ſelected theſe three examples, from many ſimilar ones on the ſame eſtate, in proof of the utility of the meaſures, which Lord Winchilſea has adopted for the benefit of his cottagers. There are two circumſtances which I learnt upon enquiry, and which I think will ſhew that the benefit I have ſtated, was not local or partial, but diffuſed over his eſtate; one, that the rate collected for the relief of the poor, in his three pariſhes is not ſo much, on an average, as an annual ſix-pence in the pound; the other, that his cottagers' rents (for their cottages and little cloſes of ground) are, of all his rents, the earlieſt and beſt paid; and that there has been no arrear of them for ſeveral years.

"There was an air of content and gratitude marked in the countenances, and expreſſed in the language of all the cottagers, that convinced me that what had been done for them by their landlord, had not only made them more happy, and improved their means of ſubſiſtence, but that it had produced very beneficial effects on the heart and the morals. The advantages, however, are not confined to the poor man and his family; they extend to the pariſh, and prevent its being burthened with a heavy poor's-rate; and to the community at large, on account of the children of the lower claſſes of the people being educated in habits of induſtry and good order; and having, at an early age, a ſpirit and energy infuſed into them by the examples of their parents; which teach them that their beſt and ſureſt dependence, in future life, will be on their own exertions and good conduct for the maintenance and welfare of themſelves and their families."

LANDAU, a town of Germany, in the circle of Upper Rhine, 12 miles N. of Waldeck, and 34 S.S.E. of Paderborn.

LANDAU, a town of Lower Bavaria, ſituate on the Iſer, 32 miles W. of Paſſau. Long. 12. 41. E. Lat. 48. 32. N.

LANDERON, a town of Switzerland, in the principality of Neufchatel. In 1707 this town refuſed to acknowledge the King of Pruſſia for ſovereign, and was reduced by force of arms. It is ſituate at the S.W. extremity of the lake of Bienne, ſeven miles N.E. of Neufchatel, and nine S.W. of Bienne.

LANDES, a department of France, including the late territory of Marſan. It takes its name from a diſtrict called Landes, extending along the coaſt of the bay of Biſcay. It is a barren ſandy country, covered with fern, pines, and the holm-tree, of the bark of which corks are made. Mount-de-Marſan is the capital of this department, and Dax the epiſcopal ſee.

LANDRIANO, a town of Italy, in the Milaneſe, 11 miles S.S.E. of Milan.

LANDSBERG, a town of Bavaria, near the river Lech, 23 miles S. of Augſburg.

LAND'S-END, a promontory of Cornwall, the moſt weſterly point of Great Britain, and a vaſt aggregate of moorſtone. Long. 5 40. W. Lat 50. 6. N.

LANDSCHUT, a town of Sileſia, in the duchy of Schweidnitz. It has a flouriſhing linen trade, and is ſeated on the Zelder, 12 miles W. of Schweidnitz.

LANDSCHUT, a town of Lower Bavaria, with a ſtrong caſtle, on an adjacent hill. It is ſeated on the Iſer, 35 miles N.E. of Munich. Long. 12. 10. E. Lat. 48. 30. N.

---

* In the Dillorn incloſure act, paſſed in 1781, there is a clauſe for ſecuring to cottagers, in fee-ſimple, houſes built by them upon the waſte, with the gardens belonging to them, and alſo for ſecuring to them an eſtate for one, two, or three lives, in the incloſures previouſly made by them on the waſte, not exceeding two acres. This clauſe was ſuggeſted by a principal proprietor, Mr. Holliday of Lincoln's-Inn, from whom we learn, that the cuſtom of joiſting the cottager's cow is prevalent in that pariſh; and the rent is uſually made up out of the extra wages during harveſt. Mr. Holliday has declared that, during the ſixteen years that have paſſed ſince the incloſure, there has been hardly any inſtance of a cottager, who kept a cow, ſtanding in need of, or ſeeking relief from the pariſh.

LANDSCHUT, a town of Moravia, ſeated on the Morava, on the confines of Hungary and Auſtria.

LANERK, a borough in Lanerkſhire, ſeated on the Clyde, 20 miles S.E. of Glaſgow. Long. 3. 49. W. Lat. 55. 40. N.

LANGANICO, the ancient Olympia, a town of Turkey in Europe, ſituate on the ſmall river Carbon, the ancient Alpheus. Here anciently the famous Olympian games were celebrated. It is 32 miles S.S.E. of Chiarenza, and 60 S.W. of Corinth.

LANGEAC, a town of France, in the department of Cantal, ſeated near the Allier, among mountains, 17 miles E. of St. Flour. Long. 3. 35. E. Lat. 45. 5. N.

LANGENTHAL, a town of Switzerland, in the canton of Berne. Here are three great annual fairs, at which great quantities of linen, as alſo cattle, cheeſe, and grain, are ſold. Near the town are ſome medicinal ſprings. It is 10 miles E. of Soleure, and 18 N E. of Berne.

LANGOGNE, a town of France, in the department of Lozere, 21 miles N.E. of Mende, and 33. W. of Privas. Long. 3. 45 E. Lat. 44. 44. N.

LANGON, a town of France, in the department of Gironde. It is noted for excellent wine, and ſeated on the Garonne, 15 miles N. of Bazas. Long. 0. 10. W. Lat. 44. 33. N.

LANGPORT, a town in Somerſetſhire, with a market on Saturday. It is ſeated on a hill, by the river Parret, which is navigable for barges to Bridgewater. It is 10 miles S.E. of Bridgewater, and 128 W. by S. of London. Long. 3. 0. W. Lat. 51. 0. N.

LANGUAGE (*Encycl.*). It appears to be not without the moſt powerful reaſons, that a general cuſtom of a great part of Europe has devoted a conſiderable portion of the time allotted to education to the ſtudy of languages; for, beſides the convenience and pleaſure of being enabled to comprehend and appropriate, without difficulty, the ideas of writers of various nations in their original purity, it is impoſſible to learn a language without gaining a variety of other knowledge connected with that of words; without learning to make logical and metaphyſical diſtinctions on the moſt ſubſtantial grounds; and without acquiring a taſte for the beauties, and ſenſibility to the perfections, of the works of genius, which muſt neceſſarily be ſtudied in order to attain a familiarity with that language. Unfortunately, indeed, men are too prone to miſtake the means for the end, and to devote ſuch a degree of attention to the form of expreſſion, as is only due to the beauty or deformity of the ſenſe; and that pedantry, which always accompanies a little mind, has been moſt conſpicuouſly exhibited in verbal ſcholars. But there is a point of view in which every language may be conſidered, which renders it an object highly worthy the attention of a philoſophical obſerver. The different character of each language, their general derivation, dependence, and connection; the progreſs of the primitive expreſſion of an idea through different forms and modifications; the various metaphyſical relations which are more or leſs openly expreſſed or implied in a ſentence; and other hiſtorical and critical enquiries of this kind, ſtill leave a wide field of reſearch open to thoſe who are diſpoſed to cultivate it. Conſiderable progreſs has already been made by M. Court de Gebelin, Profeſſor Buettner, Mr. Horne Tooke, and Profeſſor Hunter; and two other gentlemen might be named who promiſe to add much to our knowledge of the affinity of languages in general; and it is to be hoped, that ſucceſſive attempts will extend our views of the ſubject as far as our means of information will allow. A perfect language ſhould be capable of expreſſing every poſſible idea, and combination of ideas, accurately and conciſely: but if we compare any exiſting language with this model, we ſhall find great imperfections in both theſe reſpects; but more particularly in point of conciſeneſs; for inaccuracy is generally precluded by a diſproportionate prolixity. The ſame teſt will apply to the delineation of a language by written characters; and here we have the greateſt reaſon to complain, in moſt languages, of innumerable inaccuracies. No man of cool judgment would attempt to introduce a general philoſophical language into common uſe; for when a country is once enlightened and civilized, its language, in all eſſential points, is unalterably fixed; and no literary authority is powerful enough to increaſe or diminiſh it, excepting technical terms, by a ſingle word; as, on the other hand, it is equally vain for the pedantry of faſhionable fools to endeavour to give currency, in elegant converſation, to ſuch terms, for words they are not, as a quiz, a gig, a bore, and a row. But it may be worth while to attempt a comparative view of the degrees in which various languages approach to the ſtandard of perfection in point of conciſeneſs; and it is remarkable, that the Engliſh ſeems to be the leaſt objectionable of all in this reſpect; unleſs perhaps the Hebrew, conſidered without points, may be reckoned more ſimple. For, in fact, the immenſe maſs of concordances, declenſions, conjugations, and inflections, with which the memory and patience of many a poor ſchool-boy is overpowered, is entirely compoſed of ſo many pleonaſms, which add nothing to the ſenſe but an unneceſſary repetition of an unimportant idea; although, like many other amiable weakneſſes, they are admired as elegancies; eſpecially, when by the capricious inverſions of the poets, they are rendered, in ſome degree, ſubſervient to perſpicuity. "The ſcorching ſun," in Engliſh, is equally expreſſive with the correſponding expreſſion in Greek, Latin, Italian, or French, where the idea of the maſculine gender is not only unneceſſarily, but falſely added to each of two or more words; or, in German, where the feminine gender is, with equal impropriety, applied as often. In ſpeaking of "a handſome girl," the idea of the female ſex is repeated in moſt languages; in German that of neutrality is added, with the ſame impropriety as frequently occurs in Greek and Latin. But the German, by ſometimes omitting, and ſometimes repeating the ideas of gender and caſe implied in the termination, render their language exceedingly complicated; for when ſeveral adjectives come together, they ſometimes add the form of caſe and gender to each; and ſometimes make the firſt the only echo, leaving the remainder in a kind of indifferent ſtate with reſpect to both. The conjugations of verbs, as far as they expreſs perſon and number, add no new limitation to the ſenſe; and the Engliſh auxiliaries define the time of an action with far more accuracy than the more complicated temporal terminations in other languages. Not but that the Engliſh have pleonaſms in this reſpect too; "he give" would be as intelligible as "he gave;" and "you loves I," and "I loves you," inelegant as they appear, are yet more truly logical than the received expreſſions. But as it is impoſſible to accommodate actual language to rules perfectly analogical, all theſe defects muſt, in practice, be tolerated; although it is abſolutely neceſſary to pay regard to them in every metaphyſical analyſis of the nature and conſtruction of languages. The imperfections of written characters are productive of more ſerious inconvenience, as they greatly and unneceſſarily increaſe to foreigners the difficulty of learning any modern language. The leaſt imperfectly delineated language is, perhaps, the Italian; next the Spaniſh; then the German; the French; and, laſt of all, the Engliſh; which is more irregular in its orthoepy, than, perhaps, any other language that ever exiſted. There is reaſon to ſuppoſe that

the Greeks and Romans deviated but little from an uniform pronunciation of ſimilar characters. The evil is, perhaps, too inveterate to admit a radical cure; not ſo much from any eſſential difficulty, as from the inconveniences of a change; but certainly ſome very conſiderable palliatives have lately been adminiſtered; and it is to be hoped, that when the formation of articulate ſounds ſhall have been more attentively examined, it may be, in great meaſure, practicable to deſcribe the ſound of every word with perfect accuracy.

Another ſuperfluity in many languages is the uſe of a *ſubjunctive mood*, which is conceived to ſignify a kind of contingency that ſtill requires an auxiliary particle to define it. It is certain, that no rule has ever yet been laid down which will ſufficiently limit every caſe of its application; and for a very obvious reaſon, that the beſt authors have never been perfectly conſiſtent in their uſe of the moods. But it is preſumed, that a rule may be given which approaches very nearly to the practice of correct writers; and which may, in every caſe, be followed with perfect ſafety and elegance. It is, to conſider it ſimply as a future tenſe following a conditional particle. A few examples will make this rule more intelligible than a prolix explanation would do. 'If the Elbe "is" now open, we ſhall ſoon have the mails; and then, if there "be" any news from the army, I will ſend it you immediately.' 'If Catiline "was" generous, it was in order to ſerve his ambition.' 'If it "were" not certain that ſome men of good ſenſe maintain the nineteenth century to have commenced, it would appear utterly incredible that ſo ſimple a queſtion could admit of diſpute,' &c.

LANJAN, or LANCHANG, a city, and the capital of the kingdom of Laos, at leaſt of the ſouthern part, to which it gives name. It is the uſual reſidence of the king, whoſe palace is of vaſt extent. The houſes of the grandees and perſons of condition are lofty and elegant; but thoſe of the inferior people are no better than huts. The prieſts alone have the privilege of building their houſes and convents with brick and ſtone. Lanjan is ſituate on the W. ſide of the river Mecon, 400 miles N.N.W. of Cambodia. Long. 101. 38. E. Lat. 18. 30. N.

LANION, a town of France, in the department of the North Coaſt. Its trade conſiſts in wine and hemp, and it has ſome mineral waters. The inhabitants of Lanion, Guingamp, and the environs, ſpeak the Welſh language, which was probably brought hither by the Britons, who took refuge in theſe parts, in the fifth century. Lanion is 15 miles W. of Treguier.

LANNOY, a town of France, in the department of the North, five miles S.E. of Liſle.

LANSINBURGH, a town in the ſtate of New York, formerly called the New City. It ſtands on the eaſt ſide of Hudſon's River, oppoſite the ſouth branch of Mohawk River, nine miles N. of Albany.

LANZO, a town of Piedmont, on the river Sture, 12 miles N.W. of Turin. Long. 7. 28. E. Lat. 45. 9. N.

LAPELA, a town of Portugal, in Entre Douero e Minho, ſeated on the Minho, 13 miles E. of Valenzo do Minho.

LAR, a town of Perſia, in the province of Lariſtan, with a caſtle. It carries on a great trade in ſilk. Long. 52. 45. E. Lat. 27. 30. N.

LARACHA, a ſtrong town in the kingdom of Fez, ſeated at the mouth of a river of the ſame name, with a good harbour. It was once in poſſeſſion of the Spaniards, but the Moors took it from them. Long. 5. 59. W. Lat. 35. 40. S.

LARGENTIERE, a town of France, in the department of Ardeche, 18 miles S.W. of Privas. Long. 5. 11. E. Lat. 44. 32. N.

LARGO, a town of Scotland, in Fifeſhire, ſituate on the north coaſt of the frith of Forth, in a large bay to which it give name. It is ſix miles S. of Cupar.

LARISTAN, a province of Perſia, which lies N. of the gulf of Perſia. It abounds in oranges, lemons, and very large tamarinds. Lar is the capital.

LARNE, a town of Ireland, in the county of Antrim, ſituate at the mouth of a river of the ſame name, eight miles N. of Carrickfergus, and 16 N.E. of Antrim. Long. 5. 43. W. Lat. 54. 51. N.

LARNIO, a ſea-port on the S. coaſt of Cyprus, the ſee of a Greek biſhop, and the reſidence of ſeveral European conſuls. It is 30 miles S.W. of Famagoſta.

LARVIGEN, or LAURWIGEN, a ſea-port of Norway, capital of a county to which it gives name. It is a place of conſiderable trade, and its iron-works are eſteemed among the moſt valuable in Norway. It is 55 miles S.S.W. of Chriſtiania. Long. 10. 15. E. Lat. 59. 3. N.

LASNEBOURG, a town of Savoy, in the county of Maurienne, on the Arc, at the foot of Mount Cenis, the paſſage of which is the principal ſupport of the inhabitants. The ſun is hidden from the inhabitants of this town by the mountain during two months of the year: 20 miles N.N.W. of Suſa, and 23 miles E. of St. Jean-de-Maurienne.

LASSA, or LHASSA, the capital of the country of Great Thibet, in Aſia. It is not a large city; but the houſes are of ſtone, and are ſpacious and lofty. About ſeven miles on the eaſt ſide of the city, is the mountain of Putala, which contains on its ſummit the palace of the grand lama, the high-prieſt and ſovereign of Thibet. Laſſa is 24 miles N.E. of the croſſing place of the river Sanpoo, which is ſeven miles from the foot of Mount Kambala; and it is 850 miles N. by E. of Calcutta. Long. 91. 40. E. Lat. 30. 34. N.

LATACUNGA, a town of South America, and principal place of a juriſdiction of the ſame name, in the audience of Quito, containing 10,000 inhabitants. This town was deſtroyed by an earthquake in the year 1698, and great numbers of the inhabitants were buried in the ruins: 50 miles S. of Quito.

LATAKIA, formerly LAODICEA, an ancient and conſiderable town of Aſia, in Syria, with a harbour, biſhop's ſee, and beautiful remains of antiquity. It is become the moſt flouriſhing place on the coaſt, and is 75 miles S.W. of Aleppo, and 245 N. of Jeruſalem. Long. 34. 30. E. Lat. 35. 40. N.

LATTON, a village in Eſſex, between Epping and Harlow. It had once a priory of Auguſtine monks, whoſe church, now uſed for a barn, ſtands about three miles S. of the pariſh church. Latton is about 21 miles N. by W. of London.

LAVAL, a conſiderable town of France, in the department of Maine and late province of the ſame name. It has been recently erected into a biſhopric, ſuffragan to Rennes. The inhabitants are computed at 24,000. Linen of all kinds and qualities is manufactured here; and the neighbouring quarries produce green-marble, or black, veined with white. It has two caſtles, and is ſeated on the river Maine, 15 miles S. of the town of that name, and 40 W. of Mans. Long. 0. 42. W. Lat. 48. 7. N.

LAVAMUND, or LAVANT MINDF, a town of Germany, in Carinthia, with a caſtle, and a biſhop's ſee. It belongs to the archbiſhop of Saltzburg, and is ſeated on the river Drave, 40 miles E. of Clagenfurt. Long. 15. 18. E. Lat. 46. 44. N.

LAVAUR, a town of France, in the department of Tarn and late province of Languedoc. Before the revolution it was a biſhop's ſee; and it is ſeated on the river Agout, 20 miles N.E. of Toulouſe. Long. 1. 52. E. Lat. 43. 40. N.

LAUBACH, a handſome and ſtrong town of Germany, in Carniola, with a biſhop's ſee, and a caſtle. It is ſeated on a

river of the ſame name, in which are the largeſt crawfiſh in Europe, 32 miles S. of Clagenfurt, and 155 S. by W. of Vienna. Long. 14. 25. E. Lat. 46. 24. N.

LAUDA, a town of Germany, in the biſhopric of Wurtzburg, 18 miles S.W. of Wurtzburg. Long. 9. 45. E. Lat. 49. 28. N.

LAUDER, a borough of Scotland, in Berwickſhire; a ſmall town, but lately much improved. Near it, is Lauder Caſtle, 22 miles S. of Edinburgh. Long. 3. 5. W. Lat. 55. 36. N.

LAVELLO, an ancient town of the kingdom of Naples, with a biſhop's ſee; 30 miles E. by N. of Naples. Long. 15. 55. E. Lat. 41. 5. N.

LAVELT, or LAFELT, a village in the biſhopric of Liege, near Maeſtricht, remarkable for a battle gained here by the French in 1747.

LAUENSTEIN, a town of Upper Saxony, on the margravate of Meiſſen, 18 miles S. of Dreſden. Long. 13. 45. E. Lat. 51. 42. N.

LAUFFEN, a town of Germany, in the duchy of Wirtemburg, ſeated on the Neckar, 10 miles S. of Hailbron. Long. 9. 25. E. Lat. 49. 3. N.

LAUFFEN, a town of Switzerland, in the canton of Baſle, ſeated near the river Birs, 12 miles S.W. of Baſle.

LAUFFEN, a village of Switzerland, in the canton of Zuric, three miles S. by W. of Schauffhauſen. Here is a celebrated cataract of the Rhine; the perpendicular height of which is 50 or 60 feet, and the breadth 300.

LAUFFENBURG, a ſtrong town of Suabia, and one of the four Foreſt-Towns, with a ruined caſtle. It belongs to the houſe of Auſtria, and is ſeated on a rock, on the Rhine, which divides it in two parts. Here is a ſmall cataract, noted for the beauty of the ſcenery. It is 17 miles E. of Baſil. Long. 8. 2. E. Lat. 47. 35. N.

LAUGHTON, a village in the W. riding of Yorkſhire, on a high hill, ſix miles E.S.E. of Rotherham. It is noted for its church, whoſe tower and ſpire are not excelled by any Gothic piece of the kind; and it is ſeen, in ſome places, at the diſtance of 60 miles.

LAVIGNA, a town of Italy, in the territory of Genoa, at the mouth of a river of the ſame name, eight miles from Rapallo.

LAUINGEN, a town of Suabia, formerly imperial, but now ſubject to the duke of Neuberg. It is ſeated on the Danube, 32 miles N.W. of Augſburg. Long. 10. 25. E. Lat. 48. 38. N.

LAUNU, a town of Bohemia, near the river Eger, 27 miles N.W. of Prague. Long. 14. 20. E. Lat. 50. 21. N.

LAUREATE (*Encycl.*). Degrees in grammar, which included rhetoric and verſification, having been anciently conferred in our univerſities, that circumſtance has occaſioned much confuſion, and has led ſome writers too haſtily to ſuppoſe that perſons were inveſted with the office of poet laureat, who, in truth, had no claim to it. A wreath of laurel being preſented to the new graduate on taking his degree, he was afterwards frequently ſtyled *poeta laureatus*; and this ſcholaſtic laureation certainly gave riſe to the appellation by which the court poet was diſtinguiſhed. The king's poet laureat, therefore, ſtrictly ſpeaking, is only a graduate rhetorician, employed in the ſervice of the king.

On this ſubject, Fuller (in his Worthies of England, c. x. p. 27.) makes the following obſervation: "As for our Engliſh poets, ſome have aſſumed unto themſelves the title of *laureat*, as John Kay, in his dedication of The Siege of Rhodes to King Edward the Fourth, ſubſcribing himſelf *his humble poet laureat*. Others have, in compliment, given the title to ſuch perſons as were eminent in that faculty; and nothing is more uſual than to ſee their pictures before their books, and ſtatues on their tombs, ornamented accordingly. However, all this is done by civil courteſy, or common cuſtom; no ceremonious creation in court or univerſity."

So early as the thirteenth century, *Henry d'Avranches*, a Frenchman (*Henricus Abrincenſis*), was entertained by our Henry III. as a poet attached to his court; and under the title of "Maſter Henry the verſifier" received from that monarch an annual ſtipend, which ſeems to have been ten pounds a-year.

In the 36th year of the ſame king's reign (1252), forty ſhillings a-year and a pipe of wine were granted to *Rickard*, the king's harper; which perhaps gave riſe, at a ſubſequent period, to a ſimilar bounty to the poet laureat.

Gulielmus Peregrinus, who compoſed a poem on the cruſade of Richard I. appears to have been the royal poet of that time; and *Robert Baſton*, whom Ball calls *poeta Oxonii laureatus*, and whom Edward II. carried with him to the ſiege of Stirling-caſtle, to record his Scottiſh exploits in verſe, may be conſidered as exerciſing the ſame office under that monarch. Of theſe verſifiers, as they were then called, the compoſitions produced in their character of poets laureat were in Latin.

Chaucer, perhaps, in the time of Edward III. and Richard II. as a poet, and as receiving a royal penſion, not without a due allowance of ſack; and in the time of Henry IV. *Henry Scogan*, maſter of arts, who, if we may credit Ben Jonſon, made diſguiſes for the king's ſons, and wrote in fine tinkling rhyme and *ſtowand verſe*; may with ſufficient propriety be enrolled in the ſame tuneful and honourable band: yet neither theſe poets nor *Gower*, though two of them were afterwards enumerated in Dryden's patent, as having worn the laurel, were ever regularly and expreſsly appointed to this office*; nor does the title of *poet laureat* occur earlier than the time of Edward IV., to whom Jon Kay (Caius), about the year 1470, dedicating a proſe tranſlation of a Latin hiſtory of the Siege of Rhodes, ſtyles himſelf *lys humble poete lauriate*. None of his poetry, however, either in Latin or Engliſh, is known to be extant.

Andrew Bernard, a Frenchman, and an Auguſtine monk, who was blind, was ſucceſſively poet laureat and hiſtoriographer to Henry VII. and Henry VIII. and was living in 1522.

In 1489, *John Skelton* was laureated as a rhetorician at Oxford, and a few years afterwards was permitted to wear the laurel publicly at Cambridge. Previouſly to which he had been honoured by Henry VII. with a grant to wear either ſome peculiar dreſs, or ſome additional ornament on his ordi-

* Fuller (Worthies, ubi ſup.) aſſerts, that till the time of his writing (about 1660), there was no regular appointment of a poet laureat. "There want not thoſe," he obſerves, "who do confidently aver that there is always a laureat poet in England, and but one at a time; the laurel importing conqueſt and ſovereignty; and ſo, by conſequence, ſoleneſs in that faculty; and that there hath been a conſtant ſucceſſion of them at court, who, beſide their ſalary from the king, were yearly to have a tun of wine, as very eſſential to the heightening of fancy." This laſt is founded on what we find given to Geoffery Chaucer, *Vigeſimo ſecundo anno Richardi ſecundi conceſſum Galfrido Chaucer unum dolium vini per annum durante vitâ in portu civitatis London, per manus capitâlis pincernæ noſtri.* But Chaucer, beſides his poetical accompliſhments, did the king ſervice both in war and peace, as ſoldier and ambaſſador, in reward whereof, this and many other boons were beſtowed on him.

nary apparel. That he was poet laureat to Henry VIII. may be presumed from the titles of some of his works, but there is not sufficient proof of his ever having received an annual salary, which is a criterion for forming a conjecture, at least, concerning the possession of the office, for none of the persons who may be considered as filling the station before Dryden, except Andrew Bernard, are expressly denominated *poets laureate* in any authentic record.

Thomas Churchyard, a voluminous poet after in the time of Queen Elizabeth, in consequence of having addressed many of the noblemen of her court for near 40 years, in such rhymes as he could spin, is called by one of his contemporaries *the old court poet*; this has given rise to a conjecture that he was peculiarly countenanced and patronised by the queen, and formally placed at the head of the poetical band of that time; but, undoubtedly, Elizabeth had no poet laureat till in February, 1590-1, she conferred on *Edmund Spenser* a pension of 50l. a-year; from which time to his death, in 1598-9, he may properly be considered as filling the office, though not expressly styled *Laureat* in his patent.

Samuel Daniel has been represented by Anthony Wood, and others, as the next successor to the laurel, but he never was thus honoured; for from the death of Spenser to the year 1616 the poetical throne was vacant, though in that period *Daniel, Jonson, Dekker*, and others, furnished the court with pageants and masques, and may, during that interval, be considered as *volunteer laureats*. About four months before the death of Shakspeare, January 1, 1615-16, King James granted to *Ben Jonson* a pension of one hundred marks a-year (66l. 13s. 4d.) during his life, "in consideration of his good and acceptable services past and future;" a grant which invested him with all the dignity and functions of poet laureat. This consideration, however, is common to many other crown grants not conferred on poets; nor did any patent expressly mention the duty and peculiar services expected from a poet laureat, before that of Charles I. to the same person; in which the character and functions of this office are, for the first time, specifically pointed out. On the 23d of April, 1630, that king, "in consideration of good and acceptable services done by the said Benjamin Jonson, and especially to encourage him to proceed in those services of his wit and pen which we have enjoined unto him, and which we expect from him," was pleased to augment his annuity of one hundred marks to one hundred pounds per annum, during life, payable from the preceding Christmas. Old Ben had not long before been struck with the palsy, on which account, perhaps, as well as to gratify his well-known propensity, his majesty, by the same instrument, granted him a tierce of Canary wine yearly, during his life, out of the royal cellars at Whitehall.

It has been generally supposed that Sir *William d'Avenant* succeeded to the bays immediately on Jonson's death, in August, 1637; but he then received no favour from the crown. About sixteen months afterwards, December 13, 1638, letters patent passed the great seal, granting an annuity of one hundred pounds a-year to the said William d'Avenant, during his majesty's pleasure. By this patent no Canary wine was given, nor is any mention made of the office of poet laureat, or the duties belonging to it.

In 1670, some time after the death of Sir William d'Avenant, *Dryden* was made poet laureat by letters patent, and held the office till he was compelled to forego it in consequence of the revolution.

On the 29th of August, 1689, he was succeeded by *Shadwell*.

Shadwell's successor was *Nahum Tate*, December 23d, 1692, with an annual pension of one hundred pounds, and a butt of Canary wine.

On the death of Tate, 1716, the laurel was given to *Rowe*; who dying in December, 1718, the Rev. *Laurence Eusden* was, in the following year, invested with this office.

On the death of Eusden, September 27, 1730, *Colley Cibber* was appointed poet laureat. His reign extended to the end of the year 1757.

To him succeeded *William Whitehead*, who dying April 14, 1785, the Rev. *Thomas Warton* obtained the laurel, which he held for five years.

Shortly after his death, which happened May 21, 1790, *Henry James Pye*, esq. was appointed poet laureat, and now fills the poetical throne.

There is no grant in the chapel of the rolls, constituting Rowe poet laureat. The practice of conferring this office by a warrant signed and sealed by the lord chamberlain, nominating A. B. to the office, with the accustomed fees thereunto belonging, then commenced, and has prevailed from that time to the present.

LAURINGEN, a town of Germany, in the bishopric of Wurtzburg, 24 miles N.W. of Bamberg, and 30 N.E. of Wurtzburg. Long. 10. 21. E. Lat. 50. 5. N.

LAURVIG, a town of Norway, in the province of Aggarhuus, 55 miles S. of Christiania. Long. 10. 15. E. Lat. 59. 3. N.

LAUTERBRUNN, a village of Switzerland, six miles S. of Interlacken. It is seated in a valley of the same name, celebrated for its picturesque and romantic scenery. See STAUBBACH.

LAUTERBURG, a town of Western Prussia, in the palatinate of Culm, 50 miles N.E. of Thorn.

LAUTERBURG, a town of Germany, in the circle of Upper Rhine, but subject to the French. It is 10 miles S.E. of Weissemburg. Long. 8. 26. E. Lat. 48. 48. N.

LAUTERECK, a town of Germany, in the circle of Upper Rhine, and county of Veldenz, situate on the Glan, 24 miles N. of Deux Ponts, and 46 S. of Coblentz. Long. 7. 17. E. Lat. 49. 39. N.

LAUZERTE, a town of France, in the departments of Lot and Garonne, 15 miles N.E. of Marmande. Long. 0. 22. E. Lat. 44. 38. N.

LAWRENCE, St. the largest river of North America, proceeding from Lake Ontario, from which it runs 700 miles to the Atlantic. It is navigable for large ships of war, as far as Quebec, which is above 400 miles; but beyond Montreal, it is so full of shoals and rocks, that it will not admit large vessels without danger. It is here called the Iroquois.

LAXENBURG, a town of Austria, with a palace, where the princes of the house of Austria go for pleasure. It is seated on a small river, 10 miles S. of Vienna. Long. 16. 28. E. Lat. 48. 5. N.

LAYBACH, a town of Carniola, on a navigable river of the same name, 28 miles N.E. of Trieste. Long. 14. 32. E. Lat. 46. 12. N.

LAZZARONI, a peculiar description of the lowest class of people, that have, for a number of years, constituted a very singular, as well as a very considerable, part of the poor of Naples. Their origin, which is but little known, is said to be as follows: the romantic and enterprising Duke of Guise, who defended the city of Naples against the Spaniards for a long time with very inadequate forces, tells us, in the third book of his Memoirs, that two secret enemies of his, "*Gennaro* and *Vincenzo*, cherished underhand the aversion the rascality had for the better sort of citizens, and civiler people, who, by reason of the insolencies suffered from them, justly hated them. The latter of these, by whom the greatest part of the Virgin's suburbs was inhabited, were called *black-cloaks*, and the ordinary sort of people took the name of *Lazares*, at

the beginning of the revolutions; as the revolters in Flanders formerly had done that of *beggars*, thoſe of Guienne that of *caters*, thoſe of Normandy of *barefeet*, and of Beauſſe and Soulongne of *wooden pattens*." The Lazzaroni's quondam opponents, the *black-cloaks*, and all the others, are now completely blotted out of the remembrance of men, but they ſtill ſurvive, and were never more conſpicuous, nor of more importance, than in the preſent æra, after the lapſe of a century and half. Titles, ſimilar to thoſe above, in times of public diſorder, have been aſſumed by combinations of the lower claſſes of ſociety in almoſt every age, but have ſeldom long ſurvived their exiſtence who originally conſtituted thoſe confederacies. Perhaps in another century the *Chouans* and the *ſans culottes* will be as little talked of in the diſtricts which gave them birth as are now the *barefeet* and the *wooden pattens*.

LEA, a river which riſes near Luten in Bedfordſhire, flows to Hertford and Ware, and dividing Eſſex from Hertfordſhire and Middleſex, falls into the Thames below Blackwall. By this river large quantities of corn and malt are brought out of Hertfordſhire to London.

LEAD (*Encycl.*). Though we have ſpoken fully on the nature, qualities, and chemical combinations of this metal, under the articles LEAD and CHEMISTRY, and alſo under ACETITE in this Supplement, the following extracts from a Memoir on the Preparation of Sugar, or Acetite of Lead, by Citizen Marchais, which was read before the Société Académique des Sciences, in France, ſeem to deſerve notice in this place.

"Machy," ſays he, "the only French author who has given circumſtantial details concerning this manufacture, has repreſented it as being ſo difficult in the execution, that its ſucceſs cannot always be certain. Thoſe who have written ſince this author, have either added nothing to our knowledge, or have at leaſt not been able to determine what was good in the ancient proceſſes, and what might be proper to be added to them; neither have they pointed out the grounds of the ſuperiority of one proceſs over the other, as they were unable to determine the theory of the operation in a clear manner, the evidence of which was ſupported by facts. Baſil Valentin, and Iſaac the Hollander, who are mentioned as the firſt who gave an account of the action of vinegar upon lead, and the ſalt thereby produced, required for that purpoſe much leſs ſcience, and were obliged to make much fewer experiments than were afterwards required, in order to aſcertain the uſes of this ſalt in the arts, and eſpecially in that of dyeing, in which it is of ſo great importance. At that time, in order to make chemical diſcoveries, it was ſufficient to place ſubſtances in contact, and ſee whether they exerted any operation upon each other. From thence to the knowledge of the theory of this action, the road was much longer than that which had led to the firſt obſervation; thus almoſt all the explanations which chemiſtry gave of her operations, prior to the diſcoveries of the immortal Lavoiſier, have rather retarded than accelerated the progreſs of the ſcience. Every ſound theory points out the route we are to take in a certain manner, but when the theory itſelf is erroneous, it leads us aſtray, and the arts receive no improvement. Local circumſtances may render the error leſs perceptible, or cauſe it to diſappear; but, when we do not well know what we are doing, which is almoſt as bad as not knowing it at all, we can never rectify our courſe, nor know whether or not it be the beſt which we could take, if perchance that ſhould happen. What I have to ſay concerning the preparation of the ſugar of lead is evident, is known, and yet it has never been ſaid before; for the operation has remained obſcure, uncertain, little productive in France, whilſt other nations know how to derive profit from it: this is what muſt have happened, as the facts will prove.

"It had been diſcovered that diſtilled vinegar was leſs concentrated than the ſame vinegar not diſtilled; becauſe, in diſtillation, more water raiſes itſelf than acid, the latter concentrating itſelf in the alembic; but this portion cannot be employed, as it is only after having been diſtilled, that it becomes proper for preparing the acetite of lead. My firſt idea was, to combine the oxyd of lead with vinegar not diſtilled, but, however, without any colour, as I attributed to its extractive part, the impoſſibility of obtaining a cryſtaliſable product from the direct combination of the oxyd and the acid. The preparation known in pharmacy by the name of extract of lead, yields no cryſtals on condenſation, but merely the appearance of an extract, ſuch as is obtained from vegetables. I believed that I had found, in the oxygenated muriatic acid gas, a means of deſtroying the colouring matter of the vinegar. It was white-wine vinegar that I uſed.

Experiment 1. "The apparatus which I employed is a known one; it is that which chemiſts uſe for obtaining the muriatic acid gas, ſuſpended in water; inſtead of water I had put vinegar into it: this loſt its colour, and became very white. I ought to remark that it no longer retained its peculiar odour; neither had it that of oxygenated muriatic acid; but it had acquired one peculiar to this combination, which no author has hitherto treated of. Into 18 ounces 5 drachms 60 grains of this liquor, I put three ounces of the white oxyd of lead; of this there was a little that was not diſſolved, and a ſmall part precipitated in a pulverulent form; this was muriate of lead. The liquor poured off, ſubjected to a very ſlow evaporation, and cooled in its ſand bath, preſented nothing to the eye but a brown extract, having the ſmell of mucous-ſaccharine matter when beginning to burn, but no appearance of cryſtals was obſerved in it, after it had been kept cool for eight hours. I gently ſtirred it, inclining the veſſel at the ſame time, in order to examine whether there might not be ſome cryſtals at the bottom; immediately the liquid was converted into a ſolid, and I had nothing more than a ſaline maſs, irregularly cryſtaliſed and very brown. This was acetite of lead; but it ought to have been the acetite of commerce, with reſpect to the whiteneſs and regularity of the cryſtals; it was only the chemiſt who could diſcover in it the principles of the acetite of lead.

Experiment 2. "I endeavoured to bleach the vinegar, if I may be allowed the expreſſion, by the admixture of oxygenated muriatic acid diſſolved in water; the vinegar was deprived of its colour, but the ſtate in which I found it was preciſely the ſame as in the firſt experiment; I therefore judged it ſuperfluous to employ it for diſſolving the white oxyd of lead, as I could foreſee the reſult from the former experiment.

Experiment 3. "Chemiſts having frequently employed the ſulphurous acid for depriving vegetable ſubſtances of their colour, I diſpoſed the apparatus uſed in Experiment 1, and diſtilled the ſulphuric acid upon a combuſtible ſubſtance; (it was on ſtraw): a conſiderable diſengagement of ſulphurous acid took place; the vinegar became turbid, a very light precipitate was formed; but the colouring matter was not attacked: I therefore judged it uſeleſs to treat the white oxyd of lead with this acid.

Experiment 4. "I thought I ought to try, for the ſake of compariſon, the ſolution of the white oxyd of lead in ſtrong red vinegar. A pound of this acid was able to diſſolve an ounce, and ſome particles remained in the form of a brown powder. I tried in vain every expedient I could deviſe, in order to make this ſolution cryſtalize. I had only a blackiſh-brown extract, of the conſiſtence of honey, but which exhibited

no appearance of cryſtals; diſtilled vinegar poured upon it very eaſily effected its complete ſolution; the ſolution was brown, and ſerved me for ſome experiments foreign from the ſubject of this memoir.

"The experiments which I have juſt related had taught me that if the colouring matter was an impediment to the cryſtalliſation, one ought not to attribute to it alone the more or leſs red appearance of the cryſtals of acetite of lead.

Experiment 5. "I put ſeveral pounds of the ſame vinegar into a diſtilling apparatus of glaſs. I divided the whole into four portions in the following order: $\frac{1}{4} + \frac{1}{4} + \frac{1}{3}$, ſo that there remained only $\frac{1}{6}$ in the diſtillatory veſſel: the three firſt products preſented no apparent diverſity to the eye; they were equally limpid and colourleſs; the fourth was very high coloured, very acid, and when cooled, depoſited cryſtals of tartarite of potaſh.

Experiment 6. "Eight ounces of the firſt fourth were combined with ſix drachms 44 grains of white oxyd of lead*; the ſolution took place under a continued effervescence; the pieces of oxyd did not aſſume a brown colour, as in experiments 1 and 4; the ſalt which I obtained was beautiful, very white and brilliant; I had 5 ounces 36 grains of it; the mother-water was ſomewhat coloured, and yielded 70 grains of a reddiſh ſalt. The portions of the vinegar, No. 2 and 3, on being ſubjected to the ſame operation, yielded a ſalt much inferior to that of No. 1, eſpecially No. 3; the mother-water was in larger quantity and more coloured, as were alſo the cryſtals which were more irregular. The conſideration of theſe three facts gave me reaſon to conclude, that the oil, which exiſts in conſiderable quantity in vinegar, was the real cauſe of the difficulty which had been found in obtaining the acetite of lead. Machy was not aware of this difficulty, though he was in the way to diſcover it; he relates that the manufacturers of Grenoble pour ſeveral ounces of alcohol into each of the veſſels in which the cryſtalliſation is performed. What I have juſt ſaid may ſerve to demonſtrate the utility of this precaution. Alcohol has a decided affinity on the one hand with the acetite of lead, and on the other with the oil furniſhed by the vinegar; it will therefore diſſolve in preference the oily and red cryſtals, or even the oily part, ſo that what remains in the veſſel will be more beautiful, and freed from that ſubſtance which impaired its whiteneſs. Machy, and thoſe who have repeated it after him, are wrong, in aſſerting that the manufacturers uſe this alcohol in order to prevent evaporation from taking place, during the cryſtalliſation of the ſalt: its direct object is to free it from that ſubſtance which would impair its whiteneſs. In order to demonſtrate this theory with the moſt convincing evidence, it was neceſſary to take acetous acid that contained no oil, conſequently not that which is obtained from wine; I therefore procured vinegar prepared from cyder.

Experiment 7. "I diſtilled it in glaſs veſſels, and twice ſtopped the diſtillation, in order to ſuffer the ſalt, which the liquor might contain, to cryſtaliſe; but not having perceived any cryſtalliſation, I continued it to exſiccation; a ſmall quantity of extractive matter remained, which could be re-diſſolved by water. I diſſolved the white oxyd of lead in the diſtilled acid; the liquid remained white and tranſparent, it cryſtaliſed completely, without any coloured mother-water, and the laſt cryſtals were no leſs beautiful than the firſt. Succeſs, ſo complete and conformable to theory, proved to me, that the real ſuperiority of the Dutch conſiſts in their employing in the manufacture of this ſalt, vinegar exempt from oily particles; ſuch as are the vinegars prepared from grain. It is known that they manufacture theſe vinegars of very ſuperior quality, and that they very carefully keep ſecret the details of this operation. I have been informed upon good authority, that at the time when the Dutch territory was covered by our troops, and when the influence of France, in that country, was at its greateſt height, it was never poſſible to penetrate into theſe manufactories of vinegar, many of which even ceaſed for the time to work. The beautiful appearance of the ſugar of lead which they ſell us, depends therefore upon local circumſtances; they naturally would employ the acid which they manufacture themſelves, in preference to that for which they would have been obliged to procure the materials from abroad, as their ſoil produces no wine: our country, on the other hand, knows in general of no other vinegar than that produced from wine, which conſequently has been employed, and all thoſe inconveniences have reſulted with which its uſe is naturally attended. It may perhaps be objected to me, that it is ſaid in the works that have been quoted, that the Dutch come to buy up the huſks of grapes in the Artois and Bordelois territories; myſterious as they are in whatever they undertake, if the Dutch pretend that the uſe for which theſe huſks are deſtined is the manufacture of ſugar of lead, I ſhould be induced to believe the contrary; but, beſides, might not the manufacture of white lead and that of verdigris conſume theſe huſks? Do not the four ſtalks ſerve to develope an acid principle in fermentation. Beſides, it is not ſaid that the Engliſh, who likewiſe excel in the manufacture of the acetite of lead, come to our ports to buy theſe huſks; but it is certain that they make uſe of vinegar prepared from grain.

"I cannot conclude this memoir without remarking, that though I have uſed the term of white oxyd of lead, I have done ſo only in order to conform to the denomination generally adopted; but it is nevertheleſs certain that this is not a pure oxyd, but a carbonate of lead, and it conſequently diſſolves in vinegar in a larger proportion than the oxyds of lead, even than that which is termed litharge, which amongſt all is the moſt of an oxyd. If a continued effervescence takes place during the ſolution, it is owing to the diſengagement of the carbonic acid, which yields to a more powerful affinity; we muſt therefore conclude, that the acetous acid undergoes a decompoſition in the fermentation, excited by the heat of the layers of dung, with which the pots in which this preparation is made are covered; but chemiſtry is at preſent familiariſed to the changes which the vegetable acids undergo of the one into the other, ſo that the obſervation here preſented coincides with thoſe that have already been made."

LEADHILLS, a village in Lanerkſhire, ſituate among the mountains of Clydeſdale, and ſaid to be the higheſt human habitation in Great Britain. Here reſide many hundreds of miners, with their families. Theſe miners, though, in a great meaſure, excluded from ſociety by their habitation, pay great attention to the cultivation of the mind, and have provided a circulating library for the inſtruction and amuſement of the little community belonging to the village.

LEAO-TONG, or CHEN-YANG, one of the three departments of Eaſt Chineſe Tartary, or country of the Mantchew Tartars, who hence entered and conquered China. It is bounded on the S. by the great wall of China and the gulf of Lea-tong; and incloſed on the eaſt, north, and weſt, by a paliſade, conſtructed of ſtakes ſeven feet high, without either bank of earth or ditch. Chen-yang, or Mougden, is the capital.

LEATHER (*Encycl.*). To what has been already offered under that head, we are induced to add the following account

* To the quina of vinegar, 10 lb. 5 oz. 2 dr. 16 grs. of oxyd, a little more than one-tenth.

of a mode of manufacturing morocco leather, as practiſed at Fez.

The goat being ſtripped of his ſkin by doubling it over itſelf, and ſo drawing it off as one would pull off a ſtocking by the upper part, the hide, entire and covered with its hair, is thrown into water, in which it is left to ſoak during three days. It is then expoſed to the air, and, when dry, coarſely ſtripped of the hair; after which it is plunged into ſlaked lime.

To clear the ſkins more thoroughly from the hair, they are powdered over with quick lime, which takes away even the ſmalleſt hairs. They are next waſhed in running water, and very carefully rinſed. They are ſuffered to remain in that water during the ſpace of a night, then hanged up to drain in the open air. After this, they are laid in bran, in the proportion of a hundred and eighty ſkins to three hundred pounds of bran. They continue in the bran, being each day turned inſide out, until they have acquired a conſiderable degree of pliability.

They are next waſhed again in running water, by trampling them with the feet; after which operation, they are thrown into a ſecond bath prepared with white figs—about a hundred and ninety pounds of figs to a hundred and eighty ſkins. The figs render the water ſoapy. The ſkins remain in it four or five days, in which time they are frequently turned. And, during the period of their ſoaking in it, they are, on three ſucceſſive days, ſprinkled with ſal gemmæ very finely powdered: after which, the water being ſuffered to drain from them, they are again ſprinkled with ſal gemmæ, and laid in a heap in a flat veſſel, where the proceſs of impregnating them with the ſalt is completed. The water is then ſqueezed out by wringing the ſkins; after which they are very pliant, and fit to receive the colour.

If red be the intended colour, half a pound of cochineal and three ounces of alum are employed for ſixty ſkins. Finally, they are tanned by placing them in pits, where beds of tan are made, of about fifty pounds of tan for each ſkin. The ſkin is tanned ſo as to have the grain ſide within, and filled with the tanning water. After the expiration of eight days it is again turned, and again filled with the tanning water, which is ſuffered to remain in it ſix days. During the whole of this term, the ſkins are carefully ſtirred and ſhaken. They are then rinſed in running water, ſcraped with an iron inſtrument, opened up along the belly, and rendered pliant by the application of a little oil. They are dried in the ſun, ſet to cool in the ſhade, ſlightly moiſtened with water, and finally ſcraped down to a proper thinneſs with three different inſtruments of iron.

When the red colour is too deep, it is weakened with a decoction of a plant called *razoul al achbi*, which is the *meſembrianthemum annuum*. This liquor is uſed warm, a ſpoonful of it being poured on each ſkin.

If the hides are intended to be dyed yellow, they are prepared in the ſame manner as for the red, except that the operation of ſalting is not prolonged beyond the time of their ſoaking in the fig-water. And, beſides, only twenty-five pounds of tan are, in this caſe, uſed for five dozen of ſkins. The yellow dye is made of powdered pomegranate-rind and alum.

An inferior red is produced from Braſil wood and alum. Inſtead of Braſil wood, the manufacturers frequently uſe the *fouah*, which is a ſpecies of *gallium* or *rubia* (*madder*) that is brought in great quantities from Morocco.

LEATHERHEAD, a town in Surrey, which had formerly a market. Here is a bridge of many arches over the river Mole. It is 18 miles S.S.W. of London.

LEATHES-WATER, called alſo WYTHBURN, or THIRLMERE-WATER, a fine lake of Cumberland, which lies S. by E. of Keſwick. It begins at the foot of Mount Helwellyn, which it ſkirts for the ſpace of four miles, receiving numerous torrents that deſcend from the mountains. The ſingular beauty of this lake is its being almoſt interſected in the middle by two peninſulas, that are joined by a bridge. Its outlet joins the rapid river Greeta, at New-Bridge, and thus has a communication with the lake of Derwentwater.

LEAWAVA, a ſea-port on the E. coaſt of the iſland of Ceylon, which yields a great deal of ſalt. Long. 83. 15. E. Lat. 6. 40. N.

LECASELLO, a town of Italy, in the ſtate of Genoa, 23 miles N.E. of Genoa. Long. 8. 53. E. Lat. 44. 37. N.

LECCE, a city of Naples, in Otranto, with a biſhop's ſee. It contains 18,000 inhabitants; is the reſidence of the governor, and ſometimes called the capital of the province; and by ſome the province is called Lecce, inſtead of Otranto. It is 17 miles N.W. of Otranto, and 195 E.S.E. of Naples. Long. 18. 20. E. Lat. 40. 36. N.

LECCO, a town of Italy, in the Milaneſe, ſeated on the lake Como, 26 miles N. of Milan. Long. 9. 21. E. Lat. 45. 55. N.

LECH, a river of Germany, which riſes in Tirol, divides Suabia from Bavaria, and falls into the Danube, below Donawert.

LECK, a river of the United Provinces, which branches off from the Rhine at Wyck-by-Deurſtede, and enters the Merve, 10 miles E. of Rotterdam.

LEDUM (*Encycl.*). The following obſervations have been made by Dr. Maton on Ledum Paluſtre, and on the uſes to which it may be applied in medicine. He conſiders it a plant which ſeems to poſſeſs very active properties. Its very odour indicates an aromatic quality, though this is not ſo ſtrong in the ſpring as during the ſtate of floreſcence. Weſtring mentions a curious fact reſpecting the permanence of the aroma. A dried ſpecimen, which he found in the Burſerian Herbarium at Upſal, retained a very ſenſible fragrance, though upwards of 150 years had elapſed from the time of its being gathered. An infuſion of the leaves is ſomewhat bitter, and conveys a ſenſation to the palate ſimilar to that produced by turpentine; a good evidence of its poſſeſſing an aſtringency. There is undoubtedly a narcotic quality in a ſtrong decoction of the plant, ſome of the northern nations being accuſtomed to boil ſticks of it in beer, for the ſake of imparting to the latter an inebriating effect; and this liquor has been obſerved to occaſion violent vomiting, cephalalgia, and even ſyncope. Some caution, therefore, is neceſſary in the exhibition of this vegetable; and though in many caſes it may be adviſable to keep up that ſtate, reſembling ſtupor, by which the advantageous effects of cicuta and other narcotics are produced, the doſe ought to be ſmall at firſt. Of the recent plant, four ounces may be infuſed in a quart of boiling water, and two ounces of the ſtrained liquor are ſufficient for the firſt exhibition.

Ledum Paluſtre grows ſo abundantly in all the northern parts of the Continent, that large quantities may be obtained without difficulty; though, as its favourite ſoil is of a moiſt, boggy nature, and as it is found on the declivities of lofty mountains, the cultivation of this plant may not often prove very ſucceſsful. No animals appear to be fond of it, excepting the goat, which Linnæus tells us (in the Pan Succus) will often brouze it; and there is a ſpecies of phalæna that dwells on its leaves; but inſects in general ſhun, and are ſo much affected by its odour, that the ſmoke is uſed for the extermination of lice and other vermin. The ſpirit obtained by diſtillation ſeems likely to be moſt efficacious for this purpoſe.

There is another ſpecies of ledum (ſcarcely deſerving, however, to be conſidered as different) which grows very plentifully in the vicinity of Hudſon's Bay, in North America, and

is generally known by the name of *Labrador Tea*, an appellation that indicates its being uſed as a beverage by the natives of that diſtrict, probably on account of this plant poſſeſſing qualities ſimilar to thoſe of ledum paluſtre,—I mean more particularly, that of intoxicating. Ledum *latifolium*, as the name implies, is diſtinguiſhed by its broader leaves; but in no other reſpect does it appear to differ from its congener. Dr. Maton has taſted infuſions of the dried leaves, and found the flavour the ſame. This plant is well deſcribed by Jacquin in his *Collectanea*, tom. ii. and in the new edition of the *Species Plantarum* by Wildenow, diſtinguiſhed thus, *Ledum (latifolium) foliis oblongis, margine revolutis, ſubtis tomentoſis floribus ſubpentandris*, tom. ii. p. 602. There is given in the Tranſactions of the Academy of Sciences of Stockholm, for 1774, an account of the efficacy of ledum paluſtre as a remedy for lepra. Dr. Odhelius ſpeaks of his ſucceſs in the exhibition of it in that diſeaſe, with the higheſt ſatisfaction.

LEE, a river of Ireland, which riſes on the confines of Kerry, and flows E. to Cork, below which city it forms a fine harbour, and enters St. George's Channel.

LEEFOOGA, one of the Friendly Iſlands, in the South Pacific Ocean, viſited by Captain Cook in 1776. Many parts of the country, near the ſea, are ſandy and barren; but in the internal parts, the marks of conſiderable population, and of an improved ſtate of cultivation, are conſpicuous. Many of the plantations are incloſed in ſuch a manner, that the fences, running parallel to each other, form ſpacious public roads. Large ſpots, covered with the paper mulberry-tree, were obſerved, and the plantations in general were abundantly ſtocked with plants and fruit-trees. To theſe Captain Cook made ſome addition, by ſowing the ſeeds of melons, Indian corn, &c. The iſland is ſeven miles in length; its breadth, in ſome places, is not above three.

LEER, or LEHR, a town of Weſtphalia, in Eaſt Frieſland, on a river of the ſame name, which ſoon after falls into the Embs. It is 11 miles S.E. of Embden, and 24 W.N.W of Oldenburg. Long. 7. 11. E. Lat. 53. 21. N.

LEERDAM, a town of the United Provinces, in Holland, ſeated on the Linghe, 17 miles N.E. of Dort. Long. 5. 13. E. Lat. 51. 56. N.

LEEROT, a fortreſs of Weſtphalia, in Eaſt Frieſland, ſeated at the confluence of the Lee with the Embs, 10 miles E. by S. of Embden.

LEERS, or LIERS, a town of Weſtphalia, in the biſhopric of Liege, near which a battle was fought on the 1ſt of October, 1746, between the allies, commanded by Prince Charles of Lorrain, and the French under Count Saxe. It is four miles N. of Liege.

LEESTOWN, a town of Kentucky, in the county of Fayette, ſeated on the E. bank of the river Kentucky. As the banks of the river are remarkably high, there are few croſſing places; and the beſt being at Leeſtown, is a circumſtance which contributes to its increaſe. It is a few miles W. of Lexington. See KENTUCKY RIVER.

LEEWARD ISLANDS, that part of the Caribbee Iſlands, in the Weſt Indies, commencing at Dominica, and extending to Porto Rico.

LEEWE, a fortified town of Auſtrian Brabant, ſeated on the Geete, 12 miles E. of Louvain. Long. 5. 7. E. Lat. 50. 53. N.

LEGACY, a ſum of money, or gift bequeathed to any one in the laſt will and teſtament of a deceaſed perſon. See TESTAMENT. The following duties have of late years been laid upon legacies. By the act of 20 Geo. III. c. 28, ſ. 1; 23 Geo. III. c. 58, ſ. 2; and 29 Geo. III. c. 51, ſ. 2; every receipt for a legacy, whether pecuniary or ſpecific, or ſhare of a perſonal eſtate, payable to the wife, children, or grandchildren of the deceaſed, ſhall be chargeable as follows:

Where the amount ſhall not exceed twenty pounds, 2s. 6d.

Where the amount thereof ſhall be of the value of twenty pounds and under one hundred pounds, 5s.

Where the amount thereof ſhall be of the value of one hundred pounds or upwards, 1l.

And for every ſuch receipt for a legacy or ſhare of a perſonal eſtate, payable to a huſband:

Where the amount ſhall not exceed twenty pounds, 2s. 6d. by 20 Geo. III. c. 28, and 2s. 6d. by 23 Geo. III. c. 58. Total 5s.

Where the amount thereof ſhall be of the value of twenty pounds and under one hundred pounds, by 20 Geo. III. c. 28, 5s. and by 23 Geo. III. c 58, 5s. Total 10s.

Where the amount thereof ſhall be one hundred pounds, by 20 Geo. III. c. 28, 1l. and 23 Geo. III. c. 58, 1l. Total 2l.

And by 23 Geo. III. c. 58, for every further ſum of one hundred pounds, an additional 1l.

And by 29 Geo. III. c. 51, if of four hundred pounds, an additional 1l. and for every further ſum of one hundred pounds, a further additional 1l.

And for every ſuch receipt for a legacy or ſhare of a perſonal eſtate, payable to collateral relations or ſtrangers, there ſhall be charged:

Where the amount ſhall not exceed twenty pounds, 2s. 6d. by 20 Geo. III. c. 28, and 2s. 6d. by 23 Geo. III. c. 58. Total 5s.

And by the laſt act, 36 Geo. III. c. 52,

Upon any legacy of the value of 20l. or ſhare of the perſonal eſtate of a perſon dying inteſtate, and leaving a perſonal eſtate of the clear value of 100l. after payment of debts, &c. which ſhall paſs to a brother or ſiſter of the deceaſed, or any deſcendant of a brother or ſiſter of the deceaſed, there ſhall be charged a duty of 2l. for every one hundred pounds of the value, and ſo after the ſame rate for any greater or leſs ſum.

To a brother or ſiſter of a father or mother of the deceaſed, or any deſcendant of a brother or ſiſter of a father or mother of the deceaſed, 3l. for every one hundred pounds of the value, and after the ſame rate for any greater or leſs ſum.

To a brother or ſiſter of a grandfather or grandmother of the deceaſed, or any deſcendant of a brother or ſiſter of a grandfather or grandmother of the deceaſed, 4l. for every one hundred pounds of the value, and after the ſame rate for any greater or leſs ſum.

To any perſon in any other degree of collateral conſanguinity to the deceaſed than before deſcribed, or any ſtranger in blood to the deceaſed, 6l. for every one hundred pounds of the value, and after the ſame rate for any greater or leſs ſum.

The duties are placed under the management of the commiſſioners of ſtamps, who are to appoint receivers in the different counties.

The duties are to be paid by executors or adminiſtrators on retaining or paying legacies or ſhares, and if duty be not paid before legacies or ſhares are retained by executors, or adminiſtrators, or diſcharged, they having deducted it, the amount ſhall be a debt from them to his majeſty; and if they pay without deducting the duty, it ſhall be a debt, not only from them, but alſo the party receiving the ſame.

The value of any legacy given by way of annuity for life or lives or for a term of years, and the duty chargeable thereon, ſhall be charged according to the tables annexed to the act; and the duty chargeable on ſuch annuity ſhall be paid by four equal payments, the firſt before or on completing the payment of the firſt year's annuity, and the three others in like manner ſucceſſively, before or on completing the reſpective payments

of the three ſucceeding years' annuity reſpectively; but if any ſuch annuity ſhall determine by death, or any other contingency, before four years' payment ſhall become due, then the duty ſhall be payable in proportion only, and all future payments of the duty ſhall ceaſe.

The duty on legacies given to purchaſe annuities to be calculated on the ſums neceſſary to purchaſe them, according to the tables before mentioned.

The duty on legacies whoſe value can only be aſcertained by application of the allotted fund, to be charged on the money as applied.

The duty payable on a legacy given to different perſons in ſucceſſion, ſhall be paid thereout, as in the caſe of a legacy to one perſon; and where the ſame ſhall go to different perſons in ſucceſſion, ſome of whom ſhall be chargeable with no duty, or ſome with different rates, ſo that one rate cannot be immediately charged; all perſons entitled for life, or other temporary intereſt, ſhall be chargeable in the ſame manner as for an annuity, and paid by equal portions in four years; and the duty on partial intereſts ſhall be charged as the duty on property given, otherwiſe than to different perſons in ſucceſſion; and perſons who ſhall become abſolutely entitled in ſucceſſion, ſhall, when they begin to enjoy the benefit, pay the duty in the ſame manner as if the ſame had come immediately on the death of the party.

No duty ſhall be paid on any articles of plate, furniture, or other things, not yielding any income, and given to be enjoyed by different perſons in ſucceſſion, whilſt the ſame ſhall be ſo enjoyed in kind only by any perſon not having any power of diſpoſing thereof; but if the ſame ſhall be actually ſold or diſpoſed of, or come to any perſon having power to diſpoſe thereof, then duty ſhall be paid thereon.

Duty on legacies in joint tenantcy to be paid in proportion to the intereſt of the parties.

Any legacy, ſubject to any contingency which may defeat the gift, and whereupon the ſame may go to ſome other perſon (unleſs chargeable as an annuity), ſhall be charged with duty as an abſolute bequeſt to the perſon who ſhall take the ſame, ſubject to ſuch contingency, and ſuch duty ſhall be paid out of the legacy.

Any legacy, ſubjected to any power of appointment for the benefit of perſons ſpecially deſcribed, ſhall be charged with duty as property given to different perſons in ſucceſſion.

Any money or perſonal eſtate, directed to be applied in the purchaſe of real eſtate, ſhall pay duty as perſonal eſtate.

Eſtates *pur auter vie*, applicable as perſonal eſtate, ſhall be charged as perſonal eſtate.

But if any direction ſhall be given, by any will, for payment of the duty out of ſome fund, ſo that the legacy may paſs free of duty; no duty ſhall be chargeable upon the money applied for payment of the duty.

In caſes of ſpecific legacies, and where the reſidue of any perſonal eſtate ſhall conſiſt of property which ſhall not be reduced into money, the executor or adminiſtrator, or the perſon to whom the duty thereon ought to be paid, may ſet a value thereon, and offer to pay the duty according to ſuch value; or may require the commiſſioners of ſtamps to appoint a perſon to ſet ſuch value, at their expence; and the commiſſioners may either accept the duty offered, or appoint a perſon to appraiſe ſuch effects, and to ſet the value, on which the commiſſioners ſhall aſſeſs the duty; but if the party ſhall not be ſatisfied with the commiſſioners' valuation, they may cauſe ſuch valuation to be reviewed by the commiſſioners of land tax, who may alſo (if they think fit) appoint a perſon to appraiſe the effects, and ſet a value thereon, whoſe judgment ſhall be final.

Duty on legacies not ſatisfied in money, &c. to be paid according to the value of the ſatisfaction.

If legatees refuſe to accept legacies, duty deducted, the court, in caſe of ſuit, may order them to pay coſts; and in ſuits where the party ſued may with to ſtop proceedings on payment of bequeſts, deducting duty, the court may make order therein.

If ſuit be inſtituted concerning adminiſtration, the court to provide for payment of the duty.

Executors and adminiſtrators may, at any time, diſcharge legacies, or pay ſhares of the perſonal eſtate, on payment of the duty accrued.

No legacy, liable to duty, to be paid without a receipt, expreſſing the date thereof, and the names of the teſtator, or inteſtate, and of the perſon to whom ſuch receipt ſhall be given, and of the party to whom ſuch legacy or reſidue ſhall belong, and the amount of the legacy or reſidue for which ſuch receipt ſhall be given, and alſo the amount of the duty payable thereon; and no receipt ſhall be available, unleſs ſtamped.

But a copy of the entry, in the books of the commiſſioners of ſtamps, of payment of duty, ſhall be admitted as evidence; and payment of any annuity ſhall not be deemed a payment for which ſuch ſtamped receipt ſhall be required, except it be the payment which ſhall complete the payment for each of the firſt four years during which ſuch annuity ſhall be payable.

Any executor, adminiſtrator, or truſtee, who ſhall pay any legacy, or reſidue, without taking ſuch receipt as aforeſaid, and cauſing the ſame to be ſtamped within the time hereby allowed for ſtamping the ſame, ſhall forfeit ten pounds *per cent.* on the amount of ſuch receipt; and all perſons receiving ſuch money, or property, without giving a written receipt, as aforeſaid, ſhall forfeit ten pounds *per cent.* on the money or property received.

Every ſuch receipt ſhall be brought within twenty-one days after the date, to the next ſtamp-office, to be ſtamped, paying duty for the ſame, and upon ſuch payment, an acknowledgement of the payment of the duty ſo paid, in words at length, and bearing date the day on which ſuch payment ſhall be made, and ſubſcribed with the officer's name, ſhall be wrote upon the receipt, and afterwards the ſame ſhall be duly ſtamped, in the manner directed in the act.

But if any ſuch receipt ſhall not be brought to ſuch office, within ſuch ſpace of twenty-one days as aforeſaid, it ſhall nevertheleſs be lawful to carry ſuch receipt to the head office to be ſtamped in like manner, within three calendar months after the date thereof, paying the duty, and a further ſum of ten pounds *per cent.* on ſuch duty, by way of penalty; but the commiſſioners ſhall not, *on any pretence* whatever, ſtamp any receipt unleſs the duty be paid, and ſuch receipt be brought to be ſtamped as aforeſaid, within the times before limited.

Upon oath or affirmation, adminiſtered by a juſtice, or maſter in chancery, that leſs duty has been paid than ought to have been paid, by miſtake, the commiſſioners may rectify ſuch miſtake, and accept the difference between the money paid and the juſt duty, together with ten pounds *per cent.* on ſuch difference, by way of penalty.

Perſons paying or receiving money contrary to this act, indemnified on diſcovering the other offender.

If by infancy or abſence legacies cannot be paid, the money may be paid into the bank, and laid out in the 3*l. per cents.* and if ſuch money be improperly paid in, the chancery may diſpoſe thereof.

[And when money is paid into the bank in purſuance hereof, the accountant-general's certificate ſhall be filed in the

Report Office, where his drafts on the bank for the money for inveſtment ſhall be entered, and be a warrant to the bank for the payment. 37 Geo. III. c. 135.]

If more than the proper duty has been paid, the commiſſioners for ſtamps may return the exceſs; and if leſs, on payment of the full duty, the chancery may order re-payment to the party.

If it ſhall appear to the commiſſioners for ſtamps, at the end of two years after the death of any perſon, that it will require time to collect the effects, or be difficult to aſcertain the reſidue of the perſonal eſtate, the duty may be compounded for.

But the duty ſhall be paid on any part of perſonal eſtates not included in the compoſition.

If at any time after payment of duty on any legacy, or reſidue, any debt ſhould be recovered againſt the eſtate, by reaſon whereof any legatee or entitled perſon ſhall be obliged to refund, the commiſſioners are, on proof thereof on oath as aforeſaid, to repay the duty.

Executors, previous to retaining their own legacies, to tranſmit the particulars, with the duty offered, to the commiſſioners of ſtamps, who ſhall charge the ſame agreeably to this act; and in caſe any perſon ſhall neglect to pay ſuch duty within fourteen days, ſuch perſon ſhall forfeit treble the value of the duty which ought to have been paid.

If adminiſtration be made void, and any duty ſhall have been improperly paid, it ſhall be repaid; but if it ought to have been paid, it ſhall be allowed in account with the rightful executor.

Perſons ſwearing falſely, are guilty of perjury. Penalty of 500l. for altering receipts. And perſons forging ſtamps, &c. to ſuffer death.

The penalties are recoverable in the courts of law.

The form of an account and receipt to be taken by the executor and adminiſtrator, is alſo annexed to the act, and is as follows:

On account of the perſonal eſtate of deceaſed, between taking the adminiſtration of the ſaid eſtate, and legatee [*or* next of kin, *as the caſe may be*]:

	£.	s.	d.
Amount of the ſum [*or* value, *if not in money*] accounted for - - -			
Duty allowed at the rate of *per centum* - - -			
Balance received -			

Received the day of the above balance in [full, *or* part, *as the caſe may be*] of my [legacy, *or* ſhare, *as the caſe may be*] out of the perſonal eſtate above mentioned.

(Signed)

LEGHENICH, or LECHENICH, a town of Germany, in the circle of Lower Rhine, and archbiſhoprie of Cologne, 10 miles S.S.W. of Cologne, and 50 E.N.E. of Liege. Long. 6. 31. E. Lat. 50. 50. N.

LEGIUNCARA, a town of Naples, in the province of Bari, 21 miles N.W. of Matera.

LEGNAGO, a fortified town of Italy, in the Veroneſe. It ſurrendered to the French in 1796, and is ſeated on the Adige, 25 miles S.S.E. of Verona.

LEIBNITZ, a town of Germany, in the duchy of Stiria, ſeated on the Sulm, 16 miles S. of Gratz.

LEIGH, a ſea-port in Eſſex, on a creek at the mouth of the Thames, oppoſite the eaſt extremity of Canvey Iſland. It is noted for oyſters, and has a good road for ſhipping. It is 18 miles S.S.E. of Chelmsford, and 40 E. of London. Long. 0. 42. E. Lat. 51. 31. N.

LEIGH, a town in Lancaſhire, whoſe market is now diſuſed. It is ſeven miles N.N.E. of Warrington, and 191 N.W. of London.

LEIGHTON-BUZZARD, a town in Bedfordſhire, with a market on Tueſday, conſiderable for fat cattle. It is ſeated on a branch of the Ouſe, 18 miles S. of Bedford, and 41 N.W. of London. Long. 0. 35. W. Lat. 51. 55. N.

LEININGEN, a town of Germany, in the palatinate of the Rhine, ſeven miles S.W. of Worms. Long. 8. 22. E. Lat. 49. 30. N.

LEINA, a river of Germany, which flows through Brunſwick-Lunenburgh, and paſſing by Heiligenſtadt, Gottingen, Calenberg, and Hanover, falls into the Aller.

LEIPHEIM, a town of Suabia, in the territory of Ulm, on the ſouth bank of the Danube, 11 miles N.E. of Ulm; and 22 W.N.W. of Augſburg.

LEISZNIG, a town of Upper Saxony, in the circle of Leipſic, ſeated on the Mulde, where are manufactures of cloth, lace, ſtockings, &c. It is 24 miles E.S.E. of Leipſic, and 32 N.W. of Dreſden. Long. 12. 53. E. Lat. 51. 7. N.

LEMBRO, the ancient Imbros, an iſland of the Archipelago, on the coaſt of Romania, 22 miles in circumference, with a town of the ſame name and a harbour. Long. 26. 0. E. Lat. 40. 25. N.

LEMGOW, a town of Weſtphalia, in the county of Lippe, 17 miles N. of Paderborn. Long. 9. 0. E. Lat. 52. 5. N.

LEMNOS, a celebrated iſland of the Archipelago, now called STALIMENE, ſituate near the ſtrait of Gallipoli. It is above 112 miles in circumference according to Pliny, who ſays, that it is often ſhadowed by Mount Athos, though at the diſtance of eighty-ſeven miles. The poets made it ſacred to Vulcan, who was hence called Lemnius Pater. Lemnos was alſo celebrated for its labyrinth, of which not a trace remains; and what hiſtorians relate of it, ſerves only to excite, but not to gratify, curioſity. The modern Greeks entertain the ſame opinion of that earth of Lemnos, which is ſaid to have cured Philoctetes, and which Galen went to examine. It is never dug up but on one particular day in the year, and then with great ceremony. This earth, called terra ſigillata, formed into ſmall loaves, and ſealed with the grand ſignior's ſeal, is then diſperſed over all Europe. The greateſt virtues are attributed to it; and yet a chemiſt can diſcover nothing but a mere clayey earth, incapable of producing the effects that have been attributed to it. Lemnos is ſubject to the Turks; but the inhabitants are almoſt all Greeks, and very induſtrious. Its capital is of the ſame name, and the ſee of a Greek archbiſhop. Long. 25. 28. E. Lat. 40. 3. N.

LENHAM, a town in Kent, with a market on Tueſday; ſeated on an eminence, 10 miles eaſt of Maidſtone, and 47 E.S.E. of London. Long. 0. 45. E. Lat. 51. 18. N.

LENNEP, a town of Weſtphalia, in the duchy of Berg, 20 miles E.S.E. of Duſſeldorf. Long. 6. 56. E. Lat. 51. 11. N.

LENS, a town of France, in the department of the Straits of Calais, eight miles N.E. of Arras.

LENTINI, a town of Sicily, in Val di Noto. It is a ſmall remainder of the ancient Leontium, contains 4000 inhabitants, and is ſituate at the foot of a height; on the top of which Charles V. built a new town, called Carlentini, which

contains 3000 people. Lentini was greatly damaged by an earthquake in 1693, and is ſeated on the Leonardo, 17 miles S.W. of Catania.

LENTZEN, a town of Upper Saxony, near the Elbe, 74 miles N.W. of Berlin. Long. 11. 32. E. Lat. 53. 6. N.

LENZBURGH, a town of Switzerland, in the canton of Bern, which has a conſiderable manufacture of flowered linens and cottons. It is ſeated on a ſmall river, eight miles weſt of Baden.

LEOBEN, a town of Germany, in the duchy of Stiria, ſituate on the Muehr. At this town the preliminaries of peace between the emperor and the French were ſigned April 20, 1797. It is 68 miles S.W. of Vienna.

LEOBSCHUZ, a town of Sileſia, in the principality of Jagerndorf, 14 miles N.N.E. of Jagerndorf, and 27 W.N.W. of Ratiſbon. Long. 17. 28. E. Lat. 50. 14. N.

LEOGANE, a town and fort with a good harbour, on the W. ſide of St. Domingo. It was taken by the Engliſh and the French royaliſts in January, 1794, but retaken by the republicans in October following; and it was unſucceſsfully attacked by the Engliſh in March, 1796. Long. 72. 37. W. Lat. 18. 38. N.

LEON, an iſland of Spain, ſeparated from the Continent by a ſtrait about ten miles long, and ſcarcely three broad in any part. The town of Cadiz is built at its N.W. extremity.

LEON, NEW, a kingdom of North America, lying between New Mexico on the north, the gulf of Mexico on the eaſt, Panuco on the ſouth, and New Biſcay on the weſt.

LEON DE NICARAGUA, a town of New Spain, in Nicaragua, the reſidence of the governor, and a biſhop's ſee. It was taken by the buccaneers in 1685, in ſight of a Spaniſh army, who were ſix to one. It is ſeated at the foot of a volcano, at the N.W. extremity of the lake Nicaragua, 30 miles from the Pacific Ocean, and 104 N.W. of Niagura. Long. 88. 10. W. Lat. 12. 25. N.

LEONARD DE NOBLET, ST. an ancient town of France, in the department of Upper Vienna, with a conſiderable manufacture of paper, and another of cloth for clothing the army. It is ſeated on the Vienna, 12 miles N.E. of Nimoges, and 195 ſouth of Paris. Long. 1. 32. E. Lat. 45. 54. N.

LEONBERG, or LEONSBERG, a town of Suabia, in the duchy of Wirtemberg, ſituate on the Glem, ſix miles weſt of Stutgard, and 34 N.N.E. of Frendenſtadt. Long. 8. 51. E. Lat. 48. 46. N.

LEONESSA, a town of Naples, in Abruzzo Ulteriore, 19 miles N.W. of Aquila.

LEONHART, a town of Germany, in Carinthia, 42 miles eaſt of Clagenfurt. Long. 15. 23. E. Lat. 46. 57. N.

LEOPOLDSTADT, a ſtrong town of Upper Hungary, built by the emperor Leopold in 1665. It is ſeated on the Waag, 36 miles N.W. of Neuhauſel, and 62 E. of Vienna. Long. 18. 6. E. Lat. 48. 35. N.

LEPERS, ISLE OF, one of the New Hebrides, in the South Pacific Ocean. Long. 168. 0. E. Lat. 15. 23. S.

LERICI, a ſea-port of Italy, on the eaſt coaſt of the gulf of Specia, in the territory of Genoa. Long. 9. 55. E. Lat. 44. 5. N.

LESINA, a town of Naples, in Capitanata, with a biſhop's ſee, 26 miles N.N.W. of Manfredonia, and 86 N.N.E. of Naples. Long. 15. 14. E. Lat. 41. 44. N.

LESKO, a town of Poland, in the palatinate of Lemberg, and Auſtrian kingdom of Galicia, 68 miles S.W. of Lemberg.

LESNEVEN, a town of France, in the department of Finiſterre, ten miles north of Landernau, and 13 N.E. of Breſt. Long. 4. 21. W. Lat. 48. 38. N.

LESPARE, a town of France, in the department of Gironde. In its environs are found tranſparent pebbles, reſembling the falſe diamonds of Alençon, and known by the name of Medoc ſtones. It is 30 miles N.N.W. of Bourdeaux.

LETTERE, a commercial town of Naples, in Principato-Citeriore, with a biſhop's ſee. It is ſeated at the back of a mountain, 12 miles N.W. of Salerno, and 20 S.E. of Naples.

LEVANTINE VALLEY, a valley of Switzerland, on the confines of Italy, lying between Mount St. Gothard and Lake Maggiore. It is divided into two parts by the river Teſino; and is eight leagues long, but the breadth inconſiderable. The lower part is populous, rich in paſturage, and produces much hemp and flax. The houſes are entirely of wood, and have externally the appearance of Swiſs cottages, but a neglect of cleanlineſs proves the vicinity and greater ſimilarity to the Italians. It is a bailiwic, ſubject to the canton of Uri; and Oſſogna, the reſidence of the bailiff, conſiſts only of a few houſes.

LEUCATE, a town of France, in the department of Aude, 18 miles ſouth of Narbonne. Long. 3. 9. E. Lat. 43. 0. N.

LEUCHTENBERG, a town of Germany, in the upper palatinate of Bavaria, ſeated on a mountain, near the river Eſreimpt, 50 miles N.W. of Ratiſbon. Long. 12. 26. E. Lat. 49. 40. N.

LEVEN, LOCH, a beautiful lake in Kinroſsſhire, twelve miles in circumference, and ſomewhat of a circular form. It has ſeveral ſmall iſlands, on one of which is a ruinous caſtle. Here the unfortunate Mary, queen of Scots, was confined by the confederate lords, after the murder of her huſband Lord Darnley, and her marriage with Bothwell; but ſhe eſcaped in 1568 by the aſſiſtance of the brother of the governor of the caſtle. Another iſland, named St. Serf's Iſle, is ſaid to have been a reſidence of the Pictiſh prieſts: it was afterwards the ſeat of a priory, of which ſome remains are to be ſeen. This lake produces trout of peculiar excellence; of which great quantities, at certain ſeaſons, are ſent to the Edinburgh markets. In autumn, a ſingular ſpecies, called the gully trout, is here ſalted and dried for winter proviſion.

LEVER (*Encycl.*). Levers are of various kinds, according to the purpoſes for which they are deſigned; and, being eminently ſerviceable for the lifting of weights, we have ſubjoined the following deſcription of a *croſs-bar lever*, which is particularly calculated for raiſing earth that abounds with great quantities of ſtones; though this machine is likewiſe applicable to other objects.—It was invented by Mrs. Wyndham, of Petworth, in Suſſex, on whom the Society for the Encouragement of Arts, &c. in 1796, conferred their ſilver medal.

A (Plate 35), is the lever.

B, an upright piece of wood, to be affixed to the lever; care being taken to place the ſide marked with this letter oppoſite to that marked A on the lever; by which means it inclines backwards, and thus increaſes the power.

C, is a croſs-bar, being the hand by which the workmen exert their ſtrength.

D, is another croſs-bar to be placed at the bottom, behind the upright piece of wood, on which the labourers are to ſtand, and through which the end of the lever paſſes. Theſe additions are ſo conſtructed, that they may be occaſionally fixed and removed, becauſe they are to be employed only

when the ſtrength of the rock, or earth, requires an increaſe of power.

Should the rock be elevated ſo conſiderably above the ground, as to endanger the men by its fall, when the ſeparation takes place, the lever may be reverſed; ſo that the labourers will ſtand upon the bar intended for the application of their hands, in common caſes; and thus all danger will be effectually prevented.

Sliding-LEVER, an invention of Mr. Snart's for transferring the weight of a loaded cart from a fallen horſe; called alſo ALEXIPPOS, and HORSE-HELPER. See the latter in this Supplement.

LEUGNE, a village of France, in the department of Upper Saone, lying to the eaſt of Veſoul. Here is a cavern, thirty-five paces deep and ſixty wide, which ſerves as a barometer to all the country people. A fog at the entrance of this glacier, is an infallible ſign of rain the next day. From the roof, which is fifty feet high, deſcends columns of ice, of a prodigious ſize. The brook, which runs through a part of this grotto, is frozen in ſummer, but flows in winter.

LEVROUX, a town of France, in the department of Indre, with a caſtle, 35 miles S.W. of Bourges. Long. 1. 40. E. Lat. 47. 0. N.

LEUSE, a town of Auſtrian Hainault, ſeated on the Dender, 14 miles N.W. of Mons. Long. 3. 45. E. Lat. 50. 35. N.

LEUTMUHL, a town of Bohemia, in the circle of Chrudim, erected into a biſhopric in 1144, but the town having ſuffered greatly by the Huſſites, the biſhopric was ſuppreſſed. It is 22 miles eaſt of Chrudim, and 76 eaſt of Prague.

LEUTSCH, a town of Germany, in the duchy of Carniola, eight miles S.S.E. of Idria.

LEWENSTEIN, a town of Franconia, capital of a county of the ſame name, with a fortreſs, 10 miles eaſt of Hailbron, and 30 N.N.E. of Stutgard. Long. 9. 38. E. Lat. 49. 18. N.

LEWISBURGH, a town of Northumberland county, in Pennſylvania, ſeated on the Suſquehannah, 140 miles N.W. of Philadelphia.

LEWISTOWN, the county town of Mifflin, in Pennſylvania, ſeated on the Juniatta, 150 miles W.N.W of Philadelphia. Long. 78. 13. W. Lat. 40. 35. N.

LEWISHAM, a village in Kent, on the river Ravenſbourn, five miles S.E. of London. The church is an elegant new edifice.

LEXINGTON, the capital of the ſtate of Kentucky, and county of Fayette. Near this town are to be ſeen curious ſepulchres, full of human ſkeletons, which were thus fabricated: firſt, on the ground were laid large broad ſtones; on theſe were placed the bodies, ſeparated from each other by broad ſtones, covered with others, which ſerved as a baſis for the next arrangement of bodies. In this order they are built, without mortar, growing ſtill narrower to the height of a man. This method of burying appears to be totally different from that now practiſed by the Indians. In the neighbourhood alſo are the remains of two ancient fortifications, with ditches and baſtions; one containing about ſix acres of land, and the other nearly three. Pieces of earthen veſſels have alſo been ploughed up near Lexington; a manufacture with which the Indians were never acquainted. Theſe, with the fortifications, and the ſepulchres, have been urged as an argument, that this country was formerly inhabited by a people different from the preſent Indians, and further advanced than they in the arts of life; and Mr. Filſon, in his account of this country, has advanced arguments to prove, that theſe people were, in all probability, an ancient colony from Wales. Lexington ſtands at the head of the river Elkhorn, 470 miles weſt of Waſhington. Long. 85. 10. W. Lat 38. 20. N.

LEXINGTON, a town of the ſtate of Maſſachuſets, celebrated for being the place where hoſtilities commenced between the Britiſh troops and the Americans, in April, 1775. It is 12 miles N.W. of Boſton.

LIAMONE, or LIMONE, a river of Corſica, which falls into the ſea, ten miles north of Ajazzo. It gives name to a department in the new French diviſion of the iſland.

LIBRARY (*Encycl.*). The following extract from an account of a Pariſh Library for the Poor, by Mrs. Bernard, is publiſhed by the Society for Bettering the Condition of the Poor.

"At Steeple Morden, in the county of Cambridge, the poor have been furniſhed with a circulating library of ſhort tracts of a religious and moral nature. The idea had been originally ſuggeſted by a ſimilar plan, uſeful in its way, but not ſo peculiarly required, which has been adopted for the benefit of the children at the Foundling. The collection at Steeple Morden conſiſts of the Cheap Repoſitory tracts, and ſome few others of a ſimilar kind; and has already, even at the beginning, proved of conſiderable benefit to the pariſh. On Sunday afternoon, when the buſineſs of the Sunday ſchool is over, Mrs. King, the lady who has founded the library, reads one of the tracts to the children, and to ſuch of the parents as chooſe to attend. It is then made the ſubject of converſation; and a few copies of the tract are lent to different children, who read it over again in the evening with their parents and neighbours; and by theſe means ſpend their Sunday evening well, and with uſeful amuſement. Copies of the ſame tract are afterwards lent out for the week, and generally go round the pariſh. On the Sunday following they are brought back, when they receive others, which have been firſt read over to them in the ſame manner. Fifty-two tracts furniſh the year's reading; and ten or twelve copies of each are ſufficient for a moderate ſized pariſh. It is very gratifying to contemplate the pleaſure, the amuſement, and other more material effects, which are produced in this pariſh by a meaſure perfectly ſimple and eaſy in itſelf, and executed at a trifling expence. It anſwers, in one reſpect, the end of the Sunday friendly ſocieties at Winſton and Auckland, and with more general extenſion to the different ages in the pariſh.

"There is hardly any thing which will be found more uſeful in promoting moral and religious improvement in a pariſh, than the ſupply of Sunday reading for the poor, to fill up thoſe hours which are not occupied by worldly employment. Many cottagers have been induced to an habitual attendance on the ale-houſe, to the entire ruin of themſelves and their families, not ſo much by natural diſpoſition, as by want of occupation, for the hours of ceſſation from labour. Perhaps the remark of diſſipation being the conſequence of want of employment, will apply with ſtill more force to higher life; and it may be found that the diſeaſe is of a more incurable nature. But, among the poor, the remedy is neither expenſive nor troubleſome; and its application will be as beneficial to the benevolent diſpenſer of relief, as to the object for whoſe benefit it is applied. I will therefore," ſays Mrs. Bernard, "expreſs my humble hope, that this plan, which has been alſo adopted by the ſame lady in two other pariſhes, and with the ſame ſucceſs, may be imitated by thoſe of our own ſex, who feel gratefully the advantages they derive from the ſources of religious and moral improvement, which are opened to them; and are therefore anxious to expreſs their gratitude, by communicating thoſe advantages to every individual who is dependent upon them."

LICENCE (*Encycl.*). The following are the regulations under which the licences granted to ale-houſe keepers, are placed by the act of 30 Geo. III. c. 38.

	£.	s.	d.
To retail foreign wines in England, if the party has not a ſpirit or beer licence - -	5	4	0
If the party has a beer licence, and not one for ſpirits - - -	4	4	0
If the party has alſo a ſpirit licence -	2	4	0
For every licence to retail Britiſh made wines or ſweets, either in England or Scotland -	2	4	0
To retail foreign wines in Scotland if the party has not a ſpirit or beer licence - -	3	6	8
If he has a beer licence, but not one for ſpirits	2	13	4
If he has alſo a ſpirit licence -	1	6	8
For every licence to retail ſpirits in Great Britain, if the party's houſe be rated to the houſe duty under the ſtat. 38 Geo. III. c. 40 (ſee p. 40, 41), at a ſum not amounting to 15l. per annum - - -	4	14	0
If at 15 and under 20 - -	5	2	0
If at 20 and under 25 - -	5	10	0
If at 25 and under 30 - -	5	18	0
If at 30 and under 40 - -	6	6	0
If at 40 and under 50 - -	6	14	0
If at 50 or upwards - -	7	2	0

Theſe licences to be renewed annually; every perſon who ſells foreign wine retail without a licence, or renewing it in time, forfeits 50l.

On death or removal, upon application to the commiſſioners, or collectors, or ſupervifors, as before recited, the executors, &c. will be authoriſed to carry on the trade for the remainder of the term.

All perſons ſhall be deemed retailers of foreign wine who ſell it in any leſs quantity than the quantity imported.

Any perſon ſelling 25 gallons or under of Britiſh made wine or ſweets is deemed a retailer of that article.

All perſons who ſhall ſell ſpirits, mixed or unmixed, in any leſs quantity than two gallons, ſhall be deemed retailers.

N. B. The ſtamp duty on the juſtices' licence to retail ale, &c. is 1l. 11s. 6d. and by 41 Geo. III. c. 86. 10s. 6d.—Total two guineas.

LICH, or LICHA, a town of Germany, in the landgravate of Heſſe, and county of Selms, 21 miles north of Francfort. Long. 8. 42. E. Lat. 50. 15. N.

LICHSTALL, a town of Germany, in the circle of Upper Rhine, and biſhopric of Baſle, ſeven miles S.E. of Baſle.

LICHTALLEN, or LIESTAL, a town of Switzerland, in the county of Baſil, ſeated on the Ergetz, eight miles S E. of Baſil. Long. 7. 39. E. Lat. 47. 29. N.

LICHTENAU, a town of Weſtphalia, in the biſhopric of Paderborn, nine miles S.S.E. of Paderborn. Long. 8. 23. E. Lat. 51. 52. N.

LICHTENAU, a town of Germany, in the principality of Heſſe Caſſel, 13 miles S.E. of Caſſel, and 24 eaſt of Naumburg. Long. 5. 28. E. Lat. 51. 1. N.

LICHTENBERG, a town and caſtle of Germany, in the duchy of Deux Ponts, 25 miles north of Deux Ponts.

LICHTENBERG, a town of Germany in Franconia. In the neighbourhood are quarries of marble, and mines of copper and iron. It is 22 miles north of Bayreuth, and 26 E. of Coburg. Long. 11. 41. E. Lat. 50. 16. N.

LICHTENSTEIG, a town of Switzerland, capital of the county of Tockenburg, ſeated on the Thur, 31 miles eaſt of Zuric. Long. 9. 8. E. Lat. 47. 15. N.

LICHTENSTEIN, a caſtle and village in the archduchy of Auſtria, nine miles S.S.W. of Vienna.

LIDA, a town of Lithuania, in the palatinate of Wilna, 56 miles ſouth of Wilna. Long. 25. 34. E. Lat. 53. 50. N.

LIDDEL, a river in Roxburghſhire, and the only one in that county that flows ſouthward. It falls into Solway Frith, near the mouth of the Eſk.

LIDDISDALE, a diſtrict in Roxburghſhire, comprehending the ſouthern angle of that county. It admits of little cultivation, and is chiefly employed in paſture.

LIEBENWERDER, a town of the electorate of Saxony, 22 miles north of Meiſſen, and 33 N.N.W. of Dreſden. Long. 13. 20. E. Lat. 51. 30. N.

LIEN-TCHEOU-FOU, a city and ſea-port of China, in the province of Quangtong. Its territories border on the kingdom of Tonquin, from which it is ſeparated by inacceſſible mountains. It is 325 miles S.W. of Canton.

LIEOU-KIEOU, the general name of 36 iſlands lying between Corea, Formoſa, and Japan. They form a powerful empire, the inhabitants of which are civiliſed, and ought not to be confounded with the other ſavage nations diſperſed throughout the iſlands of Aſia. Each iſland has a particular name; the largeſt and principal, called Lieou-kieou, extends 146 miles from north to ſouth, and 38 from eaſt to weſt. They have a king, who is tributary to China. Kint-ching, the capital, in Checuli, the ſouth part of Lieou-kieou, is in Long. 127. 30. E. Lat. 26. 2. N.

LIERE, a town of Auſtrian Brabant, at the junction of the Great and Little Lethe, nine miles N.N.E. of Mechlin, and 12 S.E. of Antwerp. Long. 4. 16. E. Lat. 51. 9. N.

LIESINA, an iſland of Venetian Dalmatia, in the gulf of Venice, 58 miles long and 12 broad. It abounds in corn, olives, ſaffron, and wine.

LIESKENSHOECK, a fortreſs of Dutch Flanders, on the weſt ſide of the Scheld, oppoſite Fort Lillo, and ſeven miles N.W. of Antwerp.

LIESSE, a town of France, in the department of Aiſne, famous for an image of the Virgin Mary, to which a great number of pilgrims uſed to reſort. It is ſix miles eaſt of Laon. Long. 3. 51. E. Lat. 49. 35. N.

LIFFEY, a river of Ireland, which riſes in the county of Wicklow, runs weſt thence into Kildare, and then turning N.E. paſſes through the county of Dublin, and by the city of that name, below which it falls into the Iriſh Sea.

LIFFORD, a borough of Ireland, in the county of Donegal, ſituate on the Foyle, 24 miles N.E. of Donegal. Long. 5. 45. W. Lat. 54. 47. N.

LIGHT (*Encycl.*). Mr. Walker, the author of "Familiar Philoſophy" has endeavoured to ſhew, that the earth and planets perform both their diurnal and annual revolutions in conſequence of the *impulſe* which they receive from *ſolar light*, and that their reſpective diſtances from the ſun may be determined by the balance ſubſiſting between this projectile force of luminous matter, and their gravitating tendency towards the ſun, as their common centre.

That the revolution of the ſun on his own axis (which is eaſily aſcertainable by obſerving the change of place that happens in the ſpots on his ſurface) anſwers ſome eſſential purpoſe in our ſyſtem, that this purpoſe may be to give velocity and force to the light which emanates from him, and that the aggregate momentum of that light may occaſion the daily and annual motions of the planetary world, which is ſubject to his influence, are all conjectures ſo exceedingly probable, that he who ſhould have propoſed them to the world unſupported by experimental inveſtigation would, in our opinion, have deſerved

praiſe for his ingenuity, and credit for the originality of his ſpeculations.

Mr. Walker has not, however, reſted his theory on the unſtable baſis of conjectural reaſoning, but, from direct experiments, has ſhewn that light, contrary to the idea which many philoſophers have entertained, *poſſeſſes an impulſive power;* a fact which neither the experiments of Homberg nor Michell had ſatisfactorily proved, but which is of high importance at a time when every circumſtance which reſpects that firſt and faireſt bounty of Providence is eagerly enquired into, in the conviction that we have but juſt begun to be acquainted with its all-pervading influence—an influence which juſtifies the beautiful obſervation of the regretted Lavoiſier.

" L'organiſation, le ſentiment, le mouvement ſpontané, la vie, n'exiſtent qu'à la ſurface de la terre, et dans les lieux expoſés à la lumière."

Mr. Walker calculates, from his experiments, that the impetus of ſolar light on $1\frac{1}{4}$ ſquare foot of the earth's ſurface is equal to the 100th part of a grain, and that it amounts to 20 tons on the whole diſk of the earth; a force ſufficient, according to him, to cauſe not only the diurnal rotation of this orb upon its own axis, floating as it is in an unreſiſting medium, but alſo its annual revolution round the great ſource of light, in conſequence of the luminous impulſe being greater on one half of the earth than on the other.

If there be ſome errors in the quantity of momentum which the author of this theory aſcribes to ſolar light (for it does not arrive at the earth's ſurface in a *concentrated* ſtate, or as when brought to a focus by a mirror or lens), and if, therefore, a proportionate deduction muſt be made for this diminiſhed force on the different planets, ſtill it is of importance to know that ſmall bodies are ſenſibly moved by the *impulſe of light,* and until the contrary can be ſhewn, it will ſtill remain probable that even the leſſened momentum of the ſun's equatorial emanation acting upon the earth's ſurface may be adequate to the production of its different motions, and to the preſervation of its proper diſtance from the ſun.

Light is eſſentially neceſſary to vegetation: in our climate it is ſeldom productive of injury by its exceſs, though the want of it is often pernicious. This fluid acts as a kind of ſtimulus on the more irritable parts of plants; as appears from the ſun-flower and others, that expand or how when expoſed to the rays of the ſun: hence Dr. Darwin ſuppoſes there may be diſeaſes in plants, ariſing from the exceſs of this ſtimulus, but which, he thinks, have hitherto been diſregarded. To corroborate this conjecture, he ſpecifies the goat's-beard, or ſalſafie (*tragopogon*, L.), and ſome other vegetable productions, which cloſe their flowers about noon, in order to prevent the influence of ſuch ſtimulus.

On the contrary, the abſence or defect of light produces a diſeaſe called *etiolation*, or *blanching*, becauſe vegetables deprived of that fluid become white. It has a ſimilar effect on animal bodies; which, as Dr. Darwin has pointedly remarked, are in conſequence rendered pale and inert: this is confirmed by the languid and *etiolated* countenances of the young ladies in ſome boarding-ſchools, where from falſe motives of delicacy, they are ſecluded both from the light of the ſun, and the invigorating influence of the air: it is ſtill farther evinced in thoſe ſtudious perſons, who paſs their waking hours in unventilated apartments, eſpecially during a conſiderable part of the night.

But, though ſuch *etiolation* be naturally injurious to vegetation, it has been artificially employed with ſucceſs, in rendering certain plants eſculent, by depriving them of their acrimony, cohesion, and colour. This method is chiefly practiſed on celery, by earthing up that plant nearly to the top; on ſea-kale, by covering it entirely with horſe-litter or ſtraw; and, laſtly, on lettuces and endive, by tying the root-leaves together with a bandage.—On the chemical effects of light, the opinions of the learned are quite as unſettled as upon its nature.

Mr. Boeckmann has made ſeveral experiments reſpecting the particular influence of light on phoſphorus diſſolved in different gaſes. It has always been a matter of enquiry and diſcuſſion, whether there is any real difference between heat and light, ſome naturaliſts having attempted to prove the identity of thoſe two matters; while others maintained, that there exiſted a great diverſity between them. From the experiments of Mr. Boeckmann, however, it ſeems to reſult, that dark heat, and heat combined with light, produce phenomena eſſentially differing from each other; and that accordingly we ought not to adopt an identity in the nature of heat and light. As it would lead us too far to relate the ſingle experiments, we ſhall only enumerate the facts that have ariſen from them, and which are the following.

1. The ſolution of phoſphorus in hydrogen gas proceeds not only at a heat combined with light, but alſo at a dark heat.

2. It proceeds with more ſpeed when the temperature is increaſed, whereby, at the ſame time, a greater quantity of phoſphorus diſſolves than at a leſs degree of heat.

3. When the ſolar light is kept off by opake bodies, either ſolid or fluid, from the glaſs tubes in which the phoſphorus is expoſed to ſolution, no phoſphoric particles are found to adhere to the ſides of the tubes, even when the degree of heat is ſo conſiderable as to melt the phoſphorus; whereas,

4. When direct or reflected ſolar light falls on the glaſs tubes, the phoſphorus is, as it were, ſublimed at the ſides of the tubes.

5. The phoſphoric particles lay themſelves on the inner ſides of the tubes more or leſs quickly, according to the degree in which light acts upon them.

6. Thoſe ſublimations of phoſphorus are even produced when the light is faint.

7. When the glaſs tubes are covered on the outſide with opake ſtripes, alternately with places uncovered, the phoſphorus only adheres at theſe ſpots.

8. The difference of temperature has no influence on the phoſphorus adhering to the places where light acts.

9. The experiments were made in veſſels very cloſely ſhut, ſo that the atmoſphere had not the leaſt ſhare in producing the cryſtallizations of phoſphorus that adhered to the inner ſides of the tubes.

On the whole, in theſe experiments we meet with two phenomena, viz. the ſolution of phoſphorus in gaſes, and the adheſion of it to the ſides of the veſſel in which the ſolution was undertaken, when they are expoſed to the light of the ſun. The ſolution is undoubtedly promoted by heat, though the adheſion never takes place without the action of light. But how this is cauſed, is not ſo eaſily to be reſolved.

LIGNAC, a town of France, in the department of Indre, 11 miles S.E. of Blanc. Long. 1. 20. E. Lat. 46. 31. N.

LIGNE, a town of Auſtrian Hainault, on the river Dender, 12 miles N.W. of Mons. Long. 3. 45. E. Lat. 50. 35. N.

LIGNEROLLES, a town of France, in the department of Allier, four miles ſouth of Montluzon.

LIGNIERES, a town of France, in the department of Cher, with a collegiate church and a caſtle, 22 miles S S.W. of Bourges. Long. 2. 24. E. Lat. 46. 47 N.

LIGNITZ, a town of Sileſia, capital of a principality of the ſame name, with a caſtle, ſeated on the rivulet Cet, 30 miles ſouth of Glogaw. Long. 16. 36. E. Lat. 51. 10. N.

LIGNY, a town of France, in the department of Meuſe,

with a caſtle, a collegiate church, and a handſome park. It is ſeated on the Orney, eight miles S.E. of Bar-le-Duc, and 125 of Paris. Long. 5. 26. E. Lat. 48. 39. N.

LIGON, a ſea-port in the peninſula of Malacca, capital of a ſmall territory of the ſame name, with a magazine belonging to the Dutch Eaſt-India Company. It is ſeated on the eaſt coaſt. Long. 100. 5. E. Lat. 7. 40. N.

LIGUEIL, a town of France, in the department of Indre and Loire, ſeated on a brook, 23 miles S.S.E. of Tours. Long. 0. 52. E. Lat. 47. 3. N.

LILIENTHAL, a town of Lower Saxony in the duchy of Bremen, ſituate on the Warp, 10 miles N.N.E. of Bremen, and 20 N.N.W. of Verden.

LILLERS, a town of France, in the department of the Straits of Calais, ſeated on the Navez, 17 miles N.W. of Arras. Long. 2. 35. E. Lat. 50. 30. N.

LILLO, a fort of Dutch Brabant, on the eaſt ſide of the Scheld, ſeven miles north of Antwerp. It was taken, in 1793, by the French, who ſoon after evacuated it, retaking it, however, in 1794. Long. 4. 18. E. Lat. 50. 30. N.

LIMALE, a town of Auſtrian Brabant, ſeated on the Dyle, 13 miles S.E. of Bruſſels. Long. 4. 42. E. Lat. 50. 42. N.

LIMAVADY, a town of Ireland. See NEWTOWN LIMAVADY.

LIMBURG, a town of Germany, in the electorate of Treves. The Auſtrians defeated the French on the heights near this place, in 1796. It is ſeated on the Lahn, 10 miles eaſt of Naſſau, and 20 north of Mentz. Long. 7. 51. E. Lat. 50. 24. N.

LIME, or QUICKLIME *(Encycl.)*. Though we have already ſpoken of this ſubſtance as a valuable manure (ſee HUSBANDRY), we are induced to add the following particulars reſpecting the principle on which lime is of uſe in agriculture. Lime is prepared from various materials of the calcareous claſs, by the application of proper degrees of heat, by which one of their conſtituent principles is diſſipated or forced off, and its place ſupplied by another; carbonic acid, or fixed air, being diſengaged, and caloric, or the matter of heat, being taken in its ſtead. In this ſtate lime poſſeſſes the greateſt power over animal and vegetable ſubſtances, being capable of breaking down their texture, and deſtroying their organization, in the moſt expeditious manner. Hence it has been denominated *quick* or *cauſtic* lime. But on expoſure to the atmoſphere, moiſture is abſorbed, the caloric or heat diſengaged, the carbonic acid or fixed air readily reſtored. This conſtitutes the mild *effete* or *carbonated* ſtate of lime. In this ſituation, though it is far from acting with ſuch violence on thoſe animal or vegetable matters that come in its way, it has much effect in accelerating the putrefactive proceſs, and in promoting their ſolution.

However well theſe different conditions of lime may have been diſcriminated by the chemiſt, they ſeem to us to have been but very little regarded by the practical agriculturiſt. The term *lime* being applied, without diſtinction, to the different ſtates, it is eaſy to perceive that they muſt frequently have been uſed in an improper manner, and that, of courſe, much confuſion, as well as contrariety of effect, muſt have been engendered.

The differences that have proceeded from the want of proper chemical examinations of the ſeveral kinds of calcareous ſubſtances that have been made uſe of for the purpoſe of lime, are perhaps not leſs productive of error or uncertainty than thoſe which have ariſen from the other cauſe which we have aſſigned; for it appears from the late experiments of that very able and ingenious chemiſt, Mr. Tennant (ſee the Philoſ. Tranſ. Royal Society, 1799, part II.), that there are ſubſtances contained in ſome ſort of limeſtone that are highly injurious to vegetation, while other kinds do not poſſeſs them at all. He found, upon reducing two different ſorts of limeſtone to a coarſe powder, and ſowing in them ſeeds of different plants, that in both the ſeeds grew equally well, and nearly in the ſame manner, as they would in ſand or other ſubſtances that afford no nouriſhment to plants; but that, after burning them into lime, and expoſing them for ſome weeks to the air, in order to leſſen their cauſticity, and then ſowing ſeeds in them, in that ſort of lime which had been found the moſt advantageous when applied to land, almoſt all the ſeeds came up, and continued to grow ſo long as they were ſupplied with water, the roots of the plants having many fibres which penetrated to the bottom of the veſſels in which they grew. The compoſition of this kind of lime, on examination, turned out to be entirely calcareous earth; and, on expoſure to the air for about three months, was found to have abſorbed four-fifths of the carbonic acid, or fixed air, that was neceſſary to ſaturate it. But in the other ſort, which had been found injurious to land, only a few of the ſeeds grew, and the plants produced by them had ſcarcely any ſtalks or roots, being formed almoſt entirely of the two ſeed-leaves which lay quite looſe on the ſurface. On ſpreading this ſort of lime on a garden ſoil, to the thickneſs of the tenth of an inch, it prevented nearly all the ſeeds that had been ſown from coming up, while no injury at all was occaſioned by common lime applied in the ſame way. This lime, on being examined, was found to contain three parts of calcareous earth, and two of magneſia; it only abſorbed, on being expoſed to the air for nearly the ſame length of time as the other, forty-two hundreds of the carbonic acid that was combined with it before it was burnt into lime. As it ſeemed extremely probable, from theſe trials, that the magneſia contained in lime of this kind was the cauſe of its extraordinary properties, ſome experiments were made to aſcertain the effects of that ſubſtance upon vegetation. Seeds of colewort, as growing rapidly, were ſown in uncalcined magneſia, which, though they ſprouted, the leaves never roſe above the ſurface, and the plants were without roots: they did not appear to grow better in magneſia that had been waſhed in water, which contained carbonic acid or fixed air. Calcined magneſia was ſtill more prejudicial, the ſeeds not coming up in it. In order to compare its effect on vegetables with thoſe of lime, each of theſe earths were mixed in different proportions with ſand in ſmall cups, and ſeeds then ſown in them. The lime being obtained from marble, and made to fall to powder from being moiſtened with water before it was put to the ſand. In a mixture of four ounces of ſand with three or four grains of calcined magneſia it was long before the ſeeds came up, and the plants had ſcarcely any roots or ſtems; and with ten grains or upwards of magneſia there was not the leaſt ſign of vegetation: thirty or forty grains of the lime not retarding the growth of the ſeeds more than three or four of the magneſia, and the injurious effects not ſo laſting. The lime, from its abſorbing carbonic acid or fixed air, ſoon loſt its deſtructive properties; ſo that after keeping the mixtures four or five weeks, ſeeds were found to grow in that with forty grains of lime nearly as well as in pure ſand; but in that with four grains of magneſia they produced only the ſeed-leaves as ſtated before. It is neceſſary to break the ſand occaſionally where much lime is uſed, in order to allow the ſeeds to puſh through it. It was found that plants would bear a much larger proportion of magneſia in vegetable ſoil than in ſand; but with twenty grains of calcinated magneſia in as much ſoil as was equal in bulk to four ounces of ſand, the ſeeds, however, only produced the ſeed-leaves without roots; and with forty grains they were totally prevented from coming up. As land

is frequently rendered barren for ſome time by the application of this ſort of lime, Mr. Tennant made experiments with mortar conſtituted of this lime, which had been prepared three and eight years, and conſtantly expoſed to the air. Theſe, on being reduced to powder, had ſeeds ſown in them, but only a few came up, and theſe merely produced the ſeed-leaves without roots. As plants would grow in the limeſtone from which this ſort of lime was made, but not in the mortar prepared from it, he next endeavoured to aſcertain what proportion of the carbonic acid contained originally in the limeſtone had been abſorbed by the mortar. To prove this, a piece of it was finely powdered, and trials made of the quantities of this powder and of the limeſtone that would ſaturate the ſame meaſure of acid, from which he found that the mortar and limeſtone contained equal quantities of the magneſian lime; and the carbonic acid or fixed air being obtained from them and meaſured, it was found that the mortar which had been expoſed three years had abſorbed forty-three, and that of eight only forty-ſeven hundreds of the quantity originally combined with the limeſtone. Common mortar that had been expoſed to the air for a year and three quarters had regained ſixty-three hundreds of its full proportion of carbonic acid. The lime which contains magneſia may, Mr. Tennant obſerves, be readily diſtinguiſhed from that which is purely calcareous by the ſlowneſs of its ſolution in acid, which is ſo conſiderable that the ſofteſt kind of the former is much longer in diſſolving than marble. The cryſtaliſed ſtructure which is generally obſerved in the magneſian limeſtone, he thinks, demonſtrates that it has not been formed by the accidental union of the two earths, but that it muſt have been the reſult of their chemical combination. The difficulty of diſſolving it he ſuppoſes to ariſe from the greater attraction of its different conſtituent parts to each other. Mortar formed from this kind of lime is as ſoluble in acids as common marble; and the ſubſtances of which it conſiſts are readily ſeparated. The magneſian may be taken from it by boiling it in muriated lime, and lime precipitated by it from lime water; but theſe effects can neither of them be produced by the ſtone previous to its calcination. This able experimenter has offered ſeveral other obſervations and concluſions to ſhew the different proportions of calcareous and magneſian earths contained in different ſpecimens of this ſort of limeſtone, which perhaps do not leſs deſerve the attention of the agriculturiſt than the chemical enquirer; but the above are amply ſufficient for the purpoſes of this work, as they abundantly prove that not only much error and confuſion muſt have been cauſed in the practice of huſbandry, but very different effects produced by the want of ſufficient knowledge of the chemical properties of the various ſorts of calcareous matter that are employed for the preparation of lime.

LIME, or LEMEN, a village in Kent, three miles weſt of Hithe. It was formerly a port, till choked up by the ſands, and is now a poor town; but it has the horn and mace, and other tokens left of its ancient grandeur. It uſed to be the place where the lord warden of the Cinque Ports was ſworn, at his entrance upon his office. The Roman road from Canterbury, called Stanc-ſtreet, ended here; and from the brow of its hill may be ſeen the ruins of the Roman walls. Here was formerly a caſtle, now converted into a farm-houſe.

LIME-TREE; (ſee TILIA, *Encycl.*) The following is an extract of a paper on the genus tilia, read at the National Inſtitute in France, by Citizen Ventenat.

Linnæus has mentioned in his Species Plantarum, only two ſpecies of lime-tree, to which he gave the name of *Europæa* and *Americana*; but as there are more diſtinct ſpecies of this tree to be met with in Europe as well as in America, thoſe names cannot conveniently be retained, becauſe one might ſuppoſe by them, that the other ſpecies do not grow in Europe or in America.

Miller, in his Gardener's Dictionary, deſcribes two American ſpecies of lime-tree, retaining the name of *Americana* for that which was known to Linnæus, and aſſigning to the other, brought from Carolina by Cateſby, the name of Caroliniana; but this cannot likewiſe be adopted, ſince *Michaux* and other botaniſts have diſcovered in Carolina another ſpecies of lime-tree, different from that found by Cateſby. Mr. Aiton, in his Hortus Kewenſis, has probably changed, on that account, the name of *Caroliniana* into that of *pubeſcens*. Mr. Walther diſtinguiſhes a ſpecies of lime-tree, native of Carolina, "*Tilia Americana, floribus nectario inſtructis, ſtipulis floriferis*;" but as this deſcription agrees evidently with all the lime-trees that may grow in the whole extent of America, it is obvious how difficult it would be to determine which ſpecies Walther may have meant, if the naturaliſts who travelled in Carolina had not brought with them ſpecimens of the tree, which the Engliſh botaniſt meant to characteriſe.

After having given the generic character, Mr. *Ventenat* deſcribes the following ſpecies, of which he has given figures:

Lime-trees of Europe, with naked petals.

Tilia microphylla.—Foliis cordato-ſubrotundis, acuminatis, argute ſerratis, capſula ſubgloboſa, minime coſtulata, tenuiſſima, fragili. Var. fructo oblongo, utrinque acuminato. Tilli Hort. Piſan. T. 49. fig. 3.

T. platyphyllos.—Foliis cordato-ſubrotundis, acuminatis, inæqualiter ſerratis, capſula turbinata, coſtis prominentibus, inſignita, lignoſa, craſſa. Var. Carolina, Ait. Hort. Kew.

Lime-trees of America; petals provided with a ſcale, at their baſis.

T. glabra.—Foliis profunde cordatis, ſerratis, glabris; petalis apice truncatis, crenatis, capſula ovata, ſubcoſtata (T. Americana L.)

Habitat in Virginia et Canada.

T. pubeſcens. Ait.—Foliis baſi truncatis et obliquis denticulato ſerratis, ſubtus pubeſcentibus, petalis emarginatis, capſula globoſa lævi.—T. Caroliniana Mill.

Habitat in Carolina.

Var. leptophylla, foliis tenuiſſimis, ſubpapyraceis. Habitat in Louiſiana.

T. rotundifolio.—Foliis cordato-ſubrotundis, ſubſinuatis, dentatis verticalibus ſubtus tomentoſis; capſula ovata, obſcuri nervoſa. T. alba Ait. argentea Mus. Nat.

Habitat in America ſeptentrionali.

T. heterophylla.—Foliis ovatis, argute ſerratis, baſi nunc cordatis nunc oblique aut æqualiter truncatis ſubtus tomentoſis, capſula globoſa, multinervoſa.

Habitat in Carolina inferiori, et in Marylandia.

Mr. Ventenat terminates this paper, by preſenting ſome obſervations on the culture of the ſpecies of this genus, on the ſoil that agrees with them, and on the advantages that may reſult from them to the community.

LIMEUIL, a town of France, in the department of Dordogne, 20 miles S. of Perigueux. Long. 0. 50. E. Lat. 44. 52. N.

LIMMAT, a river of Switzerland, formed by the junction of the Mat and the Linth; the former iſſuing from the N.W. extremity of the lake Wallenſtadt, and the latter flowing from the S. The Limmat, continuing its courſe N.W. flows through the lake of Zuric, and falls into the Aar, below Baden.

LIMOUX, a commercial town of France, in the department of Aude. It has a manufacture of cloth; and the environs produce an excellent white wine, called the Perry of Limoux. It is ſeated on the Aude, 37 miles W. by S. of Narbonne, and 50 S.E. of Toulouſe. Long. 2. 16. E. Lat. 43. 4. N

LINCHE, or LINKE, a ſtrong town of France, in the department of the North, ſeated on a river, 10 miles S.W. of Dunkirk. Long. 2. 20. E. Lat. 51. 0. N.

LINDAU, a free imperial town of Suabia. Here is a celebrated abbey of canoneſſes, whoſe abbeſs is a princeſs of the empire, and a Roman-catholic, though the inhabitants of the town are proteſtants. The French took poſſeſſion of this town in July 1796. It is a trading place, ſeated on an iſland of the lake of Conſtance, joined to the main land by a long beautiful bridge, 12 miles S.E. of Buchorn, and 75 S. by W. of Augſburg. Long. 9. 50. E. Lat. 47. 38. N.

LINDAU, a town of Upper Saxony, in the principality of Anhalt Zerbſt, five miles N. of Zerbſt.

LINDENFELS, or LINDENFELD, a town of Germany, in the palatinate of the Rhine, 14 miles N.N.E. of Manheim, and 17 of Heidelberg. Long. 8. 47. E. Lat. 49. 42. N.

LINDKOPING, or LINKIOPING, a town of Sweden, capital of Weſt Gothland, with a biſhop's ſee. It is ſeated on the lake Wenner, 12 miles N.W. of Skar, and 178 S.W. of Stockholm. Long. 13. 5. E. Lat. 58. 25. N.

LINDOW, a town of Upper Saxony, in the Middle Marche of Brandenburg, eight miles S.S.W. of Frankfort on the Oder.

LINDSEY, the largeſt of the three principal diviſions of Lincolnſhire, including all the county that lies N. of Lincoln, and the Foſſdike, which Henry I. cut between the Witham and the Trent. It is the moſt elevated part of the county: and the air is generally eſteemed healthy, eſpecially on the W. ſide. To the N.E. is a large tract of heathy land, called the Wolds, the S. part of which is well inhabited, but the N. is thin of people: great flocks of ſheep are bred throughout this tract. See AXHOLM.

LIN-KIANG-FOU, a city of China, in the province of Kiang-ſi, ſeated on the river Yu-ho. It has only four cities of the third claſs in its diſtrict; but is of ſome note, on account of one of its villages being the general mart for all the drugs ſold in the empire. It is 410 miles N. by E. of Canton.

LIN-TCHEOU-FOU, a city of China, in the province of Kiang-nan; including, in its juriſdiction, two cities of the ſecond, and ſix of the third claſs.

LIN-TCHIN-TCHEOU, a city of China, in the province of Chan-tong, ſeated on the Great Canal. Among the edifices admired here, is an octagonal tower, divided into eight ſtories, the walls of which are covered on the outſide with porcelain; and near this are ſome temples of beautiful architecture. It is 225 miles S. of Pekin.

LINEN, a general name given to thoſe garments that the people of England, and other countries, uſually wear immediately next the ſkin; theſe being, for the moſt part, of flaxen manufacture. That this is the moſt conducive to longevity, however, eſpecially in ſo variable a climate as that of Britain, has been long doubted; and the more wholeſome practice now prevails, not only with valetudinarians, but with conſiderate perſons who even enjoy good health, to wear flannel or fleecy-hoſiery (ſee FLEECY-HOSIERY, *Supp.*) *under* their linen.

The following extract from an account of an *annual diſtribution of linen to the poor*, with a propoſal as to a mode of ſupplying them with blankets, by the Rev. Mr. Dolling, late vicar of Aldenham, Herts, is publiſhed by the Society for bettering the Condition of the Poor.

"A worthy friend," ſays Mr. Dolling, "annually confided to me the diſtribution of five guineas, for the benefit of the poor. With them I purchaſed about 110 yards of linen cloth, which was cut out chiefly into ſhifts, the pieces of each being pinned togther. I kept an annual linen liſt, giving at Chriſtmas a ſhift each to about thirty-ſeven women, and occaſionally a ſhift to a girl, or a ſhirt to a boy; ſo that they all had this benefit in their turns, and ſome more deſerving mothers, with large families, conſtantly; the preference being given to thoſe who did not receive parochial relief.—Whenever they attended together at my houſe to receive the linen, I took the opportunity of pointing out to them any improprieties in their conduct, deſerving of obſervation. What was then ſaid was often attended with good effect."

On this plan the following obſervations are made:

"At the ſame time that it muſt be admitted that the poor are not provident, it ſhould be obſerved in their exculpation, that they frequently have not the means of being ſo. It ſeldom happens, when winter approaches, that they have been able to make, or at leaſt that they have made, a ſufficient proviſion for clothing during the ſeverity of the ſeaſon; and their health often ſuffers for want of it. If blankets were purchaſed, and lent out to cottagers in November, a regiſter book being kept, and the blankets marked, and No. 1, 2, &c. placed againſt each name, and ſigned by the borrower, to be returned again clean in the enſuing month of May, unleſs the cottager could become the purchaſer of it, at a limited and reduced price, it would contribute greatly to their health and comfort during the winter."

We cordially agree with the benevolent writer of theſe remarks, well knowing how greatly the miſeries of the poor are aggravated, as well as their diſeaſes promoted, in ſevere weather, from the mere want of the means of warmth and cleanlineſs. Nothing is more common amongſt the poor, eſpecially in great towns, than the uſe of ſheets, and body linen that are worn for a *continuance*, perhaps till they are *worn out*, without *once* undergoing the purifications of a waſhing tub!

LINNE, a town of Germany, in the archbiſhopric of Cologne, 32 miles N.N.W. of Cologne.

LINNICH, a town of Weſtphalia, in the duchy of Juliers, five miles N.N.W. of Juliers. Long. 6. 2. E. Lat. 51. 2. N.

LINOSA, an iſland of the Mediterranean, on the coaſt of Africa, 12 miles from Lampedoſa. It is 12 miles in circumference. Long. 12. 30. E. Lat. 36. 50. N.

LINSELLES, a town of Flanders, where, in 1794, a battle was fought between the allies, but chiefly the Engliſh commanded by the Duke of York, and the French. It is five miles N. of Liſle.

LINTON, a town in Cambridgeſhire, with a market on Thurſday, 12 miles S.E. of Cambridge, and 46 N. by E. of London. Long. 0. 22. E. Lat. 52. 8. N.

LIPOUREC, a town of Poland, in the palatinate of Cracow, 32 miles W. of Cracow.

LIPPEHNE, a town of Upper Saxony, in the New Marche of Brandenburg, 26 miles N. of Cuſtrin. Long. 14. 52. E. Lat. 52. 53. N.

LIPSTADT, a conſiderable town of Weſtphalia, capital of the county of Lippe. It was once free and imperial; afterward ſubject to its own counts, and now to the king of Pruſſia. It carries on a good trade in preparing timber for building veſſels on the Rhine, with which it has a communication by the river Lippe. It is ſeated in a moraſs, 17 miles W.S.W. of Paderborn, and 30. S.E. of Munſter. Long. 8. 30. E. Lat. 51. 42. N.

LIQUE, a town of France, in the department of the

Straits of Calais, 12 miles W. of St. Omer. Long. 2. 0. E. Lat. 50. 45. N.

LIS, a river of the Netherlands, which has its ſource in Artois, and running N.E. into Flanders, paſſes by Aire, St. Venant, Armentieres, Menin, Courtray, and Deynſe, and then falls into the Scheld, at Ghent.

LISCA, or Lisca Bianca, one of the Lipari Iſlands, three miles S.W. of Stromboli. It is a ſmall deſert ſpot.

LISIER, St. a town of France, in the department of Arriege, lately an epiſcopal ſee. Here is a chapel, which has been famous for the reſort of pilgrims. It is ſeated on the Satat, 50 miles S.E. of Auch, and 390 S. by W. of Paris. Long 1. 15. E. Lat. 42 56. N.

LISONZO, a river, which riſes in Carinthia, runs through part of the republic of Venice, and falls into the gulf of Venice, at the harbour of the ſame name.

LITHAY, a town of Germany, in the duchy of Carniola, ſituate on the Save, 15 miles E. of Lanſbach.

LITIZ, a town of the ſtate of Pennſylvania. Here is a flouriſhing ſettlement of the Moravians, begun in 1757. It is eight miles from Lancaſter, and 70 W. of Philadelphia.

LITSCHAU, a town of Germany, in the archduchy of Auſtria, 70 miles N.W. of Vienna. Long. 14. 55. E. Lat. 48. 48. N.

LITTERMORE, an iſland near the W. coaſt of Ireland, and county of Galway, about four miles long and two broad. Long. 9. 40. W. Lat. 53. 17. N.

LIVADOSTA, a town of Livadia, ſeated on the gulf of Lepanto, in the iſthmus of Corinth, to the N. of the city of that name, with a biſhop's ſee.

LIVENZA, a river of Italy, in the territory of Venice, which runs on the confines of Treviſano and Friuli, and falls into the gulf of Venice, between the mouth of the Piava and the town of Caorlo.

LIVERDUN, a town of France, in the department of Meurthe, ſeated on a mountain, near the river Moſelle, eight miles N.E. of Toul. Long. 6. 5. E. Lat. 48. 45. N.

LIZARD; (ſee Basiliscus, *Encycl.*). Some have inſiſted on the efficacy of lizards in curing the leproſy. The following tranſlation of a letter from M. Rey Demourande, a French merchant ſettled in Spain, inſerted in the Journal de Bourdeaux, together with a letter from M. Delarche at Madras, to George Smith, eſq. at Calcutta, contain ſome curious accounts of this fact. The writer of the former expreſſes himſelf eager to communicate to his country what he calls "a moſt uſeful and precious diſcovery for human nature." "It is," ſays he, "a wonderful ſpecific againſt the leproſy, cancers, venereal diſorders, and every kind of ulcers. We owe the knowledge of this remedy to the Indians of the village of Saint Chriſtoval Amalelace, dependent on the kingdoms of Guatimala. The trials which have been made of it in that country, at Malaga, and at Cadiz, have been ſo ſurpriſing and favourable, that about a month ago there was printed in the latter city a ſmall pamphlet of twenty pages, containing an account of its diſcovery, and a detail of the miraculous cures which have been derived from it, as well at Guatimala as at Mexico and Malaga. This remedy is ſmall lizards eaten or ſwallowed raw, either thoſe called in the Encyclopædia *anolis de terre*, or *gobe mouches*; and the manner they are deſcribed by Doctor Joſeph Storey, of the royal univerſity of the city of Guatimala, is this: "Theſe reptiles are very properly called ſmall lizards, for their figure is exactly that of a lizard; they are eight or ten inches in length, and a little more than half an inch in breadth; they are very active and vivacious; ſome of them are gilt between a yellow and green, and others are grey with ſpots; both of them have their ſkin covered with triangular ſcales from the head to the tail. I apprehend that the gilt ones, or thoſe of the colour *de tourne ſol*, are the female, becauſe their bellies are larger and more protuberant. The Indians," adds the doctor, "are neither averſe to them nor diſguſted with them. They take a ſmall lizard, and with much dexterity cut off its head and tail, immediately they extract the entrails, and with a ſingle exertion tear off the ſkin. In this raw ſtate, the fleſh trembling and ſtill hot, they chew them ſlowly, and ſwallow them with great compoſure. They take daily one of them faſting. It is ſaid they are accuſtomed not to take more, but it has happened that they have taken two and even three." Diſguſt has prevented the Spaniards, both in Europe and America, from taking the medicine in this manner: to render it more ſupportable and leſs repugnant to their feelings, after having cut off the head and tail, and feet of the animal, and taken away its entrails and ſkin, the remainder has been divided into ſmall pieces, and being covered over with a paſte of flour, adminiſtered to the patient in pills; the body of a ſmall lizard making two, each a little leſs than a muſquet-ball. Every experiment which has been made, both at Guatimala, Mexico, and Malaga, in the moſt deſperate caſes, has been attended with the greateſt ſucceſs. It appears, nevertheleſs, that although at Guatimala and Mexico only five or ſix *anolis* are neceſſary to cure a patient radically, yet a much greater number is requiſite at Malaga to produce the ſame effect, for it was not till after a leper's having ſwallowed thirty or forty at Malaga, in a like number of days, that his cure was completed. The effects which this remedy produces are conſtantly an extraordinary heat and burning, accompanied with a profuſe ſweat, and a ſalivation thick, plentiful, and yellow. There have been patients who have neither ſalivated or perſpired much from it, but in lieu thereof have had plentiful evacuations either by the way of urine, which was exceſſively acrid and fetid, or from conſiderable excrements. In America a patient has never been prepared by bleeding, purging, or other courſe of medicine; but at Malaga in ſome caſes it has been thought expedient to bleed ſlightly previous to adminiſtering the remedy.

"Although my letter is already very long, the ſubject is ſo intereſting to human nature that I deem it incumbent on me to add ſome few obſervations; the firſt is to remark, that theſe ſmall lizards, or anolis, retire during the winter into the holes of walls, old trunks of trees, in the ſand, and in the earth, where they remain torpid until the return of heat. I believe as well from this circumſtance as from the burning abundant ſweats which the medicine cauſes, and to approach as near as poſſible the method made uſe of at Guatimala, that it will be proper to adminiſter them only in ſummer; too much care cannot be taken to oblige the patient to ſwallow theſe animals whilſt hot, and as ſoon after being killed as poſſible, it being probable that their ſingular and wonderful property ariſes from the animal ſpirits, and a ſalt, extremely volatile, which every part of their body contains, and which the ſmalleſt degree of fire or the leaſt cooling after their death would diſſipate. Here is a fine field for diſcoveries in phyſic! for if, as I am perſuaded it will, this remedy produce the ſame effects in France as in America and Spain, it is not to be doubted but that the animal ſpecies being the moſt perfect and analogous to mankind, we ought to find in that claſs the moſt ſalutary remedies. I am alike convinced, that, after the example of the preſent diſcovery, if, inſtead of making uſe of the viper in broth, it were to be given raw, or in pills, it would produce a much greater effect, and might have the ſame efficacy as that attributed to the lizards.

"M. de Malzac, an experienced phyſician of Kaſtres,

having promiſed to make experiments with theſe lizards or *anolis*, I have given him a copy of the tranſlation which I made of the pamphlet printed at Cadiz."

Mr. Delarche writes thus from Madras, 7th May, 1785, to Mr. Smith.

"I have, in conformity with the accompanying receipt, attempted to adminiſter this cure to a leper here, who laboured under this malady for twenty years, and who had loſt the joints of his toes on both feet, and who was all over covered with pimples and ulcers, eſpecially about the ears and noſe, which diſcharged a fœtid and vicious matter. I cauſed him to take 180 of theſe lizards warm, and almoſt trembling, and for three months without interruption. The fifteenth day of the remedy he began to ſpit, or ſalivate, in great abundance, which he did for a month and a half, when it ceaſed of itſelf: during this time of his ſalivation, the pimples and ulcers, with which he was covered, dried up, and they fell off in ſcales, in ſuch manner, that it would not ſeem that this man had ever been affected with the leproſy; but ulcers which he had on his feet, though without toes, did not dry up, but continued to diſcharge matter, though in ſmaller degree than before. In other reſpects, this man, who for fifteen years had not ſlept two hours in the twenty-four, and even that a broken and diſturbed ſleep, began on the thirteenth day of his cure to ſleep ſoundly, and ſometimes for ſix hours without interruption, recovering his appetite, which he had before loſt. This, ſir, is the preſent ſtate of this man; if the leproſy ſhould not again break out on his body, he may think himſelf very happy, though not radically cured. I intend next month, when it becomes very hot, to recommence the remedy, and to adminiſter it for forty days without interval, for probably the lizards will then have more animal ſpirits, and more volatile ſalts, than they have in the months of October, November, and December, which you know is our rainy and cold ſeaſon. May it pleaſe God, for the ſake of human kind, that this man be radically cured; in ſuch event, I ſhall inform you.—N. B. No fiſh or pickles muſt be eaten by the patient during this cure."

LIZARD, the moſt ſouthernly promontory of England, whence ſhips uſually take their departure, when bound to the weſtward. Long. 5. 10. W. Lat. 49. 57. N.

LLANARTH, a town in Cardiganſhire, with a market on Tueſday, 17 miles eaſt by north of Cardigan, and 212 weſt by north of London. Long. 4. 20. W. Lat. 52. 13. N.

LLANBEDER, a town in Cardiganſhire, with a market on Tueſday. It is ſeated on the Tyvy, over which is a bridge into Carmarthenſhire, 24 miles eaſt of Cardigan, and 197 weſt by north of London. Long. 4. 8. W. Lat. 52. 9. N.

LLANDILOVAWR, a town in Carmarthenſhire, with a market on Tueſday and Saturday. It is ſeated on an aſcent, on the river Towy, over which is a bridge, 13 miles eaſt by north of Carmarthen, and 194 weſt by north of London. Long. 3. 58. W. Lat. 51. 55. N.

LLANELLY, a town in Carmarthenſhire, with a market on Tueſday. It trades much in coal, and is ſeated on a creek of the Briſtol Channel, 13 miles ſouth by eaſt of Carmarthen, and 216 weſt by north of London. Long. 4. 10. W. Lat. 51. 43. N.

LLANGADOC, a town in Carmarthenſhire, with a market on Thurſday. It is ſeated between the rivers Brane and Sawthy, which ſoon join the Towy, 18 miles eaſt by north of Carmarthen, and 185 weſt by north of London. Long. 3. 48. W. Lat. 51. 54. N.

LLANGOLLEN, a town in Denbighſhire, with a beautiful bridge of four arches over the river Dee, ſeven miles S.W. of Wrexham, and 184 N.W. of London.

LLANGUNNER, a village in Carmarthenſhire, a mile and a half from Carmarthen, noted for being the private ſeat of Sir Richard Steele, who died here in 1729.

LLANROOST, a town in Denbighſhire, with a market on Tueſday, ſeated on the Conway, 15 miles S.W. of Denbigh, and 222 N.W. of London. Long. 3. 58. W. Lat. 53. 6. N.

LLANTRISSENT, a town in Glamorganſhire, with a market on Friday. It is an ancient place, governed by a portreeve, who is ſworn by the deputy conſtable of the caſtle that ſtands near it. It is 10 miles N.W. of Landaff, and 166 weſt of London. Long. 5. 22. W. Lat. 51. 28. N.

LLANWILLING, a town in Montgomeryſhire, with a market on Tueſday. It is ſeated in a flat, among hills, near the river Cane, 15 miles north by weſt of Montgomery, and 179 N.W. of London. Long. 3. 8. W. Lat. 52. 40. N.

LLANYDLOS, a town in Montgomeryſhire, with a great market on Saturday, for woollen yarn. It is ſeated on the Severn, near its ſource, 18 miles S.W. of Montgomery, and 180 W.N.W. of London. Long. 3. 28. W. Lat. 52. 19. N.

LLANYMDDOVRY, a town in Carmarthenſhire, with a market on Wedneſday and Saturday. It had once a caſtle, now in ruins, ſeated near the Towy, 26 miles E.N.E. of Carmarthen, and 181 weſt by north of London. Long. 3. 42. W. Lat. 51. 56. N.

LLAUGHARN, a town in Carmarthenſhire, with a market on Friday; ſeated at the mouth of the Towy, near the ruins of two caſtles, ſeven miles S.W. of Carmarthen, and 233 weſt by north of London. Long. 4. 28. W. Lat. 51. 48. N.

LLERENA, a town of Spain, in Eſtramadura, 53 miles eaſt of Cordova, and 54 north of Seville. Long. 5. 23. W. Lat. 38. 24. N.

LLORET, a town of Spain, in Catalonia, 20 miles N.E. of Mataro. Long. 2. 39. E. Lat. 41. 47. N.

LO, ST. a town of France, in the department of the Channel, with a good citadel. It has conſiderable manufactures of ſerges, ſhalloons, ribands, and gold and ſilver lace. It is ſeated on the Vire, 12 miles eaſt of Coutances, and 125 weſt by north of Paris. Long. 0. 53. W. Lat. 49. 6. N.

LOANO, or LOVANO, a town of Italy, in the ſtate of Genoa, near the ſea, ſix miles S.S.W. of Finale. Long. 7. 58. E. Lat. 44. 9. N.

LOBAW, a town of Weſtern Pruſſia, with a caſtle, where the biſhop of Culm reſides. It is 25 miles eaſt of Culm. Long. 19. 0. E. Lat. 53. 25. N.

LOBENSTEIN, a town of Upper Saxony, in the county of Reuſſen, 26 miles north of Bareith. Long. 11. 37. E. Lat. 50. 20. N.

LOBOA, a town of Spain, in Eſtramadura, ſeated on the Guadiana, 22 miles eaſt of Badajoz. Long. 6. 22. W. Lat. 38. 32. N.

LOBSTADT, a town of the electorate of Saxony, in the circle of Leipſic, 10 miles S.S.E. of Leipſic.

LOBURG, a town of Lower Saxony, in the principality of Magdeburg, 22 miles eaſt of Magdeburg. Long. 12. 7. E. Lat. 52. 12. N.

LOCCO, a town of Naples, in Abruzzo Citeriore, ſituate on the Peſcara, 10 miles north of Solmona.

LOCHEM, a town of Dutch Guelderland, in the county of Zutphen. It was taken by the French in 1672, who abandoned it in 1674, after having demoliſhed the fortifications. It is ſeated on the Borrel, 10 miles eaſt of Zutphen. Long. 6. 13. E. Lat. 52. 12. N.

LOCHER MOSS, a moraſs in Dumfrieſſhire, 10 miles long and three broad. Here vaſt oak trees, and alſo canoes and anchors, have been dug up.

LOCHES, a town of France, in the department of Indre and Loire, with a ſtrong caſtle, the proſpect from which is very extenſive. Here was one of thoſe horrid dungeons, built by the cruel Lewis XI., the walls, floors, ceilings, and doors of which were lined with plates of iron faſtened to bars of the ſame metal. The unfortunate Ludovic Sforza, duke of Milan, taken in battle, under Lewis XII., ended his days in one of them. In the choir of the late collegiate church, is the tomb of the celebrated Agnes Sorel, miſtreſs of Charles VII., to whoſe patriotic exhortations that monarch owed almoſt all his glory. Loches is ſeated on the Indre, near a foreſt, 15 miles ſouth of Amboiſe, and 20 S.E. of Tours. Long. 0. 51. E. Lat. 47. 10. N.

LOCHMABEN, a borough in Dumfriesſhire, ſituate on the weſt ſide of the Annan, nearly oppoſite the place where it receives the united ſtreams of Yea and Kinnel, 10 miles N.E. of Dumfries. Long. 3. 19. W. Lat. 55. 19. N.

LOCHRIDA, or OCRIDA, a town of Turkey in Europe, in Albania, with a Greek archbiſhop's ſee. It is well fortified, and ſeated on a hill, near a lake of its own name, 62 miles S.E of Durazzo. Long. 20. 40. E. Lat. 41. 40. N.

LOCHTA, a ſea-port of Sweden, in Eaſt Bothnia, ſeated on the gulf of Bothnia, 90 miles ſouth of Tornea. Long. 24. 16. E. Lat. 64. 20. N.

LOCHWINNOCH, a lake in Renfrewſhire, called alſo Caſtle Semple Loch, near three miles in length. On an iſland in this lake, is an old fortreſs, called the Peel; a name frequently given to old fortreſſes in Scotland. From this lake iſſues the river Black Cart.

LOCHY, LOCH, a lake in the S.W. part of Inverneſsſhire, 10 miles in length, and from one to two in breadth. From the N.W. the waters of Loch Arkek deſcend into this lake. Out of it runs the river Lochy, which, about a mile below, receives the Spean, and after flowing through the diſtrict of Lochabar, falls into Loch Eil, at Fort William.

LOCK (*Encycl.*). Under that article we have minutely deſcribed the ingenious inventions of Mr. Bramah to prevent private depredation and pilfering; juſtice to the inventions of others, however, remains to be done, and we accordingly ſubjoin the following particulars on the ſubject of locks.

An account of a door or cheſt lock, of a peculiar conſtruction, by Mr. Thomas Arkwright, of Chorley-moor, in Lancaſhire, appears in the Tranſactions of the Society for the Encouragement of Arts, Manufactures, and Commerce, who conferred fifteen guineas on Mr. Arkwright for his invention.

This lock has two bolts, ſo formed, that, if the key ſhould by any accident be left in the lock, it would be ſcarcely probable that a ſervant could unlock it.

In Pl. 37. A, ſhews the pointer on the ſhank of the key.

B, the pin on which the key turns.

C, top bolt of the lock.

D, the upper higher tumbler for the top bolt.

E, another tumbler for the top bolt, and placed underneath it.

F, a lever, which works both bolts, and moves on a centre G.

H, the lower bolt, with a joint I upon its head.

K, the lower tumbler, with two joints L, L, which fall into two notches of the top bolt. Underneath the lower bolt is another tumbler, ſimilar to that marked E. There are five ſprings within the lock, four of which act upon the upper and lower tumblers, the other on the joint bolt H.

M, the bottom part of the key. The dark ring in the centre repreſents the hollow to be applied to the lock-pin B, above mentioned.

The directions given for working the double-bolted lock, are theſe:

Firſt, place the head or bolts of the lock towards the left hand; then take the key with the right hand, with the ſmall pointer A, in the ſhank of the key, towards the right: after this, put the key down to the bottom of the ſocket upon the centre pin B, in the lock, and give one half-turn with the pointer in the ſhank of the key, upwards, by which the bolt C at the top will be locked. In the next place, draw back the key about one inch, ſo that the webs or bits of the key may clear the tumblers in the lock; then turn the key with the ſmall pointer towards the right hand, and put down the key in the manner above mentioned. After this, make one half-turn with the pointer in the ſhank of the key downwards, by which means the lower bolt H is locked, and the higher bolt C unlocked. Then draw up the key as aforeſaid, and turn it with the pointer in the ſhank to the right hand. In the laſt place, thruſt down the key, and give one half-turn with the pointer in the ſhank of the key, upwards, by which means both the bolts C and H will be locked; ſo that, when the bolts are to be unlocked, the pointer in the key muſt be towards the left hand, and muſt be worked as above directed.

We ſhall next lay before the reader a ſpecification of the patent granted to Mr. Holemberg, of Silver-ſtreet, Bridgewater-ſquare, London, for locks or faſtenings on an improved conſtruction. It is dated June 24, 1801.

In Plate 37. fig. 1, ſhews the front of the lock finiſhed:—1, the four faſtening ſcrews;—2, flat plate;—3, the box;—4, key hole;—5, 5, catch faſtening to the door-poſt, &c. with two ſcrews. Fig. 2:—1, ſecond or inner plate on which the key turning opens number 4;—2, 3, ſcrews faſtening inner plate to the bottom of lock;—3, ſpring flat bolt to double faſten the lock;—4, circular or principal bolt;—5, key-hole. Fig. 3:—1, ſpring ſcrew;—2, inſide tumbler, deſigned for greater ſecurity of the principal bolt, as appears from the drawing;—3, the orbicular bolt, the principle of the whole, for ſecurity unequalled;—4, key-hole, exhibiting foot of the key;—5, ſtopper, for the recurrency of principal bolt;—6, quadra circular conductor, for the principal bolt;—7, the catch. Fig. 4:—a faſtening for ſaſhes, ſhutters, and doors, upon the ſame principle with the above deſcribed. The dimenſions, thickneſs, works, &c. may be varied at pleaſure, according to the intended uſe and deſignation of the locks and faſtenings.

In the year 1784, the Society for the Encouragement of Arts, &c. conferred their ſilver medal on Mr. Taylor, of Petworth, for his improvement on the latch or ſpring-bolts of common locks. This is effected by ſimply reverſing the tumbler, ſo that its curved ſide acts againſt two ſtubs fixed on the tail of the latch, and thruſts back the latter with eaſe, whether the knob be turned to the right or to the left, when the lock is opened. Mr. Taylor has alſo, behind the tail of the latch, fixed a guide containing a groove, in which runs a ſmall *friction-wheel*, that ſerves to keep the latch in its direct ſituation, and at the ſame time to diminiſh its friction: the arms of his tumbler are ſomewhat contracted, in order that the latch or ſpring-bolt may move with greater facility. By this conſtruction, the parts of the tumbler and latch, which are in contact, move in a line, ſo that they paſs over the greateſt ſpace, under the ſmalleſt angle; and the lock itſelf may be conſtantly uſed for ſeveral years, without requiring the application of oil.

The ſame Society alſo granted, in the ſame year, the ſum of ten guineas to Mr. Marſhal, for a *ſecret eſcutcheon*, which, when fixed to a lock, may be ſo repeatedly varied, that even the artiſt who made it, is unable to open the lock: A ſatiſ-

factory deſcription of its mechaniſm is given in the 3d volume of the Society's Tranſactions.

LOCKING-POLE, an ingenious piece of mechaniſm, to be affixed to the wheels of waggons or other carriages, when deſcending ſteep hills.

As many diſtreſſing accidents happen from loads overpowering the ſhaft-horſe, when proceeding down declivities, Mr. Colley laid before the Society for the Encouragement of Arts, &c. a contrivance for preventing ſuch caſualties; in conſequence of which, he was rewarded with their ſilver medal. See Pl. 35.

A, The hollow, which lies on the nave of the wheel.

BC, The chains, that clip the felly of the wheel.

D, the front part of the pole, ſhod with iron: and which is further ſtrengthened by a rib of iron, that is rivetted along its ſide, as is indicated by the black line.

In order to apply this locking-pole, the chain C is put round the felly of the wheel: the pin B is paſſed through the laſt link of C, and turned back through the moveable ring *e*: thus the wheel is ſecured, and any waggon, however laden, may deſcend the ſteepeſt hill with ſafety.

To prevent the locking-pole from breaking, Mr. Colley directs it to be made of the ſtem of an aſh-tree, the *ſpurns*, that is, the beginnings of which, have not been cut off in felling. He further remarks, that if a horſe, which has been accuſtomed to ſuch ſituation and to deſcents, be put in the ſhafts, the animal will be ſo much inclined to hold back, that it will be extremely difficult to make him draw. This exertion, however, is abſolutely neceſſary; as otherwiſe the chain-horſe, which ſhould always be linked to the locked ſide, will be obliged to pull an unneceſſary weight, occaſioned by his being conſiderably lower than the points of the ſhafts.

Laſtly, in conveying the locking-pole from one declivity to another, it is to be placed between the lower part of the cart and the axle-tree, while the ſmaller end is to be buckled with a ſtrap fixed under the body of the cart, on the driving ſide.

LODDON, a town in Norfolk, with a market on Friday, eight miles S.E. of Norwich, and 113 N.E. of London. Long. 1. 18. E. Lat. 52. 36. N.

LODESAN, a diſtrict of Italy, in the duchy of Milan. It is very fertile and populous, and its cheeſes are in high eſteem. Lodi is the capital.

LODEVE, a town of France, in the department of Herault. It was lately a biſhop's ſee; and has manufactures of hats and of cloth for the army. It is ſeated in a dry barren country, on the river Logue, at the foot of the Cevennes, 27 miles N.W. of Montpellier. Long. 3. 30. E. Lat. 42. 47. N.

LODI, a town of Italy, in the Milaneſe, and capital of the Lodeſan, with a fortreſs. The French defeated the Auſtrians near this place, in 1796. It is ſeated on the Adda, 15 miles N.W. of Placentia, and 20 S.E. of Milan. Long. 9. 26. E. Lat. 45. 15 N.

LODRONE, a town of Italy, in the biſhopric of Trent, ſeated on the ſmall lake Idro, at the place where it receives the river Chieſe, 31 miles S.W. of Trent. Long. 10. 46. E. Lat. 46. 0. N.

LOFFINGEN, a town of Suabia, in the lordſhip of Furſtenberg, with a famous medicinal bath, ſix miles weſt of Furſtenberg.

LOFSTA, a town of Sweden, in the province of Upland, with a hammer-mill, eight forges, and a ſmelting furnace. Theſe works were deſtroyed by the Ruſſians, in 1719, but have ſince been again erected. It is 32 miles north of Upſal.

LOGOWOGOROD, a town of Poland, in Volhinia, ſeated on the weſt bank of the Dnieper, 25 miles N.W. of Kiof. Long. 31. 7. E. Lat. 50. 46. N.

LOGRONO, an ancient town of Spain, in Old Caſtile, ſeated on the Ebro, in a country abounding with excellent fruits and good wines, 52 miles eaſt of Burgos, and 115 north by eaſt of Madrid. Long. 2. 20. W. Lat. 42. 29. N.

LOHEIA, a town of Arabia, in the province of Yemen. It has a great trade in coffee, and is 360 miles S.S.W. of Mecca. Long. 42. 49. E. Lat. 15. 42. N.

LOITZ, a town of Upper Saxony, in Anterior Pomerania, 16 miles north of Treptow, and 24 ſouth of Stralſund. Long. 13. 4. E. Lat. 53. 56. N.

LOMBARDY, a part of Italy, which comprehends almoſt all the ancient Ciſalpine Gaul. It lies towards the north, and is divided into the Upper and Lower. Upper Lombardy, the weſtern part, comprehends Piedmont, with its dependencies, and the duchies of Montſerrat and Milan. Lower Lombardy, the eaſtern part, contains Parma, Modena, Mantua, Ferrara, the Bologneſe, the territories of the Church, the Paduan, Vicentino, Veroneſe, Breſciano, Cremaſco, and Bergamo. In the late war, the whole of theſe provinces were overrun by the French republicans, who not only levied exorbitant contributions on the inhabitants, but alſo demanded many of their fineſt pictures and ſtatues, which they tranſported to Paris.

LOMBEZ, a town of France, in the department of Gers, lately a biſhop's ſee. It is ſeated on the Save, 27 miles S.W. of Toulouſe. Long. 1. 0. E. Lat. 43. 29. N.

LOMOND, Ben, a great mountain, in the north of Stirlingſhire, about 3200 feet above the level of the lake, at its bottom. It ſtretches along the eaſt ſide of Loch Lomond ſeveral miles; and its broad baſe extends ſo far into the country, that the aſcent of this mountain, though ſteep, is computed to be ſix miles. Ptarmigans, and other heath fowls, frequent its upper regions: its lower are the haunts of the roebuck; and herds of cattle feed in the irriguous valleys at its baſe. From this lofty mountain are ſeen Loch Lomond, the Clyde, the Forth, Edinburgh, the eaſtern coaſt as far as the Cheviot Fells, the iſles of Bute and Arran, the rock of Ailſa, Ireland, the mountain of Plynlimmon in Wales, the Skiddaw in Cumberland, and the hills far beyond it.

LON, or Lune, a river which riſes in Weſtmoreland, and flowing by Kirby Lonſdale in that county, falls into the Iriſh Sea, below Lancaſter. Its banks are beautiful and romantic.

LONATO, a town of Italy, in the Breſciano, 12 miles E.S.E. of Breſcia. Long. 10. 11. E. Lat. 45. 24. N.

LONDON, New, a ſea-port in the ſtate of Connecticut, and county of New London. Its harbour is the beſt in Connecticut, and as good as any in the United States. It is defended by two forts, and ſeated on the Thames, near its entrance into the Sound, 80 miles N.E. of New York. Long. 72. 45. W. Lat. 41. 15. N.

London, New, a town of the United States, in Virginia, on James River, 133 miles weſt by ſouth of Richmond.

LONG ISLAND SOUND, a kind of inland ſea in North America, 25 miles broad and 140 long, extending the whole length of Long Iſland, and dividing it from Connecticut. It communicates with the Atlantic at both ends of the iſland.

LONGARA, a town of Naples, in Calabria Ulteriore, 20 miles W.N.W. of St. Severino.

LONGEVITY (*Encycl.*). The following "*Hints on Longevity*," were drawn up by Sir John Sinclair, baronet, with the view of being inſerted in the Analyſis of the Statiſtical Account of Scotland; and printed in a fugitive form for the purpoſe of obtaining additional facts and obſervations on that intereſting ſubject. They contain, however, ſo much truly valuable matter, and the object of them is ſo important to ſociety, that we are tempted to give them further publicity, by adding them to the information we have already furniſhed on the ſubject.

I. *On the healthineſs of Scotland.*—Perhaps there is no country in Europe, where, in proportion to its population, a greater number of individuals reach to ſixty, and thence to eighty, and even ninety years of age, in full poſſeſſion of all their faculties, both perſonal and mental, than in Scotland; and ſuch a circumſtance, is a ſtronger proof of the healthineſs of a climate, than a few remarkable inſtances of extraordinary longevity. At the ſame time, North Britain is not a little diſtinguiſhed, for having given birth to a number of perſons, who have lived beyond the uſual period of human exiſtence *. In a work containing a collection of inſtances of longevity, for no leſs a period than 1733 years, namely, from A.D. 66 to 1799, in which there is given the name, age, place of reſidence, &c. of 1712 perſons, from all parts of the world, who had attained to a century and upwards, 170 are ſtated to have been natives of Scotland, and the two moſt remarkable in the whole liſt, are Kentigern, a native of Scotland †, and Peter Torton of Temeſwar, in Hungary, both of whom attained the great age of 185 years ‡."

" II. *Tables of longevity.*—But before we proceed to diſcuſs the ſubject of longevity in general, it may not be improper, to lay before the reader the following table, drawn up by an eminent author (Hufeland), which explains the ſhortneſs of human life, and points out how few there are, in proportion to the number born, who reach even the period of ſixty years §.

" Of a hundred men who are born, there die, according to Hufeland,

Under 10 - -	50
Between 10 and 20 - -	20
20 and 30 - -	10
30 and 40 - -	6
40 and 50 - -	5
50 and 60 - -	3
	94

" Hence only ſix remain, out of a hundred, who ſtand a chance of living beyond ſixty years.

" Of perſons who have lived above a hundred years, the induſtrious Haller has collected 1113 inſtances, and gives the following ſtatement of the duration of their lives ||.

" Of thoſe who lived from 100 to 110 years, the inſtances have been above - - 1000

From 110 to 120 about -	62
120 to 130 - -	29
130 to 140 - -	15
140 to 150 - -	5
152 (Parr) -	1
169 (Jenkins) -	1
	1113

" But in a recent publication, the following table is given, as the reſult of a more extenſive collection of inſtances of longevity.

" Of males and females, who lived from 100 to 110 years, both incluſive, the inſtances have been - 1310

Above 110 to 120 - -	277
120 to 130 - -	84
130 to 140 - -	26
140 to 150 - -	7
150 to 160 - -	3
160 to 170 - -	2
170 to 185 - -	3
	1712

" III. *Circumſtances tending to promote longevity.*—As the means of attaining great age, is a ſubject reſpecting which it is natural to entertain a conſiderable degree of anxiety, and as many intereſting facts regarding it, are ſcattered throughout the Statiſtical Volumes, I ſhall proceed to ſtate the circumſtances on which longevity ſeems principally to depend.

" In the firſt place, climate ſeems to be of conſiderable importance; and it may be laid down as a general rule, that the moderate, or even the coldeſt climates, are the moſt favourable to long life. Heat ſeems to relax and enfeeble, cold to ſtrengthen and brace, the human frame. The diet alſo of hot countries is not ſo nouriſhing, as that of cold **; and there is in general a greater diſpoſition, and greater opportunities, to indulge in various exceſſes, in the former, than in the latter. But if the climate be cool, a rainy atmoſphere ſeems to be leſs unfavourable to longevity than could well be

---

* " Buffon places the mountainous diſtricts of Scotland, at the head of a liſt containing thoſe parts of Europe the moſt diſtinguiſhed for longevity. Hiſt. Nat. de l'Homme. edit. 1752, tom. IV. p. 358. The celebrated Pallas, in the ſecond volume of his Travels, ſtates, that the inhabitants of the mountainous diſtricts of the province of Jſeſk, in the northern parts of Siberia, live to a great age; people of 100 years are very common; and he ſaw an invalid ſoldier aged 120. The inhabitants of the plains in their neighbourhood, are by no means ſo healthy or ſo long lived."

† " Kentigern, known alſo under the name of St. Mungo, was the founder of the biſhopric of Glaſgow. The following verſes were made on his extraordinary age and place of interment:

' Cum octogenos centum quoque quinque vir annos
' Complerat, Sanctus eſt Glaſgow funere functus.'

Spotiſwood's Hiſt. of the Church of Scotland, p. 11 and 12.

If we ſhould not be willing to give credit to the extraordinary age which Kentigern and Torton are ſaid to have reached, in which there is nothing impoſſible, as Parr and Jenkins approached to it ſo nearly, the firſt being 152, and the ſecond 169 years of age; yet they may certainly be cited as examples of long life, greatly beyond the uſual extent."

‡ " See Human Longevity, by James Eaſton. Printed at Saliſbury, in one vol. 8vo. anno 1799. There is a portrait of Torton in England, which it would be deſirable to have engraved."

§ " On the Art of prolonging Human Life; a work written by Profeſſor Hufeland of Jena, in Germany, which merits to be tranſlated. The original may be had at Geiſweiller's, Parliament-ſtreet."

|| " Haller's Elementa Phyſiologiæ Corporis Humani, vol. III. lib. xxx. ſect. 3. p. 103."

** " In cold countries they live more upon animal, in hot countries upon vegetable, food, and fruits. A judicious mixture of both is the beſt plan to purſue, but of the two, animal food is the moſt nouriſhing."

imagined; for Ireland, which is a wet country, boaſts of a great number of old people. And a very large proportion of the aged who have lived in England and Scotland, have reſided in the weſtern, and conſequently the rannieſt, counties in the iſland *.

" The next circumſtance to be conſidered is, the form † and ſize of the individual. It is generally admitted, that perſons of a compact ſhape, and of a moderate ſtature, are the moſt likely to live long. Height often originates from the diſproportioned growth of ſome particular part of the body, which neceſſarily has a tendency to engender weakneſs and diſeaſe. Tall perſons alſo are apt to acquire a habit of ſtooping, which contracts the cheſt, and is a great enemy to free reſpiration; whereas the ſhort-ſized find little difficulty in keeping themſelves erect, and are naturally much more active, by which the animal functions are retained in a ſtate of much-greater perfection. The only diſadvantage attending a ſhort ſtature is, that it is frequently accompanied with corpulence, which is extremely unfavourable to long life.

" Being born of healthy parents, and exempted from hereditary diſeaſe, are circumſtances evidently favourable to longevity. A puny frame, like Cornaro's, may, by the greateſt care and anxiety, be preſerved in exiſtence, but thoſe who inherit health and ſtrength, and are born with robuſt conſtitutions, can alone expect not only to live long, but to enjoy the pleaſures and comforts of life, while they continue to poſſeſs it.

" Longevity alſo, ſeems to depend upon good temper, mixed at the ſame time with a cheerfulneſs of diſpoſition, or good ſpirits ‡. Neither the iraſcible, nor thoſe who, from deſpondency, ſink under the croſſes of life, can expect to live long. Even thoſe who ſuffer their ſtrength and ſpirits to be exhauſted by ſevere ſtudy, or other mental exertions, ſeldom reach great age. Of the long liſt of 1712 perſons, who lived about a century, Fontenelle (who did not quite reach 100 years) is the only author of any note; and his great age is aſcribed to the tranquil eaſe of his temper, and that livelineſs of ſpirits, for which he was much diſtinguiſhed; for he retained to the laſt, *the youth of old age*, as the French happily expreſs it.

" It is commonly obſerved, ' that it is not the rich and great, not thoſe who depend on medicines, who become old, but ſuch as uſe much exerciſe, are expoſed to the freſh air, and whoſe food is plain and moderate §. And it is certain that perſons of that deſcription, in general ſtand the beſt chance of living long. At the ſame time, though inſtances of great age, in royal and in noble perſonages, are not often to be met with, yet they may be as many, *in proportion to the ſmaller number of ſuch perſons*, as thoſe in the lower but more numerous claſſes of ſociety. Nor is there any thing inconſiſtent in ſovereign power, high rank, or great wealth, being accompanied with a long period of exiſtence, provided other circumſtances are favourable to longevity.

" In the next place, it is evident, that long life muſt depend much on the manner in which the individual is employed. Unhealthy occupations generally become fatal. Yet Peter Prin, a glaſs-blower, is ſaid to have attained the great age of 101; and John Tyler, a miner at Leadhills, in Scotland, is ſuppoſed to have reached even 132 years ‖. His age, indeed, could not be proved by direct, but it reſts on very ſtrong circumſtantial, evidence; and a perſon of the moſt undoubted authority (Dr. Walker, profeſſor of natural hiſtory in the univerſity of Edinburgh) informs me, ' that in his muſcles, joints, and in his whole conformation and aſpect, he wore the appearance of more remote antiquity, than he had ever ſeen in any human creature.' But on the whole, farmers, gardeners, and labourers in the country, are in general the longeſt lived. Foot ſoldiers alſo, who have ſurvived the dangers of war, are remarkable for long life. They are generally ſtout and vigorous men, and the regularity to which ſurviving ſoldiers muſt have accuſtomed themſelves, whilſt the careleſs and diſorderly drop off, the erect poſture to which they have been trained, and being of courſe men well formed by nature, and habituated to march and walk well (which familiarizes them to a natural and healthy exerciſe), all combine in their favour.

" It is alſo proper to remark, that not only moderate exerciſe, but even labour, if not too ſevere, contributes to good health, and old age. In many inſtances, perſons have worked at threſhing, and other laborious occupations, expoſed to a current of freſh air, after they had paſſed beyond the age of 100; and, if accuſtomed to them, they do not appear to have ſuffered any inconvenience from ſuch exertions.

" Nor ought it to be omitted, that a large proportion of the long lived have preferred a married to a ſingle ſtate, and in general have left behind them a numerous family. Whether a life of celibacy occaſions diſeaſe, or leads to irregularity, or ſours the temper, or to whatever other cauſe it ought to be attributed, may be a ſubject of diſpute, but it is certain, that the number of ſingle perſons who live long, bear no proportion to the married **.

" In the laſt place, though a greater number of males are born than of females, at leaſt in European countries, yet there is reaſon to believe, that of the two ſexes, women reach old age in the greateſt proportion. For this various cauſes may be aſſigned, as the greater regularity and temperance of their mode of living, their being leſs expoſed to danger and hardſhips, leſs ſubject to violent agitations, and generally endowed with more cheerfulneſs and gentleneſs of diſpoſition ††.

---

* " Moiſture, it would appear, is not prejudicial to health, if it does not affect the purity of the air. Even ſtagnated water, if in peat bogs or moraſſes, is not unwholeſome, as the water, by the aſtringency of the peat, is prevented from becoming putrid. Lincolnſhire, alſo, and ſeveral of the marſhy counties of England, can produce a number of inſtances of great age, but probably they were from the more elevated parts of theſe diſtricts."

† " On the extent of the thorax, and the moderation of impulſe on the heart, it has been remarked, that the endurance of animal life materially depends."

‡ " Hence the great age to which many of the French nobility lived, particularly before the regency of Orleans."

§ " See Eaſton on Human Longevity, Introduction, p. 11."

‖ " It is ſaid that neither of theſe inſtances ought much to be wondered at, as a glaſs-blower is conſtantly expoſed to freſh and dry air, and the labour of miners under ground is not for many hours, and they generally reſide in hilly diſtricts."

** " This applies to both ſexes, in particular to the male. Dr. Ruſh of Philadelphia aſſerts, that he never ſaw but one unmarried man exceed fourſcore years."

†† " Among the ſymptoms of longevity, none is more ſtriking, than when nature ſeems to renew itſelf, by producing, even in old age, new teeth, new hair, &c. but the inſtances of this are extremely rare."

" IV. *Rules tending to promote long life.*—We ſhall conclude with ſhortly ſtating ſuch rules as have been followed by thoſe who have attained great age, as they may furniſh ſome hints that may be ſerviceable to others.

" The plan laid down by the celebrated Cornaro is well known, and the abſtemious manner in which he lived has often been recommended to the imitation of others; but I queſtion much, whether many would wiſh to lead the ſame life, for the ſake of mere exiſtence. Life is no longer deſirable, than whilſt it can be enjoyed with ſome degree of ſatisfaction, and it is of little conſequence, if a perſon merely vegetates, whether he lives or not.

" Without entering therefore into minute particulars, fitter for the diſcuſſions of experimental philoſophy, than for real life, we ſhall proceed to ſtate the rules which have been found the moſt effectual, and which are the moſt likely to be carried into practice.

" The firſt rule is, to avoid exceſs, whether in eating, in drinking, or in mental or perſonal exertion of any ſort, for nothing is more likely to deſtroy the ſprings of life, particularly when theſe become more feeble. Some inſtances are mentioned, of perſons who have continued to commit exceſſes, and have lived long; but theſe are to be conſidered in no other light than exceptions from a general rule. It may indeed be reaſonably contended, that if ſuch perſons lived to a great age, notwithſtanding their intemperance, they would have lived much longer, had they followed a different courſe.

" In the ſecond place, any great alteration with regard to clothing, occupation, or mode of living, ought to be avoided. When once an individual has been accuſtomed to any particular ſtyle of life, a change muſt in general be dangerous, and a long period muſt elapſe before he can accommodate himſelf to the alteration. Even if a perſon has been accuſtomed to live freely, and finds it neceſſary to become temperate, the change ought to be gradual.

" In the third place, nothing is more conducive to longevity, than to preſerve equanimity and good ſpirits, and not to ſink under the diſappointments of life, to which all, but particularly the old, are neceſſarily ſubjected. Regularity of hours, early riſing, a due proportion of ſleep, pure air, wholeſome food, warm clothing, particularly in advanced life, and moderate exerciſe or labour *, are alſo of eſſential importance.

" In the next place, good health, and conſequently longevity, depends much on perſonal cleanlineſs, and a variety of minute attentions, which it is impoſſible here to diſcuſs. It were much to be wiſhed, that ſome author would undertake the trouble of collecting the reſult of general experience upon that ſubject, and would point out a number of habits, which taken ſingly, appear very trifling, yet when combined, there is every reaſon to believe, that much additional health and comfort would ariſe from their obſervance †.

" It is a common ſaying, that every man, after the age of forty, ſhould be his own phyſician. This ſeems, however, to be a dangerous maxim. The greateſt phyſicians, when they are ſick, ſeldom venture to preſcribe for themſelves, but generally rely on the advice of their medical friends. Perſons who pretend to be their own phyſicians are generally much addicted to quackery, than which nothing can be more injurious to the conſtitution. It is eſſential to health, that medicines ſhould never be taken but when neceſſary, and never without the beſt advice, in regard to the commencement, which ought not to be too long delayed, otherwiſe much benefit cannot be expected from them, and alſo with reſpect to nature or ſort, quantity, and continuance.

" It is generally acknowledged, that the powers of phyſic are bounded. The medical art, however, is probably ſtill in its infancy, and it is impoſſible yet to ſay, to what perfection it may reach, not only in conſequence of the new improvements which chemiſtry daily furniſhes, but alſo of thoſe which may be made, by the diſcovery of new and valuable plants, in countries either already known or hitherto unexplored, and indeed the new uſes to which old medicinal plants may be applied. Perhaps ſuch diſcoveries will be much accelerated, when, inſtead of being left to the zeal and induſtry of individuals, they ſhall meet with that public encouragement and protection, to which they are ſo peculiarly well entitled.

" It has frequently been remarked, that the greateſt number of old people die in winter, and that many individuals, in a weak and conſumptive ſtate, are obliged to fly to warmer climates, as the only means of ſafety. It has thence occurred to Dr. Pearſon, that it would be of ſervice, both to the aged and to the conſumptive, to have houſes erected, of ſuch a peculiar conſtruction, that the air could always be preſerved, not only pure, but nearly of the ſame, and of rather an elevated temperature, ſo that the invalids who reſided in them, ſhould never be affected by the viciſſitudes of the ſeaſons ‡. Such an idea, it muſt be admitted, cannot be a general remedy, or reſource, but it is well entitled to the attention of thoſe who are in affluent circumſtances, by ſome of whom, it is to be hoped, an hoſpital for the aged and conſumptive will be erected, and the experiment fairly tried, both for their own ſakes, and for that of human nature in general ||.

" On the whole, it is more than probable, that by proper attention and good management, perſons in general might not only live longer, but might enjoy life with more reliſh, than is commonly the caſe at preſent; and it is to be hoped, in reſpect of this, as well as of many other particulars, that human nature is ſtill in the threſhold of acquirement, that it will yet obtain greater and more important acquiſitions of knowledge, and may reach further improvement, both with regard to the extent of perſonal and mental gratifications, which our ſpecies may be found capable of enjoying, and alſo the means of poſſeſſing them, with more ſatisfaction and comfort, and for a much longer period of time."

---

* " Travelling, in moderation, from the change of air and ſcene, has alſo been found of great uſe."

† " Many people, for inſtance, injure their health, by neglecting their teeth, in conſequence of which, the gums become firſt diſeaſed, the breath becomes tainted and noxious, the teeth then rapidly decay, and the food not being properly maſticated, muſt occaſion various complaints."

‡ " Heller (p. 118) recommends it to old men to emigrate from a colder to a warmer region; but the propoſed building will probably anſwer the ſame purpoſes equally well."

|| " An eminent ſurgeon (Mr. Benjamin Bell, of Edinburgh) is of opinion, that any common houſe might be made ſufficiently warm to anſwer the propoſed object; and he has frequently recommended the plan of keeping the houſe, during the colder ſeaſons of the year, with much advantage to aged and infirm patients; but to give the idea a fair trial, a houſe peculiarly conſtructed for the purpoſe ſhould be built."

Sir John Sinclair juſtly obſerves, that it would be of importance, if ſome author, who had leiſure to probe this enquiry to the bottom, would undertake a paper on longevity; and he annexes a liſt of ſome publications upon the ſubject, which might be conſulted with advantage. The following obſervations, he adds, alſo, coming from ſo reſpectable a quarter as that of Dr. Fordyce, merit particular attention:

"If a man wiſhes to prolong life to a very long period, he muſt take great care to eat very moderately, and drink no wine, nor uſe any intoxicating liquor whatever. In all poliſhed nations, men eat at leaſt double the quantity of food neceſſary, perhaps four or five times. If men eat only the neceſſary quantity, they have no occaſion for wine, ſpices, or any other ſtimulant to aſſiſt the digeſtion of their food. On the other hand, if a man be contented to live to the age of ſeventy, rather a greater quantity of food is uſeful, to ſupport the exertions of the bodily powers; but eating in exceſs, always wears out the body without any advantage whatever. If a man uſes more food than is neceſſary, it is likewiſe proper to uſe ſtimulants to increaſe the powers of digeſtion. This contributes alſo to wear out the powers of the body. Drinking large quantities of wine of any kind, beer, cyder, mead, &c. tends to produce many diſeaſes, but at the ſame time defends a man intoxicated from many, ſuch as ariſe from ſudden expoſure to cold, infection, and many others, if their cauſe be applied during the time of intoxication; ſo that many men who have been intoxicated every day, have lived to the age of eighty, ninety, or even longer, but never to any very great length beyond that time. Thoſe who have been intoxicated by ſpirits diſtilled from theſe liquors have hardly ever arrived at even the age of ſeventy, and moſt of them have been cut off at an early age. This much I have to obſerve in general; to enter into the proofs, would require a long diſquiſition, which I have not time at preſent to enter into."

Another reſpectable phyſician obſerves, "that in reſpect of diet, no one rule is of ſo much importance as to avoid all ſorts of compound liquors, *water* being the only wholeſome beverage, the beſt ſolvent and diluent of the ſolid portions of our food; ſupporting the tone of the ſtomach, without exhauſting its vigour, and furniſhing the moſt ſimple, the moſt bland, and manifeſtly the moſt ſuitable ſupply to the ſecretory veſſels and general humidity of the body. In a word, good water is the only fit, and ſalutary, liquor for the ordinary uſes of man; all others are noxious, and this in the proportion as they recede in their qualities from water."

It is to be obſerved, however, that though water may be an effectual ſolvent, yet that wine, beer, and other fermented liquors, muſt contain more nouriſhment; and conſequently a moderate uſe of them, beſides acting as a ſtimulant, and aſſiſting digeſtion, muſt be ſerviceable to perſons exhauſted by ſevere labour, whether mental or perſonal; and in particular muſt prove a ſtrengthening and refreſhing cordial to the aged and the infirm.

LONGUION, a town of France, in the department of Moſelle. Here is a conſiderable iron-forge and cannon-foundery. It is 10 miles S.W. of Longwy, and 22 W. of Thionville. Long. 5. 29. E. Lat. 49. 27. N.

LONS-LE-SAULNIER, a town of France, in the department of Jura, with a late abbey of noble Bernardines. It derives its name from the ſalt ſprings with which it abounds, and is ſeated on the Solvan, 30 miles S.S.W. of Dole. Long. 5. 30. E. Lat. 46. 37. N.

LOOKOUT, Cape, a cape of North Carolina, ſouth of Cape Hatteras, and oppoſite Core Sound.

LOOTS, a town of Germany, capital of a county of the ſame name, in the biſhopric of Liege, 16 miles weſt of Maeſtricht. Long. 5. 19. E. Lat. 50. 52. N.

LOPATKA, Cape, the ſouth extremity of the peninſula of Kamtſchatka. See Kuriles.

LOPESCO, a town of Naples, in the province of Abruzzo Ulteriore, 19 miles S.W. of Aquila. Long. 13. 30. E. Lat. 45. 50. N.

LORA, a town of Spain, in Andaluſia, on the river Guadalquiver, 28 miles N.E. of Seville. Long. 5. 4. W. Lat. 37. 46. N.

Lora, a town of Upper Saxony, in the county of Hohenſtein, 30 miles north of Saxe Gotha. Long. 10. 55. E. Lat. 51. 30. N.

LORE, a town of Spain, in Granada, 15 miles north of Malaga. Long. 4. 35. W. Lat. 36. 50. N.

LORBUS, a town of the kingdom of Tunis, with a caſtle, and fine remains of antiquity. It is ſeated in a plain, fertile in corn, 150 miles S.W. of Tunis. Long. 9. 0. E. Lat. 35. 35. N.

LORCA, an ancient town of Spain, in Murcia, ſeated on an eminence, near the river Guadalantin, 30 miles weſt of Carthagena. Long. 1. 37. W. Lat. 37. 44. N.

Lorca, a town of Suabia, in the duchy of Wurtemburg. It had formerly a very rich abbey, whoſe revenues now belong to the univerſity of Tubingen. It is ſeated on the Remms, 20 miles N.W. of Eſſingen.

LORCH, a town of Germany, in the electorate of Mentz. The inhabitants ſubſiſt principally by cultivating vineyards and making wine. It is 24 miles W.N.W. of Mentz. Long. 8. 1. E. Lat. 50. 8. N.

LORCHAUSEN, a town of Germany, in the electorate of Mentz, 27 miles weſt of Mentz.

LORD HOWE'S GROUP, an extenſive group of iſlands in the South Pacific Ocean, diſcovered, in 1791, by Captain Hunter, who diſtinctly deſcried 32 of them, ſome of conſiderable extent. They appeared thickly covered with wood, among which the cocoa nut was very diſtinguiſhable. Nine of the natives came near the ſhip, in a canoe, which was about 40 feet long, badly made, and had an outrigger. They were a ſtout, clean, well-made people, of a dark copper colour; their hair tied in a knot on the back of the head; and they appeared as if clean-ſhaved. They had an ornament, conſiſting of a number of fringes, like an artificial beard, which was faſtened cloſe under the noſe; and to this beard hung a row of teeth, which gave them the appearance of having a mouth lower than their natural one. They had holes run through the ſides of the noſe into the paſſage, into which, as well as through the ſeptum, were thruſt pieces of reed or bone. The arms and thighs were tattowed, and ſome were painted with red and white ſtreaks. They wore a wrapper round their middle. Long. from 159. 14. to 159. 37. E. Lat. 5. 30. S.

Lord Howe's Island, an iſland of the South Pacific Ocean, diſcovered, in 1788, by Lieutenant King, in his voyage from Port Jackſon to Norfolk Iſland. Many excellent turtle have been caught here on a ſandy beach; and it abounds with a variety of birds, which were ſo unaccuſtomed to be diſturbed, that the ſeamen went near enough to knock down as many as they wanted with a ſtick. At its ſouth end are two high mountains, nearly perpendicular from the ſea; the ſouthernmoſt named Mount Gower. About 14 miles to the ſouth is a remarkable rock, named Ball's Pyramid, which has much the appearance of a ſteeple at a diſtance. The iſland is three miles and a half long, and very narrow. Long. 159. 0. E. Lat. 31. 36. N.

LOREDO, a town of Italy, in Poleſino di Rovigo, ſeated on the Adige, 20 miles eaſt of Rovigo. Long. 12. 50. E. Lat. 45. 5. N.

LORGUES, a populous town of France, in the department of Var, ſeated on the Argens, five miles weſt by ſouth of Draguignan, and 360 ſouth by eaſt of Paris. Long. 6. 27. E. Lat. 43. 30. N.

LORRACH, or LARACH, a town of Suabia, in the margravate of Baden, ſix miles N.W. of Rheinfelden, and ſix N.E. of Baſle.

LORRIS, a town of France, in the department of Loiret. It was the reſidence of Philip the Long, in 1317, and of other kings of France. It is 15 miles weſt by ſouth of Montargis.

LOT, a river of France, which riſes in the department of Lozere, and watering Mende and Cahors, enters the Garonne, below Agen. It begins to be navigable at Cahors.

LOT, a department of France, including the late province of Querci. It takes its name from the river Lot. Cahors is the capital.

LOT AND GARONNE, a department of France, including part of the late province of Guienne. It is ſo called from two rivers. Agen is the capital.

LOTZIN, a town of Pruſſia, with a caſtle, ſituate on a canal, which joins the Angerburg and Leventin lakes, 56 miles S.E. of Konigſberg.

LOUANS, a ſmall town of France, in the department of Saone and Loire, ſituate in a kind of iſland between the rivers Seilles, Salle, and Solnan, 18 miles S.E. of Chalons.

LOUDEAC, a town of France, in the department of the North Coaſt. Here is an iron forge and a manufacture of thread. It is 20 miles ſouth of St. Brieux, and 27 S.S.E. of Guingamp. Long. 2. 40. W. Lat. 48. 11. N.

LOUDUN, a town of France, in the department of Vienne. It is remarkable for the tragical end of its rector, Urbain Grandier, who, in 1634, was burnt alive for having cauſed certain Urſulin nuns to be poſſeſſed with devils! It is ſeated on a mountain, 30 miles N.W. of Poitiers, and 155 S.W. of Paris. Long. 0. 17. E. Lat. 47. 2. N.

LOUGHREA, a town of Ireland, in the county of Galway, near a lake of the ſame name, 15 miles S.W. of Galway.

LOVIGNANO, a town of Naples, in Otranto, 12 miles S.S.W. of Brindiſi.

LOUISA, a town of Swediſh Finland, with a fortreſs, on a bay of the gulf of Finland. The houſes are all of wood, two ſtories high, and painted red.

LOUISBURGH, the capital of the iſland of Cape Breton. It was taken by the Engliſh in 1745, reſtored to the French in 1745, taken by the Engliſh in 1758, and ceded to them in 1763; ſince which the fortifications have been deſtroyed. It has an excellent harbour, near four leagues in circumference. Long 59 48. W. Lat. 45. 54. N.

LOUISVILLE, a town of the ſtate of Georgia, in the county of Burke, ſeated on the north ſide of the Ogeechee, 50 miles S.W. of Auguſta. Long. 82. 30. W. Lat. 32. 42. N.

LOUISVILLE, a town of Kentucky, in the county of Jefferſon, ſeated on the Ohio, at its rapids, 95 miles S.W. of Lexington. Long. 86 30. W. Lat. 38. 3. N.

LOUI-TCHEOU FOU, a city of China, in the province of Quang-tong. Its territory is ſeparated, by a narrow ſtrait only, from the iſle of Hai-nan. It is 315 miles S.W. of Canton.

LOUITZ, a town of Great Poland, in the palatinate of Rava, 55 miles eaſt of Gneſna. Long. 19. 0. E. Lat. 52. 26. N.

LOULE, a town of Portugal, in Algarva, with a caſtle. It is ſurrounded with antique walls, and ſeated on the river Loulé, near the ſea, 10 miles north of Faro, and 15 weſt of Tavira. Long. 8. 1. W. Lat. 37. 18. N.

LOU-NGAN-FOU, a city of China, in the province of Chan-ſi, ſituate near the ſource of the Tſo-tſang-ho, and containing eight cities of the third claſs in its juriſdiction. It is 375 miles S.W. of Pekin.

LOUNG, LOCH, a great arm of the ſea, in Argyleſhire, which communicates, on the ſouth, with the frith of Clyde.

LOURDE, a town of France, in the department of the Upper Pyrenées, with an ancient caſtle, ſeated on a rock, on the Gave de Pau, 10 miles N.W. of Bagneres. Long. 0. 5. W. Lat. 43. 8. N.

LOURICAL, a town of Portugal, in Eſtremadura, 12 miles ſouth of Montemor-o-Velho.

LOUSE (*Encycl.*). Reference was erroneouſly made, in that article, to LICE. See PEDICULUS.

LOUVESTEIN, a fortreſs of the United Provinces, in Holland, on the weſt end of an iſland, called Bommel Waert. In this caſtle, the patriotic chiefs were impriſoned by Prince Maurice; whence that party has ever ſince been called the Louveſtein party. It is 16 miles eaſt of Dort. Long. 5. 13. E. Lat. 50. 40. N.

LOUVIERS, a fortified town of France, in the department of Eure, with a conſiderable manufacture of fine cloths. It is ſeated on the Eure, in a fertile plain, 10 miles N. of Evreux, and 55 N.W. of Paris. Long. 1. 15. E. Lat. 49. 0. N.

LOUVO, a populous town of the kingdom of Siam, with a royal palace, 50 miles north of the city of Siam. Long. 100. 50. E. Lat. 15. 8. N.

LOUVRES, a town of France in the department of Seine and Oiſe, 12 miles north of Paris. Long. 2. 24. E. Lat. 49. 3. N.

LOWDORE, a fine cataract in Cumberland, on the eaſt ſide of the lake of Derwent-water, in the vale of Keſwick. It is formed by the ruſhing of the waters of Watanlath through an awful chaſm made by the contiguity of two vaſt rocks; but it fails entirely in a dry ſeaſon.

LOWENSTEIN, a town of Suabia, and capital of a county. It is 20 miles N.E. of Stutgard. Long. 9. 19. E. Lat. 49. 1. N.

LOWESTOFFE, a town in Suffolk, with a market on Wedneſday. It is built on a cliff, the moſt eaſterly point of Great Britain; partakes with Yarmouth in the mackerel and herring fiſheries; is much frequented for ſea-bathing; and has a manufacture of coarſe china. It is 10 miles ſouth of Yarmouth, and 117 N.E. of London. Long. 1. 55. E. Lat. 52. 35. N.

LOWES-WATER, a lake in Cumberland, one mile long and a quarter of a mile broad. It is of no great depth, and without char; but it abounds with pike and perch. In oppoſition to all the other lakes, it has its courſe from north to ſouth, and, under the loſty Mellbreak, falls into Cromack-water.

LOWICZ, a populous town of Poland, in the palatinate of Rava, with a ſtrong fortreſs, ſeated on the Bzura, 21 miles ſouth of Plockſko, and 30 north of Rava. Long. 19. 29. E. Lat. 52. 24. N.

LOW-LAYTON, a village in Eſſex, ſix miles N.E. of London. Here ſeveral foundations, with Roman bricks, and coins, have been found near the manor-houſe; and ſome urns, with aſhes in them, have been dug up in the church-yard, and other parts.

LOXA, a conſiderable town of Spain, in Granada, ſeated in a fertile country, on the river Xenil, 18 miles weſt of Granada. Long. 3. 52. W. Lat. 37. 15. N.

LOXA, a town of Peru, in the province of Quito, 200 miles E.N.E. of Paita. Long. 77. 10. W. Lat. 4. 50. S.

LOYTZ, a town of Pomerania, in the county of Gutz-

kow, ſeated on the Pene, 10 miles above the city of Gutzkow.

LOZERE, a department of France, including the late province of Gevaudan. It is a mountainous barren country, and receives its name from one of its principal mountains. Mende is the capital.

LU, a town of Italy, in Montferrat, eight miles ſouth of Caſal, and eight weſt of Alexandria.

LUARCA, a town of Spain, in Aſturias, near the north coaſt, 30 miles N.W. of Oviedo.

LUBAN, a town of the Ruſſian government of Livonia, 70 miles eaſt of Riga. Long. 26. 36. E. Lat. 56. 55. N.

LUBANSKEN-SEA, or LAKE OF LUBAN, a lake in Livonia, toward the confines of Courland and Lithuania. The river Roſitta falls into this lake.

LUBBEN, a town of Germany, in Lower Luſatia, capital of a diſtrict of the ſame name. It has ſeveral churches, with a noble hoſpital, and a landhouſe, or a houſe where the diets aſſemble. It is ſeated on the Spree, 60 miles S.E. of Berlin. Long. 14. 25. E. Lat. 52. 0. N.

LUBEC, biſhopric of, a ſmall biſhopric, in the duchy of Holſtein. It has been enjoyed by proteſtant princes of the houſe of Holſtein, ever ſince 1561, when Lutheraniſm was eſtabliſhed here.

LUBEC, an iſland of the Indian Ocean. Long. 112. 22. E. Lat. 5. 50. S.

LUBOW, a town of Poland, in the palatinate of Cracow, 50 miles S.E. of Cracow. Long. 20. 36. E. Lat. 49. 36. N.

LUBZ, or LUBITZ, a town of Lower Saxony, in the duchy of Mecklenburgh, 23 miles S.S.W. of Guſtrow.

LUC, a town of France, in the department of Var, 25 miles N.E. of Toulon. Long. 6. 25. E. Lat. 43. 28. N.

LUC, a town of France, in the department of Iſere, ſeated on the Drome, 32 miles ſouth of Grenoble. Long 5. 48. E. Lat. 44. 40. N.

LUCE, a great bay in Wigtonſhire, lying to the eaſt of the promontory, called the Mull of Galloway.

LUCENA, a town of Spain, in the province of Cordova, 29 miles S.S.E. of Cordova, and 40 N.W. of Granada. Long. 3. 50. W. Lat. 37. 28. N.

LUCERA, an ancient town of Naples, in Capitanata, with a biſhop's ſee. The town is ſmall but populous, and has a manufacture of cloth. It is 30 miles W.S.W. of Manfredonia, and 65 N.E. of Naples. Long. 15. 34. E. Lat. 41. 28. N.

LUCERNA, a town of Italy, in Piedmont, 15 miles S.W. of Turin. Long. 7. 38. E. Lat. 44. 52. N.

LUCHEN, a town of Spain, in Valencia, 30 miles S. of the city of that name Long. 0. 10. E. Lat. 38. 53. N.

LUCHO, a town of Lower Saxony, in the principality of Lunenburg, ſituate on the Jetze, 40 miles E.S.E. of Lunenburg, and 54. N.E. of Zell.

LUCHOWICE, a town of Lithuania, in the palatinate of Novogorodeck, 40 miles S.S.E. of Novogorodeck.

LUCIANA, a town of Spain, in the province of Seville, eight miles W.N.W. of Ecya.

LUCIANO, a town of Spain, in New Caſtile, 19 miles W. of Cindad Real.

LUCIGNANO, a town of Italy, in Tuſcany, 10 miles S. of Sienna. Long. 11. 11. E. Lat. 43. 0. N.

LUCITO, a town of Naples, in the Moliſe, 11 miles N.E. of Moliſe.

LUCKNOW, an ancient and extenſive city of Hindooſtan Proper, capital of Oude. It is meanly built; the houſes are chiefly mud walls, covered with thatch; many are entirely of mats and bamboos, thatched with leaves of the cocoa-nut, palm-tree, and ſometimes with ſtraw; and very few are built with brick: the ſtreets are crooked, narrow, and worſe than moſt in India. In the dry ſeaſon, the duſt and heat are intolerable; in the rainy ſeaſon, the mire is ſo deep, as to be ſcarcely paſſable; and there is a great number of elephants, belonging to the nabob and the great men of his court, which are continually paſſing the ſtreets, either to the palace, or to the river, to the great danger and annoyance of the foot paſſenger, as well as the inferior claſs of ſhopkeepers. The comforts, conveniency, or property of this claſs of people are, indeed, little attended to, either by the great men or their ſervants; the elephant itſelf being frequently known to be infinitely more attentive to them as he paſſes, and to children in particular. The palace of the nabob is ſeated on a high bank near the Goomty, and commands an extenſive view both of that river and the country on the eaſtern ſide. Lucknow is 605 miles N.W. of Calcutta. Long. 81. 25. E. Lat. 26. 35. N.

LUCKO, a town of Poland, capital of Volhynia, with a citadel, and a biſhop's ſee, ſeated on the Ster, 75 miles N.E. of Lemburg, and 175 S.E. of Warſaw. Long. 25. 30. E. Lat. 51. 13. N.

LUCO, a town of Naples, in Abruzzo Citeriore, ſeated on the W. bank of the lake Celano, nine miles S.S.W. of Celano.

LUCON, or LUZON, a town of France, in the department of Vendée, and late province of Poitou, and lately an epiſcopal ſee. It is ſeated in an unwholeſome moraſs, 17 miles N. of Rochelle, and 50 S. of Nantes. Long. 1. 5. W. Lat. 46. 27. N.

LUCONIA, or LUCON, the chief of the Philippine Iſlands, in the N. Pacific Ocean, 400 miles in length, and 100 in breadth. It is not ſo hot as may be expected, becauſe it is well watered by large lakes and rivers, and the periodical rains, which inundate all the plains. There are ſeveral volcanoes in the mountains, which occaſion earthquakes; and a variety of hot baths. The produce of this iſland is wax, cotton, ſilk, wild cinnamon, ſulphur, cocoa nuts, rice, gold, horſes, buffaloes, and game. Philip II. of Spain, formed a ſcheme of planting a colony in the Philippine Iſlands, which had been neglected ſince the diſcovery of them by Magellan, in 1521. Manilla, in this iſland, was the ſtation choſen for the capital of the new eſtabliſhment. Hence an active commercial intercourſe began with the Chineſe, a conſiderable number of whom ſettled in the Philippine Iſlands, under the Spaniſh protection. Theſe ſupplied the colony ſo amply with all the valuable productions and manufactures of Aſia, as enabled it to open a trade with America, by a direct courſe of navigation, the longeſt from land to land on the globe. This trade, at firſt, was carried on with Callao, on the coaſt of Peru; but it was afterward removed to Acapulco, on the coaſt of New Spain. From this port, annually ſail one or two ſhips, which are permitted to carry out ſilver to the amount of 500,000 crowns, in return for which they bring back from Manilla ſpices, drugs, China and Japan wares, callicoes, chintz, muſlins, ſilks, &c. The inhabitants are a mixture of ſeveral nations, beſide Spaniards; and they all produce a mixed breed diſtinct from any of the reſt. The blacks have long hair, and good features; and there is one tribe, who prick their ſkins, and draw figures on them, as they do in moſt other countries where they go naked.

LUDENSCHEIDE, or LUNSCHEDE, a town of Weſtphalia, in the county of Mark. The principal trade is in manufactures of iron. In 1723 it was almoſt wholly deſtroyed by fire, ſince which it has been rebuilt with ſtone. It is 28 miles N.E. of Cologne. Long. 7. 20. E. Lat. 51. 11. N.

LUDERSBURG, a town of Lower Saxony, in the duchy of Lauenburg, ſeated on the Elbe, five miles above the town of Lauenburg.

LUDGERSHALL. See LUGGERSHALL.

LUDWIGSBURG, a town of Suabia, in the duchy of Wurtemburgh, which manufactures cloth, damaſk linen, and marble paper. Here is a fine hunting ſeat belonging to the Duke of Wurtemburg, called La Favorita. It is five miles N.N.E. of Stutgard.

Ludwigsburg, a town of Upper Saxony, in Anterior Pomerania, five miles E.N.E. of Grieſſwalde.

LUDWIGSTADT, a town of Franconia, in the principality of Culmbach, 13 miles S. of Saalfeld.

LUGA, a town of Ruſſia, in the government of Peterſburg, ſituate on a river of the ſame name, 80 miles S. of Peterſburgh. Long. 29. 39. E. Lat. 51. 49. N.

LUGANO, a town of Switzerland, capital of a bailiwic of the ſame name, which is the principal of the four tranſalpine bailiwics. It is built round a gentle curve of the lake of Lugano, and backed by an amphitheatre of hills. It is the emporium of the greateſt part of the merchandiſe, which paſſes from Italy over the St. Gothard, or the Bernardin. It contains 5000 inhabitants; and on an eminence above the town, is the principal church, which has a delightful proſpect from its terrace. Moſt of the houſes are built of tufſtone; and the reſidence of the governor is a low building, on the walls of which are the arms of 12 cantons to which this bailiwic is ſubject; for the canton of Appenzel has no juriſdiction over it. It is 17 miles N.W. of Como. Long. 8. 48. E. Lat. 45. 54. N.

Lugano, a lake of Switzerland, on the Italian ſide of the Alps. It is 25 miles in length, and from two to four in breadth; its form is irregular, and bending into continual ſinuoſities. It lies about 190 feet higher than the lakes of Como and Locarno.

LUGDE, or Lude, a town of Weſtphalia, in the biſhopric of Paderborn, ſituate on the Emmer, 24 miles N.N.E. of Paderborn. Long. 8. 39. E. Lat. 51. 49. N.

LUGO, an ancient city of Spain, in Galicia, with a biſhop's ſee. There are ſprings in this city boiling hot. It is ſeated on the Minho, 32 miles S.E. of Mondonnedo, and 60 S.W. of Oviedo. Long. 8. 52. W. Lat. 42. 46. N.

LUNDEN, a town of Lower Saxony, in the duchy of Holſtein, ſeated near the Eyder, 36 miles N.N.W. of Gluckſtadt. Long. 9. 20. E. Lat. 54. 26. N.

LUNEL, a town of France, in the department of Gard, near the river Ridourle. It produces excellent Muſcadine wine, and is 16 miles E. of Montpellier. Long. 4. 19. E. Lat. 43. 38. N.

LUNEN, a town of Weſtphalia, in the county of Marche, ſituate at the conflux of the Zeſick and Lippe, 20 miles S.S.W. of Munſter. Long. 7. 49. E. Lat. 50. 40. N.

LUNERA, a mountain of Italy, between Naples and Puzzoli. It contains much ſulphur, and alum; and the ſprings that riſe from it are excellent for curing wounds.

LUNEVILLE, a conſiderable town of France, in the department of Meurthe, with a caſtle, where the dukes of Lorrain formerly kept their court, as did afterward King Staniſlaus. It is now converted into barracks. The church of the late regular canons is very handſome; and here Staniſlaus founded a military ſchool, a large library, and a fine hoſpital. It is ſeated in a plain, on the rivers Vezouze and Meurte, 12 miles S.E. of Nanci, and 62 W. of Straſburg. Long. 6. 35. E. Lat. 48. 36. N.

LUPO GLAVO, a town of Auſtrian Iſtria, ſeated near the mountains of Vena, 15 miles W. of St. Veit.

LURE, a town of France, in the department of Upper Saone, remarkable only for a late abbey of Benedictines, converted, in 1764, into a chapter of noble canons. It is 30 miles N.E. of Beſançon. Long. 6. 33. E. Lat. 47. 38. N.

LURI, an ancient town of Corſica, between Cape Corſe and the towns of Baſtia and St. Fiorenza.

LUSIGNAN, a town of France, in the department of Vienna, ſeated on the Vonne, 15 miles S.S.W. of Poitiers, and 200 of Paris. Long. 0. 10. E. Lat. 46. 25. N.

LUSO, a river of Italy, which riſes in the duchy of Urbino, croſſes part of Romagno, and falls into the gulf of Venice, 10 miles W. of Rimini.

LUTANGE, a town of France, in the department of Moſelle, eight miles S.E. of Thionville, and 11 N.N.E. of Metz. Long. 6. 19. E. Lat. 49. 11. N.

LUTKENBURG, a town of Germany, in the duchy of Holſtein, ſeated near the Baltic, 13 miles from Ploen.

LUTON, a town in Bedfordſhire, with a market on Monday, ſeated among hills, 18 miles S. of Bedford, and 31 N. by W. of London. Long. 0. 25. W. Lat. 52. 27. N.

LUTSCHINEN, a river of Switzerland, in the canton of Bern. It is formed by the junction of two ſtreams; the Weiſs Lutſchinen, which flows through the valley of Lauterbrunn, and the Schwartz Lutſchinen, which comes from the valley of Grindelwald. In a rainy ſeaſon, the river forms a torrent, which ruſhes impetuouſly through the great maſſes of rock that obſtructs its courſe, and, with inconceivable violence, forces from their beds the moſt enormous fragments. The road to Zwey Lutſchinen and Lauterbrunn is over this roaring torrent, by a kind of bridge, which is fixed againſt the ſides of rocks, that are almoſt in a leaning poſition. A huge vertical ſtone, raiſed in the middle of the river, ſupports ſome thick planks, ſo badly joined, as to be neither ſteady nor ſolid; and theſe form the wretched bridge, over which the inhabitants daily paſs, with a firm ſtep and undaunted eye; a paſſage, which the traveller, unaccuſtomed to ſuch ſtrange communications, would tremble to attempt. Hence the Lutſchinen flows till it falls into the lake of Brientz.

LUTTENBURG, a town of Germany, in the duchy of Stiria, ſeated on the Muehr, 34 miles S.E. of Gratz. Long. 16. 10. E. Lat. 46. 46. N.

LUTTER, a town of Lower Saxony, in the duchy of Brunſwick, remarkable for a battle gained over the Auſtrians, by the Danes, in 1626. It is eight miles N.W. of Goſlar, and 13 S.E. of Hildeſheim. Long. 10. 25. E. Lat. 52. 4. N.

LUTTERBERG, a town of Lower Saxony, in the electorate of Hanover. It was formerly a county, and for a long time governed by lords of its own. It is 15 miles S. of Goſlar. Long. 10. 40. E. Lat. 51. 45. N.

LUTTERWORTH, a town in Leiceſterſhire, with a market on Thurſday, and a large handſome church, with a fine lofty ſteeple. Here Wickliff, the firſt reformer, was rector, who died in 1385; but was dug up and burnt for a heretic 40 years after. Lutterworth is ſeated on the river Swift, 14 miles S. of Leiceſter, and 88 N.N.W. of London. Long. 1. 10. W. Lat. 52. 26. N.

LUTZENSTEIN, a town of France, in the department of Lower Rhine, with a ſtrong caſtle, ſeated on a mountain, 30 miles N.W. of Straſburg. Long. 7. 17. E. Lat. 48. 55. N.

LUXEUIL, a town of France, in the department of Upper Saone, remarkable for its mineral waters. From the number of urns, medals, and inſcriptions, found here, it is ſuppoſed to have been a conſiderable place in the time of the Romans. It was deſtroyed by Atilla in 450. Near the town was a late celebrated abbey, founded by St. Golumban, an Iriſhman. It is ſeated at the foot of the Voſges, 15 miles W. of Veſoul. Long. 6. 24. E. Lat. 47. 50. N.

LUZARCHES, a town of France, in the department of Seine and Oiſe, 15 miles N. of Paris. Long. 2. 19. E. Lat. 49. 7. N.

LUZERNE, a county of Pennſylvania, 80 miles long and 61 broad. In 1790, it contained 4,904 inhabitants. Wilkeſborough is the capital.

LUZZANA, a town of Italy, in the Mantuan, 22 miles S. of Mantua. Long. 10. 48. E. Lat. 44. 50. N.

LUZZARA, a ſtrong town of Italy, on the confines of the duchies of Mantua and Guaſtalla, near the confluence of the Croſtolo with the Po. Here a battle was fought between the French and Spaniards, in 1702, when each ſide claimed the victory. It is 10 miles S. of Mantua. Long. 10. 50. E. Lat. 45. 0. N.

LUZZI, a town of Naples, in Calabria Citeriore, near the river Craté, three miles S. of Biſignano.

LYCHAM, a town in Norfolk, whoſe market is diſuſed. It is 24 miles W. by N. of Norwich, and 92 N.N.E. of London.

LYDSING, a village in Kent, near Graveſend. Here 600 young Normans, who came over with Alfred and Edward, the ſons of Ethelred, after the death of Canute, to take poſſeſſion of their father's throne, were maſſacred by Godwin, earl of Kent.

LYESSE, a town of France, in the department of the North, 15 miles E. of Landrecy. Long. 4. 10. E. Lat. 50. 6. N.

LYGE, a town of Norway, near a lake of the ſame name, 16 miles N.W. of Chriſtianſand.

LYGUM, a town of Denmark, in the duchy of Sleſwick, 14 miles W. of Apenrade.

LYING-IN CHARITIES, a kind of uſeful inſtitutions, which, happily for the female poor, have multiplied greatly of late years, in the moſt populous diſtricts of the united kingdom. The eſtabliſhments which go by this name differ from the Lying-in HOSPITALS very eſſentially, and in fact confer greater benefits on the indigent at a ſmaller expence to the ſubſcribers. One important and diſtinguiſhing feature in them, which marks them with a decided preference is, that poor women are not under the neceſſity of leaving their families, but have charitable aid adminiſtered to them at their own homes, where their preſence cannot but be of great uſe in keeping an eye on their ſmall domeſtic concerns, which might ſuffer materially during an abſence of ſome weeks at an hoſpital.

The following extract from an account of a charity, for aſſiſting the female poor, at the period of their lying-in, with *child-bed linen*, &c. is publiſhed in the Reports of the Society for bettering the Condition of the Poor, and may ſerve as a ſufficient model for ſimilar Inſtitutions:

Fifteen ſets of child-bed linen and clothes are diſtributed in parcels at Stowe, Wotton, Buckingham, and Ayleſbury, in the county of Buckingham, and at Gosfield Hall in Eſſex, under the care of perſons at thoſe places, who receive applications and enquire into the characters of the perſons applying. The ſets are lent out for a fortnight, three weeks, or a month, according to circumſtances, and conſiſt of the following articles each;—three ſheets, two blankets, one leathern ſheet, two bed-gowns, two night-caps, three bed ſhifts, three children's caps, three children's ſhirts, one cotton wrapper, one flannel wrapper, and a ſufficient quantity of ſmall articles.

The woman, who has the uſe of any ſet, is allowed to retain a cap, a ſhirt, and ſome flannel for the child: the reſt are returned clean, and five ſhillings allowed her for waſhing them; which, as that is generally done by the kindneſs of her neighbours, is ſo far an additional charity to her.—During her confinement, broth and beer caudle are occaſionally ſent her, and medical aid in particular caſes.

This charity was inſtituted by the Marchioneſs of Buckingham about ten years ago.—The benefit of it has been accepted by the poor in the moſt grateful manner; and there occurs no inſtance of its having been abuſed, by their damaging or purloining any of the articles. Almoſt every article is ſpun, woven, and made up, at the ſchools for poor children, which have been of late years eſtabliſhed at Stowe, Wotton, and Gosfield; and, when made of coarſe materials, which will anſwer the purpoſe, need not coſt more than 30s. a ſet. The annual expence of keeping them up may be about 10s. a ſet.

The advantage of this charity is, that it affords the poor, at a ſmall expence, much more relief and comfort than they could provide for themſelves with the ſame ſum, even if they poſſeſſed it: for one ſet of articles may, in the courſe of a year, ſerve a dozen families ſucceſſively, who either might not have the means of purchaſing them, or, if they had, would be obliged to buy them merely for temporary uſe, and then to ſell them again to diſadvantage. Beſides this there is a ſaving in the purchaſe of the articles by wholeſale, and an advantage in thus furniſhing work for a village ſchool. Though what has been done, in this inſtance, is at the expence of one perſon, it is quite as well ſuited to be eſtabliſhed by a ſubſcription, and conducted by a committee of ſubſcribers. This charity has been adminiſtered many years, at Audley End, in Eſſex; and has alſo been adopted, on a ſmaller ſcale, in ſome other places. Aid is alſo given to females during their lying-in by ſome of the Benefit Societies for women. See FEMALE BENEFIT SOCIETIES, *Supp.*

LYNDHURST, a village in Hants, with a ſeat which belongs to the Duke of Glouceſter, as lord warden of the New Foreſt. It is ſeven miles N. of Lymington.

LYNN, a town of Maſſachuſets, with a conſiderable manufacture of women's ſilk and cloth ſhoes. It is nine miles N.E. of Boſton. Long. 70. 55. W. Lat. 42. 33. N.

LYSE, a town of Norway, eight miles S.S.W. of Bergen.

LYSEKIL, a ſea-port of Sweden, in Weſt Gothland, 16 miles W. of Uddevalla.

LYSOBYKI, a town of Poland in the palatinate of Lublin, 20 miles N.N.W. of Lublin. Long. 22. 40. E. Lat. 51. 29. N.

M.

MABRA, a town of the kingdom of Algiers, ſeated on the gulf of Bona, W. of the town of Bona.

MACEDONIA, a province of Turkey in Europe, bounded on the N. by Servia and Bulgaria, on the E. by Romania and the Archipelago, on the S. by Livadia, and on the W. by that country and Albania. Salonichi is the capital.

MACERATA, a town of Naples, in Terra di Lavoro, four miles S. of Capua.

MACHECOUL, a town of France, in the department of Lower Loire, ſituated on the Tenu; 20 miles S.W. of Nantes. Long. 1. 11. W. Lat. 47. 2. N.

MACHERRY, a town of Hindooſtan Proper, in the country of Mewat, 70 miles S.S.W. of Delhi.

MACHIA, a town of Naples, in the Moliſe, 12 miles S.W. of Moliſe.

MACHICACO, a promontory of Spain, in the Bay of Biſcay. Long. 3. 0. W. Lat. 43. 37. N.

MACKERAN, a province of Perſia, bounded on the N. by Segeſtan and Sableſtan, on the E. by Hindooſtan Proper, on the S. by the Arabian Sea, and on the W. by Kerman. It is tributary to the ſultan of Candahar; and the capital, of the ſame name, is 100 miles N. W. of Tatta. Long. 66. 0. E. Lat. 26. 0. N.

MACOCO, or Anzico, a kingdom of Africa, to the E. of Congo, and S. of the equator. The Portugueſe trade with the inhabitants for ſlaves, elephants' teeth, and copper.

MACON, or Mascon, an ancient town of France, in the department of Saone and Loire, and lately a biſhop's ſee. It is remarkable for good wine, and ſeated on the declivity of a hill, near the Saone, 35 miles N. of Lyons, and 188 S.E. of Paris.

MACPHERSON (James), a Scotch writer of ſome celebrity, was born in 1738. His firſt work, and that which brought him moſtly into notice, was a tranſlation of poems attributed by him to Oſſian. Theſe poems certainly poſſeſs great beauty; but after they had been publiſhed ſome time, their authenticity was doubted by Dr. Johnſon and other writers, while they were as vigorouſly defended by ſome men of genius, the principal of whom was Dr. Blair. Mr. Macpherſon was greatly irritated at Dr. Johnſon's remarks, and wrote him a threatening letter, which the doctor anſwered in the moſt indignant terms. In 1773 Mr. Macpherſon publiſhed a Tranſlation of the Iliad into heroic proſe, but it ſunk into contempt. In 1775 Mr. Macpherſon publiſhed *The Hiſtory of Great Britain from the Reſtoration to the Acceſſion of the Houſe of Hanover*, in two volumes 4to.; a work in our opinion of great merit, though by one party it has been induſtriouſly, and, we are ſorry to add, too ſucceſsfully, decried. As an hiſtorian, our author could not indeed boaſt the attic elegance of a Robertſon, the ſplendor of a Gibbon, or the philoſophical profundity of a Hume; but his *ſtyle*, though it has ſometimes been the avowed, was not the real, cauſe of the coldneſs with which his hiſtory was received. The writer of this ſketch once ſaw a gentleman of rank, and of the whig intereſt, turn over one of Macpherſon's volumes, and heard him ſay, upon ſhutting the book: "I cannot bear that work." He was aſked if he thought the narrative falſe; and he replied, "No! It is too true; but I cannot bear it, becauſe it gives me a bad opinion of thoſe great men to whom I have been accuſtomed to look back with reverence as to the ſaviours of my country."

The author, however, acted with great fairneſs; as, together with the hiſtory, he publiſhed the proofs upon which his facts were founded, in two quarto volumes, entitled, *Original Papers, containing the Secret Hiſtory of Great Britain, from the Reſtoration to the Acceſſion of the Houſe of Hanover; to which are prefixed, Extracts from the Life of James II. as written by himſelf.* Theſe papers were chiefly collected by Mr. Carte, but are not all of equal authority.

Soon after this period, the tide of fortune flowed very rapidly in Mr. Macpherſon's favour, and his talents and induſtry were amply ſufficient to avail himſelf of every favourable circumſtance which aroſe. The reſiſtance of the Colonies called for the aid of a ready writer to combat the arguments of the Americans, and to give force to the reaſons which influenced the conduct of government, and he was ſelected for the purpoſe. Among other things, he wrote a pamphlet, which was circulated with much induſtry, entitled, *The Rights of Great Britain aſſerted againſt the Claims of the Colonies; being an Anſwer to the Declaration of the General Congreſs*, 8vo. 1776, and of which many editions were publiſhed. He alſo was the author of *A ſhort Hiſtory of Oppoſition during the laſt Seſſion of Parliament*, 8vo, 1779; a pamphlet which, on account of its merit, was by many aſcribed to Mr. Gibbon.

But a more lucrative employment was conferred on him about this time. He was appointed agent to the nabob of Arcot, and in that capacity exerted his talents in ſeveral appeals to the public in behalf of his client. Among others, he publiſhed, *Letters from Mahommed Ali Chan, Nabob of Arcot, to the Court of Directors; to which is annexed, a State of Facts relative to Tanjore, with an Appendix of Original Papers*, 4to. 1777; and he was ſuppoſed to be the author of *The Hiſtory and Management of the Eaſt-India Company from its Origin in 1600 to the preſent Times*, vol. I. containing the affairs of the Carnatic, in which the rights of the Nabob are explained, and the injuſtice of the Company proved, 4to. 1779.

In his capacity of agent to the nabob, it was probably thought requiſite that he ſhould have a ſeat in the Britiſh Parliament. He was accordingly, in 1780, choſen member for Camelford; but we do not recollect that he ever attempted to ſpeak in the Houſe. He was alſo re-choſen in 1784 and 1790.

He had purchaſed, we think before the year 1790, an eſtate in the pariſh in which he was born; and changing its name from *Retz* to *Belville*, built on it a large and elegant manſion, commanding a very romantic and picturesque view; and thither he retired, when his health began to fail, in expectation of receiving benefit from the change of air. He continued, however, to decline; and after lingering ſome time, died at his ſeat at Belville, in Inverneſs, on the 17th of February, 1796. He appears to have died in very opulent circumſtances; and by his will, dated June 1793, gave various annuities and legacies to ſeveral perſons to a great amount. His remains were afterwards taken from the place where he died, and buried in the Poets' Corner of Weſtminſter church.

MACRES, a river of Africa, which croſſes the kingdom of Tripoli, and falls into the Mediterranean, a little to the E. of Lebeda.

MACRI, an ancient town of Samos, in the Archipelago.

MACRO, or Macronisi, an iſland of the Archipelago, near the coaſt of Livadia, 20 miles E. of Athens. Long. 24. 16. E. Lat. 37. 30. N.

MACZUA, a ſmall iſland on the Red Sea, near the coaſt of Abex.

MADIA, or Maggia, a town, river, valley, and bailiwic

of Switzerland, in Upper Valais. The valley is long and narrow, between high mountains, watered throughout its whole length by the river; and it is the fourth transalpine bailiwic. The town is 10 miles N.W. of Locarno.

MADRE DE DIOS, an island in the S. Pacific Ocean, near the coast of Patagonia, 180 miles in circumference. Long. 42. 0. W. Lat. 51. 0. N.

MADRID, New, a city, now building, or to be built, in a new Spanish settlement, in Louisiana, on the Mississippi, opposite the mouth of the Ohio. The settlers are to enjoy a free toleration in religion. Long. 89. 50. W. Lat. 30. 36. N.

MADRIGAL, a town of Spain, in Old Castile, seated in a plain, fertile in excellent wine, 10 miles N.E. of Medina-del-Campo. Long. 4. 19. W. Lat. 41. 25. N.

Madrigal, a town of Terra Firma, in the province of Popayan. Long. 75. 45. W. Lat. 0. 50. N.

MADRISIO, a town of Italy, in Friuli, lately belonging to the state of Venice, 30 miles N. of Venice.

MADROGAM, the capital of Monomotapa, with a spacious royal palace. The upper part of the houses is in the shape of a bell. Long. 31. 40. E. Lat. 18. 0. N.

MADURA, a town of the Carnatic, capital of a province of the same name, on the coast of Coromandel. It is 130 miles N. by E. of Cape Comorin, and 300 S.S.W. of Madras. Long. 78. 12. E. Lat. 9. 55. N.

Madura, the capital of an island of the same name, in the Indian Ocean, situate to the N. of the E. end of the island of Java. Long. 112. 49. E. Lat. 9. 50. N.

MAELER, a lake of Sweden, between the provinces of Westmania and Sudermania. It contains several fine islands, is usually frozen during a few weeks in winter, and opens an easy communication, by sledges, between the interior parts of Sweden and the city of Stockholm.

MAERNA, a town of Germany, in the county of Tyrol, 23 miles W.S.W. of Trent.

MAESLANDSLUYS, a town of the United Provinces, in Holland, five miles S.W. of Delft. Long. 4. 18. E. Lat. 51. 57. N.

MAESYCK, a town in the bishopric of Liege, on the river Maese, eight miles S.W. of Ruremonde.

MAFFRA, a town of Portugal, in Estremadura, near which, in a sandy and barren place, King John V. erected a building of extraordinary magnificence. This was done in pursuance of a vow, made in a dangerous fit of illness, to found a convent for the use of the poorest friary in the kingdom. Upon enquiry, this poorest of convents was found at Maffra, where twelve Franciscans lived together in a hut. The king procured from Rome the design of a building far exceeding the Escurial. It is five miles N.W. of Lisbon.

MAGGEROE, a large island, near the coast of Norway, said to be the most northern land in Europe. Long. 25. 0. E. Lat. 72. 0. N.

MAGGIORE, or Locarno, a lake of Italy, partly in the duchy of Milan, and partly in the country of the Grisons. It is 35 miles long and six broad.

MAGHERAFELT, a town of Ireland, in the county of Londonderry, considerable for its linen manufactures, 13 miles W. of Antrim, and 30 S.E. of Londonderry.

MAGLIANO, a small but populous town of Italy, in the territory of the pope, and district of Sabina, seated on a mountain, near the river Tiber, 30 miles S.W. of Spoletto, and 30 N. of Rome. Long. 12. 35. E. Lat. 42. 25. N.

MAGNAVACCA, a town of Italy, in the Ferrarese, with a fort, seated at the mouth of the lake of Comachio, in the gulf of Venice, 18 miles N. of Ravenna. Long. 12. 4. E. Lat. 44. 52. N.

MAGNY, a town of France, in the department of Seine and Oise, 32 miles N.W. of Paris. Long. 1. 54. E. Lat. 49. 10 N.

MAGRA, a river of Italy, which rises in the Appennines, in the valley of Magra, washes Pont-Remoli and Sarzana, below which it falls into the Mediterranean.

Magra, a valley in the duchy of Tuscany, 27 miles long and 15 broad.

MAGUELONE, a lake of France, in the department of Herault, near a town of the same name, which is seated on the coast of the Mediterranean, into which the lake enters by a canal, the beginning of the famous canal of Languedoc.

MAHALEU, a town of Egypt, capital of Garbia. It carries on a considerable trade in linen, cottons, and sal-ammoniac; and the inhabitants have ovens to hatch chickens. Long. 30. 31. E. Lat. 31. 30. N.

MAHANUDDY, or Mahanady, a river of Hindoostan, which rises in the N.W. part of Berar, and falls by several mouths into the bay of Bengal, at Cattack. These mouths form an assemblage of low woody islands; and at the mouth of the principal channel, near False Point, is a fortified island, named Cajung or Codjung.

MAHMUDPOUR, a town of Hindoostan Proper, in Bengal, 80 miles N.E. of Calcutta, and 84 S.E. of Moorshedebad.

MAHOMDY, a town of Hindoostan Proper, in the country of Oude, 70 miles N.W. of Lucknow, and 150 E.S.E. of Delhi. Long. 80. 32. E. Lat. 27. 54. N.

MAIDA, a town of Naples, in Calabria Ulteriore, nine miles W.N.W. of Squillace.

MAILLEZAIS, a town of France, in the department of Vendée, seated in an island formed by the Seure and Autize, 22 miles N.E. of Rochelle, and 210 S.W. of Paris. Long. 0. 40. W. Lat. 46. 27. N.

MAIN, a district of Massachusets, 300 miles long and 104 broad; bounded on the N.W. by the high lands, which separate the rivers that fall into the St. Lawrence, and those that fall into the Atlantic; on the east by the river St. Croix, and a line drawn due north from its source to the said high lands, which divides this territory from Nova Scotia; on the S.E. by the Atlantic; and on the west by New Hampshire. It is divided into three counties. The heat in summer is intense, and the cold in winter extreme: all the lakes and rivers are usually passable on ice, from Christmas till the middle of March. Portland is the capital.

MAINA, a country of Turkey in Europe, in the Morea, according to tradition, derives its name from the Greek word Μανια, signifying *rage* or *fury*, and intended to express the ardor with which those people fought against the Turks. That tract of territory, though rough with rocks and mountains, contains a population of about forty-five thousand souls. It reckons three hundred and sixty villages, of which Vitulo is the most considerable.

Its principal productions are wheat, barley, and lupines, which are each year grown in rotation, so as never to let the land lie uncultivated. Here, as every-where else, agriculture is the mother of the principal domestic resources. It is not attended with great difficulty in Maina, in consequence of the great population, and the proximity of the villages. The labours of the plough are performed by oxen: the crops are not abundant; but the deficiency of corn is compensated by a prodigious quantity of oil, and by the produce of the silk-worm.

The lands of Maina, like its inhabitants, are unacquainted with rest. They annually yield their produce, without the aid of manure, except such as they derive from the natural deposits of the cattle, which remain constantly in the fields, as there are no stables in the country. Besides, the soil is dotted with little rocks which prevent the waters from washing away the mould; and the rain, being stopped by those rocks, deposits around them a kind of mud, which probably contributes much to the fertility of the land.

No vineyards are seen in Maina. It is not that the soil is

unfit for the cultivation of the grape; for there are parts of it well adapted for the propagation of the vine; but the Mainots give the preference to Ceres over Bacchus. They can very well diſpenſe with wine, they ſay, but not with corn. Beſides, they can eaſily procure grapes and wine from any other part of the Morea.

The Mainots are equally unacquainted with extreme poverty and great opulence. During the ſummer, they imitate the ant, and carefully lay up for winter a ſufficient ſtore of proviſions of prime neceſſity. The inhabitants of Cape Matapan are alone deſtitute of that advantage: their territory being leſs fertile than the other parts of the diſtrict of Maina, numbers of them go in the harveſt ſeaſon to work in the Morea, and thus procure ſupplies of wheat and barley for the whole year.

Since the fall of the Greek empire, the Mainots have ever conſidered courage as the virtue which was the moſt neceſſary to them for the preſervation of their liberty. Their bodily exerciſes give them agility; and their temperance renders them robuſt. Having neither tribunals nor judges, they have acquired the habit of perſonally avenging themſelves for every kind of injury. To pardon an outrage is deemed the conduct of a coward: to puniſh it, is frequently to kindle the flames of war between the families of the parties: but even this kind of family hoſtilities is advantageous to them, inaſmuch as it inures them to martial toils.

Their œconomy conſtitutes their wealth. Equally ſparing of their time and their money, they have ſufficient dependence on each other's word, to ſuperſede the neceſſity of binding themſelves by written agreement. Neither notaries nor lawyers are to be found among them: all their engagements are made verbally, but are not on that account the leſs faithfully obſerved.

At Maina, nothing is more ſacred than the honour of the fair ſex. To deceive a woman is accounted an act of baſeneſs: an outrage offered to her is, in the eyes of her family, a ſtain which cannot be waſhed out except in blood. The women, it is true, ſhew in the firſt inſtance a proper reſpect for themſelves. The conduct of the mothers is the beſt leſſon for their daughters. They ſeldom go abroad from their houſes, and then on family buſineſs alone. Accuſtomed to labour, they neither experience the irkſome *ennui* of our polite circles, nor are expoſed to the dangers of our public places, nor frequent balls, where every thing is maſked, except debauchery. Accordingly they are ſafe from thoſe dark intrigues in which virtue too often falls a ſacrifice. It is not that their hearts are proof againſt the ſhafts of love, or that the young men view them with the eyes of indifference; but both ſexes are equally attentive to preſerve their moral and phyſical powers for the purpoſe of more effectually ſecuring their liberty.

All the inhabitants of the ſame village live together like children of the ſame family: they mutually lend to each whatever is neceſſary, and take pleaſure in relieving each other's wants. If any one of them, burthened with a numerous family, is reduced to diſtreſs, the prieſts or principal inhabitants of the place make for him a collection without naming him, and cauſe it to be privately conveyed to his hands.

Hoſpitality is the favourite virtue of the Mainots. Does a hapleſs victim of Turkiſh cruelty come to them from any other part of the Morea in queſt of an aſylum? he is received with all the attention due to misfortune and to friendſhip: he is provided with lodging, food, raiment, every thing. If they do not obſerve the ſame conduct toward foreigners, it is becauſe the Mainots are afraid of ſeeing corruption introduced among them. To inſure himſelf a good reception, a foreigner muſt come recommended by ſome perſon who is well known to the inhabitants, or bring with him the means of ſupplying all his wants until his demeanour have gained him reſpect, and he have learned in ſome meaſure to ſpeak the language of the country. His character once eſtabliſhed, he is thenceforward treated as if he were a native Mainot.

In no other part of the globe is ſo great affection and friendſhip ſeen to reign among relatives as in Maina. The glory of a noble deed, or the diſgrace of an act of baſeneſs, reflects on the whole kindred. Each family regards its ſeniors as its guides. Is there queſtion of a marriage, or of any other important undertaking? The old men are conſulted before a ſingle ſtep be taken in the buſineſs.

There is no corporal puniſhment for theft; but the depredator is obliged to make ſeven fold reparation. His crime is never expiated by the penalty of death: for "all the wealth in the world," ſay the Mainots, "is not equal in value to the life of a man." Indeed, what is ſtolen among them is of no great moment: it is only fruits or garden produce. The moſt effectual check upon perſons who might be inclined to thievery, is the ſentence of excommunication pronounced againſt them by the prieſt at maſs.

The Mainots profeſs the Chriſtian religion according to the rites and tenets of the Eaſtern church, which acknowledges for its chief the patriarch of Conſtantinople. They ſcrupuloufly obſerve the commandments of their church, which have been handed down to them without innovation. They conſider the head of the Roman church as a ſchiſmatic, on account of the changes introduced into the Romiſh religion—changes, in conſequence of which it is no longer recogniſable. In particular, they cannot pardon the popes for having forbidden married men to exerciſe the eccleſiaſtic functions, and having ſold indulgences which were pretended to poſſeſs the virtue of releaſing ſouls from purgatory.

In Maina there is a biſhop, reſiding at Vitulo, but who has neither ſalary nor houſe. He lodges in a little convent with a ſmall number of monks, where he lives on the fruit of his perſonal labour, and the produce of his maſſes, for each of which he receives a ſtated price, amounting to four times the ſum paid for a maſs ſaid by a common prieſt. The prieſts are in general married, and obliged to work for their ſubſiſtence, having no other income than the caſual fees ariſing from the exerciſe of their functions. The cuſtom of paying to the church either tithes or any other ſtated contribution, is equally unknown to the Mainots as to the reſt of the Greeks.

It rarely happens that the prieſts accompany their maſſes with ſermons: they ſupply the place of the latter by their exemplary lives. Their modeſty, their mildneſs, their ſimplicity, gain for them the unbounded confidence of the people, whom they inſpire with equal attachment to their religion as to their native country. Hence that axiom, common to all the Greeks, "Fight for your religion and country"—an axiom ſo ſcrupuloufly reſpected at Maina, that the prieſts are ever among the foremoſt in flying to arms for the defence of the country, and that they never take up arms except in her cauſe.

In the Greek churches* there is but a ſingle altar; at that

* Different in this reſpect from the Romiſh churches; the latter containing numerous altars, at each of which, numerous maſſes are each day ſaid. In the *ci-devant* cathedral of *Notre Dame*, at Paris, not a ſingle minute elapſed, between the hours of ſix in the morning and twelve at noon, without the appearance of a prieſt paſſing or repaſſing, between the veſtry and ſome

altar no more than one maſs can be celebrated on the ſame day; and the celebration uſually takes place only on Saturdays and Sundays. On thoſe days, therefore, and on the feſtivals, not an individual is to be ſeen in the villages during the hour of divine ſervice, all the inhabitants being at church. At Maina there is no parochial rector: if there happen to be ſeveral prieſts in one village, each in rotation exerciſes his functions during a week; whence he is, for the time being, called the hebdomadary.—At church, the wives of the prieſts hold the foremoſt rank among the women.

When a Mainot woman is on the verge of puerperal labour, a midwife is called in, together with ſome of the female relatives or neighbours, who prepare every thing neceſſary for the occaſion. The woman places herſelf upright in the arms of her huſband, who alſo holds himſelf in a ſtanding poſition, but with his back leaning againſt the bed, that he may have more ſtrength. Nothing can be better calculated to facilitate the delivery than that poſture. The midwife attends for no other purpoſe than that of receiving the infant; her ſkill extending no further than to encourage the patient by her diſcourſe. If the child preſents itſelf in a wrong direction, the mother is laid on a ſheet, and rocked to and fro until that inconvenience be remedied.

As ſoon as the infant is come into the world, the midwife handles all his limbs, puts them into proper ſhape, carefully forms the nipples of the breaſt, and ſprinkles the babe from head to foot with finely powdered ſalt. After the expiration of three days ſhe waſhes him with a tepid decoction of aromatic plants, which preſerves him from all eruption either in the head or in any other part of the body. When the child is ſwathed, he is ſprinkled, particularly on the joints, with fine powder of myrtle-leaves.—With reſpect to the lying-in woman, ſhe is bound beneath with a girdle, and ſupplied with a bowl of good broth.

The birth of a ſon is announced by a muſket-ſhot fired by the father. At that ſignal, all his male relatives and friends teſtify their joy by a diſcharge of their fire-arms. During the firſt eight days from her delivery, the mother is viſited by her female relatives, who bring her preſents of food ſuited to her condition. So long as ſhe keeps her bed, ſhe takes the beſt of nouriſhment, and drinks nothing but wine, being expreſsly prohibited to uſe water. Hence ſhe acquires an abundance of milk.

Every mother ſuckles her own child; and, if a mother happen to die, each of her female neighbours is eager to ſupply, toward the orphan, the place not only of a nurſe but alſo of a mother. The babe receives baptiſm and confirmation together. The prieſt takes a ſmall bit of wax from each of the two candles uſed at the ceremony, cuts, on four ſides, ſome hairs from the child's head, faſtens them to the wax, and, together with it, throws them into the water in which he has been baptiſed.

The cradle uſed in Maina proves the ſimple and natural genius of the people. It is made of a ſheep-ſkin well tanned, and dyed with any colour, according to the fancy of the maker. It is three feet in length: its breadth at the head is three feet and half, at the foot only two. To each ſide is faſtened a ſtick, having at each end a ring, through which paſſes a cord. The child's head reſts on a pillow, which prevents the ſticks from meeting, and thus leaves a free acceſs to the air. At home, the mother hangs the cradle from a nail faſtened in the wall. Whenever ſhe goes abroad, ſhe ſlings it over her ſhoulder, and carries it as a ſoldier carries his cartouch-box. Nothing is more common than to ſee a Mainot woman returning from the fields with a faggot of wood on her back, and, on top of the faggot, her child in its cradle; the whole burthen ſo well adjuſted, that ſhe has her hands at liberty to ſpin cotton as ſhe walks along.

The male child continues till the age of ſeven years under the direction of his mother. She carefully inſtils into him a love for his country, reſpect for old age, diſcretion, fidelity to his friends, and, above all things, hoſpitality to the poor and the ſtranger. After the expiration of the ſeven years, the father takes charge of his ſon's education, teaches him to read and write, accuſtoms him to agricultural labours for the purpoſe of ſtrengthening his limbs, trains him to the handling of arms until he becomes capable of participating the exerciſes of youth, which conſiſt in wreſtling, lifting a weight and placing it on his ſhoulders, hurling ſtones of a certain ſize, leaping, and ſwimming.

The daughters are left to the care of the mother, who trains them to the labours of the houſhold. Their principal inſtruction has for its objects the ſpinning of cotton, and the rearing of ſilk-worms. Each woman has her loom in the houſe, and can weave cotton and ſilk ſtuffs, which ſerve for the raiment of both ſexes. The girls, conſtantly employed under the inſpection of their mother, never think of the ſports and amuſements ſuited to their age. It is only on holidays that they are allowed to quit the houſe, for the purpoſe of going to church, and to the dances, which are held only in the public market-places, and by-day:—there is no dancing by night.

At Maina the young men are robuſt; and though, at the age of eighteen, their bodies are hardened by laborious exerciſes, they do not, however, marry till five-and-twenty. That age is deemed neceſſary for the procreation of well-conſtituted children. Till that period their chief deſire is to ſignaliſe their proweſs in combat: and they find frequent opportunities of gratifying their wiſhes in that reſpect. There never comes a new pacha to the Morea, who is not ambitious to announce his arrival by an attack on the Mainots. Theſe, on the other hand, are all up in arms in an inſtant. The young men are the foremoſt in ſallying forth to meet the enemy. The only recompenſe which they covet is the approbation of the fair ſex. Nothing is more efficacious to fire their courage than encomiums from the lips of young heroines, who are ever ready to partake their dangers. Accordingly, notwithſtanding the enormous ſuperiority of the Ottoman force, the Mainots continue unſubdued.

Their gunpowder is excellent. Each man prepares it in his own family. This is one of the principal occupations of the young men. They take care, in the firſt inſtance, to reduce the ſaltpetre, the ſulphur, and the charcoal, ſeparately, to fine powder in wooden mortars; after which they blend the ingredients together, and work them to a proper conſiſtency. There are ſome ſpots of land in Maina which produce ſaltpetre in abundance; but the inhabitants are unacquainted with the art of extracting it.

If the Mainots have preſerved their innocence and their liberty, they are indebted for the enjoyment of thoſe bleſſings to the care with which they have retained that auſterity of manners which characteriſed their progenitors. Even in the age of infancy they breathe the pure air of virtue: in years of adoleſcence they triumph over the allurements of libertiniſm. Their parents are aware, that, in adding a new member to ſociety, they have done no more than acquit themſelves

---

one of the many altars. And as many of thoſe gentlemen could *expedite* their maſſes in fifteen or twenty minutes, the reader may judge what a number were ſaid at each altar, and what ſums were paid for that commodity, even at a ſhilling per maſs, which was the very loweſt and pooreſt price.

of a debt which they owed to it: they know that they have a more important duty to fulfil—that of directing the firſt affections of their children, and as it were the firſt pulſations of their hearts, until they have taken their bent toward wedlock.

In Maina thoſe intrigues are unknown, which elſewhere ſerve as an introduction to the conjugal union, and which frequently prove favourable to love at the expence of matrimony. So ſoon as a young man has made the choice of a partner, he communicates the matter to his kindred, who then apply to hers, and aſk of them her hand in marriage: nor do the latter heſitate to grant the requeſt, if they approve the young man. The girl is next made acquainted with the choice of her future huſband, which ſhe ſanctions by her ſilence. Not having before laid her heart open to love, this firſt object preſented to her becomes the ſole poſſeſſor of her entire affection for the remainder of her life.

That affection is increaſed by an obſtacle which is not known in any other country. From the moment when the marriage has been decreed, the young man is expreſsly prohibited from entering the abode of his intended bride, or even ſpeaking to her, until the marriage have taken place. If he ſhould happen to contravene that prohibition, the ſpouſal contract would be broken. This privation tends to fan the ſoft flame in the boſoms of the young betrothed, and adds a new ſtimulus to their deſire of ſeeing themſelves bound in the hymenæal chain.

The wedding-day being arrived, the relatives of the party aſſemble—thoſe of the bride in her dwelling, where they remain—the others in the abode of the bridegroom, whence they ſet out with him, to go to the houſe of his betrothed wife. The young man preſenting himſelf at the door, one of her kindred ſtops him, and aſks what is the object of his viſit.

"My promiſed bride," he replies, "that I may go and be married to her according to the eſtabliſhed forms."

"Have you ſufficient means to ſupport the partner whom you deſire?"

"Would her family have conſented to give her to me, if I had not the ability to maintain her?"

Immediately the girl's father is called, and informed that his future ſon-in-law is at the door. The father advances to the youth, and ſalutes him in theſe terms—"Welcome, my ſon-in-law! May God grant thee happy days, peace and concord with thy partner, and every thing that thy heart deſires!" So ſaying, he embraces him.

After the father, comes the brothers of the bride, who hail the youth with the ſame prayer, make him a preſent in money proportioned to their faculties, and, having embraced him, depoſit their offering in the hands of a female appointed to receive it; for which office the bridegroom's ſiſter or couſin is always choſen.

The brothers are ſucceeded by the male relatives, who each in turn preſent ſimilar gifts, and in like manner embrace him. After them, come the females, preceded by the bride's mother and ſiſters.

The ſalutations and embraces which they beſtow are accompanied by preſents of a different nature; each of them places a handkerchief on the bridegroom's ſhoulders, where ſhe ſuffers it to remain.

This ceremony concluded, a little boy, brother or couſin-german to the bride, and not above ſix years old, takes the young man by the hand, and conducts him to the apartment which contains his deſtined wife. The betrothed pair ſalute each other, and remain together with the relatives of the bride. Immediately thoſe of the bridegroom being introduced, both parties unite, divert themſelves, eat ſome dried fruits, drink, and ſing hymns ſuited to the occaſion. After about an hour ſpent in this manner, the whole company walk forth; which is generally done at the ſetting-in of night. Foremoſt advance the relatives of the bridegroom, at whoſe ſide marches the brideman, appointed to the office of exchanging the rings and chaplets. Next follows the bride, attended by all the females.

In this order the proceſſion arrives at the church, in the middle of which riſes an altar erected for the occaſion, and diſplaying a croſs ſurrounded by ſix candles. The prieſt, arrayed in his ceremonial robes, aſſigns their ſtations to the young couple, placing the bride to the right of the bridegroom. Near to them ſtands the brideman and a young woman, who is attentive to wipe the perſpired moiſture from their faces with a white handkerchief.

The prieſt alternately aſks the youthful votaries of hymen whether they be ſatisfied to unite with each other according to the rules preſcribed by the church. Having received their ſeveral anſwers in the affirmative, he beſtows on them his benediction; and taking their right hands, puts them together, ſaying—"Theſe hearts, which God has united, let no man diſunite." He then bleſſes the two rings, and places one on the fourth finger of the right hand of each of the parties, ſaying, "God's faithful ſervant *A B* is united with God's faithful handmaid *C D*:" after which he turns to the altar, and bleſſes the chaplets, which are compoſed of vine-twigs ornamented with branches of lemon-tree and laurel.

During this time, the brideman exchanges the rings three times, finally leaving the ring of each party on the finger of the other. The prieſt now takes the chaplets, which he places on the heads of the new-married pair, ſaying, as he crowns the bridegroom, "I crown God's faithful ſervant *A B*, in uniting him with God's faithful hand-maid *C D*," and repeating a ſimular formula as he places the garland on the head of the bride: after which ceremony he wiſhes them a life of peace. The garlands being exchanged in the ſame manner as the rings, he directs the young couple to take from the ſame glaſs a morſel of bread and a few drops of wine: finally he walks forward with the bride and bridegroom, leads them three times round the altar, conducts them back to their former ſtation, beſtows on them a new benediction, and thus terminates the functions of his miniſtry.

The company retire from the church in the ſame order as they had repaired to it, firing muſket and piſtol-ſhots. While the new-married pair proceed along the ſtreets, the women, from the windows, ſprinkle the ground before their ſteps with wheat and millet, ſymbolic of fecundity. The proceſſion returns amid the ſounds of muſical inſtruments, to the bridegroom's dwelling, which the bride cannot enter with her attendant until ſhe have anſwered the ſame queſtions at the door as had been put to him when he preſented himſelf for admiſſion into her abode. Here alſo a little child is employed to introduce her into the houſe of her huſband. On her entrance, her mother-in-law, having diſrobed her of her veil, conducts her into an apartment, where ſhe ſeats her on a cuſhion placed upon a ſack of flour. By her ſide ſtands another ſack full of nuts, almonds, and other dry fruits, which ſhe diſtributes to the relatives who ſucceſſively approach and wiſh her every kind of proſperity.

The bridegroom's mother takes her ſtation at the window, whence ſhe throws fruits, and ſometimes money, to thoſe perſons who have followed the hymenæal train without invitation. The bride, having finiſhed her diſtribution, is conducted to the hall where the wedding-feaſt is prepared. The remainder of the evening is ſpent at table; the night is devoted to dancing; and—what will no doubt be conſidered as the moſt ſingular circumſtance in the whole buſineſs—the new-married pair are, by the traditionary uſage handed down from their anceſtors, debarred from all opportunity of *tête-à-tête* interview during this night.

Three days after the marriage, and it is always on a Wednesday, the bridegroom, accompanied by his bride, and preceded by a boy of the age of seven years, repairs to the house of his father-in-law, where he dines—having, however, taken care to bring with him every thing necessary for the meal. When they are preparing to return home, the mother presents her daughter with a distaff and spindle, emblems of the kind of occupation for which she is destined. The husband is presented with agricultural implements, which he accepts. Mutual embraces being exchanged, the new-married pair retire, and pass eight days without attending to any domestic business.

In the evening of the seventh day, the nearest relatives of the husband invite the kindred of both families to escort the young couple to church on the morrow, and to re-conduct them to the house of the husband's father-in-law. They all attend the summons: after having saluted the bride and bridegroom, they sing and dance until the moment of their departure for the church.

During that interval, the young man's father presents the father of the young woman with bread, cheese, wine, and other provisions, such as almonds, nuts, and figs, in sufficient quantity to supply a breakfast for the whole company.

After the celebration of divine service, the party go to the house of the bride's family, where the same kind of distribution is made as had taken place on the wedding-night. They dine, they dance, they sing. After dinner, the husband receives from his father-in-law his wife's portion, consisting of clothes and furniture, of which an inventory is drawn up, and signed by both parties. If perchance the woman die without issue, the marriage-portion is punctually restored to her family; on the other hand, if the husband happen so to die, his relict enjoys his property during her widowhood. No law-suit ever occurs on these occasions: any difficulty arising relative to such matters is immediately removed by the decision of arbitrators, whose judgment admits of no appeal.

The Mainots have a particular mode of dress for the marriage ceremony. The bridegroom wears on his head a small close-fitting red cap, from the top of which depends a silken tassel. His vest is scarlet, having all the seams covered with twist of the same colour; it has no collar, and is edged round with three rows of similar twist: its sleeves are open as far as the middle of the fore-arm. His jacket is of the same stuff: it is open in the fore part, and, from the neck to the bottom, is ornamented with five rows of gold or silk twist: a sixth serves, on the left side, to furnish loops, and on the right, to fasten twenty-four small round buttons, which lie close to each other. The vest and jacket are both fashioned to a point in front. The breeches are very wide, and descend six inches below the knee. He wears no stockings: his shoes are fastened with silken strings ascending half way up the leg, and are bordered before and behind with an edging to prevent the strings from hurting the foot.

The bride wears a veil of white gauze, two yards in length, which goes round the upper part of her head, passes under her chin, and falls behind, hanging down as low as her mid-leg. It is fastened on each side of the head with a pin. This veil is ornamented with fringes of the same stuff. Under it she wears a bonnet of scarlet cloth or of silk. From her ears hang two pendants of curious workmanship. Her under garment is of silk, without sleeves, and has three edgings, one red at the bottom, another of white lace, at a small distance above the former, and a third, blue or yellow, at equal distance from the second. Her breast is bound with an elegant girdle. Over the inner garment she wears an ample scarlet robe with very wide sleeves. Her shoes are flat, and she has no stockings.

Divorce is allowed at Maina, but that indulgence is rarely used. A separation seldom takes place, except in consequence of a notorious incompatibility of dispositions in the married pair, or of the husband's continuing seven years absent without sending any intelligence to his wife. No legal process is necessary: no expence is incurred: the parties simply present themselves before the bishop, who, after having ascertained the fact, pronounces their separation, and declares them at liberty to form new engagements. If there be any children from their union, they remain with the father.

At Maina there are no school-masters, in the proper acceptation of the term. It is by the priests that the children are taught to read and write: which two acquisitions constitute nearly all the knowledge possessed by the teachers themselves. They however form the heart at the same time that they instruct the mind. Their morality consists much less in precept than in good example.

The best policy of the Mainots is, that they are totally unacquainted with what we call policy. Justice is their guide, and jealous vigilance their safeguard. They are strangers to the art of printing, that art which enables designing impostors to deceive millions of men at once. They have scarcely any books, and exclusively devote their attention to agriculture, fishing, hunting, and practising with the weapons of war. Their martial exercises are considered as an object of prime importance. Hence it is common to see a boy running from school, and a priest from the altar, to oppose the enemy.

The Mainots have not among them either surgeons, or physians, or apothecaries. To the purity of the air they breathe, and more especially to their temperate mode of life, they are indebted for the preservation of their health. Their blood is not tainted with maladies imported from foreign lands. Fevers, indeed, of the putrid and intermittent classes, are not unknown in the country; but these prevail only on the frontier, toward Monenbasia, where low lands and marshes abound.

During the period of a continuous fever, the patient is surrounded by his relatives, who are attentive to afford him every aid which their knowledge or experience can suggest. They do not administer to him any internal medicines, through an apprehension of counteracting nature in her crisis, but suffer the disease to take its natural course. If the sick person have lost his appetite, they present him no food: but if he have retained an inclination to eat, they give him such aliment, of the lighter kinds, as he prefers; thus endeavouring to support his strength. Hence he frequently recovers.

It is from long experience that the Mainots have learned to distinguish the critical days in violent diseases. They then employ diet-drinks and gentle medicines internal and external, calculated to facilitate a perfect crisis. By the application of external medicaments they remove accidental pains, such as head-ach, nephritic colic, stitch in the side.

At Maina the physicians of the soul have also the additional advantage of acting as physicians for the body. A priest is stationed near the sick person, having one hand placed on his forehead, and holding in the other a book, from which he continually reads prayers with a loud voice until he have procured him some relief. He sometimes passes whole nights thus exorcising the fever.—The recovery of a patient is a triumph for religion, since the superstitious credulity of those good folks never fails to attribute the cure to the efficacy of the holy man's prayers.

Every Mainot acts as surgeon in his own family. They have learned by routine how to apply the first dressings, and to follow up the process by the use of medicaments suited to determine the suppuration. In cases of gun-shot wounds, they successively employ detersive and cicatrising applications, which are usually derived from plants. For wounds from

edged weapons, when there is no loſs of ſubſtance, they content themſelves with the aid of deſiccative plants, to prevent ſuppuration; by which method they ſpeedily cure them. With reſpect to luxations and fractures, there are particular men at Maina who are noted for their ſkill in treating them; and theſe are called in on ſuch occaſions.

The Mainots are not ſo raſhly haſty in drawing blood from ſick perſons, as people are in thoſe countries which are ſubject to the deſpotiſm of medicine. Before they have recourſe to that operation, the relatives, and particularly the old men, aſſemble, conſult the great book of experience, examine whether, under a ſimilar malady, phlebotomy has proved beneficial or injurious, and conformable to the reſult of their examination, adopt or reject the expedient. The Mainots are almoſt univerſally expert in opening a vein.

None of the nation has ever yet attempted to eſtabliſh a public pharmacy. Each individual poſſeſſes one at home, or carries it as it were in his head. They have a number of remedies generally adopted as ſpecifics for certain complaints. They purſue an equally ſingular and efficacious mode of treating ſores ariſing from a vitiated ſtate of the humours; they apply to them the leaves of a deterſive plant, adding, every four-and-twenty hours, a new leaf, without removing the former, or doing more than gently to preſs the ſore with the hand, for the purpoſe of ſqueezing out the purulent matter by the ſides. That matter becoming each day thicker, becauſe alſo, in our faculty phraſe, more "*laudable:*" and, when the ſore is cicatriſed, the leaves are dried by the heat of the fleſh, and detach themſelves from the part on being gently rubbed.

When a Mainot has expired his laſt breath, his deceaſe is announced by the lamentations of all around him. He is enwrapped in a ſheet, and placed in the middle of the houſe, under a white coverlit, with his face expoſed. The near relatives of the female ſex, their cheeks bedewed with the drops of ſorrow, and their hair diſheveled, ſtand round the corſe, ſinging mournful airs ſo tenderly affecting as to call forth ſympathetic tears from all who are preſent. The male relatives or friends who come to the mournful ſcene, ſo ſoon as they have reached the threſhold of the door, pronounce three times, in conformity to a very ancient cuſtom, the words, "Brother! ah! ſweet brother!" To theſe lamentations they generally add queſtions analogous to the connections which had exiſted between them and the defunct.—The widow, after having given a looſe rein to her grief, rehearſes all the good qualities of her deceaſed huſband. She pours forth in extemporaneous poetry the moſt pathetic ſpeeches, ſuited to the melancholy occaſion.

When the prieſts are come, attended by almoſt the entire population of the village, the wailings and tears are redoubled at the moment when the dead body is placed in the coffin; but, when the funeral proceſſion has commenced its march, they ceaſe. The prieſts advance ſinging in front; the men follow the coffin; and the woman cloſe the rear.

After their arrival at the church, when the clergyman in the courſe of the funeral-ſervice pronounces the words "Friends and brethren! weep my ſeparation!" the neareſt relatives of the deceaſed walk ſucceſſively in pairs, one on each ſide of the coffin, with their faces turned toward the altar, and, bowing in adoration, reſpectfully kiſs the image of Chriſt on his breaſt, and then his forehead. The interment being concluded, the company all return to the houſe of the defunct, teſtify their regret, and retire.

As ancient cuſtom hath forbidden the lighting of any fire in the houſe of a deceaſed perſon, on the day of his death, each of the relatives and friends carries from home a ready-cooked diſh to go and dine with the family of the defunct. The men firſt take their repaſt, ſeated on the floor or carpets, before a cloth which covers the whole length of the hall. At the head ſit the prieſts, next to them the old men, and after theſe the others in the order of ſeniority. This cuſtom of aſſigning the places according to age is ſo regularly obſerved at Maina, that no confuſion ever takes place in that reſpect. On beginning the meal, at the firſt morſel which they are preparing to eat, each of the company ſucceſſively exclaims, "God have mercy on his ſoul, and grant him a place among the juſt!" After the men have dined, the women come and take their places in the ſame order. The viſitors invite the near relatives of the deceaſed to take ſome food, and in the moſt affectionate language endeavour to conſole them. The whole company remain with them till dark: as ſoon as night has commenced, each of them embraces the family, and retires.

All the Mainot women wear trimmings at the bottom of their petticoats or gowns. Widows are known by the want of theſe, which they cannot replace until married again.

If a widow is burthened with children, her relatives and friends chooſe a holiday to cultivate her lands, but not without having previouſly obtained the biſhop's permiſſion for that purpoſe. A ſingle day is ſufficient for ſowing her field, or gathering in her harveſt.

MAINBURG, a town of Bavaria, ſituate on the Ambs, 18 miles E.S.E. of Ingolſtadt, and 32 N.N.E. of Munich. Long. 11. 21. E. Lat. 48. 40. N.

MAINEVILLE, a town of France, in the department of Eure, 24 miles E.S.E. of Rouen. Long. 1. 26. E. Lat. 49. 20. N.

MAINLAND, the principal of the Shetland Iſles, 60 miles long, but its breadth ſeldom exceeds ſix. The face of the country exhibits a proſpect of black craggy mountains, and marſhy plains, interſperſed with ſome verdant ſpots, which appear ſmooth and fertile. Neither tree nor ſhrub is to be ſeen, except the juniper and the heath. The mountains abound with various kinds of game. Lofty cliffs, impending over the ocean, are the haunts of eagles, falcons, and ravens. The deep caverns underneath ſhelter ſeals and otters; and to the winding bays reſort ſwans, geeſe, ſcarfs, and other aquatic birds. The ſeas abound with cod, turbot, and haddock; and, at certain ſeaſons, with ſhoals of herrings of incredible extent. They are viſited, at the ſame time, by whales, and other voracious fiſhes. Lobſters, oyſters, muſcles, &c. are alſo plentiful. The hills are covered with ſheep of a ſmall breed; the horſes are alſo of a diminutive ſize, but remarkably ſtrong and handſome, and are well known by the name of Shelties, from the name of the country. The rivulets and lakes abound with ſalmon, trout, &c. A mine of copper, and one of iron, near the ſouth extremity of the iſland, are ſaid to be extremely productive. There is an inexhauſtible ſtore of peat, but no coal. Lerwick is the capital.

MAINLAND, or POMONA, the principal of the Orkney Iſlands, 24 miles long and nine broad. The general appearance of the country is not very different from the Mainland of Shetland. The ſoil, however, is more fertile, and in ſome parts better cultivated. Kirkwall is the capital. See ORCADES.

MAINTENON, a town of France, in the department of Eure and Loire, with a caſtle, a late collegiate church, and a late priory. It is ſeated between two mountains, on the river Eure, five miles N. by E. of Chartres. Long. 1. 36. E. Lat. 48. 31. N.

MAINUNGEN, a town of Franconia, capital of a ſmall diſtrict belonging to the houſe of Saxe-Gotha. It is eight miles N. of Henneberg. Long. 10. 39. E. Lat. 50. 46. N.

MAISY, a town of France, in the department of Calvados, five miles N. of Iſigni, and 27 W.N.W. of Caen. Long. 1. 2. W. Lat. 49. 24. N.

MAIXANT, St. an ancient town of France, in the department of Two Sevres. It had lately a Benedictine abbey, and is one of the new biſhoprics created ſince the revolution of 1789. It carries on a trade in corn, ſtockings, and woollen ſtuffs; and is ſeated on the Sevre, 26 miles S.W. of Poitiers. Long. 0. 7. W. Lat. 46. 24. N.

MAIZE, or Indian Corn (ſee Zea); when properly cooked, a moſt excellent article of human ſuſtenance, happily introduced into Britain during the late ſcarcity. To be thoroughly acquainted with this valuable grain, and the means of making its uſe general among the poor, it is neceſſary to conſult Count Rumford's Eſſays, vol. I. See alſo the article Corn, *Supp.*

MAKAREV, a town of Ruſſia, in the government of Niznei Novogorod, ſituate on the Volga, 24 miles E.N.E. of Niznei Novogorod. Long. 44. 46. E. Lat. 56. 25. N.

MAKARIEF, or Makareu, a town of Ruſſia, in the government of Koſtrom. It is the capital of the province of Unſha, and ſituate on the river Unſha, 80 miles eaſt of Koſtrom. Long. 44. 14. E. Lat. 58. 50. N.

MAKOONDA, a town of Hindooſtan Proper, in the country of Allahabad, 66 miles S. of Allahabad, and 110 N.N.E. Gurrah. Long. 84. 37. E. Lat. 24. 33. N.

MALAMOCCO, a ſmall iſland and town in the Laguncs of Venice, five miles ſouth of Venice.

MALATHIA, an ancient town of Turkey in Aſia, capital of Leſſer Armenia, ſeated on the Arzu, with an archbiſhop's ſee. Long. 43. 25. E. Lat. 39. 8. N.

MALCHIN, a town of Lower Saxony, in the duchy of Mecklenburg, ſeated on the river Peene, where it falls into the lake Camrow, 10 miles N. of Wahren. Long. 13. 12. E. Lat. 53. 0. N.

MALDEN, a village in Surrey, two miles S.E. of Kingſton. Here are ſome gunpowder mills, on the ſtream that flows from Ewel to Kingſton.

MALESHERBES, a town of France, in the department of Loiret, 11 miles N.E. of Pluviers. Long. 2. 6. E. Lat. 48. 20. N.

MALESTROIT, a town of France, in the department of Morbihan, ſeated on the Ouſt, 37 miles E. of Port l'Orient. Long. 2. 23. W. Lat. 47. 45. N.

MALIO, Cape, or St. Angelo, a cape of the Morea, at the ſouth entrance of the gulf of Napoli, 15 miles E. of Malvaſia.

MALKAR, a town of the Deccan of Hindooſtan, in the country of Golconda, 22 miles S.E. of Calberga, and 54 W. of Hydrabad. Long. 77. 36. E. Lat. 17. 12. N.

MALLEVILLE, a town of France, in the department of Lower Loire, 15 miles N.W. of Nantes.

MALLING, West, a town in Kent, with a market on Saturday, ſix miles W. of Maidſtone, and 30 E. by S. of London. Long. 0. 33. E. Lat. 51. 20. N.

MALMEDY, a town of the Netherlands, in the biſhopric of Leige, with an abbey. It was taken by the French in 1794. It is ſeated on the Recht, nine miles S. of Limburg. Long. 6. 2. E. Lat. 50. 18. N.

MALMISTRA, an ancient town of Natolia, with an archbiſhop's ſee; ſeated at the mouth of a river of the ſame name, which divides it into the Old and New town. It is 30 miles S.E. of Teraſſo. Long. 36. 15. E. Lat. 36. 50. N.

MALMOE, a ſea-port of Sweden, in the province of Schonen, with a large harbour and a ſtrong citadel. It is ſeated on the Sound, 15 miles S.E. of Copenhagen. Long. 13. 7. E. Lat. 53. 38. N.

MALMSAS, a town of Sweden, in the province of Sudermania, 23 miles W.N.W. of Nikoping.

MALORIA, a ſmall iſland of Italy, on the coaſt of Tuſcany, 10 miles W. of Leghorn. Long. 10. 4. E. Lat. 43. 34. N.

MALPARTIDO, a town of Spain, in Eſtramadura, 14 miles S. of Placentia. Long. 5. 30. W. Lat. 39. 36. N.

MALSESENA, a town of Italy, in the Veroneſe, 18 miles N.N.W. of Verona.

MALT-KILN. Under the article Kiln we have given an account of the improved conſtruction of malt-kilns. We here preſent the reader with the deſcription of a Malt and Corn Kiln invented by Mr. Joſeph Coppinger, of Harbour View, near Cove, Ireland, which was communicated by him to the editors of the Repertory of Arts, &c.

"The encloſed plan of a malt and corn kiln," ſays Mr. Coppinger, "for which I have been favoured with the thanks of the Bath Society, at a general meeting, held in September laſt, is particularly adapted to the uſe of farmers, who, in wet ſeaſons, often loſe quantities of grain for want of ſuch convenience. The advantages it appears to me to poſſeſs above the kiln now in common uſe are many; *firſt*, it may be erected for one tenth of the expence, if you take in the value of the ſeparate buildings which are now almoſt invariably allotted for this purpoſe. *Secondly*, any kind of fuel may be uſed without prejudice to the malt or corn to be dried in it. *Thirdly*, the heat (by the conſtruction of the flues) will be more regularly and evenly diſtributed without any waſte, as at preſent. *Fourthly*, the health of the people attending will not, as at preſent, be expoſed to certain injury, by always breathing and ſleeping in heated and unwholeſome atmoſpheres, as their beds will be placed in a ſhed on the outſide of the building. This, in my mind, is the moſt important part of the plan, and highly worthy the attention of every humane and conſiderate employer in this way. *Fifthly*, this conſtruction of a kiln may be erected on a loft or ground floor. If in the latter ſituation, ſufficient elevation ſhould be given the fire-place, ſo as not to impede the draught. Theſe are the principal advantages that occur to me. If the experience of others confirm them, I ſhall be highly gratified.

In Plate 34: A, ſhews the main walls. B, the flues. C, the chimneys; in each of which may be placed a metal damper, to regulate the heat. It is recommended, in the caſe of a new building, to carry up the flues of the chimneys in the thickneſs of the walls. In a houſe already built, they may be carried up either inſide or outſide the building. D, the fire-place, which may be divided, or in one, juſt as deſired; by which the half or the whole may be heated.

"Kiln tiles, eighteen inches ſquare, and two inches thick in the ſolid, with a lapping of half an inch broad and one inch deep quite round the edge of each tile, are propoſed for covering the flues, which, if fairly caſt, may be laid dry, without mortar. If it ſhould be difficult, or too expenſive, to procure tiles of eighteen inches, nine inches can be made to anſwer. The flues are propoſed to be divided by a brick, on edge, ſo as that every eighteen-inch tile will cover two flues. The breadth of the flues may be ſix inches and a half, and ten inches high. This proportion, it is hoped, will be found to anſwer in moſt caſes; but it may be varied according to the better judgment of the party erecting. The ſides and bottoms of the flues ſhould be plaſtered. The platform of this kiln ſhould, in all caſes, be well rammed with earth, and made perfectly level before laying out the flues."

Iron grate doors are intended to be hung on hinges, in a

receſs, at the mouth of each flue, to prevent them being choked with large pieces of cinder, or other ſubſtances. It is propoſed that theſe doors ſhould ſhut and open at pleaſure, as may be found neceſſary.

MALTA, Melita, or Citta Vecchia, an ancient and ſtrongly fortified city of the iſland of Malta. It is the reſidence of the biſhop, and the cathedral is a very fine ſtructure. Near this city are the catacombs, which are ſaid to extend 15 miles under ground; and a ſmall church, dedicated to St. Paul, adjoining to which is a ſtatue of the ſaint, with a viper in his hand, ſaid to be placed on the ſpot where he ſhook the viper off, without having been hurt; and cloſe to it is the grotto in which he was impriſoned. Malta is ſeated on a hill in the centre of the iſland, and was formerly twice as large as at preſent; for the new city, Valetta, being more conveniently ſituate, has drawn away the greater number of its inhabitants.

MALTOY, a town of the Deccan of Hindooſtan, in the country of Berar, 58 miles N.W. of Nagpour.

MALVASIA, a ſmall iſland of Turkey in Europe, on the eaſt coaſt of the Morea, remarkable for its rich wine, called Malmſey. The capital is Napoli-di-Malvaſia.

MALUNG, a town of Sweden, in the province of Dalecarlia, 55 miles W. of Fahlun. Long. 15. 20. E. Lat. 60. 30. N.

MALWA, a province of Hindooſtan Proper, bounded on the W. by Guzerat, on the N. by Agimere, on the E. by Allahabad and Oriſſa, and on the S. by Candiſh. It is one of the moſt extenſive, elevated, and diverſified tracts in Hindooſtan; and is divided among the chiefs of the Poonah Mahrattas. Ougein and Indore are the principal towns.

MALZIEU, a town of France, in the department of Lozere, 20 miles N.N.W. of Mende.

MAMARS, an ancient town of France, in the department of Sarte, ſeated on the Dive, 14 miles W. of Belleſme. Long. 0. 16. E. Lat. 48. 22. N.

MANACHIA, or Magnisa, the ancient Magneſia, a town of Natolia Proper, with a biſhop's ſee, and a caſtle. It was formerly the capital of the Ottoman empire, and is ſeated at the foot of a mountain, on the river Sarabat, 22 miles N. of Smyrna. Long. 27. 25. E. Lat. 38. 45. N.

MANAR, an iſland of the Eaſt Indies, on the eaſt coaſt of the iſland of Ceylon. The Portugueſe got poſſeſſion of it in 1560; the Dutch took it from them in 1658; and the Engliſh took it from the Dutch in 1795. Long. 80. 45. E. Lat. 9. 0. N.

MANATOULIN, a chain of iſlands on the N. ſide of Lake Huron, in N. America, extending about 100 miles in length and eight in breadth. The name ſignifies a Place of Spirits; and they are held ſacred by the Indians.

MANBED, a town of Perſia, in the province of Irak, 150 miles E.S.E. of Iſpahan.

MANBONE, the capital of the kingdom of Sabia, ſituate on the ſea-coaſt, at the entrance of the channel of Moſambique. Long. 32. 19. E. Lat. 20. 55. N.

MANCESTER, a village in Warwickſhire, near Atherſtone and the river Anker. It was a Roman ſtation on the Watling-ſtreet, and here ſeveral coins have been dug up.

MANCHE, or Channel, a department of France, including part of the late province of Normandy. It is almoſt ſurrounded by the Engliſh Channel, and Coutances is the capital.

MANCHESTER, a town of Virginia, on James River, oppoſite to Richmond, with which it is connected by a bridge.

MANCIET, a town of France, in the department of Gers, 17 miles S.W. of Condom. Long. 0. 5. W. Lat. 43. 38. N.

MANDAL, a ſea-port of Norway, in the province of Chriſtianſand, at the mouth of a river of the ſame name, 19 miles W.S.W. of Chriſtianſand. Long. 7. 42. E. Lat. 58. 2. N.

MANDRIA, a ſmall deſert iſland, in the Archipelago, between Samos and Langos. It gives name to the ſea near it.

MANGALORE, a ſea-port of Canara, on the coaſt of Malabar, with an excellent road for ſhips. It is inhabited by Gentoos and Mahometans. The former, on their feſtival days, carry their idols in triumph, placed in a waggon, adorned on all ſides with flowers; and on the wheels are ſeveral ſharp crooked iron hooks, upon which the mad devotees throw themſelves, and are cruſhed to pieces. It is a place of great trade, and the Portugueſe have a factory here for rice, and a large church frequented by black converts. The adjoining fields bear two crops of corn in a year; and the higher grounds produce pepper, betel-nuts, ſandal-wood, iron, and ſteel. It is ſeated on a riſing ground, 100 miles N. by W. of Tellicherry. Long. 75. 24. E. Lat. 13. 8. N.

MANGANESE *(Encycl.)*. The following remarks on the decompoſition of the ſulphate of iron and copper by means of the natural calx of manganeſe, by Mr. Fiſcher, of Berlin, appears in Scherer's Chemical Journal.

"Accident," ſays the author, "led me to theſe experiments. I had, for a different purpoſe, let a ſolution of ſulphate of iron, to which I had added two parts of calx of manganeſe and half a part of muriate of natron, to one part of the cryſtalliſed ſalt of iron, ſtand for ſeveral days in a moderate temperature. After the mixture had ſtood for this ſpace of time, I found it conſiderably tinged with a reddiſh yellow colour, and a conſiderable quantity of calx of iron had ſeparated itſelf in a completely oxydated ſtate. My firſt idea was, that it had acquired oxygen from the calx of manganeſe, in conſequence of which it had been ſeparated in an inſoluble form. However, upon adding a quantity of carbonate of lime to the liquid, a precipitate was formed, which might almoſt have been miſtaken for a pure calx of iron; but, upon a more accurate examination, it was found to conſiſt, for the greater part, of imperfect calx of manganeſe, and a ſmall quantity of a perfect calx of iron. This unexpected phænomenon induced me to make the following experiments.

"One part of the vitriol of iron of commerce, containing copper, which had alſo been employed in the firſt caſe, with two parts of natural calx of manganeſe, and half a part of muriate of natron, were expoſed in a glaſs retort to a red heat. An extremely ſmall quantity of muriatic acid gas was extricated. After the extrication of gas had ceaſed, the retort was cooled and broken, and the maſs that had been melted together was boiled out with hot diſtilled water. The reſiduum was found to be calx of copper, iron, and magneſia; but the filtrated fluid, on the contrary, which was perfectly colourleſs, contained no calx of iron, as appeared by proving it with the ſolution of pruſſiate of kali, for a precipitate of a light red colour was formed, which was completely diſſolved by the addition of more water. It therefore contained pure calx of manganeſe, partly combined with ſulphuric acid, but for the greater part with muriatic acid, beſides which the ſolution contained ſulphate of natron.

"Theſe carbonates of kali and natron precipitated from this ſolution a perfectly white carbonated calx of manganeſe, which, however, in the courſe of time aſſumed a browniſh yellow colour. Carbonate of ammonia added to the fluid produced alſo the ſame effects.

" I became doubtful whether the calx of manganeſe, thus obtained, was entirely free from iron, as it appeared to become coloured by the contact of the air, which might eaſily proceed from the preſence of iron; however, I found, when the alkali was not added in exceſſive quantity, but in ſuch proportion as not to be able to precipitate the whole of the calx of manganeſe, that the precipitate, after having been edulcorated and dried, retained its white colour without alteration.

" I am much inclined to account for the firſt appearance, by ſuppoſing a complete oxydation of the calx of manganeſe, which perhaps obtained oxygen from the ſuperabundant addition of alkali; for that the alkalies really contain oxygen, ſeems to me to be proved by various facts, amongſt which I alſo reckon the great change which ſiliceous earths undergo in being heated with the alkalies.

" I further mixed one part of pure ſulphate of iron with four parts of calx of manganeſe, and expoſed this mixture, for the ſpace of half an hour, to a ſtrong red heat. A portion of the ſulphuric acid was, by this means, volatilized, but that which remained was found, after boiling out the torrefied pulverulent maſs, to be combined with calx of manganeſe, completely free from iron, in which the pruſſiate of kali produced a clean, light red, and eaſy ſoluble precipitate. The undiſſolved reſolved reſiduum was perfect calx of iron and manganeſe.

" Sulphate of copper, in the ſame proportion with calx of manganeſe, and treated in the ſame manner, afforded the ſame reſults. The reſiduum contained calx of copper, undecompoſed calx of manganeſe, and, in the latter, always an admixture of calx of iron.

" Poſſibly theſe experiments may procure us the advantage of being able to exhibit the calx of manganeſe free from iron, in an extremely cheap manner, and to employ it as a cheap and agreeable glaſs-flux for earthen-ware and china.

" By the method firſt mentioned, the ſulphate of iron is never completely decompoſed by the calx of manganeſe; for, by conſtant boiling for four hours, and afterwards digeſting for twelve days, I could effect no complete ſeparation of the iron, though, after this treatment, it is contained in the ſolution as completely oxydated iron. I have found, by repeated experiments upon this ſubject, that the decompoſition may be completely effected in the dry way, by the application of a red heat for the ſpace of fifteen minutes."

MANGEEA, an iſland in the South Pacific Ocean, five leagues in circumference. In the interior parts it riſes into ſmall hills, and Captain Cook repreſents it as a fine iſland; but the hoſtile appearance of its inhabitants obliged him to leave it ſoon. Long. 158. 16. W. Lat. 21. 27. S.

MANGLE, a valuable domeſtic machine, employed for the purpoſe of ſmoothing ſuch linen as cannot be conveniently *ironed*.

Various patents have been granted for improvements in this machinery: but, as they are not expired, and too complicated to be underſtood without very tedious details, we have annexed the figure in Pl. 35, repreſenting an improved mangle contrived by Mr. Jee, of Rotherham; to whom the Society for the Encouragement of Arts, &c. in 1798, voted their ſilver medal, for the ingenuity diſplayed on that occaſion.

The following is a deſcription of Mr. Jee's improved mangle:

A, points out the great wheel, which, in machines of a full ſize, is 15 inches in diameter. B, the arbor, on which the nut, C, is fixed. D, the handle of the winch. E, the crank, 21 inches in length. F, the rod of the crank. G G, repreſents the hollow ſtuds, by which the ends of the bed are lifted up. H H, the levers. I I I I, the four pullieys fixed on the moveable bed K. L L, the ends of the rollers.

Fig. 2, repreſents a front view of one of the hollow ſtuds G, to ſhow its form, when ſtanding at the end of the bed; and into which the levers enter alternately, as often as it becomes neceſſary to elevate the bed, in order to put in, or take out, the rollers.

Mr. Jee's mangle is ſo conſtructed, that the handle requires to be turned one way only, in conſequence of which the machine moves with greater facility, and with incomparably leſs injury to the linen, than by varying the turnings, and in a manner cutting the different folds. Beſides, it poſſeſſes the great advantage, that a woman and one boy are ſufficient to work it, and can perform as much labour in the ſame period of time, as three or four perſons with mangles of the common conſtruction.

MANGUSHLAK, a town of Turcomania, on the eaſt coaſt of the Caſpian Sea. Its commerce is conſiderable; the neighbouring Tartars bringing hither the productions of their own country, and even of Bokharia, ſuch as cotton, yarn, ſtuffs, furs, ſkins, and rhubarb. It is 37 miles S.W. of Aſtracan. Long. 48. 29. E. Lat. 44. 45. N.

MANHARTZBERG, the northern part of Lower Auſtria, ſeparated from the ſouthern by the river Danube, and bounded on the weſt by Upper Auſtria, on the north by Bohemia and Moravia, and on the eaſt by Hungary.

MANICA, or CHICANGA, an inland kingdom of Africa, bounded on the north by Monomatapa, on the eaſt by Sofala and Sabia, and on the ſouth and weſt by unknown regions. It is ſaid to abound with mines of gold, and to have a great number of elephants; but it is little known to the Europeans.

MANICKDURG, a town of the Decean of Hindooſtan, in the country of Berar, five miles S.E. of Chanda.

MANICKPOUR, a town of Hindooſtan Proper, in the country of Oude, 30 miles N.W. of Allahabad, and 68 S.S.E. of Lucknow. Long. 81. 45. E. Lat. 37. 26. N.

MANIEL, a mountain of St. Domingo, 20 miles in circumference, and ſo high and craggy, that it is almoſt inacceſſible.

MANNINGTREE, a town in Eſſex, with a market on Tueſday; ſeated on the river Stour, which is here called Manningtree-water, 11 miles W. of Harwich, and 60 E.N.E. of London. Long. 1. 12. E. Lat. 52. 0. N.

MANOSQUE, a populous town of France, in the department of the Lower Alps, with a caſtle. It is ſeated on the Durance, 10 miles S. of Forcalquier, and 350 S. by E. of Paris. Long. 5. 55. E. Lat. 43. 51. N.

MANPURRY, a town of Hindooſtan Proper, in the country of Dooab, 54 miles E. of Agra. Long. 77. 40. E. Lat. 27. 5. N.

MANRESA, an ancient town of Spain, in Catalonia, ſeated at the confluence of the Cardonero and Lobbregat, 15 miles S.E. of Cardona, and 20 N.W. of Barcelona. Long. 1. 56. E. Lat. 41. 36. N.

MANSAROAR, a lake of Thibet, from which the ſouthermoſt head of the Ganges is ſuppoſed to iſſue. It is 115 miles in circumference, and lies about 79° E. long. and 34° N. lat.

MANSILLA, a town of Spain, in Leon, 15 miles S.W. of the city of Leon. Long. 4. 55. W. Lat. 42. 30. N.

MANSOURA, a town of Egypt, which has a conſiderable trade in rice and ſal-ammoniac. Here are likewiſe vaſt chicken ovens. It is ſeated on the eaſt ſide of the Nile, 24 miles S.S.W. of Damietta, and 60 N. of Cairo. Long. 31. 36. E. Lat. 31. 10. N.

MANSURA, a town of Turkey in Aſia, in Irac Arabia, ſituate on the Euphrates, where it is joined by a branch of the Tigris, 110 miles W.N.W. of Baſſora.

MANTCHEW TARTARS, a branch of the Mogul Tartars, whoſe anceſtors conquered China in the 13th century, but were expelled by the Chineſe in 1368. They inhabit the three departments of eaſt Chineſe Tartary, called Leoa tong, Kirin, and Teitcicar. They retain the cuſtoms they brought from China.

MAOUNA, one of the Navigators Iſlands, in the South Pacific Ocean. Here, in 1787, M. de la Pérouſe, commander of the French ſhips the Bouſſole and Aſtrolabe, met with his firſt fatal accident; M. de Langle, captain of the Aſtrolabe, with 11 officers and ſailors, being maſſacred by the natives. Long. 169. 0. W. Lat. 14. 19. S.

MARAGAL, a town of Perſia, in the province of Aderbeitzan, 42 miles ſouth of Tauris. Long. 47. 52. E. Lat. 37. 36. N.

MARANS, a town of France, in the department of Lower Charente. The inhabitants carry on a conſiderable trade in ſalt, malt, corn, and meal. It is ſituate in the midſt of ſalt marſhes, 12 miles N.N.E. of Rochelle, and 21 weſt of Niort. Long. 1. 5. W. Lat. 46. 18. N.

MARANT, or AMARANT, a town of Perſia, in the province of Adirbeitzan, containing 2500 houſes, each with a garden, ſituate near a river, and watered by canals. Cochineal is found in the neighbourhood. The inhabitants ſay that Noah was buried here. It is 50 miles north of Tauris. Long. 47. 46. E. Lat 39 7. N.

MARASCH, a populous town of Natolia, encompaſſed by the mountains of Taurus and Anti-taurus, and the river Euphrates. Long. 38. 25. E. Lat. 38. 15. N.

MARAWINA, a river of Guiana, which ſeparates Surinam from the French colony of Cayenne. It is noted for a curious pebble, known by the name of the Marawina diamond; which, when poliſhed, is often ſet in rings, &c. It falls into the Atlantic in long. 53. 48. W. Lat. 5. 58. N.

MARBACH, a town of Suabia, in the duchy of Wirtemburg, ſeated on the Neckar. It was burnt by the French in 1693. It is 12 miles ſouth of Hailbron, and 13 north of Stutgard. Long. 9. 25. E. Lat. 48. 59. N.

MARCA, a ſmall iſland in the gulf of Venice, five miles from Raguſa, on which it depends. It had formerly a biſhop's ſee; but the town is now in ruins.

MARCELLIN, ST. a town of France, in the department of Iſere, ſeated on the Iſere, at the foot of a hill, in a country that produces excellent wine. It is five miles from St. Antoine, and 253 ſouth by eaſt of Paris. Long. 5. 32. E. Lat. 45. 14. N.

MARCELLINO, a ſmall river of Sicily, in Val-di-Noto, which falls into the ſea, two miles from Auguſta.

MARCHIENNES, a town of the Auſtrian Netherlands, in the county of Namur, ſeated on both ſides of the Sambre, four miles weſt of Charleroy, and 22 ſouth-weſt of Namur. Long. 4. 22. E. Lat. 50. 20. N.

MARCHIENNES, a village of France, in the department of the North, with a late abbey; ſeated in a moraſs, on the river Scarpe, between Douay and St. Amand.

MARCHPURG, a town of Germany, in the duchy of Stiria, with a ſtrong caſtle, ſeated on the Drave, 18 miles weſt of Pettaw, and 25 S.S.W. of Gratz. Long. 15. 19. E. Lat. 46. 44. N.

MARCIGLIANO, a town of Naples, in Terra di Lavoro, ſeven miles eaſt of Naples, between Nola and Acerra. Long. 14. 30. E. Lat. 40. 51. N.

MARCK, a territory of Germany, in the circle of Weſtphalia, bounded on the north by the biſhopric of Munſter, on the eaſt by the duchy of Weſtphalia, and on the ſouth and weſt by that of Berg. It is pretty fertile, and belongs to the King of Pruſſia. Ham is the capital.

MARCKECK, a town of the archduchy of Auſtria, ſituate on the Marſch, 14 miles north-weſt of Preſburg, and 24 E.N.E. of Vienna. Long. 16. 58. E. Lat. 48. 17. N.

MARCKOLSHEIM, a town of France, in the department of Lower Rhine, 26 miles ſouth of Straſburg. Long. 7. 27. E. Lat. 48. 10. N.

MARCO, ST. a town of Naples, in Calabria Citeriore, with a biſhop's ſee, ſeated on the Senito, 22 miles north of Coſenza. Long. 16. 20. E. Lat. 39. 41. N.

MARCOU ST. two iſlands in the Engliſh channel, near the coaſt of France, about ſeven miles ſouth-eaſt of La Hogue. Long. 1. 17. W. Lat. 49. 31. N.

MARDIKE, a village of France, in the department of the North, ſeated on a canal, to which it gives name, four miles weſt by ſouth of Dunkirk.

MAREB, a town of Arabia, capital of a diſtrict, in the province of Yemen. It is 88 miles eaſt of Sanaa. Long. 27. 30. E. Lat. 15. 44. N.

MAREE, LOCH, a freſh-water lake in Roſsſhire, 18 miles long, and in ſome parts, four broad. It contains many ſmall iſlands, and abounds with ſalmon, char, and trout.

MARENNES, a town of France, in the department of Lower Charente, remarkable for the green-finned oyſters found near the coaſt, and its ſalt. It is ſeated near the Atlantic, 32 miles north-weſt of Saintes, and 270 ſouth-weſt of Paris. Long. 0. 49. W. Lat. 45. 15. N.

MARETIMO, an iſland of Italy, on the weſt coaſt of Sicily. It is 10 miles in circumference, has a caſtle, with a few farm-houſes, and produces much honey. Long. 12. 35. E. Lat. 38. 5. N.

MARGARETTA, an iſland near Terra Firma, 40 miles long and 15 broad, diſcovered by Columbus in 1498. The continual verdure renders it pleaſant; but it is not conſiderable ſince the Spaniards retired thence to Terra Firma. The preſent inhabitants are mulattoes, and the original natives. It was taken in 1626 by the Dutch, who demoliſhed the caſtle. Long. 63. 12. E. Lat. 10. 46. N.

MARGOZZA, a town of Italy, in the Milaneſe, ſituate near a ſmall lake, to which it gives name, 40 miles N.W. of Milan.

MARICELLO, a town of Naples, in the province of Bari, ſix miles N.W. of Gravina.

MARIE-AUX-MINES, a town of France, in the department of the Voſges, divided into two parts by the river Leber. It is famous for its ſilver mines, and 25 miles N.W. of New Briſach. Long. 7. 24. E. Lat. 48. 16. N.

MARIENBURG, a town of Upper Saxony, in Miſnia, remarkable for its rich ſilver mines. It is ſeated among the mountains, on the confines of Bohemia, 28 miles S.S.W. of Dreſden. Long. 13. 35. E. Lat. 50. 49. N.

MARIENBURG, an ancient and ſtrong town of Weſtern Pruſſia, capital of a palatinate of the ſame name, with a caſtle. It is ſeated on a branch of the Viſtula, 30 miles S.W. of Elbing, and 30 S.E. of Dantzic. Long. 19. 15. E. Lat. 54. 9. N.

MARIENSTADT, a town of Sweden, in Weſt Gothland, ſeated on the lake Wenner, 35 miles S.E. of Carlſtadt, and 162 S.W. of Stockholm. Long. 14. 25. E. Lat. 58. 28. N.

MARIENWERDER, a town of Weſtern Pruſſia, with a caſtle. The cathedral is the largeſt church in the kingdom of Pruſſia, being 320 feet long; and by its ſtrong breaſt-works ſeems to have formerly ſerved as a fortreſs. The palace here is ſpacious, and built in the old Gothic taſte. Marienwerder is ſeated on the Viſtula, 20 miles S.S.W. of Marienburg. Long. 19. 5. E. Lat. 53. 49. N.

MARIGNANO, a town of Italy, in the duchy of Milan, remarkable for the defeat of the Swiſs, by the French, in 1515. It is ſeated on the Lambro, 10 miles S.E. of Milan.

MARINO, St. a town of Italy, in Campagna di Roma, with a caſtle, 10 miles E. of Rome. Long. 12. 46. E. Lat. 41. 54. N.

MARK, St. a ſea-port on the W. ſide of St. Domingo. The houſes are built of free-ſtone, which is abundant in the neighbouring country. It was taken by the Engliſh and royaliſts in 1794, and is 45 miles N N.W. of Port-au-Prince. Long. 72. 40. W. Lat. 19. 20. N.

MARKDORF, or Marchdorf, a town of Suabia, in the biſhoprie of Conſtance, nine miles N.E. of Conſtance, and 11 S.W. of Ravenſburg. Long. 9. 14. E. Lat. 47. 43. N.

MARKET-RASEN, a town of England, in the county of Lincoln, with a weekly market on Tueſday: ſixteen miles and a half N.N.E. Lincoln, and 151 N. of London.

MARMORA, a ſea between Europe and Aſia, which communicates with the Archipelago, by the ſtrait of Gallipoli on the S.W. and with the Black Sea, by the ſtrait of Conſtantinople, on the N.E. It is 120 miles in length, and 50 in breadth, and was anciently called the Propontis.

Marmora, a celebrated caſcade of Italy, in the duchy of Spoletto, three miles from Terni.

Marmora, a town of Naples, in Calabria Ulteriore, 16 miles W. of St. Severino.

MARNE, a department of France, including part of the late province of Champagne. It takes its name from a river which riſes near Langres, and flowing N.W. joins the Seine, a little above Paris. Rheims is the archiepiſcopal ſee, but Chalons is the capital.

Marne, Upper, a department of France, including part of the late province of Champagne. Chaumont is the capital.

Marne, a town of Perſia, in the province of Choraſan, 200 miles N. of Herat.

MARNHULL, a village in Dorſetſhire, on the Stour, five miles S.W. of Shaftſbury. The church is an ancient lofty building; the tower of which fell in 1710, in time of divine ſervice, but was handſomely rebuilt.

MARO, a town of Italy, on the coaſt of Genoa, in a valley of the ſame name, eight miles N.W. of Oneglia, and 48 W.S.W. of Genoa. Long. 7. 41. E. Lat. 44. 55. N.

MAROGNA, a town of Romania, with a Greek archbiſhop's ſee, ſeated near the Mediterranean, 70 miles S.W. of Adrianople. Long. 25. 41. E. Lat. 40. 59. N.

MAROTIER, a town of France, in the department of Lower Rhine, with a late Benedictine abbey, 18 miles N.W. of Straſburg. Long. 7. 33. E. Lat. 48. 38. N.

MARPACH, a town of Suabia, in the duchy of Wirtemberg, ſituate on the Neckar, eight miles N.N.E. of Stutgard, and 30 E.N.E. of Wildbad. Long. 9. 7. E. Lat. 48. 51. N.

MAR-FOREST, a diſtrict in Aberdeenſhire, conſiſting of vaſt woodland mountains, which occupy the weſtern angle of the country. The river Dee riſes among theſe mountains.

MARSICO NUOVO, a town of Naples, in Principato Citeriore, with a biſhop's ſee; ſeated on the foot of the Apennines, near the river Agri, 73 miles S.E. of Naples. Long. 15. 49. E. Lat. 40. 28. N.

MARSILLY, a town of France, in the department of Marne, 10 miles S. of Suzanne.

MARSTRAND, a rocky iſland of Sweden, in the Categate, lying N.W. of the mouth of the Gotha. It is two miles in circumference; and, on account of its ſtrength, is called the Gibraltar of Sweden. The town, which lies on the E. ſide, contains about 1200 inhabitants; and the harbour is ſecure and commodious, but of difficult entrance. Since the peace of 1783, its trade has declined; and the inhabitants ſubſiſt chiefly by the herring fiſhery, by the number of ſhips which in bad weather take refuge in the harbour, and by a contraband trade. It is 23 miles N.W. of Gotheborg. Long. 11. 30. E. Lat. 57. 59. N.

MARTA, a town in Italy, in the patrimony of St. Peter, and duchy of Caſtro; ſeated on a lake of the ſame name, called alſo Bolſena, 35 miles N. of Rome. Long. 12. 40. E. Lat. 42. 26. N.

MARTAGO, a town of Spain, in Leon, 10 miles S.S.E. of Cindad Rodrigo.

MARTEL, a town of France, in the department of Lot, ſeated near the Dordogne, 18 miles E. of Sarlat. Long. 1. 44. E. Lat. 44. 51. N.

MARTHALEN, a conſiderable town of Switzerland, in that part of the county of Kyburg, ſubject to Zurich. It is ſeated near the Rhine, ſix miles S. of Scaffhauſen.

MARTIGAO, a town of Portugual, in the Beira, 22 miles N.E. of Coimbra.

MARTIGNANA, a town of Piedmont, in the marquiſate of Saluzzo, ſeated near the Po, five miles W. of Saluzzo.

MARTIGNI, a town of Switzerland, and the ſeat of a government, in the Valais. It is 11 miles W. of Sion, and 38 E. of Geneva. Long. 71. E. Lat. 46. 5. N.

MARTORANO, a town of Naples, in Calabria Citeriore, with a biſhop's ſee, eight miles from the ſea, and 15 S. of Coſenza. Long. 16. 20. E. Lat. 39. 6. N.

MARTOREL, a town of Naples, in Catalonia, ſeated at the confluence of the Noya and Lobragal, 18 miles N.W. of Barcelona. Long. 1. 56. E. Lat. 41. 36. N.

MARTOS, a town of Spain, in Andaluſia, with a fortreſs on a rock, eight miles S. of Anduxar.

MARU, a town of Perſia, in Choraſan, celebrated for its ſalt-works, 150 miles E.N.E. of Meſched, and 190 N.N.E. of Herat.

MARVAO, a town of Portugal, in Alentejo, ſeven miles S.E. of Valença de Alcantara. Long. 6. 14. W. Lat. 44. 33. N.

MARVEJOLS, a commercial town of France, in the department of Lozere, ſeated in a valley, on the river Colange, 10 miles N.W. of Mende, and 300 S. of Paris. Long. 2. 23. E. Lat. 44. 36. N.

MARVILLE, a town of France, in the department of Meuſe, ſeated on the Oſhein, three miles N. of Jametz.

MARY's RIVER, St. a river of the United States, in Georgia. It is navigable for veſſels of conſiderable burthen for ninety miles; and its banks afford immenſe quantities of fine timber ſuited to the Weſt-India markets. It forms a part of the ſouthern boundary of the United States, and enters Amelia Sound, in lat. 30. 44. N.

MARY'S STRAIT, St. a ſtrait in North America, which forms the communication between Lake Superior and Lake Huron. It is about 40 miles long; and at the upper end is a rapid fall, which, when conducted by careful pilots, may be defeended without danger.

MARZA SIROCCO, a gulf on the ſouth ſide of the iſle of Malta. The Turks landed here in 1565, when they went to beſiege Valetta; for which reaſon the grand maſter ordered three forts to be built, two at the entrance of the gulf, and one on the point of land that advances into the middle of it.

MARZILLA, a town of Spain, in the province of Navarre, ſeated near the river Arragon, 30 miles S. of Pampeluna.

MASBATE, one of the Philippine Iſlands, almoſt in the

centre of the reſt. It is 75 miles in circumference, and the natives are tributary to the Spaniards. Long. 122. 25. E. Lat. 11. 36. N.

MASBROUGH, a village in Yorkſhire, on the river Don, adjoining the bridge of Rotherham. Here are conſiderable iron works, where all ſorts of hammered and caſt-iron goods are made, from the moſt trifling article to a large cannon, of which great quantities are exported.

MASCATE, a town of Arabia Felix, in the province of Oman. It has a caſtle on a rock, and is very ſtrong both by nature and art, though the buildings are mean. It was fortified, in 1650, by the Portugueſe; but afterwards taken by the Arabs, who put all the garriſon to the ſword, except 18, who turned Mahometans. The cathedral, built by the Portugueſe, is now the king's palace. There are neither trees, ſhrubs, nor graſs, to be ſeen on the ſea-coaſt near it, and only a few date-trees in a valley at the back of the town, though they have all things in plenty. The weather is ſo hot from May to September, that no people are to be ſeen in the ſtreets from ten in the morning till four in the afternoon. The bazars or market places are covered with the leaves of date-trees, laid on beams which reach from the houſe tops on one ſide to thoſe on the other. The religion of the inhabitants is Mahometaniſm, and yet, contrary to the euſtom of the Turks, they ſuffer any one to go into their moſques. The products of the country are horſes, dates, fine brimſtone, coffee, and ruinoſs, a root that dyes red. Maſcate is ſeated at the bottom of a ſmall bay, of the Arabian Sea, 68 miles S.E. of Oman. Long. 57. 26. E. Lat. 24. 0. N.

MAS-D'ASIL, a town of France, in the department of Arriege, with a late rich Benedictine abbey; ſeated on the rivulet Rife, eight miles S.W. of Pamiers.

MASHANGUR, a town of Hindooſtan Proper, in the province of Cabul, ſituate on the Seward, 48 miles N. of Attock, and 130 E.S.E. of Cabul. Long. 71. 7. E. Lat. 33 54. N.

MASKELYNE'S ISLES, a group of ſmall beautiful iſlands, in the South Pacific Ocean, lying off the S.E. point of Malicollo, one of the New Hebrides.

MASON (William), an eminent poet and diſtinguiſhed ſcholar, was born at Hull, where his father poſſeſſed the vicarage of St. Trinity. Where he received his ſchool education we have not been able to learn. At the proper time he was admitted into St. John's College, Cambridge; where he took the degree of B.A. and M.A. and in 1747 he obtained a fellowſhip in Pembroke-hall. It was there that he contracted an intimate friendſhip with Gray the poet, and with Mr. Hurd, now Biſhop of Worceſter. When the former of theſe gentlemen died, Mr. Maſon took upon himſelf the office of editor of his works and guardian of his fame; and upon the promotion of the latter to the ſee of Lichfield and Coventry, he expreſſed his ſatisfaction in ſome beautiful verſes.

In 1754 he entered into holy orders, and was patroniſed by the then Earl of Holderneſs, who obtained for him the appointment of chaplain to the king, and preſented him with the valuable rectory of Aſton in Yorkſhire. He was ſome time afterwards made precentor of York Cathedral, when he publiſhed a ſmall volume of church muſic, which has alternately met with oppoſition and applauſe. In our opinion ſome of his anthems are unrivalled.

It was natural for the precentor of a cathedral church, who was likewiſe a poet, to turn his attention to ſacred muſic; and Maſon had been a poet from his early years. His *Elfrida* and *Caractacus*, two tragedies on the Grecian model, were both publiſhed before the year 1757. Theſe two dramas, in the opinion of Dr. Hurd, do honour to modern poetry, and are, according to him, a ſufficient proof of the propriety of reviving the chorus on the Britiſh ſtage. In this ſentiment few critics, we believe, will agree with his lordſhip; but the tragedies have certainly great merit, and tranſcend perhaps every poem of the ſame caſt in our own or any other modern tongue. In the firſt, the language is elegant and ſweet; in the latter, it is daring and ſublime. The author himſelf always conſidered the former as the moſt perfect; and Johnſon, whoſe critical judgment will not be raſhly queſtioned, ſeems to have been of the ſame opinion.

Beſides his two tragedies, Mr. Maſon publiſhed many other poems. His Engliſh Garden is univerſally read and admired, being unqueſtionably the fineſt poem of the kind that has appeared ſince the days of Thomſon; though ſome have affected to conſider it as treating the ſubject rather with profeſſional ſkill than with poetical genius. That there are in it a few proſaic expreſſions we ſhall not controvert; for ſuch ſeem inſeparable from didactic poetry: but, taken as a whole, where ſhall we find its equal? His elegies, particularly that on the death of his wife, and that on the demiſe of Lady Coventry, have been generally read and extolled, though not more than they deſerve, as ſuperior in claſſical elegance to any thing of the kind in the Engliſh tongue, and expreſſing a manlineſs and tenderneſs of the pathetic, rarely found in the moſt poliſhed elegies of Roman writers. The ſplendor of genius, and accuracy of judgment, conſpicuous in his dramas, are equally diſplayed in his character as a lyric writer. His quarry was bold and impetuous, and he never ſwept the ground with an ignominious flight. In his Sappho and Phaon he has happily imitated the ſtyle of Dryden and Metaſtaſio; and at his death he was employed on a poem in which he propoſed to meaſure his ſtrength with Dryden.

It is ſaid, we know not how truly, that this ingenious man was the inventor of the faſhionable inſtrument the Pianoforte.

Poetry and muſic, and the duties of his office, might be ſuppoſed to have employed all his time; but, unfortunately, he caught the alarm which in 1769 was ſpread over the nation by the expulſion of Mr. Wilkes from the Houſe of Commons, and immediately enrolled himſelf among the ſupporters of the *Bill of Rights*.

Being leagued with the oppoſition, he joined in ſome violent clamours for a parliamentary reform. In the year 1779, when the city of London, and ſome other commercial towns, agreed to preſent their petition to parliament for a more economical expenditure of the public money, and a more equal repreſentation of the people, Mr. Maſon came forward, and took an active part in promoting theſe deſigns, as one who was convinced of their importance and neceſſity. Yet he ſhewed, by his ſubſequent conduct, that however earneſtly he might wiſh for what he doubtleſs conſidered as an expedient reform in the commons-houſe of Parliament, he was firmly attached to the Britiſh conſtitution. He was indeed a whig; but he was a whig of the old ſchool. In the beginning of 1794, when the reformers had betrayed the principles of French democrats, he deſerted them, and ranged himſelf under the banners of the ſervants of the crown; and for this conduct, which was certainly conſiſtent, he has been plentifully traduced by our Jacobin journaliſts as an alarmiſt, who not only deſerted his old friends, but aſcribed to them a certain degree of guilt and political depravity.

The death of this great and good man, which happened in April 1797, was occaſioned neither by age nor by inveterate diſeaſe. As he was ſtepping into his chariot, his foot ſlipped, and his ſhin grazed againſt the ſtep. This accident had taken place ſeveral days before he paid the proper attention to it; and on April the 3d a mortification enſued, which in the ſpace of 48 hours put a period to his life.

That he was a ſcholar and a poet of high eminence is univerſally acknowledged; and we are aſſured, that his poſthumous works, when publiſhed, will not detract from his living fame. In private life, though he affected perhaps too much the faſtidious manners of Mr. Gray, whoſe genius he eſtimated with a degree of enthuſiaſm amounting almoſt to idolatry, his character was diſtinguiſhed by philanthropy and the moſt fervid friendſhips; and he may be conſidered as a man who merits to be ranked with the ableſt ſupporters of Britiſh liberty and Britiſh morals.

MASOVIA, a province of Poland, containing the two palatinates of Czerſk, or Maſovia Proper, and Polotſk. By the laſt diſmemberment of the kingdom, it is annexed to the territories of Pruſſia. Warſaw is the chief city.

MASSA, a town of Italy, in the Sienneſe, with a biſhop's ſee; ſeated on a mountain near the ſea, 25 miles S.W. of Sienna. Long. 10. 48. E. Lat. 42. 40. N.

MASSACHUSETS BAY, a bay of North America, which ſpreads eaſtward of Bolton, and is comprehended between Cape Ann on the north, and Cape Cod on the ſouth. It is ſo named, as well as the whole ſtate of Maſſachuſets, from a tribe of Indians of the ſame name, that formerly lived round this bay.

MASSAFRA, a ſtrong town of Naples, in Terra d'Otranto, with a biſhop's ſee; ſeated at the foot of the Appennines, 16 miles N.N.W. of Tarento. Long. 17. 20. E. Lat. 40. 50. N.

MASSERANO, a town of Piedmont, capital of a ſmall principality of the ſame name, held by its prince as a fief of the church. It is ſeated on a mountain, 40 miles N.E. of Turin. Long. 8. 14. E. Lat. 45. 38. N.

MASSEUBE, a town of France, in the department of Gers, 14 miles ſouth of Auch. Long. 0. 28. E. Lat. 43. 25. N.

MASTICO, or CAPO MASTICO, a cape on the ſouth ſide Scio, one of the iſlands of the Archipelago.

MASUAH, a town of Abyſſinia, ſituate on an iſland on the coaſt of the Red Sea. The houſes, in general, are built of poles and bent graſs, as in the towns in Arabia; and a few are of ſtone, ſome of them two ſtories high. Long. 39. 36. E. Lat. 15. 35. N.

MATAGORDA, a fortreſs of Spain, at the entrance of the harbour of Cadiz.

MATALA, a town and cape of the S. coaſt of the iſland of Candia, 30 miles S. of Candia. Long. 24. 58. E. Lat. 34. 46. N.

MATALONA, a town of Naples, in Terri di Lavoro, eight miles N.W. of Capua, and 19 W. by S. of Benevento. Long. 14. 14. E. Lat. 41. 12. N.

MATCOWITZ, a ſtrong town of Upper Hungary, in the county of Scepus, ſeated on a mountain, 185 miles N.E. of Preſburgh.

MATELICA, an ancient town of Italy, in the marquiſate of Ancona, 15 miles S. of Jeſi.

MATTHEW, ST. an iſland of Africa, 420 miles S. by W. of Cape Palmas on the coaſt of Guinea. It was planted by the Portugueſe, but is now deſerted. Long. 6. 10. W. Lat. 1. 24. S.

MATTHEW, ST. a ſmall iſland in the Indian Ocean. Long. 123. 51. E Lat. 52. 3. S.

MATTSEE, a town of Bavaria, in the archbiſhopric of Saltzburg, 12 miles N. of Saltzburg. Long. 13. 3. E. Lat. 47 50. N.

MATUMAY, a ſea-port in the iſland of Jeſo, capital of a province of the ſame name, tributary to Japan. Long. 138. 55. E. Lat. 42. 0. N.

MATURA, a town of Hindooſtan Proper, in the province of Agra, 22 miles N.E. of Agra, and 70 S.S.E. of Delhi. Long. 78. 41. E. Lat. 27. 11. N.

MAUBAL, a town of Hindooſtan Proper, in the country of Candahar, 70 miles N.N.E. of Candahar.

MAULDAH, a city of Hindooſtan Proper, in Bengal, ſituate on a river that communicates with the Ganges. It aroſe out of the ruins of Gour, which are in its neighbourhood; and is a place of trade, particularly in ſilk, 190 miles N. of Calcutta. Long. 88. 28. E. Lat. 25. 10. N.

MAULEON, a town of France, in the department of the Lower Pyrenées, ſituate on the frontiers of Spain, 20 miles S.W. of Pau, and 40 S.E. of Dax. Long. 0. 31. W. Lat. 43. 10. N.

MAULEON, a town of France, in the department of Vendée, with a late famous Auguſtine abbey. It is ſeated near the river Oint, 52 miles N.E. of Rochelle, and 52 N.W. of Poitiers. Long. 0. 36. W. Lat. 46. 54. N.

MAURA, ST. an iſland of the Mediterranean, near the coaſt of Albania, 15 miles N.E. of the iſland of Cephalonin. Long. 20. 46. E. Lat. 39. 2. N.

MAURE, ST. a town of France, in the department of Indre and Loire, 17 miles S. of Tours, and 148 S.W. of Paris. Long. 0. 42. E. Lat. 47. 9. N.

MAURIAC, a trading town of France, in the department of Cantal, famous for excellent horſes. It is ſeated near the Dordogne, 27 miles S.E. of Tulles. Long. 2. 16. E. Lat. 45. 15. N.

MAURICE, ST. a town of Switzerland, in the Valais, ſituate on the Rhone, between two high mountains, 16 miles N.W. of Martigny. It guards the entrance into the Lower Valais.

MAURIENNE, a valley of Savoy, 50 miles in length, extending to Mount Cenis; which ſeparates it from Piedmont. St. John is the capital town.

MAXEN, a town of the electorate of Saxony, celebrated for a victory obtained by the Auſtrians, commanded by Count Daun, over the Pruſſians, in 1759, when 20,000 Pruſſians ſurrendered priſoners of war. It is eight miles S.W. of Pirna, and 10 S. of Dreſden.

MAXIMIN, ST. a town of France, in the department of Var. Before the revolution, here was a convent for Dominicans, who pretended to preſerve in it the body of Mary Magdalen, which brought them great riches by the reſort of ſuperſtitious viſitors. It is ſeated on the Argens, 20 miles N. of Toulon. Long. 5. 57. E. Lat. 43. 30. M.

MAY, or MAYO, one of the Cape de Verd Iſlands, 17 miles in circumference. The N.E. end is extremely low, and the land riſes gradually till it arrives at a volcanic mountain, to the S.W. of which is irregular ground, ſoon followed by a high diſorderly peak, much more lofty than the volcanic cone. The ſoil in general is very barren, and water ſcarce; but there are plenty of beeves, goats, and aſſes; as alſo ſome corn, yams, potatoes, plantains, figs, and water-melons. The chief commodity is ſalt, with which many Engliſh ſhips are freighted in the ſummer time. Pinoſa is the principal town, and has two churches. The inhabitants are negroes, who ſpeak the Portugueſe language, and many of them go naked. Long. 23. 5. W. Lat. 15. 10. N.

MAY, CAPE, a cape of North America, on the North ſide of the mouth of the Delaware. Long. 75. 4. W. Lat. 39. 0. N.

MAYAMBA, a town of the kingdom of Loango, capital of a diſtrict of the ſame name. Long. 13. 6. E. Lat. 3. 20. S.

MAYENCE. See MENTZ.

MAYENNE. See MAINE.

MAYORGA, a town of Portugal, in Eſtramadura, near

the Atlantic, 15 miles S.W. of Leria, and 51 N. of Liſbon. Long. 9 7. W. Lat. 39. 33. N.

MAZANDERAN, a province of Perſia, bounded on the north by the Caſpian Sea, on the weſt by Ghilan, on the ſouth by Irac Agemi, and on the eaſt by Aſtrabad. Ferabad is the capital.

MEACO, or Kio, a city of the iſland of Niphon, in Japan, of which it was formerly the capital. It is the great magazine of all the manufactures in Japan, and the principal place for trade. The inhabitants are ſaid to be 600,000. Long. 134. 25. E. Lat. 35. 30. N.

MEADIA, a town of Hungary, in the bannat of Temeſwar, ſeated on the north ſide of the Danube, 15 miles eaſt of Belgrade. It was diſmantled by the Turks in 1738. Long. 12. 0. E. Lat. 45. 0. N.

MEAO, a ſmall iſland, one of the Moluccas, in the Indian Ocean, with a good harbour. Long. 127. 5. E. Lat. 1. 12. N.

Hecatolitre	6102.44288
Chiliolitre	61024.42878
Myriolitre	610244.28778

A litre is nearly $2\frac{1}{8}$ wine-pints.
14 decilitres are nearly 3 wine-pints.
A chiliolitre is 1 tun, 12.75 wine-gallons.

Weights.	*E. grains.*

Chiliogramme	15444.0234
Myriogramme	154440.2344

A decagramme is 6 dwts. 10.44 gr. tr.; dr. iiis. gr. 4.44 apoth.; or 5.65 dr. avoird.
A hecatogramme is 3 oz. 8.5 dr. av.
A chiliogramme is 2 lbs. 3 oz. 5 dr. av.
A myriogramme is 22 lbs. 1.15 oz. av.
100 myriogrammes are 1 ton wanting 32.8 lbs.

Agrarian meaſures.

Are, 1 ſquare decametre, - 3.95 perches.
Hecatare, - 2 acres, 1 rood, 30.1 perches.

For Fire-wood.

Deciſtre, $\frac{1}{10}$ ſtere, - - 3.5315 cub. f. E.
Stere, 1 cubic metre, - 35.3150 cub. f.

MECAN, a large river, which riſes in Thibet, and flowing S.E. through Laos and Cambodia, falls by two mountains into the China ſea, forming an iſland below the city of Cambodia, which here gives name to the eaſtern branch.

MECHADEB, a town of Arabia Felix, in the province of Yemen, 72 miles S. of Sanaa. Long. 44. 15. E. Lat. 14. 7. N.

MECHLIN, a city of the Auſtrian Netherlands, capital of a diſtrict of the ſame name, with an archbiſhop's ſee. It conſiſts of ſeveral ſmall iſlands made by artificial canals, over which are a great many bridges; and its cathedral is a ſuperb ſtructure, with a very high ſteeple. Here is a great foundery for ordnance of all kinds; and it is famous for fine lace, and a ſort of beer, which is ſent into the neighbouring provinces. The territory of this town is a lordſhip, which comprehends two ſmall diſtricts containing nine towns of little conſequence, and ſome villages. It ſubmitted to the Duke of Marlborough in 1706, and was taken by the French in 1746, but reſtored in 1748. In 1792 the French again took it, evacuated it the next year, and re-entered it in 1794. It is ſeated on the Dender, 10 miles N.E. of Bruſſels, and 15 S.E. of Antwerp. Long. 4. 34. E. Lat. 51. 2. N.

MECHOACHAN, or VALLADOLID, a conſiderable town of New Spain, capital of the province of Mechoachan, with a biſhop's ſee. It is ſeated near a great lake, 110 miles W. of Mexico. Long. 102. 28. W. Lat. 20. 5. N.

MECKENHEIM, a town of Germany, in the archbiſhopric of Cologne, ſituate on the Erfft, ſeven miles S.S.W. of Bonn, and 18. S. of Cologne. Long. 6. 43. E. Lat. 51. 40. N.

MECKLEY, a province of Aſia, bounded on the N. by Aſſam, on the E. by China, on the W. by Bengal, and on the S. by Rothaan and Burmah, to which laſt it is ſubject.

MECRAN, a province of Perſia, bounded on the N. by Segeſtan and Candahar, on the E. by Hindooſtan, on the S. by the Indian Ocean, and on the W. by Kerman. The ſouthern part is dry, and little more than a deſert; the northern is leſs ſo; but animals are rare, and the ſoil far from fertile.

MECRINHOS, a town of Portugal, in Tra los Montes, 15 miles N.N.E. of Torre de Moncove, and 24 S.E. of Mirandela. Long. 6. 3. W. Lat. 41. 8. N.

MEDEBACH, a town of Weſtphalia, 32 miles W. of Caſſel. Long. 10. 1. E. Lat. 51. 4. N.

MEDELIN, a town of Spain, in Eſtramadura, remarkable for being the birth-place of Fernando Cortes. It is ſeated in a fertile country, on the river Guadiana, 22 miles E. of Merida. Long. 5. 38. W. Lat. 38. 41. N.

MEDELPADIA, a maritime province of Sweden, in Norland, on the gulf of Bothnia. It is full of mountains and foreſts. Sundſwall is the capital.

MEDEMBLICK, a town of the United Provinces, in North Holland, ſeated on the Zuider-Zee, with a good harbour. It is nine miles N. of Hoorn, and 22 N.E. of Amſterdam Long. 5. 0. E. Lat. 52. 47. N.

MEDICINE *(Encycl.)*. There is no art or ſcience in which a greater degree of penetration and of accuracy appears to be required than in medicine; for, involved in difficulty and uncertainty as it muſt, in general, be, its poſſeſſors ought, in order to combat them, to poſſeſs no ſmall ſhare of capacity and diſcernment. This is, perhaps, the reaſon that where the profeſſions have been ſeparate, phyſic has been generally eſteemed more reſpectable than ſurgery: although, in point of utility, it may juſtly be doubted whether a preference may

not be due to ſurgery. The almoſt inextricable obſcurity in which the nature of the animal functions, and the operations of medicines, are at preſent involved, are the more to be lamented, as the ignorant and impatient are, in general, more diſpoſed to commit themſelves to the care of pretenders, who do not deſerve the name even of empirics, than to be contented with the moderate degree of relief that can be promiſed them by the honourable practitioner; who, from the ſuppoſed depth and extent of his acquaintance with nature and its laws in general, has been denominated a phyſician;—an appellation once as uſual in France and Germany as it is ſtill in England.

Whether any great advances will ever be made in rendering the animal proceſſes as intelligible as thoſe of inanimate nature, is very much to be doubted; and indeed, to judge from general inferences, can ſcarcely ever be hoped: although the rapid advances which have been made within our recollection, and which are daily making, in many kindred ſciences, render it hazardous to pronounce an abſolute negative. Hitherto very little progreſs can be ſaid to have been made in the immediate ſubjects of medical ſpeculation; and the grand advantage of modern practice appears to conſiſt in a partial return to nature and ſimplicity. It is no longer the faſhion to irritate every wound by hot and ſtimulating balſams, nor to deprive it of the protection and aſſiſtance of the blood which coagulates round it: a fever is not oppreſſed with a miliary eruption, nor the ſmall-pox made confluent, by a forced accumulation of heat; and the natural inclination for cold liquids has been followed with the moſt ſalutary effects: a patient in a dropſy is not tormented with hunger and thirſt to produce the temporary relief of a ſymptom; and the ſupport of the whole ſyſtem is not prodigally waſted by unneceſſary veneſection. But all this has required time for its attainment; however natural and eaſy it might have ſeemed to compare at leaſt thoſe caſes in which nature had been uninterrupted and ſucceſsful, with others where art had been miſchievouſly active.

It may be enquired, then, how far the writings of the Greek phyſicians, ſo much extolled by medical writers of no ancient date, really deſerve their commendations: and if a man who has taken the pains to make himſelf maſter of their contents would be candid enough to diveſt himſelf of partiality for his purſuits, he would be obliged to confeſs, that he would in no caſe think himſelf juſtified in following in his practice an aphoriſm of Hippocrates, unſupported by modern experience, if it came in competition with a ſingle obſervation of a country apothecary, publiſhed in any medical journal of the preſent century. This being granted, it is difficult to conceive on what ground the moſt prejudiced can maintain the propriety of a man's ſpending a conſiderable portion of his time in endeavouring to deduce practical information from ſources ſo precarious. That the form of examining candidates for medical honours in the ancient medical writers ſhould be retained, is exceedingly neceſſary for the ſupport of the good education and literary reſpectability of the profeſſion. And it muſt alſo be allowed, that pathological ſtudies may be aſſiſted, and, perhaps, hints for experiments may often be derived from their works; but for every ſingle fact of practical importance known to the Greeks and Romans, it is probable that ten were diſcovered in the laſt century, and twenty in the preſent: and yet, for the mortification of human vanity, it muſt be confeſſed that the average period of human life does not appear to be perceptibly longer now than at the time of the oldeſt calculations. In phyſiology, the diſcovery of the nature of the circulation of the blood, of the change which this fluid undergoes in the lungs, of the proceſs of its coagulation, of the cauſe of the pleuritic coat, of the exiſtence and functions of the abſorbents, of the nature of the placenta; the exploſion of the notion of the origin of animal heat from friction, and of the exaggerated doctrines of the human pathology; all theſe improvements are of ſuch vaſt magnitude, that it is almoſt aſtoniſhing that they have not produced more conſpicuous effects on the practical treatment of all poſſible diſeaſes. Of the moſt powerful articles of our materia medica, opium and cantharides alone were known to the ancients; antimony, bark, ipecacuan, and mercurials, are entirely of modern invention; and, perhaps, the application of electricity may, in time, deſerve to be reckoned among the moſt efficacious, when its highly intereſting chemical properties and its effects in the animal economy ſhall have been more fully inveſtigated. On the other hand, we have to combat with many diſeaſes unknown to the ancients; it is ſingular enough, that almoſt all of theſe are curable with tolerable certainty, and yet ſometimes not without the greateſt riſk. The ſmall-pox, although in great meaſure deprived of its terrors by the practice of inoculation, is ſtill ſo formidable a diſorder, as to create a doubt whether more individuals do not annually die of it than before the introduction of that practice; and a more complete protection from its effects, which there is every reaſon to hope from the vaccine contagion, muſt ſtill be reckoned an invaluable addition to the expedients for the preſervation of the public health, and ſuch as will fairly entitle the man who firſt introduced inoculation for the cow-pox, both to honorary and to ſubſtantial tokens of public gratitude.

Suppoſing a preference to be decidedly granted to modern, beyond ancient medicine, it will be of conſequence to enquire into what countries of Europe the moſt rational practice in general prevails. And here, without being accuſed of partiality, we may be allowed by the concurring teſtimony of the majority, to give the preference to Great Britain, and, perhaps, in particular to that of the metropolis of England. One of the few who have diſputed the ſuperiority of the Engliſh practice, Dr. Fiſcher of Brunſwick, begins with accuſing his countrymen in general of a ſervile adoption of foreign innovations, and in particular of the medical anglomania. Undoubtedly the former part of the accuſation is well founded, and it is with reaſon that he aſſerts that they ſpend their whole time in amaſſing materials, without taking ſufficient pains to methodiſe, to digeſt, and to appropriate them; ſo that where this is the caſe we cannot expect to find a high degree of practical perfection: and the truth of the ſecond part of the charge is ſo well known, as to conſtitute a well-grounded compliment to this country; for if the Germans, who are ſo diligent compilers, are uſually in the habit of giving a decided preference to the Engliſh practice of phyſic, this is by no means the ſlighteſt recommendation that can be produced in its favour. The ſpecific objections that he makes to the practice in London are principally four; that it is too ſimple, too inappropriate, too bold, and too impatient; nor will our phyſicians have any objection to confeſſing that theſe characters may, in compariſon with continental medicine, be in ſome degree allowed to be juſt; and eſpecially in that limited kind of practice which a ſtranger can ſee in a few months in an hoſpital. The German practice would here, on the contrary, be called old womaniſh and fanciful; their inciding medicines, their decoction of graſs-root, their horrors of the rheumatic matter contained in a boiled potatoe and a pork chop, and of the inflammatory and antitraumatic powers of a cup of coffee, would here excite a ſmile. On the whole it may be fair to conclude, that the German phyſicians compile well, the Scotch reaſon well, and the Engliſh deſcribe well, and that the liberal and diligent ſtudent may derive from each of the ſchools information and inſtruction enough to repay him for his application.

MEDINA-SIDONIA, an ancient town of Spain, in Andaluſia, with a caſtle, 36 miles N.N.W. of Gibraltar, and 20 N.E. of Cadiz. Long. 5. 36. E. Lat. 36. 40. N.

MEDNIKI, a town of Poland, in the province of Samogitia, with a biſhop's ſee; ſeated on the Warwitz, 40 miles E. of Memel. Long. 22. 49. E. Lat. 55. 42. N.

MEDUA, a town of the kingdom of Algiers, ſeated in a country abounding in corn, fruits, and flocks of ſheep, 175 miles S.W. of Algiers. Long. 0. 13. E. Lat. 34. 45. N.

MEDUSA *(Encycl.)*. The animal now known among naturaliſts by the name of *meduſa*, was called by the ancients the *ſea nettle*, on account of its producing a ſenſation on the ſkin ſimilar to that which is excited by the plant, called *a nettle*. This animal was peculiarly called the *ſea* nettle, to diſtinguiſh it from another of the ſame ſpecies, which adheres to rocks. Linnæus, deſirous of avoiding theſe compound and equivocal denominations, aſſigned to the animal the name of *meduſa*: there is no obvious reaſon for this preference, except that, in many caſes, it is fortunate to find a name which diſtinguiſhes the given object, without exciting any other idea. See Pl. 1, Vol. VI. and Pl. 38 in this SUPPLEMENT.

The meduſa lives in the waves of the ſea, and ſwims with conſiderable ſwiftneſs. The body forms a ſegment of a ſphere, ſimilar to the head of a muſhroom. Though no muſcular fibre can be perceived, it poſſeſſes the faculty of contracting and dilating itſelf at will, either in parts, or in the whole. By increaſing or diminiſhing the concavity of its upper ſurface, it ſtrikes the water with ſufficient force to riſe to the ſurface; its own weight enables it, without exertion, to ſink to the bottom: and when deſirous of making an horizontal progreſs, the animal ſtrikes the water with a part of its edge, and thus proceeds with a rotatory motion.

Under the centre of the plane of the ſegment of a ſphere is a cylindrical or conical excreſcence, which is longer or ſhorter according to the ſpecies of the animal, repreſenting, in a manner, the ſtalk of the muſhroom, ſuppoſing the body to repreſent the head of the plant. In ſome kind of meduſas this excreſcence is terminated by a large opening, which is the mouth of the animal; but that which is here deſcribed has no mouth, or, to ſpeak more correctly, hundreds of mouths.

Although this ſpecies of the meduſa is moſt common on the coaſt of France, it has not been accurately deſcribed and delineated till the preſent time, except by Réaumur. At the ebb of the tide they are left in large quantities, motionleſs, on the ſand. They are of all ſizes, from about four fifths of an inch to eight or nine inches diameter; tranſparent, with a blueiſh reflection, producing an agreeable effect. Their ſubſtance is about the conſiſtency of the jelly of veal; and when they are ſuſpended for a ſhort time, they become reduced almoſt to nothing, as the water, which ſwells out their parenchyma, drops out, and nothing remains but their thin and fragile membranes.

The delicacy of their conformation has hitherto prevented all attempts to aſcertain their interior ſtructure by diſſection. It was alſo peculiarly difficult to inject them with ſucceſs. No heated ſubſtance, ſuch as melted wax, could be uſed, becauſe it would parch them up in an inſtant. Mercury, by its weight, tore all their veſſels; and liquids, as ink and coloured oil, eſcaped at the minuteſt aperture. At length Cuvier had the good fortune to ſucceed in diſplaying the vaſcular ſyſtem of the meduſa, and even to preſerve the injected animal for a long time in ſpirits of wine, by the uſe of a very fluid matter, which could be conſolidated at pleaſure, without changing its temperature. He injected the animal with milk, and, the moment the veſſels were ſufficiently diſtended, coagulated the milk, by pouring on a quantity of very ſtrong vinegar.

From this experiment, the following information was obtained:

Under the excreſcence above mentioned are eight leaves of fleſh, of conſiderable ſize, triangular, and indented at the edges. At each of the indentations of theſe leaves is a ſmall hole, which is only viſible when the animal is dilated by means of the injected liquor. Through theſe ſmall holes the meduſa imbibes the portion of fluid by which it is nouriſhed. Theſe ſmall orifices give birth to an equal number of minute veſſels, which, after uniting to the number of two or three, terminate in one greater veſſel, which occupies the centre of each leaf of fleſh.

Theſe eight veſſels alſo unite themſelves, two by two, in four large trunks, which deſcend into a cavity, the only one in the body, and which may be denominated either the heart or the ſtomach.

This cavity is ſituated in the baſe of the cylindrical excreſcence, before compared to the ſtalk of the muſhroom: this baſe, increaſing in ſize, extends itſelf between four pillars of fleſh, which terminate in the body, or part already compared to the head of the muſhroom. It is in the midſt of theſe four pillars that the cavity of the ſtomach is ſituated. The interſtices of the pillars would be ſo many orifices to this cavity; but they are cloſed by a thin folded membrane, the uſe of which, undoubtedly, is to extend itſelf in proportion as the ſtomach is filled: however this may be, ſixteen veſſels branch out from the ſtomach, which direct themſelves immediately to the circumference of the body, dividing its area into ſixteen equal partitions.

Four of theſe veſſels correſpond with the four pillars of fleſh; and there is, on the internal ſurface of each pillar, a groove which eſtabliſhes a direct communication between the correſponding veſſels, and one of the four grand veſſels of the ſtalk. The remaining twelve are diſtributed in diviſions of three in the interſtices of thoſe four, and terminate in thoſe parts of the ſtomach which are cloſed by the folded membranes.

The ſixteen veſſels in the body all communicate with each other by a circular veſſel, exactly concentric to the periphery of the animal.

The ſpace, or fillet, ſituate between this circular veſſel and the edge, is filled with an innumerable multitude of ſmall veſſels, which form a common net-work, exactly reſembling the moſt beautiful lace.

On the ſide oppoſite to the circular veſſel, that is to ſay, on the concave of the body, are ſixteen veſſels, forming a ſemicircle, one for each diviſion; they communicate with the greater veſſel, not only at their two extremities, but alſo by means of two or three ſhort veſſels, which go directly from the one to the other.

Theſe ſixteen ſemicircles appear to ſupply with nouriſhment thoſe parts of the body which are ſituate between the circular veſſel and the ſtalk; but this fact could not be demonſtratively aſcertained, as the injection could not be ſufficiently projected.

The following facts could, however, be ſafely inferred:—

1. That the nutritive juices reach the inſide by a multitude of ſmall apertures, and not through a ſingle mouth: this is an inſtance of approximation in this animal to the vegetable ſpecies never before inſtanced by the naturaliſts.

2. That the nutritive juices do not paſs into the veſſels until they have been depoſited in the great interior cavity: this circumſtance reſtores the meduſa to the order of animals.

3. That the veſſels which conduct theſe juices to all parts of the body branch out immediately from this great cavity.

This would alſo be a ſingularity, if theſe veſſels are to be conſidered as real arteries; but if they are ſuppoſed to be only elongations of the inteſtinal cavity, a kind of cœca, then the meduſa may, in this reſpect, be claſſed between the ſtar-fiſh and the polypus; for the ſtar-fiſh alſo produces cœca diſpoſed in rays, but floating in the cavity of the body, and not connected with it in a common maſs; and in the polypus the ſtomach produces no cœcum, but adheres to and incorporates with the reſt of the animal.

The meduſa, uniting in itſelf both theſe ſingularities, is alſo connected with both the ſpecies to which it appertains. If theſe inferences are correct, Cuvier, in his Elements of Zoology, and Lamark, in the tables annexed to his Lectures on Helminthology, have rightly placed it between the ſtar-fiſh and the polypus. In that caſe, the remarkable characteriſtic of this animal will conſiſt only in the multitude of its little mouths.

If, on the other hand, the interior cavity be conſidered as a heart, and the veſſels branching from it as arteries, the ſmall veſſels leading to it muſt be conſidered as veins, or as lymphatic veſſels, and we may ſay that the ſea ſerves it for a ſtomach, as the earth does to plants.

But the former is the more reaſonable ſuppoſition, conſidering that, in the animal ſcale, the heart diſappears much more early than the ſtomach.

This meduſa has no nerves, nor any particular organs of ſenſation; nor could Cuvier diſcover any organs of generation, or by what particular means the ſpecies was multiplied. The thin folded membranes ſurrounding the ſtomach, in the interſtices between the pillars of fleſh, may be conſidered as adapted for reſpiration, ſince the ambient element can pervade their ſubſtance to act on the nutritive fluid.

Such is the reſult of obſervations hitherto made on this extraordinary animal, whoſe ſingularity conſiſts in its having apparently no mouth, but nouriſhing itſelf like a plant, by means of ramified ſuckers, and in the circumſtance of its ſtomach fulfilling the office of the heart.

MEDWI, a town of Sweden, in E. Gothland, called the Swediſh Spa, on account of its waters, which are vitriolic and ſulphureous. The lodging-houſes form one ſtreet of uniform wooden buildings painted red. The walks and rides are delightful, particularly on the banks of the Wetter. It is three miles from Wadſtena.

MEDZIBOZ, a town of Poland, in the palatinate of Volhinia, ſeated on the river Bog, 20 miles S. of Conſtantinow.

MEGEN, a town of Dutch Brabant, ſeated on the Maeſe, 15 miles S.W. of Nimeguen. Long. 5. 26. E. Lat. 51. 49. N.

MEGESVAR, a town of Tranſylvania, capital of a county of the ſame name, remarkable for its good wines. It is ſeated on the river Koter. Long. 25. 20. E. Lat. 46. 50. N.

MEGIERS, a town of Tranſylvania, 28 miles N. of Hermanſtadt. Long. 24. 41. E. Lat. 46. 53. N.

MEHRAN, the principal of the channels into which the river Indus divides itſelf, near Tatta, in Hindooſtan Proper.

MEHUN-SUR-YEVRE, an ancient town of France, in the department of Cher. Here are ruins of a caſtle built by Charles VII. as a place of retirement; and here he ſtarved himſelf, in the dread of being poiſoned by his ſon, afterward Lewis XI. It is ſeated in a fertile plain, on the river Yevre, 10 miles N.W. of Bourges, and 105 S. of Paris. Long. 2. 17. E. Lat. 47. 10. N.

MEHUN-SUR-LOIRE, a town of France, in the department of Loiret, ſeated on the Loire, 10 miles S.W. of Orleans. Long. 1. 48. E. Lat. 47. 50. N.

MEILLERIE, a village of Savoy, in Chablais. It is ſeated on the S. ſide of the lake of Geneva, in the receſs of a ſmall bay, and at the foot of impending mountains, which in ſome parts are gently ſloping, and clothed to the edge of the water with dark foreſts, and in others are naked and perpendicular. Theſe dark and gloomy rocks lie S.W. of Clarens, which place and Meillerie are both intereſting ſcenes in the Eloiſa of Rouſſeau.

MEINAU, an iſland in the bay of the Bodmer Sea, or middle lake of Conſtance, one mile in circumference. It belongs to the knights of the Teutonic order, and produces excellent wine, which forms the chief revenue of the commander. It is five miles N. of Conſtance.

MEINUNGEN, a town of Franconia, ſituate amid mountains, on the river Werra, 14 miles N.W. of Hilburghauſen, and 21 N. of Schweinfurt. Long. 10. 26. E. Lat. 50. 36. N.

MEISSAU, a town of the archduchy of Auſtria, 14 miles S.S.W. of Znaim, and 34 N.W. of Vienna. Long. 16. 7. E. Lat. 48. 30. N.

MEISSEN, or MISNIA, a margravate of Germany, in the electorate of Saxony, 100 miles long and 80 broad; bounded on the N. by the duchy of Saxony, on the E. by Luſatia, on the S. by Bohemia, and on the W. by Thuringia. It is a very fine country, producing corn, wine, metals, and all the conveniences of life. The inhabitants ſpeak the pureſt language in Germany. The capital is Dreſden.

MEISSENHEIM, a town of Germany, in the duchy of Deux Ponts, ſituate on the Glan, 28 miles N. of Deux Ponts, and 30 W.S.W. of Mentz. Long. 7. 22. E. Lat. 49. 42. N.

MELAZZO, an ancient town of Natolia, with a biſhop's ſee, and ſome curious monuments of antiquity. It is ſeated on a bay of the Archipelago, 60 miles S. of Smyrna. Long. 27. 25. E. Lat. 37. 28. N.

MELCK, a ſmall fortified town of Lower Auſtria, with a celebrated Benedictine abbey, ſeated on a hill, 47 miles W. of Vienna. Long. 15. 20. E. Lat. 48. 11. N.

MELDELA, a town of Italy, in Romagna, belonging to its own prince, eight miles S.W. of Ravenna. Long. 11. 48. E. Lat. 44. 22. N.

MELDERT, a town of Auſtrian Brabant, 10 miles S.E. of Louvain. Long. 4. 41. E. Lat. 50. 45. N.

MELDORP, a town of Lower Saxony, in the duchy of Holſtein, ſeated near the Milde, 15 miles S. of Tonningen, and 45. W. of Hamburg. Long. 9. 6. E. Lat. 54. 10. N.

MELFI, a town of Naples, in Baſilicata, with a biſhop's ſee, and an ancient caſtle, ſeated on a rock, 16 miles N.E. of Conza, and 72 of Naples. Long. 15. 52. E. Lat. 41. 2. N.

MELIDA, an iſland of Dalmatia, in the gulf of Venice, and in the republic of Raguſa. It is 25 miles in length, and abounds in oranges, citrons, wine, and fiſh. It has a Benedictine abbey, ſix villages, and ſeveral harbours.

MELILITHUS; in foſſilogy, the honey-ſtone. The celebrated chemiſt, Mr. Klaproth, of Berlin, has enriched chemiſtry with a diſcovery of a new acid, which he obtained by the analyſis of this ſtone. It is not a ſimple mineral acid, but rather of the nature of a vegetable acid; and according to the properties it ſhews, it muſt be conſidered as a peculiar modification of thoſe elements which conſtitute vegetable acids, and conſequently as a ſpecific vegetable acid, and an acid of its own. The properties it poſſeſſes are the following:

1. It cryſtaliſes in ſmall fibrous and glomerated maſſes, and ſometimes in ſmall and ſhort columns. It does not appear to be able to cryſtaliſe at firſt, but gets the power

of cryſtaliſing by degrees, by imbibing more oxygen from the air.

2. Its taſte is ſweetiſh-ſour at firſt, but becomes afterwards a little bitter.

3. Poured upon a heated potſherd it quickly evaporates, ſpreading a dark grey ſmoke, which, however, does but little affect the ſmell; a ſmall quantity of yellowiſh light aſhes is left, which, moiſtened with water, are quite taſteleſs, and cauſe no change at all in blue colours.

4. Neutraliſed with kali, it forms a cryſtaline maſs of a fibrous, radiant texture.

5. Saturated with natron, or ſoda, it produces cubic cryſtaliſations, partly diagonal ſingle priſms, partly concrete in a ſtellated manner.

6. The neutral ſalt which it produces with ammonia, exhibits ſmall hexagonal priſms, that loſe their tranſparency when expoſed to the air, and get a ſilver-white appearance.

7. Diſſolved in water, and dropped into lime-water, into a ſolution of burned barytes in water, it cauſes a white precipitation, which diſappears again by dropping to it ſome nitric acid.

8. A ſimilar precipitation takes place when it is dropped into a ſolution of acetated barytes (acetate de baryte), that alſo diſſolves again in nitric acid.

9. No precipitation followed with muriated barytes; but, ſoon after, ſome ſmall needle-like cryſtals became viſible in the mixture.

10. A ſolution of ſilver in nitric acid remained clear in mixing it with the acid of the honey-ſtone.

11. A ſolution of nitrate of mercury mixed with it, let fall a frequent precipitation of a white colour, which was diſſolved again by putting more nitric acid to the ſolution.

12. Iron diſſolved in nitric acid, formed a yellow precipitation with it, and was made ſoluble by the addition of muriatic acid.

13. A ſolution of the acetate of lead is much precipitated by it, but clearly diſſolved again by nitric acid.

14. With a ſolution of the acetate of copper, a verdigriſe precipitation followed.

15. A ſolution of nitrate of copper ſuffered no change by it.

Theſe experiments ſhew, that this acid enters into a combination with ſeveral metallic calces, and that its affinity to them is greater than that of the acetous acid, though inferior to mineral acids. Similar effects are produced by its neutral ſalts, and the precipitation cauſed by them is in a great degree ſoluble.

As this acid is conſtituted by the carbon, oxygen, and hydrogen, and eaſily deſtroyed by fire; and as, at the ſame time, it agrees with none of the known acids in its properties and relations; it deſerves to be placed among the vegetable acids, as an acid of its own, to which the name of *Melilithic Acid* may be given.

The honey-ſtone, or Melilithus, from which it is obtained, is a foſſil found in Saxony amongſt the ſtrata of bovey-coal (braunkohle), and was firſt deſcribed by Mr. Werner. It is of a honey-yellow colour, ſometimes darker, ſometimes lighter, and is always found in a cryſtaliſed octaëdrous form, but ſeldom in a perfect ſtate. Its ſurface is generally ſmooth and ſhining, but ſometimes rough and eaten. It rarely is quite clear, but generally half tranſparent only, and it is ſoft, brittle, and eaſily reduced to a yellow grey powder. Its ſpecific weight is, according to Klaproth, 1550. Mr. Klaproth was induced to ſubject this mineral to a new analyſis, in conſequence of the different opinions of chemiſts and mineralogiſts about its nature and conſtituent particles. Some of them took it for a kind of amber, as Mr. Born; others, for a ſort of gypſum impregnated with petroleum. The chief particles are now, according to Mr. Klaproth, a peculiar acid combined with aluminous earth; and the proportion in 100 parts of it is, 16 parts of aluminous earth and 46 of acid, beſides the water of cryſtaliſation.

Prof. Lampadius, of Freyberg, in Saxony, found in 100 parts:

85½	carbon
3½	petroleum
1	ſiliceous earth
5	water of cryſtaliſation
96	

Mr. Abick relates its conſtituent particles as follow:

40	carbonic acid
28	water of cryſtaliſation
16	carbonic aluminous earth
5	benzoic aluminous earth
5½	benzoic acid
5	calx of iron
2½	reſin
100	

MELINDA, the capital of a kingdom of the ſame name, on the coaſt of Zanguebar. Here the Portugueſe have 17 churches, nine convents, and warehouſes well provided with European goods. It is ſurrounded by fine gardens, and has a good harbour, defended by a fort; but the entrance is dangerous, on account of the great number of ſhoals, and rocks under water. The inhabitants are Chriſtians and Negroes, which laſt have their own king and religion; and the number of both is ſaid to amount to 200,000. It is ſeated at the mouth of the Quilmanci. Long. 39. 38. E. Lat. 2. 15. S.

MELIPILLA, a town of Chili, in a juriſdiction of the ſame name, 200 miles N. of Conception. Long. 71. 39. W. Lat 33. 28. S.

MELISSAU, a town of Naples, in Calabria Citeriore, four miles N. of Strongoli.

MELITELLO, a town of Sicily, in Valdi Noto, eight miles W. of Leontini.

MELITO, a town of Naples, in Calabria Ulteriore, with a biſhop's ſee, 40 miles N. of Reggio. Long. 16. 30. E. Lat. 38. 40. N.

MELITOPOL, a town of Ruſſia, in the province of Tauris, about 12 miles from the ſea of Azoph, and 108 S. of Catharinenſlaf. Long 83. 10. E. Lat. 46. 22. N.

MELLDORF, a ſea-port of Lower Saxony, in the duchy of Holſtein, on the German Sea, 48 miles N.W. of Hamburg. Long. 9. 4. E. Lat. 54. 10. N.

MELLE, a town of Weſtphalia, in the biſhopric of Oſnaburg, 10 miles E. of Oſnaburg. Long. 8. 35. E. Lat. 52. 25. N.

MELLE, a town of France, in the department of the Two Sevres, 13 miles S. of St. Maixent.

MELLINGEN, a town of Switzerland, in the bailiwic of Baden, which, ſince 1712, depends on the cantons of Zuric and Bern. It is ſeated in a fertile country, on the river Reuſs, five miles S. by W. of Baden.

MELNICK, a town of Bohemia, ſeated at the confluence of the Elbe and Muldaw, 18 miles N. of Prague. Long. 14. 50. E. Lat. 50. 22. N.

MELOUE, a town of Upper Egypt, ſeated on the Nile, with a remarkable moſque. Long. 31. 55. E. Lat. 27. 30 N.

MELRICHSTADT, a town of Franconia, in the biſhoprick of Wurtzburg, remarkable for a battle fought near it,

between the emperor Henry IV. and Rodolph duke of Suabia. It is ſeated on the Strat, 20 miles N. of Schweinfurt.

MELUN, an ancient town of France, in the department of Seine and Marne, ſeated on the Seine 25 miles S.E. of Paris. Long. 2. 35. E. Lat. 48. 30. N.

MEMBRILLO, a town of Spain, in Eſtramadura, 14 miles S. of Alcantara. Long. 6. 0. W. Lat. 39. 12. N.

MEMMINGEN, a ſtrong town of Suabia, near which, in 1795, the French republicans defeated the emigrants under the Prince of Condé. It is ſeated in a fertile plain, 24 miles S.E. of Ulm, and 35 S.W. of Augſburg. Long. 10. 16. E. Lat. 48. 3. N.

MENAN, a large river of the kingdom of Siam, which runs through it from N. to S. paſſes by the city of Siam, and falls into the gulf of Siam, below Bancok. There are ſeveral ſingular fiſhes in it, beſide crocodiles, which are common in theſe parts.

MENANCABO, the capital of a ſmall kingdom of the ſame name, in the iſland of Sumatra; ſeated on the S. coaſt, oppoſite the iſle of Naſſau, 250 miles from the ſtrait of Sunda.

MENDE, an ancient town of France, capital of the department of Lozere, with a biſhop's ſee. The fountains, and one of the ſteeples of the cathedral, are remarkable, It is very populous; has manufactures of ſerges and other woollen ſtuffs; and is ſeated on the Lot, 35 miles S.W. of Puy, and 210 S. by E. of Paris. Long. 3. 35. E. Lat. 44. 31. N.

MENDICITY, that ſtate in which paupers frequently are; eſpecially in crowded cities, where the purſuit of pleaſure too much engroſſes *their natural guardians, the rich*, to attend duly to the charge which Providence has aſſigned them.

It is certainly a diſgrace to the metropolis of Britain, that, with all our charitable eſtabliſhments, no adequate proviſion has yet been made to prevent mendicity in London; but that our funds of charity are to be waſted on the indolent and drunken beggar, while modeſt indigence is often neglected and forgotten.—When the means of occupation, and the inducement to induſtry and exertion, are provided in London, there will be no further occaſion for *vagrant paſſes, and for orders of removal*. The idle and the profligate beggars will ſoon find that the air of the metropolis does not ſuit them; and will retire, as they have done from Edinburgh, to other more congenial climates, where liberal encouragement continues to be offered to idleneſs and profligacy.

It is no ſmall merit in the Edinburgh eſtabliſhment (ſee EDINBURGH, *Supp.*), that they have adopted the principle, ſo ſtrongly recommended by Count Rumford, of giving the poor the WHOLE ENTIRE of their earnings, and ALL the benefit of their induſtry. Thoſe earnings, it is true, are inconſiderable, and at the preſent period inadequate to their ſupport; and, indeed, whenever an eſtabliſhment of this kind ſhall be formed in London, it is probable that the produce of the induſtry of the poor, in the commencement at leaſt, will be comparatively ſmall. But if we could ſuppoſe only one half of the beggars of London to be uſefully employed (the other half having retired to other cities, where *ſpeculative idleneſs* is not *perſecuted*), the gain to the public in the poſitive produce* of labour, in the examples of induſtry, and in the comparative improvement of morals, would be of an importance beyond all calculation.

"I am aware," ſays Mr. Bernard, in the Reports of the Society for bettering the Condition of the Poor, "that I ſhall be told that the ſituation, the magnitude, and the circumſtances, of Edinburgh and London are very different. In like manner if I urge the example of Munich, I am anſwered, that "the ſcale is ſmall,—the difficulty leſs;—with the military under his orders, and the ſprings of government at command, the favourite miniſter of a deſpotic prince might do much:" —So, if I cite what Mr. Voght has done at Hamburgh;—Mr. Venn, at Clapham;—what Lord Winchelſea, at Burley; —Mr. Conyers, at Epping;—Mr. Eſtcourt, at Shipton Moyne; —or Mr. Gilpin, at Boldre;—ſtill I am told, theſe are all peculiar caſes, exempt from thoſe circumſtances, which are ever ready to prevent any thing of that kind being attempted by the projector.—I admit that the magnitude of Edinburgh is leſs, the education and domeſtic habits of the poor are better, and that they are free from the embarraſsments attending our complicated ſyſtem of poor laws: but I muſt obſerve, that thoſe circumſtances in London, which enhance the difficulty, do alſo increaſe the neceſſity of the meaſure; and that if we are incumbered by poor laws, we may receive from them funds more than adequate to the perfecting and continuing of ſuch a reform; as there can be little doubt that half the money which is now applied in our metropolis in making the poor helpleſs and idle, would be ſufficient for the encouragement of induſtry, and for the relief of poverty, to the extent that political wiſdom and general philanthropy would require; even if we can ſuppoſe that the benevolence of individuals would not afford any pecuniary ſupplies; and that Bridewell, and ſome other charities, originally intended to have been ſubſervient to this general object, ſhall remain for ever in their preſent condition.

"In ſhort, when we conſider the degree of diſtreſs which ſuch an eſtabliſhment may alleviate, the comfort it may beſtow, the induſtry it may promote, the productive labour it may create, the bad habits it may amend, the good habits it may form, the improvement in ſkill and dexterity of working it may produce, the benefit to be done to the metropolis by diminiſhing the number of beggars at the preſent, and by keeping down the poor rates in future, and the probable advantages to the country from ſuch an example leading to the erection of ſimilar eſtabliſhments in other parts of the kingdom,—I flatter myſelf we ſhall all ſpeedily unite in meaſures, for forming an inſtitution TO PROVIDE FOR THE BEGGARS OF LONDON, upon principles ſimilar to thoſe which have been adopted with ſuch ſucceſs and effect at Edinburgh."

After this account of what *ought* to be done to check the growing diſpoſition to mendicity among the poor, eſpecially in the metropolis, we may very properly ſtate what has been done. The following is extracted from an account of an attempt to aſcertain the circumſtances of the beggars of London, with obſervations on the beſt mode of relieving them, by Thomas Bernard, eſq.

In order to inform himſelf on this ſubject, Mr. Martin has, from the beginning of the year 1797, diſtributed tickets in London, to appoint ſuch of the beggars there, as ſeemed to merit and wiſh enquiry into their circumſtances, to come to him for that purpoſe. Of theſe as many as 120 have attended in conſequence;—21 men and 99 women.

Of the men the greater part were maimed, or diſabled by age or ſickneſs; and only two of them belonged to any place of legal ſettlement in London.

Of the women there were 48 widows; ſeven of them the

* Few perſons are fully aware of the extent of the loſs to the public by a certain number of perſons being unemployed.—The following paper was very lately diſtributed with good effect among the riotous colliers at Briſtol.—"Kingſwood, April 11, "1801.—The LOSS to EVERY IDLE MAN, for one day's work, is 2*s*; one week's ditto, 12*s*; and if five hundred men do not "work for a week, their wives and children will be deprived of the enormous ſum of THREE HUNDRED POUNDS!"

widows of ſoldiers; only one of them of a ſeaman. About a third of theſe conſiſted of aged women; ſome were crippled, and ſome diſtreſſed from want of work: many of them embarraſſed by ignorance of the mode of obtaining parochial aſſiſtance, or by the fear of applying for it.

Of the wives, in moſt caſes, the difficulty was the want of work, or the incapability of doing it on account of a child in arms. Theſe were caſes of very great diſtreſs. Above half of them had two or more children, who were ſome of them infants, and the greater part of the reſidue of an helpleſs age, too young for work.

With regard to the ſettlements of the women, twenty-four referred him to pariſhes in London and Weſtminſter; thirty-three to pariſhes in different parts of England; twenty-two belonged to Scotland and Ireland; and the remaining twenty ſaid they could not give, or at leaſt declined giving, him any account of their place of ſettlement.

By application, in moſt caſes to their pariſhes, and in ſome to their friends, he was enabled to obtain effectual relief for ſeveral of them: for others he is now uſing his endeavours. To all of them, the gift of a little food, and the hearing of their melancholy ſtory, afforded ſome comfort.

Upon this paper, extracted from Mr. Martin's account, Mr. Bernard adds the following obſervations:—As the parochial poor of the metropolis," ſays he, " though they are *in general* treated with kindneſs and attention, yet the overſeers in London have more room allowed for the operations of favour and prejudice, than in country pariſhes. The magiſtrates, in the city of Weſtminſter and its ſuburbs, interfere very little in queſtions of parochial relief; and the poor are, in conſequence, left almoſt entirely to the *diſcretion* or *caprice* of the pariſh officers; and frequently, by the want of relief, or by their not underſtanding the mode of applying for it, are induced to increaſe the number of beggars in London.

" In many of the inſtances, where perſons of this deſcription beg in the ſtreets, a neglect of duty is, in a certain degree, imputable to ſome of the pariſh officers of London. —But there is, in the metropolis, a more numerous claſs of mendicants, who belong to pariſhes in the country. By the preceding account it will appear, that, of the 120 beggars whoſe caſes have been enquired into, one third of the women, and the greater part of the men, belonged to country pariſhes; which, in ſome caſes, there is too much reaſon to believe, their pariſh officers, either by menaces or promiſes, had prevailed upon them to quit, in order to ſet up the trade of a London beggar. In this manner the poor and the helpleſs, by harſh treatment, or by a trifling preſent, are ſometimes ſeparated from their own connections, where they might live cheaper and earn ſomething, and where by law they are entitled to ſupport and protection, and are, in a degree, compelled to increaſe the maſs of vice and miſery in the metropolis.

" This is an abuſe which *ought* to be corrected.—Leſt, however, I ſhould be miſunderſtood, I muſt ſtate what has always been my ſentiment; that, in policy and juſtice, every individual ſhould be at liberty, while he can work, to carry his induſtry to that pariſh, in which he can exert it with moſt benefit to himſelf and the community; and I ſhould add that, in point of kindneſs and humanity, the aged and infirm, who want parochial aid, ſhould not be removed to a diſtant pariſh, that may have been their place of ſettlement, though not of reſidence; much leſs that they ſhould be driven, at the cloſe of a uſeful life, into a pariſh work-houſe, while they have friends and connections, with whom they may continue upon a parochial allowance, not more, and probably leſs, than they would coſt in a work-houſe. But the caſe of London beggars, with country ſettlements, is very different. Their connections are not in London. They have wandered from their pariſhes, from their friends, and from thoſe who are by law directed to maintain them, to a place new and unknown to them; where, by a diſplay of miſery, too frequently the genuine, though uncredited, repreſentation of real ſufferings, they draw *comfortleſs* and *ignominious* relief from the compaſſion of individuals, inſtead of receiving at home that parochial protection and ſupport, to which by law they are entitled.

" To theſe two claſſes is to be added a third, conſiſting chiefly of caſual poor, who are occaſionally out of employment, and either are not, or pretend not to be able to procure work. Of theſe ſome are ready and deſirous to be employed; and the greater part would work, if it were as eaſy for them to obtain employment, as it is to aſk alms. For the relief of them, we have only to follow the example of Count Rumford, in his great and excellent eſtabliſhment at Munich; or that of Lord Winchilſea, in his ſchool at Oakham, admirable in its ſimplicity and facility of execution: we have only to eſtabliſh work-rooms in different parts of the metropolis, where the poor ſhall have the option of attending or not, where they ſhall receive inviolably every penny of their earnings, and where they may, *if they prefer it*, partake of a comfortable and good meal at a cheap rate.

" I have deſcribed the three claſſes, of which the beggars of London do principally conſiſt:—1ſt. of aged and infirm perſons, belonging to pariſhes in or about the metropolis; pariſhes, which ought, and, with proper aſſiſtance, would pay more attention to them: 2d, of a ſimilar deſcription of perſons from country pariſhes, where they ſhould be received and maintained; ſomething being done, if an extraordinary caſe occurred, to prevent their ſending away their parochial poor: and 3d, of perſons who cannot procure employment, and of other caſual poor, for whoſe reſort and relief work-rooms ought to be opened.

" What is propoſed would have the merit of being capable of execution with little or no addition to the ſtatute book; as it would hardly require more than the enforcement of our preſent laws, in inſtances where the neglect of them has been attended with ſerious evils to the community. If, therefore, by the enforcement of thoſe laws, and by the aid of individuals, theſe three objects are attained;—the relieving of the aged and impotent of London pariſhes;—the aſſiſting of the country poor to return to their own pariſhes; —and the finding of employment for the caſual poor, who either cannot find work, or do not wiſh to find it;—begging will ſoon become, in London, an unneceſſary and unprofitable trade.

" A queſtion, however, may ariſe, whether this object, ſo far as it calls for the aid of the magiſtrate, can be attained by the preſent police offices; or whether it will not require a new and original office of its own.—Moſt of the police offices are already pretty fully employed; but even if they were not, yet a regular ſyſtem of relief, that is to pervade the whole of the metropolis—to provide work, and the means of maintenance for all who *can* labour, and for the aged and infirm (who *cannot*) comfort and relief, in the mode beſt for them, and leaſt burthenſome to ſociety;—a meaſure like this, I am perſuaded, could never be completed, and properly carried into effect in this great town, but by one office. It would otherwiſe be devoid of that ſingleneſs and uniformity of plan, which would be eſſential to its ſucceſs:—not that it ſeems neceſſary that any new appointment ſhould be made for the purpoſe; as a weekly board held at one of the now exiſting offices, or, which perhaps would be better, at a ſeparate office, by ſome of the moſt active and intelligent

magiſtrates, ſelected from the other offices, might be fully adequate to theſe important objects.

" Such an office, eſtabliſhed in the metropolis for the ſole purpoſe of attending to the poor, and forming and promoting plans for their employment and protection, if conducted with zeal, induſtry, temper, and diſcretion, would be attended with the moſt beneficial effects, not merely in the relief of the diſtreſſed and impotent poor, but in the reform of the idle and profligate. Whether the execution of the meaſure ſhould be conducted by the Society, the expences being defrayed from funds to be furniſhed by public contribution, or by any other mode, is matter for ſerious conſideration. In any event, it would produce an important diminution in the amount of miſery and vice in London; and it would be the means of aſſiſting and encouraging virtue and induſtry, and converting the benevolence of individuals into its proper and legitimate channel.

MENDIP-HILLS, a lofty tract, in the N.E. of Somerſetſhire, abounding in coal, calamine, and lead; the latter ſaid to be of a harder quality than that of other countries. Copper, manganeſe, bole, and red ochre, are alſo found in theſe hills. On their ſummits are large ſwampy flats, dangerous to croſs.

MENDLESHAM, a town in Suffolk, with a market on Friday, 18 miles E. of Bury St. Edmunds, and 82 N.E. of London. Long. 1. 12. E. Lat. 52. 24. N.

MENDRAH, a province of the kingdom of Fezzan, much of which is a continued level of hard and barren ſoil; but the quantity of trona, a ſpecies of foſſil alkali, that floats on the ſurface, or ſettles on the banks of its numerous ſmoking lakes, has given it a higher importance than that of the moſt fertile diſtricts. It has a town of the ſame name, 60 miles S. of Mourzook.

MENDRISIO, a town of Switzerland, the capital of an Italian bailiwic, containing about 16,000 inhabitants. It is ſeven miles W. of Como. Long. 8. 59. E. Lat. 25. 45. N.

MENEHOULD, St. an ancient and conſiderable town of France, in the department of Marne, with a caſtle advantageouſly ſituate; but its other fortifications have been demoliſhed. It was almoſt totally deſtroyed by a conflagration in 1719. It was here, in 1792, that the French gave the firſt check to the progreſs of the victorious Pruſſians, which in the end compelled them to a retreat. St. Menehould is ſeated in a moraſs, on the river Aiſne, between two rocks, 20 miles N.E. of Chalons, and 110 E. of Paris. Long. 4. 59. E. Lat. 49. 2. N.

MENGEN, a town of Germany, in Auſtrian Suabia, 33 miles S.W. of Ulm, and 45. S. of Stutgard. Long. 9. 13. E. Lat. 48. 1. N.

MENIN, a town of Auſtrian Flanders, ſeated on the Lis. In 1585 it was almoſt entirely deſtroyed by fire. It is conſidered as the key of the country; and in every war, from the middle of the 17th century, the poſſeſſion of it has been deemed of the utmoſt conſequence. It has, therefore, been often taken and retaken; the laſt time by the French in 1794, when the garriſon (in order to ſave the unhappy emigrants) bravely forced their way through the enemy. It is eight miles S.E. of Ypres, and 10 N. of Liſle. Long. 3. 9. E. Lat. 50. 48. N.

MENTON, a city of Italy, in the principality of Monaco, with a caſtle. It has a conſiderable trade in fruit and oil; and is ſeated near the ſea, five miles E.N.E. of Monaco, and eight W.S.W. of Ventimiglia. Long. 7. 35. E. Lat. 43. 46. N.

MENZALA, a town of Egypt, ſituate near a great lake to which it gives name, 20 miles S.S.E. of Damietta, and 73 N.N.E. of Cairo. Long. 32. 2. E. Lat. 31. 3. N.

MEPHITIS (*Encycl.*) The following communication on a method of preventing and deſtroying the mephitic taint with which walls become impregnated where a number of perſons, particularly ſick, are collected together, is inſerted in the Decade Philoſophique, &c.

" In my Memoir," ſays the author, " on milk-painting (ſee PAINTING, *Supp.*), I had conſidered it only as an object of domeſtic œconomy, ſo that I neglected to treat of the uſeful application of this method of painting to the demephetiſation of walls. Let me therefore ſupply the omiſſion.

" Wherever a great number of perſons, either healthy or ſick, are collected together, the walls are penetrated, and become inſenſibly ſurcharged with infectious effluvia, which they again exhale in conſequence of the motions of the atmoſpherical air; ſo that actual inhalation and exhalation take place in them. The currents of air which are conducted through ſuch places ſerve very well to renovate the atmoſphere, but they do not carry away with them the miaſmata that lurk in the pores of the walls, and which are retained there by the infectious moiſture proceeding from the perſpiration of the bodies, and which condenſes itſelf upon their ſurface.

" I have mentioned inhalation and exhalation: in fact, in the ſouthern climates, and particularly in Italy, where the phthiſis aſſumes a character of energy that renders it very contagious, experience has ſhewn that it is neceſſary, not only to burn all the clothes and furniture that have been in contact with the phthiſical perſon, but likewiſe to remove the ſuperficial layer of the walls and floors, in order to prevent the contagious miaſmata, which is concealed in them, and which they re-exhale, from taking effect. In my opinion, quick-lime might be ſubſtituted in the place of theſe means, and prove a ſufficient preventive of the contagion, as it has powerful demephitiſating properties.

" By waſhing with water and lime I entirely deprived a dead body, in a ſtate of putrefaction, which I was charged, by a decree of the parliament, to have dug out of the ground, of its ſmell, on account of the dangers that might ariſe from digging it out of ground.

" This mephitiſm is ſo inherent, that even time cannot diſſipate it, as was proved by the example of the Donjeon of Vincennes, when it ceaſed to be a ſtate priſon, under the adminiſtration of Maleſherbes. Curioſity attracted a great concourſe of people to the dungeon; and thoſe who had formerly inhabited the priſon being particularly curious to ſee it, they recogniſed the ſame ſmell in it with which they had been ſtruck upon entering it the firſt time: and yet the doors and windows had been removed, and the elevation of the building expoſed it to the free action of the air.

" Workſhops, manufactories, infirmaries, hoſpitals, priſons, and all ſuch buildings, have an atmoſphere peculiar to themſelves, an atmoſphere which ſhortens the lives of the individuals, or often becomes the ſource of epidemic; and ſometimes peſtilential maladies, as the hoſpital or priſon fever, &c. Plants, when deprived of air, languiſh and loſe their colour; the effects of this privation muſt be ſtill more powerful upon animals, whoſe lungs conſume ſo large a quantity of air.

" Citizen Guyton-de-Morveau has diſcovered a method, by means of muriatic, or preferably oxygenated muriatic gas, of purifying any atmoſphere impregnated with contagious and peſtilential miaſmata. It waſhes ſuch an atmoſphere, and deprives it of its miaſmata, which it ſeizes upon and deſtroys. This important diſcovery gives Citizen Morveau a claim to the title of one of the benefactors of humanity, and a right to the civic crown.

" This means, however, though it ſubdues the mephitiſm of the air, would, perhaps, not act with equal efficacy upon walls, which conceal, deep within their pores, the miaſmata

with which they are infected. The activity of time is ſufficient for the purpoſe.

" I find in my notes the reſult of an experiment which I ſhall relate. Wiſhing to aſcertain the power of lime as a means of demephitiſation, I had layers, to the thickneſs of nine lines, taken away from a wall, before I arrived at a layer that was not yet altered. The other portion of the ſame wall, which I reſerved for the comparative experiment, was completely deprived of its mephitic impregnation by three ſucceſſive applications of common white-waſh (pure water and quick-lime). See WHITE-WASH, *Supp.*

" Now lime enters into the compoſition of the milk-paint, and it may be made the baſe of it by ſubſtituting it inſtead of the Spaniſh white, or whiting.

" The painting will become ſtill cheaper by this ſubſtitution, on account of the cheapneſs of the lime, ſo that the toiſe of the painting will coſt only five centimes: as to the labour, there can be no want of hands in buildings where great numbers of individuals are collected together, and where every thing ought to be conducted as œconomically as poſſible.

" To be able to deſtroy the mephitiſm of the walls in the aſylums of induſtry, indigence, and misfortune, is certainly a great point gained; but the means of preventing the evil, ſo that there may be none that requires to be remedied, is a no leſs valuable acquiſition. Now milk-painting, with the baſe of lime, is the means of preventing the walls from becoming impregnated with infectious miaſmata.

" But of what advantage, it may be objected, is the addition of milk and of oil? It is not by a chemiſt that this objection will be made; however this is our anſwer to it. The addition is made becauſe lime has no adheſion to the walls: it cannot be applied in a thick layer; and the ſlighteſt contact cauſes it to come off; on which account walls white-waſhed in the common way ſoil the clothes that come into contact with them. The caſeous part of milk, the addition of the oil, which forms a ſaponaceous ſubſtance with the lime, afford, on the contrary, after the evaporation of the moiſture, a layer that poſſeſſes denſity and coheſion, and is capable of receiving thickneſs; it is a coating, in ſome meaſure varniſhed, which annihilates the poroſity of the ſtone, plaſter, brick, or wood, and from which we may wipe off the duſt, without laying bare the place which has been painted.

" Milk painting affords another advantage, which I have not mentioned in my memoir, namely, that of checking the nitrification of the walls, which is accelerated by painting in diſtemper.

" In fact, glue is an animal ſubſtance, of which one of the conſtituent principles is azot; now the decompoſition of the glue extricates this azot, which is alſo one of the conſtituent principles of the nitric acid, and enables it to combine with the oxygen, with which it forms this acid.

" As milk painting produces no extrication of azot, one of the aliments of the nitrification is removed; not that the caſeous part of milk does not alſo contain azot, but that it does not become decompoſed, nor give this principle the freedom requiſite to enable it to enter into a new combination. Moreover, this painting ſtops up the pores of the ſtone, and interpoſes itſelf between the walls and the nitrifying action.

" Supported by the theory which I have juſt explained, by the authority of two of our firſt chemiſts, Citizens Fourcroy and Deyeux, to whom I have ſubmitted my opinion, and, laſtly, by my own experience, I think myſelf juſtified in recommending to the adminiſtrators of hoſpitals, to adopt the *reſinous milk painting* (always ſubſtituting lime in the place of Spaniſh white) as the moſt efficacious, and at the ſame time the moſt œconomical means of deſtroying the mephitiſation of the walls, and preventing it for the future."

MEPPEN, a town of Weſtphalia, which depends on the Biſhop of Munſter. It is ſeated on the Embs, 15 miles N. of Lingen, and 50 N.W. of Munſter. Long. 7. 36. E. Lat. 52. 45. N.

MEQUINENZA, an ancient town of Spain, in Arragon, with a caſtle; ſeated at the confluence of the Ebro and Segra, in a fertile country, 39 miles N.W. of Tortoſa, and 180 N.E. of Madrid. Long. 0. 29. E. Lat. 41. 36. N.

MER, a town of France, in the department of Loir and Cher, 10 miles N.E. of Blois.

MERAN, a trading town of Germany, in the Tyrol, capital of Erſchland. It is ſeated on the Adige, 12 miles N.W. of Bolzano. Long. 11. 18. E. Lat. 46. 44. N.

MERAZION, or MARKET JEW, a ſea-port in Cornwall, with a market on Thurſday; ſeated on an arm of the ſea, called Mountſbay, three miles E. of Penzance, and 283 W. by S. of London. Long. 5. 30. W. Lat. 50. 12. N.

MERCURY (*Encycl.*). The following experimental enquiry concerning the ſolution and oxydation of mercury, by Mr. Schmidt, apothecary at Sondeſburg, appears in Scherer's Chemical Journal.

" In preparing," ſays the author, " the *red oxyd of mercury* (red precipitate of mercury), the idea had frequently occurred to me, whether the nitrous acid that paſſes over might not ſtill be employed for other ſimilar purpoſes, or more mercury employed for ſolution. Time and circumſtances did not at firſt permit me to enter upon the inveſtigation of this ſubject, which afterwards ceaſed to engage my attention, till the obſervations of Van Mons upon the oxydation of mercury, in this Journal, vol. II. p. 742, which ſo entirely coincided with what I had formerly ſuſpected, recalled my thoughts to it, and I now felt a more urgent impulſe to inſtitute a more accurate enquiry into the ſubject.

" I therefore firſt ſubjected, according to the old method commonly in uſe, one part of mercury, and two parts of the common aquafortis of the ſhops, to diſtillation, in order to examine, whether the acid, which is carried over, might not ſtill be employed once more, or perhaps oftener, for the ſame purpoſe. After the diſtillation, I found that the loſs of aquafortis amounted to no more than four ſcruples in the ounce. To this I added three drachms more of freſh mercury, and my expectations were completely fulfilled; the mercury was completely diſſolved, and the fluid that was carried over amounted to ſix drachms all but one ſcruple, which, as the acid did not yet ſeem to have entirely loſt its powers, I mixed ſtill with three drachms of mercury, in order to carry my experiments to this ultimate point. Here, however, my expectations failed: ſcarcely two drachms were diſſolved, and amongſt this ſalt I found globules of liquid mercury, which, being accurately weighed, amounted to ſixty-ſix grains; and the fluid that had paſſed over no longer exhibited any traces of predominant acidity.

" After having repeated theſe experiments ſeveral times, and always with the ſame reſult, I took equal parts of mercury and common aquafortis, as the former experiments clearly proved that this completely diſſolved, and conſequently oxydated the mercury, put both together into a retort, and ſubjected them to diſtillation. I again obtained a perfect nitrate of mercury, but the nitrous acid that was carried over was far leſs in weight than before, which was to be attributed to the greater quantity of mercury that had been employed. I then mixed the acid that had paſſed over once more with half the quantity of mercury; but now nine ſcruples remained undiſſolved in the retort out of one ounce of mercury.

" Theſe experiments ſufficiently convinced me, that the common aquafortis of the ſhops is able to diſſolve only a little more than an equal quantity of mercury: I therefore thought

proper to try the *double* aquafortis *(aquafortis duplex)*, and the concentrated fuming nitrous acid *(Acidum nitri concentratum)* But alſo the experiments which I made with thoſe afforded me little more diſſolved mercury than the common ſingle aquafortis had done: a drachm of fuming nitrous acid diſſolved only four ſcruples of mercury, all of which, under the extrication of a large quantity of nitrous gas, was converted into a dry ſaline maſs, to which no artificial heat could be applied. Double aquafortis was more convenient for my experiments, as it produced no conſtant extrication of vapours; however it diſſolved and oxydated no larger a quantity of mercury than had been done in the former proceſſes.

" It now therefore only remained for me to try the purified acid of nitre; and it was neceſſary for me to make the experiment alſo with this, in order that I might be able to draw certain inferences from my experiments. I therefore purified good common ſingle aquafortis again over dry ſaltpetre, put the fluid which firſt paſſed over apart, and employed only that which followed for my experiments. Their reſult was as follows:

" 1. Equal parts of mercury and purified acid of nitre, immediately diſſolved in the cold, under an extrication of nitrous gas, in a glaſs veſſel, and yielded a white ſalt, over which ſtill one ſcruple of fluid ſtood; this I poured anew upon half a drachm of mercury, which likewiſe was entirely converted into a ſaline maſs.

" 2. Half an ounce of purified aquafortis, and an ounce of mercury, were likewiſe completely diſſolved, without the application of artificial heat.

" 3. I then poured half an ounce more of this aquafortis, and two ounces of mercury, into a ſmall retort, in which I let them remain incloſed over night, and, on the following morning, I found that ſix drachms were diſſolved. I then fixed a receiver to the retort, and applied a gentle heat; however, no more mercury was diſſolved; I therefore poured the remaining crude mercury into the fluid that had paſſed over into the receiver, in which, upon the application of heat, two drachms were again diſſolved, ſo that in all an ounce of mercury remained undiſſolved *.

" After having made theſe experiments, I endeavoured to avail myſelf of the hints which Van Mons gives in the abovementioned article in Scherer's Journal, namely, " To perform the ſolution and oxydation of the mercury in an open veſſel, which enables us to ſtir the maſs, and divide the mercury." An evaporating diſh of porcelain was choſen for this purpoſe: I began the ſolution at a low temperature, and gradually increaſed the heat, at the ſame time keeping the maſs in conſtant motion by ſtirring it; however, all my labour was in vain. I obtained nothing more than what the preceding experiments had already exhibited, and the ſuppoſition of Van Mons, " That, by proceeding in this manner, it might be poſſible to oxydate at leaſt fifty parts of mercury with twenty parts of moderately concentrated nitrous acid," was proved to be groundleſs. I obtained, indeed, a very good oxyd; but the mercury that was not diſſolved had eſcaped in increaſing the temperature.

" However, if we take the proper proportions of acid and mercury, and manage the fuel properly, this mode of proceeding is the moſt convenient, eaſy, and advantageous. By conſtant ſtirring, every part of the mercury is expoſed to the action of the acid; the whole proceſs is completed in a few hours, and a conſiderable ſaving of fuel is made.

" From all the experiments hitherto mentioned, I deduce the following *inferences:*

1. " That the common, not purified, aquafortis of the ſhops, both ſingle and double, can diſſolve and oxydate well only equal quantities of mercury; but that one part of purified aquafortis can diſſolve and oxydate two parts of mercury.

2. " That conſequently purified aquafortis, free from all admixture of muriate and ſulphuric acid, is the beſt adapted for the ſolution of mercury.

3. That the ſolution or oxydation of mercury, performed in open veſſels, effects nothing more than that which is performed in cloſe veſſels; but that, for the reaſons already adduced, it is more advantageous to perform the operation in open veſſels †.

4. " That it is advantageous, when this operation is performed in cloſe veſſels, to reſerve the acid that paſſes over from the mercurial oxyd, for new ſolutions of mercury; or alſo to make uſe of this fluid in preparing the white precipitate of mercury, as always a portion of diſſolved mercury paſſes over together with it, which affords a white precipitate with muriate of ammonia and carbonate of kali.

5. " When too much mercury was employed, I did not obſerve that it paſſed over into the receiver in the metallic ſtate, but it was always at firſt covered by the mercurial ſalt; and upon increaſing the temperature, it was raiſed indeed, but it depoſited itſelf in a half-calcined ſtate upon the upper part of the retort, in the form of a greyiſh-white ſublimate. The very trifling quantity of metallic mercurial globules that paſſed over was immediately diſſolved by the diſtilled acid contained in the receiver.

MERDIN, a town of Turkey, in Diarbeck, with a caſtle, and an archbiſhop's ſee. The country about it produces a great deal of cotton. It is 45 miles S.E. of Diarbekar. Long. 39. 59. E. Lat. 36. 50. N.

MERE, a town in Wiltſhire, with a market on Tueſday, 28 miles W. of Saliſbury, and 100 W. by S. of London. Long. 2. 25. W. Lat. 51. 6. N.

MERECZ, a town of Lithuania, ſeated at the confluence of the Berezino and Merecz, 30 miles N. of Grodno. Long. 24. 10. E. Lat. 50. 0. N.

MERGENTHEIM, a town of Franconia, ſubject to the grand maſter of the Teutonic order; and ſeated on the Tauber, 16 miles S.W. of Wurtzburg. Long. 8. 50. E. Lat. 49. 30. N.

MERGUI, the capital of a province of the kingdom of Siam, ſituate on an iſland near the coaſt, with an harbour, which is ſaid to be one of the beſt in the Eaſt Indies. Long. 98. 28. E. Lat. 12. 6. N.

MERINDOL, a village of France, in the department of the Mouths of the Rhone, whoſe inhabitants were maſſacred on account of their religion, in 1545, by virtue of an arret of the parliament of Aix. It is nine miles E. of Cavaillon.

MERITZ, MERITCH, or MERRICH, an important fortreſs and city of the Deccan of Hindooſtan. It was taken by Hyder Ally, in 1778; and is ſituate near the N. bank of the river Kiſtna, 70 miles S.W. of Viſiapour.

---

* " It is not yet entirely clear to me (ſays Mr. Schmidt in a note), from whence it proceeded, that the whole of the nitrous acid did not at firſt ſaturate itſelf with mercury, and that the fluid that paſſed over ſtill diſſolved a portion of mercury, as was the caſe in all the proceſſes before mentioned. Perhaps the nitrous ſalt of mercury that had ſeparated itſelf from, and covered, the metallic mercury, prevented the nitrous acid, that was now left in a weak ſtate, from acting upon it."

† *Note of Prof. Scherer.* " In the ſame manner I alſo diſſolve the ſulphate of mercury, complete the operation in a few hours, which, when performed in cloſe veſſels, occupies ſeveral days, on account of the difficulty with which the concentrated ſulphuric acid paſſes over, and nevertheleſs obtain Turpeth mineral of the fineſt yellow colour."

MERK, a river of Auſtrian Brabant, which running N. by Breda, afterward turns W. and falls into one of the months of the river Maeſe, oppoſite the iſland of Overflackee, in Holland.

MERO, a ſtrong town of the kingdom of Pegu, 140 miles S.W. of the town of Pegu. Long. 98. 36. E. Lat. 16. 0. N.

MEROU, a town of Perſia, in Chorafan, ſeated in a fertile country, which produces ſalt, 112 miles S.W. of Bokhara. Long. 64. 25. E. Lat. 37. 40. N.

MERRIMACK, a town of the United States, in New Hampſhire, ſituate on a river of the ſame name, 35 miles N.W. of Boſton.

MERSEBURG, a town of the electorate of Saxony, in Miſnia, with a biſhop's ſee; ſeated on the Sala, 10 miles S. of Halle, and 56 N.W. of Dreſden. Long. 12. 6. E. Lat. 51. 28. N.

MERSPURG, a town of Suabia, in the biſhopric of Conſtance, and the biſhop's uſual place of reſidence. It is ſeated on the N. ſide of the lake of Conſtance, 11 miles from the town of that name. Long. 9. 26. E. Lat. 47. 45. N.

MERTOLA, a ſtrong town of Portugal, in Alentejo, ſeated near the Guadiano, 60 miles S. of Evora, and 100 S.E. of Liſbon. Long. 7. 40. W. Lat. 37. 30. N.

MERTON, a village near Oxford, ſituate near two military ways. There were intrenchments in the neighbouring woods, ſuppoſed to be thrown up by King Ethelred, or the Danes, whom he defeated in 871.

MERTON, a village in Surrey, ſeated on the Wandle, ſeven miles S.W. of London. It had a celebrated abbey, founded in the reign of Henry I. in which ſeveral important tranſactions took place; particularly, at a parliament held here, in 1236, were enacted the proviſions of Merton (the moſt ancient body of laws after Magna Charta), and the barons gave that celebrated anſwer to the clergy, *Nolumus leges Angliæ mutari*—We will not change the laws of England. Nothing remains of this abbey, but the E. window of a chapel; and the walls that ſurround the premiſes, which are built of flint, are nearly entire, and include about 60 acres. Upon the ſite of this abbey are two calico manufactures, and a copper-mill; and about 1000 perſons are now employed on a ſpot, once the abode of monaſtic indolence.

MERVE, the north branch of the river Maeſe, in Holland, on which the city of Rotterdam is ſeated.

MERVILLE, a town of France, in the department of the North, ſeated on the Lis, 10 miles S.E. of Caſſel, and 24 S.W. of Menin. Long. 2. 43. E. Lat. 50. 57. N.

MESEN, a ſea-port of Ruſſia, in the government of Archangel, capital of a diſtrict of the ſame name. It is ſeated on the river Meſen, on the E. coaſt of the White Sea, 160 miles N. of Archangel. Long. 44. 45. E. Lat. 65. 50. N.

MESKIRK, a town of Suabia, in the county of Furſtenburg, 15 miles N. of Uberlingen.

MESSA, a town of Morocco, on the river Sus, not far from the Atlantic, at the foot of Mount Atlas. Near it is a moſque, in which are the bones of a whale, which the inhabitants conſider as the bones of the whale that ſwallowed Jonah. It is 165 miles S.W. of Morocco. Long. 10. 46. W. Lat. 29. 58. N.

MESSING, a town of Franconia, in the biſhopric of Aichſtatt, 14 miles N.N.E. of Aichſtatt.

MESTRE, a town of Italy, in the dogado of Venice, 16 miles N.E. of Padua. Long. 12. 2. E. Lat. 45. 26. N.

MESURATA, a ſea-port of Tripoli, and the reſidence of a governor. Caravans travel hence to Fezzan and other interior parts of Africa, with which they carry on a great trade. It is 100 miles E.S.E. of Tripoli. Long. 15. 2. E. Lat. 31. 55. N.

METELEN, a town of Weſtphalia, in the biſhopric of Munſter, 19 miles N.W. of Munſter. Long. 6. 59. E. Lat. 52. 18. N.

METERISCH, a town of Moravia, in the circle of Iglau, 17 miles E. of Iglau, and 76. S.E. of Prague. Long. 15. 58. E. Lat. 49. 6. N.

METHODISTS *(Encycl.)*. We have already given a general account of this religious body, but it may not be diſagreeable to the reader to have their preſent ſtate in England more particularly deſcribed. The moſt trivial cauſes have oftentimes effected the greateſt changes in ſociety. Syſtems have been overturned by caſual incidents, apparently of no ſignificance; and widely-extended corruptions have been purged away, by means the moſt inadequate, and through the inſtrumentality of perſons from whom different deſigns might have been expected. The reformation of the church, and the ultimate deſtruction of the papal power, may be attributed to the preference given by Leo X. to the Dominicans, and the conſequent reſentment of the Auguſtine monks, who encouraged their brother *Luther* to a ſpirited oppoſition of the papal indulgences.

The great change which has evidently taken place in the proteſtant churches within the preſent century, and the ſpread of religious knowledge in various parts of the earth, not long ſince obſcured with ignorance and ſuperſtition, may be traced to the chambers of a private fellow of a college in Oxford. The ſentiments of John Weſley, upon the neceſſity of a living Chriſtianity, ſeated in the hearts and commanding the practice of men, in oppoſition to a mere formal profeſſion, led him to aſſociate with others of the ſame ſerious diſpoſition. The remark made to him by a good man, whom he went many miles to ſee, affected him not a little: "Sir (ſaid he), you wiſh to ſerve God and to go to heaven. Remember, you cannot ſerve him alone. You muſt, therefore, *find* companions, or *make* them: the Bible knows nothing of a ſolitary religion." Soon after this, which was about the year 1729, Mr. Weſley formed a ſmall ſociety at Oxford, of ſerious ſtudents, as his brother Charles, a Mr. Morgan, the exemplary Mr. Harvey, the celebrated George Whitfield, and others. Theſe pious young men met together, to promote one another's ſtudies, and to read the ſcriptures for mutual edification. Finding the benefit of this courſe, they proceeded, in the next place, to render themſelves more conſpicuous in a work of love; namely, to viſit the priſoners in the caſtle, and the ſick poor in the town. Being increaſed to the number of fifteen, they were ſtrengthened in their minds, and encouraged in their pious labours. At this time, when prejudice is ſo much ſoftened down, and religious intolerance has been driven away by a ſpirit of liberality, the man of enlarged mind, whatever may be his principles, cannot ſee any thing to diſcommend in this conduct: it was, on the contrary, ſuch as highly became perſons deſtined for the moſt ſacred of profeſſions, and ought to be held up as an example to all candidates for the miniſtry. Thus far, candour muſt approve the riſe of what is called *Methodiſm*, which term was applied to theſe ſerious young men by a fellow of *Merton* college, in alluſion to an ancient ſect of phyſicians at Rome, who were remarkable for putting their patients under regimen, and were therefore called *Methodiſts*. But religious zeal is a delicate thing, and requires to be tempered with much diſcretion. Meſſrs. Weſley and Whitfield were fired with the ſpirit to ſuch a degree, that no limits could contain them. Though ordained in an epiſcopal church, the canons of which are very ſevere againſt all irregularities, they ventured to break the barriers, and went forth as miſſionaries to convert the world.

The churches being ſoon ſhut againſt them, they adopted the novel method of field-preaching, which produced much diſorder, and, it muſt alſo be confeſſed, much good. The next irregular ſtep of theſe good men, for ſuch they undoubtedly were, was the authoriſing laymen, and thoſe in general of the loweſt occupations, to preach the goſpel. Nothing can prove the tenderneſs of our national eſtabliſhment more effectually than the indulgence which was ſhewn to theſe clergymen: no eccleſiaſtical cenſure was ever paſſed upon their conduct, although ſuſpenſion might naturally have been expected. The churches, it is true, were in general ſhut againſt them; but this was the private act of individuals, with which the biſhops could have no concern. But to return: the ſocieties of methodiſts increaſed rapidly, and were multiplied throughout the kingdom. At length the two great leaders, John Weſley and George Whitfield, ſeparated from each other, and a grand breach was made between their followers. The former held univerſal redemption and free will, while the others ſtrenuouſly adhered to abſolute election and free grace. The heats occaſioned by this difference ſubſiſted for many years, and produced much violent and indecent controverſy: at preſent there is more unity between them, and they appear to be aſhamed of the intemperance which diſgraced their once favourite diſputants. Mr. Weſley preſerved an admirable economy in his numerous ſocieties, which were held together, during his life-time, by a ſimple, but firm, diſcipline. Since his death, they have ſuffered conſiderably from a ſpirit of diſſenſion. Mr. Weſley always preſerved a great regard for the church of England; and never ſuffered his ſocieties to have religious worſhip in the hours of church ſervice, or the ſacrament to be adminiſtered by lay-preachers. Since his death, both theſe reſtrictions have been broken, and moſt of his ſocieties have become complete diſſenters. Many, however, from their veneration for Mr. Weſley, diſapprove theſe meaſures, and refuſe to hold communion with their brethren—calling themſelves, with an honeſt pride, *Church Methodiſts*. Mr. Weſley, it is ſaid, about the year 1765, was ſo imprudent as to accept of conſecration from a perſon calling himſelf a Greek biſhop, who alſo ordained ſeveral of the lay-preachers. This was a ſcandalous violation of the canons, and a pitiful ſubterfuge at the very beſt. It is generally concluded that the man was an impoſtor. Mr. Weſley afterwards took upon him, with the aſſiſtance of ſome other preſbyters, to ordain preachers, and even conſecrated, after a manner, Dr. Coke to be a ſuperintendant, or biſhop, of the methodiſts in North America. This gentleman is now at the head of the Weſleyan, or Arminian methodiſts, and is indefatigable in following the ſteps of his great leader. He has made ſeveral voyages to America and the Weſt-Indies, where the ſocieties are very numerous; and it is ſaid that their labours among the negroes have been exceedingly ſucceſsful. No leſs than ten thouſand are regular members of claſſes in the Weſt-India iſlands, where there are alſo many black preachers. The methodiſts of Mr. Weſley's eſtabliſhment are more numerous than thoſe of the Calviniſtic perſuaſion, and appear to be better ſubjects of the government.

METHVEN, a town of Scotland in Perthſhire, with an ancient caſtle. It has manufactures of broad and narrow linen; with two paper and ſome other mills. King Robert Bruce, ſoon after his coronation in 1306, was defeated here by the Engliſh troops under the earl of Pembroke, and found himſelf forſaken by the greater part of his army. It is ſix miles W.N.W. of Perth.

METHWOLD, a town in Norfolk, with a market on Tueſday, 15 miles N.W. of Thetford, and 86 N.N.E. of London. Long. 0. 40. E. Lat. 52. 34. N.

METLING, a ſtrong town and caſtle of Germany, in the duchy of Carniola, ſeated on the Kulp, 40 miles S.E. of Laubach. Long. 15. 10. E. Lat. 46. 2. N.

METRO, a river of Italy, which riſes in the territory of the church, runs into the duchy of Urbino, and falls into the gulf of Venice, near Fano.

MEUDON, a village of France, where was a magnificent royal palace on the Seine, ſix miles S.E. of Paris.

MEULAN, an ancient town of France, in the department of Seine and Oiſe. It is built in the form of an amphitheatre, on the river Seine, over which are two bridges, 20 miles N.W. of Paris. Long. 1. 57. E. Lat. 49. 1. N.

MEURS, a town of Germany, in the duchy of Cleves, ſeated on the Rhine, 15 miles N.W. of Duſſeldorf. Long. 6. 41. E. Lat. 51. 25. N.

MEURTHE, a department of France, including part of the late province of Lorrain. It is ſo called from a river that riſes in the department of the Voſges, and watering Luneville and Nanci, falls into the Moſelle. Nanci is the principal ſee of this department.

MEUSE, a department in France, including the late duchy of Bar. It takes its name from the river Meuſe, or Maeſe. Bar-le-Duc is the capital. See MAESE.

MEWARI, a conſiderable town of Japan, in the iſland of Niphon, with a royal palace. It is ſeated on a hill, at the foot of which are vaſt fields of wheat and rice, with fine orchards, full of excellent plums.

MEWAT, a hilly and woody tract of Hindooſtan Proper, lying on the S.W. of Delhi, confining the low country, along the W. bank of the Jumna, to a comparatively narrow ſlip, and extending weſtward 130 miles. From N. to S. it is 90 miles. Although ſituate in the heart of Hindooſtan, within 25 miles of its former capital (Delhi), its inhabitants, the Mewatti, have been ever characteriſed as the moſt ſavage and brutal; and their chief employment has been robbery and plunder. In 1265, 100,000 of theſe wretches were put to the ſword; but they are ſtill ſo noted as thieves and robbers, that parties of them are taken into pay by the chiefs of Upper Hindooſtan, in order to diſtreſs the countries that are the ſeat of warfare. Mewat contains ſome ſtrong fortreſſes on ſteep or inacceſſible hills, and was almoſt entirely ſubject to the late Madajee Sindia, a Mahratta chief.

MEWAT-ALI, a town of Perſia, in Irac-Arabia, not ſo conſiderable as formerly, but famous for the ſuperb and rich moſque of Ali, to which the Perſians go in pilgrimage from all parts. It is 100 miles S.W. of Bagdad. Long. 42. 57. E. Lat. 32. 0. N.

MEXAT-OCEM, a conſiderable town of Perſia, which takes its name from a moſque dedicated to Ocem, the ſon of Ali. It is ſeated in a fertile country, on the river Euphrates, 70 miles N. of Mexat-Ali. Long. 42. 57. E. Lat. 33. 0. N.

MEXICANO, or ADAYES, a river of Louiſiania, which empties itſelf into the gulf of Mexico.

MEXICO, the capital of the province of Mexico Proper, of the audience of Mexico, and of all New Spain. It was a flouriſhing place before the Spaniards entered the country, and was ſeated on ſeveral iſlands, in a ſalt-water-lake, to which there was no entrance, but by three cauſeways, two miles in length each. It contained about 80,000 houſes, with ſeveral large temples, full of rich idols, and three palaces where the emperor of Mexico reſided. The abbé Clavigero ſays, that when the Mexicans were ſubjected to the Colhuan and Tepanecan nations, and confined to the miſerable little iſlands on the lake of Mexico, they ceaſed for ſome years to cultivate the land, becauſe they had none, until neceſſity taught them to form moveable fields and gardens, which floated on the waters of the lake. The method which they purſued to make theſe, and which they ſtill practiſe, is extremely ſimple. They

plait and twiſt willows and roots of marſh plants or other materials together, which are light, but capable of ſupporting the earth of the garden firmly united. Upon this foundation they lay the light buſhes which float on the lake; and over all, the mud and dirt which they draw from the bottom of the ſame lake. Their regular figure is quadrangular; their length and breadth various; but generally they are about eight perches long, and not more than three in breadth, and have leſs than a foot of elevation above the ſurface of the water. Theſe were the firſt fields which the Mexicans owned after the foundation of Mexico; and there they firſt cultivated the maize, great pepper, and other plants neceſſary for their ſupport. In progreſs of time, as theſe fields grew numerous from the induſtry of the people, there were among them gardens of flowers and odoriferous plants. Every day, at ſunriſe, innumerable veſſels, loaded with various kinds of flowers and herbs cultivated in theſe gardens, are ſeen arriving by the canal, at the great market-place of the capital. The mud of the lake is an extremely fertile ſoil, and requires no water from the clouds. In the largeſt gardens there is commonly a little tree, and even a hut, to ſhelter the cultivator and defend him from rain or the ſun. When the owner of a garden wiſhes to change his ſituation, he gets into his little veſſel, and by his own ſtrength alone, if the garden is ſmall, or with the aſſiſtance of others, if it is large, he tows it after him, and conducts it wherever he pleaſes. Mexico was taken by Cortez, in 1521, after a ſiege of three months. As the Mexicans defended themſelves from ſtreet to ſtreet, it was almoſt ruined, but afterward rebuilt by the Spaniards. The ſtreets are ſtraight, and ſo exactly diſpoſed, that in point of regularity it is the fineſt city in the world; and the great cauſeways leading to it, with the want of walls, gates, and artillery, render Mexico extremely remarkable. The great ſquare in the centre of the city, and the public buildings, are magnificent. There are 29 cathedrals and churches, and 22 convents; of the riches of which an idea may be formed from the revenues of the grand cathedral, amounting to 80,000l. a-year, of which the archbiſhop has 15,000l. There is alſo a tribunal of the inquiſition, a mint, and an univerſity. This city contains above 200,000 inhabitants. The goldſmiths here are immenſely rich, and it carries on a great trade to Europe by St. Juan de Ulhua, and to Aſia by Acapulco. This place was overflowed by an inundation in 1629, in which 40,000 perſons were drowned. This obliged the Spaniards to make a great conduit through a mountain, in order to empty the lake; which being done, part of the town became ſeated on dry land. Mexico is ſupplied with freſh water by an aqueduct three miles long. It is 200 miles E.N.E. of St. Juan de Ulhua, and 250 N.E. of Acapulco. Long. 100. 34. W. Lat. 20. 2. N.

MEXICO, GULF OF, that part of the Atlantic Ocean, on the coaſt of N. America, bounded on the S. and W. by Mexico, and on the N. by W. and E. Florida; the entrance lying to the E. between the S. coaſt of E. Florida, and the N.E. point of Jucatan.

MEYENBERG, a town of Upper Saxony, in the marche of Pregnitz, 21 miles N.E. of Perleberg, and 60 N.N.W. of Berlin. Long. 12. 19. E. Lat. 53. 20. N.

MEYENFELDT, a town in the country of the Grifons, ſeated on the Rhine, in a pleaſant country, fertile in excellent wine, 15 miles N.E. of Coire. Long. 9. 36. E. Lat. 47. 2. N.

MEYRVEIS, a town of France, in the department of Loziere, 23 miles S. of Mende, and 27 W. of Alais. Long. 3. 18. E. Lat. 44. 10. N.

MEZANA, a town of Naples, in Baſilicata, 17 miles S.S.W. of Turſi.

MEZEMNA, a ſea-port of Fez, on the coaſt of the Mediterranean, 80 miles E. of Tetuan. Long. 4. 1. W. Lat. 35. 22. N.

MEZEN, a ſea-port of Ruſſia, in the government of Archangel, near the White Sea, at the mouth of a river of the ſame name, 128 miles N.N.E. of Archangel. Long. 43. 34. E. Lat. 66. 30. N.

MEZIN, a town of France, in the department of Lot and Garonne: ſeated in a country that abounds in wheat; with vines, from which is principally made brandy: and with the cork-tree, which is ſold both in its natural ſtate, and in corks. It is nine miles N.W. of Condom.

MIA, or MIJAH, a large town of Japan, ſeated on the S. coaſt of the iſle of Niphon, with a fortified palace. Long. 130. 40. E. Lat. 35. 50. N.

MIANA, a town of Perſia, in the province of Aderbeitzan. Here the celebrated traveller M. Thevenot died, on his return from Iſpahan. It is 57 miles S.E. of Tauris.

MICHA, a cape of Dalmatia, which advances into the gulf of Venice, near the town of Zara.

MICHAEL, ST. the moſt fertile and populous of the Azores or Weſtern Iſlands. Its two principal harbours are Punta Guda and Villa Franca: the former is the capital of the iſland. Long. 25. 42. W. Lat. 37. 47. N.

MICHAEL, ST. a town of France, in the department of Meuſe, remarkable for its hoſpital, and the rich library of a late Benedictine abbey. It is ſeated on the Meuſe, 20 miles N.E. of Bar-le-Duc, and 165 E. of Paris. Long. 5. 38. E. Lat. 48. 51. N.

MICHAEL, ST. a ſea-port of New Spain, in the province of Guatimala, ſeated on a ſmall river, 180 miles S.E. of New Guatimala. Long. 87. 45. W. Lat. 12. 25. N.

MICHAEL, ST. a town of Peru, in the province of Quito. It was the firſt Spaniſh colony in Peru, and is ſeated near the mouth of the Piura, 225 miles S. by W. of Quito. Long. 80. 50. W. Lat. 5. 0. S.

MICHAEL DE IBARRA, ST. a town of Peru, in the province of Quito, 60 miles N.E. of Quito.

MICHAEL, GULF OF ST. to the E. of Panama, that part of the Pacific Ocean, which was firſt diſcovered by the Spaniards, after their march acroſs the iſthmus of Darien.

MICHELONIA, a country of Pruſſia, which is part of the circle of Culm, and ſeparated from the other part by the river Dribents. It takes its name from the caſtle of Michelow.

MICHIGAN, a conſiderable lake of N. America, whoſe N.E. extremity communicates with the N.W. end of Lake Huron, by the ſtrait of Michillimackinac.

MICHILLIMACKINAC, a ſtrait of N. America, which unites the lakes Michigan and Huron, and lies in 85° W. long. and 46° N. lat.

MIDDLEBURG, a large and ſtrong commercial city of the United Provinces, capital of the iſland of Walcheren, and of all Zealand. The ſquares and public buildings are magnificent. The Dutch took it from the Spaniards, in 1574, after a ſiege of 22 months. The inhabitants are computed at 26,000. The harbour is large and commodious, and has a communication with the ſea by a canal, which will bear the largeſt veſſels. It is 20 miles N.E. of Bruges, 30 N.W. of Ghent, and 72 S.W. of Amſterdam. Long. 3. 39. E. Lat. 51. 32. N.

MIDDLEBURG, a town of Dutch Flanders, which belongs to the prince of Iſenghein. It is five miles S.E. of Sluys. Long. 3. 26. E. Lat. 51. 15. N.

MIDDLESEX, a county of the ſtate of Maſſachuſets. Charleſtown, Cambridge, and Concord, are the chief towns.

MIDDLESEX, a county of the ſtate of Connecticut, which,

with the county of Tolland, has been recently formed from that of Hartford. Middleton and Haddam are the county towns.

MIDDLESEX, a county of the ſtate of New Jerſey. New Brunſwick is the chief town.

MIDDLETON, a commercial town of the ſtate of Connecticut, ſeated on the river Connecticut, 15 miles S. of Hartford. It is one of the county-towns of Middleſex.

MIDDLETOWN, a town of the ſtate of New Jerſey, and adjoining Shrewſbury, in the county of Monmouth. Sandy Hook (ſo called from its ſhape and ſoil) is included in this townſhip. On the point of the Hook ſtands the light-houſe, 100 feet high, built by the city of New York. Middletown is 30 miles S.W. of New York, and 50 E. by N. of Trenton.

MIDWIFE (*Encycl.*). The following extract from an account of the mode of ſupplying a country pariſh with a midwife, by the Rev. Mr. Dolling, late Vicar of Aldenham, Herts, appears in the Reports of the Society for bettering the Condition of the Poor.

" Fifteen years ago (ſays Mr. Dolling), there being then no midwife living in the pariſh of Aldenham, I ſelected a poor widow, who had three children ſupported by the pariſh, and ſent her up for inſtruction, to the Lying-in Hoſpital in Store-ſtreet, near Tottenham-court-road; where Dr. Oſborn permitted her to continue for three months, at a very ſmall expence. Though without any preparatory education, ſhe returned ſo well inſtructed, as to exerciſe her calling in the pariſh ever ſince, without a ſingle accident, or ever having occaſion to call in medical aſſiſtance*. She has been enabled thereby to ſupport herſelf and her children comfortably: and is now living, and in the enjoyment of the confidence due to her ſkill. She attends all the day-labourers' wives, at the ſtipulated ſum of half-a-crown.

" The expence of her inſtruction and ſetting up, was collected in the pariſh by ſubſcription; part of which paid for her board in the hoſpital; and the reſt of the money was applied for her journey and incidental expences.—She has been the cauſe of a conſiderable ſaving in the medical bills of the pariſh, beſides being a very great comfort † and relief to the poor."

The expence and trouble of the above was trifling; its benefit, both to the poor and to the pariſh, conſiderable: whenever, therefore, a pariſh is diſtant from medical aid, and unprovided with a midwife of its own, the above may be recommended to its conſideration.

MIECHAU, or MIEZAVA, a town of Poland, in Cujavia, ſeated on the Viſtula, 10 miles S. by E. of Thorn. Long. 18. 46. E. Lat. 52. 58. N.

MIGLIANO, a town of Naples, in Principato Ulteriore, 15 miles N.N.E. of Conza.

MIKALIDI, a town of Turkey in Aſia, in Natolia, with a fort, ſituate on a river, which runs into the ſea of Marmora, 35 miles W. of Burſa. Long. 28. 24. E. Lat. 40. 10. N.

MILAZZO, a ſtrong ſea-port of Sicily, in Val-di-Demona. It is divided into the upper and lower town; the upper is very ſtrong, and the lower has a fine ſquare, with a ſuperb fountain. It is ſeated on a rock, on the W. ſide of a bay of the ſame name, 13 miles W. of Meſſina. Long. 15. 34. E. Lat. 38. 12. N.

MILETO, an ancient town of Naples, in Calabria Ulteriore, with a biſhop's ſee, five miles from Nicotera.

MILETS, anciently MILETUS, a town of Turkey, in Aſia, in Natolia, 64 miles S. of Smyrna. Long. 27. 14. E. Lat. 38. 22. N.

MILFORD, a town of the ſtate of Delaware, in the county of Suſſex, ſeated at the ſource of a ſmall river, 15 miles from the bay of Delaware, and 150 S. of Philadelphia.

MILHAUD, a town of France, in the department of Aveiron. It was diſmantled in 1629, and is ſeated on the Tarn, 50 miles N.W. of Montpellier, and 142 S. of Paris. Long. 3. 11. E. Lat. 44. 3. N.

MILIANE, a town of the ſtate of Algiers in Tremeſen, with a caſtle. It is ſeated in a country fertile in oranges, citrons, and other fruits, the beſt in all Barbary. Long. 2. 35. E. Lat. 35. 15. N.

MILK (*Encycl.*). In the village of Barton-under-Needwood, Staffordſhire, the principal number of the poorer inhabitants were deſtitute of all means of procuring this moſt uſeful ſpecies of FOOD for their families. The benefit which would reſult, if they could be furniſhed with that article of food, appeared of ſo much importance, that, nearly three years ſince, a ſpecific plan for providing a ſupply was adopted. A reſpectable tradeſman in the pariſh expreſſed his readineſs to take a quantity of his land into his own hands, and to employ it in keeping cows, for the purpoſe of ſelling their milk to the poor. He mentioned, however, two obſtacles, as neceſſary to be removed. He ſtated the impracticability of diſtributing the milk at his own houſe; as the crowd, which would frequent it for a conſiderable time every morning and evening, together with the conſequent noiſe and trouble, would be equally unpleaſant and inconvenient. And he apprehended that he ſhould receive from the purchaſers a quantity of copper coin, larger than he ſhould be capable of circulating again, either in the way of change to them, or in his own buſineſs. It was therefore ſettled, that the milk ſhould be regularly carried from the field to the houſe of another inhabitant of the village, and ſold there: and a friend of the undertaking engaged to pay this perſon annually for his trouble. The tradeſman had alſo an aſſurance, that copper coin, to the amount of ſome guineas annually, ſhould be taken off his hands, if he thought proper. Theſe points being adjuſted, the meaſure was carried into effect at Candlemas, 1795; and it has been continued without interruption to the preſent

---

* In the Mancheſter Infirmary, upon the ſuggeſtion of Mr. Simmons, a ſurgeon of eminence there, a plan for the relief of poor lying-in women has been adopted, which may deſerve the attention of other medical hoſpitals. Upon notice of any difficult caſe of delivery, the infirmary ſurgeon of the diſtrict, or in his abſence the one next in rotation, immediately attends gratis, and aſſiſts the poor woman at home; and the Infirmary provides medicines if wanted. The caſes that have occurred have been very few, but they were caſes of difficulty, and moſt of them would have been of extreme danger without ſuch medical aid.

† It ſeems much better for the wives of the poor, that they ſhould be attended at home, and receive a little pecuniary or other aſſiſtance, than that they ſhould be moved into a lying-in hoſpital; in which caſe the woman is uſually abſent from home for a month, her family neglected during her abſence, ſome parochial charge incurred, and ſhe returns home with habits of life not ſuitable to her ſituation. If ſhe is attended at home ſhe is generally capable of managing and aſſiſting in her family in a very few days, and the relief is given her at about a tenth part of the expence that would have attended her lying-in at an hoſpital.

time. The advantages which have accrued from it to the poor, have completely anſwered the expectations previouſly formed.

The following brief ſtatement will ſufficiently ſhew the detail of the ſcheme.

Nineteen acres of land, which might be let to good tenants at 2l. 10s. per acre, are wholly employed in furniſhing graſs and hay for the cows, and in rearing two or three calves. The ſtock of cows conſtantly kept is ſeven. Four of them calve at different periods in the ſpring and ſummer, and three in the autumn and winter.—The price, at which the milk is ſold, is three halfpence per quart, from the beginning of Auguſt until the time of turning out to graſs in the ſpring; and one penny, during the remainder of the year. It is always paid in ready money.

The quantity furniſhed to each poor family is regulated by the number of children in the family, and by other ſimilar circumſtances. Some of the purchaſers generally attend to ſee the milk carried from the field to the place of ſale: and they are all ſatisfied that the quality is unadulterated, and the meaſure ample.

If the milk had been ſold at two pence a quart, during the three winter months, and at three halfpence the reſt of the year, the account would have been in profit: but, at a penny a quart for the ſummer half year, there was a deficiency of about 5l. *as will appear by the following ſtatement, made by the tradeſman who ſells the milk, of the receipts and expences, for one year, ending the 17th of September, 1797.

Receipts.	£.	s.	d.
One year's receipts for milk	70	8	5
Milk kept for the tradeſman's family	12	5	9
Sale of young calves	3	6	0
Value of three rearing calves	8	10	0
Lattermath of part of the land	2	1	6
	96	11	8

Expences.	£.	s.	d.
A year's rent of nineteen acres of land, at 50s. per annum	47	10	0
Taxes, &c.	3	16	6
Mowing, getting hay, &c.	6	12	6
Straw for dry cows and litter	6	0	0
Rent of croft at home; yards, and ſhed	2	10	0
Decreaſe in value of ſtock from age	3	10	0
N. B. If young cows, they may improve.			
Hazard in ſtock, drugs, &c.	6	5	0
Intereſt of the value of ſtock	4	4	0
Loſs in changing ſtock, to keep a regular ſupply, and expences	3	10	0
James Harding, for care of cows and extra wages to ſervant	8	17	0
Carrying dung and ſoil, mixing and carrying compoſts	5	5	0
Hedging, ditching, ſpreading, &c.	1	10	0
Cultivation of cabbages	1	6	0
Uſe of bull	0	17	6
	101	13	6

To the foregoing, which appear in the Reports of the Society for bettering the Condition of the Poor, Mr. Bernard annexes the following obſervations: he ſays, "I do not mean to intimate that this plan is preferable to others which have been adopted elſewhere; that object, univerſally moſt deſirable, may in different places be beſt attained in different ways; and in ſome places it may be attainable by that method only which has been deſcribed. When this mode is ſelected, to provide for the permanence of the meaſure, will generally prove more beneficial, than to require *extreme* cheapneſs in the price of the article. To be able daily to purchaſe milk, though at its full value, is a very important advantage to the poor †. A local ſubſcription, however, for the purpoſe of reducing the price, will frequently be an eligible mode of charity. But, if the ſeller be urged to diſpoſe of the milk at a rate ‡, that will not allow him to draw from

* There are many parts of England, in which milk may be had at leſs coſt, than in this part of Staffordſhire. Mr. Manſell, of Lathbury Hall, near Newport Pagnell, aſſerts, that in his neighbourhood, cows may be kept with more advantage and leſs expence, than in that of Mr. Giſborne. This information is of importance, as it ſhews that Mr. Giſborne's example may be imitated with great advantage in other parts of England. Mr. Manſell thinks that the lattermath ſhould be kept; and that, where the ſupply of milk is the object, calves ſhould not be reared; as they conſume the richeſt milk, which ſhould be mixed with the other: he conceives that, in his own neighbourhood, the cutting of hedges will pay the expence of fences; and that nothing need be allowed for changing cows; as an intelligent farmer would make ſome benefit by buying and ſelling.

† It would be a great benefit and comfort to the poor, if farmers would generally, or even occaſionally, ſell them, for ready money, ſmall quantities (as half a buſhel) of corn, and ſingle cheeſes. The *trouble* of ſmall dealings, which is the objection alleged, would be trifling, if one or two ſtated hours, on a fixed day in each week, were aſſigned for the purpoſe. By being thus reſcued from the impoſitions too prevalent among millers, bakers, and huckſters, the poor would ſave, perhaps, two pence in every ſhilling, not to mention other important benefits.

‡ Milk is an article of very great importance to the poor; it is eſſential to the nouriſhment of children, and extremely uſeful to the economy of families. Where the cottager can be ſupplied with the means of keeping his cow, his benefit will be very conſiderable: where he cannot, the mode adopted by Mr. Giſborne is very deſerving of attention and imitation. There may, however, be parts of England (particularly where a good deal of butter, or rich cheeſe, is made) in which the poor cannot in general have new milk: but, in thoſe places, if they could be ſupplied, either as a gift or by purchaſe, with ſkim-milk, even that would be of great uſe to them; eſpecially as it would come at a very cheap rate. Where the poor can purchaſe ſkim-milk, they get it very cheap; it coſts them about a halfpenny a quart. To aſcertain its utility to a cottager, who has children, try the following ingredients:

Two quarts of ſkim-milk	1d.
Half a pound of rice	1d.
Two ounces of treacle	0½
	2½d.

Theſe,

his fields a profit equal to the rent for which he could ſet them, or to the common returns from other modes of huſbandry in the neighbourhood, he will probably continue the plan with reluctance, or will ultimately abandon it. In Barton, the price was originally fixed at one penny per quart, from Lady-day to Michaelmas; and at three halfpence, during the reſt of the year. But experience proved it to be too low; and the more ſo, as of late the prime coſt of cattle has been very high, and the advantage reſulting from raiſing butchers' meat, cheeſe, and butter, proportionally large.

"The tradeſman has not had occaſion to apply to be relieved from a ſuperabundance of copper coin; a circumſtance which ſuggeſts the hope that in other places, where the plan now detailed may be inſtituted, difficulties, apprehended at firſt, may be found on trial to be of little moment."

The following is extracted from an account of a ſupply of milk for the poor at Stockton, in the county of Durham, by Robert Clarke, eſq. publiſhed in the ſame work.

In October, 1800, upon a farm at Stockton, of 173 acres, belonging to the epiſcopal demeſne of Durham, the biſhop, in order to relieve the diſtreſs of the poor in that place, on account of the want of milk, eſpecially in the winter ſeaſon, gave directions for the farm being let upon the old rent, provided that (in addition to the uſual ſtipulations applicable to a farm, conſiſting partly of arable land, and partly of dairy land) it ſhould be held upon the following terms: that the tenant, Mr. *John Robſon*, ſhould undertake to keep upon the farm, during his leaſe, fifteen cows of the beſt breed and ſize in the country, over and above the number neceſſary for his own family; not leſs than twelve of which ſhould be at one time in milk, and the remainder in calf. The tenant was to ſell the milk, unadulterated, and without any cream being taken from it, *to the poor of Stockton* indiſcriminately, whether pariſhioners or not, at one halfpenny per pint, beer meaſure in ſummer, and wine meaſure in winter. The tenant has engaged to produce for ſale in Stockton, and in clean and proper veſſels, the milk of theſe 15 cows twice a-day in ſummer, and once a-day in winter; every poor perſon applying, being to be entitled, without any preference, except that which is due to the aged and infirm, to one quart of milk in ſummer, and one pint of milk in winter; and as to the reſidue not ſo diſpoſed of, a preference to be given to cottagers having families of young children.

The mode of ſelling the milk may be varied by the biſhop or his agent; and to prevent any doubts as to the fair diſpoſal of the milk, the tenant is not to ſell any milk whatever, except to the poor; nor to ſell any butter or cheeſe to any one; nor is he to make more butter or cheeſe than may be wanted for the ſupply of his own family.—In conſideration of the preceding ſtipulations on the part of the tenant, it has been agreed on the biſhop's part, that upon the punctual performance of the tenant's agreement to the ſatisfaction of the biſhop's ſteward, the annual ſum of 30l. ſhall be diſcounted and allowed the tenant out of his rent.

In letting this farm, a particular attention has been paid to the character of the tenant, in reſpect of integrity, induſtry, and regularity. In conſequence of what the biſhop has done, and in order to incorporate upon his charity a gratuitous ſupply of milk for thoſe families which cannot earn the means of purchaſing it for themſelves, the town of Stockton has been ſince divided into nine diſtricts; in each of which five or ſix of the moſt reſpectable inhabitants have undertaken the office of viſitors, and to attend the houſes of the poor, ſo as to aſcertain their ſituations and characters, and their means of livelihood. The conſequence is, that upon any application for parochial relief, or for private charity, in the town of Stockton, the viſitors may be referred to, and the relief to be granted may be proportioned in manner, and in degree, to the *induſtry*, the *neceſſity*, and the *character* of the object. By theſe means, coals alſo have been delivered to the poor, with a great attention to juſtice, as well as to effect; and milk is diſtributing, at preſent, to the moſt neceſſitous and deſerving, by means of tickets iſſued by the inſpectors of the diſtrict; ſo as, in ſome degree, to confine the benefit of the biſhop's charity to thoſe for whom it is peculiarly intended.

In order to give a ſimilar accommodation to the tradeſmen and other inhabitants of Stockton *, and thereby to promote the effect and ſucceſs of this plan for the benefit of the poor, the biſhop has applied a further part of his eſtate, in providing a cow paſture, and incloſed fields, for the other inhabitants. Four fields, containing together twenty-four acres, have been laid together as a ſummer paſture; and a number of incloſures are to be ſubdivided and fenced, and to have cow-houſes built in them at his lordſhip's expence; each of theſe ſubdiviſions will contain from two acres and a half to three acres, and will be ſufficient for hay and winter paſturage for two cows.

It will often come within our notice, that *the country poor* are more thankful for employment kindly offered, with the occaſional aid of a little *ſkim milk* or ſpare vegetables for their family, than for any thing that benevolence can give in the way of alms. There is, indeed, hardly any circumſtance which does more eſſential prejudice to the cottager's domeſtic ſyſtem of economy, and to the health and well-being of his children, than the difficulty under which he labours, in his endeavours to procure a ſupply of milk. With that variety of information upon this ſubject, that has for ſome time engaged the attention of *the Society for bettering the Condition of the Poor*, and with the zeal which its preſident poſſeſſes on this and on every other object of the ſociety, it is not to be wondered that he ſhould have given an early and beneficial example, of the means by which this inconvenience may be removed. For the ſubſiſtence of children, there is perhaps nothing ſo excluſively uſeful as milk; no other food which aſſimilates and co-operates with every kind of grain of this, and of every other country, and with almoſt every ſpecies of vegetable and animal food; ſo as to correct and ameliorate our general means of life.

Until the cottager can be ſupplied with milk, it can hardly

Theſe, either boiled or baked, will produce four pounds of pudding; and, at the expence of hardly more than *a halfpenny each*, will give a plentiful and wholeſome dinner to four children. But it is not unuſual for perſons in many parts of England, inſtead of *giving* or even *ſelling* their refuſe ſkim-milk to their poorer neighbours, to *throw it to their hogs*.

* This town has been fortunate in the attention not only of the biſhop, but of Mr. Burdon, one of the members for the county, who has the merit of eſtabliſhing another milk farm at Stockton for a ſimilar purpoſe, and with the following covenants:—that the leſſors ſhould keep upon the ground ten milch cows, and ſell all the milk (except what ſhall be uſed in their own families) pure, unmixed, and unadulterated, and without having any cream taken from the ſame, to the inhabitants of the town of Stockton, for the time being, at or under the price of one halfpenny per pint, and in quantities not exceeding three gallons per day to any one perſon or family; and on performance of this covenant, Mr. Burdon agrees that the annual ſum of twenty pounds ſhall be allowed out of the rents.

be expected that his preſent thriftleſs and comfortleſs table of diet of dry bread, ſhould be changed for a more healthful and economical ſyſtem of food. But with the full advantage of ſuch a ſupply as is provided for the poor of Stockton, it is hardly poſſible but that the cottager will eventually become ſenſible of the advantages of milk dreſſed with rice, as a nouriſhing and palatable food for his children. And whatever prejudices may have exiſted againſt rice as a food for the labouring man (prejudices which will not, however, bear the teſt of experience), no one can doubt of rice, prepared with milk, being a pleaſant, nutritious, and economical food for children.

Charity is meritorious, not merely in reſpect of its motive and principle, but in proportion as it is extenſive in its influence, and unexceptionable in its effect; particularly in that of not diminiſhing or prejudicing the virtue, or energy, of the perſons for whoſe benefit it is applied. As to the ſums annually devoted in this inſtance by the founders of the milk charities at Stockton, it is not eaſy to ſay how they could have been otherwiſe directed with any proportionable advantage; or how any funds can be applied with leſs riſk of impairing the induſtry and the prudence of thoſe, who come within the ſcope of its influence.

For an account of the benefit of the arrangement of diſtricts, and of the diviſion of attention in the care and conduct of the intereſts of the poor, we muſt refer the reader to the Biſhop of Durham's narrative and obſervations, in the beginning of the ſecond volume of the Reports of the ſociety. With regard to the latter plan, for encouraging the keeping of cows by the tradeſmen and other inhabitants of the place, we have only to obſerve, that it removes every poſſible degree of odium or jealouſy, to which, in ſome minds, the poor might have been ſubjected, by the extenſive benefits provided for them; and that the additional number of cows thereby kept in the neighbourhood of the town, increaſes conſiderably the general ſupply of milk for that place; thereby diminiſhing the price, and leaving a ſurplus to be diſpoſed of among their dependents and poorer neighbours.

MILK-HOUSE, a building deſigned for the reception and preſervation of milk, previouſly to its undergoing the various proceſſes of the dairy. In Pl. 35, we have given a repreſentation of a milk-houſe, upon an improved plan, by Dr. Anderſon, of Aberdeen.—Fig. 1, repreſents a plan of the whole ſtructure. A, the dairy in the centre, ſurrounded by an open paſſage; B, the entry to the dairy from the north; C, the ice-houſe; D, the ſcullery, or waſh-houſe, with the door or entrance from the ſouth, and benches placed beneath; *f*, a door, which communicates with the milk-houſe, &c.; *h*, the fire-place.—Fig. 2, is an elevation of the milk-houſe A. In this, B B, ſhew the paſſages round it; *c*, the interior window; *d*, the ventilator or air-pipe; *g*, the exterior window.—Fig. 3, is a delineation of the ventilator; *i*, repreſents the valve at the top; *k*, another valve at the bottom, which communicates with the milk-houſe; *n*, a ſimilar valve, with the paſſage. The whole of this ſtructure ought to conſiſt of a range of narrow buildings, as in the ſection firſt delineated, where the middle diviſion marked A, repreſents the *milk-houſe*, properly ſo called. Dr. Anderſon directs it to be built with a double wall, ſo that a current of air may continually paſs, for the purpoſe of preſerving a regular, cool temperature; the inner wall being conſtructed with lath or bricks, doubly plaſtered on both ſides; and the outer one, conſiſting of plaſtered lath: both being carefully worked, ſo as to render them perfectly air-tight.

The entrance to the dairy ought to be on the north-ſide B; but it will be requiſite, for greater convenience, to make another communication through the door *f*, into the front-room, eſpecially during the winter, when the outer door, B, ſhould be kept continually ſhut. The external roof ought to be conſtructed with tiles, or ſlate, while the inner one ſhould be made of plaſter, cloſely applied. Between both, it will be neceſſary to leave a vacant ſpace, at leaſt four feet wide, for the free paſſage of air, as delineated in the elevation above given; in which the letter A repreſents the inſide of the *milk-houſe*. The letters B B deſignate the area between the two walls, that gradually diminiſhes towards the top, till it terminates in the ventilator or wooden chimney *d*; which ought to be conſtructed, on three ſides, with planks or boards lined with plaſter; the fourth, or ſouth front, ſhould conſiſt wholly of glaſs, carefully cloſed with putty, ſo as to render it completely air-tight. Its dimenſions may vary at pleaſure, from one to two feet in diameter, internally; but it ſhould be elevated at leaſt ſix or eight feet above the roof; as its effects will be more or leſs powerful, according to its length.

This tube is furniſhed at the top with a valve *i*, placed immediately beneath the air-holes, which may be cloſed when required; and at the bottom is a ſimilar valve *k*. The lower pipe, which communicates with the milk-houſe, is conſiderably ſmaller than the upper tube juſt deſcribed. The opening *m*, is cloſed on one ſide; and at *n* is a valve, which, when ſhut, prevents any communication between this pipe and the external area. Further, the top of the ventilator is covered with boards, placed in the form of a roof, ſo that the rain may be thrown off, without impeding the current of air; while, by means of the valves above mentioned, the air, heated by the action of the ſun through the outer wall, will immediately eſcape, thus conſtantly preſerving a due temperature; and, by the ſame means, all damp and confined air, which is extremely pernicious in dairies, will be conſtantly expelled.

The building is furniſhed with a window placed along the ſlanting interior roof at *c*, and which is cloſed down with putty, to prevent it from being opened. Another window, *g*, is fixed over it in a ſimilar manner on the external roof ſo as to tranſmit the light, without impeding the current of air between the two glaſſes.

The paſſage round the milk-houſe ought to communicate with the external air below, only at the threſhold of the door B. But it will be neceſſary to make a ſmall aperture on every ſide, about one foot in height from the floor, in order that ſuch area may be occaſionally ventilated. Each of theſe apertures ſhould be ſecured with a piece of thin wire-work, in order to prevent the approach of inſects, or other vermin; and ought likewiſe to be furniſhed with a door, or cover, by which it may be opened, or cloſed, according to circumſtances. Further, if this paſſage be furniſhed with ſhelves, and lighted by a glazed window from the inner apartment, ſo as to admit *light only*, it may be advantageouſly converted into a pantry for keeping butter, cheeſe, &c. perfectly cool, independently of its uſe for preſerving the temperature of the milk-room.

The whole of the interior apartment ſhould be finiſhed with hard plaſter neatly ſmoothened, and totally devoid of ornament, ſo that it may be cleaned as often as becomes neceſſary. In its centre, Dr. Anderſon directs a large ſtone table to be placed, being about 2½ feet high, 3 feet wide at the leaſt, and of a breadth proportioned to the length of the room. Beneath the table is to be fixed a ſtone trough, correſponding to the length and breadth of the former, and being about one foot deep, that is, ſix inches above and below the floor of the milk-houſe. From the bottom of the trough, a pipe is to be conducted, for the purpoſe of carrying off the water: and, in caſe it be ſupplied by a running ſtream, it will be requiſite to make one ſide of ſuch trough ſomewhat lower, that the water may run over, and thus be carried out

of the houſe. The floor of the building ſhould be conſtructed with ſtones neatly laid; and, if theſe be eaſily attainable, the ſhelves, delineated in the elevation above given, ſhould be hewn out of the ſame materials: otherwiſe, they may conſiſt of wooden planks.

If the milk-houſe be ſituated near a large town, where ice could be vended during the ſummer, Dr. Anderſon is of opinion, it would be very beneficial to the owner, to erect an ice-houſe contiguous to this dairy, as repreſented at the letter C, in the plan, fig. 1, in the plate. He recommends it to be ſurrounded by a double wall on three ſides, with a paſſage or area intervening, as in the dairy. The receptacle for the ice ought to be formed of upright poſts, lined with wattled-work of wands, or with cloſe rail-work, but ſo as to leave a walk two feet and a half wide every way; round which a gutter ſhould be made to carry off ſuch water as may drain from the ice. This is, in his opinion, the cheapeſt method of building an ice-houſe in any ſituation; and is far preferable to the uſual mode of making vaults, which are not only more liable to be damp, and become mouldy, but are alſo far more expenſive, and by no means ſo well calculated to preſerve a gentle coolneſs, and an equal temperature, at every ſeaſon.

The apartment, marked with the letter D, is deſigned as a repoſitory for the utenſils of the dairy, in which they may be cleaned and arranged. For this purpoſe, it will be adviſable to place ſhelves round the walls, together with tables, and ſuch other articles as may be found neceſſary. Its entrance ſhould be from the ſouth, where the roof projects about two feet over the wall, as at *f*, which door communicates immediately with the milk-houſe, and may be occaſionally opened in the ſummer; but which alone ought to be uſed during the winter, when the chief entrance, B, ſhould be conſtantly ſhut. At one end of this apartment is a fire-place, on which a cauldron, proportioned to the ſize of the dairy, ought to be fixed; in order that there may be a continual ſupply of warm or hot water.

Such is the outline of Dr. Anderſon's ingenious plan, which appears to be well calculated to enable attentive dairy-men to keep their milk of an equal temperature at all ſeaſons, while they may, at the ſame time, carry on the neceſſary operations with little trouble or expence. Thoſe of our readers who wiſh to become more intimately acquainted with the whole economy of the milk-houſe, will not without inſtruction peruſe Dr. Anderſon's *Practical Remarks on the Management of the Dairy*, which were originally publiſhed in the 5th vol. of the *Letters and Papers of the Bath Society;* but which have been conſiderably enlarged in the 3d vol. of the new ſeries of his valuable miſcellany, entitled *Recreations in Agriculture, &c.*

MILL (*Encycl.*). The following account of a family-mill, invented by Mr. Thomas Ruſtall, was preſented to the Society for the Encouragement of Arts, &c. who voted him a premium of forty guineas, in 1800.

In Pl. 35, fig. 1, A, is the handle of the mill; B, one of the mill-ſtones, which is about 30 inches in diameter, and 5 inches in thickneſs, moving with its axis C; D, is the other mill-ſtone, which, when in uſe, is ſtationary; but which may be placed near r to, or at a diſtance from, the moveable ſtone B, by means of three ſcrews paſſing through the wooden block E, that ſupports one end of the axis C; after it has been put through a hole or perforation in the bed-ſtone. The grain likewiſe paſſes through this perforation from the hopper F, into the mill; F, repreſents the hopper, which is agitated by two iron pins on the axis C, that alternately raiſe the veſſel containing the grain, which again ſinks by its own weight. In conſequence of this motion, the corn is conveyed through a ſpout, that paſſes from ſuch hopper into the centre of the mill behind, and through the bed-ſtone D. G, a paddle, regulating the quantity of corn to be delivered to the mill; and, by raiſing or lowering which, a larger or ſmaller proportion of grain may be furniſhed: H, the receptacle for the flour, into which it falls from the mill-ſtones, when ground: I, repreſents one of the two wooden ſupporters on which the bed-ſtone, D, reſts. Theſe are ſcrewed to the block E, and likewiſe mortiſed into the lower frame-work of the mill at K, which is connected by means of the pins or wedges L, L, L, that admit the whole mill to be eaſily taken to-pieces: M, a fly-wheel, placed at the furtheſt extremity of the axis C, and on which another handle may be occaſionally fixed; N, a ſmall rail, ſerving to keep the hopper in its place; the furtheſt part of ſuch hopper reſting on a ſmall pin, which admits of ſufficient motion for that veſſel, to ſhake forward the corn: O, a ſpur-rail, for ſtrengthening the frame-work of the mill; P, the front upright, that is mortiſed into the frame-work, and ſerves as a reſt for the end of the iron axis C, which is next to the handle. On each extremity of ſuch axis, there is a ſhoulder, which keeps it ſteady in its place. Laſtly, there is a cloth-hood fixed to a broad wooden hoop, and which is placed over the ſtones while working, to prevent the finer particles of flour from eſcaping.

Fig. 2, repreſents the bolter, with its front removed, in order to diſplay its interior ſtructure; the machine being 3 feet 10 inches in length, 19½ inches in breadth, and 18 inches in depth. A, is a moveable partition, ſliding about four feet backwards or forwards, from the centre of the box, upon two wooden ribs, which are fixed to the back and front of the box, and one of which is delineated at the letter B; C, the lid of the bolter repreſented open; D, a ſlider, which is moveable in a groove made in the lid, by means of two handles on the back of ſuch lid; E, a forked iron, fixed in the ſlider D, and which, when the lid is ſhut, takes hold of the edge of the ſieve F, and moves it backwards and forwards on the wooden ribs B, according to the agitation of the ſlider; G, repreſents a fixed partition in the lower centre of the box, which it divides into two parts, in order to ſeparate the fine from the coarſe flour; from this partition, the ſlider A moves each way about four inches, and thus affords room for working the ſieve: H, a board that is parallel to the bottom of the bolter, and forms part of the ſlider A; this board ſerves to prevent any of the ſifted matter from falling into the other partition: I, repreſents two of the back feet, which ſupport the bolter.

Fig. 3, of the plate above mentioned, is a view of the top, or upper part of the lid of the bolter; K, the ſlider that moves the lengthwiſe of the bolter; L, L, the handles by which the ſlider is worked; M, a ſcrew, ſerving to hold the fork, which imparts motion to the ſieve.

Fig. 4, repreſents the forked iron, E, ſeparately from the lid. Both the mill and bolter may be conſtructed at a moderate expence, and they occupy only a ſmall ſpace of ground. The former may even be worked in a public kitchen, or within a room in a farm-houſe, without occaſioning any great incumbrance.

The particular excellence of the mill conſiſts in this circumſtance, that, from the vertical poſition of its ſtones, it may be put in action without the intervention of cogs or wheels. It may be employed in the grinding of malt, the bruiſing of oats for horſes, and for making flour, or for all theſe purpoſes: it may likewiſe be eaſily altered, ſo as to grind either of thoſe articles to a greater or leſs degree of fineneſs.

Another advantage peculiar to Mr. Ruſtall's contrivance is, that one man is ſufficient to work it; though, if two perſons, namely, a man and a boy, be employed, they will be able to produce, in the courſe of two hours, a quantity of flour ſufficient to ſerve a family, conſiſting of ſix or eight perſons, for a whole week:—repeated ſatisfactory trials have proved, that

this mill grinds the corn completely, and at the rate of one buſhel of wheat within the hour. Beſides, the induſtrious farmer will thus be enabled to make comparative experiments on the quality of his grain, and may furniſh himſelf, at a trifling expence, with flour from his own wheat; without apprehending any adulteration; or without being expoſed to the impoſitions, or caprice, of fraudulent and avaricious millers.

Laſtly, though Mr. R.'s bolter be more particularly calculated for ſifting flour, it may alſo be applied to various other uſeful purpoſes, and eſpecially with a view to obviate the inconveniences neceſſarily attendant on the levigation of noxious ſubſtances, and to prevent the waſte of their finer particles.

The original mill may be inſpected in the Repoſitory of the Society for the Encouragement of Arts, &c. Adelphi; and we underſtand from Mr. Taylor, the ſecretary to this patriotic aſſociation, that the inventor of the machinery, Mr. Thomas Ruſtall, wheelwright, of Purbrook-heath, near Portſmouth, engages to furniſh the whole apparatus, and to deliver it free of carriage, in London, for the moderate price of *twenty guineas*.

MILL-REEK, a dreadful diſeaſe, cauſed by the poiſonous fumes of melted lead, which affect not only thoſe who are employed in the ſmelting or preparing of that metal, but likewiſe all who reſide near the mines whence it is dug, or contiguouſly to the furnaces, &c. where it is worked.

On the firſt attack of this diſeaſe, the patient feels a weight and uneaſineſs in the region of the ſtomach, and a ſlight degree of colic in the bowels: the pulſe is low; the appetite impaired; the legs become feeble, and the whole body is debilitated. Sometimes theſe ſymptoms abate in conſequence of a ſlight diarrhœa; though, if the latter continue for ſome time, it is always attended with danger.

At firſt, however, the patient is not prevented from following his uſual occupations; but, if the diſorder progreſſively increaſe, and he neglect to apply for relief, the next ſymptoms will be, obſtinate coſtiveneſs, violent pain in the inteſtines; a troubleſome giddineſs, inſenſibility, and delirium. The extremities become convulſed; the pulſe intermits; and, at length, the higheſt degree of palſy, or apoplexy, cloſes the diſtreſſing ſcene.

The *mill-reek* is of a ſimilar nature and origin with the *Devonſhire-colic*, of which we have already treated. We cannot, however, conclude this article, without recommending the following precautions, which the editor of the Domeſtic Encyclopedia takes from the firſt vol. of the Edinburgh *Eſſays and Obſervations, phyſical and literary*, &c. It is certainly a duty incumbent on all thoſe perſons who are in any manner connected with the manufacture of lead, or who reſide in the vicinity of lead mines, to ſpread and inculcate the means of refcuing many induſtrious members of ſociety from a moſt painful death; or, if a perſon be attacked by this terrible diſeaſe, to contribute their ſhare towards preſerving them from feeling its extenſive horrors.

1. No labourer ſhould be ſuffered to repair to his work, *faſting*; his food ought to be fat and oily; and it would be very beneficial, if he were to drink a glaſs of ſweet oil, either pure, or mixed with a little brandy, every morning.

2. It will be adviſable to take ſome aperient phyſic, not only in the ſpring and in autumn, but likewiſe, as often as any ſymptoms of the mill-reek, however ſlight, are perceived.

3. No ſpirituous liquors ſhould be allowed, or, at leaſt, be very ſparingly uſed, eſpecially while the labourer is at work, or immediately after it.

4. No workman in a ſtate of perſpiration muſt expoſe himſelf to the cold air; but he ſhould retire to his home, as ſpeedily as poſſible; and, after having changed his clothes, cool himſelf gradually.

5. Immediately after the labourer returns from his work, he ought to take ſome nouriſhing aliment, which ſhould principally conſiſt of fat broths, or ſimilar liquids.

6. The diet ſhould be wholeſome and nouriſhing; becauſe ſcanty or poor food diſpoſes ſuch perſons to be more frequently affected, and renders them too feeble to undergo a complete cure.

Laſtly, as often as their employment will permit, they ought to viſit an open country, where they may breathe an untainted air, and find proviſions free from the noxious fumes of lead. Particular care muſt, however, be taken not to venture upon long journeys; becauſe ſuch perſons will be more fatigued, and reduced, by travelling one day, than by labouring two days in the lead-mines.

MILTENBERG, a town of Franconia, in the electorate of Mentz, ſeated on the Maine, 20 miles S.E. of Aſchaffenburg. Long. 9. 19. E. Lat. 49. 46. N.

MILTON ABBEY, a town in Dorſetſhire, with a market on Tueſday. It is famous for a ruinous abbey, built by king Athelſtan, and for a magnificent Gothic church. It is 14 miles N.E. of Dorcheſter, and 112 W. by S. of London. Long. 2. 32. W. Lat. 50. 50. N.

MINCIO, a river of Italy, which riſes in the lake Garda, and paſſing by Peſchiera, forms the lake which ſurrounds the city of Mantua, and afterward runs into the Po.

MINCKENDORF, a town of the archduchy of Auſtria, ſituate on the Trieſſing, ſix miles E.N.E. of Baden.

MINEHEAD, a borough in Somerſetſhire, with a market on Wedneſday. It has a good harbour on the Briſtol Channel, for ſhips of large burthen; and carries on a trade in wool, coal, and herrings. It ſends two members to parliament, and is 31 miles N. of Exeter, and 161 W. by S. of London. Long. 3. 34. W. Lat. 51. 12. N.

MINER, a workman or labourer in the mines. The following general view of the ſituation of the miners, compared with that of ſome other claſſes of the poor, by the Reverend Thomas Giſborne, is publiſhed by the Society for bettering the Condition of the Poor, with the hope of awakening the attention of the higher orders of the community to the abject ſtate of this uſeful claſs of men. He very juſtly obſerves, that the reſpective occupations of the different claſſes, into which the poor of this country may be divided, are found to produce important effects, not only on the habits of life, but alſo on the moral character of each claſs. To ſtate with brevity the principal of theſe effects, as they ſeverally appear exemplified in two or three of the moſt numerous claſſes, together with ſome practical remarks, may not be uſeleſs; ſince, from ſuch a ſtatement, perſons who are ſolicitous to befriend and improve the poor in their vicinity, may derive occaſional ſuggeſtions as to the particular channels, in which their exertions are likely to be the moſt needed, and moſt beneficial.

It would be deſirable to ſpeak ſucceſſively of the ſituation of miners, of fiſhermen, and of manufacturers; illuſtrating each by incidental references to that of labourers in huſbandry. The preſent paper will be confined to the caſe of miners.

Miners are commonly exempted, by the nature of their work, from the ſuperintending inſpection of their employer. The latter, in conſequence, finds the mode of paying them a certain ſum per day unadviſable. He fets them their taſk by the great, fixing the mode to prevailing cuſtom and other local circumſtances. In Derbyſhire, the workmen frequently take a mine, or bargain for a determinate period, as three months, on the terms of receiving a ſettled price for each meaſure of ore which they ſhall produce: or occaſionally, on the condition of being themſelves allowed to purchaſe all the

ore at a ſtipulated rate. In Cornwall, the eſtabliſhed courſe of proceeding is not ſubſtantially different. Hence there is a fundamental diverſity between the gains of the miner and thoſe of the huſbandman. The huſbandman, in general, earns a fixed ſum per week. If he ſometimes undertakes taſk-work, the amount of his earnings may ſtill be foreſeen with tolerable accuracy; and it has a known limit in the ſtrength of his body, and in his ſkill in the particular ſort of work. But the pay of the miner depends upon chance. The working miner is almoſt always in ſome meaſure a gambler, and embarks in the adventure of the mine. The ore may be found depoſited in ample or in ſcanty veins; may be with eaſe, or with great difficulty, detached from its bed; it may ſtretch far and wide in an unbroken range, or it may be ſuddenly removed many yards to a higher or a lower level. Even in breaking up ground which does not contain veins of ore, the miner is ſtill a gambler. The work is put up to a kind of auction; and the perſon who will undertake it on the cheapeſt terms is preferred. His bargain proves good or bad, according to circumſtances. He may find himſelf engaged upon a maſs of ſoil, which yields readily to his ſpade, and pick-axe; or retarded in his progreſs by rocky ſtrata, whoſe ſtubborn oppoſition muſt be overcome by gunpowder.

The earnings, however, of the miner, though precarious, are on an average great; and in many inſtances very far exceed all proſpects of gain which a labourer in huſbandry can propoſe to himſelf. Thoſe miners who are induſtrious, and at the ſame time frugal, often make a conſpicuous uſe of the opportunities which they poſſeſs, of improving their ſituation. With the ſurplus of their gains they purchaſe little ſpots of property (in Cornwall, chiefly on leaſehold tenures), and cultivate them in their hours of leiſure.

But, in common, the miner is not diſpoſed to adjuſt the ſcale of his expences to the *average* of his earnings. Being accuſtomed to the occaſional receipt of conſiderable ſums of money; money too which has flowed in ſuddenly upon him, rather from good fortune than from proportionate exertions; he often raiſes his expenditure and mode of living to a pitch, to which the labourer in agriculture ventures not to aſpire. He feeds on better diet, and wears clothes of finer materials, than the huſbandman. And, in general, he perſiſts in this manner of life, in ſpite of a change of circumſtances. He is buoyed up with the ſanguine hopes of a gameſter; and, for what he cannot pay to-day, draws on the favourable luck of to-morrow. This natural propenſity is cheriſhed and aggravated by the eaſe with which he obtains credit, in compariſon of thoſe claſſes of labourers, whoſe gains, though ſteady, are limited. If he happens to be unſucceſsful, he is truſted nevertheleſs at ſhops, and permitted to run up long ſcores at public-houſes; through the hopes entertained by the ſhopkeeper and the publican, that a day will come, when fortune will ſmile on the debtor. Thus the habits of the miner are ſeldom interrupted by any rubs and difficulties, which may teach him caution. He has leſs occaſion than moſt other men to dread the immediate inconveniences of poverty; and does not willingly learn the neceſſity of frugality and foreca ſt.

Miners very frequently work and live in large companies. Hence naturally ariſes the communication and the encouragement of vice. In Derbyſhire it is obſerved, and the caſe is probably the ſame elſewhere, that, when only two or three miners work together, they are frequently much more ſober and orderly than the reſt of their claſs. Among the vices of miners, thoſe are naturally prominent, which are uſually aſſociated with rudeneſs of character; as riotous diſpoſitions, impatience of ſuppoſed grievances, and diſcontent inflamed by the contagion of turbulence and clamour, and filling with juſt alarm the adjacent country.

Drunkenneſs is a vice, to which particular claſſes of workmen are allured, in an eſpecial manner, by the nature of their employments. Blackſmiths, glaſs-makers, and they who labour in other ways at the forge and the furnace, are led, by intenſe thirſt and exhauſtion of ſtrength, firſt to the uſe, and then to the abuſe, of ſtrong liquors. The cold and dampneſs of ſubterranean ſituations, and in ſome meaſure the powerful exertions of ſubterranean labour, produce a ſimilar effect on the miner. Several other cauſes concur; numerous and unprincipled ſociety, large gains, and, in many caſes, much vacant time. In Derbyſhire and Cornwall, the miners frequently do not work above ſix hours—and, in the former county, ſometimes even but four hours—in a day. The eaſe, too, with which a miner has obtained credit, often proves a temptation to exceſs. He who has met with a friend in the time of need, in the keeper of an alehouſe or of a brandy ſhop, will feel inclined, when he has money, to ſpend it freely at the houſe of his friend, partly from gratitude, and partly from the hope of obtaining credit hereafter. Another inducement to drunkenneſs remains to be mentioned; namely, the cuſtom which prevails in ſome few places, of paying the miners, on Saturday evening, by a bill, for a ſum which is to be divided among them. Theſe men, however diſpoſed to depart home with their wages entire in their pockets, are abſolutely forced to go for change to the neighbouring public-houſe: the maſter of which is known regularly to provide himſelf with caſh, to anſwer the demand. During the diviſion ſomething muſt be ſpent. From this cuſtom many miners, once ſober and well diſpoſed, have probably had to date the commencement of habits of ebriety.

The labourer in induſtry is commonly attached to ſome particular family, either of a private gentleman, or of a farmer. In the former caſe, it generally happens that he receives from his employer many little favours. In the latter, he is perhaps furniſhed with corn at a price lower than that of the neighbouring market, or enjoys ſome ſimilar advantage. Hence the maſter acquires an influence over the conduct of his workmen; and is often ſeen to exert it in promoting their comfort, and guarding them from extravagant and profligate courſes. The connection, which ſubſiſts between the proprietor of a mine and the working miner, is comparatively ſlight. The latter conſiders himſelf as independent; frequently ſhifts his quarters; and is little under the control of authority, or of perſuaſion.

Another circumſtance in the ſituation of miners, which is unfavourable to domeſtic frugality and good management, is to be traced in the ſort of women which they often chooſe for wives. At almoſt every mine, there is a number of women, daughters in general of the mining poor, who earn their livelihood by picking and waſhing the ore, and performing other operations of the ſame nature. In theſe employments they have been buſied from their childhood. A young mining labourer takes a haſty liking to one of theſe young women, and marries her, without thinking about conſequences. This is the hiſtory of a multitude of marriages among miners; and, circumſtanced as the parties are, it is natural that the caſe ſhould be ſo. The wife, however, is not likely to have found the mine an excellent ſchool, either of virtue, or of economy. Nor is it, in conſequence, very ſurpriſing that waſte, profligacy, and dram-drinking, ſhould be almoſt among the ordinary habits of a miner's family. The daughters of the huſbandman are commonly brought up much more under the eye of their mother. They help her in nurſing and ſpinning, and other occupations at home; and when they go out

to work in the field, it is frequently in her company. They ſtand, therefore, a better chance of being trained in morality and religion, and the arts of female induſtry; and become habituated to that economy, and thoſe various contrivances, which actual neceſſity forces on the wife of a day labourer. They of courſe will, in general, make more virtuous and more prudent wives, than young women who have been accuſtomed, from an early age, to the company and example of the mixed crowd of their own ſex and of the other, which is uſually aſſembled at the mine and the ſtamping mill.

The colliers in the vicinity of the Tyne form ſo large a body of men, and ſhew ſo ſtrongly marked a character, that ſome diſtinct account of them ſeems proper to be ſubjoined.

Few undertakings open the door ſo ſoon to the employment of the young, and few operate ſo powerfully to impreſs durable habits on the mind of youth, as the coal trade.

Boys enter the ſubterranean workings at the age of ſix or ſeven, in the character of *trap-door keepers*, an employment ſuited to their years; the labour being little more than to open and ſhut doors, fixed for conducting air round the various works, when the coals are paſſing through them from the workmen to the ſhaft.

In this ſituation they remain four or five years, with little intercourſe during the hours of labour (which are from 12 to 18 out of the 24), either with their equals in years, or with their ſuperiors; and hear little that can influence their minds, except the noiſe of imprecations ſpreading through the works, from the pitman contending with his overſeer, down to the half-grown youth, employed in leading the coals from the workmen, and impoſing upon his younger partner in the labour, a diſproportionate ſhare of the work, to procure eaſe to himſelf. When they reach the age of ten or twelve years, a more laborious ſtation is allotted to them.

They then become what are termed *lads* or *foals;* ſupplying the inferior place at a machine called a tram, where two are employed in drawing the coals from the workmen to the ſhaft. In this ſituation they are ſubject to the moſt harſh uſage from their ſuperior in the work, who frequently forces upon them, with profane and abuſive language, followed by blows, a greater ſhare of the labour than they are able to perform. Hence, in order to avoid puniſhment, they ſoon learn habits of deceit and evaſion; and ſcruple not to practiſe them, whenever they ſeem expedient, at the expence of truth and honeſty. And when the period arrives, which places them in the ſtation from which they have received ſo much abuſe, they ſeldom fail to retaliate on thoſe, whom progreſſive advancement from the trap-door to the tram brings into their power.

In every ſubſequent ſtep towards manhood, they conſider it as a merit to deceive and over-reach. In their next ſtage of occupation they are employed, during one half of their time, *in putting and drawing* the coals: and, during the other half, in raiſing the coal from its bed. Here a wider field opens itſelf to the diſplay of their ingenuity in the art of evaſion; and new incentives impel them to the exerciſe of it. Let looſe from even that ſmall degree of reſtraint, under which they conſidered themſelves as held by the authority of their parents (for at this period they generally become their own maſters, having the full diſpoſal of the product of their labour), and inflamed with the growing paſſions of youth, they indulge themſelves, with the moſt vicious emulation, in the ſcenes of intemperance and profligacy. If they are, at any time, without the means neceſſary to procure thoſe indulgences, they ſtudy to avail themſelves, in their reſpective departments, of every artifice (however injurious to the intereſt of their employer) to complete their purpoſe. Thus, by ſlow but perceptible degrees, the mind becomes poiſoned with wicked principles and guilty habits.

The hours devoted to what they term their amuſement, are not leſs prejudicial to the moral character. At a very early period in life they attend the haunts of their fathers at public-houſes; where their growing fondneſs for ſtrong liquors is encouraged, rather than checked, by their parents; and the child ſoon becomes a man in the frequency of intoxication. To gratify this paſſion for intemperance, which is a leading characteriſtic of pitmen, they endeavour to enhance the price of their labour by every art in their power; and in this, as well as in every other tranſaction with their employers, eaſily ſacrifice the principles of rectitude, to promote their ſelfiſh deſigns.

The early age, at which the child is ſeparated from the parent, and the little communication which they have with each other afterwards, viſibly impair thoſe affectionate feelings, which conſtitute parental happineſs.

They ſeem to conſider their children chiefly in the light of ſervants and dependents, from whoſe labour they expect to reap advantage; and are little ſolicitous to impreſs on their minds, habits of ſobriety, honeſty, and truth; and thus to train them in the paths of religion.

For the purpoſe of inculcating Chriſtian principles, Sunday ſchools have been eſtabliſhed. While the inſtitution was novel, they were numerouſly attended. As ſoon as that impreſſion loſt its influence, they became far leſs frequented. And no repreſentations of the good effects of ſuch inſtitutions, have been ſufficient to prevail upon the parents to enforce attendance by their authority. Even where daily ſchools have been eſtabliſhed by ſome of the opulent coal-owners, the pitmen frequently do not give their children the advantage of that little education, which might there be obtained, antecedently to the period when they enter the pit.

When the principles are thus habitually depraved, it is not to be expected that much attention will be paid to the duties of religion. By moſt, even external forms are diſregarded; and the time, which ought to be ſpent in attendance on divine worſhip, is generally diſſipated in frivolous purſuits, vulgar athletic exerciſes, or in drinking at public-houſes. Where attention to religion prevails, the good effects are manifeſt. Colliers of that character are uſually ſober, induſtrious, honeſt, and frugal, both in themſelves and in their families.

Another trait in the character of a collier, is his predilection to change of ſituation. Whatever may be the comfort and conveniences reſulting from his connection with any particular employ, he ſacrifices them all to his love of variety, and the hope of ſuperior advantage; ſo that annual changes are almoſt as common with the pitman, as the return of the ſeaſons; and, not unfrequently, the ſucceeding year finds him in the ſame ſituation, which he quitted twelve months before. And whatever favours he may have received, he is diſpoſed to conſider them as all cancelled by the refuſal of a ſingle requeſt.

It is to high wages, that many of the criminal habits, ſo often attached to the character of a collier, may in part be aſcribed. He is furniſhed with the power of obtaining more than the neceſſaries of life; and being deſtitute of the principles, which would teach him to apply the ſurplus to proper purpoſes, he ſquanders it in the gratification of groſs ſenſuality. To economy he is, in general, an utter ſtranger. It is no unuſual thing to ſee a man and his family, during the firſt week after they receive their wages (which are commonly paid to them once a fortnight) indulging themſelves in the uſe of animal food three times a-day; and in the ſucceeding week living on a little rye bread, with oatmeal and

water, until the next receipt of their wages enables them to return to a courſe of luxury. The contraſt between the pitman and the labourer in huſbandry is very ſtriking. The latter, with 9s. a-week, is ſeen keeping himſelf, his wife, and ſeveral children, from whoſe labour he reaps little advantage, with all the appearance of decency and frugality; and even allowing out of his wages ſomething for the education of his children: while the former with 16s. a-week, and often more, together with the labour of his family (which, if it conſiſt of three or four boys, brings him in from 20 to 30s. a-week in addition to his own gains), paſſes half of his time in luxury and riot, and the remainder in filth and poverty. The manners of the pitman are ſaid evidently to have altered, within a few years, materially for the worſe.

"As the preceding account of the colliers (ſays Mr. Giſborne), does not repreſent them in an attractive light, it is the more incumbent on me to ſay, that I ſpeak from concurrent information, derived from different ſources, each of high authority. Many exceptions to the general deſcription undoubtedly exiſt.

"The preceding ſtatement contains facts of ſuch a nature, that the peruſal of it will probably ſuggeſt to the reader ſeveral practical remarks. There are, however, ſome points, on which it may be uſeful to add a few words.

"The firſt evil, in the ſituation of miners, which ought to be remedied, is the very little education and religious inſtruction, which their children in general receive. How are theſe children, when they compoſe in their turn the next generation of the mining poor, to diſcharge their duty to God and man, if they are not impreſſed early with the principles, from which the ſenſe of religious and moral obligation flows? The inſtitution of Sunday-ſchools is one excellent mean for the attainment of the object in queſtion. Every poſſible encouragement ought to be given to them, and perſuaſion and little premiums and all other fit inducements ſhould be employed, to ſecure the regular and cheerful attendance of the ſcholars. Another method of improving the parents, as well as the children, has been recently and deſervedly recommended by an eminent prelate; namely, the erection of additional chapels in populous diſtricts. Let it here be generally obſerved, that, in every plan for improving the character of the mining poor, the proprietor of the mine and the clergyman of the place ought cordially and actively to co-operate. Each has it in his power to contribute to that improvement; and, in proportion to his power, each is reſponſible.

"The predominant vice of drunkenneſs calls for the moſt vigilant counteraction.—Let the number of public-houſes be reduced within as narrow limits as convenience will permit: and the conduct of publicans be carefully obſerved by the gentlemen and magiſtrates of the country. Let the very pernicious cuſtom, of paying miners by a bill to be changed at the public-houſe, be immediately aboliſhed. The temporal diſtreſſes, which reſult from ebriety, afford arguments proper to be urged to individuals, in proportion to their intrinſic force. But I know no method of recalling guilt to the paths of rectitude, either in public or in private life, likely to be durably efficacious, except this: firſt to impreſs the mind with a conviction of the truth and aweful import of Chriſtianity; and then, to point out the bearings of Chriſtian commands and prohibitions on the particular ſubject, with reſpect to which you wiſh to accompliſh a reformation. He who, under the impulſe of brutiſh appetite, diſregards all conſiderations of injured health, wafted property, a heart-broken wife, and ſtarving children, may pauſe, tremble, and be reclaimed, when he ſees that the "*drunkard*" has his place in the dark catalogue of thoſe, who "*ſhall not inherit the kingdom of God!*".

"The uſe of profane language may be in a great degree repreſſed by care, on the part of the proprietor, to appoint conſcientious agents and ſuperintendants over his works. I could name more than one inſtance of captains of men-of-war, who, by ſuitable penalties and perſonal exertions, have almoſt eradicated that vice from their ſhips. Why ſhould it be more difficult to be ſubdued in a coal-mine?

"Deceit appears to be among the general faults of miners. It is ſtated as one of the characteriſtics of the Neweaſtle colliers: and a ſimilar reproach is applied to the miners in Derbyſhire, who are ſaid by practice to have attained great adroitneſs in disfiguring the ſides of a mine, when the time, for which they have taken it, is expiring, that the owner may be entrapped into a new bargain advantageous to the workmen. By a due choice of agents, let the tyranny of the elder partner over his colleague at the tram, one principal ſource of deceit, be prevented. And, univerſally, let the love of truth be habitually encouraged, and traced up to Chriſtian motives.

"In oppoſition to the ſpirit of mutiny and diſcontent, it may eaſily be ſhewn, and it ought to be inculcated, that no principles are, on the one hand, more adverſe to turbulence and anarchy, nor, on the other, more favourable to genuine freedom, than thoſe of the religion which we profeſs; and that correſponding praiſe belongs to thoſe of the conſtitution under which we live.

"The propenſity to change of ſituation, which prevails among miners, to the detriment of themſelves and their employers, will be beſt encountered, by ſolicitude, on the part of the proprietor, to attach his workmen to himſelf, by rendering their condition comfortable. Let him make their cottages neat, and moderately commodious; adding to them ample gardens, and affording to each family an opportunity, as far as may be practicable, of keeping a cow, or of purchaſing milk: let him ſtudy to allure them to habitual cleanlineſs, when above ground. Let him invite them to forecaſt, by encouraging the eſtabliſhment of friendly ſocieties; the advantage of which to miners is the greater, on account of the frequent accidents to which they are expoſed; and let him promote ſimilar inſtitutions for the benefit of widows and orphans. Let him ſet up ſchools, where the girls may be inſtructed in ſewing, knitting, and ſpinning, and thoſe little domeſtic arts, which will be of the utmoſt utility, when they become wives and mothers. By abundant ventilation, and other ſuitable contrivances, let him render the different ſubterranean occupations ſalubrious, and as free from diſagreeable circumſtances of every kind, as the nature of the caſe will admit."

From the pen of the ſame benevolent writer we have the following account of the proviſions made for the benefit of the Duke of Bridgewater's colliers, near Manchester.

The Duke of Bridgewater pays his colliers, in the neighbourhood of Manchester, monthly. He has eſtabliſhed ſhops, and a little market for them; and when his agents pay the wages, the ſhop-keepers bring in their monthly bills. Theſe the agents diſcharge, and give to each collier his ſurplus. Thus the collier always has credit for neceſſaries and reaſonable comforts; and, at the ſame time, is not able to ſquander the maſs of his gains, to the injury of himſelf and his family. Debts at public-houſes are not allowed to be brought in. The butchers and other tradeſmen, being the duke's tenants, dare not be exorbitant in their charges, or fraudulent as to the weight of their commodities. The duke lets to his colliers their houſes at a low rent, and nearly at a price. To the beſt and pleaſanteſt of theſe houſes, he prefers thoſe colliers who have been the longeſt time in his ſervice, if they have behaved well. They are, however, all tenants at will. Theſe

circumſtances operate as ties and encouragement to good conduct. All the workmen are bound to contribute to a general ſick-club. The duke's colliers are ſtationary with him: a neighbouring magiſtrate informs me, that he hears few complaints from either ſide; and that the colliers there are more moral than the weavers who are ſpread over the adjacent country. Some of the duke's agents are men of a religious caſt; and have eſtabliſhed Sunday ſchools for the inſtruction of the children.

What has been done in this inſtance is worthy of attention and imitation, as tending to diminiſh the evils and inconveniences, to which the claſs of men under conſideration is peculiarly expoſed. Colliers and miners, however, are ſo numerous in ſome parts of England, and are ſubject to ſo many and ſo great diſadvantages, that they merit more attention than they have yet received. No perſons ſtand more in need of the advantages of a religious education, and none are ſo little favoured in that reſpect, or poſſeſs ſo few means of correcting the vices and infirmities to which they are peculiarly liable.

Of miners and colliers it is to be obſerved, that living in large companies, without favourable examples of conduct before them, and being, through the circumſtances and mode of their employment, little ſubject to the control or influence of their employers, they are naturally turbulent, paſſionate, and rude in manners and character.—Their gains are large and *uncertain*; and their employment is a ſpecies of taſk-work, the profit of which can very rarely be previouſly aſcertained. This circumſtance gives them the waſteful habits of a gameſter, leading them to truſt, without forethought or apprehenſion, to the extraordinary ſucceſs of to-morrow, for the ſupport of their families. Their labour being under ground, liable to ſubterraneous damps, and attended with ſtrong exertions, they are, almoſt of neceſſity, led to the uſe, in a certain degree, of ſtrong liquors; and thence by a natural progreſs, too often proceed to habitual drunkenneſs.

The firſt and beſt corrective of theſe evils, would be a religious education. It is obvious to every one, who viſits the counties where colliers and miners abound, that their children have not the fair and ordinary advantages of inſtruction: that, placed in a ſituation of life in which they can have very little hope of improving by domeſtic example, they are ſo diſunited from the other claſſes of the community, as to be, in a great degree, though living in a Chriſtian and civiliſed country, excluded from the common benefits of religion and civiliſation.

This obſervation applies to a numerous claſs of our fellow-ſubjects: a claſs, to which education and early habits of religion are particularly neceſſary; as nothing can have ſo efficacious a tendency to improve the conduct of men thus circumſtanced, as a juſt ſenſe of revealed religion, and of the rewards and puniſhments of a future ſtate.

It is likewiſe of great importance, that colliers and miners, particularly, ſhould be habituated to the deſire of acquiring permanent property; and, with the ſurplus of their profits, be enabled and induced to purchaſe little ſpots of ground, as objects of cultivation, and employment for their leiſure hours. Thoſe miners, who do this in Cornwall (and there are many who in that county, with the ſurplus of their gains, purchaſe little ſpots of ground, chiefly on a leaſehold tenure), are in every reſpect a better claſs of men.—They are kept from ale-houſes, by finding, in their own little property, amuſement and occupation for their vacant time; they acquire habits of fore-thought, becauſe they enjoy the benefit of it; and become orderly and civiliſed in ſome meaſure, becauſe they derive an additional motive to behave aright, and conſider their conduct as more ſubject to obſervation, in conſequence of their being poſſeſſed of property.

MINERALOGY (*Encycl.*). As the pleaſing and inſtructive ſcience of mineralogy, after having made ſuch rapid ſtrides upon the continent, for theſe ten years, is daily making more and more progreſs in this iſland, where our gentlemen farmers, and manufacturers, begin to think it a ſhame to be ignorant of ſubſtances under their eyes, of which a proper knowledge may often turn to good account; we have little doubt but the following directions for the mineralogical traveller, by the celebrated Sauſſure, author of the Journey to the Alps, in 4 vols. 4to. will be acceptable to our readers.

1. The moſt neceſſary inſtrument to take with you, is a miners' hammer. You muſt have it of at leaſt two ſizes: one ſmall, to break the little pieces, and the pebbles, holding them in your left hand, while you ſtrike them with your right; the weight ought to be, including the handle, about 10 oz.: the other, to ſtrike fragments out of the rocks, and to break large pieces, ought to be four times the ſize of the former. When I travel on horſeback I have theſe two hammers put in my ſaddle-bows.

2. Two chiſſels uſed by ſtone-cutters: one ſmall, about a line or a line and a half broad at the point, to detach little cryſtals, or other minute objects; the ſecond ſhould be about ſeven or eight lines, that is, three quarters of an inch, in breadth.

3. To try the hardneſs of foſſils, you muſt have a *ſteel* briquet; a triangular file, rather fine; and a ſtrong point or needle of tempered ſteel.

4. Nitrous acid, and the boxes with re-actives (*boîtes à réactifs*) of M. de Morveau.

5. An artificial magnet in a caſe, with a pivot of ſteel, upon which it is placed, to try the magnetiſm of foſſils.

6. A magnifying glaſs of three inches focus, in order to form a general idea of a foſſil; another of one inch, to ſtudy its ſeparate parts; and one of five or ſix lines, for a more accurate examination. Theſe three magnifiers ought always to be in the pocket of the traveller; but, beſides theſe, for the cabinet, and any laſting reſidence, he ought to have a microſcope with a micrometer.

7. Perſpective glaſſes to obſerve the inacceſſible heights, and the diſtant mountains.

8. A pocket-book with leaves of prepared paper, on which to write with a pencil of tin-ſolder (ſoudure d'etaim, *qr.* etain?) which one is not obliged to be always mending, and the writing is not ſo eaſily effaced as of black-lead. In this pocket-book muſt be entered, on the very ſpots, the ſketch of one's journals, and notes of any obſervations that may ariſe; but every evening theſe notes ſhould be copied with the pen, preſerving, nevertheleſs, the originals, which have always a character of truth, to which one is glad to recur.

9. Some quires of brown paper, of which ſome ſheets ſhould be carried in the pocket, to wrap up, and mark, one by one, and on the ſpot, the pieces of ſtone which are collected; they muſt afterwards be packed with hay in a bag for this purpoſe, till there be enough to fill a packing caſe, to be ſent home by the carriers as occaſion may ſerve. But in the midſt of the journey, as it is fatiguing to load one's pockets, and as the guides often loſe them on purpoſe to get rid of the trouble, I have behind my ſaddle two leather bags, in which I put them till I come to a reſting-place, where I have time to wrap them in hay, and put them into my canvas bag. M. Beſſon recommends to voyagers to write the tickets with China ink, if the minerals be to be ſent from afar, becauſe many accidents may diſcolour common ink.

10. The blow-pipe and its accompaniments. As I make much uſe of it, which is fatiguing, though I know very well

to uſe my cheeks only, without blowing from the bottom of my breaſt, I make uſe of portative bellows, *à deux vents*, each ſide being ſixty-two ſquare inches in ſurface. Theſe bellows may be hung on the ſide of any table; and I put them in motion by preſſing the handles betwixt my knees, which again ſeparate by a ſpring. This apparatus is eaſily carried, and very convenient.

11. A ſemicircle, traced, and graduated, upon a thin plate of copper, of a form exactly rectangular, with a plummet hung in the centre of the ſemicircle. This is the moſt commodious inſtrument to meaſure the inclination of beds, veins, and ſlopes; and may eaſily be carried in the pocket-book.

12. A compaſs, with an *alidade*, to take the direction of mountains, chains, and beds of foſſils.

13. A pocket-barometer, with two thermometers, both mercurial; one fixed to the barometer, to meaſure the temperature of its mercury, the other with a naked bowl, to meaſure the temperature of the air. Thoſe who are ſtudious of meteorology ſhould alſo have a hygrometer, and an electrometer; thoſe who underſtand geometry ought to be provided with a ſextant, with its artificial horizon, and a chain to meaſure a baſe, and then take the height of an inacceſſible peak, of the breadth of a river, &c. With the ſextant, latitudes may be taken; but the longitude requires much practice and acquaintance with aſtronomy.

14. It is neceſſary to have ſome tools to repair an inſtrument, in caſe it be deranged; as pincers, files, vice, compaſſes, gimlets, wire, needles, thread, packthread.

15. Some good map, paſted on canvas, of the country propoſed to be examined; which muſt be often compared with the itinerary, and the ſituation aſſigned by the compaſs.

The other obſervations of M. Sauſſure, relate ſolely to the clothing and food, &c. &c. neceſſary in viſiting the higheſt Alps.

MINERAL WATERS (*Encycl.*). The following account of the factitious mineral waters of Citizen Goldſchmidt is extracted from the '*Recueil Periodique de la Societé de Médecine de Paris, of Ventôſe*; *An. vii. February*, 1799; tranſlated in the Medical and Phyſical Journal.

Citizens Bouillon La Grange, and Chauffier, reported to the Medical Society of Paris, that they examined three diſtinct ſpecies of artificial mineral waters; namely, thoſe of Seltz, Spa, and Sedlitz.

Their firſt care was to aſcertain the phyſical properties; they found them very clear and tranſparent, having a ſtrong acid flavour; and that they gave the tincture of turnſol a deep red colour. By putting them in contact with different re-agents, they obtained, firſt, by cauſtic alkalies, neutral ſalts; ſecondly, by lime water, an abundant carbonate of lime; thirdly, poured on filings of very pure iron, the artificial waters, in a ſhort time, acquired a ferruginous taſte, which, after the properties already diſcovered, confirmed the preſence of the carbonic acid and its action on the iron.

They then proceeded to examine the nature of the ſalts employed, and the quantity of carbonic acid which each bottle might contain. The methods followed to aſcertain the compoſition of theſe waters, afford no novelty; the ſaline ſubſtances, however, employed, were ſimilar to thoſe deſcribed by Bergmann. Upon the whole it appeared that the author had completely ſucceeded, and produced an exact imitation of nature.

As to the carbonic acid which theſe waters poſſeſs in ſolution, experience ſhews, they have a greater quantity than the natural waters. But in order to aſcertain this quantity with the greateſt exactneſs, Citizen Goldſchmidt has invented a very ingenious apparatus. (See Pl. 39.) By this apparatus (which may ſerve to obtain any other gas, and aſcertains with the moſt ſcrupulous exactneſs, the quantity of gas held in a liquid in ſolution) it was diſcovered, that the waters contained twice and a half their volume of carbonic acid. The author even went ſo far as to aſſert, that he could ſeparate three times their volume. But this ſuperabundant quantity eaſily diſengages itſelf, not only by being agitated, but by an elevation of temperature. Such an exceſs of acid is therefore uſeleſs, eſpecially in medical practice.

The Medical Society alſo deſired the Citizens Bouillon La Grange, and Chauſſier, to examine the differences which exiſted between the artificial mineral waters of Goldſchmidt, and thoſe of Citizen Goſſe, of Geneva; but from the impoſſibility of procuring thoſe of the latter as recently prepared as thoſe of the former, they were unable to make a fair trial. It is certainly very eaſy to conceive, that water which has been agitated by travelling, or which has been prepared any length of time, whether in a cellar or any other place, will not bear a compariſon with water which has been ſaturated only a few days. The two commiſſioners, therefore, had recourſe to the report made by their colleague, Deyeux, to the School of Medicine, who had carefully examined the artificial water of Citizen Goſſe.

"Two pounds," ſays that chemiſt, "of this water, placed under mercury, afforded twice and a half their volume of carbonic acid, the half of which was ſeparated ſpontaneouſly, and the other half by plunging the bottle into hot water."

It is evident from this, that there exiſts a great analogy in the reſult of the two experiments, ſince each of the waters contain twice and a half their volume of carbonic acid; and it is alſo evident, that there is no difference between the mineral waters of Goldſchmidt and thoſe of Goſſe; for, beſides the equal quantity of carbonic acid, the chemical examination of the ſalts in diſſolution, afforded the ſame reſults as thoſe mentioned in the report of Citizen Deyeux.

This compariſon muſt nevertheleſs be of great advantage to thoſe who preſcribe or make uſe of theſe artifical mineral waters, as it will enable them to obtain them of a proper degree of acidity; for it is evident from the experiments of Citizen Goldſchmidt, that it is poſſible to ſuperſaturate the water with the acid.

It appears that theſe artificial waters have been employed with great ſucceſs in different maladies by ſeveral French phyſicians; and Bouillon La Grange, and Chauffier, conclude their report by recommending the eſtabliſhment of a manufactory for them in Paris, in order to inſure their being accurately and faithfully prepared, and alſo by declaring Citizen Goldſchmidt deſerving both of attention and encouragement.

To this accoun tis annexed the following explanation of the *Gaſolitre*, by Citizen Goldſchmidt.

"The method hitherto uſed," ſays he, "to aſcertain the quantity of carbonic acid gas by lime water, appeared to me very troubleſome, not only becauſe it at the ſame time precipitates the iron, the magneſia, and other earthy ſubſtances, which we are afterwards forced to ſeparate, and becauſe the operation of filtering always occaſions a certain waſte, but becauſe the acceſs of atmoſpheric air contributes, in a great degree, to form carbonate of lime.

"The pneumato-chemical apparatus with mercury, which is at preſent in uſe, has the diſadvantage of being always in equilibrium with the preſſure of the atmoſpheric air; and is conſequently obedient to the laws of the barometer.

"Theſe ſeveral difficulties urged me to an endeavour at avoiding thoſe obſtacles, which I have overcome by the invention of the Gaſolitre: this apparatus being fully adapted to calculate with accuracy, and in a ſhort time, the gaſeous

parts contained in any body whatever, and to ſhew the preſſure.

" Fig. P is a glaſs meaſure containing two centilitres, or two drachms fifty grains: in fitting it with its cock for a double current of air, to the tube G, the cylinder C being full of mercury, the cock B ſhut, and the apparatus deprived of all poſſibility of admitting the atmoſpheric air, we ſhall find, in opening the cock H, that no vacuum is occaſioned in the cylinder C beſides that which is formed of the bubbles of air between the glaſs and the mercury, in filling the cylinder under the preſſure of the atmoſphere of ſeventy-five centimeters, or about twenty-eight inches, and that which the difference of the column of mercury in the cylinder C and the volume of air in the meaſure P under a preſſure of ſeventy-five centimetres, reduced to zero, can produce.

" We ſhall find this ſtatement accurate in opening the cock Q to communicate the preſſure of the atmoſpheric air into the meaſure P: in then ſhutting it oppoſite Z it will not produce a greater vacuum in the cylinder C than the preſſure of the volume of air in P has been able to effect.

" The little pump O, placed on the ſtand F, ſerves to graduate the cylinder C. We fill the bladder of gas, which we intend to meaſure, and open the cock S and T to draw a volume of gas, at all times equal, into the pump; we open the cock T oppoſite U, ſhutting it at the ſame time oppoſite S, and puſh forward the piſton to introduce the gas into the cylinder C filled with mercury, and ſhut by the cock B: when the cock H does not ſupply more mercury, we continue in this manner to introduce at intervals the ſame volume of gas into the cylinder C, in order to graduate it.

" We ſhall obtain the firſt time a greater vacuum on account of the preſſure of ſeventy-five centimetres, where the mercury meets; this preſſure ceaſes the ſecond and following times, when it will be of an equal volume.

" The operation will never be attended with ſucceſs, if the external air can penetrate: it is, however, eaſy to aſcertain this by the cock H, which, when the hole is well adjuſted and ſhut, does not furniſh more mercury, after the effort of the preſſure before explained.

" To know the quantity of gas which the gaſeous waters contain, we thus diſpoſe the apparatus:

" We ſhut the cock H and fill the cylinder C with mercury; we ſhut the cocks B and K, and open the cock A, to aſcertain the ſtate of the apparatus; if the apparatus be in proper order, it will not make a vacuum in the cylinder C, further than the firſt mark; we fill the matraſs up to the neck with the water we intend to analyſe, and carefully fit the matraſs to the cock K, by a ſcrew provided with a little ſhield of leather: the whole being well ſecured, we open the cocks K and H, and heat the water to the boiling point."

The following is an explanation of the figures in the plate:

A is a glaſs funnel to pour in the mercury; B, iron cock; C, glaſs cylinder, graduated, ſhut by the cock, and cemented on the plate D; D, delft plate; E, wooden ſtand; F, ſtand to ſupport the apparatus; G, glaſs tube, the cavity of which is of the diameter of one millimetre, about half a line, and which communicates with the cylinder C; H, tube, of the ſame diameter, communicating with the cylinder C, and returning into the bottle J by an iron cock; J, bottle and funnel to receive the mercury; K, cock for a double current of air; L, matraſs containing about twelve centilitres of water (four ounces), ſecured to the cock by a ſcrew; M, ſand bath; N, furnace; O, pump, the cylinder of which is glaſs, ſecured by two ſcrews to the ſtand F; P, glaſs meaſure of two centilitres, or ſix drachms twenty-eight grains; Q, cock for a double current of air; R, bladder to contain the gas; S, cock; T, cock for a double current of air; U, glaſs pipe coming from the cock T to K; X, pump; Y, ſtand on which to fix the pump; Z, index of the ſecond current of air.

MINFELD, a town of Germany, in the duchy of Deux Ponts, eight miles S. of Landau.

MINIATO, St. an epiſcopal town of Tuſcany, ſeated on the Arno, 20 miles S.W. of Florence. Long. 10. 45. E. Lat. 43. 40. N.

MINORBINO, a town of Naples, in Terra di Bari, with a biſhop's ſee, 26 miles N. of Cirenza. Long. 16. 19. E. Lat. 41. 8. N.

MINORI, a town of Naples, in Principato Citeriore, with a biſhop's ſee. It is ſeated on the gulf of Salerno, between the town of that name and Amalfi.

MINSFELDEN, or Mensfelden, a town of Germany, in the archbiſhopric of Treves, 25 miles E. of Coblentz. Long. 7. 57. E. Lat. 50. 26. N.

MINSINGEN, a town of Suabia, in the duchy of Wirtemburg, with a caſtle. Long. 9. 35. E. Lat. 48. 32. N.

MINSKI, a town of Lithuania, capital of a palatinate of the ſame name, with two citadels. The country is pretty fertile, and has foreſts containing vaſt numbers of bees, whoſe honey makes part of its riches. Minſki is 65 miles N. of Sluczk, and 100 S.E. of Wilna. Long. 26. 48. E. Lat. 54. 11. N.

MIOLANS, a fortreſs of France, in the department of the Lower Alps, ſeated on a craggy rock, in the valley of Barcelonetta, ſix miles N.E. of Montmelian. Long. 6. 20. E. Lat. 45. 35. N.

MIOSS, a lake of Norway, in the province of Hendemarke, 80 miles in circumference. It is divided by a large peninſula, and contains a fertile iſland 10 miles in circumference.

MIRA, a town of Portugal, in Beira, 16 miles N.W. of Coimbra. Long. 8. 25. W. Lat. 40. 20. N.

MIRANDELA, a town of Portugal, in Tra-los-Montes, 30 miles S.W. of Braganza, and 28 N.E. of Lamego. Long. 6. 9. W. Lat. 41. 25. N.

MIRABEAU, a town of France, in the department of Vienne, famous for the beauty and ſtrength of the aſſes which its environs produce. It is 16 miles N. of Poitiers, and 175 S.W. of Paris.

MIRECOURT, a town of France, in the department of the Voſges, famous for its violins and fine lace. It is ſeated on the river Modon, 27 miles S. of Nanci, and 30 S.E. of Toul. Long. 6. 4. E. Lat. 48. 15. N.

MIREMONT, a town of France, in the department of Dordogne. Near it is a remarkable cavern, called Cluſeau. It is ſeated near the Vizere, 15 miles E. of Bergerac.

MIREPOIX, a town of France, in the department of the Upper Pyrenées. It was lately an epiſcopal town, and is ſeated on the Gers, 15 miles N. of Foix.

MISAGNO, a town of Naples, in Otranto, nine miles S.S.E. of Oſtuni.

MISENO, a cape of Italy, W. of the bay of Naples, between Puzzoli and Cuma. On it are the ruins of the ancient Miſenum.

MISERDEN, a village in Glouceſterſhire, ſix miles N.W. of Cirenceſter. Here is a park, ſeven miles in circumference, in a valley of which is a mount of a circular form, now overgrown with trees. This was the ſite of an ancient caſtle, built in the reign of King John; and part of the moat, which encompaſſed the building, is ſtill to be ſeen.

MISITRA, a celebrated town of Greece, capital of the

Morea, with a Greek archbiſhop's ſee, and a caſtle. It is divided into four parts, the caſtle, the town, and two large ſuburbs. The church is one of the fineſt in the world, and the Turks have turned it into a moſque, near which is a magnificent hoſpital. There is a great number of Chriſtians, and ſo many Jews, that they have three ſynagogues. It was taken by the Venetians in 1687; but the Turks retook it. It is ſeated on the Vaſilipotamo, 100 miles S.W. of Athens, and 90 N. by E. of Lepanto. Long. 22. 30. E. Lat. 37. 6. N.

MISSOURI, a river of North America, whoſe ſource is unknown. It joins the Miſſiſippi in lat 39° E. but is a longer, broader, and deeper river, and is, in fact, the principal ſtream. It has been aſcended by the French traders upwards of 1200 miles, and from its depth and breadth at that diſtance, appeared to be navigable much higher.

MISTRETTA, a town of Sicily, in Val di Demona, with a biſhop's ſee, 50 miles E.S.E. of Palermo, and 64 W. of Meſſina. Long. 24. 22. E. Lat. 38. 55. N.

MITCHAM, a village in Surrey, eight miles S.W. of London. It is ſeated on the Wandle, on which are ſome ſnuff-mills, and two calico-printing manufactures.

MITTENWALDE, a town of Upper Saxony, in the Middle March of Brandenburg, 12 miles S. of Berlin. Long. 13. 28. E. Lat. 52. 19. N.

MITTERBURG, a town of Auſtrian Iſtria, the capital of a county, with a caſtle ſituate on a rock, 15 miles W. of Fiume, and 30 S.E. of Trieſt. Long. 14. 19. E. Lat. 45. 41. N.

MOCAUMPOUR, a town of Hindooſtan Proper, in Napaul, ſituate on the eaſt ſide of the Napal, 40 miles S.S.E. of Catmandu, and 120 N. of Patna. Long. 85. 27. E. Lat. 27. 35. N.

MODBURY, a town in Devonſhire, with a market on Thurſday. It is ſeated in a bottom, between two hills, 36 miles S.S.W. of Exeter, and 208 W.S.W. of London. Long. 3. 54. W. Lat. 50. 23. N.

MODICA, a town of Sicily, in Val-di-Noto, on a river of the ſame name, 25 miles S.W. of Syracuſe. Long. 15. 9. E. Lat. 36. 48. N.

MODON, a ſtrong town of the Morea, with a ſafe harbour, and a biſhop's ſee. It is ſeated on a promontory, projecting into the ſea of Sapienza, 15 miles E. of Coron, and 95 S.W. of Napoli-di-Romania. Long. 21. 35. E. Lat. 36. 56. N.

MODZIR, a town of Lithuania, capital of a diſtrict of the ſame name. It is ſeated on the river Prypec, in a fertile country, 85 miles S.E. of Sluczk. Long. 29. 10. E. Lat. 52. 5. N.

MOESKIRCH, a town of Suabia, belonging to the princes of Furſtenburg, 18 miles N. of Conſtance, and 52 S. of Stutgard. Long. 9. 11. E. Lat. 47. 56. N.

MOFFATT HILLS, the higheſt mountains in the S. of Scotland. They occupy the N. part of Annandale; and from theſe deſcend, in different directions, the Tweed, Clyde, and Annan, whoſe ſources are but little diſtant from each other.

MOGADOR, an iſland and caſtle of Africa, in the kingdom of Morocco, near Cape Ozem. There are mines of gold and ſilver in one of the mountains. Long. 9. 55. W. Lat. 31. 38. N.

MOHATZ, a town of Lower Hungary, in the county of Baraniwar. Here Louis, the laſt king of Hungary, in 1526, was defeated by the Turks under Soliman II. with the loſs of 22,000 men, and after the battle ſuffocated by the fall of his horſe in a muddy brook. In 1687, another battle was fought here, between the Chriſtians commanded by Prince Charles of Lorrain, and the Turks, who were defeated with the loſs of 10,000 men, their cannon and baggage. It is ſeated at the confluence of the Danube and Coraſſe, 17 miles N.W. of Elſeck. Long. 19. 56. E. Lat. 45. 46. N.

MOHAWK RIVER, a river of the ſtate of New York, which riſes to the north of Fort Stanwix, paſſes by that fort and Skenectady, and empties itſelf by two mouths, into Hudſon's River, eight miles above Albany. About two miles above its junction with that river it has a cataract, where the ſtream, 100 yards wide, falls perpendicularly about ſeventy feet.

MOHILEF, or Mogilev, a government of the Ruſſian empire, part of Lithuania, diſmembered from Poland in 1772.

MOHRUNGEN, a town of Pruſſia, in the province of Oberland, ſituate on a lake of the ſame name, which almoſt ſurrounds it. Here is an old caſtle, formerly a convent, belonging to the knights of the Teutonic order, in conſequence of whoſe wars the town has frequently ſuffered. It is 56 miles S.S.W. of Konigſberg, and 56 S.E. of Dantzic.

MOISSAC, an ancient town of France, in the department of Lot. It has a great trade in corn and flour, and is ſeated on the Tarn, near the Garonne, 13 miles N.W. of Montauban. Long. 1. 17. E. Lat. 44. 6. N.

MOLA DI BARI, a town of Naples, in Terra di Bari, on the coaſt of the gulf of Venice, 12 miles E. of Bari.

MOLA DI GAETA, an ancient town of Naples, in Terra di Bari, ſeated on the gulf of Venice, 14 miles E. of Bari.

MOLD, a town in Flintſhire, where the aſſizes are held. It is five miles S. of Flint.

MOLE, a mountain of Savoy, which, from its height and fine ſloping peak, is an object of great beauty, when ſeen from the lake of Geneva. At its foot is the town of Bonneville, 20 miles S. of Geneva.

MOLFETTA, a town of Naples, in Terra di Bari, with a biſhop's ſee, ſeated on the gulf of Venice, 10 miles N.W. of Bari. Long. 16. 52. E. Lat. 41. 28. N.

MOLIERES, a town of France, in the department of Lot, 11 miles N. of Montauban, and 16 S. of Cahors. Long. 1. 30. E. Lat. 44. 10. N.

MOLINA, a ſtrong town of Spain, in New Caſtile, ſeated on the Gallo, in a territory abounding in paſtures, 35 miles S.E of Siguenza, and 88 E.N.E. of Madrid. Long. 1. 53. W. Lat. 40. 50. N.

MOLISE, a territory of Naples, in the form of a triangle, whoſe ſides are 39 miles long, lying between Terra di Lavoro, Abruzzo Citeriore, Capitaneta, and Principato Ulteriore. It is a mountainous country, but fertile in corn, wine, ſaffron, and ſilk.

Molise, a town of Naples, capital of a territory of the ſame name, but not populous. It is 50 miles N. of Naples. Long. 14. 43. E. Lat. 41. 36. N.

MOLSHEIM, a town of France, in the department of Lower Rhine, ſeated on the Bruſch, 10 miles W. by S. of Straſburg, and 228 E. of Paris. Long. 7. 35. E. Lat. 48. 32. N.

MONASTER, an ancient town of the kingdom of Tunis, ſeated near the ſea, 70 miles S.E. of Tunis. Long. 11. 6. E. Lat. 35. 50. N.

MONCALLIER, a town of Piedmont, ſeated on the Po, five miles S.E. of Turin. Long. 7. 48. E. Lat. 45. 2. N.

MONCALVO, a ſtrong town of Italy, in Montferrat, ſeated on a mountain, 12 miles S.W. of Caſſel. Long. 7. 19. E. Lat. 45. 10. N.

MONCHABOU, a city of the kingdom of Burma, which, in 1755, was the reſidence of the king. It is 39 miles N. of Ava, the preſent capital.

MONCONTOUR, a town of France, in the department of Ifle and Vilaine, 39 miles S.W. of St. Malo. Long. 2. 36. E. Lat. 48. 15. N.

MONDEGO, a river of Portugal, which has its fource near Guarda, and croffing Beira, paffes by Coimbra, and falls into the Atlantic, near a cape of the fame name.

MONDIDIER, a town of France, in the department of Somme, where the kings of France formerly had a palace. It is feated on a mountain, 24 miles S.E. of Amiens, and 57 N. of Paris. Long. 2. 34. W. Lat 49. 39. N.

MONDONEDO, a town of Spain, in Galicia, with a bifhop's fee; feated in a fertile country, on a fmall river, 60 miles N.E. of Compoftella. Long. 7. 10. W. Lat. 43. 30. N.

MONDOUBLEAU, a town of France, in the department of Loir and Cher, with a caftle, 13 miles N. of Vendôme.

MONDRAGON, a town of Spain, in Guipufcoa, in the neighbourhood of which are fome medicinal fprings, and a mine of iron of fuperior quality. It is 24 miles S.S.W. of St. Sebaftian. Long. 2. 4. W. Lat. 43. 9. N.

MONDRAGON, a town of France, in the department of Tarn, 12 miles N.N.W. of Caftres.

MONDRAGONE, a town of Naples, in Terra di Lavoro, celebrated for its medicinal waters. It is near the fea, 13 miles N.W. of Capua.

MONFORTE, a town of Portugal, in Beira, 30 miles N. by E. of Portalegra. Long. 7. 21. W. Lat. 39. 32. N.

MONFORTE, a town of Portugal, in Alentejo, 20 miles S. of Portalegra. Long. 7. 31. W. Lat. 38. 47. N.

MONGEARTS, a people of Africa, of whom, and the Mouſelemines, we have the following account in Saugnier's travels to the coaft of Africa, Morocco, Senegal, Goree, Galam, &c.

The travels of Sparmann, Gordon, Vaillant, Maffon, Bruce, and Mungo Park, in different parts of Africa, have made us acquainted with only a fmall portion of the immenfe kingdoms of that continent; and it may be truly averred, that, though neareft to Europe, the anterior is as yet almoft entirely unknown. To become completely acquainted with it, two great journeys muft be undertaken; the firft to Tombuet, in Abyffinia, either by traverfing the Bildulgerid, or by afcending to the fource of the Niger; the fecond would be from Tombuet to the Mofambique, thus traverfing the whole interior of Africa. No doubt the fociety eftablifhed in London will have intrepidity enough to vanquifh all the obftacles which may prefent themfelves either in the climate, or the inhabitants; and from their indefatigable obfervations, will be derived an acquaintance with countries hitherto only known by incorrect maps, and peopled by nations whofe names are uncertain as their exiftence is doubtful.

The narrative before us is rather an account of Saugnier's misfortunes than a difplay of difcoveries, which he might have made in traverfing at large a country entirely new to the obferver: but being unfortunately a flave to the Moors, on whofe coaft his veffel was wrecked, he expected nothing but death, and had to contend with infinite difficulties. Yet his narrative contains many particulars relative to the manners, cuftoms, and character, of the various Arabian hordes among whom he refided.

The horde of Mongearts, who alone were on the coaft when he was caft away, did not obtain undivided poffeffion of the wreck: they were obliged to fhare it with the Moors of the Biledulgerid, a warlike nation, known by the name of Mouſelemines. One of thefe Arabs obtained Saugnier in his partition of the fpoil: he made his efcape, but fell into the hands of other Moors, who brought him, after a march of thirty days acrofs the defert, to their camp; for thefe people are all wanderers. Content in their poverty, and unacquainted with want, they live in a ftate of perfect tranquillity. The men are occupied in hunting or tending flocks; the women in fpinning or cookery; both fexes cover themfelves with the fkins of goats, or with pieces of cotton when they are able to obtain them from Guinea. The finery of the men conſifts in carrying handfome arms, fuch as daggers, fabres, firelocks, and in a wreath of large white cryftals: that of the women is in necklaces of amber, coral, and all kinds of glafs beads; in ear-rings either of gold or filver, according to the wealth of the individuals; and in a very ample cotton covering, one half of which is red.

Saugnier was employed in fupplying the tent with wood, and in keeping the flocks of goats and camels, and faw no probable end of his misfortunes. He was fucceffively fold to different Arabs, and inferred from his own fufferings that the more men are civilifed the more cruel they become: every new maſter treated him with increafed feverity, and every day brought him nearer to the ftates of Morocco.

By the courfe of fucceffive tranſfers he arrived at Cape Nun, where the French and Engliſh merchants at Mogador, having learned the misfortunes of thefe fhipwrecked people, directed a purchafe to be made of all who furvived that event. Saugnier was among the number. Being brought to Mogador, he fondly hoped that all his fufferings were at end, and that he fhould be reftored to liberty, when the emperor, enraged that the Chriftians had been more fpeedily obeyed than himfelf in his own dominions, broke out in threats, ordered the ranſom to be reftored to the merchants, and Saugnier and his companions were again made flaves, but they were flaves to the emperor, which entitled them to high confideration among his fubjects. On their arrival at Morocco they were well treated, dreffed in the French faſhion, and difcharged from all labour. The emperor, to whom they were prefented, received them graciouſly; he promifed they fhould fpeedily be fent to France, and in a few days reftored them to that liberty which they had not hoped fo fpeedily to enjoy. At Tangiers, by the help of the French vice-conſul, they obtained a paſſage in a Spaniſh fhip, and arrived in fafety at Cadiz.

In the journeys which Saugnier made with his various maſters in the interior of Africa, he faw all the wandering nations which inhabit the great defert *Saara*, to the Niger; they are indifferently called Nars, Moors, or Arabs. They are divided among themfelves: the moſt conſiderable tribes are the Mongearts, Traſſarts, Bracnarts, and Mouſelemines: the laſt, accuſtomed to murder and pillage, are the fcourge of the neighbouring people. It is impoſſible but that a people always wandering, always fugitive, and compoſed of a collection of various nations, fhould imbibe fome of the cuſtoms and fuperſtitions of their neighbours; they are Mahometans only in appearance and name. They diſplay in their cuſtoms, the principles of natural law; it is imprinted on almoſt all their actions. The fimple impulſe of unaſſiſted nature and the effects of example are the only education they receive.

In the Saara, hoſpitality is exerciſed without reſtraint; every traveller, on his arrival, is conducted to the tent of the chief, and treated with all the complaiſance and attention which can be expected from a half-ſavage race. The Jew alone muſt not venture on the territory of the Mongearts; all religions are tolerated except his, but he would be burned alive. The Jews are eaſily recogniſed, not only by their features, but by the diſtinguiſhing dreſs they are compelled to

wear in all parts of Barbary, where they form a numerous nation. Among the Arabs, the old are reſpected in an equal degree with the prieſts, and with thoſe who have been at Mecca. The aged, like the heads of hordes, are the judges of the people. They are only reſtrained from pronouncing the puniſhment of death; ſeveral chiefs muſt be aſſembled to decide on the nature of a crime and its penalty. War is leſs terrible, and leſs ſanguinary, among them than predatory attempts, which are, in a certain degree, ſanctioned by law. To ſucceed with impunity depends on the care which is taken not to be caught in the fact: the theft is only a crime if committed by day, in the night the law authoriſes it, intending, no doubt, to excite a greater degree of vigilance in tending the flocks.

The only mechanics employed among the Mongearts, are farriers and gold-ſmiths; the people are too indolent to apply to theſe occupations. The workmen who travel through the Saara, come from the Biledulgerid, and find ample employment. The Mongearts go in ſearch of things abſolutely neceſſary to the Traſſarts, who inhabit the northern ſhore of the Niger. Theſe people are entirely occupied with the care of their cattle; they live on the produce of the dairy, and on grain which they obtain from their neighbours; they are ſtrangers to agriculture, and ſo indolent, that they do not get their victuals ready till nature requires it, by which means they are often unprovided. The women are engaged in houſehold concerns; the negro ſlaves and children take care of the flocks; the men go to the places of aſſembly of the hordes, to market, or to the chace. The wives of the Mongearts are held in a greater degree of conſideration than thoſe of their neighbours; yet they are kept in a ſtate of ſubjection bordering on ſlavery. Houſehold affairs, ſpinning the hair of the camels and goats, the providing of wood, and the preparation of victuals, are their concerns: thoſe who have negro-women for ſlaves have no trouble but that of iſſuing orders.

Although polygamy is allowed by their religion, few Arabs have more than one wife; when ſhe no longer pleaſes her huſband, or is diſpleaſed with him, they ſeparate; the woman retires to her parents: if ſhe reſiſts the ſolicitations of her huſband to return, ſhe is free, and may marry any one elſe; but if ſhe has a child, eſpecially a boy, ſhe cannot remain ſeparated from her huſband more than eight days upon pain of death. When a man beats his wife, it is an unequivocal proof of his affection, and that he does not wiſh to be ſeparated from her; but if he only reproaches, without beating her, ſhe thinks herſelf contemned, and retires to her parents. Theſe proofs of friendſhip, and even of love, though ſtill in uſe among the lower claſſes in Ruſſia, would not accord with the taſte of females in civiliſed nations. The fidelity of the Arab women is inviolable; they hope for an equal immortality with their huſbands, but expect to attain it by conſtancy alone; in this they differ widely from the Mahometans. They make frequent viſits to each other, and the mode of ſhewing reſpect is to permit the gueſt to do all the work in the tent; ſhe prepares the food, churns the butter, while her friend or relation talks to her on private or public affairs. The cordiality of the reception is eſtimated according to the quantity of occupations the viſitor is permitted to fill.

All theſe cuſtoms are pretty generally prevalent among the inhabitants of the northern bank of the Niger, the variations are ſo few and trifling as to claim very little notice. The Mouſelemines, who are a mixture of real Arabs and fugitive Moors from the empire of Morocco, occupy one part of the Biledulgerid. Their government is republican: more civiliſed than the other Moors, they are united in ſocieties, and inhabit ſmall towns; more induſtrious and laborious than their neighbours, they employ themſelves in agriculture, and treaſure their grain, half-winnowed, in large holes made in the earth, in the ſhape of obtuſe cones, which they prepare by filling them with wood, and burning it. When they have depoſited their grain in theſe excavations, they cover them with ſtrong planks laid cloſe together, and cover the planks with earth.

This country is very populous, and would be ſtill more ſo but for the continual wars in which they are engaged with the Emperor of Morocco. The liberty they enjoy encourages them to endure the greateſt fatigues; they look upon it as their greateſt good, and will fight, even to death, to preſerve it. They are rich, becauſe they alone carry on all the commerce of Barbary with the Saara. The women are not more enſlaved than in the interior; every man has as many as he can maintain: thoſe are moſt reſpected who have the good fortune to bear male children, who are educated with the greateſt care.

Theſe people have a general head of their religion, who is reſpected even to adoration: he is the moſt powerful individual in Africa; his authority is unlimited; he declares war, makes peace, and though he has no territory of his own, enjoys a moſt extenſive power. He does not, like the Emperor of Morocco, fancy himſelf inſpired by the prophet, nor does he impoſe ſuch a belief on his people; on the contrary, he avowedly forms his judgment from conſultations with wiſe and experienced men. His authority extends over all the inhabitants of the Biledulgerid and the Saara; and the emperor, powerful as he is, has never dared to attempt a diminution of his influence.

The country of the Mouſelemines is very fertile; it produces all the neceſſaries of life, almoſt without cultivation; it abounds in palm-trees, dates, fig and almond trees, and produces great quantities of oil, wax, and tobacco, which are carried to Mogador. This plenty occaſions the people to be better fed than thoſe in the deſert, but the inhabitants of the country are often reduced to a ſtate of rigid frugality.

The ſubjects of the emperor of Morocco are much more unhappy even than thoſe who want the neceſſaries of life. The prejudices and deſpotic power of their princes, the plunder to which they are inceſſantly expoſed, the neceſſity they are under of concealing their property that it may not be forcibly taken from them, theſe circumſtances render them unhappy and barbarous. They plunder and pilfer wherever they have an opportunity; and ſo abject is their ſubmiſſion to the will of a deſpotic ſovereign, that they dare not even utter a complaint. This Mooriſh nation, which occupies one of the fineſt ſpots on the globe, is always miſerable, and often in want of the neceſſaries of life. So great is their ſlavery, that they have no characteriſtic manners, the caprice of their prince is their only law; they are acquainted with no other.

Plurality of wives is allowed among the Moors; they may have four who bear that name, the reſt are called ſlaves. Theſe women are cloſely ſhut up, and have no enjoyment but at the caprice of their lords. When a barbarous huſband is diſpleaſed with his wives, he maltreats them according to the prevalence of his brutal paſſion, and they are without hope of redreſs; often, after a long ſeries of ill uſage, he kills them to ſave the expence of their maintenance: the more humane get rid of them by exchange or ſale: the lot of theſe unhappy perſons admits of no ſolace, unleſs they are ſo fortunate as to bear male children.

All Moors are by birth equal; they are diſtinguiſhed only by offices: when out of place, they return to the ordinary rank. The education of children is very much neglected till they are ſeven or eight years old: it is not till after circun-

ciſion that they are fixed either in the ſtudy of the Alcoran, in arts, or in arms: the military are favoured by the emperor; they are placed in the horſe or foot according to their expertneſs, and they continue in the corps where they were firſt admitted, till the emperor is pleaſed to diſmiſs them. The ſovereign diſpenſes juſtice in perſon, but no one is admitted to an audience unleſs he comes with a preſent proportioned to his fortune: the ſmalleſt gifts, even two eggs, are not refuſed. The Moors ſpeak boldly to their ſovereign; baſhfulneſs is conſtrued as a ſymptom of guilt, and the perſon ſhewing it would be ſure to loſe his cauſe.

The emperor of Morocco, as a deſcendant of Mahomet, by his pretended relationſhip with the family of the Sherifs, is the interpreter of the law. The prieſts, called *Talbes*, are always friendly to him; and his ſubjects believe him to be inſpired by the prophet, and infallible. The reſpect with which he is regarded is ſo great, that his people conſider it a happineſs to die by his hand; it is a favour done to a religious Moor; he is ſure to go immediately to Mahomet's boſom, and there enjoy everlaſting felicity. Hoſpitality is partially exerciſed: the traveller is obliged to pay for his food, but if reſorted to as an aſylum, the houſe of a Moor is inviolable.

It is a general belief, that the ſouls of good men, and zealous obſervers of the law, are immortal; others ſuffer for a limited period, and are then annihilated: they conſider the doctrine of eternal puniſhments repugnant to the divine goodneſs. As to the women, thoſe only are immortal who have been inviolably faithful to their huſbands; the others utterly periſh. According to their principles, man is not a free agent, every thing having been predeſtined from all eternity; therefore, if any one commits a crime, he is not the leſs eſteemed: when a Moor is in adverſity, he bears it with an heroic courage.

The preſent reigning prince, according to Saugnier's account, might be taken for one of the Mouſelemine nation, for his love of money is equally ardent with theirs. Commerce is an object of his excluſive attention, and procures him immenſe ſums; all nations have liberty to eſtabliſh commercial houſes in his ſtates, but he takes one twelfth part of their cargoes as his right. He often levies immenſe ſums on the merchants, which they are forced to pay or relinquiſh their trade: the Jews are not ſpared; the induſtry of that wandering race is one of the chief reſources of the emperor; he gives them every facility in trading, and even advances them a capital, but he knows how to reſume it with uſury. The Arabs, acquainted with the morality of this ſovereign, will not deliver up their priſoners on his word, and the Chriſtians are ſufferers by it. The merchants dare not treat for a ranſom, till they have purchaſed the emperor's permiſſion; but on the ſimple word of theſe merchants, the inhabitants of the Biledulgerid part with their ſlaves; they have no fear of loſing the ſtipulated ranſom, for there is no example of a Chriſtian at the head of a commercial houſe breaking his engagement; this makes the Moors obſerve, that the Chriſtians never lie, becauſe it is forbidden by their religion.

All the dangers which Saugnier had incurred, and all the evils he had undergone, did not diſcourage him; he ventured to undertake a ſecond voyage, to try whether fortune would be more favourable; he arrived at Senegal without accident. This iſland is a mere bank of ſand in the middle of the river, at three miles diſtance from its diſcharge into the ſea: ſterility is its ſmalleſt inconvenience; the air is extremely impregnated with ſalt, the heat exceſſive, and increaſed by the reflection of the ſand. Inſects abound in ſuch a degree that it is impoſſible to defend one's ſelf againſt their ſtings; the water is bad, meat ſoon becomes tainted, and fiſh has a bad flavour. A more dreadful ſituation cannot be found, nor a place where it is more difficult to procure the firſt requiſites of life; yet this country has been deſcribed by Meſſieurs Adanſon and Dumanet as the abode of enjoyment and delight. "Theſe writers," Saugnier obſerves, "have given the rein to their imagination; but I, who have traverſed the greateſt part of it, found it in every particular more or leſs deteſtable. But when one is heartily tired, it is eaſy to find a termination of exiſtence without ſuicide; it is enough either to remain there, or, if the ſufferer is not endowed with ſufficient patience, let him make a voyage to Galam."

This voyage Saugnier himſelf undertook, not appriſed perhaps of the ills he thus announces, or, perhaps, confiding in the ſtrength of his conſtitution. Galam is the place known as the depot of African commerce, ſo far as it conſiſts in articles of exchange. To arrive there he was obliged to aſcend 325 leagues up the Niger, and to brave the dangers of a moſt laborious navigation, the ill effects of a moſt deſtructive clime, the hoſtilities of a moſt inhoſpitable race who inhabit the banks of the river, the oppreſſions of numerous petty ſovereigns who govern theſe people, and finally the inſubordination and the robberies of the crew he was obliged to employ. Nothing but the avidity of gain, and an inſatiable thirſt after riches, can induce a man to face and conquer all the hazards of ſuch a voyage: it requires that gold ſhould be preferred to life.

It is neceſſary to read the work itſelf to learn in the detail all the dangers of this perilous commerce. The articles of exchange are guns, gun-powder, coarſe cloth manufactured for the purpoſe, ſalt, iron, piſtols, ſabres, woollen and linen cloth, ſmall ſilver bells, coral, cryſtals, and all kinds of glaſs; theſe are bartered for ſlaves, gold, ivory, and elephant's teeth. The hardy traveller has given a preciſe and circumſtantial account of the articles uſed in theſe negociations, but an extract which muſt neceſſarily be mutilated, would be of little uſe.

At length, after a voyage of five months, conſtantly annoyed with fatigue and illneſs, and haraſſed with a multiplicity of accidents, Saugnier returned from Senegal, having completed only one half of the purpoſe which cupidity had induced him to undertake. Cheated by white men, cheated by the blacks, exhauſted by mental and bodily infirmities, he reſolved to return to his country. He notices Goree only to ſay, that it is merely a melancholy rock, which can produce nothing, and is deſtitute of water. The air is more wholeſome than at Senegal; the inhabitants are a colony of the ſame nation, called Yoloſ; there are more inhabitants than the trade of the place requires, for there are not above a hundred negroes ſold in a year, and it is neceſſary to ſearch a ſpace of thirty or forty leagues to obtain even thoſe.

Notwithſtanding all the difficulties which Saugnier has encountered, the injuries he has received from men, and the inſalubrity of the climate; the knowledge he has acquired, and the ſacred character of ſlave of the emperor, which is equally reſpected among his numerous ſubjects at a remote diſtance as by thoſe near the capital, have influenced him to propoſe to the French government to undertake, at a very ſmall expence, one of the moſt extenſive journeys ever yet made by land. Seven obſtacles of conſiderable importance preſent themſelves, but he feels in himſelf ſufficient reſources to ſurmount them all.

MONGHIR, a town of Hindooſtan Proper, in Bahar, with a fort. It is generally made a ſtation for part of the Engliſh troops, and is ſeated on the Ganges, 110 miles E. by S. of Patna, and 275 N.W. of Calcutta. Long. 86. 30. E. Lat. 25. 20. N.

MONHEIM, a town of Germany, in Bavaria, eight miles N. of Donawert. Long. 11. 12. E. Lat. 48. 58. N.

MONICKEDAM, a ſea-port of the United Provinces, in North Holland. In 1515, the whole town (the church of St

Nicholas excepted) was deſtroyed by fire. It is ſeated at the entrance of the Monick into the Zuider Zee, eight miles N.E. of Amſterdam. Long. 4. 56. E. Lat. 52. 29. N.

MONJOY, a town of Weſtphalia, in the duchy of Juliers, 19 miles S. of Juliers. Long. 6. 7. E. Lat. 50. 39. N.

MONISTROL, a town of France, in the department of Upper Loire, 14 miles S.W. of St. Etienne. Long. 4. 6. E. Lat. 43. 17. N.

MONOMUGI, a region of Africa, lying near the equator, between Abyſſinia on the N. Zanguebar on the E. Monomotapa on the S. and Congo on the W. This country is very little known to the Europeans.

MONONGAHELA, a river of North America, which riſes in Virginia, and running N. into Pennſylvania, meets the Allegany at Fort Pitt, where their united ſtreams aſſume the name of Ohio. It is deep and gentle, and navigable for barges 50 miles from its mouth.

MONOPOLI, an epiſcopal town of Naples, in Terra di Bari, ſeated on the gulf of Venice, 28 miles S.E. of Bari. Long. 17. 37. E. Lat. 41. 20. N.

MONPAZIER, a town of France, in the department of Dordogne, 18 miles S.W. of Sarlat. Long. 0. 47. E. Lat. 44. 46. N.

MONREALE, a town of Sicily, in Val di Mazara. It was erected into a biſhopric in 1183, which has been ſuppreſſed, and the revenues appropriated to the marine, and the defence of the iſland againſt corſairs. It is three miles W.S.W. of Palermo.

MONSANTO, a ſtrong frontier town of Spain, in Eſtramadura. Long. 5. 50. W. Lat. 39. 40. N.

MONSARAZ, a town of Portugal, in Alentejo, ſeated on the Guadiana, 25 miles S.W. of Elvas. Long. 7. 32. W. Lat. 38. 26. N.

MONSTERBERG, or MUNSTERBERG, a town of Sileſia, in a province of the ſame name, 20 miles N.E. of Glatz, and 27 S. of Breſlaw. Long. 17. 16. E. Lat. 50. 37. N.

MONTABOUR, a fortified town of Germany, in the electorate of Treves, between Coblentz and Limbourg. Long. 7. 50. E. Lat. 50. 30. N.

MONTAGNIAC, or MUDANIA, a town of Natolia, on the ſea of Marmora. It carries on a great trade, eſpecially in fruits, and is ſeated on a bay of the ſame name, 70 miles S.S E. of Conſtantinople. Long. 29. 10. E. Lat. 40. 0. N.

MONTAGUE ISLAND, one of the New Hebrides, in the South Pacific Ocean, near Sandwich Iſland. Long. 168. 31. E. Lat. 17. 26. S.

MONTAGUE (Mrs. Elizabeth), a lady highly eſteemed in the circles of faſhion, and of conſiderable celebrity in the republic of letters, was daughter of Matthew Robinſon, eſq. of Weſt-Layton, in the county of York, and of Horton in Kent; deſcended of an ancient and reſpectable family, nearly allied to Richard, firſt Lord Rokeby, which title, for default of male iſſue in the original poſſeſſor, devolved to Matthew Robinſon, eſq. Mrs Montague's brother. Her mother was Elizabeth, daughter of Robert Drakes, of the town of Cambridge, eſq.

The care of Miſs Robinſon's education was aſſumed by Dr. Conyers Middleton, the celebrated author of the life of Cicero, and ſeveral philoſophical and theological works. The pupil was worthy the attention of ſo great a maſter, as ſhe joined to an ardent love of literature, and a zealous deſire of inſtruction, a perſeverance which alone can inſure extenſive information, or permanent acquiſition; of this quality ſhe is ſaid to have given a remarkable inſtance by tranſcribing, before ſhe had completed her eighth year, all the Spectators: there are many reaſons to doubt the truth of this ſtory in its utmoſt extent; but granting ſhe copied thoſe papers which were beſt worth the labour, namely, Addiſon's Contributions, the effort is entitled to applauſe and admiration.

About the year 1742, ſhe married Edward Montague of Allerthorpe, in the county of York, eſq. ſon of Charles, fifth ſon of Edward, firſt earl of Sandwich. By him ſhe had one ſon, who was born in 1743, and died before he had completed his ſecond year. Mrs. Montague was early left a widow, with an ample fortune, and extenſive and honourable connections.

When the celebrated Pultney, earl of Bath, and his lady, made a tour in Germany and other parts of Europe, Mrs. Montague was of the party: ſhe maintained an epiſtolary correſpondence with ſome of the moſt eminent literary characters of the country, and particularly with the late Dr. Monſey, phyſician of Chelſea College. Her letters are praiſed by thoſe who have ſeen them, as abounding in wit, obſervation, judgment, and learning; and in thoſe reſpects are ſaid to excel the letters of her celebrated name-ſake Lady Mary Wortley Montague.

George, lord Littleton, was a warm admirer of Mrs. Montague; he was aſſiſted by her in the compoſition of his Dialogues of the Dead, ſome of the beſt of which, according to his acknowledgment, were her productions,

In 1769, Mrs. Montague publiſhed her only avowed literary compoſition, An Eſſay on the Writings and Genius of Shakſpeare, compared with the Greek and French dramatic Poets; with ſome Remarks on the Miſrepreſentations of M. de Voltaire. This work obtained a great reputation: it was well received in the firſt literary circles, and paſſed through ſeveral editions. Voltaire's talent in decrying whatever is great, admirable, or venerable, was never ſhackled by the reſtraints of truth or morality; his arrogant pretenſion to triumph over the unrivalled bard of Avon merited reprehenſion, and his fallacies were completely detected and expoſed by Mrs. Montague. Yet, as an eſſay on the genius and writings of Shakſpeare in the moſt extended ſenſe of the term, her production was not ſatisfactory: as an apology it was complete, becauſe it demonſtrated the futility of the critic; but as an independent homage to the bard, it was not ſufficiently copious or forcible to obviate the attacks of future caviliers, or to prove the claims of her favourite author to univerſal ſuperiority. Dr. Johnſon, who, with great force and inimitable preciſion, appreciated the extent, and marked the failings of Shakſpeare's genius, was not ſatisfied with Mrs. Montague's eſſay, of which he always ſpoke with diſreſpect, and expreſſed ſurpriſe that Sir Joſhua Reynolds honoured it with his admiration. Dr. Johnſon conceived that Mrs. Montague's acquaintance with the ancients was not ſufficiently profound or extenſive to juſtify the pretenſions of her title page; but, whatever faults may, in this reſpect, be diſcovered in her eſſay, it had at leaſt the good effect of diſcrediting the preſumptuous gabble of the foreign critic and his inane and ignorant echoes. The ſtyle is remarkably elegant, and characteriſtic of a pen formed in the ſchool of Addiſon.

Mrs. Montague was in habits of friendſhip with the firſt wits and ſcholars of the age, and was the reputed founder of a ſociety known by the name of the *Blue Stocking Club*. This aſſociation was founded on the liberal and meritorious principle of ſubſtituting the rational delights of converſation for the abſurd and vapid frivolities of the card table. No particular attention or reſpect was paid to her, but the converſation was general, cheerful, and unreſtrained: far different from what is inſinuated reſpecting the company by a ſatiriſt who accuſes them of going

"To barter praiſe for ſoup with Montague."

The name of this club is ſaid to be derived from the follow-

ing circumſtance. One of their moſt diſtinguiſhing characters in the early days of the ſociety was Mr. Stillingfleet, who always wore *blue ſtockings*: his converſation was diſtinguiſhed for brilliancy and vivacity, inſomuch that when, in his abſence, the ſtock of general amuſement appeared deficient, it was a common exclamation, *we can do nothing without the blue ſtockings*: thus was the appellative acquired which is now become frequently in uſe for a learned and witty lady, even though ſhe never drank tea in Portman-ſquare.

Mrs. Montague was noticed for another peculiarity; that of giving an annual dinner to the chimney-ſweepers of the metropolis. This innocent exerciſe of charity has not eſcaped animadverſion from thoſe who atone for giving nothing themſelves by affecting to prove that the donations of others are not ſo wiſe and benevolent as they ought to be. Yet, if the feſtive treat is now diſcontinued, the ſooty ſons of labour will undoubtedly look forward with leſs delight than uſual to the calends of May.

This excellent lady died at her houſe in Upper Berkeley-ſtreet, Portman-ſquare, London, on the 25th of Auguſt, 1801. In private life, ſhe is ſaid to have been an example of liberal diſcretion and rational benevolence. Her hand was always extended to the protection of genius and the relief of diſtreſs; but ſhe was careful to diſtinguiſh the objects, and not to laviſh her bounty upon falſe pretenſions. Her magnificent manſion was the reſort of the moſt diſtinguiſhed characters of her time; and all were emulous to teſtify their eſteem, and pay homage to the endowments of her mind and the amiable qualities of her heart.

MONTAIGU, a town of France, in the department of Vendée, 24 miles weſt of Mauleon. Long. 1. 30. W. Lat. 47. 0. N.

MONTALVAS, a town of Portugal, in Alentejo, on the borders of Spain, 32 miles N.E. of Liſbon. Long. 6. 24. W. Lat. 39. 30. N.

MONTARGIL, a town of Portugal, in Eſtremadura, 28 miles S.E. of Santarem, and 33 N.N.W. of Evora. Long. 8. 11. W. Lat. 38. 48. N.

MONTARORO, a town of Naples, in Principato Citeriore, nine miles north of Salerno.

MONTDAUPHIN, a town of France, in the department of the Upper Alps, ſeated on a craggy mountain, almoſt ſurrounded by the Durance, eight miles N.E. of Embrun. Long. 6. 45. E. Lat. 44. 40. N.

MONT-DE-MARSAN, a town of France, capital of the department of Landes, ſeated on the Midouſe, 30 miles N.E. of Dax. Long. 0. 30. W. Lat. 43. 55. N.

MONTE-CASINO, a mountain of Naples, in Terra di Lavoro, on the top of which is a Benedictine abbey. Long. 13. 44. E. Lat. 41. 39. N.

MONTE-LEONE, a town of Naples, in Calabria Ulteriore. It was ruined by an earthquake in 1638, and is 12 miles N.E. of Nicotera.

MONTELIMAR, a commercial town of France, in the department of Drome, with an ancient citadel. The inhabitants, in the 16th century, were the firſt to embrace the reformed religion. It is ſeated in a fertile plain, 25 miles ſouth of Valence, and 325 S. by E. of Paris. Long. 4. 55. E. Lat. 44. 33. N.

MONTE-SANTO, a town of Portugal, in Beira, ſix miles north of Idanha a Velha.

MONTE VELINO, a mountain of Italy, ſuppoſed to be the moſt lofty part of the Apennines, and 8397 feet above the level of the Mediterranean. It is 46 miles N.E. of Rome.

MONTESQUIEU, a town of France, in the department of Upper Garonne, 15 miles S.S.E. of Toulouſe.

MONTESQUIOU, a town of France, in the department of Gers, 11 miles W.S.W. of Auch.

MONTGOMERY, a county of Pennſylvania, 33 miles long, and 16 broad. In 1790, it contained 22,929 inhabitants. Norriſtown is the capital.

MONTGOMERYSHIRE, a county of North Wales, 36 miles long, and nearly the ſame broad; bounded on the north by Merionethſhire and Denbighſhire, on the N.E. and E. by Shropſhire, on the S. by Radnorſhire, on the S.W. by Cardiganſhire, and on the W. by Merionethſhire. It contains five market-towns and 47 pariſhes, and ſends two members to parliament. Though barren and mountainous in many parts, it has a greater mixture of fertile vale and plain, than ſeveral of the Welſh counties. Its riches proceed from its ſheep and wool, the hilly tracts being almoſt entirely ſheep-walks; and the flocks, like thoſe of Spain, are driven from diſtant parts to feed on them during the ſummer. This county alſo affords mineral treaſures, particularly lead; and it abounds with ſlate and lime; but there is no coal. Its principal rivers are the Severn, Vyrnew, and Tannat, which are remarkable for ſalmon.

MONTIEL, a town of Spain, in New Caſtile, formerly the ſee of a biſhop. It is 18 miles W.S.W. of Alcaraz.

MONTILLA, a town of Spain, in Cordova, 18 miles S.S.E. of Cordova, and 51 N. of Granada. Long. 3. 28. W. Lat. 37. 48. N.

MONTJOY, a town of France, in the department of Lot and Garonne, eight miles S S.W. of Agen. Long. 0. 49. E. Lat. 44. 11. N.

MONTIVILLIERS, a town of France, in the department of Lower Seine, 95 miles N.W. of Paris. Long. 0. 20. W. Lat. 49. 35. N.

MONTLOUIS, a town of France, in the department of the Eaſtern Pyrenées. It is the capital of the French part of Cerdagna, and has a regular fortreſs, on a rock, at the foot of the Pyrenées, built in 1680, by Lewis XIV. for the protection of the frontiers. It is 40 miles W.S.W. of Perpignan, and 430 ſouth of Paris. Long. 2. 5. E. Lat. 42. 30. N.

MONTLUET, a town of France, in the department of Ain, ſeated on the Seraine, 12 miles N.E. of Lyons, and 205 S.E. of Paris. Long. 5. 8. E. Lat. 45. 49. N.

MONTLUCON, a town of France, in the department of Allier, ſeated on the Cher, 35 miles S.W. of Moulins, and 150 ſouth of Paris. Long. 2. 45. E. Lat. 46. 22. N.

MONTMELIAN, a town of Savoy, with a caſtle; taken by the French, in 1705, who demoliſhed the fortifications. It is eight miles S.E. of Chamberry, and 27 N.E. of Grenoble. Long. 6. 15. E. Lat. 45. 30. N.

MONTMORILLON, a town of France, in the department of Vienna, ſeated on the Gartempe, over which is a bridge, 24 miles S.E. of Poitiers.

MONTPENSIER, a town of France, in the department of Puy de Dome, ſeated on a hill, 20 miles N.E of Clermont, and 210 S E. of Paris. Long. 3. 14. E. Lat. 46. 4. N.

MONTREUIL, a ſtrong town of France, in the department of the Straits of Calais, with a caſtle; ſeated on a hill, near the river Canche, 10 miles N.W. of Heſdin, and 117 north of Paris. Long. 1. 52. E. Lat. 50. 27. N.

MONTREUIL-BELLAY, a town of France, in the department of Maine and Loire, ſeated on the Touet, 12 miles S.S.W. of Saumur, and 155 S.W. of Paris. Long. 0. 9. W. Lat. 47. 6. N.

MONTRICHARD, a town of France, in the department of Loir and Cher, and late province of Blaſois, with a caſtle. It is ſeated near the Cher, 12 miles S.E. of Amboiſe, and 112 S.W. of Paris. Long. 1. 22. E. Lat. 47. 22. N.

MONT ST. MICHEL, a ſtrong town of France, in the department of the Channel, built on a rock in the ſea, which is aſcended at low water. Its late Benedictine abbey ſerved at once for a caſtle of defence, and a ſtate priſon, and was alſo much frequented by pilgrims. The prior of the abbey was governor of the town, and the keys were brought to him every evening. This place gave name to the late military order of St. Michel, founded by Lewis XI. in 1479. It is 10 miles S.W. of Avranches, and 180 weſt of Paris. Long. 1. 30. W. Lat. 48. 37. N.

MONTSAUJEON, a town of France, in the department of Upper Marne, 15 miles S.S.W. of Langres, and 145 S.E. of Paris. Long. 5. 16. E. Lat. 47. 36. N.

MONZA, a town of Italy, in the Milaneſe, ſeated on the Lambro, eight miles N.E. of Milan. Long. 9. 20. E. Lat. 45. 33. N.

MONZINGEN, a town of Germany, in the circle of Upper Rhine, 12 miles weſt of Creutznach, and 42 E. of Treves. Long. 7. 14. E. Lat. 49. 50. N.

MOON, MOUNTAINS OF THE, mountains of Africa, extending between Abyſſinia and Monomotapa. They are higher than thoſe of Atlas.

MOORSHEDABAD, a city of Hindooſtan Proper, the capital of Bengal before the eſtabliſhment of the Engliſh power. It is ſeated on the weſtern arm of the Ganges, 120 miles north of Calcutta. Long. 88. 28. E. Lat. 24. 15. N.

MOOTAPILLY, a town of the peninſula of Hindooſtan, in the Guntoor Circar, at the mouth of the Gondegama. Long. 80. 10. E. Lat. 15. 45. N.

MORA, a town of Spain, in New Caſtile, 18 miles S.E. of Toledo. Long. 3. 4. W. Lat. 39. 36. N.

MORANT, POINT, the moſt eaſterly promontory of Jamaica. Long. 75. 56. W. Lat. 17. 56. N.

MORATALAZ, a town of Spain, in New Caſtile, 22 miles eaſt of Ciudad Real. Long. 3. 4. W. Lat. 40. 32. N.

MORATALLA, a town of Spain, in Murcia, 34 miles S.S.W. of Chinchilla. Long. 1. 50. E. Lat. 38. 31. N.

MORAVO, or MORAW, a river of Germany, which has its ſource on the confines of Bohemia and Sileſia. It croſſes Moravia, where it waters Olmutz and Hradiſch, and receiving the Teya, from the confines of Lower Hungary and Upper Auſtria, ſeparates theſe two countries as far as the Danube, into which it falls.

MORBACH, or MURBACH, a town of France, in the department of Lower Rhine, 42 miles ſouth-eaſt of Straſburg. Long. 8. 25. E. Lat. 48. 0. N.

MORBEGNO, a town of the country of the Griſons, in the Valteline, where the governor and the regency reſide. It is the handſomeſt and moſt commercial town in the Valteline, and ſeated on the Adda, 12 miles S.E. of Chiavenna, and 20 N.E. of Lecco. Long. 9. 31. E. Lat. 46. 10. N.

MORBIHAN, a department of France, including part of the late province of Bretagne. Vannes is the capital of this department, which takes its name from a ſmall bay between that town and the iſland of Belleiſle. Its entrance is narrow; but it expands within, and contains about 30 little iſlands.

MORCONE, a town of Naples, in the Moliſe, 19 miles S.S.E. of Moliſe. Long. 14. 54. E. Lat. 41. 24. N.

MORELL (Sir Charles), the ſuppoſed author of the Tales of the Genii. See RIDLEY.

MORELLA, a town of Spain, in Valencia, which was almoſt deſtroyed, in 1705, by the army of Philip V. It is ſeated among high mountains, 80 miles north of Valencia.

MORET, an ancient town of France, in the department of Seine and Marne, with a caſtle, ſeated on the Loire, 35 miles S.E. of Paris. Long. 2. 52. E. Lat. 48. 25. N.

MORETTA, a town of Piedmont, ſituated on a ſmall river, which runs into the Po, 16 miles ſouth of Turin. Long. 7. 44. E. Lat. 44. 48. N.

MORINGEN, a town of Suabia, in the principality of Furſtenberg, 14 miles N.N.E. of Schaffhauſen, and 26 N.W. of Conſtance. Long. 3. 46. E. Lat. 47. 48. N.

MORINGEN, a town of Lower Saxony, in the principality of Calenberg, ſituate on the Mohr, 12 miles N.N.W. of Gottingen. Long. 9. 49. E. Lat. 51. 40. N.

MORLAIX, a ſea-port of France, in the department of Finiſterre, with a caſtle and a tide harbour. The church of Notre-Dame is a ſingular ſtructure, and the hoſpital very handſome. The inhabitants carry on a conſiderable trade in linen, hemp, and tobacco. It is ſeated on the river of the ſame name, 30 miles N.E. of Breſt, and 45 W. of St. Brieux. Long. 3. 46. W. Lat. 48. 33. N.

MORLENBACH, a town of Germany in the electorate of Mentz, ſeven miles S.E. of Heppenheim.

MORLUNDA, a town of Sweden, in the province of Smoland, 41 miles north of Calmar. Long. 16. 24. E. Lat. 57. 20. N.

MOROTOI, one of the Sandwich Iſles, ſeven miles W.N.W. of Mowee. Yams are its principal produce; but it has little wood. The coaſt, on the ſouth and weſt ſides, forms ſeveral bays. Long. 117. 14. W. Lat. 21. 10. N.

MORRISTOWN, a town of the United States, in New Jerſey, 100 miles N.E. of Philadelphia. Long. 74. 28. W. Lat. 40. 45. N.

MORSONA, a town of Naples in Moliſe, 14 miles N.E. of Moliſe.

MORTAGNE, a town of France, in the department of Orne, famous for its ſerges and tanneries. It is 19 miles eaſt of Seez, and 70 weſt of Paris. Long. 0. 40. E. Lat. 48. 33. N.

MORTAGNE, a town of France, in the department of the North, ſeated at the confluence of the Scarpe and Schelde, eight miles S.E. of Tournay. Long. 3. 30. E. Lat. 50. 29. N.

MORTAIN, a town of France, in the department of the Channel, ſeated on the rivulet Lances, almoſt ſurrounded by craggy rocks, 20 miles eaſt of Avranches. Long. 0. 54. W. Lat. 48. 37. N.

MORTARA, a ſtrong town of Italy, in the Milaneſe, ſubject to the king of Sardinia. It is 15 miles N.E. of Caſal, and 22 S.W. of Milan. Long. 8. 40. E. Lat. 45. 22. N.

MORTLAKE, a village in Surrey, ſeated on the Thames, ſix miles weſt of London. Great part of this pariſh is incloſed in Richmond Park; and his majeſty has a farm here of 80 acres in his own occupation.

MORTLICH, a village in Banffſhire, ſix miles S.W. of Keith. Here Malcolm II. in memory of a victory gained over the Danes, founded a biſhopric, which was tranſlated to Aberdeen by David I.

MORTON, or MORTON HAMPSTEAD, a town in Devonſhire, with a noted market for yarn on Saturday. It is ſeated on a hill, near Dartmoor, 14 miles S.W. of Exeter, and 185 W. by S. of London. Long. 3. 46. W. Lat. 50. 39. N.

MORTON, or MORTON IN MARSH, a town in Glouceſterſhire, with a market on Tueſday, ſeated on a foſſway, 29 miles E.S.E. of Worceſter, and 83 W.N.W. of London. Long. 1. 36. W. Lat. 52. 0. N.

MORVEN, a diſtrict in Argyleſhire, whoſe mountains are celebrated in the ſongs of Oſſian.

MORVIEDRO, a town of Spain, in Valencia, on the ſite of the ancient Saguntum, with the ruins of a Roman amphitheatre. It is ſeated on a river of the ſame name, 15 miles north of Valencia. Long. 0. 10. E. Lat. 39. 38. N.

MOSA, a town of Arabia Felix, 25 miles N.E. of Mocha.

MOSAMBIQUE, a ſtrait or channel of the Indian Ocean, between the eaſt coaſt of Africa and the iſland of Madagaſcar, and between 11 and 25° ſouth latitude. It is narroweſt in the middle, where it is 240 miles over; and in this part, on the coaſt of Zanguebar, is a kingdom, iſland, and town of the ſame name.

MOSBACH, a town of Germany, in the palatinate of the Rhine, with a caſtle, ſeated on the Necker, 26 miles E.N.E. of Heidelburg. Long. 9. 21. E. Lat. 49. 28. N.

MOSBRUNN, a town of the archduchy of Auſtria, eight miles ſouth of Vienna.

MOSBURG, a town of Germany, in the duchy of Carinthia, ſix miles N.W. of Clagenfurt.

MOSBURG, a town of Germany, in Bavaria, ſeated at the confluence of the Iſer and Ambert, nine miles weſt of Landſchut. Long. 11. 55. E. Lat. 48. 30 N.

MOSCHEL, or OBER MOSCHEL, a town of Germany, in the duchy of Deux Ponts, 10 miles N.E. of Weiſſemburg, and 32 N.E. of Deux Ponts. Long. 7. 29. E. Lat. 49. 46. N.

MOSELLE, a department of France, including part of the late province of Lorrain. It takes its name from a river, which riſes in the Voſges, waters Epinal, receives the Meurthe below Nanci, and paſſing by Metz, Thionville, and Treves, falls into the Rhine at Coblentz. Metz is the capital.

MOSENIA, a town of Perſia, in the province of Chuſiſtan, 22 miles S.W of Suſter.

MOSS, a town of Norway, in the province of Aggerhuys, on the eaſt ſide of Chriſtiana Bay, 15 miles north of Frederickſtadt, and 28 ſouth of Chriſtiania. Long. 10. 48. N. Lat. 58. 38. N.

MOSTAGAN, an ancient town of the kingdom of Algiers, with a caſtle and a good harbour, 50 miles N.E. of Oran. Long. 0. 30. E. Lat. 36. 20. N.

MOSTAR, a ſea-port of Turkiſh Dalmatia, with a Greek archbiſhop's ſee, 20 miles N.E. of Narenta. Long. 18. 37. E. Lat. 43. 48. N.

MOTANA, a town of Naples, in Terra d'Otranto, with a biſhop's ſee, 15 miles N.W. of Taranto. Long. 17. 14. E. Lat. 40. 46. N.

MOTRICO, a ſea-port of Spain, in Guipuſcoa, on the bay of Biſcay, 18 miles weſt of St. Sebaſtian.

MOTRIN, a ſea-port of Spain, in Granada, with a good harbour, ſeated on the Mediterranean, 37 miles S.E. of Granada. Long. 2. 28. W. Lat. 36. 32. N.

MOTTA, a town of Italy, in the Treviſano, ſituate at the confluence of the Mottigano and Nivenza, 18 miles E.N.E. of Treviſo. Long. 12. 34. E. Lat. 45. 54. N.

MOTTA, a town of Naples, in Capitanata, three miles E.S.E of Voltumara.

MOTYR, an iſland, one of the Moluccas, of great value to the Dutch, on account of its ſpices. Long. 128. 20. E. Lat. 0. 10. S.

MOUAB, a town of Arabia Felix, capital of Yemen, ſeated in a fertile country, 80 miles ſouth of Sanaa. Long. 46. 35. E Lat. 16. 20. N.

MOUDON, an ancient town of Switzerland, capital of a bailiwic of the ſame name, in the Pays de Vaud, and formerly of all that part of the country which belonged to the Duke of Savoy. The bailiff, appointed by the canton of Bern, reſides in the caſtle of Lucens, built on the ſummit of a mountain. It is 12 miles north by eaſt of Lauſanne. Long. 6. 58. E. Lat. 46. 41. N.

MOULINS-ENGILBERT, a town of France, in the department of Nievre, ſeated at the foot of the mountains of Morvan, five miles S.W. of Chateau-Chinon.

MOULTAN, a province of Hindooſtan Proper, bounded on the north by Lahore, on the eaſt by Delhi and Agimere, on the ſouth by Guzerat, and on the weſt by Perſia and Candahar. Its products are cotton, ſugar, opium, gall, ſulphur, &c. It was ſubject to the Selks; but its capital, Moultan, has been garriſoned by the King of Candahar, ever ſince 1779.

MOULTAN, one of the moſt ancient cities of Hindooſtan Proper, capital of a province of the ſame name. It is of ſmall extent for a capital, but ſtrongly fortified, and has a Hindoo temple of great celebrity. Here is a particular ſect of Hindoos, called Catry; a tribe of warriors ſuppoſed to be the Catheri or Cathei, with whom Alexander warred on the banks of the Malli. Moultan is ſeated on one of the branches of the Indus, 210 miles S.W. of Lahore, and 310 S E. of Candahar. Long. 70. 40. E. Lat. 29. 52. N.

MOUNTAINEERS, a name given to the inhabitants of wild and mountainous diſtricts, where civiliſation is ſcarcely expected by travellers, and therefore not ſuppoſed to exiſt.

Among thoſe touriſts who have given the world their obſervations on Ireland, we do not find one who has explored and deſcribed the mountainous regions of that iſland. The following ſketch is intended to give the reader a diſtinct idea of the unciviliſed Iriſh mountaineers, who, like the Scotch Highlanders, retain and adhere to the cuſtoms of their anceſtors.

Theſe people have ever been miſrepreſented by the prejudice of illiberal travellers, who, too indolent to climb mountains, or explore remote valleys, adopted the erroneous accounts of others. To reſcue this ſingular claſs of human beings from undeſerved calumny, and repreſent them in a fair point of view, ſhall be the object of this article.

A vaſt range of mountains riſes in the county of Louth and province of Leinſter, on the north-eaſt coaſt of Ireland. Theſe mountains extend along the weſtern ſide of Newry-bay, about ten miles from north to ſouth, and terminate in a promontory above the town of Carlingford. Their high and broken curves preſent a majeſtic and ſublime ſcene; they are generally barren, covered with heath, and ſhort graſs intermixed with moſs, and ſeveral pure ſtreams of "living water from the rock" flow down their ſides to fertiliſe the plains below.

The valleys which interſect theſe majeſtic piles are inhabited and cultivated by the deſcendants of the ancient Iriſh, who fled to theſe remote regions as an aſylum from the perſecution of Oliver Cromwell during his deſolating progreſs through the iſland.

By perſevering toil they built ſeveral villages, where, after ſuffering many inconveniences, they cultivated and fertiliſed the ſoil; and the wild ſcenes to which the firſt ſettlers were driven by neceſſity, are now inhabited from choice by their poſterity.

The moſt remarkable of theſe villages is called *Glenmore*, or the great valley. It is ſurrounded by very high mountains of various forms, which, with their groteſque hanging cliffs, the ſheep and goats that graze on graſſy ſpots among the rocks, and the ſprightly and inceſſant flow of ſeveral ſtreams that iſſue from the pureſt fountains and deſcend to the valley, exhibit a pleaſing ſcene of peaceful ſolitude.

Eaſtward of the village the confluence of the ſtreams forms

a rivulet, which glides with gentle murmurs amid the valley. On its banks about 100 cottages are built, irregularly, and environed with potatoe-gardens and corn-fields. The population amounts to about 500.

In this remote ſociety, the manners to the ancient Iriſh are ſaid to have been preſerved to the preſent day, and preſent to the reflecting mind an intereſting portraiture of ruſtic ſimplicity.

The glen is about two miles long from eaſt to weſt, and nearly a mile wide: it produces ſufficient potatoes, flax, and corn, for the inhabitants; and their black cattle, ſheep, and goats, are fed on the adjacent mountains. The villagers yearly ſell a conſiderable number of ſheep and cows in the fairs of Dundalk and Newry, which, with the profits ariſing from the manufacture of coarſe linen, and the ſale of butter and poultry, enables them to pay their rents and live in their own plain way. Their houſes are ſmall, and, like the Scotch ſheilties, very durable. They are chiefly employed in carrying their linen, butter, &c. to market in panniers; for their rugged, ſteep, and almoſt impaſſable paths prevent the uſe of carriages of any kind. Indeed even their agriculture is moſtly effected by the ſpade, for the ſoil is ſo ſtony that in many places they cannot uſe the plough.

With reſpect to the appearance of Glenmore, the village conſiſts of cabins, the walls of which are commonly about ten feet high, built with ſtone cemented by tough clay, which the rains having waſhed from between the ſtones, you would think, on approaching, that the walls were ready to fall, being apparently formed of looſe ſtones; but they are found by experience to be ſtrong enough to reſiſt the winter's ſtorms. The windows are ſmall, being moſtly only apertures in the walls, which are occaſionally filled with ſtraw to reſiſt the weather, or opened to admit the light and air. A framed glaſs window moveable in a groove is conſidered as a mark of elegance in Glenmore, and a few of the richeſt peaſants have white-waſhed their cabins as a mark of diſtinction. The roofs of thoſe cottages are compoſed of rafters interwoven with hazle boughs or branches of the pliant willow. They are very neatly thatched with ſtraw, ſimilar to the barns in England.

Their fuel is peat, or, as they call it, *turf*, which is cut into ſmall oblong ſquares on the ſummits of the mountains, dried in the ſun, and conveyed home on their horſes in panniers.

This fuel gives a ſtrong and durable heat, but from the unſkilfulneſs of the peaſants in the conſtruction of their chimneys, or rather the action of the wind from the circumjacent hills, the cabins are moſtly infeſted with ſmoke, which is condenſed on the inſide of the roof into ſoot, and ſometimes, in wet weather, is diſſolved and falls in what the peaſants call *ſoot-drops*, which ſtain their clothes and utenſils.

The furniture of a cabin is commonly one or more bedſteads of fir, containing a bed of chaff with coarſe ſheets and blankets; two or three old cheſts and boxes; a few wicker or ſtraw chairs, and low ſtools. Their utenſils are an iron pot, cups of earthen ware, three or four crocks, half a dozen trenchers, the ſame number of noggins, a clumſy knife, a few horn ſpoons, a gridle, or circular plate of caſt-iron, on which they bake their oat-cakes over the fire, and laſtly the ancient and ever-venerated *mather*. This curious veſſel is made of wood, its form is an oblong ſquare, it has four handles, and contains two quarts. When a perſon drinks out of the mather he takes it up by two of the handles, and he muſt be a very thirſty mortal indeed who cannot be ſatisfied with the contents. The mather has been uſed by the Iriſh mountaineers time immemorial, before the introduction of metal or earthen utenſils.

Such are the elegances of an Iriſh mountain-cottage, and indeed many of them are not ſo well furniſhed. It is only the more opulent that can boaſt of ſuch accommodations; for in ſeveral of the wretched huts, the beds of the inhabitants are merely ſtraw ſpread out on the earthen floor, with ſcarcely any bed-clothes.

Let it be remembered, however, that this faithful picture of almoſt ſavage ruſticity is not to be confounded with the comfortable habitations of the Iriſh who live in the fertile plains, where every neceſſary that contentment can deſire is abundantly ſupplied by the hand of induſtry, and the polite arts of civiliſation poliſh and adorn a happy people.

This ſketch will be principally confined to the mountain villages, and the reaſons will be given why their inhabitants have continued ſo long in a ſtate of indigent but contented ignorance.

The cabins are moſtly divided into two apartments; a kitchen, where the women ſpin, nurſe their children, and dreſs the proviſions, and a room appropriated to repoſe.

Let us enter one of theſe lowly dwellings. At the further ſide of the kitchen ſit a number of lively young women buſy at their ſpinning wheels, while they ſing in concert one of the favourite love ſongs of Carolan, or ſome other Iriſh bard. How ſimple and affecting are thoſe ſoothing ſounds! which are rendered ſtill more harmonious by the hum of the ſpinning wheels that, like the baſſoon or baſſ-viol, ſoftens the clear notes of the female voice. It is now evening, and the labour of the day being finiſhed, the peaſant enters his cabin, lays down his ſpade, and after welcoming us, ſits down at a reſpectful diſtance. Emboldened by our freedom of converſation, and our enquiries reſpecting the village, his awe ſoftens into that good-natured air of frankneſs, which evinces that man was intended to be a ſocial being. Proud of the honour we do him he is deſirous to amuſe his viſitors, and diverts us with his legendary tales of the Iriſh giants, and the miracles of St. Patrick. Supper is now brought forward; it conſiſts of potatoes, bread, and milk, and we are earneſtly invited to participate the homely fare.

Thus, the inhabitants of Glenmore and the other mountain villages, though a diſtinct and detached people, are not averſe to their lowland neighbours, but ſeem proud of a viſit from ſtrangers. Their characteriſtic hoſpitality has remained unimpaired through the lapſe of ages; and notwithſtanding the pains taken by their prieſts to prejudice their minds againſt the heretical proteſtants as they are called, the mountaineers in general are remarkably officious to their more refined viſitors, and appear good-natured and cheerful.

Indeed their contentment is the conſequence of their ignorance; and though ſome of their young men leave their native mountains and mingle in the more active ſcenes of civiliſed ſociety, yet by far the greater number voluntarily remain at home.

The mountaineers are ſomewhat lower in ſtature than the natives of the low-lands. The men are generally of the middle ſize; they are well formed, active, and hardy. Their viſage is round, their hair black, ſometimes long, but moſt inclined to curl, and their complexion brown, or rather ſwarthy. The women are more graceful; their complexion is brown, though a few are delicately fair; their eyes are black or brown, and their hair long; they are ſo plump as to border on corpulence: and their faces are moſtly round, ſmooth, and unintereſting, being rather the image of good-nature than of ſenſibility. There are a few

exceptions among them—girls whofe fymmetry of form and beauty of countenance would induce a poet to imagine them the female deities of their native mountains. Thofe girls are flender, with fair complexions, light brown hair, and eyes of a moft enchanting light blue, beaming with the luftre of youthful health. Yet thefe charming creatures are inſenſible of their own attractions; and though their unmeaning fimplicity of air may delight for a moment, yet on a more intimate acquaintance, the man of refinement is diſguſted with the vulgarity of their manners.

" Full many a flow'r is born to bluſh unſeen,
And waſte its ſweetneſs on the deſert air."

Many of the young women have an amorous archneſs in their looks, which probably ariſes from the familiar intercourſe of the ſexes This is attended with no immoral effects, for they are remarkably chaſte. Perhaps the ſimplicity of their manners, vegetable diet, and induſtrious habits, tend to ſuppreſs that ardor which in more civiliſed ſocieties is too often productive of ſeduction, infamy, diſeaſe, and all the dire concomitants of licentiouſneſs. Till within theſe few years the mountain villagers were unacquainted with the Engliſh language, but a circumſtance happened, which, fortunately for them, was the introduction not only of that excellent vehicle of knowledge, but of a more lucrative kind of induſtry than they had practiſed.

The river of Ravenſdale, which flows along in the plains near the weſtern ſide of the mountains before mentioned, invited enterpriſing men from Ulſter about thirty years ago. They built bleach mills, and by introducing the linen buſineſs into the country, they prevailed upon the neighbouring mountaineers to work for a ſhilling a-day, wages which to them appeared a treaſure. Thus by an intercourſe with the proteſtants, the mountaineers gradually learned to converſe in Engliſh, and many of them can now communicate their ideas in that language with perſpicuity.

Their ignorance is owing to the want of education, and the cunning of their prieſts, who have gained ſuch an aſcendancy over their ſuperſtitious minds, that they believe whatever nonſenſe is ſubſtituted inſtead of the pure precepts of Chriſtianity.

Every ſpring they receive abſolution from the prieſt. On this ſolemn occaſion they exert their recollection to the utmoſt, in order to render up a faithful account of all the ſins they have committed during the laſt year. Very young boys and girls are exempted from this farcical ceremony, but all thoſe who are arrived at maturity, aſſemble with the moſt ſolemn and penitential looks before the holy father, who gravely hears the confeſſion of each in private, and gives them abſolution and his benediction for ſix pence or a ſhilling each. The cheerfulneſs and alacrity with which they return from confeſſion is inexpreſſible. They have cleared off the old account, and may lay in a new ſcore as ſoon as they pleaſe! Such opinions would have a moſt pernicious effect in a luxurious community, but in the quiet valleys above mentioned they rather promote the contentment of the ignorant peaſant.

During Lent the mountaineers abſtain from animal food, and would conſider it a crying ſin to let it touch their lips

The mountaineers are accuſtomed to hardſhip from their infancy. Their children run barefoot among the tufts of heath, and the rocky mountains, even amid the rigor of winter. This gives them a callofity of nerve, and tends to ſtupify their mental faculties. The poets may expatiate on the efficacy of trotts in bracing the nerves and clearing the brain, but the experience of mankind proves, that mild climates, genial ſuns, and odorous breezes, are more conducive to genius and expanſion of mind.

At a very early period, perhaps ſeven years of age, the boys are employed in leading horſes at the plough or harrow, in weeding the potatoes and corn, and ſeveral of them are ſhepherds. The girls are taught to knit, ſew, card, and ſpin. Whatever ideas the children of both ſexes acquire from the traditionary tales of their parents and neighbours conſtitute the whole of their knowledge, except the " palpable obſcure" of religion, which their prieſts think proper to impart. Hence their ideas, like their wants, are few: they are healthy, and the pure air of their native hills gives them a charming vivacity of ſpirits.

The dreſs of the mountaineers is coarſe and plain. The men are clothed in frieze coats, waiſtcoats, and breeches, coarſe woollen-yarn ſtockings, brogues (a kind of clumſy ſhoes), coarſe linen ſhirts, and felt hats. Some of the young men, however, imitate their low-land neighbours by a finer dreſs, and the women have progreſſively increaſed their finery, inſomuch that the plain woollen hood, worn about twenty years ago, is laid aſide, and cloaks of good ſcarlet broad cloth, or in ſummer of white dimity, are uſed in their ſtead. The young women are particularly partial to variegated ribbons, and the more glaring the colours the more they are prized. Their gowns are linſey-woolſey or ſtriped linen, of home manufacture. It is a curious fact, that the fair ſex among the moſt uncivilifed nations are fond of brilliant colours, witneſs the tartan ribbons and petticoats of the highlanders of Scotland; and a ſimilar predilection is ſhewn by the women of Ruſſia and Tartary for the party-coloured ſhawls of Kiſhmyre and India.

Hoſpitality may almoſt be ſaid to be inſtinctive among the mountaineers; and they carry this amiable virtue to ſo great a height, that there is always a little couch appropriated to the wandering beggars who often viſit them. Indeed, the ſociality and contentment of their lives have been very naturally pourtrayed by the poet, in the following lines:

" Though poor the peaſant's hut, his feaſt though ſmall,
He ſees his little lot the lot of all.
Cheerful at morn he wakes from ſhort repoſe,
Breathes the keen air, and carols as he goes;
At night returning, every labour ſped,
He ſits him down the monarch of a ſhed;
Smiles by his cheerful fire, and round ſurveys
His children's looks that brighten with the blaze;
While his lov'd partner, boaſtful of her hoard,
Diſplays her cleanly platter on the board.
And haply, too, ſome pilgrim, thither led,
With many a tale repays the nightly bed."

Their ſummer amuſements conſiſt of annual feſtivals, which they call *patrons*, being holidays in honour of tutelar ſaints. The principal meeting of theſe mountaineers is held on Midſummer-day. On this occaſion the people firſt hear maſs in the morning, and ſpend the remainder of the day in dancing, drinking, and other amuſements. There are booths erected where they aſſemble, and a multitude of toys brought thither for ſale. The young men buy ribbons and gloves, which they preſent to their ſweethearts; and the feſtival reſembles the Engliſh country wake.

Beſides this amuſement, the young people often aſſemble on Sunday afternoon on ſome little green plain or mount, where they form a circle, around which the lads and laſſes purſue each other alternately, and whoever is taken forfeits a kiſs, ſimilar to the ſports of Yorkſhire and other northern counties of England. In winter they amuſe themſelves with dancing,

in barns; or when the young women ſpin, the young men divert them with ſtories, or with the muſic of the flute or violin. Some of them are very expert at playing on the jews-harp, and commonly uſe two at a time, which they play with their little fingers. It is almoſt impoſſible to conceive the cheerfulneſs which illumines their faces at theſe ſocial meetings. Their penury, the wintry ſtorms that howl without, and the rumbling torrents that bear fragments of the rocks impetuouſly along, are unheeded by the lively train. We may well ſay of the Iriſh mountaineer, as the poet does of the Swiſs—

"——Every good his native wilds impart,
Imprints the patriot paſſion on his heart;
And ev'n thoſe ills that round his manſion riſe,
Enhance the bliſs his ſcanty fund ſupplies.
Dear is that ſhed to which his ſoul conforms,
And dear that hill which lifts him to the ſtorms:
And as a child, when ſcaring ſounds moleſt,
Clings cloſe and cloſer to the mother's breaſt;
So the loud torrent and the whirlwind's roar,
But bind him to his native mountains more."

With reſpect to ſuperſtition, the mountaineers retain a belief in the exiſtence of fairies, whoſe power they dread. They recount many feats performed by the fairies, or, as they call them, *the gentry*. Tradition has conveyed down the fable of the *banh ſhea*, an apparition like an old women, dreſſed in the ancient Iriſh habit, with a hood on her head, bound with a kerchief; this ſpectre was ſaid always to appear under the window where any perſon lay on the death-bed, and to expreſs ſeveral mournful cries as a token of approaching diſſolution. The exiſtence of familiar ſpirits is alſo believed by this credulous people; and an impoſtor, called Roger Mulhern, who lived near Carlingford for many years, is yet mentioned by them with the greateſt reverence. This man pretended, that by the aid of his inviſible friend he could tell the ſtate of the dead. Several people, anxious to know how their relatives fared in the other world, flocked to the houſe of this ſage, who gave them a night's lodging free of expence, and by artful enquiries drew from his viſitors a knowledge of ſuch circumſtances in the life of the departed friends, as enabled him to decide whether he was happy or miſerable. His fame increaſed, and the prieſts became alarmed leſt his impoſture ſhould circumvent theirs. They forbade their pariſhioners to viſit Mulhern, whom they affirmed to be under the influence of the devil. But though the prohibition deterred the people from going publicly to the houſe of the impoſtor, yet they viſited him, with the greateſt ſecrecy, under the veil of night; and he, as a reward for their faithfulneſs, preſented each perſon with a ſhilling, beſides giving them the moſt ſatisfactory information reſpecting the deceaſed. This act of beneficence was ſo different from the practice of the prieſts, who always demanded money for any of their good offices, that if death had not removed Mulhern, it is not improbable but he might have produced another hereſy in the holy mother-church.

As the young mountaineers approach maturity, the ſoft paſſion predominates. The neareſt relations of the enamoured pair aſſemble, and after adjuſting the portion to be given with the young woman (commonly two or three cows, and a few ſheep), the marriage is ſolemniſed. This is the moſt expenſive feſtival of the mountaineers. It is common for forty or more perſons to be entertained at the expence of the bridegroom; or if the father-in-law is generous, he ſometimes defrays the expence of the wedding dinner.

This feaſt conſiſts of a ſuperabundance of bread, meat, poultry, butter, and whiſkey punch.

Within theſe few years tea in the afternoon has been introduced; but in general, only the favourite cordial, whiſkey*, is circulated with joy-inſpiring influence. A muſician attends, and the feſtive party dance till midnight.

When the bride retires, a number of young people of both ſexes throng into her bed-chamber, till ſhe complies with the old cuſtom of throwing the ſtocking. She throws her ſtocking over her right ſhoulder, and whoever is ſo happy as to be hit with it, is ſuppoſed to be the next of the company who will be married. This ceremony is accompanied with loud burſts of laughter, after which the lively party retire.

A chriſtening is alſo attended with much expence in regaling friends, but as the people become more enlightened they will probably be more economical

By frequent intermarriages in the ſame village, the mountaineers think that they keep their property among themſelves, and are unwilling to form any connubial engagements with others.

On the deceaſe of any perſon, the fire is inſtantly extinguiſhed, as ſymbolical of the extinction of life. If this event happens in ſpring or ſummer, flowers are gathered and ſtrewed around the body, which is laid out on a little ſtraw. It is covered to the chin with a ſheet, and the face remains bare. For two nights a large table is placed over the corpſe, with ten candles upon it; this is called the night-wake, and is emblematic of immortality. A baſon filled with cut tobacco, with a number of pipes, are placed for the accommodation of the neighbours, who throng to the houſe, fill it with the ſmoke of tobacco, and talk as gaily as if they were at a chriſtening. Nay, ſeveral of the young people join in ſuch amuſements as hunt the ſlipper, or blind man's buff; and even courtſhip makes no inconſiderable progreſs in this houſe of mourning. The cheerfulneſs of the viſitors is interrupted at intervals by the exclamations of the mourners.

A female orator begins this ceremony. She recites the former happineſs of the deceaſed; deplores his death in a kind of ſong, and is joined in different parts of this monody by a chorus of mourners: thoſe who feel leaſt are ever the moſt noiſy, while the neareſt female relations prove, by their ſighs and tears, that their ſorrow is unaffected.

"Alternately they ſing, alternate flow
Th' obedient tears, melodious in their woe;
While real ſorrow ſwells in each full heart,
And nature ſpeaks at every pauſe of art."

This ancient cuſtom might excite riſibility in a mind unaccuſtomed to reflect or feel: but moſt people are melted by its ſolemn ſimplicity. It is difficult to ſee the geſtures of ſorrow exhibited by thoſe mourners, and to hear their ſweet plaintive voices, without ſympathiſing; and the writer of this account has on many ſuch occaſions felt the tear of ſenſibility bedew his cheek.

After theſe ceremonies the corpſe is carried on a bier to the place of interment, where the prieſt prays for the repoſe of the departed ſoul, and urges his hearers to give him ſome money for praying the deceaſed out of purgatory. The credulous people

* The author cannot ſuppreſs a wiſh that the wiſdom of the legiſlature may deviſe ſome other mode of taxation, and put an entire ſtop to the diſtillation of this pernicious liquor. By this chemical proceſs, nutritious grain is changed into a liquid poiſon, which ruins the health, and depraves the morals, of myriads of our fellow-ſubjects.

have paid their clergy for this nonſenſical mummery for many ages, but ſome of the moſt intelligent among them are beginning to queſtion its efficacy, and it probably will ſoon be "a tale of the times of old."

The moral character of the mountaineers has often been miſrepreſented by ſatiriſts, who, as Churchill ſays, "judged the many by the raſcal few." On an impartial and philoſophic inveſtigation of their qualities of head and heart, it will be found that they are naturally acute; warm in their reſentment and affection; hoſpitable, credulous, and inquiſitive; paſſionately fond of the marvellous in deſcription; very ſuperſtitious, and paſſive to their clergy; communicative and unſuſpicious; indolent till ſtimulated by the hope of gain or a proſpect of pre-eminence; boaſtful and fond of praiſe; warmly attached to their relatives and friends, and ferocious to their enemies. Such is the Iriſh mountaineer in his natural ſtate; but their prieſts have abſolutely perverted this people, by inculcating a deteſtation of the proteſtants, whom they ſtigmatiſe with the name of *heretics*. This hatred is further increaſed by the idea that they have been diſpoſſeſſed of their heritage by the firſt ſettlers from England and Scotland. Conſequently the mountaineers conſider themſelves as the true proprietors of the iſland, who have been deprived of their rights by the invaſion of others. In conſequence of this opinion, many of them hate the proteſtants; and as in their intercourſe they are obliged to behave civilly, nay ſubmiſſively, they are early taught the low arts of diſſimulation, and can diſguiſe their ſentiments with wonderful addreſs.

This perverſion of the human heart has been productive of the moſt dreadful effects, witneſs the maſſacre of 1641; but as ſuperſtition is gradually declining, and a ſpirit of enquiry is become univerſal throughout Europe, it is to be hoped that even the Iriſh mountaineers will ſoon adopt the benign precepts of Chriſtianity, which teaches us to "love our neighbour as ourſelves." The idea that "faith was not to be kept with a heretic," has long prevailed among the mountaineers; hence they were prone to defraud their low-land neighbours, whenever they could do it with impunity; and in their bargains they are yet too cunning for more enlightened dealers.

One virtue of the moſt amiable kind they practiſe with unremitting zeal—filial piety. No nation, not even the Chineſe, can pay more reſpectful attention and implicit obedience to their parents. As there are no pariſh workhouſes in Ireland, except in ſome of the principal towns, conſequently the country would abound with deſtitute old people, were it not for the gratitude of their progeny. The Iriſh peaſant, but eſpecially the mountaineer, protects his parents in the decline of their years. The mothers aſſiſt in nurſing, carding, or ſpinning; the fathers hobble about the farms, directing the young men at their work. At night, the beſt and eaſieſt ſeat is appropriated to the ancient father and mother, and the moſt nutritious food in the houſe is ſerved up to them. It really is an edifying and lovely ſight to behold the reſpectful attention paid by thoſe peaſants to their aged parents, while the grandchildren are taught to addreſs them in the moſt endearing language, nay to crave their bleſſing, and ſupplicate the Deity for them in prayer.

Nor does the filial love of the Iriſh mountaineer expire with his parents. He cloſes their eyes, attends their remains to the tomb with grateful ſorrow, and occaſionally viſits the grave of thoſe who gave him being, and bedews it with his tears. From ſuch a diſpoſition, what excellent virtues might be produced with proper cultivation! but, alas! ignorance and ſuperſtition contract thoſe faculties with lethargic torpor, and many an excellent mind is buried in thoſe remote regions, like the diamond in the mine.

Let us for a moment turn our attentinn from theſe wild ſcenes, to another that approaches nearer to the elegance of civiliſed ſociety, and conclude this account with a ſhort deſcription of the ſubjacent country.

Ravenſdale is a fertile valley, about ſeven miles north-weſt of Carlingford. It lies at the bottom of the great chain of mountains whoſe inhabitants we have deſcribed. This lofty and majeſtic range ſhelters the vale from the north and eaſt winds. Ravenſdale lies open to the ſouthern and weſtern breezes, and is beautified by a large river, which runs from north to ſouth, ſkirting the fields with the livelieſt verdure along the weſtern ſide. This river empties itſelf into Dundalk bay, which is about two miles diſtant.

An excellent road has been made along the bottom of the mountains, on the eaſtern ſide of the vale; and there are five bleach-mills on the banks of the river, with ſeveral acres around, each covered with whitening linen: here a number of bleachers at work enliven the landſcape, and give an air of buſineſs to the ſcene, while ſeveral handſome manſions, adorned with gardens and ſhrubberies, exhibit a charming variety.

This cheerful ſcene is contraſted by the wild ſublimity of the mountains, which ſwell in natural grandeur, empurpled by the blooming heath, and brightened by the yellow bloſſoms of furze. Tranſlucent ſtreams flow in many cafcades down the ſides of the mountains, and appear with peculiar beauty and luſtre when the evening ſun ſhines upon them.

Towards the north, Ravenſdale-park diſplays a beautiful aſſemblage of pictureſque objects. A variety of trees, particularly fir, oak, and laurel, bloom along the ſloping ſide of the higheſt mountain, with viſtas at different intervals, which give a view of the river winding along amid the level meadows below. A caſcade, which falls over a rock, is precipitated about forty feet perpendicular into a baſon, where it foams and murmurs away in a ſtream that joins the river. Several gravel walks conduct the rambler through the mazes of the wood; and ſeats painted green, placed at different diſtances, invite to reſt and contemplation. The peak of the mountain above Ravenſdale-park is crowned with a vaſt pyramidical cairn or heap of ſtones, probably raiſed to perpetuate ſome great event. This cairn is diſcoverable at the diſtance of many miles, and adds greatly to the magnificence of the airy ſteep.

The rural grandeur of this mountain ſcene, and the ſofter features of natural beauty ſmiling in the ſunny meadows, and ſparkling on the gliding river below, is contraſted by an oppoſite mountain, which is ſo barren that it preſents nothing but an irregular maſs of rocks and looſe ſtones, which appear in broken curves, with here and there a ſtunted thorn, vegetating on the ſurface of the ſteril ſoil.

Such are the primitive manners of the Iriſh mountaineers of Leinſter; and ſuch the rich and pictureſque country adjacent, which is inhabited by an induſtrious and refined race of people, as diſtinct from the former as if they lived in a diſtant region of the globe.

MOUNTMELLICK, a town of Ireland, in Queen's County. The wool combing, malting, and tanning buſineſſes; with the cotton manufacture, and bleaching, are carried on here. It is five miles north of Maryborough, and 42 W.S.W. of Dublin.

MOUNTRATH, a town of Ireland, in Queen's County. Iron forges and furnaces have been long erected in its neighbourhood; but from the ſcarcity of charcoal have not been in regular uſe: the woollen manufacture forms the principal trade. It is ſix miles W.S.W. of Maryborough, and 23 north of Kilkenny. Long. 6. 54. W. Lat. 53. 2. N.

MOUNTSBAY, a bay on the ſouth coaſt of Cornwall, between the Land's End and the Lizard Point. It is ſo named

from a lofty peninſulated rock, called Mount St. Michael, which riſes within it. Among the rocks, on this part of the coaſt, breeds the Corniſh chough, or red-legged crow, noted for ſtealing and carrying away whatever it finds. In Mountſbay is a conſiderable pilchard fiſhery.

MOURA, a town of Portugal, in Alentejo, with an old caſtle; ſeated at the confluence of the rivers Ardita and Guadiana, 87 miles S.E. of Liſbon. Long. 5. 59. W. Lat. 38. 0. N.

MOURZOOK, the capital of Fezzan, ſituate on a ſmall river, and ſupplied with water from a multitude of ſprings and wells. The medley which it preſents to the eye, of the vaſt ruins of ancient buildings, and the humble cottages of earth and ſand that form the dwellings of its preſent Arab inhabitants, is ſingularly groteſque and ſtrange. It is ſurrounded by a high wall, with three gates, at which is collected a tax on all goods (proviſions excepted) that are brought for the ſupply of its people. A caravan arrives annually from Meſſurata at this place; and hence the Fezzaners diſpatch, every year, a caravan to Caſhna, and another to Bornou. Mourzook is 262 miles ſouth of Meſſurata, 650 N.W. of Bornou, and 710 north by eaſt of Caſhna. Long. 15. 5. E. Lat. 27. 20. N.

MOUSELEMINCS. See MONGEARTS, *Supp.*

MOUSSY, a river of Hindooſtan, which croſſes the country of Golconda, and runs into the Kiſtnah, on the borders of the circar of Palnaud.

MOUSTIERS, a town of France, in the department of Lower Alps. It is noted for a manufacture of fine porcelain, and for a once famous pilgrimage, called Our Lady of Beauvezer, ſeated between two lofty and craggy mountains It is five miles N.E. of Riez, and 47 W.N.W. of Nice.

MOUTIER, or MONSTIER, a town of Savoy, capital of Tarenteſia, with an archiepiſcopal palace. It is ſeated on the Iſere, 62 miles N.W. of Turin. Long. 6. 23. E. Lat. 45 30. N.

MOUZON, an ancient town of France, in the department of the Ardennes, with a late rich Benedictine abbey; ſeated on the Meuſe, eight miles S.E. of Sedan, and 110 N.E. of Paris. Long. 5. 10. E. Lat. 49. 37. N.

MOYENVIC, a town of France, in the department of Meurthe, remarkable for its ſalt pits. It is three miles from Vic, and 10 S.S.E. of Nanci.

MOZCISLAW, a ſtrong town of Lithuania, capital of a palatinate of the ſame name. It was almoſt ruined by the Ruſſians in 1660, but is rebuilt. It is ſeated on the Sofz, 22 miles ſouth of Smolenſko. Long. 32. 32. E. Lat. 54. 28. N.

MUCHELN, a town of Upper Saxony, in Thuringia. It was burned, in 1621, by the imperialiſts, under the command of Count Tilly. It is ſix miles north of Freyburg, and eight S.W. of Merſburg. Long. 11. 39. E. Lat. 51. 15, N.

MUCHELNEY, a village in Somerſetſhire, two miles ſouth by eaſt of Langport. Here are the remains of a rich and ancient abbey, part of which is now converted into a farm-houſe.

MUCIDAN, a town of France, in the department of Dordogne, ſeated on the river Iſle, 18 miles S.W. of Perigueux.

MUCKENBERG, a town of Upper Saxony, in the margravate of Meiſſen, 28 miles north of Dreſden, and 22 N.E. of Meiſſen. Long. 13. 52. E. Lat. 51. 20. N.

MUEHR, a river of Germany, which riſes in the archbiſhopric of Saltzburg, croſſes Stiria, paſſing by Judenburgh, Luben, Muehr, and Gratz, and falls into the Drave, near Kaniſca, in Hungary.

MUEHR, or MUEHRAU, a conſiderable town of Germany, in the duchy of Stiria, on the river Muehr, 25 miles N.W. of Gratz, and 40 S.W. of Neuſtadt. Long. 15. 4. E. Lat. 47. 16. N.

MUGGIA, or MUGGLIA, a town of Italy, in Venetian Iſtria, with a caſtle, ſeated on a gulf of the ſame name, five miles S.E. of Trieſt. Long. 14. 2. E. Lat. 45. 52. N.

MUHLBERG, a town of Upper Saxony, in the margravate of Meiſſen, with a caſtle, ſituate on the Elbe, 19 miles N.W. of Meiſſen, and 32 N.W. of Dreſden. Long. 13. 9. E. Lat. 51. 25. N.

MUHLROSE, a town of Upper Saxony, in the middle marche of Brandenburg, ſituate on a navigable canal, which forms a communication by water from Hamburg to Breſlaw, nine miles S.W. of Frankfort on the Oder.

MUIRKIRK, a town in Ayrſhire, ſeated on the river Ayr, and noted for a conſiderable iron-work.

MULDAU, or MOLDAU, a river of Bohemia, which riſes on the confines of Moravia, and running by Budweis and Prague, falls into the Elbe, at Melnick.

MULDORE, a town of Germany in the archbiſhopric of Saltzburg, ſeated on the Inn, 37 miles N.W. of Saltzburg, and 40 eaſt of Munich. Long 12. 25. E. Lat. 48. 10. N.

MULHEIM, a town of Germany, in the electorate of Cologne, ſeated near the Rhine, three miles from Cologne. Here the few proteſtants in Cologne are obliged to go to perform divine ſervice.

MULHEIM, a town of Weſtphalia, in the duchy of Berg, ſituate on the Ruhr, 14 miles north of Duſſeldorf. Long. 6. 51. E. Lat. 51. 26. N.

MULL OF GALLOWAY, a rocky promontory, the moſt ſoutherly point of Scotland, in the county of Wigton.

MUNDEN, or GEMUNDEN, a town of Lower Saxony, in the principality of Calenberg, ſituate at the confluence of the Werra and the Fulda, where they join to form the Weſer. No one who is not a freeman of Munden, is to trade beyond this town, but muſt conſign his goods to a factor here; and whatever is brought in a veſſel, muſt, by virtue of the ſtaple-right granted and confirmed to this town, be unladen and laden again. The Werra may be navigated by Munden and Heſſian veſſels, but the latter, on coming to Munden, are not to proceed, without a licence, and even then they muſt have a Munden maſter and pay a duty to the town. It is 10 miles N.N.E. of Caſſel, and 13 S.W. of Gottingen. Long. 9. 47. E. Lat. 51. 40. N.

MUNDER, a town of Lower Saxony, in the principality of Calenberg, ſituate on the Hammel, 18 miles E.S.E. of Munden. Long. 9 25. E. Lat. 51. 38. N.

MUNDERKINGEN, a town of Suabia, ſeated on the Danube, 25 miles S.W. of Ulm. Long. 9. 43. E. Lat. 48. 15. N

MUNDU, a city of Hindooſtan Proper, in the province of Malwa, of which it was anciently the capital. It was then a prodigious city, 22 miles in circuit, and contained many monuments of ancient magnificence; but it is fallen much to decay. It occupies the top of a large and lofty mountain, 46 miles ſouth of Ougein, and 454 N.E. of Bombay. Long. 75. 47. E. Lat. 22. 50. N.

MUNGATS, or MUNKATS, a town of Upper Hungary, with a biſhop's ſee, and an impregnable caſtle, ſeated on a high rock, 50 miles N.E. of Tockay. Long. 22. 0. E. Lat. 41. 30 N.

MUNGLORE, a town of Hindooſtan Proper, in the county of Cabul, 125 miles weſt of Caſhmere, and 135 eaſt of Cabul. Long. 71. 15. E. Lat. 34. 15. N.

MUNIA, or MENIE, an ancient and conſiderable town of Egypt, ſeated on the Nile. The veſſels that go down the river are obliged to ſtop here and pay certain duties. There

are ſeveral moſques and a great number of granite pillars. It is 140 miles ſouth of Cairo. Long. 31. 20. E. Lat. 27. 45. N

MUNNERSTADT, a town of Franconia, in the biſhopric of Wurtzburg, ſituate on the Lauer, 28 miles N.N.E. of Wurtzburg, and 31 N.W. of Bamberg. Long. 10. 9. E. Lat. 50. 7. N.

MUNNYPOUR, a town of the province of Meckley, in Aſia, 264 miles N.N.E. of Aracan. Long. 95. 0. E. Lat. 24. 40. N.

MUNSINGEN, a town of Suabia, in the duchy of Wurtemberg, 20 miles weſt of Ulm, and 26 S.S.E. of Stutgard. Long. 9 20. E. Lat. 48 23. N.

MUNSTER, a town of France, in the department of Upper Rhine, with a late rich Benedictine abbey, 30 miles S.W. of Straſburg. Long. 7. 5. E. Lat. 48. 8. N.

MUNSTER MEINFELD, a town of Germany, in the electorate of Treves, 12 miles S.W. of Coblentz. Long. 7. 18. E. Lat. 50. 19. N.

MURANO, an iſland and town of Italy, a mile from Venice, formerly a very flouriſhing place, and has ſtill ſome palaces that bear the marks of former magnificence, though now in a ſtate of decay. The iſland is ſaid to contain 20,000 inhabitants. The great manufacture of looking-glaſs is the only inducement for ſtrangers to viſit this place, which formerly ſerved all Europe with looking-glaſſes. Long. 12. 5. E. Lat. 45. 26. N.

MURET, a town of France, in the department of Upper Garonne, ſeated on the Garonne, 10 miles ſouth of Toulouſe. Long 1. 18. E. Lat. 43. 26. N.

MURHART, a town of Suabia, in the duchy of Wurtemburg, with a Benedictine abbey. It is ſeated on the river Mur, eight miles ſouth of Halle. Long. 9. 51. E. Lat. 49. 14. N.

MURO, an epiſcopal town of Naples, in Baſilicata, ſeated at the foot of the Apennines, 12 miles S.E. of Conza. Long. 15. 45. E. Lat. 40. 46. N.

MURRAY FRITH, a conſiderable inlet of the ſea, on the eaſt coaſt of Scotland, between Tarbetneſs, in Roſsſhire, on the north, and Brough Head, in Murrayſhire, on the ſouth.

MUSA, a town of Arabia, in the province of Yemen. It is populous, and ſurrounded with walls: 18 miles eaſt of Mocha.

MUSACRA, a ſea-port of Spain, in Granada, with a ſtrong caſtle, ſeated on a mountain, 27 miles N.E. of Almeria, and 62 S.W. of Carthagena. Long. 1. 36. W. Lat. 37. 11. N.

MUSIC (*Encycl.*). To what we have already offered under this head we are induced to lay before the reader, from the pen of a ſcientific and truly ingenious writer who aſſumes the title of the LEPTOLOGIST in the Britiſh Magazine for 1800, the following obſervations on muſic in general:

The agreeable effect of melodious ſounds, not only on the human ear, but on the feelings and on the paſſions, is ſo univerſal and ſo powerful, as deſervedly to excite the attention of the pſychological philoſopher. For what ultimate end a ſuſceptibility for this peculiar pleaſure has been implanted by nature in the mind, is not eaſy to be aſcertained; but, ſetting aſide the well-known pleaſing ſenſation of a delicate titillation, wherever the nerves are poſſeſſed of great ſenſibility, and the aſſociations of an intereſting voice, giving expreſſion to poetical and impaſſioned diction, it is probable that the taſte for all complicated and ſcientific muſic is wholly acquired.

1. Muſic may be conſidered as conſiſting of three component parts, rhythm, melody, and harmony. Rhythm is an agreeable ſucceſſion of ſounds conſidered with reſpect to the time of their whole duration. Melody is an agreeable ſucceſſion in reſpect to the pitch, or the frequency of vibrations of each ſound. Harmony is an agreeable combination of ſeveral ſounds at the ſame time. It is evident that rhythm and melody are almoſt inſeparable; but that harmony is by no means neceſſary to the exiſtence of muſic. In the firſt place, it is eaſy to conceive that a love of rhythm, or of the periodical recurrence of the ſame or ſimilar ſenſations at equal intervals of time, may be derived from the habit of a certain equality and recurrence in the motions of the body, ſuch as walking, or, in children who cannot yet walk, from the paſſive motion of geſtation. this predilection for the return of cuſtomary ſenſations appears to be an innate and fundamental tendency of the human ſyſtem, to which phyſiologiſts and metaphyſicians have been obliged ultimately to refer many properties both of body and mind. But be this as it may, the love of rhythm, which is, perhaps, the loweſt ingredient in muſical taſte, is, if poſſible, ſtill more univerſal than the love of harmony and melody. Poetry, or rather metrical compoſition, is diſtinguiſhed from proſe only by the regularity of its rhythm; and the knowledge of metre and proſody, however high it may rank in the critic's eſtimation, is a ſubordinate and comparatively inſignificant branch of muſical ſcience. The natural fondneſs for rhythm is the principal foundation of the pleaſure of dancing, an amuſement intimately connected with muſic, and no leſs popular. The rhythm of a muſical compoſition is almoſt always at leaſt twofold, often three or fourfold, conſiſting of ſubordinate diviſions or bars, and periodical returns of larger members, either phraſes or ſtrains, containing equal numbers of theſe diviſions. All this is perfectly natural, but, perhaps, not ſo neceſſary to muſic as Mr. Walter Young, in his excellent eſſay, printed in the Edinburgh Tranſactions, appears to imagine; for thoſe who are already experienced muſicians are generally obſerved to delight in recitative, where the rhythm is almoſt entirely loſt; and ſtill more in fugues, where two or three ſeries of rhythms, almoſt independent of each other, are carried on at the ſame time, one part beginning its ſubdiviſions when another has made ſome progreſs, and a third is ſtill to follow. But the pleaſure derived from ſuch compoſitions, is, as Kirnberger has obſerved, more intellectual than ſenſual, ariſing in great meaſure from the conſciouſneſs of being able to comprehend that which is "caviar to the general." Rhythm is generally marked in performance by a ſlight increaſe of force at the beginning of each ſubdiviſion or bar; ſometimes, and in ſome inſtruments always, the change of ſounds, in point of acuteneſs and gravity, or the interruption of the ſame ſound, is a ſufficient diſtinction; and ſometimes, after the rhythm has already been firmly impreſſed on the mind, neither change of ſound nor of ſtrength is perpetually repeated; the imagination alone being ſufficient to conceive the continuation of the rhythm: but this conſtitutes a kind of *tempo rubato*, where the perception of meaſure is intentionally weakened or ſuſpended. The Æolian harp pleaſes indeed without rhythm, but the pleaſure would ſoon be exhauſted by repetition.

2. The next conſtituent part of muſic is melody. Melody may in ſome ſenſe be ſaid to pleaſe on the ſame principle as rhythm, the partiality of the mind to a regular recurrence of intervals: for though we have it not in our power to count the ſingle vibrations of muſical ſounds numerically, yet we are evidently able to compare with eaſe ſuch ſounds as are related to each other in the ſimpleſt numerical ratios. For inſtance, if a treble and a tenor voice ſing the ſame part, there is ſcarcely an ear ſo inaccurate as not to perceive their reſemblance, which is produced by the recurrence of two vibrations of the treble note at the ſame interval of time with one of the tenor. The ſame love of order may eaſily be extended to the compariſon of fifths and fourths, where the proportions are as two to three, and as three to four. This is enough to account in

ſome degree for the pleaſure derived from melody, or the ſucceſſion of ſounds bearing certain proportions to each other, in reſpect to gravity and acuteneſs: beſides, that the ſame intervals which are moſt melodious in ſucceſſion, are found alſo to form the moſt pleaſing combination of harmony when contemporary; for ſince the preceding ſound is very frequently continued by reflection from ſurrounding objects, ſo as to become contemporary with the ſucceeding, and perhaps always remains fixed in the imagination, it is obvious that ſounds, in order to be perfectly melodious, muſt alſo be harmonious. Add to this, the impreſſion generally made in infancy by the more or leſs melodious ditties of the nurſe's voice, and the connection of refined and chromatic melodies with the natural expreſſion of the moans of grief, or the exclamations of joy; and from the union of all theſe cauſes it may eaſily be conceived from whence the love of melody, as an acquired faculty, may, without much difficulty, be derived.

3. The pleaſure ariſing from harmony is not ſo ſimple and univerſal as that which is produced by a combination of rhythm and melody. Harmony requires for its execution and perception a greater degree of cultivation both in the performer and the hearer than melody alone. Contemporary ſounds may, from the due proportion of the times of their vibrations, give a ſimilar pleaſure to that of melody, when the mind, conſidering them in ſucceſſion, finds them capable of a ready compariſon. But the characteriſtic of harmony is the regular, and at the ſame time diverſified, motion of the air, which ariſes from the combined vibrations, and which appears to be well calculated to produce the pleaſure that the mind derives from the perception of ſymmetry. In this point of view, a concord may be conſidered as a ſingle ſound diſtinguiſhed from a diſcord by a ſuperior quality of tone; in the ſame manner as the tone of the harmonica is more agreeable than that of a newſman's horn, as the note of a nightingale is ſweeter than that of a frog, and a ſmooth rich voice more pleaſing than a hoarſe and natal croaking. Thus the harſhneſs and diſagreeable quality of a ſingle ſound may alſo, on a more nice examination, be ſometimes found to conſiſt in a want of harmonious proportion in thoſe ſecondary notes which generally enter into its compoſition. This quality of ſound, ſometimes called its tone, regiſter, colour, or *timbre*, might be conſidered as a fourth component part of muſic; it depends on the law by which the parts of the ſounding body, and the particles of the air, are governed, with reſpect to the velocity of their progreſs and regreſs in each vibration, or in different ſucceſſive vibrations. No doubt, much of the pleaſure derived from muſic depends on it; but as it is capable of little diverſity on the ſame inſtrument, it is ſeldom conſidered in treating of the theory of muſic. The various combinations of the ſtops of the organ and harpſichord, the uſe of the harmonies of the harp and violin, the bowing nearer to or further from the bridge, the application of muffles of various kinds, the change of the aperture of the lips in wind inſtruments, the choice of vowels and conſonants more or leſs adapted to the powers of the voice; and, in full pieces, the judicious introduction of different voices and inſtruments as ſubſervient to the general effect: all this relates to the quality of ſound, and whoever adequately reliſhes the works of the great modern maſters will be fully competent to judge of its practical importance.

Be the cauſes what they may, natural or habitual, ſimple or complicated, it is certain that a very great majority of mankind experiences pleaſure from muſic: this pleaſure is a ſocial pleaſure, and, connected as it is with ſentiment and paſſion, it is a rational pleaſure. The purſuit of muſical excellence, if properly conducted, amply exerciſes the faculties, at the ſame time that it forms a deſirable variety when intermixed with literary or profeſſional employments. To call it an amuſement only, betrays an ignorance of the nature and difficulty of the ſtudy; ſo far is the ſcience of muſic from being of a light and ſuperficial nature, that, in its whole extent, it is ſcarcely leſs intricate or more eaſily acquired than the moſt profound of the more regular occupations of the ſchools: and even practical perfection in muſic requires ſo much intenſe and laborious application, ſuch a minute accuracy of perception, and ſo rapid an aſſociation of various ſenſitive ideas with other ideas and mechanical motions, that it is inconceivable how men who have no appearance of ſuperior brilliancy in any other accompliſhment, ſhould be able to attain a conception and execution which ſeem almoſt to require the faculties of a ſuperior order of beings. An intemperate and diſſipated attachment to muſic may indeed often be productive of evils; but probably the ſame individuals would have been equally idle and irregular if they had been deſtitute of this accompliſhment. A conſiderable ſhare of the pleaſure of practical muſic ariſes from cauſes perfectly diſtinct from the ſenſual perceptions: the conſciouſneſs of having overcome difficulties, the laudable ſatisfaction of entertaining others, and the intereſt and emulation produced by a concurrence of others in the ſame purſuits: all theſe entirely outweigh the temporary amuſement of the ear, and wholly remove the objection which might be made to the enervating effect of a continual devotion to pleaſurable ſenſations. The ancient philoſophers, with all the manlineſs and dignity of character to which they aſpired, were not aſhamed to conſider muſic as an indiſpenſable part of a liberal education; and Plato devotes three of the earlier years of his young citizens entirely to the ſtudy of the lyre: nor are we without examples in modern times, of philoſophers, and princes, and heroes, who have excelled as much in muſical performances, as in literature and in arms.

Origin of the ſcale.—The firſt lyre, with three ſtrings, is ſaid to have been invented in Egypt by Hermes, under Oſiris, between the years 1800 and 1500 before Chriſt. The ſecond and third ſtring were, perhaps, the octave and fifth of the firſt, or more probably its fifth and fourth, as it would be eaſy to ſing the octave with the accompaniment of the primitive note only. The melody might be either always in uniſon with one of the ſtrings, reſembling a very ſimple modern baſs part; or the intervals might be occaſionally filled up by the voice without accompaniment. We have in modern muſic, a ſpecimen of a pleaſing air, by Rouſſeau, formed on three notes alone, the key note with its ſecond and third; but there can be little doubt that the earlieſt melodies muſt have had a greater compaſs than this. The trumpet is ſaid to have been invented about the ſame time: a little experience might have taught the Egyptians to produce from it the octaves, the 12th, 17th, 23d, and other harmonics of the primitive ſound, which are related to it in the ratio of the integers from 1 to 9, and the ſame ſounds might have been obſerved by a delicate ear among the ſecondary notes of a long chord; and then by deſcending three octaves from the 23d, and two from the 17th, they might have added to their lyre, the ſecond and major third of the principal note. But it does not appear that this method ever occurred to the ancients: they ſeem rather to have attended to the intervals of the notes within the octave, than to the union of ſimilar notes in the natural harmonics; and, beſides, the ſeries of natural harmonics would never have furniſhed a true fourth or ſixth. It is uncertain when, or by whom, the fourth ſtring was added; but the merit of increaſing the number to ſeven, is attributed to Terpander, about the year 700 before Chriſt; two centuries after Homer; although ſome perſons aſſerted that he only brought the improvement from Egypt, and that Hermes was alſo the inventor.

of the lyre with ſeven ſtrings. Pythagoras, or Simonides, about the year 500, added an eighth, and Timotheus a ninth ſtring: the number was afterwards extended to two octaves; and Epigonus is ſaid to have uſed a lyre of forty ſtrings, or rather a harp, as he played without a plectrum: but the theory of the ancient muſic ſoon became more intricate than intereſting. The lyre of eight ſtrings comprehended an octave, correſponding pretty accurately with the notes of our natural ſcale beginning with *e*: the key note was *a*, ſo that the melody appears to have borne uſually a minor third, which has alſo been obſerved to be the caſe in the airs of moſt uncultivated nations: but there was a conſiderable diverſity in the manner of tuning the lyre, according to the great variety of modes and genera that were introduced. Theſe modes were of a nature totally different from the modern modulations into various keys, but they muſt have afforded a more copious fund of ſtriking, if not of pleaſing melodies, than we have at preſent. In ſome of the genera, intervals of about a quarter tone were employed; but this practice, on account of its difficulty, was ſoon abandoned; a difficulty which is not eaſily overcome by the moſt experienced of modern ſingers; although ſome great maſters have been ſaid to introduce a progreſſion of quarter tones, in pathetic paſſages, with ſurpriſing effect. The tibia of the ancients, as it appears evidently from Theophraſtus, although not from the miſinterpretations of his commentators and of Pliny, had a reed mouth-piece about three inches long, and therefore was more properly a clarionet than a flute; and the ſame performer generally played on two at once, and not in uniſon. Pollux, in the time of Commodus, deſcribes, under the name of the Tyrrhene pipe, exactly ſuch an organ as is figured by Hawkins, compoſed of braſs tubes and blown by bellows: nor does he mention it as a new diſcovery: it appears from other authors, to have been often furniſhed with ſeveral regiſters of pipes; and it is ſcarcely poſſible that the performer, who is repreſented by Julian as having conſiderable execution, ſhould have been contented without occaſionally adding harmony to his melody. That the voice was accompanied by thorough baſs on the lyre, is undeniably proved by a paſſage of Plato: and that the ancients had ſome knowledge of ſinging in three parts, is evident from Macrobius. Martini, who is one of the ſtrongeſt opponents of that opinion, which attributes to the ancients a knowledge of counterpoint, obſerves, that "they allowed no concords but the octave, fourth, and fifth, or at moſt very rarely the third; yet they were not without a knowledge of concord of harmonious parts. It is known with certainty, that two parts, whether vocal or inſtrumental, or mixed, beſides uniſon, performed at the ſame time the ſame melody, either always in octaves, or probably always in fifths, or always in fourths; which was called a ſymphony: perhaps alſo, they changed in the courſe of the performance from one interval to another, and this might be done by more than two parts at the ſame time." It is not improbable that this ſtatement may be accurate: nor is it neceſſary to ſuppoſe a very exquiſite and refined ſkill in the intricacies of compoſition, to produce all the effects that have with any probability been attributed to muſic. It is well known that Rouſſeau and others have maintained, that harmony is rather detrimental than advantageous to an intereſting melody, in which true muſic conſiſts; and it may eaſily be obſerved, that an abſolute ſolo, whether a paſſage or a cadence, is univerſally received, even by cultivated hearers, with more attention and applauſe than the richeſt modulations of a powerful harmony.

The minor ſcale being the moſt commonly uſed by the ancients, it was natural for Pope Gregory, who in the year 600 is ſaid to have marked the notes by the Roman letters, to begin with A, the key note of that ſcale: although if, as there is ſome reaſon to ſuppoſe, that B was originally flat, A was not the key note, but its fifth, until the B natural was introduced, and denoted by a ſquare b inſtead of a round one. By degrees the chromatic ſcale was filled up, and the five added intervals were denoted by the letter belonging to the note above them, with the addition of the round b, or by the note below, with the addition of four lines croſſing each other, implying a half note, as compoſed of four commas. A ſimple croſs would, however, at preſent, be much more convenient, as more readily diſtinguiſhable from the ſquare b, which is uſed to ſignify a natural note in oppoſition to theſe flats and ſharps. This is the hiſtorical account of the origin of the ſcale; but, according to the modern theory and practice of muſic, the ſubject may be more eaſily underſtood, by beginning with an explanation of the major ſcale.

Practical application of the ſcales.—The ſimpleſt proportions of two ſounds to each other, next to uniſon, is when the frequency of their vibrations are related as one to two: ſuch ſounds bear ſo ſtrong a reſemblance to each other, that when named, they are denoted by the ſame letter, and are only diſtinguiſhed by the appellations in alt, in altiſſimo, on the one ſide, and double double, on the other. The Germans, with great propriety, make uſe of ſmall letters or capitals with one, two, or more lines over them. The note marked by tenor cliff is called $\bar{c}$, the octaves above $\bar{c}$, $\bar{\bar{c}}$, as far as ſix lines, which is, perhaps, the higheſt note uſed in muſic: the octaves below $\bar{c}$, are c, $\bar{C}$, $\bar{\bar{C}}$, $\bar{\bar{\bar{C}}}$: C is probably not audible, vibrating but eight times in a ſecond. C with ſix lines, would denote a ſound, of which the complete vibrations ſhould laſt preciſely a ſecond. The ſeries of natural notes is thus—$\bar{A}$, $\bar{B}$, C, D, E, F, G, A, B, c, a,... b, $\bar{c}$, $\bar{d}$.—The ſubjoined table will ſhew the abſolute frequency and the dimenſions of each vibration of the octaves of c, and the length of the ſimpleſt organ pipe that produces it; but according to the different temperature of the air, and the pitch of the inſtruments, theſe numbers may vary ſomewhat from perfect accuracy; and it muſt be obſerved, that the uſual pitch of concerts in London, is higher than this ſtandard; and in Germany, perhaps a little lower.

Sound moves in a ſecond 1130 feet.		
Note.	Vibrations in a ſecond.	Length of open pipe in feet.

New P. Forte.

Any ſound may be aſſumed at pleaſure for the primitive or ſtandard note of a piece of muſic, and is then denominated the key note; and the idea of this note is perpetually in-

preſſed on the mind in all ſimple compoſitions, both from its frequent recurrence, and from the relation that all the other ſounds bear to it. C being the key note of the ſcale called natural, we ſhall conſider it as the foundation of the ſcale. The next in importance is the fifth, G, which for various reaſons is intimately connected with the key note. The firſt reaſon is, that it conſtitutes the moſt perfect melody and harmony with C, ſince every other vibration of C coincides with every third of G; the ſecond is, that an attentive ear may almoſt always diſtinguiſh this fifth, at leaſt its octave, the 12th, whenever any inſtrument ſounds C; it being one of thoſe ſecondary ſounds which are called natural harmonics, and which may generally be obſerved in the proportion of the natural numbers, as far as twenty or more, but which have not hitherto been completely explained: thirdly, a ſtopped pipe, if blown forcibly, ſprings immediately from C to g, and an open pipe firſt to c, and then to g, the interval between C and G, is moſt naturally divided by the note E, which anſwers to the number of 5, when C and G are repreſented by 4 and 6, and which is found among the natural harmonics both of chords and pipes. Theſe three notes conſtitute the harmonic triad, or common accord in the major ſcale, which is the moſt perfect, or rather the only perfect harmony. But the intervals are ſtill much too large for melody, and require a further ſubdiviſion; we now therefore take the fifth below inſtead of above the key, or its octave, the fourth above F, which is to C as 4 to 3: this ſound is no-where found among the natural harmonics of C, but C is the moſt diſtinguiſhable of its harmonics, and therefore the relation is nearly the ſame. The ſcale is completed by filling up the perfect triads of G and F: the fifth of G furniſhing D, the ſecond of the key, which is alſo the ninth natural harmonic of C; the third of G, the ſeventh, B, which is the fifteenth harmonic of C; and the third of F being the ſixth of the key, A, which is neither among the harmonics of C, nor has c among its harmonics. Hence we have a ſecond table, in which the proportions of the length of a chord, or pipe, producing the various ſounds are detailed, and the place among the principal natural harmonics of the key annexed.

Notes.	Proportions.	N. lt.
Key C	1	1, 2, 4
2d D	$\frac{8}{9}$	9,
3d E	$\frac{4}{5}$	5, 10
4th F	$\frac{3}{4}$	0, $(\frac{1}{3})$
5th G	$\frac{2}{3}$	3, 6, 12
6th A	$\frac{3}{5}$	0,
7th B	$\frac{8}{15}$	15,
8th c	$\frac{1}{2}$	2, 4, 8, 16

Now when two or more perfectly harmonious parts are performed together, they muſt neceſſarily be found all in the ſame triad, C, E, G; G, B, D; or F, A, C; and the ſucceſſion of theſe triads in various forms, is ſufficient for the accompaniment of any ſimple melody. A regular melody always terminates by an aſcent or deſcent of one degree to the key note: the laſt note but one muſt therefore be always B or D; and both of theſe being in the triad of G, G is called the governing note, or the dominant of C; and F, being in the ſame manner governed by C, is called its ſubdominant. And it is uſual, in all regular compoſitions of any length, to depart for a ſhort time from the principal harmony of the key note, and to modulate into the key of the dominant, then to return, and to modulate for a ſtill ſhorter time into the ſubdominant, before the final cloſe in the tonic or key note. It is neceſſary therefore, for greater variety, to complete the ſcale of the dominant, as well as that of every other note which may be occaſionally introduced as a principal key note; but to do this with mathematical accuracy in the ſame proportion as has been explained, would be practically impoſſible, and even theoretically inconvenient: hence ariſes the neceſſity of tempering ſome intervals to make the others more tolerable, without too much increaſing the number of ſounds. It has been found ſufficient in practice, to add five notes to the ſeven which have been enumerated; but the beſt proportions of theſe have not yet been abſolutely determined: ſome have made all the twelve intervals equal: others have left the whole ſcale of C perfect: others again have taken a middle path, and have introduced a ſlight imperfection into this key, in order to make the neighbouring ones the leſs diſagreeable. The leaſt circuitous introduction of theſe notes is ſhewn in the third table, together with the proportion that they bear to C when thus conſidered. They are denominated nearly in the German manner -is ſignifying what the Engliſh call ſharp, and the French *diſe*, and -es, flat, or *bemol*.

Notes.	Relations,	Proportions.
Fis	as 7th of G	$\frac{32}{45}$
Bes	as 4th of F	$\frac{9}{16}$
Cis	as 7th of D	$\frac{128}{135}$
Ees	as 4th of Bes	$\frac{27}{32}$
Gis	as 3d of E	$\frac{16}{25}$

But a ſtill greater variety being required than theſe major ſcales afford, it has been found that the interval of a fifth may be agreeably, though ſomewhat leſs harmoniouſly, divided, by placing the minor third below, inſtead of above, the major; ſo that C may be to E as E was to G, and conſequently E to G as C was to E. The E thus depreſſed to $\frac{5}{6}$, differs but by a comma, or the ratio of 80 : 81, from the Ees found above, as the 4th of Bes; therefore the ſame ſtring ſerves for both notes; and the ſcale becomes C, D, Ees, F, G, A, B, C; which is the aſcending minor ſcale, the A and B being retained as leading beſt towards the key note, and the major triad of the dominant being therefore neceſſary to the cadence. But in deſcending, the triad of the ſub-dominant F may conform to the character of the minor mode, and Aes is ſubſtituted for A; and moſt frequently Bes for B, as dividing the interval from C to Aes more equally and more melodiouſly.

Thus, we have a pretty comprehenſive view of the moſt uſual practical relations of all the notes to each other. Their uſe as diſcords is ſomewhat more complicated, and would lead further into the ſcience of muſic than is conſiſtent with the nature of ſo ſummary a view. But it may be remarked in general, that by far the moſt common diſcord is the note which conſtitutes the diſtinction of the ſcale of the key from that of its dominant; for inſtance, F with the triad of G, which is called the accord of the flat ſeventh of G; and F not being in the ſcale of G, is conſidered as a regular preparative to the final accord of C; in which that part or inſtrument by which the F is introduced, muſt neceſſarily deſcend to E, the third of the key. The ſecond kind of diſcords are ſuſpended diſcords, when one or more notes of any preceding accord are continued after the commencement of a different harmony in other parts of the compoſition. The third, which is rare, and leſs univerſally adopted, conſiſts in an anticipation of a ſubordinate note of an accord which is to follow, as in the caſe of the added ſixth of the French ſchool. The fourth kind are paſſing diſcords, where a note forming only a melodious ſtep between two others, is inſerted without any regard to its harmonious relations.

Terms expreſſive of time.—The notation of muſic, as it has been eſtabliſhed for more than two centuries, is in general admirably adapted for its purpoſe: but there is one great deficiency, which might be very eaſily remedied, and that is, the total omiſſion of any character expreſſive of the abſolute duration of each note, however accurately the relative value of

the notes may be preſcribed. 'Tis true, ſome little allowance muſt be made for the execution of the performer, and for the habits of the audience; but this is no reaſon why time might not be much more accurately noted, than by the vague terms which are uſually adopted. It would be eaſy to prefix to each movement a number, ſignifying how many bars are to be performed in a minute, which might at firſt be aſcertained by the help of a ſtop-watch, and would ſoon become perfectly familiar both to compoſers and performers, even without this aſſiſtance. According to Quanz, the number which ſhould be ſubſtituted for *Allegro aſſai* in common time, is about 40; for *Allegretto*, 20; for *Larghetto*, 10; and for *Adagio aſſai*, 5. But it is uſual to perform modern muſic much more rapidly than this; or at leaſt the ſtyle of compoſition is ſo changed that the terms are very differently applied. An allegro, or even an allegretto, in common time, without ſemiquavers, is often performed as faſt as 60, ſeldom ſlower than 30.

A very ſuperficial attempt to affix a determinate meaning to the words denoting muſical time, may be ſeen in the table ſubjoined; which, if it were more completely and accurately filled up, might be of conſiderable uſe to young muſicians; although it will appear from inſpection, that compoſers have hitherto employed thoſe terms in very indefinite ſignifications. But it muſt be confeſſed, that much latitude muſt neceſſarily be left for the ear and taſte of a judicious performer, and that it is impoſſible for human art to deſcribe on paper every delicacy of finiſhed execution.

Indian Music. Of the melodies called *Raugs* and *Raugnees*, the primary and ſubordinate modes or tunes of Hindooſtan, many equal in ſweetneſs the moſt favourite Scotch or Italian airs. Sir William Jones derives the word *raug* from a Sanſcrit root, ſignifying *a paſſion, or affection of the mind*. The *raugs* are ſix in number; to each belong five Raugnees. The moſt extraordinary and preternatural powers are aſcribed to ſome of theſe tunes by the Indians: one has the property of occaſioning a fall of rain; another cauſes a conflagration, &c.; and ſeveral ſtrange anecdotes are recorded of raſh muſicians who ſuffered the moſt dreadful agonies, as a puniſhment for having violated all muſical decorum by ſinging a *night raug* in the day-time, or a *morning raug* in the evening.

Theſe melodies are perſonified by the Hindoos; and repreſented in allegorical paintings, the ſeries of which is denominated *Raugmala*: the beſt account we have yet ſeen of theſe perſonifications is given by the ingenious Mr. Gilchriſt in his very excellent and uſeful *Grammar of the Hindooſtanee Language*, *p.* 276; from which work, as it is unfortunately ſo rare in this country as not to be procured for any price, we have not heſitated to extract the following deſcriptions, taken by that learned orientaliſt from a Perſian treatiſe, called the *Tohfut al Hind*, compoſed by *Mirza Khan*.

I. First Raug, called Bhyroon.—This muſt be ſung at the dawn of day, in the autumnal ſeaſon only; it is repreſented under the figure of the god *Mahadeo*, or *Jupiter Olympius*: face comely, but covered with aſhes, and long lank hair; from which the river Ganges flows. The *raug* iſſues from the mouth of the deity, who holds a trident in his hand, and has a bull by his ſide, with other emblems of divinity familiar to the Hindoos.

The *raugnees* belonging to *Bhyroon* are,

1. *Bhyrouwee*, repreſented as a beautiful damſel, dreſt in ſcarlet and white, with a garland of *chumpa* flowers round her neck. She is ſeated on a hill amidſt lilies, worſhipping the *Mahadeo* (or ſymbol of Jupiter Genitor), ſinging a love ſong, and playing on the cymbal. Time; morning. Seaſon; autumn.

2. *Eyraree*. A handſome nymph, black locks, bracelets on her arm, adorned with leaves; dallying with her lover, and fanning flies from his face. Time; evening. Seaſon; autumn.

3. *Madehmadh*. A nymph dreſt in yellow, with ſtreaks of ſaffron on various parts of her body, in dalliance with her lover. Time and ſeaſon as the laſt.

4. *Sindhuwee*. Time; evening. Seaſon; autumn. A lovely female, clothed in red, and armed with a trident; her ears ornamented with noon flowers. She ſits complaining, and expecting her lover, while ſhe runs over her roſary in honour of *Mahadeo*.

5. *Bungal*. Time and ſeaſon as the laſt mentioned. A female, with a beautiful face, but obſcured by aſhes rubbed over it, like that of a *Jognee*, or female mendicant. Her hair coiled up. In her left hand a trident; in the right, a waterlily; her drapery ſaffron colour, and her body marked with ſtripes of ſandal wood: on her forehead a line of muſk.

II. Second Raug, named Malkous, is adapted to the ſecond winter, and the laſt watch of the night. It proceeds either from the mouth of *Mahadeo* or *Kanh*, the Indian Apollo. The figure is a robuſt, florid, ſtately man, in blue garments, armed with a club; his neck adorned with a ſtring of pearls, or human ſkulls, and he ſeems in dalliance with many damſels.

The *raugnees* belonging to *Malkous* are,

1. *Tooree*. Time; forenoon. Second winter. A fair and gentle maid, clothed in violet and white; her body covered

with ſtreaks of ſaffron and camphor: ſhe plays on the *beena*, or Indian lyre, in a verdant plain, where the wild deer are captivated by her melody.

2. *Gouree.* Time; late in the afternoon. Second winter. A charming brunette, dreſſed in white robes, ſinging with a voice which faulters from the juice of the grape. She has pendants and mango bloſſoms in her ears, and her ſongs are amorous.

3. *Goonkulee.* Dawn of day: ſecond winter. A woman, who, in the abſence of her lover, by grief and lamentation, has reduced herſelf to an emaciated ſtate. She is weeping with diſhevelled hair at the foot of a *kudum*, or *ball-flower* tree.

4. *Khumbhawatee.* After midnight: ſecond winter. An airy, graceful nymph, ſinging conſtantly, dancing and playing on muſical inſtruments; clad in green and ſcarlet, with jewels.

5. *Kokubu.* A plump female, with wanton looks and glances, having juſt left her bed-fellow; her garments are partly rent, and her garland of flowers diſcompoſed.

III. Third Raug, named Hindoul, is intended for the gay ſeaſon of morning and ſpring: he is ſaid to have emanated from the navel of *Brahma*, and ſeems a handſome youth of radiant hue: he is ſeated on a ſwing, with lovely nymphs, who toy and dally with him; ſinging ſongs of love, and playing on various inſtruments.

The *raugnees* which belong to him, are,

1. *Ramkulee.* Seaſon; ſpring. Time; dawn of day. A lovely female; bright complexion, clad in blue, ornamented with jewels; her lover falling at her feet entreats forgiveneſs for paſt infidelities.

2. *Deſakh.* Morning: ſpring. A fair Amazon, with a drawn ſword; her arms and breaſts covered with aſhes; her lover cloſe at her ſide.

3. *Lulit.* Seaſon as above. A beautiful damſel, clad in ſcarlet, and richly ornamented with jewels: on her neck a garland of flowers.

4. *Bilawul.* Time; morning in ſpring. A jetty nymph, of ſlender make, and clad in crimſon, decorated with jewels; ſhe ſits in expectation of her lover.

5. *Putmunjuree.* Spring: midnight. A forlorn, deſerted, love-ſick damſel, grieving in the abſence of her lover. A garland of withering flowers hangs on her boſom.

IV. Fourth Raug, called Deepuck *, is to be ſung in the hot weather at noon exactly. He is the offſpring of the ſun, and of a flame or orange colour, with crimſon garments, and a ſtring of large pearls round his neck, riding upon a furious elephant, attended by many females. Others deſcribe him as extinguiſhing a taper, and darkening his chamber, that the eye of curioſity may not put him to the bluſh on account of his amours.

The *raugnees* ſubordinate to him are,

1. *Deſee.* Summer ſeaſon: forenoon. A handſome ruddy young woman, in green robes, decorated with precious ſtones, &c. She amorouſly approaches the couch of her lover.

2. *Kamod.* Time as the laſt. A graceful female, clad in white above and red below, weeping in the abſence of her lover.

3. *Nut.* Afternoon. Summer ſeaſon. A roſy nymph adorned with jewels, mounted on a ſteed in a riding habit, with a drawn ſword, hewing down her enemies in battle.

4. *Kidara.* Summer: midnight. A mendicant with long matted hair, in pink-coloured garments. A ſnake entwined in his locks, whence iſſues the river Ganges. His brow is adorned with a creſcent, and he worſhips *Mahadeo* with cloſed eyes.

5. *Kanhra*, or *Kurnotee.* Summer evening. A handſome fair man, with a ſword in his right hand, the left extracts the tooth of an elephant; a bard ſtands before him repeating his praiſes: on his forehead is a line of camphor.

V. Fifth Raug, named Sreeraug, is reſtricted to winter's afternoon: he proceeds from the womb of the earth, and is a florid graceful man clothed in white, or red, adorned with a necklace of amethyſts and falſe diamonds. He holds the lotos flower in his hand, and ſits on a ſplendid throne, before which muſicians are ſinging to amuſe him.

The *raugnees* belonging to him, are,

1. *Maljuree.* Winter ſeaſon: forenoon. A roſy dame, with graceful figure, clad in yellow, with a groupe of damſels, under the ſhade of a mango grove.

2. *Marwa.* Winter; towards evening. A damſel in gorgeous apparel, with a garland of flowers round her neck, expecting the arrival of her lover.

3. *Dhunaſree.* Winter; forenoon. A love-lorn female, in red garments, weeping alone under a *Moulſuree* tree.

4. *Buſunt.* Forenoon: winter. A handſome man, dreſſed in ſcarlet; crowned with peacocks' feathers; holding mango bloſſoms in his hand; intoxicated with paſſion; a garland of flowers hangs from his neck, and he ſports in a garden with ſinging and dancing girls; in his left hand he holds a pan of *betel*, whilſt he plays on a pipe or lyre, ſurrounded with his nymphs.

5. *Uſawuree.* Winter; forenoon. A dark-coloured, delicate damſel, in white garments, her legs and arms entwined by ſeveral large ſnakes. She is ſeated in water, on a plain at the top of a mountain: according to ſome, ſhe is quite naked, or only wears an apron of leaves.

VI. Sixth Raug, called Megh, is adapted to the wet or rainy ſeaſon, and the laſt watch of night. He is ſaid by ſome to proceed from the head of *Brahma*, and by others from the ſky; he is of a dark complexion, but comely. His hand is armed with a ſword, and his hair gathered into a knot, and tucked up behind.

The *raugnees* belonging to *Megh*, are,

1. *Tunk.* Midnight: rainy ſeaſon. A damſel diſtracted by the abſence of her lover; ſpreading a bed of lotos leaves.

---

* On the ſubject of this raug, we ſhall extract a curious paſſage from Sir William Ouſeley's Eſſay on Indian Muſic (Oriental Collections, vol. I. p. 73.) "There is a tradition, that whoever ſhall attempt to ſing the raug Depuk, is to be deſtroyed by fire. The emperor Akber ordered Naik Gopaul, a celebrated muſician, to ſing that raug. He endeavoured to excuſe himſelf, but in vain; the emperor inſiſted on obedience; he therefore requeſted permiſſion to go home, and bid farewel to his family and friends. It was winter when he returned, after an abſence of ſix months. Before he began to ſing, he placed himſelf in the waters of the Jumna, till they reached his neck. As ſoon as he had performed a ſtrain or two, the river gradually became hot; at length began to boil, and the agonies of the unhappy muſician were nearly inſupportable. Suſpending for a moment the melody thus cruelly extorted, he ſued for mercy from the monarch, but ſued in vain. Akber wiſhed to prove more ſtrongly the powers of this raug. Naik Gapaul renewed the fatal ſong. Flames burſt with violence from his body, which, though immerſed in the waters of the Jumna, was conſumed to aſhes!!!"

2. *Mular.* Same ſeaſon: midnight. A lovely maid, pining in the abſence of her beloved. Adorned with jeſſamine flowers, and playing a mournful air on the lute.

3. *Gooree,* Morning: rainy ſeaſon. A beautiful damſel, ſlender waiſted, and ſkilled in ſong; the upper part of her drapery is orange coloured; the lower, ſcarlet; ſtudded with jewels, &c.

4. *Bhopalee.* Evening: rainy ſeaſon. A charming roſy female, in white garments; her body ſtreaked with ſaffron; ſhe has a garland of flowers round her neck, and is wholly covered with rich ornaments; ſhe leans upon her lover, and her hands are tinged with *hinna.*

5. *Deſkar.* Laſt watch of the night: rainy ſeaſon. A beautiful fair woman, with a fine mole on her face, which is oval; her breaſts rival the pomegranate, and her ſkin the lily; ſhe wears a ſtring of pearls round her neck, and is adorned with jewels. She ſports and amorouſly dallies with her lover.

Muſical Games. The following is a ſpecification of the patent granted to Ann Young, of the city of Edinburgh, for an apparatus conſiſting of an oblong ſquare box, which, when opened, preſents two faces or tables; and of various dice, pins, counters, &c. contained within the ſame, by means of which ſix different games may be played, which, beſides being amuſing and intereſting, and ſuch as children of eight years old may be taught to play, are at the ſame time an improving exerciſe upon, and ſerve to render familiar, and to impreſs upon the memory, the fundamental principles of muſic, particularly all the keys or modulations, major and minor, both with the common and uncommon ſignatures, muſical intervals, chords, diſcords, with their revolutions, and the moſt uſeful rules of thorough baſs. It is dated March 16, 1801.

The box is compoſed of two equal pieces or frames of cabinet-work, united by hinges like backgammon tables. When it is opened, or ſpread out, the two pieces exhibit different faces. The one preſents at each end two muſical ſtaves or ſyſtems of five lines. In each line and ſpace of theſe ſtaves, a number of ſmall holes are drilled, in which are occaſionally ſtuck the pieces of turned ivory and wood, which are deſigned to repreſent the ſharps and flats, that ſeverally belong to the different keys or modulations of muſic. Under each of theſe ſtaves there is a drawer, in one of which are contained the dice, pins, &c. which are uſed in playing with ſharps; and, in the other, the correſponding dice, pins, &c. uſed in playing with flats. Theſe drawers are pulled out from the ends of the frame, and, when in their places, are kept firm by braſs pins running through the edge. In the middle ſpace betwixt them are contained two dice boxes; when theſe are taken out and the game is to be played, this vacant ſpace is covered by a moveable lid, which at other times reſts upon one of the ends. The ſurface of the table is by that means rendered complete and uniform. Upon the outer part of the border round it are written the fundamental letters of all the twelve major keys, according to the order of ſucceſſion by flats; and, immediately below or within each of theſe, the fundamentals of their relative minor keys. At each letter there is a ſmall hole for receiving a pin. The other face or table is of one piece. At each end is a delineation of the clavier or finger touches of a piano-forte, in every one of which there is a ſmall hole. Above theſe are two muſical ſtaves, on which are written in crotchets the whole ſcale of natural notes. In the round head of each crotchet, there is a ſmall hole, for receiving pins or moveable notes; and alſo immediately below each of them, there is another ſmall hole for receiving the pins, on the heads of which are the characters of ſharp, double ſharp, double flat, and natural. Around this table there is a border ſimilar to that which ſurrounds the other table, on which are marked the fundamental letters of the twelve major keys, according to the order of ſucceſſion by ſharps, with their relative minors below or within each. In the drawer which contains the apparatus for ſharps, there is at one end in front a ſquare compartment, in which is an uncovered box or moveable frame, divided by a partition in the middle into two cells, in one of which are contained fourteen pieces of turned ivory, and in the other, ten ſuch pieces of a different ſhape; the former intended to repreſent ſingle ſharps, and the latter to repreſent double ſharps, and deſigned to be ſtuck into the holes in the lines and ſpaces of the ſtaves upon the table firſt deſcribed, for the purpoſe of exhibiting the ſignatures of all the keys of muſic with ſharps. Behind this compartment are two ſmall ſquare cells, in each of which is a cylindrical box, the one containing twelve larger, and the other twelve ſmaller ivory counters. The remaining part of the front of the drawer is a range, divided into four ſmall ſquare compartments, marked 1, 2, 3, 4, in each of which are four dice, and a ſmaller one at the end marked 5, in which lie two ivory pins. The firſt pair of dice in the compartment 1, have upon their faces, the one, the capital letters G, D, A, E, B, F𝄪 being the fundamentals of ſix major keys with ſignatures in ſharps; the other, the ſmall letters e, b, f𝄪, c𝄪, g𝄪, d𝄪, being the fundamentals of ſix relative minor keys with ſignatures in ſharps. The ſecond pair in the compartment 1 have upon their faces, the one, the capitals C𝄪, G𝄪, D𝄪, A𝄪, E𝄪, B𝄪, being the fundamentals of the ſix remaining major keys, with uncommon ſignatures, or according to the order by ſharps continued from ſix to twelve; the other the ſmall letters a𝄪, e𝄪, b𝄪, fX, cX, gX, the fundamentals of the ſix remaining minor keys with uncommon ſignatures. The four dice in the compartment 2, have each upon their faces reſpectively in order the very ſame fundamentals of the keys major and minor with the former, repreſented in muſical notes baſs ſtaves, with the ſignatures proper to each. In the compartment 3, there is 1ſt, a die having upon its faces C, the ſame note on a muſical ſtave, A, the ſame note on a muſical ſtave, and two baſs ſtaves without ſignatures; 2dly, a die having on its faces baſs ſtaves, with ſignatures of 1, 2, 3, 4, 5, and 6 ſharps, but without any notes; 3dly, a die having upon three of its faces the letter T, and upon the other three the letter S; 4thly, a die having upon its faces the characters of treble, baſs, and tenor cliffs. In the 4th compartment are dice with various numeral figures. The ſpace behind this range is divided into two compartments. In one of theſe, upon a raiſed ſurface, are ſtuck fourteen ivory pins, with ſmall flat heads, on ſeven of which are marked the muſical character 𝄪, or ſharp, on five the character X, or double ſharp, and on two, the character ♮, or natural. Upon the ſunk ſurface beſide theſe are ſtuck three ivory plates, bearing the marks of the treble, tenor, and baſs cliffs. In the other compartments are ſtuck eight black, and two white pins, with ſmall round heads, which are uſed as muſical notes. The other drawer, which contains the apparatus for flats, is, in its diviſions and compartments, exactly ſimilar to the one now deſcribed. The fourteen and the ten pieces of turned work contained in the divided box, or moveable compartment, which repreſent ſingle and double flats, are exactly of the ſame form with thoſe for ſharps, but for the ſake of diſtinction are made of dark coloured wood. The counters are of ivory ſtained red. The firſt pair of dice in the compartment 1, have, the one, the capitals F, B♭, E♭, A♭, D♭, G♭, the fundamentals of ſix major keys, according to the order by flats; and the other, the ſmall letters d,

g, c, f, b♭, e♭, the fundamentals of the reſpective minor keys. The ſecond pair have, the one, C♭, F♭, B♭♭, E♭♭, A♭♭, D♭♭, the fundamentals of the other ſix keys with uncommon ſignatures, or according to the order by flats continued up to twelve; the other, a♭, d♭, g♭, c♭, b♭♭, their reſpective minors. The four dice in the compartment 2, have the very ſame fundamentals, repreſented in muſical notes upon baſs ſtaves, with the proper ſignatures of one, two, three, four, five, and ſix flats, but without notes; 2dly, a die having upon its faces one line, one line and a half, two lines, two lines and a half, three and four lines: thirdly and fourthly, a pair, having upon their faces various thorough baſs cyphers, and chords upon muſical ſtaves. In the compartment 4, there is, firſt, a die having upon one of its faces the character ♮, upon two, the character ♯, and upon the other three, numeral figures: ſecondly, a die having upon one of its faces the character ♮, upon two, the character ♭, and upon the remaining three, numeral figures. Laſtly, a pair bearing upon their faces the fundamental letters of all the keys major and minor of the firſt circular ſyſtem.

Several games are inſerted by way of illuſtration; but as they extend to too great a length, we muſt refer for further particulars to the Repertory of Arts, &c. vol. XVI.

MUSICAL-INSTRUMENTS. Theſe have been ſpoken of under their proper names. It is neceſſary however to notice the patent lately granted to Mr. Becker of Princes-ſtreet, Soho, for improvements in the conſtruction of harps and piano-fortes.

Mr Becker ſays his invention conſiſts in the following improvements in the harp and piano-forte. Of the harp, he obſerves as follows:—"I produce," ſays he, "ſharps, flats, quarter notes, or any intermediate variation deviating from the natural notes, by cauſing (what are commonly called) the wreſt pins (I mean the pins by which the ſtrings are extended and tuned) to move partly round their centres, and thereby increaſe or decreaſe the tenſion of the ſtrings, more or leſs, as may be required, to anſwer the deſired change of the notes. To this purpoſe the ſaid wreſt pins are connected with the pedals by an apparatus hereby deſcribed, and more clearly expreſſed by the annexed drawing (ſee Pl. 39); fig. 1, *a*, *a*, repreſents the wreſt pin paſſing through a ſocket *b*, with a lever *c c*, on which ſlides a quadrant *d*; on this quadrant are fixed the link *c e*, kept ſtationary by a regulating ſcrew *f*. Theſe links communicate with the pedals by the interpoſition of a crank *g*, fig. 2, where are ſeen all the quadrants *d*, with levers and wreſt pins belonging to their reſpective ſtrings of the ſame denomination. On the ſaid crank *g* is alſo a regulating ſcrew *f*, to adjuſt the whole to the motion of the pedals. Now if any one of the pedals is preſſed down, all its appertaining quadrants with the wreſt pins muſt follow, and conſequently the tenſion of the appending ſtrings will be increaſed accordingly; and as ſoon as the pedal is left at liberty, the ſtrings will, by their re-action, reſume their former degree of tenſion, and the pedal its former ſtation; hence it follows, that a variety of changes may be effected on each ſtring throughout the inſtrument by the motion of the pedals. It is obvious that to this end the quadrants and the parts of the wreſt pins, round which the ſtrings coil, muſt, in regard to their circumferences, be ſo proportioned that by the motion of the pedals each ſtring ſhall have its tenſion altered uniformly with the reſt of the ſtrings belonging to the ſame pedals, ſo as to keep in tune together. If in caſe new ſtrings are put on, perhaps differing in ſize or quality, any irregularity ſhould take place, this muſt be corrected by the regulating ſcrew *f*; for if by this ſcrew the quadrant is moved towards or from the centre of the wreſt pin, its motion will be accordingly more or leſs. To ſtop the pedals at four different ſtations, anſwering to the natural note, to one quarter, to one half, and to three quarter notes, I apply a kind of rack, as ſeen in fig. 5; *a*, *b*, *c*, are the ſteps, which being ſo diſpoſed, preſerve the pedal in each ſituation in a perpendicular line, and thereby prevent them coming too cloſe to one another. To eaſe the motion of the pedals, having each of them ſix or ſeven ſtrings to act upon, I apply a ſpring to each pedal, to counteract the tenſion of the ſtrings, and thereby render the motion of the pedals as eaſy as I pleaſe. As in tuning the harp it is generally attended with difficulty to find out the wreſt pin belonging to its reſpective ſtring in the baſs, particularly for ſhort perſons, I reverſe the wreſt pin, and form the ſquare for the key, by which the inſtrument is tuned at the ſame end where the ſtring is applied, as fig. 3. To facilitate the tuning of this inſtrument, I have ſtill another contrivance, viz. inſtead of turning round the wreſt pin in its ſocket, in which it muſt move tight, to be capable of ſuſtaining the ſtreſs of the ſtring, I fix it into the ſocket; and to receive the ſtring I apply a ſeparate piece *k*, fig. 4, with a notched rim, to be turned by an endleſs ſcrew *f f*. which is ſupported by a collar firmly fixed to the pin. When the former method is made uſe of, it will be neceſſary to apply a ſet of ſprings, as ſhewn at fig. 2, to ſupport the levers *c*, belonging to the ſmaller ſtrings, in the act of tuning, in their proper poſition; for as the wreſt pin in drawing up the ſtring moves in the ſame direction as it is propelled by the pedals, the lever will be carried along with it if nothing is put in oppoſition to overcome the friction which ſubſiſts between the wreſt pin and ſocket. This friction may be adjuſted by the ſocket *b*, fig. 1, being ſlit at *b*, and an adjuſting ſcrew *i* introduced: beſides this, a lining of leather or any other elaſtic ſubſtance within the ſocket may be of ſome ſervice. Inſtead of the ſpring *s*, fig. 2, ſeveral other mechanical contrivances may be made to anſwer the ſame end.

"In *piano-fortes*, or other ſtringed inſtruments, played with keys, I uſe one or more wheels, to cauſe the ſtrings to vibrate. Theſe wheels are placed under or above the ſtrings, and put in motion with a pedal or pedals, or any other mechanical power, and the ſtrings are by the touch of keys inclined to the wheels. In the manner of extending and inclining the ſtrings conſiſts the principle of my invention. In the diagram, fig. 6, *a* repreſents the ſtring faſtened by a loop and pin at *b*, and extended by a moveable lever or brace, with two points or knife-edges reſting againſt two props at *c c*: here it may be eaſily conceived that if the ſtring paſſes through the direction of the points of motion, *c c*, of the lever, the ſtring has no inclination to either ſide, but may, without materially altering its tenſion, be moved up or down a little way by *d*, and very little power will keep it in due bounds. The gravity of the lever, connected with a key, will be ſufficient to keep in balance with the ſtring when its direction is a little above thoſe points of motion; hence it is eaſy to conſtruct an inſtrument on this principle ſo as to make the keys with the ſtrings move a little way up and down very freely. Secondly, if the ſaid lever on its extremity inſtead of two points or knife-edges forms part of a circle, the radius of which is the length of the lever, and reſts againſt two circular ſurfaces, deſcribed by the part of the ſtring *c* to *b*, fig. 7: here it is evident, that by moving the lever at *d* up to *m*, or down to *n*, the tenſion of the ſtring will not in the leaſt be altered, and yet yield to the ſlighteſt touch. The application of this principle is not confined to theſe two inſtances, but will admit of a variety of forms and applications. If therefore the ſtring be any-wiſe extended on any thing moveable, having its prop or fulcrum any-where within the extent of the ſtring, or

its two ends higher or lower, for the purpoſe of inclining or moving the ſtring to the wheels, or altering the tenſion of the ſtrings to raiſe or lower the tone thereof, it will compriſe the principle of my invention. Where hammers and dampers are uſed, I mean to connect both, ſo as to conſtitute one piece, by letting one or two ſlips, of any convenient material, paſs through between the ſtrings, which are to be faſtened to the hammer below the ſtrings, and likewiſe to the dampers above them; by that means the mechaniſm will be ſimplified, and their gravity is thereby united, and ſerves each alternately. The hammer may move on a hinge in any of the uſual ways, or otherwiſe, and the damper form part of the ſaid hammer."

MUSK (*Encycl*). There has been lately diſcovered an *Artificial* Musk; a chemical preparation, thus denominated on account of its poſſeſſing all the eſſential properties of the genuine muſk. It was firſt invented by Maggraff, and has been lately recommended to public notice by Profeſſor Hufeland: it is prepared in the following manner:—one drachm of rectified oil of amber is firſt poured into a wine glaſs, on which a drachm and a half of the concentrated nitric acid, or ſmoking aquafortis, ſhould be gradually and cautiouſly dropped. The mixture, on agitating it, grows hot, and emits offenſive vapours, againſt which the noſtrils muſt be guarded: when it has ſtood twenty-four hours, the compound produces a yellow reſinous matter, concreting at the top, and which reſembles muſk in its ſmell, while a ſtrong acid liquor remains at the bottom. The reſin is now to be repeatedly waſhed, both in cold and in hot water, till it be totally diveſted of its ſour taſte. Thus a ſubſtance is obtained, which is not only cheaper than the common muſk, but is at the ſame time free from thoſe impurities with which the latter is too frequently adulterated.

Dr. Willich ſays artificial muſk is a more powerful medicine than the natural, and that it has been ſucceſsfully preſcribed by Hufeland, in the epidemic chin-cough, as well as other nervous and ſpaſmodic affections. Nor have its effects been leſs ſalutary in caſes of diabetes, and difficulty of breathing; having effected a cure when other medicines had failed of ſucceſs.—As this ſubſtance is of a reſinous conſiſtence, it will be moſt conveniently given in emulſions: hence ten or twelve grains of it ſhould be triturated in a mortar, together with a few blanched almonds, and diluted with five or ſix ounces of diſtilled water. Of this mixture, two tea-ſpoonfuls may be given every two hours, to a child between one and two years old; and in progreſſive doſes, ſo that a youth from twelve to fourteen years of age, will require double, and an adult about three times, the quantity above ſtated. Without the aid of any other medicine, it generally produces a ſudorific effect; diminiſhes and alleviates the fits of coughing; and often produces eruptions reſembling the true nettle-raſh: —thus, a favourable change takes place, and the diſeaſe ſpeedily diſappears.

MUSSELBURG, a ſea-port in Edinburghſhire, on the frith of Forth, at the mouth of the river Eſk. Here a victory was obtained by the Engliſh over the Scots, in the reign of Edward VI. It is ſix miles eaſt of Edinburgh. Long. 3. 5. W. Lat. 56. 0. N.

MUSTAGAM, a ſea-port of the kingdom of Algiers, with a caſtle, 140 miles weſt of the city of Algiers. Long. 0. 3. W. Lat. 36. 30. N.

MUSUELA, a town of Spain, in Andaluſia, ſituate on the Guadalquiver, ſeven miles N.E. of Jaen, and 50 north of Granada. Long. 3. 18. W. Lat. 37. 41. N.

MUSWELL HILL, a village in Middleſex, five miles north of London. It takes its name from a famous well on the hill, which belonged to the fraternity of St. John of Jeruſalem, in Clerkenwell; and as this was deemed a miraculous cure for all ſcrofulous and cutaneous diſorders, they here built a chapel, with an image of our lady of Muſwel, to which there was a great reſort of patients. This well ſtill belongs to the pariſh of Clerkenwell.

MUTSCHEN, a town of Upper Saxony, in the circle of Leipſic. In the neighbourhood is found a ſpecies of cryſtal to which is given the name of Mutſchen diamond. It is 20 miles eaſt of Leipſic. Long. 12. 50. E. Lat. 51. 14. N.

MUYDEN, a town of Holland, ſeated on the Vecht, on the ſouth coaſt of the Zuider-Zee, ſeven miles eaſt of Amſterdam. Long. 5. 1. E. Lat. 52. 22. N.

MYCONE, an iſland of the Archipelago, thirty miles in circumference. The harbour is very open, and deep enough for the largeſt ſhips, where they may ride ſecure from the north wind. The ſoil is dry, and the mountains are of a great height. Water is very ſcarce in ſummer; but in the town is a large well, the only one in the iſland. Here are plenty of partridges, quails, woodcocks, turtledoves, rabbits, and wheatears; alſo excellent grapes and figs. Almoſt all the inhabitants are Greeks, who have fifty churches in all; but many are chapels; and ſome monaſteries. Long. 25. 51. E. Lat. 37. 28. N.

MYSORE, a kingdom in the peninſula of Hindooſtan, formerly ſubject to a prince, named Tippoo Sultan, who ſtyled himſelf regent of the country. His dominions comprehended, generally, the provinces of Myſore Proper, Bednore, Coimbettore, Canara, and Dindigul; beſide the conqueſts of his father Hyder Ally (who uſurped the throne) to the northward, which are Meritz, Soonda, Chitteldroog, Harponelly, Sanore, Bancapour, Roydroog, Gooty, Condanore, Canoul, and Cuddapa. The extent of this territory from north to ſouth, is 550 miles; and its breadth, in the wideſt place (the north part of the peninſula) 330 miles, but proceeding to the ſouth, it diminiſhes, till it ends in a point. Its area has been compared to that of Great Britain. By the peace of 1782, Hyder Ally was to relinquiſh all but his ancient poſſeſſions. How far his ſucceſſor fulfilled the terms of that treaty cannot be aſcertained; but on the termination of the war in 1792, Tippoo Sultan agreed, over and above a large payment in money, to cede one half of his dominions to the Engliſh Eaſt-India Company, and their allies, the Mahrattas and the nizam of the Decan. In 1799 a new war taking place between him and the Eaſt-India Company, his capital was taken by the Engliſh troops, on the 4th of May, and himſelf killed in the aſſault. Myſore, in general, is dry, rugged, mountainous and barren. It lies between 10 and 16° N. lat. The capital is Seringapatam.

Mysore, a town and fortified poſt of the peninſula of Hindooſtan, the ancient capital of the ſame name, eight miles ſouth of Seringapatam, the preſent capital.

N.

NABAL, a town of the kingdom of Tunis, celebrated for its potteries. Near it are ſeveral remains of antiquity. It is ſeated near the ſea, 32 miles S.S.E. of Tunis. Long. 10. 19. E. Lat. 53. 13. N.

NABURG, a town of Germany, in Bavaria, ſeated on the river Nab, 10 miles S.E. of Amberg. Long. 12. 13. E. Lat. 59. 23. N.

NAFFELS, a town of Switzerland, in the canton of Glaris. In 1388, a celebrated victory was gained near this place, by the inhabitants of this canton over the Auſtrians. Only about 350 troops of Glaris, aſſiſted by fewer than 50 Schweitzers, withſtood 15,000 Auſtrians, and, after a terrible ſlaughter, compelled them to retire; in memory of which glorious tranſaction, a chapel was built on the ſpot, which was rebuilt in 1779. The inhabitants are Roman-catholics. It is four miles N. of Glaris.

NAGOLD, a town of Suabia, in the duchy of Wurtemburg, with a ſtrong caſtle, ſituate on a river of the ſame name, 10 miles W. of Tubingen. Long. 8. 37. E. Lat. 48. 30. N.

NAGORE, a town of Hindooſtan Proper, in the country of Agimere, 40 miles N.W. of Agimere. Long. 74. 10. E. Lat. 27. 8. N.

NAGPOUR, a city of the Deccan of Hindooſtan, capital of that part of Berar which is ſubject to a chief of the Eaſtern Mahrattas. It is extenſive and populous, but meanly built; and, excepting a ſmall citadel, is open and defenceleſs. It is 560 miles W. by S. of Calcutta. Long. 79. 46. E. Lat. 21. 8. N.

NAGYBANJA, a town of Hungary, which is a metal town, and one of the royal free towns. The gold and ſilver mine-works are of great produce, and the money coined here is diſtinguiſhed by the mark NB. It is 30 miles N.E. of Zatmar. Long. 22. 54. E. Lat. 48. 10. N.

NAHE, a river of the palatinate of the Rhine, which flows by Birkenfeld, Oberſtein, Kreuzenach, and Bingen, and falls into the Rhine.

NAJERA, a town of Spain, in old Caſtile, 32 miles W. of Calahorra, and 36 E. of Burgos. Long. 2. 39. W. Lat. 42. 10. N.

NAIL (*Encycl.*). Among the different purpoſes for which nails are employed, is that of firmly ſecuring the ſhoe of a horſe to his hoof. Mr. Coleman, in his work on ſhoeing horſes, recommends a nail with the head formed like *a wedge*, to fit a correſponding hole, ſtruck in the ſhoe with a punch. Of both theſe he has given delineations in his publication. A perſon of the name of Spencer has obtained a patent for making horſe-ſhoe nails of this form in an expeditious manner. He forms them whilſt the iron is of a red heat, by means of a roller with impreſſions cut on it; or he ſays the metal may be formed by caſting, which muſt be varied according to the length of nails intended to be made. "This is," ſays the inventor in his ſpecification, "to be run (in forming the iron for the nails) againſt a plain roll; after the iron has paſſed theſe rolls, it will be left according to B (Pl. 38), which is then taken and ſeparated by ſhears or any other engine for the purpoſe of cutting at C, which is the thinneſt part, the edges of which are, if neceſſary, thinned by hand or tilt-hammer; the piece, No. 1, is then applied to the bed D, and punch E, which are fixed in a ſcrew preſs, or any other power fit for the purpoſe, and when the ſtroke is made, preſſes the iron out as F, which is then applied to the bed G, and ſeparater H, in a power ſimilar to that uſed for the bed and punch D, E, and which then leaves two complete horſe-ſhoe nails I. The punch E may be formed of different ſhapes ſo as to ſuit any fancy, and it may alſo be formed to punch out only one nail inſtead of two if found more convenient."

NAIRNE, a borough and ſea-port, the county-town of Nairneſhire; ſeated at the entrance of the frith of Murray, 10 miles N. of Inverneſs, and 104 N. of Edinburgh. Long. 3. 51. W. Lat. 57. 33. N.

NAKSIVAN, a city of Armenia, capital of a province of the ſame name, with an archbiſhop's ſee. It is 90 miles S.E. of Erivan, and 250 E. of Erzerum. Long. 45. 30. E. Lat. 38. 40. N.

NAMARI, a mountain of Sicily, in the Val-di-Demona, between Meſſina, Taormina, and Melazzo.

NAMSLAW, a town of Sileſia, in the principality of Breſlaw, with a ſtrong caſtle, ſituate among moraſſes, on the river Weyda, 23 miles S.E. of Breſlaw. Long. 17. 38. E. Lat. 51. 33. N.

NANDER, a town of the Deccan of Hindooſtan, in the province of Dowlatabad, 132 miles N.N.W. of Hydrabad.

NANGASACKI, a city of Japan, in the iſland of Ximo-Fiſen, with a well-frequented harbour. The inhabitants carry on a great trade with the Chineſe and Dutch. The latter are never ſuffered to come into the city, unleſs when their ſhips arrive, and then they deliver up their guns, helms, and ſails, as pledges of their good behaviour. Long. 128. 52. E. Lat. 32. 32. N.

NANGIS, a town of France, in the department of Seine and Marne, 12 miles W. of Provins, and 14 E. of Melun.

NANG KANG-FOU, a city of China, in the province of Kiang-ſi, ſeated on the lake Po-yang, and containing four cities of the third claſs in its diſtrict.

NAN-NGAN-FOU, a populous city of China, in the province of Kiang-ſi, containing, in its diſtrict, four cities of the third claſs. It is 200 miles N. by E. of Canton.

NANTUA, a town of France, in the department of Ain, ſituate at the extremity of a great lake of the ſame name, 18 miles S.E. of Bourg.

NANTUCKET, an iſland in the ſtate of Maſſachuſets, of which it is a county. It lies to the ſouth of Cape Cod, and had once the moſt conſiderable whale fiſhery on the coaſt; but it was almoſt ruined by the civil war. As the iſland is low, ſandy, and barren, the inhabitants depend almoſt entirely on the watery element for ſubſiſtence. It has but one town, called Sherburne, which is 83 miles S. of Boſton. Long. 70. 30. W. Lat. 41. 0. N.

NAPAUL, a province of Hindooſtan Proper, bounded on the S. by Bahar, on the W. by Oude, and Rohilcund, on the N.W. by Sirinagur, and on the N.E. and E. by the ridge of mountains called Himmaleh, by which it is ſeparated from Thibet. Catmandu is the capital.

NAPOLI-DI-MALVASIA, a ſea-port of the Morea, capital of the iſland of Malvaſia, ſeated on a rock, at the entrance of the bay of Napoli-di-Romania. It is defended by a good citadel; has a fine harbour, and a long wooden bridge, which joins it to the main land. It gives name to that excellent wine, called Malmſey; and was the ancient Epidaurus, famed for the temple of Æſculapius. It is 42 miles S.E. of Napoli-di-Romania. Long. 23. 22. E. Lat. 56. 57. N.

NAPOLI-DI-ROMANIA, a ſea-port of the Morea, and an archbiſhop's ſee, ſeated at the bottom of a bay of the ſame name. It has a large harbour, with a narrow mouth, through which one ſhip only can enter at a time. It is inhabited by 60,000 Greeks, beſide people of different nations, and very ſtrong both by nature and art. It was taken by the Turks in 1715. It is 56 miles S.W. of Athens. Long. 23. 4. E. Lat. 37. 36. N.

NARA, a town of Japan, in the iſland of Niphon, with a magnificent caſtle, 25 miles N.W. of Meaco. Long. 134. 15. E. Lat. 35. 50. N.

NARAGANSET BAY, a bay on the coaſt of the United States, which contains Rhode Iſland, and ſeveral other iſlands.

NARBARTH, a town in Pembrokeſhire, with an old caſtle, and a market on Wedneſday. It is ſeated on a hill, 12 miles N.E. of Pembroke, and 229 W. by N. of London. Long. 4. 46. W. Lat. 51. 50. N.

NARBOROUGH, an iſland of South America, on the coaſt of Chili, where Sir John Narborough refreſhed his men, when ſent to the South Sea, in the reign of Charles II. Long. 74. 35. W. Lat. 45. 0. N.

NARENTA, a town of Dalmatia, with a biſhop's ſee, ſeated on a gulf of the ſame name, 46 miles N.E. of Raguſa. Long. 18. 27. E. Lat. 43. 35. N.

NARNALLA, a town of the Deccan of Hindooſtan, in the province of Berar, 33 miles W.N.W. of Ellichpour, and 72 E. of Burhampour. Long. 77. 34. E. Lat. 21. 25. N.

NARNI, an ancient town in Italy, in Sabina, with a biſhop's ſee. Here are the ruins of a marble bridge, built by Auguſtus, one of whoſe arches was 150 feet high, and 200 broad; as alſo of an aqueduct that brought water from a ſpring at the diſtance of 15 miles. It contains a great many noble families, and is ſeated on the Nera, 20 miles S.W. of Spoletto, and 40 N.E. of Rome.

NAROVA, a river of the Ruſſian empire, which iſſues from the lake Peipus, and watering Narva, flows into the gulf of Finland, eight miles below that town. It is noted for two cataracts, pompouſly deſcribed by travellers, but they are far inferior to that of the Rhine, at Lauffen.

NARSINGAPATAM, a town of the peninſula of Hindooſtan, in the territory of Biſnagur. It was the reſidence formerly of a king, and is ſituate 400 miles S.E. of Bombay. Long. 76. 10. E. Lat. 15. 30. N.

NARWAR, or NARWHA, a town of Hindooſtan Proper, in the province of Agra, ſeated near the Sinde, which falls below it into the Jumna. It is 127 miles S. of Agra. Long. 79. 17. E. Lat. 25. 40. N.

NASEBY, a village in Northamptonſhire, famous for the deciſive victory gained by the army of the parliament over that of Charles I, in 1645. It is 12 miles N. of Northampton.

NASHVILLE, a town of the ſtate of Tenaſſee, capital of the diſtrict of Mero, ſeated on Cumberland River, 160 miles E. of Knoxville. Long. 87. 20. W. Lat. 36. 2. N.

NASSAU, a county of Germany, in the circle of Upper Rhine; bounded on the N. by Weſtphalia, on the E. by the county of Solmes, on the S. by the territory of Mentz, and on the W. by the electorate of Treves. It is very fertile, and contains mines of iron, copper, and lead.

NASSAU, a town of Germany, capital of a county of the ſame name, the houſe of whoſe ſovereign is divided into ſeveral branches. It is ſeated on the river Lahn, 12 miles S.E. of Coblentz. Long. 7. 42. E. Lat. 50 18. N.

NASSAU, HADAMAR (*Encycl.*), erroneouſly printed HASSAU-*Hadamer*.

NASSUCK, a town of Hindooſtan Proper, in the province of Guzerat, 128 miles W. of Aurungabad, and 95 S.S.W. of Surat. Long. 73. 49. E. Lat. 19. 50. N.

NASTADT, a town in Germany, in the circle of Upper Rhine, 18 miles S.E. of Coblentz, and 22 N.W. of Mentz. Long. 7. 36. E. Lat. 19. 50. N.

NATA, a ſea-port of South America, in the government of Panama, ſeated in a fertile country, on the bay of Pirata, 70 miles S.W. of Panama. Long. 81. 15. W. Lat. 8. 10. N.

NATAL, a country on the E. coaſt of Africa, lying N.E. of the Cape of Good Hope, inhabited by the Boſhman Hottentots.

NATCHITOCHES, a river of Louiſiana, which falls into the Miſſiſſippi, at Point Coupee.

NATIONAL INSTITUTE. See INSTITUTE.

NATTAM, a town and fortreſs of the peninſula of Hindooſtan, in the country of Madura, 18 miles N. of Madura, and 45 S.S.W. of Trichinopoly. Long. 78. 18. E. Lat. 10. 10. N.

NAVARINO, a ſtrong and populous town of the Morea, with an excellent large harbour, defended by two forts. It is ſeated on a hill, near the ſea, eight miles N.E. of Modon, and 17 N.W. of Coron. Long. 21. 40. E. Lat. 37. 2. N.

NAVARREINS, a town of France, in the department of the Lower Pyrenées, ſeated on the Gave d'Oleron, 26 miles S.E. of Bayonne. Long. 0. 45. W. Lat. 43. 19. N.

NAVIDAD, a ſea-port of New Spain, ſeated on the Pacific Ocean, 350 miles W. of Mexico. Long. 106. 0. W. Lat. 19. 0. N.

NAVIGATORS ISLANDS, a cluſter of iſlands in the South Pacific Ocean. The inhabitants are a ſtrong and handſome race; ſcarcely a man to be ſeen among them leſs than ſix feet high, and well proportioned. The women are delicately beautiful; their canoes, houſes, &c. well conſtructed; and they are much more advanced in internal policy, than any of the iſlands in this ocean. Long. 169. 0. W. Lat. 14. 19. S.

NAUEN, a town of Upper Saxony, in the Middle Marche of Brandenburg, 14 miles N. of Potſdam, and 18 W. of Berlin. Long. 12. 52. E. Lat. 52. 37. N.

NAUENHOF, a town of Upper Saxony, in the circle of Leipſic, eight miles E. of Leipſic.

NAUMBERG, a town of Germany, in the electorate of Mentz, ſituate on the Eder, 14 miles W.S.W. of Caſſel, and 36 S.W. of Gottingen.

NAXKOW, a town of Denmark, in the iſle of Laland, with a harbour commodious for trade, and a plentiful fiſhery here. It is 60 miles S.W. of Copenhagen. Long. 11. 31. E. Lat. 54. 52. N.

NAZARETH, a town of Paleſtine, famous for being the reſidence of Jeſus Chriſt, in the early part of his life. It is now only a village, where the monks of St. Francis have a convent. Long. 35. 20. E. Lat. 32. 30. N.

NAZARETH, a town of the United States, in Pennſylvania. It is a flouriſhing ſettlement of the Moravians, and is ſituate 10 miles N. of Bethlehem, and 63 of Philadelphia.

NAZE, or CAPE LINDENAS, the moſt ſouthern promontory of Norway. Long. 7. 20. E. Lat. 57. 30. N.

NEAGH, Lough, a lake of Ireland, ſituate in the counties of Armagh, Down, Antrim, Londonderry, and Tyrone. It is the largeſt in Europe, thoſe of Ladoga and Onega in Ruſſia, and that of Geneva in Switzerland, excepted; being 20 miles long, and 15 broad. It is remarkable for a healing virtue, and alſo for petrifying wood, which is not only found in the water, but in the adjacent ſoil, at a conſiderable depth.

NEATH, a corporate town in Glamorganſhire, with a market on Saturday, ſituate on the river Neath, over which is a bridge, where ſmall veſſels come to load coal. In the neighbourhood are iron forges, ſmelting works for copper, and coal mines; and on the other ſide of the river are the ruins of a fine monaſtery. It is governed by a portreve, who is ſworn in by the deputy conſtable of the caſtle of Neath, and ſeated near the Briſtol Channel, 32 miles N.W. of Landaff, and 200 W. by N. of London. Long. 3. 45. W. Lat. 51. 43. N.

Neath, a river in Glamorganſhire, which runs into the Briſtol Channel, below the town of Neath.

NEB, a river in the iſle of Man, which runs into the Iriſh Sea, at Peel Caſtle.

NEBRA, a town of Upper Saxony, in Thuringia, 12 miles N.W. of Naumburg. Long. 11. 26. E. Lat. 51. 13. N.

NECKAR, a river of Germany, which riſes in the Black Foreſt, croſſes the duchy of Wurtemburg, and the palatinate of the Rhine, and falls into the Rhine, at Manheim.

NECKARS-GEMUND, a town of Germany, in the palatinate of the Rhine, ſeated on the Neckar, 42 miles N. of Stutgard. Long. 9. 55. E. Lat. 49. 26. N.

NECKARS-ULM, a town of Germany, in the circle of Franconia, ſeated on the Neckar. It belongs to the grand-maſter of the Teutonic order. Long. 9. 5. E. Lat. 49. 52. N.

NEDROMA, a town of the kingdom of Algiers, ſurrounded with magnificent ruins. It is 50 miles W.S.W. of Oran. Long. 0. 38. W. Lat. 35. 40. N.

NEDSJED, an extenſive province or diſtrict of Arabia; bounded on the N. by the deſert of Syria, on the E. by Nachſa, on the S. by Hadramaut and Yemen, and on the W. by Hedsjas. The ſoil is various, in many parts very fertile. The Bedouins inhabit a great part of this province; the remainder is mountainous, and contains a great number of towns, almoſt every one of which has its own ſchiech.

NEEHEEHEOW, one of the Sandwich iſlands, five leagues W. of Atooi. The E. coaſt is high, and riſes abruptly from the ſea; the reſt of it conſiſts of low ground, except a round bluff head on the S.E. point. It produces plenty of yams.

NEERWINDEN, a village of Auſtrian Brabant, a little N. by W. of Nanden. Hence the two celebrated battles of Nanden are ſometimes called by the name of Neerwinden.

NEFTA, a town of the kingdom of Tunis, 250 miles S. by W. of Tunis. Long. 9. 25. E. Lat. 33. 0. N.

NEGRAIS, a ſea-port on the E. ſide of the bay of Bengal, 240 miles W.S.W. of Pegu. Long. 94. 4. E. Lat. 15. 50. N.

NEGRO, Cape, a promontory of Africa, on the W. coaſt of Angola, being the moſt ſoutherly country to which the Europeans uſually reſort to purchaſe ſlaves. Long. 10. 40. E. Lat. 15. 54. N.

NEGROES ISLAND, one of the Philippine Iſlands, between Panay and Zebu.

NEGROPONT, a ſtrong city, capital of an iſland of the ſame name, and a Greek archbiſhop's ſee. It has a good harbour, which is commonly the ſtation of the Turkiſh ſhips. The walls of the city, in which the Turks and Jews reſide, are two miles and a half in circumference; but the ſuburbs, where the Chriſtians live, are much larger. It was taken in 1469, from the Venetians, who attempted to retake it in 1688, without effect. It is ſeated on a ſtrait of the ſame name, 30 miles N.E. of Athens, and 260 S.W. of Conſtantinople. Long. 24. 8. N. Lat. 38. 30. N.

NEHAVAND, an ancient town of Perſia, in Irac Agemi, famous for a battle fought near it, between the califf Omar and Yex Degerd, king of Perſia, in 1638, when the latter loſt his life and kingdom. It is 170 miles N.W. of Iſpahan. Long. 47. 10. E. Lat. 34. 20. N.

NEIDENAU, a town of Germany, in the electorate of Mentz, ſituate on the Jaxt, nine miles N. of Heilbron, and 23 E.S.E. of Heidelberg.

NEIDENBURG, a town of Pruſſia, with a caſtle on a mountain, 75 miles E. of Culm. Long. 20. 20. E. Lat. 53. 22. S.

NEIDENSTEIN, a town of Germany, in the palatinate of Heſſe, ſix miles E. of Naumburg, and nine S.E. of Caſſel. Long. 8. 58. E. Lat. 51. 3. N.

NEIFFEN, a town of Suabia, in the duchy of Wurtemburg, 17 miles S.S.E. of Stutgard. Long. 9. 11. E. Lat. 48. 30. N.

NEILSTON, a village in Renfrewſhire, to the S. of Paiſley. It is noted for a cotton manufacture.

NEITRA, a town of Hungary, the capital of a diſtrict, with a biſhop's ſee. It is ſituate on a river of the ſame name, 34 miles N. of Gran. Long. 18. 3. E. Lat. 48. 20. N.

NELISURAM, a town of the peninſula of Hindooſtan, on the W. coaſt, 33 miles N.E. of Mangalore, and 40 N.W. of Tellicherr. Long. 74. 5. E. Lat. 12. 20. N.

NELLENBURG, a town of Suabia, capital of a landgravate of the ſame name, 20 miles N. of Conſtance, and 20 N.E. of Schaffhauſen. Long. 9. 8. E. Lat. 47. 59. N.

NELLORE, a town and fortreſs of the peninſula of Hindooſtan, in the Carnatic, near the Pennar river, 85 miles N. of Madras, and 98 N. of Arcot. Long. 79. 57. E. Lat. 14. 26. N.

NELSON, an Engliſh ſettlement in North America, on the W. ſide of Hudſon's Bay, at the mouth of the river Nelſon, 250 miles S.E. of Churchill Fort. It belongs to the Hudſon's Bay Company. Long. 92. 35. W. Lat. 57. 7. N.

NEMEA, a village of the Morea, famous for the Nemæan games anciently celebrated here.

NEN, the principal river of Northamptonſhire, which riſes in the W. part of the county, and is made navigable at Northampton. It leaves the county at Peterborough, and croſſing the iſle of Ely, forms part of the W. boundary of Norfolk, and falls into the Lincolnſhire Waſh. It likewiſe communicates, by ſeveral channels, with the Great Ouſe.

NEOCASTRO, a fort of Turkey in Europe, in Romania, where the Turks always keep a good garriſon. It is ſeated in the middle of the ſtrait of Conſtantinople, 12 miles from Conſtantinople. Long. 29. 4. E. Lat. 41. 10. N.

NEOTS, St. See Needs.

NEPEAN ISLAND, an iſland of the South Pacific Ocean, oppoſite Port Hunter, on the ſouth coaſt of Norfolk Iſland. It conſiſts entirely of one maſs of ſand, held together by the ſurrounding cliffs, which are a border of hard rocks. The ſurface was covered with a kind of coarſe graſs, and upwards of 200 fine pines were growing on it.

NEPI, an ancient town of Italy, in the patrimony of St. Peter, with a biſhop's ſee, ſeated on the Triglia, 20 miles N. of Rome. Long. 11. 34. E. Lat. 42. 14. N.

NERAC, a town of France, in the department of Lot and Garonne, divided by the river Baife into Great and Little Nerac. In the feudal times, this was the reſidence and capital of the lords of Albret. Their ſtupendous caſtle is now in ruins; but, before the abolition of royalty, no true Frenchman could viſit it without ſentiments of veneration; for here there once favourite Henry IV. ſpent part of his youth. Nerac is 20 miles S.W. of Agen, and 380 S. by W. of Paris. Long. 0. 13. E. Lat. 44. 2. N.

NERBUDDA, a river of India, which iſſues from a lake on the ſouthern confines of the province of Allahabad, forms the boundary between Hindooſtan Proper and the Deccan, and falls into the gulf of Cambay, below Baroach.

NERICIA, a province of Sweden Proper; bounded on the N. by Weſtmania, on the E. by Sudermania, on the S. by Eaſt Gothland, and on the W. by Weſt Gothland. Orebo is the capital, and the only conſiderable place in it.

NERO, an iſland in the Eaſt Indies, the ſecond of the Banda Iſlands, where the Dutch have a fort called Fort Naſſau. Here are large ſerpents, but not venomous, and the mountains are covered with trees, in which are birds of a very ſingular kind. Long. 129. 45. E. Lat. 4. 40. N

NERTCHINSK, one of the four provinces of the Ruſſian government of Irkutzk. Its capital, of the ſame name, is ſeated on the Nertcha, which falls into the Schilka. Long. 116. 44. E Lat. 51. 12. N.

NESLE, a town of France, in the department of Somme. It is ſeated on the Lingon, eight miles N.E. of Royes, and 66 N. by E. of Paris. Long. 2. 59. E. Lat. 49. 51. N.

NESS, Loch, a lake in Inverneſsſhire, 22 miles in length, and, for the moſt part, one in breadth. It is ſheltered on the N.W. by the high mountains of Urquhart and Mealfourvoney, and edged with coppices of birch and oak.

Ness, a river of Scotland, which is the outlet of Loch Neſs, and falls into the frith of Murray, below Inverneſs.

NESTVED, a town of Denmark, in the iſland of Zealand, ſituate on the river Neſs, 38 miles S.W. of Copenhagen. Long. 11. 51. E. Lat. 55. 15. N.

NETSCHKAU, a town of Upper Saxony, in the Voigtland, ſituate on the Golſch, 12 miles S.W. of Zwickau.

NETTLE RASH in medicine a troubleſome cutaneous eruption, of which Dr. Cullen forms the genus Urticaria. This diſeaſe has its Engliſh name from the reſemblance of its eruption to that made by the ſtinging of nettles. Theſe little elevations upon the ſkin in the nettle-raſh often appear inſtantaneouſly, eſpecially if the ſkin be rubbed or ſcratched, and ſeldom ſtay many hours in the ſame place, and ſometimes not many minutes. No part of the body is exempt from them; and where many of them riſe together, and continue a hour or two, the parts are often conſiderably ſwelled; which particularly happens in the face, arms, and hands. Theſe eruptions will continue to infeſt the ſkin, ſometimes in one place and ſometimes in another, for one or two hours at a time, two or three times every day, or perhaps for the greateſt part of the twenty-four hours.—In ſome perſons they laſt only a few days, in others many months; nay ſometimes the diſeaſe has laſted for years with very ſhort intervals.

But though the eruption of the urticaria reſembles, as already obſerved, that produced by the ſtinging of nettles, it is ſometimes accompanied with long wheals, as if the part had been ſtruck with a whip. Whatever be the ſhape of theſe eminences, they always appear ſolid, without having any cavity or head containing either water or any other liquor; and this affords an eaſy mark whereby this diſeaſe may be diſtinguiſhed from the itch. For it often happens that the inſufferable itching with which this eruption is attended, provokes the patient to ſcratch the parts ſo violently, that a ſmall part of the cuticle on the top of theſe little tumors is rubbed off; a little ſcab ſucceeds; and, when the ſwelling is gone down, there is left an appearance hardly to be diſtinguiſhed from the itch, but by the circumſtance juſt now mentioned. The nettle-raſh alſo further differs from the itch, in not being infectious.

Dr. Heberden is inclined to aſcribe this diſeaſe to ſome mechanical cauſe outwardly applied to the ſkin. He obſerves, that moſt people ſuffer in a ſimilar manner from the real ſtinging of nettles. Cowhage, a ſort of *phaſeolus* or French bean, the pod of which is covered over with a kind of down or hair, and the effect of which upon the ſkin is much the ſame as that of nettles; and almoſt any hairs cut equally ſhort, and ſprinkled upon the ſkin, whenever they happen to ſtick in it, will make the part itch or ſmart in ſuch a manner as to give great uneaſineſs; it is alſo a conſiderable time before the ſkin can be cleared of the finer ones, when once they are ſtrewed upon it.

Reaumer, in the fourth memoir of his Hiſtory of Inſects, deſcribes a ſpecies of caterpillar to which belong a ſort of hairs almoſt inviſible to the naked eye, which are eaſily detached, and frequently float in the air round their neſt, though it have not been at all diſturbed. The touch of theſe hairs has a ſimilar effect with the cowhage; that is, they occaſion intolerable itchings, with little bumps and redneſs, ariſing ſometimes to a ſlight inflammation. Theſe he found would continue four or five days, if the animal or the neſt had been much handled; and though they had not been touched at all, yet, by only walking near their neſts, the ſame effects would be brought on, but for a ſhorter time. Theſe hairs affect the ſkin in this manner by ſticking in it, as he could perceive with a glaſs of a great magnifying power; for with one of a ſmall power they are not viſible. The uneaſy ſenſations cauſed by theſe ſmall wounds, not only, as he ſays, laſt ſeveral days, but move from one part of the body to another; ſo that they will ceaſe upon one wriſt, and immediately begin on the other; from the wriſt they will go to the fingers or the face, or even to the parts of the body which are covered. He ſuppoſes, that the motion of the body, when much of this fine down lies near or upon the ſkin, may drive it from one part or another, or change what was lying there inoffenſively to a ſituation fit to make it penetrate into the ſkin. Neither cold water, nor oil, nor ſpirit of wine, with which the parts affected were bathed, had any effect in removing the itching. He thinks the moſt efficacious remedy which he tried for this complaint was, to rub the parts ſtrongly with parſley, which inſtantly leſſened the ſenſations, and after two or three hours, entirely freed the patient from them. It is alſo well known that many ſpecies of caterpillars, by only walking over the hands, will produce ſomething like this effect on the parts which they touch, and undoubtedly from the ſame cauſe.

Dr. Heberden aſks, Is it impoſſible that the nettle-raſh ſhould ariſe from the ſame cauſes, or from others ſimilar, which we miſs by looking too deeply for them in the blood and humours? Such (ſays he) may have been its origin in ſome inſtances, where it has laſted only a few days; but where this affection has continued for ſome years, in perſons who change their linen every day, and who bathe frequently all the time, it can hardly be aſcribed to ſuch an external cauſe. He has obſerved it frequently to ariſe from cantharides; but though it has continued many weeks after the removal of the bliſter, yet it might be ſu-

ſpected that this aroſe from the fine ſpiculæ of the cantharides ſticking all this time about the ſkin; it being cuſtomary to ſtrew much of the dry powder of the cantharides over the bliſter-plaſter, whence it may readily be carried to other parts of the body. But it is certain that ſimilar effects will ſometimes follow the internal uſe of wild valerian root, or the eating of fiſh not ſufficiently dreſſed; muſcles, ſhrimps, and even honey, and the kernels of fruits, will alſo ſometimes produce ſymptoms of a ſimilar kind. But whatever be its cauſe, Dr. Heberden never ſaw any reaſon to ſuppoſe that the nettle-raſh had in any way vitiated the humours to ſuch a degree as to require the uſe of internal remedies; and if the itching could be certainly and expeditiouſly allayed, there would be no occaſion for any further cure. He concludes this hiſtory of the diſorder with a caſe communicated to him by Dr. Monſey, phyſician of Chelſea College, and in which the diſeaſe appeared with uncommon violence.

W. A. aged near 30, of a thin ſpare habit, was ſeized with a diſorder attended with ſymptoms of a very uncommon kind. Whenever he went into the air, if the ſun ſhined bright, he was ſeized with a tickling of his fleſh on thoſe parts expoſed to the ſun: this tickling, by his continuing in the air, increaſed to a violent itching, attended with great heat and pain: the ſkin would then be almoſt as red as vermilion, and thicken like leather; and this remained till he went out of the open air, and then abated in about fifteen or twenty minutes. This happened only when the ſun was above the horizon; at other times he was what he called *quite well*.—But it was not owing to the heat of the ſun; for the ſun in winter affected him full as much, if not more, and the heat of the fire had no ſuch effect. Thus he was confined to the houſe for ten years. He tried ſeveral hoſpitals, and had advice from many phyſicians, without the leaſt abatement of his complaints. At laſt it was agreed in a conſultation of phyſicians, that he ſhould try dipping in ſalt water; which he did at Yarmouth for thirteen weeks, without any viſible amendment. One hot day, having pulled off his clothes and gone into the ſea in the middle of the day, the heat diffuſed itſelf ſo violently all over his body, that, by the time he had put on his clothes his eye-ſight began to fail, and he was compelled to lie down upon the ground to ſave himſelf from falling. The moment he lay down, the faintneſs went off: upon this he got up again; but had no ſooner ariſen, than he found himſelf in the former condition: he therefore laid down again, and immediately recovered. He continued alternately getting up and lying down, till the diſorder began to be exhauſted, which was in about half an hour; and he was frequently obliged to have recourſe to the ſame expedient.

Having at laſt accidentally met with Dr. Monſey, this phyſician queſtioned him concerning the cauſe of the diſorder; but nothing could be gueſſed at, excepting that the patient owned he had one winter lived entirely upon bullocks' liver and porter, from inability to purchaſe better victuals. A comrade lived with him at that time, on the ſame proviſions; and he alſo was affected in a ſimilar manner, though in a leſs degree, and had recovered. This patient was then firſt put upon a courſe of Dover's ſweating powder without any effect, and afterwards tried a courſe of nitrous ones with the ſame bad ſucceſs. At laſt Dr. Monſey determined to try the effect of mercury, which happily proved effectual in removing this obſtinate and uncommon diſtemper. The patient began with taking five grains of calomel for three nights running, and a cathartic next morning. In this courſe he went on for near a fortnight, at the end of which he found himſelf very ſenſibly relieved. This encouraged him to go on rather too boldly, by which means a ſlight ſalivation enſued; however, that went off ſoon, and in about ſix weeks he was quite well.—Some time after, he was threatened with a return of his diſorder; but this was effectually relieved by a doſe of calomel, which he had afterwards occaſion to repeat for the ſame reaſon, and with the ſame ſucceſs: but at laſt the diſorder ſeemed to be radically cured. by his having no further ſymptoms of a relapſe.

NEUBURG, a town of Suabia, in the Briſgaw, ſubject to the houſe of Auſtria. It is ſeated near the Rhine, 12 miles N. of Baſle, and 12 S. of Briſach. Long. 7. 35. E. Lat. 47. 47. N.

NEUBURG, a town of Lower Auſtria, with a famous monaſtery, ſeated on the Danube, five miles from Vienna. Long. 16. 20. E. Lat. 48. 13. N.

NEUBURG, a town of Germany, in the duchy of Wurtemburgh, with a caſtle, ſeated on the Entz, 25 miles W. of Stuigard. Long. 8. 34. E. Lat. 48. 52. N.

NEUBURG, a town of Germany, in the circle of Bavaria, capital of a duchy of the ſame name, ſubject to the elector palatine. It is 28 miles N.E. of Augſburg, and 40 S.W. of Ratiſbon. Long. 11. 18. E. Lat. 48. 45. N.

NEVERS, a conſiderable town of France, in the department of Nievre, with a biſhop's ſee. It is built in the form of an amphitheatre, and contains ſeveral fine buildings; particularly the ancient ducal palace, in which John Caſimer, king of Poland, expired in 1672. The number of inhabitants is eſtimated at about 8000. It is ſeated on the Loire, over which is a handſome bridge, 15 miles N.W. of Moulins, and 145 S.E. of Paris. Long. 3. 14. E. Lat. 46. 59. N.

NEUFCHATEL, a town of France, in the department of Lower Seine, noted for excellent cheeſe. It is ſeated on the Arques, 20 miles S.E. of Dieppe, and 75 N.W. of Paris. Long. 1. 30. E. Lat. 49. 46. N.

NEUHAUS, a ſtrong town of Bohemia, in the circle of Bechin, with a caſtle. Long. 15. 13. E. Lat. 49. 8. N.

NEUHAUS, a town of Lower Saxony, in the duchy of Bremen, ſituate near the mouth of the Oſte. It was once a place of great trade, and had a commodious harbour; but a ſand bank ariſing in it, at the iſſue of the Oſte into the Elbe, it is now much leſs frequented. It is 19 miles N.W. of Stade. Long. 8. 27. E. Lat. 53. 52. N.

NEUHAUSEN, a ſtrong town of Upper Hungary, ſeated in a marſhy plain, on the river Neitra, 15 miles N.W. of Comora, and 40 S.E. of Preſburgh. Long. 18. 10. E. Lat. 48. 1. N.

NEVIN, or NEWIN, a town in Carnarvonſhire, with a market on Saturday. It is ſeated on the Iriſh Sea, 20 miles S. by W. of Carnarvon, and 249 W.N.W. of London. Long. 4. 25. W. Lat. 52. 52. N.

NEUKIRCHEN, a town of Germany, in the principality of Heſſe, 20 miles E.N.E. of Marburg, and 28 S. of Caſſel. Long. 9. 15. E. Lat. 50. 40. N.

NEUMAGEN, a town of Germany, in the electorate of Treves, on the ſouth ſide of the Moſelle, 11 miles E.N.E. of Treves; and 42 S.W. of Coblentz. Long. 6. 26. E. Lat. 50. 0. N.

NEUMARK, a town of Tranſylvania, on the river Meriſch, 56 miles N. of Clauſenburg. Long. 23. 35. E. Lat. 47. 19. N.

NEUMARK, a town of Bavaria, 30 miles N.N.W. of Ratiſbon. Long. 12. 25. E. Lat. 49. 18. N.

NEUMARK, a town of Sileſia, in the principality of Breſlaw, 15 miles W. by N. of Breſlaw. Long. 16. 42. E. Lat. 51. 5. N.

NEUS, a river of North Carolina, which enters Pamlico Sound, below Newbern, where it is a mile and a half broad.

NEUSALTZ, a town of Silesia, in the principality of Glogau, 12 miles N.W. of Glogau.

NEUSIDLE, a town of Hungary, situate on a lake of the same name, 24 miles S.W. of Presburg.

NEUSOL, a town of Upper Hungary, with a large castle, in which is a church, covered with copper. Near it are the greatest copper-mines in all Hungary. It is seated on the Gran, 10 miles N. of Chremnitz, and 50 N.E. of Leopoldstadt. Long. 19. 29. E. Lat. 49. 9. N.

NEUSTADT, a town of Lower Saxony, in the duchy of Holstein, seated on the Baltic, 22 miles N.N.E. of Lubec. Long. 11. 0. E. lat. 54. 10. N.

Neustadt, a town of Lower Saxony, in the duchy of Mecklenburg, 15 miles S. of Schwerin. Long. 11. 50. E. lat. 53. 24. N.

Neustadt, a town of Lower Saxony, in the duchy of Brunswick-Lunenburg, with a castle, 15 miles N.W. of Hanover. Long. 9. 55. E. Lat. 52. 34. N.

Neustadt, a town of Lower Austria, with a bishop's see, a castle, and an arsenal, 30 miles S. of Vienna. Long. 16. 27. E. Lat. 47. 48. N.

Neustadt, a town of Franconia, in the bishopric of Wurtzburg, seated on the Sale, 12 miles N.E. of Schweinfurt. Long. 10. 25. E. Lat. 50. 24. N.

Neustadt, a town of Germany, in the duchy of Wurtemburg, seated on the Kocher, 12 miles N.N.E. of Hailbron. Long. 9. 20. E. Lat. 49. 17. N.

Neustadt, a town of Germany, in the palatinate of the Rhine, nine miles N. by W. of Landau. Long. 8. 7. E. Lat. 49. 20. N.

NEUVILLE, a town of Switzerland, in the bishopric of Basle. It is governed by two burgomasters and a small and great council, each consisting of twenty-four members. It is seven miles S.S.W. of Bienne, and nine N.E. of Neuchatel.

NEUWIED, a flourishing commercial city of Germany, in the circle of Upper Rhine, capital of the principality of Wied. The number of the inhabitants is between 6 and 7000: the Calvinist is the established religion, but all others are tolerated; and the Moravians, in particular, have here a very respectable settlement. Neuwied is 10 miles N.N.W. of Coblentz. Long. 7. 25. E. Lat. 50. 32. N.

NEWARK, a flourishing town of the United States, in New Jersey, with one episcopal and two presbyterian churches. It has the reputation of making the best cider in the world, and is nine miles W. of New York.

NEWBIGGIN, a fishing town of Northumberland, situate on the N. side of a bay to which it gives name, seven miles E. of Morpeth.

NEWBURGH, a corporate town in the isle of Anglesey, with a market on Tuesday. It is governed by a mayor, and seated on the Brant, 15 miles S.W. of Beaumaris, and 257 N.W. of London. Long. 4. 27. W. Lat. 59. 10. N.

NEWBURN, a village in Northumberland, on the west side of Newcastle, inhabited chiefly by colliers. Here, a part of the army of Charles I. under Lord Conway, was defeated by the Scotch in 1640.

NEWBURY-PORT, a town of the United States, in Massachusetts, where the business of ship-building is carried on largely. It is situate on the river Merrimak, two miles from the sea, and 45 E. of Boston. Long. 71. 5. W. Lat. 42. 45. N.

NEWCASTLE, a town in Carmarthenshire, with a market on Friday. It had a fine castle, now in ruins; and is seated on the Tyvy, 17 miles N.W. of Carmarthen, and 219 W.N.W. of Lower. Long. 4. 30. W. Lat. 52. 4. N.

Newcastle, a borough of Ireland, in the county of Dublin, 10 miles W.S.W. of Dublin.

NEWDIGATE, a village in Surrey, five miles S.E. of Darking. Here is a medicinal spring of the same nature as that of Epsom.

NEWENBERG, a town of Germany, in the county of Feldkirch, three miles N.W. of Feldkirche.

NEWENHAM, Cape, a rocky point of considerable height, on the W. coast of North America, forming the N. extremity of a vast bay called Bristol Bay, of which the promontory of Alaska is the S. boundary. It was dicovered by Captain Cook in 1778. Long. 162. 24. W. Lat. 58. 42. N.

NEWENT, a town in Gloucestershire, with a market on Friday, seated near a branch of the Severn, eight miles N.W. of Gloucester, and 114 W.N.W. of London. Long. 2. 20. W. Lat. 51. 56. N.

NEWHAVEN, a town of Sussex, at the mouth of the river Ouse, with a quay on the E. side. It is seven miles S. by E. of Lewes, and 56 S. of London. Long. 0. 5. E. Lat. 50. 48. N.

Newhaven, a town of the United States in Vermont, 75 miles N. of Benington. Long. 73. 8. W. Lat. 44. 6. N.

Newhaven, a town of the United States, in Connecticut, with a university, consisting of one college, called Yale College. It carries on a considerable trade with New York and the West-India islands; and lies round the head of a bay, four miles N. of the Sound, and 132 N.N.E. of New York. Long. 72. 58. W. Lat. 41. 17. N.

NEWNHAM, a corporate town in Gloucestershire, with a market on Friday. It is governed by a mayor, and seated on the Severn, eight miles S.W. of Gloucester, and 112 W.N.W. of London. Long. 2. 23. W. Lat. 51. 4. N.

NEWPORT, a borough in the Isle of Wight, with a market on Wednesday and Saturday. It is governed by a mayor, and sends two members to parliament. It is seated on the river Cowes, which is navigable for small vessels, 17 miles S. by E. of Southampton, and 91 S.W. of London. Long. 1. 15. W. Lat. 50. 40. N.

Newport, a borough in Cornwall, which has no market, but sends two members to parliament. It is three miles N. of Launceston, and 214 W. by S. of London. Long. 4. 36. W. Lat. 50. 43. N.

Newport, a town in Shropshire, with a market on Saturday, and a handsome free-school, 17 miles E. of Shrewsbury, and 140 N.W. of London. Long. 2. 18. W. Lat. 52. 45. N.

Newport, a town in Monmouthshire, with a market on Saturday, seated on the river Usk, over which is a bridge. It is walled round, and was formerly defended by a castle, considerable remains of which are yet in being. Near it are the vestiges of a camp. It stands 19 miles S.S.W. of Monmouth, and 152 W. by N. of London. Long. 3. 4. W. Lat. 51. 36. N.

Newport, a corporate town in Pembrokeshire, with a market on Saturday, and the ruins of a castle. It is governed by a mayor, and seated at the foot of a high hill, at the bottom of a bay of the same name, 18 miles N.E. of St. David's, and 235 W.N.W. of London. Long. 4. 50. W. Lat. 52. 6. N.

Newport, a sea-port of the United States, in Rhode Island. Its harbour is one of the finest in the world; and to the west of the town is Goat Island, on which is a fort. Newport has a handsome state-house and an elegant public

library. It is 80 miles N.E. of New York. Long. 71. 6. W. Lat. 41. 35. N.

NEWPORT-PAGNEL, a town in Buckinghamſhire, with a market on Saturday. It has a manufacture of bone-lace, and is ſeated on the Ouſe, 14 miles E.N.E. of Buckingham, and 51 N.N.W. of London. Long. 0. 43. W. Lat. 52. 4. N.

NEWPORT PRATT, a ſea-port of Ireland, ſituate near the mouth of a river which runs into Clew Bay, eight miles W. of Caſtlebar. Long. 9. 21. W. Lat. 53 53. N.

NEW RIVER, a fine artificial ſtream, brought from two ſprings, at Chadwell and Amwell, near Ware, in Hertfordſhire, for the ſupply of the metropolis with water. It was finiſhed in 1613, by Sir Hugh Middleton, a citizen of London, who expended his whole fortune in the undertaking. This river, with all its windings, is nearly 39 miles in length, and is under the management of a corporation called the New River Company.

NEWRY, a borough of Ireland, in the county of Down, ſituate on the ſide of a ſteep hill, at the foot of which is Newry-water, having over it two ſtone bridges; and there is a third bridge over a navigable canal, by which it has a communication with Lough Neagh and Carlingford Bay. It has ſuffered greatly by the rebellions in Ulſter, and was burnt by the Duke of Berwick in 1689; but it is now ſo much improved in trade and buildings, that it is the largeſt town in the county. It is 49 miles N. of Dublin. Long. 6. 20. W. Lat. 54. 15. N.

NEWRY-WATER, a river of Ireland, which ſeparates the counties of Armagh and Down, and watering Newry, enters Carlingford Bay.

NEWSHAM, a village in Durham, ſituate on the Tees, five miles from Darlington. This being the uſual ford over the river from the ſouth, the Biſhop of Durham is met here, at his firſt coming to the ſee, when the Lord of Stockbourn, juſt below it, being at the head of the country gentlemen, advances into the middle of the river, with his truncheon, and preſents it to the biſhop, who returns it, and is then conducted along amid the acclamations of the populace. Here was formerly a nunnery.

NEWTON, a borough in Lancaſhire, with a market on Saturday. It ſends two members to parliament, and is five miles N. of Warrington, and 190 N.W. of London. Long. 2. 45. W. Lat. 53. 28. N.

NEWTON, a borough in the Iſle of Wight, which ſends two members to parliament, but has no market. It is 14 miles S. of Southampton, and 93 S.W. of London. Long. 1. 16. W. Lat. 50. 43. N.

NEWTON, a town of Montgomeryſhire, with a market on Saturday, ſeated on the Severn, ſeven miles S.W. of Montgomery, and 169 W.N.W. of London. Long. 3. 12. W. Lat. 52. 21. N.

NEWTON-BUSHEL, a town in Devonſhire, with a market on Wedneſday, ſeated on the Teign, 15 miles S. by W. of Exeter, and 188 W.S.W. of London. Long. 3. 38. W. Lat. 50. 32. N.

NEWTON-STEWART, a town in Wigtonſhire, ſituate on the Cree, which is navigable for ſmall veſſels to within two miles of the town. There is a handſome bridge over this river, whoſe mouth, in Wigton Bay, affords a valuable ſalmon-fiſhery. Several manufactures have been commenced with ſucceſs in this town, which is indebted for its riſe and name to the family of Stewart earl of Galloway. It is 26 miles E. by N. of Port Patrick.

NEWTOWN, a village in Renfrewſhire, to the ſouth of Paiſley. It is noted for ſeveral large print fields.

NEWTOWN, the capital of the county of Bucks, in Pennſylvania, five miles from the Delaware, and 20 N.N.E. of Philadelphia. Long. 75. 1. W. Lat. 40. 14. N.

NEWTOWN ARDES, a town of Ireland, in the county of Down, ſituate on the northern point of the lake of Strangford. It has a conſiderable linen manufacture; and is 87 miles N. of Dublin. Long. 5. 45. W. Lat. 54. 40. N.

NEWTOWN BARRY, a town of Ireland, in the county of Wexford, 58 miles S. of Dublin. Long. 6. 30. W. Lat. 52. 35. N.

NEWTOWN LIMAVADDY, a borough of Ireland, in the county of Londonderry, ſeated near the N. coaſt of Lough Foyle, 15 miles E.N.E. of Londonderry.

NEWTOWN MOUNT KENNEDY, a town of Ireland, in the county of Wicklow, 17 miles S. of Dublin.

NEW-YEAR'S-HARBOUR, a part of Staten Land, in South America. Long. 64. 11. W. Lat. 54. 48. S.

NEW-YEAR'S-ISLANDS, ſmall iſlands of South America, on the N. ſide of Staten Land.

NEYLAND, a town in Suffolk, with a market on Friday, and a manufacture of ſays and bays. It is ſeated on the Stour, over which is a bridge, 16 miles S.W. of Ipſwich, and 57 N.E. of London. Long. 1. 5. E. Lat. 52. 1. N.

NGAN-LO-FOU, a rich and populous city of China, in the province of Houquang, containing, in its diſtrict, two cities of the ſecond and five of the third claſs. It is 425 miles W. by S of Nanking.

NIAS, a ſmall iſland, near the W. end of the iſland of Sumatra, remarkable for the beauty of the women, who are purchaſed as ſlaves by the Dutch and Portugueſe. Long. 97. 0. E. Lat. 1. 10. N.

NIBE, a town of Denmark, in North Jutland, nine miles W.S.W. of Alburg.

NIBIANO, a town of Italy, in the duchy of Piacenza, 16 miles S.W. of Piacenza.

NIBIANO, a town of Italy in the duchy of Parma. Long. 10. 0. E. Lat. 45. 5. N.

NICHABURG, a city of Perſia, the largeſt and richeſt in Koraſan, famous for a mine of turquois ſtones in its neighbourhood. It is 37 miles S. of Meſched. Long. 57. 48. E. Lat. 36. 30. N.

NICHOLAS ISLAND, a ſmall iſland on the N. coaſt of the iſland of Cuba. Long. 79. 40. W. Lat. 33. 50. N.

NICHOLAS, ST. a town in France in the department of Meurthe, with a handſome church, dedicated to St. Nicholas, to which pilgrims formerly reſorted. It is ſeated on the Meurthe, five miles S.E. of Nanci, and 265 E. of Paris.

NICHOLAS, ST. a ſea-port of Ruſſia, in the government of Archangel, ſeated at the mouth of the Dwina, on the White Sea, ſix miles S. of Archangel.

NICHOLAS, ST. or MOLE ST. NICHOLAS, a town, harbour, and cape, of the Weſt Indies, at the N.W. extremity of St. Domingo, commanding the ſtrait called the Windward Paſſage. The harbour is nine furlongs broad at the entrance; and ſhips of any burthen may ride at anchor in the baſon, even during a hurricane. It was taken by the Engliſh, aided by the French royaliſts, in 1793; and was evacuated in 1798. Long. 73. 20. W. Lat. 19. 15. N.

NICHOLSBURG, a town of Germany, in Moravia, with a caſtle, 27 miles N. of Vienna.

NICKING *the tail of a horſe*, an operation deſigned to make him carry it more genteelly. There are particular machines or pulleys, ſo contrived as to keep the tail up, which may be better comprehended by ſeeing the figures

in Pl. 22. vol. III., and referred to in the article FARRIERY. The number of the nicks are to be proportionable to the length of the tail, but generally three are ſufficient. When the operation is over, the wounds may be dreſſed with a mixture of powdered roſin, honey, and ſpirits of wine; and a doſſil of tow, dipt in the ſame mixture, ſhould be laid between the nick, wrapping the tail up as uſual. The next morning the covering ſhould be cut open down the back part of the tail, and the following morning it ſhould be taken quite off, in order to plait the hair, and ſet the tail. You ſhould let the tail down every two or three days, and bathe the upper part next the rump with hot vinegar, in which a bit of alum is diſſolved, and mixt with honey. If the tail ſhould happen to ſweil, and the hair come off, it muſt be fomented and poulticed with a mixture of ſcalded bran, cow-dung, linſeed-meal, and a little lard. When ſeven or eight days are expired, the horſe ſhould be ſuffered to ſtand without the machine or pulley for a few hours, that you may ſee how he carries his tail. He muſt likewiſe have his tail kept up a few hours every day, till the wounds are quite healed, or, in other words, till new fleſh is formed in the nicks.

Of this practice Mr. John Lawrence ſpeaks in the following terms:—"Of *nicking*," ſays he, "I ſhall ſay but little; in truth if nobody were more attached to it than I am, the art would ſoon be loſt from diſuſe. At preſent, I muſt allow, we ſet horſes' tails in a more natural form, than ſome years back, when it was the cuſtom to cock them bolt upright, in a moſt burleſque, and prepoſterous manner, and a young horſe, with his blazing meteor diſplayed *a poſteriori*, looked juſt as naturally and in character, as a young fellow with his head enveloped in the curls of an enormous perriwig. My prejudice in favour of every thing appertaining to the turf, may perhaps warp my judgment; but I am all for broom or racing tails, ſuch as are 'cut ſquare by the Ruſſian ſtandard;' theſe I think are becoming and natural to all ſorts and ſizes of horſes, but more particularly at this time, now the ſhew of blood is ſo univerſal. As to the art of nicking, every dealer or farrier can perform it."

NICOPOLI, or GLANISH, an ancient town of Armenia, built by Pompey the Great, in memory of a victory gained over Mithridates. It is ſeated on the Cerauna, 165 miles S.W. of Erzerum. Long. 37. 55. E. Lat. 38. 15. N.

NICOSIA, a ſtrong town, capital of the iſland of Cyprus, ſeated between the mountain Olympus and a chain of other mountains. It was formerly well fortified by the Venetians, but now the works are in ruins. It is three miles in circumference; and there are plantations of olives, almonds, lemons, oranges, mulberries, and cypreſs-trees, interſperſed among the houſes, which give the town a delightful appearance. The church of St. Sophia is an old Gothic ſtructure, which the Turks have turned into a moſque. It is 100 miles W. of Tripoli, and is 160 S.W. of Aleppo. Long. 34. 45. E. Lat. 34. 54. N.

NICOTERA, a ſea-port of Naples, in Calabria Ulteriore, with a biſhop's ſee, 35 miles N.E. of Reggio, and 185 S.E. of Naples. Long. 16. 30. E. Lat. 38. 34. N.

NICOYA, a town of New Spain, on the Pacific Ocean, at the bottom of a bay, 45 miles S.E. of Leon de Nicaragua. Long. 88. 0. W. Lat. 10. 15. N.

NICSARA a town of Turkey in Aſia, in Caramania, with an archbiſhop's ſee. It is 10 miles N. of Tocat. Long. 36. 9. E. Lat. 39. 25. N.

NIDAU, or NIDOW, a handſome town of Switzerland, capital of a bailiwic of the ſame name, in the canton of Bern, with a caſtle. It is ſituate on the lake of Bienne, 15 miles N.W. of Bern, and 60 S.W. of Zuric.

NIDDA, a town of Germany, in Upper Heſſe, 20 miles N.E. of Frankfort, and 38 E.N.E. of Mentz. Long. 8. 58. E. Lat. 50. 17. N.

NIDECKEN, a town of Germany, in the duchy of Juliers, ſituate on a rock, and ſurrounded by rocks. It is 13 miles S.S.E. of Juliers. Long. 6. 16. E. Lat. 50. 46. N.

NIDJIBABAD, a town of Hindooſtan Proper, in the province of Oude, 80 miles N.N.E. of Delhi, and 96 N.N.W. of Bereilly. Long. 78. 41. E. Lat. 29. 35. N.

NIEBLA, an ancient town of Spain, in Andaluſia, ſeated on the Rio Tinto, 40 miles W. of Seville. Long. 5. 56. W. Lat. 37. 26. N.

NIEDERBIEBER, a village of Germany, in the principality of Wied, three miles from Neuwied. Many valuable antiquities, and the traces of a Roman city, were diſcovered here in 1791.

NIEMECZ, a ſtrong town of Moldavia, between Soczoway and Braſſaw, being 25 miles from each. Long. 26. 16. E. Lat. 46. 58. N.

NIEN CLOSTER, a town of Lower Saxony, in the biſhopric of Schwerin, three miles E. of Wiſmar.

NIENHUIS, or NEUNHAUS, a town of Germany, in the biſhopric of Paderborn, ſeated on the Lippe, 20 miles E. of Lipſtadt. Long. 8. 55. E. Lat. 51. 50. N.

NIESTADT, a town of Lower Saxony, in the duchy of Mecklenburgh, 15 miles S. of Schwerin. Long. 11. 46. E Lat. 53. 59. N.

NIESTADT, a town of Germany, in the middle marche of Brandenburg, ſeated on the Fuyhre, 25 miles N.E. of Berlin. Long. 1. 14. E. Lat. 52. 49. N.

NIEUPORT, a ſea-port of Auſtrian Flanders, ſeated on the German Ocean, at the mouth of the Yperlee. In 1383, it was burnt by the rebels of Ghent. In 1583, it was taken by the Prince of Parma. In 1606, Prince Maurice gained here a great victory over the Spaniards. It has been taken and retaken in the ſubſequent wars; the laſt time by the French in 1794 It is nine miles S.W. of Oſtend, and 16 N.E. of Dunkirk. Long. 2. 45. E. Lat. 51. 7. N.

NIGER. See NILE, *Suppl.*

NIGONO, a town of Italy, in the duchy of Modena, 22 miles S.W. of Modena.

NIKOPING, a town of Denmark, capital of the iſland of Falſter, or Hulſter, in the Baltic, with a ſtrong fort, 55 miles S.W. of Copenhagen. Long. 12. 7. E. Lat. 54. 50. N.

NIKOPING, a town of Sweden, in Sudermania, 60 miles S.W. of Stockholm. Long. 16. 40. E. Lat. 58. 49. N.

NILE (*Encyc.*) In the Britiſh Magazine for 1800, an opinion is maintained that the Nile and the Niger are one and the ſame river. Dr. Arthur Browne, Senior Fellow of Trinity College, Dublin, and member in parliament for that Univerſity, previous to the union, ſupports his conjectures in the following way:

"Herodotus heard," ſays he, "from certain Cyreneans, that on an expedition they made to the Oracle of Ammon, they had converſed with Etearchus, ſovereign of the country, who informed them, that ſome Laſamonians (a people who inhabit the Syrtes) had related to him, that certain young men, ſons of perſons of diſtinction, had ſignaliſed themſelves by ſome extravagance of conduct. Among other things, they deputed by lot five of their companions to explore the ſolitudes of Africa, and to endeavour at extending their diſcoveries beyond all preceding adventurers. After a long peregrination they came to a city waſhed by a great river, which flowed from eaſt to weſt, and abounded in crocodiles. This Etearchus conjectured to be the Nile,

which, ſays Herodotus, probability confirms. The Nile, continues he, certainly riſes in Lybia, which it divides; and if it be allowable to draw concluſions from things which are well known concerning thoſe uncertain and obſcure points, it takes a ſimilar courſe with the Jeten, that is, from weſt to ſouth-eaſt.

"In this opinion of Herodotus, that the Nile and the Niger were the ſame river, the Grecians generally concurred. The Romans formed a different opinion, and the moderns have varied ſo far as to believe, for many hundred years paſt, that the Niger ran to the weſtward, was the ſame river with the Senegal or Gambia, and ran into the Atlantic Ocean.

"Mr. Park diſcovered, beyond a doubt, that the Niger ran to the eaſt; and he ſays it abounds in crocodiles. Every modern diſcovery has proved, that where Herodotus formed an opinion, or ſpoke of a fact within his own knowledge, or depending upon teſtimony of which he could himſelf judge, that he has been right almoſt univerſally. I have the ſtrongeſt faith in his rational accounts; and as to the irrational, he only reports them as fables. In ſhort, I have ſcarcely a doubt, I would ſay not any whatever, if the wonderful ingenuity of Major Rennel would permit me, that the Niger is the Nile.

"Believe me, it will ere long be found to be the caſe, notwithſtanding the very powerful and ingenious arguments of Major Rennel as to the level of the river, and the contemporaneous riſe of their waters. Thoſe difficulties, I believe, are capable of ſolution; and if I had time and leiſure I would communicate my reaſons here for thinking ſo. But as I expect every moment to be anticipated by the actual diſcoveries of ſome of the later explorers of Africa ſince Mr. Park's expedition, who, as I have been told, are every day approaching to that opinion, I venture to propheſy now, that they will find it to be the caſe. It is impoſſible for any man to have greater reſpect for Major Rennel than I have, but I cannot conceive a greater difficulty, than to ſuppoſe, that the mighty river Niger terminates in moraſſes, lakes, or ſands."

NIMBURG, a town of Bohemia, near the Elbe, 26 miles E.N.E. of Prague, and 70 S.E. of Dreſden.

NING-KOUE FOU, a city of China, in the province of Kiang-nan, noted for its manufactures of paper, made of a ſpecies of reed. Its diſtrict contains ſix cities of the third claſs.

NINOVE, a town of Flanders, on the river Dender, with an abbey, 13 miles W. of Bruſſels. Long. 4. 5. E. Lat. 50. 52. N.

NIORT, a town of France, in the department of the Two Sevres. Here are manufactured druggets, ſerges, and other coarſe woollen goods; and its dry ſweetmeats are much eſteemed. It is 28 miles N.E. of Rochelle. Long. 0. 33. W. Lat. 46. 20. N.

NISIBEN, or NESBIN, a very ancient and celebrated town of Diarbeck, now greatly decayed. It is ſeated in a vaſt plain, 70 miles S.W. of Diarbekar. Long. 38. 26. E. Lat. 36. 10. N.

NISIDA, a ſmall iſland on the coaſt of Naples, very fertile, and would be more ſo but for the great number of rabbits. It has a harbour, called Porto Pavone, five miles W.S.W. of Naples.

NISSA, or NESSAVA, a town of Turkey in Europe, in Servia. It was burnt by the Imperialiſts in 1689, and is ſeated on the Morava, 20 miles E. of Precop, and 120 S.E. of Belgrade. Long. 22. 32. E. Lat. 43. 32. N.

NITH, a river in Dumfrieſſhire, which riſes in the mountains to the N.W. and gives the name of Nithſdale to that part of the county through which it flows. A little above Dumfries, it joins the Cairne, and their united ſtreams form a fine eſtuary in Solway Frith.

NITRIA, a famous deſert of Egypt, 37 miles in length, on the coaſt of the Mediterranean Sea. It had formerly a great number of monaſteries, which are now reduced to four; and it takes its name from a ſalt lake, out of which is procured the natrum of the ancients.

NIXABOUR, a town of Perſia, in Choraſan, 80 miles S.E. of Meſched. Long. 61. 32. E. Lat. 35. 40. N.

NIZAMPATAM, a town of the peninſula of Hindooſtan, ſituate at the mouth of the Kiſtnah, 34 miles S.W. of Maſulipatam. Long. 80. 50. E. Lat. 15. 55. N.

NIZNEI NOVOGOROD, a town of Ruſſia, in a government of the ſame name, with a citadel, and an archiepiſcopal ſee. It is ſeated on a mountain, at the confluence of the Volga and Occa, 280 miles E. by N. of Moſcow. Long. 46. 30. E. Lat. 56. 34. N.

NIZZA-DELLA-PAGLIA, a town of Italy, in Montferrat, ſeated on the Belbo, 15 miles S.W. of Alexandria. Long. 8. 36. E. Lat. 45. 15. N.

NOAILLES, a town of France, in the department of Vienne, ſix miles S.S.E. of Poitiers.

NOANAGUR, a town of Hindooſtan Proper, capital of a diſtrict, on the S. coaſt of the gulf of Cutch, inhabited by a piratical tribe, called Sangarians. It is 300 miles N.W. of Bombay.

NOCERA, an ancient town of Italy, in the duchy of Spoletto, with a biſhop's ſee; ſeated at the foot of the Apennines, 18 miles N.E. of Spoletto. Long. 12. 49. E. Lat. 43. 1. N.

NOGARA, a town of France, in the department of Gers, 21 miles S.W. of Condom, and 27 W.N.W. of Auch. Long. 0. 9. W. Lat. 43. 46 N.

NOGARCOT, a town of Hindooſtan Proper, in the province of Napoul, with a celebrated pagoda, 50 miles N.E. of Catmandu. Long. 85. 12. E. Lat 28. 40. N.

NOGENT-SUR-SEINE, a town of France, in the department of Aube, ſeated on the Seine, 25 miles N.W. of Troyes. Long. 3. 40. E. Lat. 48. 30. N.

NOGENT-LE-ROTROU, a town of France, in the department of Eure and Loire, ſeated on the Huiſne, 35 miles N.E. of Mans. Long. 9. 50. E. Lat. 48. 26. N.

NOIR, CAPE, a promontory of S. America, at the S. extremity of Terra del Fuego. Long. 73. 3. W. Lat. 54. 32. S.

NOIRMOUTIER, an iſland of France, near the mouth of the river Loire. It is ſeventeen miles long and eight broad, full of bogs, and yet there are good paſtures. The Engliſh made an unſucceſsful attack on it in 1795. The principal town is of the ſame name. Long. 2. 10. W. Lat. 47. 0. N.

NOLA, an ancient town of Naples, in Terra di Lavoro, with a biſhop's ſee, 10 miles N.E. of Naples. Long. 14. 28. E. Lat. 40. 56. N.

NOLI, a town of Italy, in the territory of Genoa, with a biſhop's ſee, and a good harbour, five miles N.E. of Final, and 30 S.W. of Genoa. Long. 8. 41. E. Lat. 44. 18. N.

NOMBRE-DE-DIOS, a town of Terra Firma, in the province of Darien, a little E. of Porto-Bello, to which its once flouriſhing trade is now transferred. Long. 78. 35. W. Lat. 9. 40. N.

NOMENY, a town of France, in the department of Meurthe, ſeated on the Selle, 15 miles N. of Nanci. Long. 6. 15. E. Lat. 48. 56. N.

NONTRON, a town of France, in the department of

Dordogne, 21 miles N. of Perigneux, and 30 S.S.W. of Limoges. Long. 0. 33. E. Lat. 45. 32. N.

NOOPOUR, a town of Hindooſtan Proper, in the province of Guzerat, 55 miles E. of Surat, and 142 W. of Burhanpour. Long. 73. 50. E. Lat. 21. 11. N.

NOORDEN, a conſiderable town of Weſtphalia, 12 miles N. of Embden. Long. 7. 5. E. Lat. 53. 38. N.

NORBERG, a town of Sweden, in Weſtmanland, near which are the beſt iron mines in the province. It is 34 miles N. of Stroemſholm. Long. 16. 12. E. Lat. 60. 2. N.

NORCIA, a town of Italy, in the duchy of Spoletto. It is a kind of republic, and ſeated among the mountains, 20 miles S.E. of Spoletto. Long. 13. 4. E. Lat. 41. 36. N.

NORD. See NORTH, *Suppl.*

NORDBURG, a town of Denmark, at the N. extremity of the iſle of Alſen, with a caſtle, nine miles N.N.W. of Sunderburg.

NORDHAUSEN, an imperial town of Lower Saxony, under the protection of the Elector of Saxony. The inhabitants are Proteſtants. It is 25 miles S.W. of Halberſtadt. Long. 11. 3. E. Lat. 51. 45. N.

NORDKIOPING, a town of Sweden, in E. Gothland. It covers a large ſpace of ground, being 10 miles in circumference; but the houſes are ſcattered, and the inhabitants do not exceed 10,000. The river Motala flows through the town, forms a ſeries of cataracts, and is divided into four principal ſtreams, which encircle ſeveral rocky iſlands, covered with buildings: at the extremity of the town it is navigable for ſmall veſſels. Here are manufactures of cloth and fire-arms; ſome ſugar-houſes, and a braſs foundery. Corn is exported hence in great quantities; and a ſalmon-fiſhery gives employment and riches to many of the inhabitants. It is 90 miles S.W. of Stockholm. Long. 15. 50. E. Lat. 58. 28. N.

NORDLAND, a province of Northern Norway, included in the government of Drontheim.

NORDLINGEN, a commercial and free imperial town of Suabia, ſeated on the Aigre, 38 miles N.W. of Augſburg. Long. 11. 49. E. Lat. 48. 52. N.

NORDSTRAND, an iſland of Denmark, in the duchy of Sleſwick, which was entirely overflowed in 1634. Long. 9. 15 E. Lat. 54. 40. N.

NORHOLM, a town of Norway, in the dioceſe of Chriſtianſand, 16 miles N.N.E. of Chriſtianſand.

NORLAND, one of the five general diviſions of Sweden, comprehending the provinces of Geſtrikeland, Helſingland, Madelpadia, Hiemland, Herjedalia, Ongermania, and Weſt Bothnia.

NORRISTOWN, a town of the United States, capital of the county of Montgomery, in Pennſylvania. It is ſeated on the Schuylkill, 12 miles N.W. of Philadelphia. Long. 75. 24. W. Lat. 40. 7. N.

NORTELGA, or NOR TELGE, a ſea-port of Sweden, in the province of Upland. This town ſuffered much from the ravages committed here by the Ruſſians in 1719: near it is a forge for making fire-arms. It is 30 miles N.E. of Stockholm. Long. 10 32. E. Lat. 50. 44. N.

NORTH, or NORD, a department of France, including the late French provinces of Hainault, Flanders, and the Cambreſis.

NORTH COAST, a department of France. See COTES DU NORD.

NORTHALLERTON, a borough in the N. riding of Yorkſhire, with a market on Wedneſday. It ſends two members to parliament, and is ſeated on a ſmall brook, which, a mile below, runs into the river Wiſk. It is a well-built trading place, 30 miles N.N.W. of York, and 223 N. by W. of London. Long. 1. 20. W. Lat. 54. 23. N.

NORTHAMPTON, a county of Pennſylvania, 111 miles long and 35 broad. In 1790, it contained 24,250 inhabitants. Eaſton is the capital.

NORTHCURRY, a town in Somerſetſhire, with a market on Tueſday and Saturday, ſeated on the Tone, 20 miles S.W. of Wells, and 134 W. by S. of London. Long. 3. 0. W. Lat. 51. 0. N.

NORTHFLEET, a village in Kent, ſeated on the Thames, one mile W. of Graveſend. The church is very large, and contains fragments of monuments as ancient as the fourteenth century. Vaſt quantities of lime are made, and great numbers of extraneous foſſils have been dug up here.

NORTHLEACH, a corporate town in Glouceſterſhire, with a market on Wedneſday, ſeveral almſhouſes, and a free grammar-ſchool. It is ſeated on the Lech, 25 miles E. of Glouceſter, and 80 W. by N. of London. Long 1. 43. W. Lat. 51. 46. N.

NORTHORP, a town of N. Wales, in Flintſhire, near which are large potteries of coarſe earthen ware, fire-bricks, &c. It is 11 miles N.W. of Cheſter.

NORTHUMBERLAND, a county of Pennſylvania, 180 miles long and 80 broad. In 1790, it contained 17,161 inhabitants. Sunbury is the capital.

NORTHUMBERLAND, a town of Pennſylvania, ſeated in the angle formed by the junction of the W. and E. branches of the Suſquehannah, juſt above Sunbury, and 138 miles N.W. of Philadelphia.

NORTHUMBERLAND ISLANDS, a chain of iſlands in the S. Pacific Ocean, near the N.E. coaſt of New Holland. Long. 150. 20. E. Lat. 22. 0. S.

NORTON, or CHIPPING NORTON, a corporate town in Oxfordſhire, with a market on Wedneſday. Roman coins have been frequently found here, and it formerly ſent members to parliament. It is 12 miles S.W. of Banbury, and 74 N.W. of London. Long. 1. 17. W. Lat. 51. 55. N.

NORWICH, a town of the United States, in Connecticut. The executive courts of law are held at this place and New London alternately. Here are made paper of all kinds, ſtockings, buttons, ſtone and earthen ware, and all kinds of forge work. It is ſeated at the head of the Thames, 12 miles N. of New London.

NORWICH, a town of the United States, in Vermont, 100 miles N.N.W. of Boſton, and 182 N. of New York. Long. 72. 22. W. Lat. 43. 40. N.

NOSSEN, a town of Upper Saxony, ſituate on the Muldau, 12 miles S.W. of Meiſſen, and 18 W. of Dreſden. Long. 13. 0. E. Lat. 51. 2. N.

NOSTRUM, denotes any medicine the compoſition of which is ſuppoſed to be ſecret, and confined to the knowledge of one, or a few individuals.

The natural deſire of health and longevity, has in all ages afforded a pretext to deſigning men, to invent medicines, with the abſurd pretence of curing *every* diſorder. It is true, that the confidence in *panaceas*, or univerſal remedies, is gradually declining, among the higher as well as the lower claſſes of ſociety; but innumerable elixirs, drops, pills, &c. for particular complaints, are daily impoſed upon the public by pretenders, whoſe chemical and medical knowledge is ſo confined, that they are generally obliged to borrow the recipes for ſuch preparations from printed books. To aggravate the evil, their pernicious compounds

for the moſt part contain opium, hemlock, or other narcotic drugs, which are rendered ſtill more deleterious by the addition of ſtimulating gums and aromatic ſubſtances.

The duration and extent of ſuch baſe practices, it is difficult to determine; though we conceive, that ſo long as the thoughtleſs and diſſipated indulge in ſenſual pleaſure of every deſcription, the audacity of pretenders to the healing art will continue to increaſe. Experience has too often evinced, how little efficacy *medicines* poſſeſs in a variety of caſes, without a ſtrict adherence to a proper *regimen*; and much leſs may be expected from any noſtrum, however ſtrongly recommended by the dignitaries of church and ſtate. Nay, the excellence and dignity of medical ſcience can neither be ſupported, nor depreciated, by the illuſion of great names.—If a due regard were more generally had to the laws of temperance and ſobriety, if the cool dictates of reaſon were more frequently conſulted, there would be fewer diſeaſes, and thoſe who enrich themſelves at the expence of a credulous public, would ſpeedily fall into contempt.

NOTCHENGONG, a town of the Deccan of Hindooſtan, in the province of Berar, 47 miles S.S.W. of Nagpour, and 75 S.S.W. of Ellichpour. Long. 79. 17. E. Lat. 20. 32. N.

NOTE *(Encycl.)*. See BILL, *Supp.*

By the act 39 Geo. 3. cap. 107. from and after December 1, 1799, there ſhall be paid on bills of exchange and promiſſory notes for ſmall ſums, the ſeveral duties herein-after mentioned; (that is to ſay),

For every bill of exchange, promiſſory note, or other note, draft, or order, whether payable on demand or otherwiſe, where the ſum expreſſed therein ſhall be for one pound, and one pound and one ſhilling each, a ſtamp duty of two pence.

And where the ſum expreſſed therein ſhall be five ſhillings, as herein-after mentioned, one halfpenny.

For every promiſſory note, or other note for the payment of money to the bearer on demand, payable only at the place where iſſued, and which may be re-iſſuable after payment at that place, where the ſum expreſſed therein ſhall be for one pound, or one pound one ſhilling, there ſhall be charged a ſtamp duty of two pence.

And where the ſum expreſſed therein ſhall be five ſhillings, one halfpenny.

For every promiſſory note, or other note for the payment of money to the bearer on demand, payable at two or more different places, or at any place different from that where it ſhall have been originally iſſued, and which may be re-iſſued after any payment at the ſame or any other place, where the ſum expreſſed therein ſhall be for one pound, or one pound and one ſhilling, there ſhall be charged a ſtamp duty of four pence.

And where the ſum expreſſed therein, or made payable thereby, ſhall be five ſhillings, one penny. [The five-ſhilling notes are only iſſuable in Scotland.]

The duty is payable by the giver of the note.

Drafts payable on demand upon a banker reſiding within ten miles of the drawer, are not liable to duty. And the Bank of England notes are exempted from the duties charged by this act on a compoſition of 4000l. and from all additional duties impoſed ſince the act 31 Geo. 3. c. 25. on a compoſition of 8000l. payable half-yearly.

No bill of exchange ſhall be re-iſſued. But notes payable on demand, on which a duty of two pence or one halfpenny is reſpectively impoſed, paid by perſons giving them at the places where firſt iſſued, may be re-iſſued; but if paid by any other perſons, or at any other place, in purſuance of appointment expreſſed therein, ſhall be cancelled; and if re-iſſued, or if not cancelled, the party to forfeit 20l. And ſuch notes, not cancelled, but again iſſued, ſhall pay the ſame duty as when firſt iſſued.

Notes ſtamped with the duty of 5s. and 1d. reſpectively, may be re-iſſued, though paid by other perſons than by whom, and at other places than where, firſt iſſued. And notes ſo re-iſſuable ſhall be the property of the perſons holding them.

The acts 15 Geo. 3. c. 51. and 15 Geo. 3. c. 30. ſo far as they relate to notes payable on demand for one guinea and one pound, to be ſuſpended until and upon November 30th, 1802.

From July 5, 1799, the bank of Scotland and the royal bank of Scotland, the Britiſh Linen Company, the Carron Company, and all other banks and banking companies in Scotland, may iſſue notes payable to bearer on demand for 5s. ſterling, as they have heretofore iſſued notes for 20s. and upwards. And ſuch iſſue may continue till December 1, 1800, and to the end of the next ſeſſion.

And from December 1, 1799, no bill of exchange or promiſſory note ſhall be iſſued in Scotland under 5l. ſterling, except for five ſhillings or one guinea, on penalty of 10l. But the banks or companies in Scotland may, on licence, iſſue or re-iſſue notes for 5s. ſterling, and alſo 1l. and one guinea, drawn under the regulations mentioned in the act, unſtamped, upon giving ſecurity for payment of the duties.

NOTEBURGH, a town of Ruſſia, in the government of Peterſburgh, ſeated on an iſland in the lake Ladoga, at the place where the Neva proceeds from this lake. It has a good citadel, and was capital of Ingria, before Peterſburgh was built. It is twenty-five miles eaſt of Peterſburgh. Long. 31. 9. E. Lat. 59. 56. N.

NOTTELEN, a town of Weſtphalia, in the biſhopric of Munſter, ſeven miles weſt of Munſter.

NOTTINGHAM, a town of the United States, in Maryland, five miles N.E of Baltimore.

NOVARA, an ancient and ſtrong town of Italy, in the duchy of Milan, capital of the Novareſe, with a biſhop's ſee. It is ſeated on an eminence, twelve miles N.E. of Verceil, and 25 W. by S. of Milan. Long. 8. 35. E. Lat. 45. 25. N.

NOVA SCOTIA, or ARCADIA, a country of Britiſh North America, bounded on the W. by the United States, on the N. by the river St. Lawrence, on the E. by the gulf of that name, and on the S. by the Atlantic and bay of Fundy; being ſo indented by the latter, that its eaſtern part forms a peninſula. It extends from Cape Sable, its moſt ſouthern point, in lat. 43. 23. to 49. 30. N. and from 60. 15. to 67. 0. W. long. In 1784, part of this country was formed into a new province. See NEW BRUNSWICK. The atmoſphere, for a great part of the year, is clouded with a thick fog which renders it unhealthy; and, for four or five months, it is intenſely cold. A great part of the country lies in foreſt; and the ſoil (except on the banks of the rivers), is thin and barren. Halifax is the capital.

NOVOMIRGOROD, a town of Ruſſia, in the government of Catharinenſlaf, 136 miles W.N.W. of Catharinenſlaf. Long. 31. 44. E. Lat. 48. 40. N.

NOUTRA, a town of Poland, in the palatinate of Cracow, on the frontiers of Hungary, near which are mines of gold and ſilver. It is 30 miles S. of Cracow. Long. 19. 49. E. Lat. 49. 40. N.

NOYA, an ancient town of Spain, in Galicia, ſeated on the Tamara, 15 miles W. of Compoſtella.

NOYERS, a town of France in the department of Yonne,

ſeated on the Serin, in a valley ſurrounded by mountains, 17 miles S.E. of Auxerre. Long. 4. 2. E. Lat. 47. 39. N.

NOZEROY, a town of France, in the department of Jura, with a caſtle, ſeated on a mountain, 20 miles S.E. of Salines, and 30 S. of Beſançon. Long. 6. 13. E. Lat. 46. 47. N.

NUITZ, a town of France, in the department of Côté d'Or, famous for its excellent wines. It is ſeated at the foot of a mountain, 15 miles S.W. of Dijon, and 150 S.E. of Paris. Long. 5. 0. E. Lat. 47. 10. N.

NUN, or Ned de Nun, a province of Africa, to the S. of Sus, from which it is ſeparated by a ſandy deſert. The Emperor of Morocco arrogates to himſelf the ſovereignty of this country, but his real authority is extremely feeble. This vaſt, but deſert, province is inhabited by different tribes of Arabs, whoſe camps are ſcattered over ſuch interior parts of the country as are capable of cultivation.

NUNDYDROOG, a town and fortreſs of the peninſula of Hindooſtan, capital of a conſiderable diſtrict, in the Myſore country. It is built on the ſummit of a mountain, 1700 feet in height, the greater part inacceſſible; but was beſieged and taken by the Engliſh, under Lord Cornwallis, in 1792. It is 70 miles N. of Seringapatam.

NUNEATON, a town in Warwickſhire, with a market on Saturday. It has a manufacture of camblet cloth, was formerly noted for its nunnery, and is ſeated on the river Anker, eight miles N. by E. of Coventry, and 99 N.N.W. of London. Long. 1. 25. W. Lat. 52. 36. N.

NUNEHAM, a village, five miles E. by S. of Oxford; remarkable for its ſpinning feaſt, an annual feſtival, inſtituted by Lord and Lady Harcourt, for the encouragement of virtue and induſtry.

NUNNY, a village in Somerſetſhire, two miles S.W. of Frome. It is remarkable for the ruins of a ſtrong caſtle, the ſhell of which ſtill remains nearly perfect, and is a fine piece of antiquity. It was taken by the parliament forces in 1645, and probably ſoon afterward diſmantled.

NURTINGEN, a town of Suabia, in the duchy of Wurtemberg. The hoſpital here, founded in 1481, is ſaid to be the richeſt foundation in the whole duchy. It is ſituate on the Neckar, 14 miles S.E. of Stutgard, and 60 E. of Straſburg. Long. 9. 12. E. Lat. 48. 33. N.

NUSSERPOUR, a town of Hindooſtan Proper, capital of a diſtrict of the ſame name. It is ſituate on the Sinde, 80 miles N.E. of Tatta. Long. 68. 20. E. Lat. 25. 20. N.

NUYS, a town of Germany, in the electorate of Cologne. It was taken by the French in 1794; and is ſeated on the Erfft, five miles S.W. of Duſſeldorf, and 20 N.W. of Cologne. Long. 6. 52. E. Lat. 51. 11. N.

NYBORG, a town of Denmark, in the iſle of Funen, with the remains of an old palace, in which Chriſtian II. was born. The ſhips trading to the Baltic that paſs through the Great Belt are obliged to pay toll here, for which purpoſe a man-of-war is always ſtationed in the Belt. Nyborg is ſeated on a commodious bay, 10 miles E. of Odenſee. Long. 10. 40. E. Lat. 55. 30. N.

NYMPHÆA (*Encycl.*). A remarkable fact, in the department of Natural Hiſtory, but particularly applicable as a counterpart to the modern rage for *coſmetics*, we ſhall communicate to our readers, in the author's words, from the firſt volume of his travels, in German, p. 232 and following:

"On the 20th of Auguſt," ſays M. Pallas, "the commandant of the port of Aſtrakhan, granted me a barge for an excurſion to the mouth of the Volga, a diſtance from ſixty to eighty verſts. As I had learned from the late Dr. Lerch, that the *Nymphæa nelumbo* grew there in abundance, I ſent a party of my eſcort, who procured a great number of the flowers and fruits of this plant, in different gradations of growth; ſome of which had nearly attained perfect maturity. Theſe fruits are by the Ruſſians called ſea-nuts, or *morſkye orechi*; by the inhabitants of Tybet, *badma*; by the Perſians, *dariopacta*; and by the Indians, *pabin* or *lilifar*: they are ſearched for and eaten with avidity by the laſt-mentioned nation, who regard them as ſacred. According to their mythology and that of Tibet, the perfect divinities are regenerated in the richly ſcented flowers of this plant, which ſerve them for a throne. Theſe flowers, indeed, have an agreeable flavour; and the diſtilled water which the apothecary of this city, Aſſeſſor Zettler, had the politeneſs to prepare for me, contained a pleaſant and permanent taſte of fine ambra, and when uſed as a lotion, imparts ſuch a ſoftneſs and delicacy to the ſkin of the face and hands, that it deſerves to be introduced as an *innocent coſmetic* into all the apothecaries' ſhops; eſpecially as the flowers may be collected throughout the ſummer, in the inlets of the Volga and the Bolda. I found the leaves of this plant completely free from zoophytes, and other aquatic inſects. The ſeminal veſſels are more conſpicuous, and the germ more magnified, in the ſeed of the *Nymphæa nelumbo*, than in any other plant. When the nuts are incloſed in a lump of clay, and immerſed under water, they readily germinate, particularly if a ſlight inciſion be previouſly made in the ſhell."

NYONS, a town of France, in the department of Drome, ſeated at the foot of a chain of mountains, on the river Aigues, with a lofty bridge of one arch, the work of the Romans. Here is a mineral ſpring, named Pontius, and ſome manufactures of ſoap and woollen ſtuffs. It is eight miles N.W. of Buis. Long. 5. 15. E. Lat. 44. 26. N.

NYSTADT, a town of Sweden, in Finland, with a commodious harbour, and a conſiderable trade in all kinds of wooden veſſels. In 1721, a peace was concluded here, between the Emperor of Ruſſia and the King of Sweden. It is ſeated on a bay of the gulf of Bothnia, 55 miles N.W. of Abo. Long. 21. 1. E. Lat. 61. 10. N.

NYSTED, or Nyested, a town of Denmark, in the iſland of Laland, which carries on a conſiderable trade to the duchy of Mecklenberg and other provinces of Germany. Long. 11. 40. E. Lat. 54. 43. N.

O.

OAKHAM. See Okeham.

OBAN, a village in Argyleſhire, ſeated on the ſea-coaſt, to the S. of Loch Etive. Here is an excellent fiſhing ſtation, and a cuſtom-houſe.

OBDACH, a town of Germany, in the duchy of Stiria, ſeated at the confluence of the Achza and Traun, three miles below the lake Chienzee, and 35 W. of Gratz. Long. 14. 43. E. Lat. 47. 3. N.

OBERKIRCH, a town and caſtle of France, in the department of Lower Rhine, three miles from Straſburg, to whoſe late archbiſhop it belonged. Long. 7. 50. E. Lat. 48. 35. N.

OBERNBERG, a town of Bavaria, with a caſtle, ſeated on the Inn, 15 miles S. of Paſſau, to whoſe biſhop it belongs. Long. 13. 36. E. Lat. 48. 15. N.

OBERNDORF, a town of Suabia, in the Black Foreſt, ſubject to the houſe of Auſtria. It is divided into the Upper and Lower Town, and ſeated on the Neckar, 14 miles N. of Rothweil. Long. 8. 45. E. Lat. 48. 22. N.

OBERSTEIN, a town of Germany, in the palatinate of the Rhine, capital of a county of the ſame name. It is ſeated on the Nahe, 30 miles E. by S. of Treves. Long. 7. 26. E. Lat. 49. 42. N.

OBERWESEL, a town of Germany, in the electorate of Treves, formerly imperial. It was taken by the French in 1794, and is ſeated on the Rhine, 40 miles E.N.E. of Treves. Long. 7. 48. E. Lat. 50. 1. N.

OBIDOS, a town of Portugal, in Eſtremadura, with a ſtrong caſtle on a rock, 13 miles E. of Peniche, and 38 N. of Liſbon. Long. 9. 18. E. Lat. 39. 17. N.

OBOLLAH, a ſtrong town of Perſia, in Irac-Agemi, ſeated on a branch of the Tigris, near Buſſarah. Long. 45. 15. E. Lat. 30. 15. N.

OBSKAYA, a bay of the Frozen Ocean, in Aſia. Long. 72. 25. E. Lat. 70. 0. N.

OBVINSK, a town of Ruſſia, in the government of Perm, ſituate on the Kama, 60 miles N. of Perm. Long. 56. 0. E. Lat. 58. 44. N.

OCANO, a town of Spain, in New Caſtile, ſeated on a plain, 18 miles E. of Toledo. Long. 2. 50. W. Lat. 39. 52. N.

OCCA, a river of Ruſſia, which falls into the Volga, near Niſhnei Novegorod.

OCHSENEURT, a town of Franconia, in the biſhopric of Wurtzburg, ſeated on the Maine, 10 miles S.E. of Wurtzburg. Long. 10. 10. E. Lat. 49. 35. N.

OCHSENHAUSEN, a town of Suabia, near which is a princely abbey, founded in 1100. It is 14 miles S. of Ulm, and 40 W.S.W. of Augſburg. Long. 10. 11. E. Lat. 48. 10. N.

OCKER, a river of Lower Saxony, which riſes in the S. part of the duchy of Brunſwick, runs by Goſlar, Wolfenbuttle, and Brunſwick, and falls into the Aller, E. of Zell.

ODER, a river of Germany, which has its ſource near a town of the ſame name, in Sileſia. It runs N. by Ratibor, Oppelen, Breſlaw, Glogaw, and Croſſen, in Sileſia; Francfort, Lebus, Cuſtrin, and Frinwalt, in Brandenburg; and Gartz, Stetin, Cammin, Wellin, Uſedom, and Wolgaſt, in Pomerania. Below Stetin it forms a large lake or bay, called Friſchen Haff, and afterward falls into the Baltic Sea by three mouths; between which lie the iſlands of Uſedom and Wollin.

ODERBERG, a town of Upper Saxony, in the middle marche of Brandenburg, ſituate on the Oder, 25 miles N.W. of Cuſtrin, and 35 N.E. of Berlin. Long. 14. 15. E. Lat. 52. 58. N.

ODERBURG, a town of Sileſia, near the confluence of the Oder and Elſa, 10 miles S. of Ratibor. Long. 18. 10. E. Lat. 50. 2. N.

ODERNHEIM, a town of Germany, in the palatinate of the Rhine, ſeated on the Seltz, 20 miles S. of Mentz. Long. 8. 20. E. Lat. 49. 31. N.

ODIHAM, a corporate town in Hampſhire, with a market on Saturday, 24 miles N.E. of Wincheſter, and 42 W. by S. of London. Long. 0. 56. W. Lat. 51. 18. N.

ODONTALGIA *(Encycl.)*. The following obſervations on this diſeaſe, with the explanation of an apparatus that has been ſucceſsfully employed in relieving it (ſee Pl. 38), are addreſſed to the editors of the Medical and Phyſical Journal.

"The tooth-ach (ſays the author, Dr. Brown), the moſt frequent and painful diſeaſe incident to the human body, is often occaſioned by being expoſed to a partial current of cold air, or to ſudden heat and cold; by reſiding in a marſhy or damp ſituation; by morbid matter within, by acrid matter attached to the external ſurface of the teeth, and frequently by the muſcles and membranes of the jaw being affected by the ſame diatheſis which produces irritation, gout, and rheumatiſm, in other parts. Women are more liable than men to rheumatiſm and to tooth-ach; they are moſt ſubject to both in pregnancy, and during obſtructions of the menſtrual diſcharge.

"It has alſo been obſerved, that mercurial preparations thrown into the ſyſtem, ſo as to affect the ſalival glands; nervous affections; ſipping hot liquors; frequent picking of the teeth with hard inſtruments; a ſcorbutic and ſome other acrimonious ſtate of the fluids; probably often occaſion a caries of the teeth: and I have known ſeveral families, who ſeemed particularly liable to their premature loſs and decay."

The common people of Aberdeen, it ſeems, have an idle notion that the cauſe of the tooth-ach, is a worm, or worms, engendered in the tooth. Juſt ſo, in former times, it was generally ſuppoſed, that worms contained in the cavity of the affected tooth, by irritating its nerve, occaſioned the acute pain that is ſometimes productive of watchfulneſs, fever, loſs of appetite, proſtration of ſtrength, convulſions in children, and delirium, in perſons who have laboured under this exquiſitely painful diſeaſe.

Hence in *Regimen Sanitatis Salerni*, p. 154:

"Sic dentes ſerve porrorum collige grana,
"Ne carcas jure cum inſquiamo ſimul ure,
"Siſq; per embotum Fumum cape dente remotum."

"To cure the tooth-ach, take the ſeed of leeks,
When that fell pain annoyes and ſwells the cheeks;
But *ſeed* of Henbane muſt be mixt among,
And burn them both, to make the ſmoke be ſtrong;
Hold thy mouth o'er, and ſo receive the fume,
The pain it ſlakes, and worms in teeth conſume,
If through a tunnil, you the ſmoke aſſume."

"Sir Hans Sloane gives an inſtance of the virtues of *ſemen hyoſciami*, in alleviating the tooth-ach. A perſon of quality, tormented with this racking pain, had an empiric recommended to him, who conveyed the ſmoke of burning ſeeds of henbane, by means of a funnel, into the hollow tooth, and thereby removed the pain; but, at the ſame time, there dropped ſome maggots from the tooth (as the operator pretended) into a pail of water placed underneath for that purpoſe. Sir Hans procured one of theſe maggots, which he ſent wrapt up to M. Lewenhoeck, at Delft, in Holland, where it arrived ſafe and alive. Upon examination, M. Lewenhoeck found it to be entirely like thoſe bred in ordinary rotten cheeſe; wherefore he procured ſome of theſe latter, and carefully fed them both, and that one Sir Hans Sloane had ſent, on the ſame cheeſe; and they were all, according to the uſual methods of nature, turned into ſmall ſcarabei, both being returned ſuch to Sir Hans, from Holland. Upon the whole, though the henbane ſeeds cured the tooth-ach, it is highly probable, that the maggots had been conveyed thither, and let drop into the water by ſome ſlight of hand.

"We learn from the writings of Dioſcorides and others, that *hyoſciami*, which is a powerful remedy of the narcotic tribe, has been employed as an anodyne by the moſt illuſtrious phyſicians, from the earlieſt periods of medical hiſtory. It appears to have been the favourite ſedative of Celſus; he gave it internally to mitigate pain and procure ſleep; he uſed it externally as a collyrium, in caſes of ophthalmia; and he employed it topically to aſſuage the pains of the teeth and gums. Accordingly, under the head of "*Dentium doloris varia remedia*," he ſays, with his uſual eloquence and preciſion, "The tooth-ach is a diſorder that may be juſtly ranked among the greateſt torments;" and he tells us, "if the pain be ſevere, a clyſter is uſeful, with hot cataplaſms applied to the cheek, as alſo ſome medicinal hot liquor held in the mouth, and frequently changed. For which purpoſe is uſed, henbane root, either in vinegar and water, or diluted wine, with the addition of a little ſalt to either of them, and poppy heads not over dry, and mandrake roots prepared in the ſame manner, but in theſe three, care muſt be taken not to ſwallow what is in the mouth.

"Mynſicht who has long been reſpectfully named in our diſpenſatories, gives, in his *Medico-Chymicum*, the following formulæ, which are all deſigned for the uſe of perſons afflicted with painful affections of the teeth and gums, viz. Tinctura Odontalgica, Pilulæ Odontalgicæ, inſerted in Dr. Lewis's Diſpenſatory, p. 330, 5th edit. Trochiſci de Alumine with radix Pyrethrum, Spiritus Odontalgicus; in all which he directs a certain portion of the ſeeds of henbane. Salmon, whoſe labours ſeem not to have been duly appreciated by his countrymen, and Etmuller, preſcribe them for the ſame purpoſe. Boerhaave had his ſenſes diſordered by only making a plaſter from this plant. Yet, as the various medicines I had myſelf hitherto employed were of little avail, and as I had ſome teeth extracted, and obtained in one inſtance only twelve hours' reſpite from my ſufferings, the pain flying either to another tooth, or attacking the *Antrum Maxillare*, I tried the effect of fumigating with two parts of henbane ſeed, added to carraway and cummin ſeeds, of each one part.

"After repeating the operation three times, I remained near a fortnight exempt from pain: I then had occaſion to have recourſe to the fumigation again, and was again relieved; and in the mean time a permanent cure was obtained by the uſe of internal medicines, which had never occurred either to myſelf or any of the many ſkilful and experienced practitioners who had been conſulted, on what appeared to ſome of them, as a caſe equally inveterate and extraordinary."

In caſe of a carious tooth, extraction is often the only radical remedy; but as in ſome caſes extraction is improper, and as in many inſtances it is obſtinately avoided, Dr. Brown had a veſſel made of copper, of which ſee an engraving in Pl. 38, fig. 1. The apparatus takes in pieces at the line *a*, *b*, and alſo at *c*. "The bottom is fitted into a wooden ſtand turned with a groove, to prevent its ſlipping out of the hand of the operator. In the centre of the bottom of this veſſel (as the tube at the bottom of a lanthorn for the reception of a candle), is a piece of metal ſhaped to receive the bowl of a *large* tobacco-pipe, with an opening large enough to receive the ſtalk of the pipe oppoſite to the hole at *b*. The apparatus being taken aſunder at *a*, *b*, the cup or bowl of an iron or common clay tobacco-pipe is made red hot, filled quickly with the ſeeds, placed in the aperture formed for its reception, the conical or upper part being reſtored to its place, as in the engraving; the tube *c*, is turned upwards or downwards, as the pain may happen to be ſeated in the upper or lower jaw; and being placed in contact with it, the operater, applying his mouth to the tube of the pipe, forces by his breath, into the mouth of his patient, the ſmoke of the burning ſeeds, which, by their heating, ſedative, and ſialagogue effect (ſometimes it being neceſſary to repeat the proceſs), generally afford the patient conſiderable relief."

The ſmall tube marked *d*, is intended to be uſed when pain is ſeated in the front teeth.

ODYSSEY (*Encycl.*). See ſome obſervations on the Geography of Homer's Odyſſey, under GEOGRAPHY, *Supp.*

OELFELDT, a town of Lower Saxony, in the duchy of Magdeburg, ſeated on the Aller, 25 miles E. of Brunſwick. Long. 11. 20. E. Lat. 52. 27. N.

OELS, or OLSE, a ſtrong and conſiderable town of Silefia, with a caſtle, where the duke generally reſides. It is 17 miles N.E. of Breſlaw. Long. 17. 26. E. Lat. 51. 19. N.

OELSNITZ, a town of Upper Saxony, in the territory of Voigtland, ſeated on the Elſter, 20 miles S.S.W. of Zwickau, and 72 S.W. of Dreſden. Long. 12. 10. E. Lat. 50. 19. N.

OEPEN, or EUPEN, a town of the Netherlands, in the province of Limburg. It has conſiderable manufactures of cloth, and is ſituate on the Weze, 12 miles S. of Aix la Chapelle.

OFFENBACH, a town of Franconia, taken by the French in 1796. It is ſeated on the Maine, five miles E. of Francfort. Long. 8. 45. E. Lat. 49. 52. N.

OFFENBURGH, an imperial town of Suabia, under the protection of the houſe of Auſtria, ſeated on the Kintzig, 10 miles S.E. of Straſburg, and 20 S.S.W. of Baden. Long. 8. 1. E. Lat. 48. 31. N.

OFFIDA, a town of Italy, in the marquiſate of Ancona, 26 miles S. of Loretto. Long. 13. 46. E. Lat. 42. 53. N.

OGGERSHEIM, a town of Germany, in the palatinate of the Rhine, with a villa belonging to the elector. It is ſituate on the Rhine, four miles W.N.W. of Manheim.

OHLAU, a town of Silefia, in the principality of Brieg, with a large caſtle. Great quantities of tobacco are produced in the neighbourhood. It is ſituate on the Ohla, eight miles N.W. of Brieg, and 14 S.E. of Breſlaw. Long. 17. 29. E. Lat. 50. 56. N.

OHRDRUF, a town of Upper Saxony, in the principality

of Gotha. It has ſeveral times been deſtroyed by fire, but is now in a very flouriſhing ſtate, from its numerous manufactures. It is eight miles S.S.E. of Gotha, and 15 S.W. of Erfurt. Long. 10. 57. E. Lat. 50. 55. N.

OHRINGEN, a town of Franconia, 34 miles E.S.E. of Heidelberg, and 33 S. of Wertheim. Long. 9. 50. E. Lat. 49. 13. N.

OIGH, Loch, a lake in Inverneſsſhire, extending four miles from E. to W. It contains ſome little wooded iſlands; and its waters flow through Loch Neſs into Murray Frith.

OIRA, an ancient town of Naples, in Terra d'Otranto, with a biſhop's ſee, and an old caſtle. It is ſeated at the foot of the Appennines, 20 miles N.E. of Tarento. Long. 17. 54. E. Lat. 40. 38. N.

OISANS, a town of France, in the department of Iſere, 28 miles S.E. of Grenoble. Long. 6. 25. E. Lat. 45. 0. N.

OISE, a department of France, including part of the late province of the Iſle of France. It takes its name from a river, which has its ſource in the Ardennes, and falls into the Seine, near Pontoiſe. Beauvais is the capital.

OKOTZK, a province of the government of Irkutzk, in Ruſſia. Its capital, of the ſame name, is ſeated at the mouth of the Okota, in a bay of the Eaſtern Ocean.

OLDENBURG, a town of Weſtphalia, capital of a county of the ſame name, noted for its horſes. The church of St. Lambert contains the tombs of the laſt counts of Oldenburg, which are very curious. It is ſeated on the Hunta, 22 miles W. of Bremen, and 45 S.E. of Embden. Long. 8. 8. E. Lat. 53. 7. N.

Oldenburg, a town of Lower Saxony, in the duchy of Holſtein, ſeated near the Baltic, 30 miles N. of Lubec. Long. 10. 47. E. Lat. 54. 22. N.

OLDENDORF, a town of Lower Saxony, in the duchy of Lunenburg, ſeated on the Wenaw and Eſca. Long. 10. 35. E. Lat. 53. 16. N.

Oldendorf, a town of Weſtphalia, in the territory of Schawenburg, ſeated on the Weſer, 28 miles S.W. of Hanover. Long. 9. 31. E. Lat. 52. 16. N.

OLDENZEEL, a town of the United Provinces in Overyſſel, 30 miles E. of Deventer. Long. 6. 57. E. Lat. 52. 20. N.

OLDESLOHE, a town of Lower Saxony, in the duchy of Holſtein, ſeated on the Trave, 17 miles W. of Lubec, and 25 N.E. of Hamburg. Long. 10. 18. E. Lat. 53. 52. N.

OLERON, an iſle of France, five miles from the coaſts of Aunis and Saintonge. It is 12 miles long and five broad; is populous and fertile, and defended by a caſtle. In the reign of Richard I. this iſland was part of the poſſeſſions of the crown of England; and here that monarch compiled the code of maritime laws, called the Laws of Oleron, which are received by all nations in Europe, as the ground and ſubſtruction of all their marine conſtitutions. Long. 1. 20. W. Lat. 46. 3. N.

OLESKO, a town of Poland, in Red Ruſſia, 38 miles E.N.E. of Lemburg. Long. 25. 10. E. Lat. 50. 23. N.

OLIKA, a town of Poland, in Volhinia, with a citadel, 20 miles E. of Lucko. Long. 26. 8. E. Lat. 51. 15. N.

OLINDA, a town of Braſil, ſeated on the Atlantic, with a very good harbour. It was taken by the Dutch, in 1630, but retaken by the Portugueſe. Long. 35. 0. W. Lat. 8. 13. S.

OLITA, a town of Spain, in Navarre, where their kings formerly reſided. It is ſeated in a fertile country, 20 miles N. of Tudela. Long. 1. 46. W. Lat. 42. 22. N.

OLIVA, a ſea-port of Weſtern Pruſſia. Here is a celebrated monaſtery, which contains ſeveral tombs of the dukes of Pomerania, and in it a peace was concluded in 1660, between the emperor of Germany and the kings of Sweden and Poland. It is ſituate on a bay of the gulf of Dantzic, three miles W. by N. of Dantzic. Long. 18. 32. E. Lat. 54. 24. N.

OLIVENCA, a ſtrong town of Portugal, in Alentejo, ſeated near the Guadiana, 13 miles S. of Elvas, and 40 E. of Evora. Long. 7. 4. W. Lat. 38. 30. N.

OLMEDO, a town of Spain, in Old Caſtile, ſeated on the Adaja, 30 miles S. of Valladolid. Long. 4. 29. W. Lat. 41. 20. N.

OLNEY, a town in Bucks, with a market on Monday, and a conſiderable manufacture of bone lace. It is ſeated on the Ouſe, 12 miles S.E. of Northampton, and 56 N.N.W. of London. Long. 0. 54. W. Lat. 52. 5. N.

OLONE, an iſland, town, caſtle, and harbour of France, in the department of Vendee, 30 miles N.W. of Rochelle, and 258 S.W. of Paris. Long. 1. 43. W. Lat. 46. 30. N.

OLONETZ, a government of Ruſſia, included formerly in the government of Novogorod. In this diſtrict are ſome conſiderable iron-works.

Olonetz, a town of Ruſſia, in a government of the ſame name, famous for its mines of iron, and its mineral water. It is ſituate on the river Olonza, which falls into the lake Ladoga. Long. 34. 20. E. Lat. 61. 26. N.

OLPE, a town of Weſtphalia, 37 miles E. of Cologne, and 50 E.S.E. of Duſſeldorf. Long. 7. 38. E. Lat. 50. 59. N.

OLTEN, a town of Switzerland, capital of a bailiwic, in the canton of Soleure. It is dependent on the Biſhop of Baſle, and is ſeated a little to the N. of the Aar, between Arberg and Araw. Long. 7. 45. E. Lat. 47. 16. N.

OLTRI, a town of Italy, in Friuli, 24 miles E. of Cadore, and 38 N.W. of Friuli. Long. 12. 25. E. Lat. 48. 26. N.

OMAN, a province of Arabia, bounded on the N. by the Perſian Gulf, on the E. by the ocean, and on the S. and W. by extenſive deſerts. It is poſſeſſed by a number of petty ſovereigns, the moſt conſiderable of whom is the imam of Oman, the capital of the province, which is ſituate 60 miles N.W. of Maſcat. Long. 57. 20. E. Lat. 24. 0. N.

OMAGH, a town of Ireland, in the county of Tyrone, where the aſſizes are held. It is 20 miles N.E. of Inniſkilling.

OMBO, a town of Egypt, on the E. bank of the Nile, 26 miles N. of Syene. Long. 31. 58. E. Lat. 24. 26. N.

OMBRONE, a river of Italy, which riſes in the Sienneſe, and falls into the Mediterranean.

OMEGNA, a town of Italy, in the Milaneſe, with a caſtle, ſituate on the N.E. ſide of the lake Orta, 25 miles N.N.W. of Novara. Long. 8. 20. E. Lat. 45. 40. N.

OMMEN, a town of the United Provinces, in Overyſſel, ſeated on the Vecht, 17 miles N.E. of Deventer. Long. 6. 10. E. Lat. 52. 32. N.

OMMENBURG, a ſtrong town of Germany, in the electorate of Mentz, ſeated on the Othern, nine miles S.E. of Marpurg, and 45 N.E. of Francfort. Long. 9. 13. E. Lat. 50. 30. N.

OMMIRABIH, a river of Africa, which riſes in Mount Atlas, ſeparates the kingdom of Morocco from that of Fez, and entering the Atlantic, forms a capacious bay on the E. ſide of Azamor.

OMZK, a town and fortreſs of Ruſſia, in the government of Tobolſk, ſituate at the confluence of the Om and Irtiſh, 260 miles S.E. of Tobolſk. Long. 74. 54. E. Lat. 55. 4. N.

ONADAGO, a lake and river, in the ſtate of New York. The river flows W. from the lake till it meets the Seneca,

when its courſe turns N. to Oſwego, where it enters Lake Ontario. It is navigable for boats from its mouth to the head of the lake, except one fall which cauſes a portage of 20 yards. See ONEIDA.

ONANO, a town of Italy, in the patrimony of St. Peter, ſeated between Acquapendente and Petigliano, five miles from each.

ONE, a cape of Barbary, in Africa, near the mouth of the river Mulvia.

ONEG, a town of Ruſſia, in the government of Archangel, ſituate on the Onega, near the White Sea, 80 miles S.S.W. of Archangel. Long. 37. 24. E. Lat. 63. 35. N.

ONEGLIA, a principality of Italy, ſurrounded by the territory of Genoa, but ſubject to the King of Sardinia. It abounds in olive-trees, fruits, and wine.

ONEIDA, or ONONDAGO, a lake of N. America, in the ſtate of New York. It is 20 miles W. of Fort Stanwix, and extends weſtward about 25 miles, where its outlet, the Onondago River, runs into Lake Ontaria, at Oſwego. At the E. extremity of the lake, is Wood Creek, on the banks of which live a tribe of Indians, called Oneidas; and the Onondagos, another tribe, occupy the country S. of the lake and river.

ONEZKOE, a lake of Ruſſia, in the government of Olonetz, 120 miles long, and 40 broad. It contains ſeveral iſlands.

ONGAR, or CHIPPING ONGAR, a town in Eſſex, with a market on Saturday, 12 miles W. of Chelmsford, and 21 E.N.E. of London. Long. 0. 16. E. Lat. 51. 43. N.

ONGOLE, a town of Hindooſtan, in the Carnatic, ſeated on a river, not far from its entrance into the bay of Bengal, 150 miles N. by W. of Madras. Long. 79. 50. E. Lat. 15. 30. N.

ONORE, a ſea-port of Canara, on the coaſt of Malabar, 110 miles N.N.W. of Mangalore. Long. 74. 45. E. Lat. 14. 20. N.

ONOTH, a town of Hungary, 50 miles N.E. of Buda. Long. 19. 22. E. Lat. 48. 10. N.

ONRUST, a ſmall iſland, at the mouth of the harbour of Batavia, where the Dutch build and careen their ſhips.

OODEADURGAM, a town of the peninſula of Hindooſtan, which gives name to a paſs, in the Myſore country. It is 31 miles S.E. of Bangalore, and 73 S. of Seringapatam.

OODOOANULLAH, a town of Hindooſtan Proper, in Bengal, ſeated on the W. bank of the Ganges, at the foot of a chain of hills. The ſituation is eſteemed unhealthy, on account of the foreſts in its vicinity. It was the ſeat of the government of Bengal, under Sultan Sujah, till he fell in the conteſt for empire with his brother Aurungzebe. The numberleſs ruins here, and in the neighbourhood, afford a proof of his magnificence; and there ſtill remains a part of the palace, which, in his time, was nearly deſtroyed by fire. Here is an elegant bridge over the Ganges, built by the ſame prince, famous for the victory gained over Meer Coſſim, in 1764, by Major Adams. Oodooanullah is 82 miles N. by W. of Moorſhedabad. Long. 87. 55. E. Lat. 24. 58. N.

OOSTBORCH, a town and fort of Dutch Flanders, in the iſle of Cadſand, four miles N.E. of Sluys. Long. 3. 29. E. Lat. 51. 22. N.

OOSTENBY, a town of Sweden, in the iſle of Oeland, 27 miles S. of Borkholm.

OOTATORE, a town of the peninſula of Hindooſtan, in the Carnatic, 22 miles N.W. of Tanjore, and 80 S.W. of Pondicherry. Long. 78. 57. E. Lat. 11. 2. N.

OPHEIM, a town of Norway, in the province of Bergen, 45 miles N.N.E. of Bergen. Long. 5. 15. E. Lat. 60. 41. N.

OPIUM (*Encycl.*). The following obſervations on opium, and its component principles, with an account of various proceſſes for obtaining it from the white poppy (*papaver ſomniferum Linn.*), are publiſhed by Citizen Dubuc, ſenior, in the Annales de Chimie.

"The natural hiſtory of opium," ſays Citizen Dubuc, "does not appear to be hitherto generally well underſtood. It is doubted whether there exiſts any drop-opium (*de l'opium en larmes*); all that ſeems to be fully eſtabliſhed as a fact is, that this ſingular ſubſtance is extracted by the inhabitants of the eaſt from the white ſomniferous poppy; but the following queſtions reſpecting it ſtill remain to be reſolved. What are the proceſſes uſed for obtaining it? What degree of maturity muſt this plant have arrived at, in order to produce opium ſuch as that of commerce? Finally, Is this vegetable ſubjected to any particular kind of preparation, before the opium is extracted?

"None of theſe queſtions have been ſatisfactorily determined by any of the writers who have treated of this ſubject.

"Several natural hiſtorians, and eſpecially Lemery, in his Dictionary of ſimple Drugs, aſſerts poſitively that *there exiſts no drop-opium*, and that the opium of the Levant is obtained from the leaves and heads of the poppy. The moſt celebrated chemiſts who have treated of the ſubject, ſuch as Fourcroy, Chaptal, Beaumé, Bouillon-Lagrange, &c. are not agreed amongſt themſelves, whether it is extracted from the leaves, ſtalks, and capſules, whilſt ſtill freſh and green, or whether it is obtained directly from the heads of the poppy when arrived at its laſt ſtage of growth and maturity, by making the extract in the ordinary manner.

"This difference of opinion, which exiſts amongſt authors whoſe knowledge in natural ſcience cannot be called in queſtion, determined me, two years ago, to occupy myſelf with the inveſtigation of the nature of this ſubſtance, by cultivating, with this view, a great number of white poppies; (*Papaver album & ſomniferum Linn.*)

"But before I give an account of the various experiments which I have made in order to obtain opium, it will be proper that we ſhould eſtabliſh our opinion concerning two facts relative to this ſubſtance, ſuch as it is brought to us from the Levant in the ordinary courſe of commerce.

"It is certain that the oriental opium contains impurities amounting at leaſt to one fourth of its weight. I have frequently examined theſe heterogeneous ſubſtances, and, after different waſhings, I have eaſily diſcovered, that they were nothing elſe than the ſtalks, leaves, feculæ, peduncles, capſules, and ſeeds of the poppy, in a ſtate of very minute diviſion.

"I ſhall ſhew hereafter that the addition of theſe ſubſtances contributes in a very great degree to give the opium that acrid and nauſeous ſmell which it is known to poſſeſs.

"It is alſo known, that this acrid odour is extremely volatile, and that frequently it is not found to exiſt any longer at the ſurface of the cakes of opium, whether in conſequence of the length of time that they have been kept, or owing to ſome artificial means that have been employed for that purpoſe; whilſt the lower part of the ſame cake, which is ſtill viſcous, is thoroughly imbued with it, and emits an intolerable ſmell when cut through the middle: hence it appears, that this volatile principle, or *aroma*, is only an accidental property of the opium.

"The following experiments will elucidate what I have advanced, both with reſpect to the two laſt-mentioned facts, and the ſolution of the queſtions which I have propoſed at the commencement of this memoir.

" *Experiment* 1. If we dry viſcous opium, in a temperature not exceeding 40—50 degrees of Reaumur's thermometer, till it becomes pulverulent, it will loſe its acrid narcotic ſmell, and aſſume that of laudanum, or the purified opium of the ſhops, from which it differs only in the impurities which it contains. The vapours which ariſe from it, when collected in a convenient apparatus, become there in part condenſed into a liquid, which at firſt is almoſt colourleſs, but in the ſpace of a few days aſſumes a ſlight yellowiſh tinge. This *aroma*, or diſtilled ſpirit, is accompanied by an aëriform fluid, which is not altogether miſcible with water, and both diffuſe an odour reſembling that of opium cakes when cut in half, but ſo extremely ſtrong as very ſpeedily to ſuffocate animals expoſed to an atmoſphere of this gas.

" Laſt year I made the extract of white poppies, gathered at different periods of their growth, without ever having been able to obtain a ſubſtance that had the ſmell of opium, or even that of laudanum. I only perceived that a heap of poppy leaves that had been thrown away, exhaled an aromatic principle very analogous to that which was obtained in the preceding experiment. This led me to make the following experiments:

" *Experiment* 2. On the 3d Prairial (22d May) laſt, twelve leaves of the white poppy, which had attained to one-third of their full growth, were well pounded in a marble mortar, without adding any liquid. The juice was very abundant, of a brown colour, ſlightly mucilaginous, and had but little of a bitter taſte. The whole was put into a veſſel of ſtone-ware, and expoſed to the atmoſphere. The temperature of the atmoſphere was between 10 and 12 degrees Reaumer.

" On the 4th I obſerved a ſlight ſwelling in the maſs. On the morning of the 5th it puffed up prodigiouſly, and already exhaled an acrid odour, very ſimilar to that of the aroma obtained by the deſiccation of the opium. On the 6th the vapour was exhaled in ſuch large quantity, that it was impoſſible to approach it without becoming affected with a violent head-ach. On the 7th, I expoſed the veſſel to the ſun for a ſpace of twelve hours. The fermentation became ſtill more vehement: I agitated the maſs from time to time, attending to what happened. I ſoon perceived that the exhalation of the narcotic odour abated, and was partly replaced by another, which had much analogy with azotic gas; the plant and the juice acquired a deeper colour; at length they became oxydated at the expence of the ſurrounding air, which probably gave birth to the nitric radical, which, combined with the aroma of the plant, produced that peculiar odour of which I have been ſpeaking.

" *Experiment* 3. On the 24th of the ſame month, twelve pounds of poppy, that had arrived at about three-fourths of its growth, after having been prepared like thoſe in the preceding experiment, were alſo expoſed in a veſſel to the air. On the 26th, the maſs began to ferment, and the acrid narcotic vapour was developed in a very perceptible manner; but this time I did not expoſe the maſs to the ſun. On the 28th the ſmell peculiar to opium was very perceptible: I then preſſed out the juice, filtrated it cold, and evaporated it, with a very moderate heat, to the conſiſtence of an extract.

" I thought I had the beſt grounds to expect that I ſhould obtain real opium as the reſult of this experiment; but I was diſappointed; for, in proportion as the juice gradually thickened, it loſt its narcotic odour, and the extract which I obtained had no other ſmell than that peculiar to the extract obtained from inodorous plants: hence I drew the further concluſion, that this aroma was of the ſame nature as that obtained in experiment 1.

" *Experiment* 4. On the 14th of Meſſidor (2d July) following, I expreſſed two pounds of juice from poppies partly in bloom, and partly ready to bloſſom. This juice was of a dirty yellow colour, nearly reſembling that of the *Chelidonium majus*; it had a very ſlight ſmell of laudanum, and a marked bitterneſs, and left a very conſiderable roughneſs upon the tongue. I expoſed it to the air in a veſſel of earthen-ware, in which it fermented rapidly, ſo that, on the 17th, it exhaled an odour ſimilar to that of the opium of Egypt. This juice I filtrated cold, and, hoping to preſerve its odour, I thickened it by expoſing it in plates to the heat of the ſun. The extract which I obtained ſtill reſembled that of the preceding experiment.

" *Experiment* 5. On the 19th Meſſidor, I extracted about one kilogramme of the juice of poppy heads, partly in flower, and partly after the leaves had fallen off, and the capſules had become very large. This juice was more bitter than that obtained in the preceding experiments. I reduced it to one-half of its quantity by the application of a very gentle heat, hoping that the maſs being more denſe, and its particles in cloſer contact with each other, I ſhould obtain, after fermentation, a ſubſtance whoſe odorous principle would be more coercible.

" The juice thus inſpiſſated did not begin to ferment till the 25th, though the heat of the atmoſphere was greater than during the preceding experiments. On the 30th it had the deſired odour, and the experiment ſeemed very promiſing.

" Again was I diſappointed: I reduced half of the maſs to an extract, which perfectly reſembled that obtained in experiments 3 and 4: the other half I kept in a well-corked flaſk, to be uſed in another experiment.

" *Experiment* 6. On the 28th of Meſſidor, four hectogrammes of capſules, ſufficiently green, but arrived at their full ſize, and twelve decagrammes of the leaves and ſtalks pulled off near to the peduncle of the plant, were well bruiſed and pounded in a mortar. They yielded a thick viſcous maſs, and the juice was deeper coloured, and more bitter, than that obtained in the preceding experiments. The whole being expoſed to the air in an earthen veſſel, it ſoon fermented, and four days were ſufficient to produce the evolution of an odour like that of the true oriental opium.

" Of this maſs I preſerved one-part, to be uſed afterwards, and inſpiſſated the other in a temperature not exceeding 40 degrees. This extract retained a very ſlight ſmell of laudanum; it was a mixture nearly ſimilar to the opium of commerce, excepting that the aroma had been evaporated by the heat.

" It would be ſuperfluous to deſcribe here the numerous experiments which followed the two laſt mentioned: the reſult in each of them was an inodorous extract, or one almoſt ſo. It is, however, proper to obſerve, that the pounded leaves, ſtalks, capſules, &c. of the poppies, always exhaled, after fermenting, for a longer or ſhorter period, the narcotic odour, or that of the aroma, obtained in experiment 1; but they loſt it again after being expoſed ten or twelve days to the air.

" Before I proceed to relate other experiments, I ought to mention ſeveral remarks which I have made upon poppies, from the period at which they bloſſom till that when the capſule begins to grow yellow, after which they exude no more juice.

" During a period of fifteen days, I made inciſions, both upon the peduncle and upon the lower part of a great number of very fine poppy heads, from whence there iſſued a whitiſh yellow juice, almoſt inodorous, but very bitter, which filled up the inciſion, and aſſumed a blackiſh colour in a very ſhort

ſpace of time: its taſte was not changed by expoſure to the air, but it firſt acquired the acrid colour, which, in the preceding experiments, was developed by fermentation: this, however, was ſoon evaporated by expoſure to the ſun, and the juice retained only that of laudanum.

" I alſo remarked in my bed of poppies, that ſome of the capſules were of a form almoſt entirely ſpherical, whilſt others affected the oval figure.

" The firſt naturally produced opium without any inciſion being made into them. This juice collected itſelf in two, three, and ſometimes four ſutures, which are found in the peduncle, where it concretes, and in a very ſhort time acquires the ſmell and colour of laudanum. I have collected ſmall maſſes of it, ſome of which weighed eight grains. I took two grains of this opium, which procured me a very tranquil and protracted ſleep.—*This was drop-opium.*

" All theſe poppies were ſowed on the 10th of Germinal laſt (March 30), in a very rich and well-manured ſoil, defended againſt the north and north-eaſt winds, by a building and a wall. The fineſt plants were at the diſtance of a foot from each other.

" Nature having completed her work, I imagined alſo, according to the reſult of experiment 6, that it would be poſſible for me to attain my object, and make opium with poppies arrived at their laſt degree of maturity.

" *Experiment* 7. For this purpoſe I took twelve fine poppy heads, ſix of which were oval and ſix globular. I pounded them together with their ſeeds, with twenty-four decagrammes of rain-water. Having expoſed them to the air, in an earthen veſſel, I was very much ſurpriſed, four days afterwards, to obſerve ſpots of mold upon them. I repeatedly ſtirred the whole maſs, but none of the phenomena of the preceding experiment took place: the maſs, left to itſelf, was deſtroyed in the manner uſual with all vegetables.

" *Experiment* 8. I made an extract, according to the uſual method (by decoction), from a conſiderable quantity of poppies. The decoction was ſaturated, and became ſlightly mucilaginous as it cooled, without however emitting any thing of the odour of laudanum. I gave the extract a pulverulent conſiſtence: it differed eſſentially from thoſe of the inodorous plants, poſſeſſing a degree of coheſion which is not uſual with thoſe, and which I attribute to the reſin contained in it, &c.

" *Experiment* 9. A portion of the dried extract obtained in the preceding experiment was well triturated with a ſufficient quantity of the viſcous reſiduum that had been laid by in experiment 5, in order to obtain a maſs having the ſame conſiſtence as the opium of commerce. This mixture much reſembled the laudanum of the ſhops in colour, taſte, and ſmell.

" *Experiment* 10. The other portion of the extract obtained in experiment 8, was likewiſe reduced to the conſiſtence of opium with the reſiduum that had been laid by in experiment 6. Three days after its formation, this maſs might, by its impurities, viſcidity, colour, and taſte, have been confounded with the opium of the Levant, excepting that it was not wrapped, and in ſome meaſure kneaded, with poppy leaves *.

" To ſum up the reſults of my obſervations, I am induced, by the experiments above related, to believe:

" 1. That the opium of commerce is not merely the extract or inſpiſſated juice of the ſtalks, leaves, or green capſules of the poppies; for, were that the caſe, it would not contain ſo large a quantity of impurities, which are diſtributed in an almoſt uniform manner throughout the whole maſs.

" 2. That this ſame juice or extract, if prepared with the intervention of heat, however moderate, would not have the acrid nauſeous odour, which the oriental opium retains as long as it preſerves its viſcidity, as is demonſtrated by experiments 3, 4, 5, and even 6.

" 3. That the opium of the Eaſt is not mere extract prepared by the infuſion or decoction of the heads of the white poppy after it arrives at the ſtage of maturity; ſince that which was obtained by experiment 8 was by no means odorous, and was alſo exempt from impurities.

" I ſhould add, that I have had in my poſſeſſion capſules of the white poppy of Egypt, between which and thoſe cultivated in France there appeared to me to be no difference.

" 4. That it appears to be made out by experiments 9 and 10, that the opium of the Eaſt is the inſpiſſated extract of every kind of the white poppies, gathered from the time when they begin to flower till they have arrived at maturity, and afterwards mixed together, and reduced to the conſiſtence which is obſerved in the acrid odorous maſs, obtained from the ſtalks, leaves, and green capſules, of the ſame kind of poppies, pounded and fermented till the moment when the acrid nauſeous odour is evolved, as appears by the reſult of the above-mentioned experiments, and particularly experiment 6; and, finally, that this maſs is divided into cakes, which are wrapped and kneaded at their ſurface with poppy leaves, in part dried, and thus ſent to foreign nations.

" 5. That it appears, by the obſervations inſerted between experiments 6 and 7, that there does really exiſt drop-opium, and that the ſubſtance which is thus termed by ſome natural hiſtorians, naturally exudes from that variety of the white poppy, the capſules of which affect the ſpherical form.

" This opium differs from that of commerce by its being almoſt entirely ſoluble in water, by its purity, by its taſte, which is leſs bitter and acrid than that of the latter, and by its odour, which is leſs narcotic and nauſeous.

" This inveſtigation is not ſo complete as might be wiſhed; and I am well aware of numerous objections that might be made againſt what I have advanced, ſuch as the analyſis of my opium compared with that of commerce, its medicinal properties, &c. &c. I have not the vanity to imagine that I have completed the work which I have undertaken, but its deficiencies may ſtill be ſupplied. I did not think it neceſſary to enlarge upon the medicinal virtues of this ſubſtance. This part of the inveſtigation is the province of the medical writer: I only aſſert, that the drop-opium which I obtained produced a perfect tranquillity in the ſyſtem, without occaſioning vertigo.

" However, I do not doubt the poſſibility of procuring good opium from poppies cultivated in the temperate zone; and the reader is alſo requeſted to obſerve, that thoſe upon which I made my experiments were raiſed in one of the northern departments of France. I wiſh that the ſame experiments might be repeated with poppies raiſed in the ſouth of the Republic. I keep a conſiderable number both of the ſpherical and oval kind, and ſhall with pleaſure procure them for any perſon, who may be inclined to occupy himſelf with this kind of labour, and to bring to perfection a work of which I have only ſketched the outlines. When this ſhall be accompliſhed, we ſhall ceaſe to be tributary to the foreign nations who ſell us this ſubſtance at a very high price."

---

* " I have obſerved that poppy leaves, when half dry, contract the narcotic ſmell, which leads me to believe that they are uſed in the Eaſt, thus prepared, for wrapping the cakes of opium in them."

That ſimilar attempts have been made to produce this valuable drug in our own country will appear from the following account of a method of preparing opium from poppies grown in Great Britain, equal in quality to the beſt foreign opium, by Mr. Thomas Jones, of Fiſh-ſtreet-hill, London. For this the Society for the Encouragement of Arts, Manufactures, and Commerce, voted Mr. Jones a premium of fifty guineas.

"In the ſummer of 1794," ſays he, "I cultivated a conſiderable number of white poppies (entitled in the New London Pharmacopœia, papaver ſomniferum, and, in another place, papaver hortenſe, ſemine albo), when a few of the heads or capſules having been broken off by the wind, I obſerved at the extremity of the ſtalks a ſubſtance in every reſpect reſembling Turkey opium. This accidental circumſtance bringing to my recollection its method of production, as related in the Encyclopædia and elſewhere, I wounded a conſiderable number of them with my penknife, and, in the courſe of the day, collected a ſmall quantity of the above-mentioned ſubſtance. As this circumſtance took place while we were cutting lavender, it happened that an old experienced ſervant, who was afterwards to diſtil it, was directing and aſſiſting, and we agreed that it was probably in effect equal to, and was certainly more pure than, any we had ever ſeen.

"From this period I have never entirely loſt ſight of the object I am now to conſider; but, on account of various avocations, and particularly my rhubarb plantation, which at this time required all the attention I could well ſpare, it was not in my power to engage in an undertaking of ſuch magnitude; and more eſpecially on a ſcale ſo extenſive as that which I had already determined to adopt, under a perſuaſion that experiments, when more confined, are for the moſt part fallacious.

"As preparatory, however, I have not failed every year to repeat the operation, at once eſtabliſhing its practicability, and availing myſelf of many advantages which can only be derived from obſervation and experience.

"The incloſed certificates will inform the Society that at length my plan has been carried into execution, but not with the degree of ſucceſs that ought, and might have been expected to attend ſo large and expenſive an experiment.

"It muſt be confeſſed, that had I been at all aware what an almoſt Herculean labour I was about to encounter, I really ſuſpect whether my reſolution would have been equal to the taſk. Leſt, however, this ſhould diſcourage others from proſecuting this object, it is neceſſary to be more explicit.

"Difficulties, and ſuch indeed as are conſiderable, muſt neceſſarily attend moſt undertakings which have been hitherto unattempted; but the diſappointments I ſuſtained, though more numerous than generally fall to the ſhare of a perſon under ſuch circumſtances, and more aggravated, did not all ariſe out of the undertaking itſelf, but from cauſes, ſome of which may be eaſily guarded againſt in future, while others may never again occur.

"Two years have paſſed, in producing what, I flatter myſelf, the Society will conſider deſerving their premium, particularly if I am enabled to render the operation much more ſimple than may at firſt ſight be ſuppoſed.

"The claimant, I obſerve, is required to ſubmit to the Society his particular method of cultivating the poppies. As the mode adopted in the preſent inſtance aroſe rather from neceſſity than choice, I muſt go back as far as the autumn of 1797, to ſhew how it happened.

"Five acres of ground and upwards, ſituated in the pariſh of Enfield, in the county of Middleſex, I appropriated to this experiment, at the period above mentioned; which, being ploughed ſeveral times previous to the following March, were then ſown broad-caſt; and the weather proving favourable, the ſeed ſoon vegetated, and appearances were very promiſing. From the neglected ſtate of the land, however, to which I was unfortunately a ſtranger, ſuch a profuſion of weeds ſprang up among them, that, after many fruitleſs efforts at recovery, I was under the mortifying neceſſity of ploughing them all up together. This circumſtance not taking place till the latter end of April, the ſeaſon for ſowing was elapſed; and as to cropping my field with oats or barley, a meaſure very ſtrongly recommended to me, I conſidered it as a deviation from my original purpoſe, and therefore, without paying any attention to it, gave the field a ſummer-fallowing, conceiving the poppies might be ſown with equal and perhaps greater advantage in autumn.

"Finding that the broad-caſt method of ſowing precluded the poſſibility of hoeing where the land is much infeſted with weeds, I now adopted a different mode, and drilled in the ſeed with a very ſimple yet efficient machine, which I purchaſed of Mr. Macdougal, of Oxford-ſtreet: but, as the weather began to be very ſevere ſo early as November, and continued ſo with few intermiſſions, the ſucceeding March found me very little forwarder. Yet ſtill I perſevered, and once more reſolved to drill the whole five acres: they came up extremely well, and, as I expected, accompanied with innumerable weeds; but theſe by well-timed application were eradicated, though not without conſiderable difficulty.

"I now thought myſelf ſecure; for nothing could aſſume a better appearance, till the beginning of May. Alas! I could not forefee the cold and remarkably dry weather that enſued, and prevailed, I believe, for ſix weeks ſucceſſively. Hence the growth of ſome became ſtunted, and others were entirely deſtroyed; but happily ſome warm refreſhing ſhowers fell juſt time enough to reſcue the remainder.

"From theſe I have procured upwards of twenty-one pounds of opium, five of which, in compliance with the Society's requiſition, I have ſent for their inſpection and examination.

"At one time I began to deſpair of even procuring this, comparatively ſpeaking, ſmall quantity, though it is not a fifth part of what I ought to have had, owing to the extraordinary rains and winds which we experienced through the whole of the ſummer months.

"This recital, as I have before obſerved, ought on no account to intimidate others from a co-operation; for it is obvious, that the former inconveniences originated in my own ignorance, whilſt the latter depended upon cauſes that in all probability may never happen again.

"Mr. Ball, in a letter publiſhed in one of the volumes of the Society's Tranſactions, advances an opinion which I conſider as very fallacious, reſpecting the quality of land adapted to the growth of poppies. He ſeems to be very little concerned about this point, and hints the probability of their being cultivated almoſt every-where. I well know that poppies, like many other vegetables, will grow in ſoils of any deſcription; but of this I am fully aſſured, that, like the reſt, they have their particular and favourite oil, viz. a ſandy loam, and that the better this is, the more advantages will accrue to the cultivator. For it ſhould be conſidered, that, in bad as well as good ground, the ſame expences of cultivation, ſcarification, and collecting, will be incurred, for perhaps a fourth ſhare of the produce.

"There is alſo another error in the ſame communication,

which, having a tendency to miſlead, ought to be pointed out. He tells us, to uſe his own words, 'That, by a calculation he has made, ſuppoſing one poppy growing in one ſquare foot of earth, and producing only one grain of opium, more than fifty pounds (I ſuppoſe he means, of courſe, apothecaries weight) will be collected from one ſtatute acre of land.' Now, as there are no more than 43,560 ſquare feet in an acre, and allowing one grain for each, the produce can be no more than ninety ounces and ſix drachms. This calculation appears to be as much in the extreme one way, as that of Mr. Ball is in the other. The medium is moſt probably neareſt the truth; but upon this point I cannot at preſent ſpeak with any degree of preciſion, on account of the ſcattered ſituation of my crop, and the extraordinary intemperance of the laſt ſeaſon. Judging, however, from the number of heads we perceived, and comparing them with the total quantity, they ſeem to have yielded three fourths of a grain each, upon an average, large and ſmall.

"I ſhall now lay before the Society ſome general remarks on the cultivation of poppies, and then conclude with ſubmitting a few hints and directions reſpecting the preparation of opium.

"Having a tap-root, their ſize will conſequently be proportionate to the depth of earth they are enabled to penetrate. Hence the neceſſity of land that will admit of deep ploughing. The fineneſs of the ſurface too is very eſſential. As the ſeed is ſo ſmall, and the plants, on their firſt coming up, ſo exceedingly tender, the buſh-harrow ſhould always be uſed after thoſe which are commonly employed. By this means a greater number are likely to vegetate, and their roots being better protected are leſs liable to injury.

"Poppies (and when I uſe this name, I mean that particular kind before ſpecified) may be cultivated both by the drill and broad-caſt mode of huſbandry; at the ſame time it muſt be remembered, that the land for each requires a different diſpoſition. In the former this is not ſo material, the ſowing-machine, regulating the diſtances of the rows according to the will of the operator; theſe ought to be nine inches or a foot aſunder, and in beds containing four rows, allowing a foot and a half between each. But, with reſpect to the latter, this point muſt be ſtrictly attended to: the ridges ſhould never exceed four feet in breadth; ſo that the furrows will anſwer the double purpoſe of preſerving the land throughout the winter, and, in the ſeaſon for collecting the opium, ſerve as paths for the workmen.

"Beſides two chances of a crop, I am decidedly in favour of autumnal ſowing; and the firſt week in September ſeems to be the moſt favourable period for this purpoſe. If the weather continues open, they will make ſuch progreſs as to be capable of reſiſting the ſeverity of an inclement winter, without on the other hand being too forward; a circumſtance highly dangerous, as the firſt ſevere froſt is inevitably deſtructive.

"On this account, whether by the drill or otherwiſe, a large proportion of ſeed ſhould be ſown at this ſeaſon, for the plants will defend each other; and as all the plants will not be equally forward, ſo, let the winter prove as it may, provided the ſeed has vegetated freely, there will be great probability of a good appearance in ſpring. If unfortunately, however, ſuch a winter as the laſt ſhould again occur, and the whole plantation fail, a circumſtance which has happened to myſelf, the ſpring ſowing ought not to be deferred longer than the firſt week in March.

"I do not, without ſufficient reaſon, recommend that this operation ſhould be performed in autumn. The poppies are not only generally larger, but even, when this is not the caſe, I know from experience, that they will yield a much larger proportion of opium: for it ſeldom happens that a ſpring poppy will bleed, as we term it, more than twice, while the others will bear ſcarifying till they are nearly ripe. This I imagine can only ariſe from the length of time the one has been in the ground in compariſon with the other. Indeed, the difference is ſo ſtriking, that if the preſent winter deſtroys my plants, I ſhall be almoſt tempted to diſpoſe of my ſpring ſowing to other purpoſes. In drilling, the neceſſity of covering the ſeed by harrowing is ſuſpended by the operation of the machine; and, in the broad-caſt method, a ſhower of rain will have all the effect without further trouble or expence.

"Excepting great additional care, turnip and poppy hoeing are ſimilar, and in every reſpect may be conducted in the ſame manner. I believe the turnips are rather benefited, they certainly are not injured by being ſhaken, and will recover from the effects of a wound; but if the poppies are accidentally touched, they will either exhauſt themſelves by bleeding, or dwindle ſo as to be of no value. But it is high time to proceed to the laſt point I purpoſed to conſider, namely, the production and preparation of opium.

"In ordinary ſeaſons, the heads or capſules of the autumnal poppies will be large enough for our purpoſe in the month of June; for at this time they will have attained about half their growth, or be equal in ſize to a ſmall tea-cup. I have invented a variety of inſtruments as ſcarificators; but as only two kinds were actually uſed, I am unwilling to trouble the Society with a deſcription of any other *.

"Seven, and ſometimes eight, boys were employed, from eight to twelve years of age, together with a man as a ſuperintendant. The children's book, which accompanies the inſtrument, contains only an account of ſix, as the eldeſt, being the ſon of my gardener, is included in another book. To the youngeſt I gave three pence per day, and, if tractable and well diſpoſed, an additional penny for every additional year.

"The ſteel inſtrument was uſed by the latter, and the others by the former. I have great reaſon to be ſatisfied with their conſtruction; for, notwithſtanding their ſimplicity, they

---

* Mr. Jones has ſince added the following deſcription of the inſtruments, and their mode of application. They remain in the Society's Repoſitory for inſpection.

"The firſt of theſe inſtruments conſiſts of two thin ſteel blades fixed by a wedge in a wooden handle, ſo as to make inciſions about one-fourth of an inch from each other.

"The other is made entirely of ſteel, and reſembles in form the tuning-fork of a harpſichord. It conſiſt of four bars, proceeding from a handle of a convenient length, a quarter of an inch wide, and two and a half long, each terminating with a bolſter, through which a ſcrew paſſes that fixes the ſcarificators. The centre bars ſhould be ſo elaſtic as to yield to the curvature of the capſule, upon the outer ones being preſſed by the finger and thumb; and by this means four inciſions are made three quarters in width; but, from the two outer blades, only an inch and a quarter. The bolſters are a quarter of an inch in diameter, and the ſcarificators a proportionate length, namely three-eighths. The wedge in the former, and a longitudinal aperture in the ſcarificators, or blades, of the latter, will regulate the depth of the inciſions, at the will of the operator. It is of the utmoſt importance that theſe ſhould not be made through the inner coat of the capſules."

proved themſelves fully equal to my purpoſe; and ſo conſiderable a trial has not ſuggeſted any other improvement, than that in the largeſt the two inner bars only ſhould be elaſtic; for the continual preſſure of the finger and thumb on the two outer ones, which is abſolutely neceſſary for the others to act, would be avoided, and conſequently much fatigue and inconvenience prevented.

"It is of very little conſequence whether the firſt inciſions are made horizontally or vertically, with this inſtrument; for, however luxuriantly the milk may flow, by making four at one time, it ſo divides the ſtream that ſeldom any eſcapes. With the ſmaller ones we moſt commonly made them horizontally, beginning as near the top of the head as poſſible, and for this reaſon--all the juices, if the firſt inciſion was made at the bottom, would be naturally attracted by the aperture, and render every other completely fruitleſs, beſides occaſioning the certain loſs of a conſiderable quantity, by falling on the ſurrounding leaves; whereas, on the other hand, a proportion of milk will exude from each, and the opium be equally diſtributed over the whole ſurface of the head.

"No particular directions ſeem neceſſary for repeating this operation, any further than at each time it ſhould be performed in a contrary direction, and continued till no more will exude, at intervals of four or five days or more, according to circumſtances: for, as the weather proves very rainy or fair, they will be ſhorter or longer, the heads being ſooner replenilhed in the one than the other.

"Each of the children being provided with a tin cup, having one handle, ſo contrived as to fix itſelf to a girdle faſtened round his waiſt, with a common gardening knife they ſcraped off the opium that appeared upon the heads in a ſoft aſh-coloured ſubſtance. Dewy mornings are beſt calculated for this purpoſe, and it ſhould be diſcontinued ſo ſoon as the ſun has gained a ſufficient power to diſſipate it; for, if perſevered in throughout the day, ſome of the opium will recede into the interſtices, and more, in defiance of every endeavour, will remain upon the heads. The principal quantity exudes in the courſe of the night, and, uniting with the dew, it is taken off as readily and completely as with a ſponge.

"Several regulations were adopted to excite, as much as poſſible, a ſpirit of emulation. The name of each boy was written upon his cup, ſo as to aſcertain, on their return from collecting, who had been the moſt active. And although, in conſequence of the unſettled ſtate of the weather, this part of our proceſs continued ſo long as from the 6th of July to the ſecond week in September inclusive, the good effects were felt to the laſt. And as, for the reaſon already mentioned, an hour in the morning became ſo invaluable, thoſe who appeared in the ground at five o'clock, at the moſt buſy period, became entitled to an additional penny to their daily pay. This meaſure ſucceeded at firſt only with a few; but the remainder, overcome by ſhame, at length attended equally well. In addition to this encouragement, I am under an engagement (in caſe I ſucceed with the Society), to ſuch whoſe behaviour has been uniformly good, to celebrate the circumſtance by a public dinner.

"The interval from breakfaſt time to ſun-ſet, if the weather aſſumed a ſettled appearance, was occupied by ſcarifying. And here I again felt the good effects of ſtimulating meaſures: certain places were allotted to particular children, according to their ability, ſo as to diſcover who ſcarified the moſt and the beſt; the ſuperintendant occaſionally following all of them, to obſerve whether any work was left unfiniſhed, and, if there were any, to complete it. If, in our progreſs, any one proved refractory, which happened in more inſtances than one, rather than have recourſe to ſeverity, and for the ſake of example, he was immediately diſcharged. I had numerous applications, and the firſt on the liſt always had the preference as his ſucceſſor.

"Upon the whole, conſidering it was the firſt attempt of the kind, every thing proceeded very regularly; and had the ſummer been propitious, notwithſtanding my former diſappointments, I ſhould have had great cauſe for ſatisfaction. The largeſt quantity that my man, ſeven children, and myſelf, were able to procure in one morning, from five to nine o'clock, was one pound and a half: this happened when the dew was remarkably great, and ſucceeded one of the warmeſt days in the ſummer.

"From the experience I have had, the precarioufneſs of our climate appears to me the only obſtacle to the production of opium in this kingdom. It may be ſaid that the ſame inconveniences attend every other agricultural purſuit; and that hay, and a variety of productions, particularly hops, are much prejudiced from the ſame cauſe. I allow that they are ſo; but the evil produced by a ſudden alteration in this caſe is irreparable; for, ſhould it happen after a fine ſcarifying day, we do not only loſe the labour of that day, but all its produce. It becomes obviouſly neceſſary, therefore, to be particularly circumſpect; and this is the only remedy we are able to procure. The poppies will receive no damage from remaining entire; while, on the other hand, impatience may be injurious, if not deſtructive.

"As my notes furniſh me with no further particulars, I have very little more to add. The opium, when firſt collected, from its union with the dew, is much too ſoft to be ſo formed as the Society will receive it.

"To reduce it to a proper conſiſtence, taking nature for our guide, it ſhould be thinly ſpread in ſhallow diſhes, and expoſed, under glaſſes, to the rays of the ſun. My opinion is, that Turkey opium ſuffers conſiderably from the operation of fire; certain it is, that, with reſpect to its effluvia, it undergoes a complete alteration. I have covered it with its own leaves, thinking this a very convenient mode of package, and conceiving it to be important, in every new undertaking, by ſtudying appearances, to yield to the general prejudices which naturally prevail in favour of the article to which we have been accuſtomed."

The following teſtimony of the quality of the opium is extracted from a letter from Dr. Woodville to Mr. Jones.

"I have examined the opium collected by you from the capſules of the white poppy; and I have no doubt, from its taſte, ſmell, colour, and purity, but that it is more powerful and efficacious than the beſt foreign opium imported into this country."

OPPELEN, a ſtrong town of Sileſia, capital of a duchy of the ſame name, with a caſtle. The chief tribunal of juſtice, and the firſt conſiſtory of Sileſia, were ſettled here in 1742. It is ſeated on the Oder, in a pleaſant plain, 35 miles S.E. of Breſlaw, and 40 N. of Troppaw. Long. 17. 50. E. Lat. 50. 41. N.

OPPIDO, an epiſcopal town of Naples, in Calabria Ulteriore, ſeated at the foot of the Appennines, 25 miles N. of Reggio. Long. 16. 21. E. Lat. 38. 19. N.

OPPURG, a town of Upper Saxony, in the circle of Nieuſtadt, four miles W.S.W. of Nieuſtadt.

ORACH, a town of Turkey in Europe, in Boſnia, near the river Drino, 60 miles S.W. of Belgrade.

ORANIENBAUM, a town of Upper Saxony, in the duchy of Anhault Deſſau, ſix miles S.E. of Deſſau.

ORANIENBAUM, a town of Ruſſia, in the gulf of Finland. Here is a royal palace, built by Prince Menzikoff, afterward converted into an hoſpital; but much uſed as a reſidence by Peter III. It is 20 miles W. of Peterſburg. Long. 29. 26. E. Lat. 59. 52. N.

ORANIENBURG, a town of Upper Saxony, in the middle marche of Brandenburg. It was anciently called Bretzow, and takes its preſent name from a villa built by the elector. In 1699, a colony of the Vandois was eſtabliſhed here, after being driven from their country on account of their religion. It is ſituate on the Havel, 18 miles N. of Berlin, and 28 N.N.E. of Potzdam. Long. 13. 26. E. Lat. 52. 50. N.

ORATAVIA, a town of Teneriff, one of the Canary Iſlands. It is ſeated at the bottom of an amphitheatre of mountains, out of which riſes the Pike of Teneriff. Its port is at three miles diſtance. Long. 16. 20. W. Lat. 28. 23. N.

ORBARESAN, a town of Piedmont, between Turin and Pignerol. Long. 7. 30. E. Lat. 45. 2. N.

ORBE, an ancient town of Switzerland, in the Pays de Vaud, capital of the bailiwic of Echallens, the ſovereignty of which is divided between the cantons of Bern and Friburg. Its romantic ſituation, and the boldneſs of its ſingle-arched bridge projecting over the Orbe, are the admiration of all travellers. It is 24 miles W. of Friburg. and 40 W. by S. of Bern. Long. 6. 43. E. Lat. 46. 49. N.

ORBE, a town of Germany, in the electorate of Mentz, celebrated for its ſalt works. It is 26 miles E. of Frankfort.

ORBITELLO, a ſtrong ſea-port of Tuſcany, in the Sienneſe, defended by ſeveral forts, and ſeated near the Albegna, 58 miles S. by W. of Sienne, and 85 S. of Florence. Long. 11. 10. E. Lat. 42. 18. N.

ORBRE, a river of France, which riſes in the Cevennes, waters Bezieres, and falls into the gulf of Lyons, five miles below that town.

ORCHIES, an ancient town of France, in the department of the North, 14 miles S.E. of Liſle. Long. 3. 25. E. Lat. 50. 28. N.

ORCHILLA, an iſland of the Caribbean Sea, 80 miles N. of the coaſt of Terra Firma, and 160 E. by S. of Curaçoa. Long. 65. 20. E. Lat. 12. 0 N.

ORCHIMONT, a town of the duchy of Luxemburg, ſituate on the Semoy, 18 miles N. of Sedan.

ORDINGEN, or URDINGEN, a town of Germany, in the electorate of Cologne, 11 miles N. of Duſſeldorf, and 32 N.N.W. of Cologne.

ORDUNNA, a ſea-port of Spain, in Biſcay, ſeated in a valley, ſurrounded by high mountains, 20 miles S.W. of Bilboa. Long. 3. 26. W. Lat 43. 11. N.

OREBRO, a town of Sweden Proper, capital of the province of Nericia, ſeated near the W. extremity of the lake Hielmar. In the middle of the town, on a ſmall iſland formed by two branches of the Swart, ſtands the caſtle, formerly a royal reſidence. Here are manufactures of fire-arms, cloth, and tapeſtry; and it has a conſiderable trade with Stockholm, acroſs the lakes Hielmar and Maeler, by means of the canal of Arboga; ſending iron, vitriol, and red paint, in particular, to that capital. Orebro is 95 miles S.W. of Stockholm. Long. 15. 12. E. Lat. 59. 12. N.

OREGRUND, a ſea-port of Sweden, on the coaſt of Upland, in the gulph of Bothnia, oppoſite the ſmall iſland of Gnio, 60 miles N. of Stockholm. Long. 18. 15. E. Lat. 60. 20. N.

OREL, a government of Ruſſia, once a province of the government of Belgoro. Its capital, of the ſame name, is ſeated on the Occa and Orel, 207 miles S.S.W. of Moſcow. Long. 35. 20. E. Lat. 53. 0. N.

ORENBURG, one of the two provinces of the government of Uſa, in Ruſſia. Its capital, of the ſame name, is ſeated on the Ural, formerly called the Yaik, 480 miles N.E. of Aſtracan. Long. 55. 0. E. Lat. 51. 46. N.

ORFORD NESS, a cape of England, on the S.E coaſt of Suſſex, where a light-houſe is erected for the direction of ſhips. Long. 1. 6. E. Lat. 52. 4. N.

ORGAN (*Encycl.*). The following is extracted from the ſpecification of a patent granted to Mr. John Longman, of Penton-ſtreet, Pentonville, Middleſex, for certain improvements in the conſtruction of barrel organs, with a view to prevent them from getting out of order. It is ſo contrived, alſo, that another muſical inſtrument may eaſily be attached to it, and made to play with the ſame barrel. This invention is ſhewn by the figures in Pl. 34, which are explained thus: "The part of barrel-organs employed in fixing the tune," ſays Mr. Longman, "has hitherto been detached from the barrel and key-frame, whence many and continual muſical imperfections ariſe. I therefore attach to the barrel a circular plate or plates, of any metallic or other ſubſtance, to which is adapted a proper key-frame (as deſcribed in the above drawing); by this is gained a regular, preciſe, uniform movement of the barrel, without any reverberatory motion whatever. The nice and ſteady connection of the plate or plates fixed to the barrel with the key-frame is the principle which gives not only variety of mechanical adaptation, but alſo accuracy of execution to this above all other barrel-organs. A reverſe method may be uſed, by having the wheel A, which is fixed to the barrel, made thick enough to contain a number of grooves cut round it, and the plate B, which before was called a notch-plate, to be a plain piece of metal, to run in the above-mentioned grooves.

"Fig. 2. The ſpiral barrel is made by cutting one part of the wheel A, and inclining one of the parts one way, ſo that when the key-frame comes to that part of the wheel, the inclined part gradually draws the key-frame until it receives the next notch in the plate B, and has then paſſed one round.

"Fig. 3. The exact connection which my diſcovery gives to all parts of barrel organs with each other enables me to add, with great advantage, as accompaniments, bells, tambourins, &c. to improve and enlarge the force and beauty of the inſtrument. The inſtrument thus improved, with or without accompaniments, is not liable to be injured by change of poſition or carriage."

The ſeveral parts of the machinery are thus deſcribed with reference to the plate.

Fig. A, the plates on the barrel. B, notch-plate to receive the plate A. C, a roller, and A, one of the plates, either of which may be uſed to keep the key-frame a proper diſtance from the barrel. D, the bell action. E, the bells. F, an index directing to place the tunes.

Fig. 2. A, plate on the barrel. B, notch-plate on the key-frame.

Fig. 3. Side-view of the bell action.

ORGANFORD, a village near Poole, in Dorſetſhire, remarkable for the prodigious quantity of pennyroyal, here called *organ*, produced in the neighbourhood.

ORGAZ, a town of Spain, in New Caſtile, with a caſtle, 15 miles S. of Toledo. Long. 3. 22. W. Lat. 39. 36. N.

ORGELET, a town of France, in the department of Jura, ſeated at the ſource of the Valouſe, 30 miles N. by E. of Bourg. Long. 5. 39. E. Lat. 46. 36. N.

ORGIVA, a town of Spain, in the province of Granada, 25 miles S. of Granada. Long. 3. 50 W. Lat. 36. 43. N.

ORIA, a decayed town of Naples, in Terra d'Otranto, with a citadel, and a biſhop's ſee; ſeated at the foot of the Apennines, 40 miles N.W. of Otranto. Long. 17. 48. E. Lat. 40. 39. N.

ORIO, a town of Spain, in Guipuſcoa, at the mouth of

the Orio, eight miles S.W. of St. Sebaſtian. Long. 2. 19. W. Lat. 43. 23. N.

ORISSA, a province of the peninſula of Hindooſtan, bounded on the N. by Bahar and Bengal, on the W. by Berar, on the S. b Golconda, and on the E. by the bay of Bengal. The diſtr ct of Midniapour, in this province, is ſubject to the Engliſh Eaſt-India Company; but all the reſt belongs to the Berar Mahrattas.

ORKENED, a town of Sweden, in Schonen, 24 miles N. of Chriſtianſtad'. Long. 14. 9. E. Lat. 56. 48. N.

ORLAMUND, a town of Upper Saxony, in Thuringia, belonging to the Duke of Saxe Gotha. It is ſeated on the Sala, oppoſite the mouth of the Orla, 50 miles S.W. of Leipſic. Long. 11. 24. E. Lat. 50. 53. N.

ORLANDO, a cape on the N. coaſt of Sicily, 15 miles W. by N. of Patti. Long. 15. 4. E. Lat. 38. 14. N.

ORLEANS, Canal of, commences at the river Loire, five miles above Orleans, croſſes the foreſt of Orleans, joins the Loing, near Montargis, and paſſing by Memours, falls into the Seine. It was finiſhed in 1682, and has 30 locks in its courſe, which is above 50 miles in extent.

Orleans, an iſland and town of Lower Canada, a little to the E. of Quebec. Long. 69. 50. W. Lat. 47. 0. N

Orleans, New, a city, and the capital, of Louſiana, built during the regency of the Duke of Orleans. In 1788, ſeven eighths of this city were deſtroyed by fire. It is ſeated on the E. ſide of the Miſſiſſippi, 105 miles from its mouth. Long. 89. 53. W. Lat. 30. 2. N.

ORLENGA, a town of Ruſſia, in the government of Irkutſk, ſituate on the Lena, 132 miles N. of Irkutſk. Long. 105. 40. E. Lat. 56. 0. N.

ORMEA, a town of Italy, in the county of Aſti. It was taken by the French in 1794; and is ſituate on the Tanaro, 10 miles S. of Ceva. Long. 8. 9. E. Lat. 44. 16. N.

ORMYAH, a town of Perſia, in the province of Tauris, 120 miles S.W. of Tauris.

ORNANS, a town of France, in the department of Doubs. In its vicinity is a well, which, during the time of the great rains, overflows in ſuch a manner as to inundate the adjacent country; and the fiſhes which it diſgorges are called *umbres*. Ornans is ſeated on the Louvre, eight miles S.E. of Beſançon.

ORNE, a department of France, including the late province of Perche and part of that of Normandy. It takes its name from a river, which falls into the Engliſh Channel, eight miles below Caen. The capital is Alençon.

ORNITHORHYNCHUS PARADOXUS, *from New South Wales*, a ſingular quadruped, concerning which ſome anatomical remarks, by Prof. Blumenbach, appear in a periodical work (ſee Pl. 38): "The moſt remarkable circumſtance in this curious animal," ſays the author," "is the great ſimilarity of its head with that of a duck, which, however, is ſtill more ſtriking in its internal ſtructure. From the external form of the ſkull of this animal, one might be more eaſily led to conclude that it belonged to ſuch an aquatic bird, than to a creature of the mammalia tribe. Both the jaws are as broad and low as in a duck, and the calvaria has, at leaſt in my ſpecimen, no traces of a ſuture, as is generally the caſe in full-grown birds. There is likewiſe a ſingularity in the cavity of the ſkull (*caverna incephali*), of which nothing like it is known in any quadruped animal of the mammalia, though there exiſts ſomething analogous in the claſs of birds, viz. a conſiderable bony falx (*g*), which is ſituated along the middle of the *os frontis*, and the *oſſa bregmatis*. This proceſſus is in general ſcarcely to be ſeen in the mammalia, even in thoſe that have a bony tentorium cerebelli. I know no inſtance of any animal of that tribe being provided with ſuch a bony falx as the ornithorhynchus [*ſchnabelthier*, as the profeſſor calls it, i. e. *beak animal*, or *beaked animal*], if we except ſome anomalous formations; as I poſſeſs the ſkull of a woman, in which the tabula vitrea of the os frontis has formed a ſimilar bony criſta. Amongſt the bird tribe, however, in which Willis and others deny the exiſtence of ſuch a criſta, I have diſcovered it in the ſkull of a cock of the wood (urogallus), which ſurpriſingly agrees as well in the ſituation as in the form with that in the ornithorhynchus. The mandible of this animal is very ſingular, conſiſting of a beak, the under part of which has its margin indented as in ducks (*q*), and of the proper inſtrument for chewing that is ſituated behind, within the cheeks. This has, at leaſt in my ſpecimen, no teeth, nor even the traces of alveoli, but only two broad proceſſes of a peculiar formation on each ſide, whoſe undulated ſuperficies fit one another (*n. o.*). Dr. Shaw ſays of the ſpecimen he examined, that it had no teeth, "dentium nulla ſunt veſtigia."—Vide No. 118 of the Naturaliſt's Miſcellany. But Sir Joſeph Banks, to whoſe liberality I am indebted for my ſpecimen, informs me, that Mr Home has found, in a ſpecimen that belongs to the Society of Natural Hiſtory at Newcaſtle, on each ſide of the jaws, two ſmall and flat molar-teeth. The fore part of this anomalous mandible, or the beak, is covered and bordered with a coriaceous ſkin, in which three parts are to be diſtinguiſhed: 1. The proper integument of the beak (integumentum roſtri). 2. The labiated margins of it (margines labiales). 3. A curious edge of the ſkin of the beak (limbus tranſverſarius). Into theſe three parts of that membrane numerous nerves are diſtributed, of which thoſe in the upper part of the beak ariſe from the ſecond branch of the fifth pair, viz. in the limbus tranſverſarius; that which penetrates through the foramen infraorbitale (*s*), in the margo labialis; that which comes forth behind the oſſa intermaxillaria (*t*) and to the integumentum roſtri, three branches, which run out between the oſſa intermaxillaria (*u*). From this quantity of nerves, with which the integument of the beak is provided, no doubt is left of this part being intended as the organ of feeling, a ſenſe which, beſides men and the quadrumanes, very few mammalia enjoy, that is to ſay, few animals, poſſeſs the faculty of diſtinguiſhing the form of external objects and their qualities by organs deſtined for that purpoſe; a property that is different from the common feeling, by which every animal is able to perceive the temperature and preſence of ſenſible objects, but without being informed by the touch of them, of their peculiar qualities. Thus, for inſtance, the ſkin in the wings of a bat, and its ear, ſerve probably as organs of common feeling, by means of which they are enabled to flutter, even after being blinded, without flying againſt any thing. The whiſkers (vibriſæ) of many animals ſeem likewiſe to ſerve for the purpoſe of informing them of the preſence of ſenſible bodies, on which account Dr. Darwin compares them with the antennæ of inſects; but they are not able to inform themſelves of the properties of thoſe objects. It is true that the ſnout of a mole has been conſidered by Derham, and the ſnout and tongue of many other animals likewiſe by Buffon, as organs of touching; but this ſeems only to be their ſecondary uſe. The ſame may be ſaid of the elephant's trunk, which Buffon alſo conceives to be an organ of touching, although from its manner of living, the neceſſity of ſuch an organ of touching does not appear. The ornithorhynchus, however, is an animal which, from the ſimilarity of its abode, and the manner of ſearching for food, agrees much with a duck, on which account it has

been equally provided by nature with an organ for touching, viz. with the integument of the beak, richly endowed with nerves. This inſtance of analogy in the ſtructure of a ſingular organ of ſenſe in two ſpecies of animals from claſſes quite different, is highly inſtructive for comparative phyſiology, and on this account the ornithorhynchus belongs to one of the moſt remarkable phenomena in zoology, and may in general be looked upon as one of the moſt intereſting diſcoveries with which that part of natural hiſtory has been enriched during the laſt century."

ORONSA, a ſmall fertile iſland of Scotland, one of the Hebrides, ſeven miles W. of Jura. Here are the ruins of an abbey, with many ſepulchral ſtatues, and ſome curious ancient ſculpture.

OROPESA, a town of Spain, in New Caſtile, 22 miles E. of Placentia, and 50 W. of Toledo. Long. 4. 36. W. Lat. 39. 50. N.

OROPESA, a town of Peru, ſeated at the foot of the mountains, 150 miles N.E. of Potoſi. Long. 63. 30. W. Lat. 18. 0. S.

ORR, a river in Kircudbrightſhire, which riſes near New Galloway, waters the town of Orr, and enters the Solway Frith.

ORSOVA, a town of Upper Hungary, in the bannat of Temeſwar, ſeated on the N. ſide of the Danube, almoſt oppoſite Belgrade. It is ſubject to the Turks. Long. 22. 0. E. Lat. 45. 30. N.

ORSOY, a town of Weſtphalia, in the duchy of Cleves, taken in 1672, by the French, who demoliſhed the fortifications. It is 20 miles S.E. of Cleves. Long. 6. 43. E. Lat. 51. 28 N.

ORTA, a town of Italy in the patrimony of St. Peter with a biſhop's ſee. It is ſeated on the Tiber, 10 miles E. of Witerbo, and 30 N. of Rome. Long. 12. 37. W. Lat. 42. 22. N.

ORTA, a town of Italy, in the Milaneſe, ſituate on a lake of the ſame name, 21 miles N.N.W. of Novara, and 36 W.N.W. of Milan. Long. 8. 30. E. Lat. 45. 37. N.

ORTA, a town of Naples, in Capitanata, 11 miles N.N.E. of Aſcoli.

ORTENBERG, a town in Germany, in the circle of Upper Rhine, and county of Hanau Munzenberg, ſituate on the Nidder, 17 miles N.E. of Frankfort, and 17 S.E. of Gieſen. Long. 8. 50. E. Lat. 52. 2. N.

ORTENBURG, a town and citadel of Lower Bavaria, capital of a county of the ſame name, 10 miles W. of Paſſau. Long. 13. 25. E. Lat. 48. 29. N.

ORTENBURG, a town of Auſtria, ſeated on the S. bank of the Drave, oppoſite its confluence with the Liſer. Long. 13. 38. E. Lat. 46. 52. N.

ORTHEZ, a town of France, in the department of Lower Pyrenees, ſeated on the declivity of a hill, on the river Gave de Pau, 17 miles S.W. of Pau. Long. 0. 24. W. Lat. 43. 5. N.

ORTON, a town in Weſtmoreland, with a market on Wedneſday, 12 miles S.W. of Appleby, and 27 N.N.W. of London. Long. 2. 40. W. Lat. 54. 28. N.

ORTZA, a town of Lithuania, in the palatinate of Witepſk, with a caſtle, ſeated on the confluence of the Oreſa and Dnieper, 50 miles W. of Smolenſko. Long. 31. 5. E. Lat. 54. 45. N.

ORWELL, a river in Suffolk, which runs S.E. by Ipſwich, and uniting with the Stour, forms the fine harbour of Harwich. Above Ipſwich it is called the Gipping.

OSACA, a large town of the iſland of Niphon, in Japan, with a magnificent caſtle. It has a harbour, and is one of the moſt commercial places of Japan. The hours of the night are proclaimed by the ſound of different inſtruments of muſic. Long. 133. 45. E. Lat. 35. 20. N.

OSCHATZ, a town of Upper Saxony, in the margravate of Meiſſen, which has ſome manufactures of cloth. It is 16 miles N.W. of Meiſſen, and 30 N.W. of Dreſden. Long. 13. 24. E. Lat. 51. 24. N.

OSERO, or OSORO, an iſland in the gulf of Venice, belonging to the Venetians, having that of Cherſo to the N. to which it is joined by a bridge. The capital is of the ſame name, with a biſhop's ſee. Long. 15. 30. E. Lat. 45. 0. N.

OSEY, an iſland in Blackwater Bay, near Malden in Eſſex, it is covered with wild fowl, at certain ſeaſons; and here the coal ſhips for Malden unload their cargoes.

OSIMO, an ancient town of Italy, in the marquiſate of Ancona, with a rich biſhop's ſee, and a magnificent epiſcopal palace. It is ſeated on the Muſone, 10 miles S. of Ancona, and 110 N.E. of Rome. Long. 13. 34. E. Lat. 43. 29.

OSMA, an ancient town of Spain, in Old Caſtile, with a biſhop's ſee, and an univerſity. It is almoſt gone to ruin, and is ſeated on the Douero, 80 miles N. by E. of Madrid. Long. 2. 12. W. Lat. 41. 30. N.

OSORNO, a town of Chili, ſeated on Rio-Bueno, in a territory where there are mines of gold, 80 miles S. of Baldivia. Long. 73. 20. W. Lat. 40. 58. S.

OSSETIA, the county of the OSSI, or OSSETI, one of the ſeven Caucaſian nations, between the Black Sea and the Caſpian; bounded on the N. by Great Cabarda, on the E. by the Leſguis Tartars, and on the S. and W. by Imeritia. It contains 19 diſtricts, of which one is ſubject to Imeritia, and the others to Georgia. Theſe diſtricts are of very unequal ſize; ſome containing only five, and others 50 villages, each of which compriſes from 20 to 100 families. Their language has ſome analogy with that of the Perſian. Their hiſtory is entirely unknown. The Circaſſians and Tartars call them Kuſha.

OSSIFICATION (*Encycl.*). A French ſurgeon, Citizen Grandchamp, relates two curious inſtances of preternatural oſſification; the firſt was a bony ſubſtance as big as a fiſt, ſituated between the bladder and the uterus, and incloſed in a proper ſac, formed by the peritonæum. The woman in whoſe body it was found, had during her life a habitual iſchury, from which ſhe only was relieved by a horizontal ſituation on the back. This complaint might have been eaſily miſtaken for the ſtone. The ſecond obſervation is an uncommon oſſification of the gall bladder, found in the body of a woman of ſixty-ſeven years of age. The place at the bladder was occupied by a hard maſs as big as the head of a ſix or ſeven months fœtus; the ductus cyſticus was wanting, and the ductus hepaticus joined the liver immediately with the duodenum; the maſs itſelf cohered to the liver by a ſmall place of the ſize of a ſmall coin. On opening it, a gluey ſubſtance was ſeen, ſofter in the middle, and harder the more it approached to the periphery, till it gradually became oſſified.—*Hufeland's Newſte Annalen.*

OSTAGIO, a town of Italy, in the territory of Genoa, 15 miles N.W. of Genoa. Long. 8. 31. E. Lat. 44. 36. N.

OSTERODE, a town of Lower Saxony, in the principality of Grubenhagen. Here is a manufacture of woollen ſtuffs, alſo a magazine for corn, which is delivered out to the miners of the Hartz foreſt, always at a fixed price. It is 16 miles S.W. of Goſlar. Long. 0. 33. E. Lat. 51. 50. N.

OSTERODE, a town of Pruſſia, in the province of Oberland, with an ancient caſtle, ſituate on the Dribentz, 65 miles S.E. of Dantzic, and 70 S.S.W. of Königſberg.

OSTERWIECK, a town of Lower Saxony, in the principality of Halberſtadt. It has ſeveral woollen manufactures, and is ſituate on the Ilſe, 13 miles W. of Halberſtadt, and 15 N.E. of Goſlar. Long. 10. 52. E. Lat. 52. 10. N.

OSTIGLIA, a town of Italy, in the Mantuan, ſeated on the Po, 15 miles E. of Mantua. Long. 11. 8. E. Lat. 45. 7. N.

OSTINGHAUSEN, a town of Weſtphalia, ſituate on the Alſt, eight miles W. of Lipſtadt.

OSTROGOTHIA, the eaſtern part of Gothland, in Sweden.

OSWALD, St. a village in Northumberland, on the Picts' Wall, N. of Hexham, by ſome called Heavensfield, on account of Oſwald's total defeat of Cedwall, a Britiſh uſurper, who was killed on the firſt onſet. Here Oſwald, who was afterward ſainted, ſet up the firſt croſs in the kingdom of Northumberland.

OSYTH, St. a village in Eſſex, nine miles S.E. of Colcheſter. Here are the remains of an ancient monaſtery, now the ſeat of the Earl of Rochford.

OTAHA, one of the Society Iſlands, in the South Pacific Ocean. It lies N. of Ulitea; and is divided from it by a ſtrait, which, in the narroweſt part, is not more than two miles broad. This iſland is ſmaller and more barren than Ulitea, but has two very good harbours.

OTOQUE, an iſland of South America, in the bay of Panama. Long. 81. 10. W. Lat. 7. 50. N.

OTTENDORF, a town of Lower Saxony, in the duchy of Saxe Lauenberg, ſituate on the Meden, 24 miles N. of Stade. Long. 8. 20. E. Lat. 58. 53. N.

OTTENSHEIM, a town of the archduchy of Auſtria, on the N. ſide of the Danube, 5 miles W.N.W. of Lintz, and 16 S.W. of Freiſtatt.

OTTONA, or Ortona, an epiſcopal town of Naples, in Abruzzo Citeriore, ſeated on the gulf of Venice, 10 miles N. of Lanciano, and 43 E. of Aquileia. Long. 14. 50. E. Lat. 42. 28. N.

OTTWEILER, a town of Germany, in the circle of Upper Rhine, and principality of Naſſau Saarbruck, with a caſtle, 40 miles S.E. of Treves.

OUDE, a province of Hindooſtan Proper, ſubject to a nabob, whoſe dominions lie on both ſides of the Ganges, occupying (with the exception of the diſtrict of Rampour) all the flat country between that river and the northern mountains, as well as the principal part of that fertile tract lying between the Ganges and Jumna, known by the name of Dooab, to within 40 miles of the city of Delhi. Oude and its dependencies are eſtimated at 360 miles in length from E. to W. and in breadth from 150 to 180. The nabob is in alliance with the Britiſh; and a brigade of the Bengal army is conſtantly ſtationed on his weſtern frontier; which anſwers the purpoſe of covering Oude as well as Bengal, and of keeping the weſtern ſtates in awe; and, in conſideration of this, the nabob pays an annual ſubſidy of 420,000l. His capital is Lucknow.

Oude, an ancient city of Hindooſtan Proper, in the province of Oude, the remains of which are ſeated on the Gogra, nearly adjoining Fyzabad. It is ſaid to have been the firſt imperial city of Hindooſtan, and the capital of a great kingdom, 1200 years before the Chriſtian era. It is frequently mentioned in the Mahaberet, a fameus Hindoo work in Sanſcrit, under the name of Adjudiah. But whatever may have been its former magnificence, no traces of it are left. It is conſidered as a place of ſanctity; and the Hindoos frequently come hither, in pilgrimage, from all parts of India.

OUDENBURG, a town of Auſtrian Flanders, eight miles S.E. of Oſtend, and ten W. of Bruges. Long. 3. 0. E. Lat. 51. 9. N.

OVEN (*Encycl.*). By a miſtake in the alphabetical arrangement, that article is placed after the article Overbury. The ovens uſed by private families are uſually made on a more diminutive ſcale, of caſt or hammered iron, and ſome are heated by the ſame fire which ſerves for the cooking of other proviſions.

Among the ovens of this conſtruction, that of Mr. Powers, who obtained for it a patent in 1801, deſerves to be noticed. In Pl. 40. it is given to the ſcale of $\frac{1}{2}$ an inch to the foot, and one foot deep. Fig 1. repreſents the oven detached, ſo conſtructed as to be ſet over a laundry, or any other ſmall ſtove. Fig. 2, repreſents the oven and hot cloſet complete. Fig. 3, is the inſide view of fig 2 A, the hot cloſet, which is gradually heated to any degree, by means of the large valve, in the chimney G F, is the ſplitter, ſo called becauſe it divides equally the heat of the fire, and throws it up the flues *a*, *a*. and heats both the oven and hot cloſet. In caſe the ſplitter ſhould retain too great a heat for the oven B; *b* is a valve for the reception of air, which may be regulated at option. H, is the ſmall valve (fig. 8), made round, and fixed about two inches from the front of the oven, with holes in the ſides, to ſecure it from the ſoot falling into the oven; the uſe of this valve is in caſe any nauſeous ſcent may ariſe from baking; a current of air paſſes through the ventilator C, and carries the ſcent into an open chamber I. The large valve is about twelve inches from the extremity of the oven. K, is the ſcraper, a piece of iron, carried over the hot cloſet, which when pulled out by the two handles *d*. *d*. ſcrapes the ſoot which adheres to the top, and carries it down the flues into an open chamber L. and is ſwept out of the doors E, E, by a bruſh. C, the furnace, which is about eight inches ſquare at bottom, and regularly paſſed up the ſides, front and back. *e*, *e*, *e*, *e*, are baking tins. D, the cinder-hole. Fig. 4, is a baker's oven, ſimilar in conſtruction to the former one; but with theſe exceptions it is four feet long, two deep, and two and a half high, with three ovens, two of which are regulated by ventilators at bottom. LL, is an open chamber, to prevent too great or ſudden heat from the ſplitter. Fig. 6, the ventilator, which is turned by the handle *f* to enable *g* to admit or ſecure any quantity of air. Fig. 7, the large valve, which is placed in the chimney G, and acts as a damper, to graduate the heat to the hot cloſet; it is made with ſheet-iron, like the oven, the ſize of the oven-pipe, turned by a ſtrong thick wire handle in its centre. Fig. 8, is on the ſame conſtruction, except being cloſed at the top, and holes in the ſides already ſpecified, and rendered, when down, air-tight by two pieces of iron on each ſide, *i*, *i*. The ſplitter is formed of ſheet-iron, as in fig. 5.

In the year 1800, the Society for the Encouragement of Arts, &c. conferred a bounty of fifteen guineas on Mr. S. Holmes, for his invention of an oven, which is heated without flues. The whole conſiſts of a caſt-iron oven, from the ſide of which a ſolid piece of that metal projects into the fire, where it conſtantly remains; and, on becoming red hot, communicates to the whole oven a degree of heat ſufficient for baking bread, while it at the ſame time aſſiſts the fire in roaſting meat.

In the common iron ovens, the heat is communicated by means of flues, which waſte a conſiderable part of the fire in its paſſage, and likewiſe require much labour to keep them of an uniform heat. The contrivance laſt alluded to, is intended to ſupply this and other inconveniences: and Mr. Holmes ſtates, that his oven uniformly remains at a baking heat, without any additional expence, or trouble. We underſtand, however, that ſuch improvement is by no means new; and that a ſimilar method of ſaving fuel has for ſeveral years been practiſed in the weſt of England.

Cottage-OVEN, a cheap and ſimple oven of a ſquare form, made of ſheet iron, and fixed in brick work; with a cloſed fire-place beneath, calculated to confine the heat and conſume the ſmalleſt poſſible quantity of fuel.

Although we have thought it incumbent on us to give a place in this work to the different inventions of ingenious men, yet we have in general cautiouſly avoided giving any opinion on their merits. Juſtice to the public, however, requires that we ſhould caution thoſe who will not take the trouble of *examining for themſelves*, at leaſt to rely on the aſſurances of philoſophical, diſintereſted, and impartial men, who have made *laborious experiments* purely for *their* benefit, rather than on the boaſtings of advertiſing ſhopkeepers; many of whoſe ovens and fire-places are certainly conſtructed on *falſe principles*.

Count Rumford, in the firſt part of his tenth eſſay, has recommended ſmall iron ovens for cottagers, and neſts of ſmall ovens for the kitchens of families. "Of theſe," he ſays, in the ſecond part, "I have had occaſion to know ſince, that ſeveral perſons have adopted them. I have likewiſe been made acquainted with the reſults of many of the trials that have been made of them, and with the complaints that have been brought againſt them. As I am more than ever of opinion that iron ovens will always be found uſeful when they are properly conſtructed and properly managed, I ſhall in this place add a few obſervations to what I have already publiſhed concerning them.

"And in the firſt place I muſt obſerve, that a ſmall iron oven ſtands in need of a good door; that is to ſay, of a door well contrived for confining heat; and the ſmaller the oven is, ſo much the more neceſſary is it that the door ſhould be good.

"The door muſt not only fit againſt the mouth of the oven with accuracy, but it muſt be compoſed of materials through which heat does not eaſily make its way.

"An oven door conſtructed of a ſingle ſheet of plate iron, will not anſwer, however accurately it may be made to fit the oven, for the heat will find its way through it, and it will be carried off by the cold air of the atmoſphere, which comes into contact with the outſide of it. The bottom of the oven may be made hot by the fire under it; but the top and ſides of it cannot be properly heated, while there is a continual and great loſs of heat through its door. But an oven, to perform well, muſt be very equally heated in every part of it.

"If the flame and ſmoke of the fire be made to ſurround an oven on every ſide, and if the fire be properly managed, there can be no difficulty in heating an iron oven equally, and of keeping it at an equal temperature, provided the loſs of heat by and through the door be prevented.

"If the door be conſtructed of ſheet iron, it muſt either be made double, or it muſt be covered on the outſide with a pannel of wood. By a double door, I do not here mean two doors, but one door conſtructed of two ſheets or plates of iron, placed parallel to and at a certain diſtance from each other; and ſo conſtructed, that the air which is between the two plates may be ſhut up and confined. The two plates or ſheets of iron, of which the double door of an oven is made, muſt not touch each other, except at their edges (where they muſt join, in order to their being faſtened together); for were they to lie one flat upon the other, the heat would paſs too rapidly through them, notwithſtanding there being two of them; but it is not neceſſary that they ſhould be further aſunder than an inch, or an inch and a half. One of the plates may be quite flat, and the other a little convex. The end of the oven muſt be made quite flat, or level, ſo as to be perfectly cloſed by a flat ſurface placed againſt it. The door is that flat ſurface; and the greateſt care muſt be taken that it apply with accuracy, or touch the end of the oven in every part, when it is preſſed againſt it; for if any opening be left, eſpecially if it be near the top of the oven, the hot air in the oven will not fail to make its eſcape out of it.

"It never ſhould be attempted to make the door of an oven or of a cloſed fire-place fit, by cauſing it to ſhut into a rabbet. That is a very bad method; for beſides the difficulty of executing the work with any kind of accuracy, the expanſion of the metal with heat is very apt to derange the machinery, when the door is ſo conſtructed.

"From what has been ſaid of the neceſſity of cauſing the door of an oven to fit with accuracy, it is evident that care muſt be uſed to place its hinges properly: and I have found, by experience, that ſuch a door is cloſed more accurately by two turn-buckles, placed at a proper diſtance from each other, than by a ſingle latch. I beg pardon for repeating what has already been ſaid elſewhere."

The Count adds the following directions as to the management of the fire in heating an iron oven. "If," ſays he, "a certain degree of attention is always neceſſary in the management of fire, there is certainly nothing on which we can beſtow our care that repays us ſo amply; and with regard to the trouble of managing a fire in a cloſed fire-place, it is really too inconſiderable to deſerve being mentioned.

"Whenever a fire is made under an iron oven, in a cloſed fire-place, conſtructed on good principles, there is always a very ſtrong draft or preſſure of air into the fire-place; and this circumſtance, which is unavoidable, renders it neceſſary to keep the fire-place door conſtantly cloſed, and to leave but a ſmall opening for the paſſage of the air through the aſh-pit regiſter. The fire-place too ſhould be made very ſmall, and particularly the bottom of it, or the grate on which the fuel burns.

"If any of theſe precautions are neglected, the conſequences will be—the rapid conſumption of the fuel—the ſudden heating and burning of the bottom of the oven—and the ſudden cooling of the oven as ſoon as the fire-place ceaſes to be filled with burning fuel.

"It is a fact which ought never to be forgotten, that, of the air that forces its way into a cloſed fire-place, that part only which comes into actual contact with the burning fuel, and is decompoſed by it in the proceſs of combuſtion, contributes any thing to the heat generated; and that all the reſt of the air that finds its way into and through a fire-place, is a thief, that ſteals heat, and flies away with it up the chimney.

"The draft occaſioned by a fire in a cloſed fire-place being into the chimney and not into the fire, cold air is as much diſpoſed to ruſh in over the fire, as through it, and it violently forces its way into the hot fire-place by every aperture, even after all the fuel is conſumed, carrying the heat away with it up the chimney and into the atmoſphere. It even makes its way between the bars of the grate whenever they are not quite covered with burning fuel: hence it appears how neceſſary it is to make the grate of a cloſed fire place ſmall, and to give to that part of the fire-place which is deſtined for holding the fuel, the form of an inverted truncated cone or pyramid, or elſe to make it very deep in proportion to its length and width.

"But the prevention of the air from finding its way through the fire-place without coming into contact with the burning fuel, is not the only advantage that is derived from conſtructing cloſed fire-places in the manner here recommended; it ſerves alſo to increaſe the intenſity of the heat

in that part of the fire-place which contains the fuel, which tends very powerfully to render the combuſtion of the fuel complete, and conſequently to augment the quantity of heat generated in that proceſs.

"To prevent the bottom of the oven (or boiler) from being too much affected by this intenſe heat, nothing more is neceſſary than to make the fire-place ſufficiently ſmall, and to place it at a ſufficient diſtance below the bottom of the oven. It will be indiſpenſably neceſſary however with ſuch a (ſmall) fire-place, ſituated far below the bottom of an oven, to keep the fire-place door well cloſed, otherwiſe ſo much cold air will ruſh in over the fire, that it will be quite impoſſible to make the oven hot.

"I have found by recent experiments, that a fire-place in the form of an oblong ſquare or priſm, ſix inches wide, nine inches long, and ſix inches deep, is ſufficient to heat an iron oven eighteen inches wide, twenty-four inches long, and from twelve to fifteen inches in height; and that the grate of this fire-place ſhould be placed about twelve inches below the bottom of the oven. More effectually to prevent the fire from operating with too much violence upon any one part of the bottom of the oven, the brick-work may be ſo ſloped outwards and upwards on every ſide from the top of the burning fuel to the extreme parts of the ſides and ends of the bottom of the oven, that the whole of the bottom of the oven may be expoſed to the direct rays from the fire.

"In ſome caſes I have ſuffered the flame to paſs freely up both ſides of the oven to the top of it, and then cauſed it to deſcend by the end of the oven to the level of its bottom, or rather below it, and from thence to paſs off by an horizontal canal into the chimney; and in other caſes I have cauſed it to paſs backwards and forwards in horizontal canals by the ſides of the oven, before I permitted it to go off into the chimney. Either of theſe methods will do very well, provided the ſmoke be made to deſcend after it has left the top of the oven, till it reaches below the level of the bottom of it, before it is permitted to paſs off into the chimney; and provided the canal by which the ſmoke paſſes off be furniſhed with a damper.

"In ſetting an oven, proviſion ſhould be made, by leaving holes, to be ſtopped up with ſtoppers, for occaſionally cleaning out all the canals in which the ſmoke is made to circulate; and in order that theſe canals may not too often be choked up with ſoot, they ſhould never be made leſs than two inches wide, even where they are very deep or broad; and where they are not more than four or five inches deep, they ſhould be from three to four inches wide, otherwiſe they will be very often choked up with ſoot.

"To clean out the flues of an oven, roaſter, or large fixed boiler, a ſtrong cylindrical bruſh may be uſed, which may have a flexible handle made of three or more iron wires, about one eighth or one hundredth of an inch in diameter, twiſted together.

"Holes cloſed with fit ſtoppers muſt of courſe be left in the brick-work for occaſionally cleaning out theſe flues.

"If the iron door of an oven be made double, the outſide of it may with ſafety be japanned black or white, which will prevent its ruſting, and add much to the cleanlineſs and neatneſs of the appearance of the kitchen.

"To ſave expence, ſmall ovens for poor families may be cloſed with flat ſtones, or with tiles; and the fire-place door for ſuch an oven, and its aſh-pit regiſter, may be made of common bricks placed edgewiſe, and made to ſlide againſt thoſe openings.

"There is a circumſtance reſpecting the iron ovens I am deſcribing, which is both curious and important. The fire-place for an oven of the ſmalleſt ſize ſhould be nearly as capacious as one which is deſtined for heating a much larger oven; and I have found by repeated experiments, that a neſt of four ſmall ovens, ſet together, and heated by the ſame fire, will require but very little more fuel to heat them than would be neceſſary to heat one of them, were it ſet alone. An attentive conſideration of the manner in which the heat is applied—of the ſmallneſs of the quantity, in all caſes, that is applied to the heating of the contents of the oven—and the much greater quantity that is expended in heating the fire-place and the flues, will enable us to account for this curious fact, in a manner that is perfectly philoſophical and ſatisfactory.

"A *cottage-oven*, eleven inches wide, ten inches high, and ſixteen inches long, will require a fire-place five inches wide, five inches high, and ſeven inches long; and for four of theſe ovens, ſet together in a neſt, the fire-place need not be more than ſix inches wide, ſix inches high, and eight inches long.

"I have in my houſe at Brompton, two iron ovens, each eighteen inches wide, fourteen inches high, and twenty-four inches long, ſet one over the other, and heated by the ſame fire; and their fire-place is only ſix inches wide, ſix inches high, and nine inches long.

"If the fire-place of an iron oven be properly conſtructed, and if the fire be properly managed, it is almoſt incredible *how ſmall a quantity of fuel* will anſwer for heating the oven, and for keeping it hot. But if the fire-place door be allowed to ſtand open, and a torrent of cold air be permitted to ruſh into the fire-place and through the flues, it will be found quite impoſſible to heat the oven properly, whatever may be the quantity of fuel conſumed under it; and neither the baking of bread, nor of pies, nor any other proceſs of cookery, can be performed in it in a ſuitable manner.

"A very moderate ſhare indeed of ingenuity is required in the proper management of a fire in a cloſed fire-place, and very little attention; and as it requires no bodily exertion, but ſaves labour, and expence, and anxiety; and as moreover it is an intereſting and amuſing occupation, attended by no diſguſting circumſtance, and productive of none but pleaſing, agreeable, and uſeful conſequences; we may, I think, venture to hope, that thoſe prejudices which prevent the introduction of theſe improvements, will in time be removed."

Count Rumford next ſhews that ovens may be uſed in boiling and ſtewing, and alſo in warming rooms, it being neceſſary, in the latter caſe, merely to leave the door of the oven open.

Roaſting-OVEN, an invaluable contrivance of Count Rumford's, calculated *either for roaſting or baking* in private families.

"Roaſters on this ſimple conſtruction (without blow-pipes—ſee ROASTER), which," ſays Count Rumford, "I ſhall call *roaſting-ovens*, were at firſt made with flat bottoms, but of late they have been made cylindrical; and as I think the cylindrical form much the beſt in many reſpects, I ſhall give a deſcription of one of them.

"In Pl. 40. fig. 1, repreſents a front view of a cylindrical roaſting-oven with its door ſhut. The front end of the large cylinder, which conſtitutes the body of this oven, inſtead of being turned over a ſtout wire, is turned outwards, and rivetted to a flat piece of thick ſheet iron, which in this figure is diſtinguiſhed by vertical lines, and which I ſhall call the front of the oven.

"The door of the oven is diſtinguiſhed by horizontal lines. The general form of the front of the oven is circu-

lar; but it has two projections on oppoſite ſides of it, to one of which the hinges of the door and to the other the turnbuckles for faſtening it when it is cloſed, are faſtened. It has another projection above, which ſerves as a frame to the door-way, through which a bruſh is occaſionally introduced for the purpoſe of cleaning the flues. On one ſide of this projection there is a ſmall hole, which is diſtinguiſhed by the letter *a*, through which the handle or projecting axis of the circular regiſter of the vent-tube (which is not ſeen) paſſes.

"In the body of the oven, at the diſtance of half its ſemi-diameter below its centre or axis, there is an horizontal ſhelf, which is fixed in its place, not by reſting on ledges, or by being rivetted to the ſides of the oven, but by its hither end being turned down, and firmly rivetted to the vertical plate of iron, which I have called the front of the oven. This ſhelf, which ſhould be made double to prevent the heat from paſſing through it from below, muſt not reach quite to the farther end of the oven; there muſt be an opening left, about one inch in width, between the end of it and the further end of the oven, through which opening the air heated below the ſhelf will make its way upwards into the upper part of the oven.

"From what has been ſaid, it will be evident that the hollow ſpace below the ſhelf we have juſt been deſcribing, which I ſhall call the air-chamber, is intended to ſerve in lieu of the blow-pipes of a roaſter; and this office it will perform tolerably well, provided means are uſed for admitting cold air into it, from without, occaſionally. This is done by means of a regiſter, which is ſituated at the lower part of the vertical front of the roaſter, a little below the bottom of the door. This regiſter is diſtinctly repreſented in figure 2.

"Fig. 2, which repreſents a vertical ſection of the oven through its axis, ſhews the (double) door of the roaſter ſhut, and the two dripping-pans, one within the other, ſtanding on the ſhelf we have juſt been deſcribing, and a piece of meat above them, which is ſuppoſed to be laying on a gridiron placed in the ſecond dripping-pan. The regiſter of the air-chamber, below the ſhelf, which ſupplies the place of the blow-pipes, is repreſented as being open; and a part of the ſteam-tube is ſhewn, through which the ſteam and vapour are driven out of the oven, by the blaſt of hot air from the air-chamber.

"The cylinder which conſtitutes the body of the oven, is two feet long, and is ſuppoſed to be of caſt-iron. It is caſt with a flanch, which projects outwards about one inch at the opening of the cylinder, by means of which flanch it is attached, by rivets, to the front of the oven, which, as I have already obſerved, muſt be made of ſtrong ſheet-iron, which may be near one eighth of an inch in thickneſs.

"As the ſhelf is not attached to the ſides of the oven, but to its front, the body of the oven need not be perforated, except in one place, namely, where the ſteam goes off; and as the bottom, or further end of the cylinder, and the flanch at its hither end, and the cylinder itſelf, are all caſt at the ſame time, and as the form of the oven is ſuch as will deliver well from the mould, it appears to me that the article might be afforded at a low price, eſpecially in this country, where the art of caſting in iron is carried to ſo high a pitch of perfection.

"The ſhelf might eaſily be made of caſt-iron, as might alſo the dripping-pans and the double door of the oven; and I ſhould not be ſurpriſed if Engliſh workmen ſhould ſucceed in making even the front of the oven, and the regiſter of the air-chamber, and every other part of the machinery, of that cheap and moſt uſeful metal.

"If the ſhelf be made of caſt-iron, to ſave the trouble of rivetting in making it double, it may be covered by an inverted ſhallow pan of caſt-iron, and in the bottom of this pan, which will be uppermoſt when it is inverted, there may be caſt two ſhallow grooves both in the direction of the length of the pan, and conſequently parallel to each other, in which grooves (which may be ſituated about an inch from the ſides of the inverted pan) two parallel projections at a proper diſtance from each other, caſt at the bottom of the lower dripping-pan, may paſs. Theſe projections paſſing freely in the grooves which receive them, will ſerve to keep the dripping-pan ſteady in its proper direction when it is puſhed into or drawn out of the oven.

"To increaſe the effect of the air-chamber when this oven is uſed for roaſting meat, a certain quantity of iron wire in looſe coils, or of iron turnings, may be put into the air-chamber.

"The door of the oven, which is very diſtinctly repreſented in the figure 2, ſhould be about nineteen inches in diameter, if the oven is eighteen inches in diameter within, or in the clear. In this figure the internal edge or corner of the hither end of the body of the oven is indicated by a dotted circle, and the poſition of the ſhelf is pointed out by an horizontal dotted line.

"In faſtening the vertical plate, which forms the front of the oven, to the projecting flanch at the hither end of the cylindrical body of the oven, care muſt be taken to beat down the heads of the rivetting nails in front, otherwiſe they will prevent the door of the oven from cloſing it with that nicety which is requiſite.

"In ſetting this roaſting-oven, the whole of the thickneſs of the vertical front of it ſhould be made to project forward before the brick-work. The fire-place doors, aſh-pit, regiſter-door, damper in the chimney, &c. ſhould be ſimilar in all reſpects to thoſe uſed for roaſters; and the flues ſhould likewiſe be conſtructed in the ſame manner.

"I have been the more particular in the deſcription of this roaſting-oven, becauſe I think it bids fair to become a moſt uſeful implement of cookery. As an oven it certainly has one advantage over all ovens conſtructed on the common principles, which muſt give it a decided ſuperiority; by means of the air-chamber and the ſteam-tube it may be kept clear of all ill-ſcented and noxious fumes, without the admiſſion of cold air."

Count Rumford thus ſpeaks of the difference between a roaſting oven and a roaſter; (ſee ROASTER).

"From the account of the roaſting-oven that has juſt been given," ſays he, "it might be imagined that it poſſeſſes all the properties of the roaſter, and in the ſame degree; but this is not the caſe. The eſſential difference between them is this; the blow-pipes of the roaſter being ſurrounded by the flame on all ſides, they are heated above as well as below, and the air in paſſing through them is much more expoſed to the heat than it is in paſſing through the air-chamber of the roaſting-oven. The particles of air which happen to come into contact with the bottom of the oven will of courſe be heated; but if, in conſequence of their acquired lightneſs on being heated, they riſe upwards to the top of the air-chamber, they will there come in contact with the bottom of the ſhelf, which, inſtead of communicating more heat to them, will deprive them of a part of that which they bring with them from below; but circumſtances are very different in the blow-pipes of a roaſter; in them, the particles of air acquire continually additional heat from every part of the ſurface with which they come into contact in their paſſage through the tube.

"From this view of the ſubject, we ſee how very eſſential

it is that the ſhelf of a roaſting-oven ſhould be ſo compoſed or conſtructed, that heat may not readily find its way through it; and we ſee likewiſe how neceſſary it is to manage the regiſters of blow-pipes and of air-chambers with proper care."

We earneſtly recommend theſe and all other inventions which Count Rumford has announced to the public after the moſt deciſive experiments to aſcertain their properties: and we add this important caution—*not to deviate a tittle* from the inſtruction given in his admirable eſſay, as to their form, or the manner of their being placed, which the workmen employed are continually *propoſing*, and often *obſtinately bent upon*.

OVERFLACKEE, an iſland of the United Provinces, in Holland, between the mouths of the Maeſe. Meliſand is the principal town.

OVERSEER, a perſon of authority who ſuperintends thoſe who are employed as labourers in any art or manufacture. The term however is uſed in other ſenſes, according to the nature of the ſuperintendance.

OVERSEERS OF THE POOR, are perſons employed to carry the poor laws into effect in the different pariſhes wherein they are appointed. Their duties are remarkably well pointed out in the following charge to overſeers of the hundred of Stoke, in the county of Bucks, by Thomas Bernard, eſq. publiſhed in the Reports of the Society for bettering the Condition of the Poor. Addreſſing the party himſelf, he ſays,

"The office, to which you are this day appointed, is of no ſmall importance; inaſmuch as the welfare of a conſiderable part of our fellow-ſubjects depends upon the due execution of it. It is your duty, ſir, to be the Guardian and Protector of the Poor;—and, as ſuch, to provide employment for thoſe who can work, and relief and ſupport for thoſe who cannot; to place the young in a way of obtaining an honeſt livelihood by their induſtry, and to enable the aged to cloſe their labours and their life in peace and comfort.

"In the execution of this office, it is your duty to conſider how you may beſt improve the ſituation of the poor in your pariſh, ſo as to leſſen the calls for parochial relief, and thereby to diminiſh your pariſh rate.——In this reſpect, much may be done by occaſional aid and encouragement to pariſhioners with large families; much, by means of regular employment for children, either at home or in ſchools of induſtry, ſo as to fit them to be placed out in ſervice at an early age;—and much, by a judicious management of your poor-houſe, if you have one, and by making a proper diſtinction and ſeparation between the honeſt and induſtrious, who are driven thither by age, infirmity, or misfortune, and the idle and profligate, whoſe looſe and vicious habits of life have made them a burthen and a diſgrace to their pariſh.

"You are, ſir, within the ſpace of 14 days, to receive the books of aſſeſſments and of accounts from your predeceſſors, together with ſuch money and materials as ſhall be in their hands; and, if any balance is due to them, you are to pay it out of the firſt monies that come to your hands.

"In conjunction with the church-wardens of your pariſh, you are, by a pariſh rate, to raiſe money, to purchaſe a ſufficient ſtock of materials for ſetting the poor to work, and to ſupply competent ſums for the relief of the lame, impotent, old, blind, and ſuch among you as are poor and unable to work, and for putting out poor children apprentices.

"In making the poor's-rate, it is neceſſary that a majority of the church-wardens and overſeers ſhould concur; and it is your duty, to make an equal and impartial rate, without favour or affection, upon 'every occupier of lands, houſes, tithes, mines, and ſaleable underwoods in your pariſh.' When ſuch rate is made, it is to be approved and ſigned by two juſtices, dwelling in or near your pariſh; and, on the Sunday after, to be publiſhed in your pariſh church.

"In caſe the rates, ſo made, ſhall not be regularly paid, you may obtain a ſummons for the perſon making default to appear before two neighbouring juſtices; who may, by warrant, authorize ſuch rates to be raiſed by diſtreſs in your pariſh; or, if ſufficient goods of ſuch perſon making default be not found in your pariſh, then, upon application to one juſtice, to be levied in any other county, or diſtrict, where the defaulter may have property.

"With regard to the poor's-rate, we know that there are inſtances, in ſome parts of England, where it has been levied upon the poor; we mean, by the poor, thoſe who have not the advantage of any profeſſion, trade, property, or income, nor other means of ſupport, except their daily labour; and who have only a cottage, a little garden, and a few articles of furniture, merely ſuch as are neceſſary for them and their families; and we think it our duty to obſerve, that, to charge ſuch poor-perſons to the rate at all, appears to us to be directly contrary to the authority, under which the rate is made; viz. the ſtatute of Elizabeth, which was paſſed ſoon after the diſſolution of the monaſteries, and entitled 'An Act for the Relief of the Poor;' an act, in which, if cottages had been intended to have been included, they would have been expreſsly named, as well as houſes; from which they were then conſidered as totally different, and diſtinguiſhable in point of law.

"It is impoſſible to read that ſtatute without perceiving that it was never intended to compel the poor, who are frugal and induſtrious, to ſupport thoſe who are not ſo; but that there is, throughout, a diſtinction made between the claſs of men, not having income or property, who are to be entitled to relief under it, and thoſe who from the income of their property, profeſſion, trade, or occupation, are to contribute to that relief:—that by the poor are intended the labouring cottagers; who, if out of employment, are, under that act, to have work found them;—if lame, impotent, old, or blind, and unable to work, are to receive pecuniary or other relief;—who, if habitations are wanting, are to have them erected at the charge of the pariſh;—and whoſe children, if unemployed, are to be ſet to work, and, at a fit age, to be placed out apprentices in ſervice, or to a trade.

"But, whatever may be the opinion as to the law, there can be no doubt in point of prudence, that while the day labourer, who has children, is exerting himſelf to maintain his family without parochial aid, it is a dangerous experiment to attempt to make him contribute to the ſupport of your other poor, with the probable, or even a poſſible, conſequence of driving a large family on the pariſh.

"There is, however, one claſs of labouring men, who have ſtill a ſuperior claim to exemption from pariſh rates;—the Members of Friendly Societies, who are acquiring for themſelves, out of the ſavings of their own induſtry, an eligible and honourable proviſion, independent of the poor laws. As theſe ſocieties, particularly where they enjoy the advantage of having their rules framed and confirmed according to law, have the effect of greatly reducing the poor's-rate, it is required of you, as an act, not merely of juſtice, but of prudence, not to endeavour, in any caſe, to compel ſuch labouring men, being members of friendly ſocieties eſtabliſhed according to law, to contribute to the ſupport of the other poor of their own pariſh.

"In applying the rate for the relief of the poor, we requeſt that you will attend to the permanent improvement of their condition, rather than to the little expedient or economy of the moment.—If a poor man's family is viſited by ſickneſs

or calamity, it is better for your parish that he should receive a timely supply of medical and other necessary assistance at home, and be re-established in the power of maintaining himself and his family by his labour, than that they should be neglected, until it becomes necessary to move them into the poorhouse, where they may probably remain, a burthen to the parish, for many years.—If the poor of your parish want employment, there is more economy in supplying them with instruction, encouragement, spinning-wheels, wool, and other means of earning a livelihood, than in leaving them to be oppressed by poverty, and by that languid and desponding indolence, which is often rather the misfortune than the vice of the poor: with the consequence of being obliged to maintain the family afterwards, at ten times the expence that would have been incurred at first, by a timely supply of relief to themselves. Upon this head, we have one earnest request to make; that whatever is made by their labour, they may have the whole produce of it, without any deduction, on any pretence whatever.—The earnings of the poor should be sacred and inviolate, in order to encourage them to work, and to exempt the character of their employers from the imputation of interested motives.

"Upon the authority of the case of the King and North Shields (20 Geo. III.) we have, where parents have applied for support for their infant children under seven years of age, ordered them relief at home, without removing the parents or children into the parish workhouse; adopting the humane and judicious sentiments, which Mr. Justice Buller delivered on that occasion:—that it would be injurious to parishes, if, "when one of a numerous family wants relief, the whole must go to the parish workhouse;" and that it would be very unjust "that the parish should be entitled to the labour of a whole family, because one of them might want relief."—Any difficulties, however, that did exist on this subject, have been removed by the act (36 Geo. III. cap. 23.) which enables magistrates to make special orders for the relief of industrious poor persons at home.

"It is your duty, sir, to see that there are proper habitations for the poor of your parish; and if, by the decay of cottages, or by the increase of population, more habitations are wanted for them, you are, with the leave of the lord of the manor, to erect cottages for them at the parish expence, on the waste or common, within your parish.

"After every thing is done for the encouragement and protection of the deserving poor, there remains another class, which it will be necessary to reform by punishment; I mean those drones of society, idle and disorderly persons, whom the law has described as vagrants, rogues, and vagabonds. It is due to the honest exertions of the industrious cottager, that, while he receives aid and encouragement, they should not escape correction; that every distinction should be made between him and those who wander about, endeavouring to subsist, without labour, on the industry of others; of whom many have deserted their families, and almost all have quitted the place, or situation, where their services might have been useful, and where they ought to have been employed.—In bringing these to punishment, with a view to amendment, it will be prudent for you to apply for directions to this bench, where you have found regular attendance and assistance from the magistrates for the space of nine years; and it will be merciful so to select the objects, as that the punishment of few may have its effect in the reform of many.

"As in your conduct towards the poor out of the workhouse, so, in respect of those within its walls, there should be a marked distinction between the industrious and the idle, and between the orderly and the profligate. There is nothing in the internal regulation of this country, more subversive of its credit, or more inimical to its prosperity, than the uniform and unvaried treatment, which the best and the worst of our fellow-subjects receive in a parish workhouse. In that place it is of the utmost importance, not merely to the poor persons who are driven thither by the tempest of fortune, but to the very well-being of the country itself, that there should be a decisive boundary—a line of separation—drawn between the industrious and honest poor, who are suffering under a calamity from which neither you nor we can presume to be exempt, and those vicious and abandoned characters, which are the pests of society, and the objects of punishment.

"In administering relief, we enquire into the industry and character of the person who applies. We have found no small benefit in adhering strictly to this rule; and we confidently recommend to you, as an encouragement to the energy and good habits of the poor, not to give to the idle the same encouragement, as is due to the honest and industrious labourer, suffering under sickness or misfortune. If it appears that the person who applies has exerted himself honourably and diligently in his situation, it is your duty sir, and it is the interest of your parish, that he be relieved, kindly, and liberally.

"There is an act of parliament, which enables you, if you are so disposed, to farm your workhouse.—It is possible, that a farmed workhouse, confided to a deserving person, like absolute power in the best and most virtuous hands, may be the instrument of good; but there is no instance whatever, in which the duty and interest of the person intrusted are so completely in opposition to each other, as in that of the farmer of a parish workhouse. For, while his duty should direct him to improve the state of the workhouse, it is his interest to keep it in such a condition, as to deter any competitor from offering for it, at the end of the year. The necessary consequence of this is the increase of parochial expences: and we find, from the different returns throughout the kingdom, that, where workhouses have been farmed, though there was some saving at first, yet in a few years the expences thereby have been greatly increased, and the poor's-rate accumulated to an alarming amount. Where, indeed, a principal land-owner, or land occupier, of a parish can be induced to contract for the parish workhouse, he has an interest in the permanent improvement of its condition, and in the diminution of the distresses of the poor; but where a vagrant speculating contractor visits your parish, with a view of making his incidental profit by farming your workhouse, we trust you will consider the Christian principle of doing as you would be done by: and that you will not confide the poor, whose Guardian and Protector it is your duty to be, to one, into whose hands you would not trust an acre of your land, or any portion of your own property.

"With regard to your *workhouse*, we have another observation to make, and that respects your parish children.—As you regard your own interest and their welfare, we entreat you to educate them out of the workhouse. You can do it with as little, and even less, expence to the parish; with much less annoyance to the old people in the workhouse, who are too often the sport of those little, unthinking, and uneducated creatures;—and with much more benefit to the children, who get earlier and more advantageous situations in service, and succeed better in life, proceeding from a parochial school or cottage, than from a workhouse.

"With regard to the removal of labourers belonging to other parishes, consider thoroughly what you may lose, and what the individual may suffer, by the removal, before you apply to us on the subject. Where you have had, for a long time, the benefit of their labour, and where all they want is a little temporary relief, reflect whether, after so many years spent in your service, this is the moment and the cause for

removing them from the ſcene of their daily labour to a diſtant pariſh. There are caſes, in which removals from one pariſh to another are proper and juſtifiable; but, in every inſtance, before you apply for an order of removal, conſider whether it is prudent; and, if prudent, whether it is juſt.

"Within four days after the appointment of your ſucceſſors, you are to produce your accounts before two of the neighbourhood juſtices for examination; and, within fourteen days after ſuch appointment, you are to deliver your books, materials for work, and balance of caſh, to the perſons appointed to ſucceed you.—If you ſhall have executed your office duly and conſcientiouſly, you will then quit it, with the bleſſings of the poor, the eſteem and reſpect of the other claſſes of ſociety, and with the approbation of your own conſcience."

We earneſtly recommend this charge to the notice of all Overſeers of the poor, as well as to thoſe who have the means of impreſſing theſe *moſt ſacred duties* on their minds.

OVERYSCHE, a town of Auſtrian Brabant, ſeated on the Yſche, ſix miles N.E. of Bruſſels, and 9 S.W. of Louvain. Long. 4. 30. E. Lat. 50. 53. N.

OUGEIN, a town of Hindooſtan Proper, in the province of Malway, capital of one of the Weſtern Mahratta chiefs. It is a place of great antiquity, 452 miles S.W. of Poonah. Long. 75. 56. E. Lat. 23. 26. N.

OULZ, a town of Piedmont, 12 miles W. of Suza. Long. 6. 46. E. Lat. 45. 20. N.

OUNDLE, a town in Northamptonſhire, with a market on Saturday; ſeated on the Nen, over which are two bridges, 26 miles N.E. of Northampton, and 83 N. by W. of London. Long. 0. 42. W. Lat. 52. 26. N.

OUREM, a town of Portugal, in Eſtremadura, with a caſtle, on a mountain between the rivers Leira and Tomar. Long. 7. 40. W. Lat. 39. 34. N.

OURIQUE, a town of Portugal, in Alentejo, remarkable for a victory obtained by Alphonſo, king of Portugal, over five Mooriſh kings, in 1139. The heads of theſe five kings are the arms of Portugal. It is 32 miles S.E. of Liſbon. Long. 8. 49. W. Lat. 38. 26. N.

OUSSORE, a town of the peninſula of Hindooſtan, in the Myſore country, taken by the Engliſh in July, 1792. It is 19 miles S.E. of Bangalore, and 69 E.N.E. of Seringapatam. Long. 77. 47. E. Lat. 12. 50. N.

OUTERIO, a town and fortreſs of Portugal, in Tralos-Montes, nine miles S.E. of Braganza, and 21 N.W. of Mirando de Douero. Long. 6. 37. W. Lat. 41. 55. N.

OWERRA, or OVEIRO, a town and territory of Guinea, in the kingdom of Benin. The air is unwholeſome, and the ſoil dry and lean; but there are ſeveral kinds of fruits, ſuch as bananas and cocoa nuts. Long. 6. 0. E. Lat. 6. 0. N.

OX, a general appellation for male black-cattle; but which ſtrictly denotes a caſtrated bull.

Having already treated, under differents heads, of the beſt mode of feeding and fattening oxen; and ſhewn their ſuperiority over horſes, under HUSBANDRY, we ſhall confine our obſervations, in the preſent article, to the moſt advantageous way of harneſſing and managing them, as beaſts of burthen, or *draught*.

The principle of draught depends, as Lord Somerville has juſtly obſerved, on the joint power of the neck and baſe of the horn. This object is effected in Portugal, by a long leather ſtrap, which is wrapped round the yoke; thence round the lower part of the horns; and is again faſtened to the yoke. Thus, the heads of oxen become more ſteady in performing their work, and the animals themſelves are rendered more tractable.

Another mode of working oxen, is that termed, by the head, which is practiſed in France, and repreſented in Pl. 38. fig. 1.

To afford a more complete idea of the manner in which the French oxen are faſtened to the bow, we have added an accurate front view of the upper part of the animals' heads; as ſuch method, in the opinion of Lord Somerville, is the beſt preparatory ſtep towards introducing that practiſed in Portugal. See fig. 2.

This method was a few years ſince introduced into Ireland, by Lord Shannon, with complete ſucceſs; two oxen thus harneſſed, being able to draw with great eaſe three tons in weight.

The moſt valuable breeds of theſe animals for draught, in this country, are thoſe of Suſſex, Devon, Herefordſhire, Glamorgan, and Pembrokeſhire; which, on account of their large ſize, are well calculated for labour, and juſtly preferred, in thoſe counties, to cart-horſes. The Suſſex oxen have beaten horſes at plough, in the deepeſt clays; and thoſe of Herefordſhire are reputed to be ſuperior in long journeys, for conveying chalk, or ſimilar heavy materials, over a hilly and flinty country. Although ſome prejudiced perſons may object that oxen are unfit for draught in mountainous ſituations, yet let it be remembered, as Mr. Comber pertinently remarks, ſee his "Real Improvements in Agriculture," &c. (8vo. 1772, 1s. 6d.) that in ſuch inſtances, "no draught can be well uſed;" and that the deſcending of ſteep hills is in all reſpects as hurtful to horſes as to oxen.—The Devonſhire cattle walk with uncommon ſpeed; and, if four or five horſes can till 100 acres of land, the ſame work might doubtleſs be managed equally well by a ſimilar number of the Devonſhire or Herefordſhire breeds, if they were trained and fed (particularly with a view to ſpeed) with the ſame care as horſes: the farmer would alſo ſave a conſiderable part of the expence in their food. For though, after being very hardly worked, they require a little corn, yet their keep, in all other reſpects, is much cheaper; and, if well ſhod, they will perform every kind of draught in the ſame manner as horſes: laſtly, they will pay for their labour; and, after being moderately worked, for 10 or 12 years, if properly managed, they will leave all the profit of their growth, in clear gain, to their owners. Beſides, ſhould an ox, from any unforeſeen accident, be lamed, or become blind or old, he may be fattened, and ſold at any time for a larger price than he originally coſt; becauſe theſe animals uniformly feed in a more kindly manner, and ſooner grow fat, after they have been worked for ſeveral years.—On the contrary, the value of a horſe decreaſes, after he attains the age of ſeven years; and, ſhould any accident happen, he becomes utterly uſeleſs.

Oxen, then, being of extenſive and permanent utility, deſervedly claim every attention from the humane and unbiaſſed huſbandman, particularly with reſpect to ſhoeing; as they will thus be enabled to walk and draw, both with greater ſpeed, and with ſuperior effect, when carefully ſhod. This operation is uſually performed by caſting them on their backs, when the farrier proceeds to affix the ſhoes, in a manner ſimilar to that practiſed on horſes. By ſuch attempts, however, they are liable to numerous accidents; for the prevention of which, an ingenious machine has been contrived, in order to ſecure the animal by means of ſhort poſts. On theſe, the fore or hinder legs are faſtened according to circumſtances; and thus the ſhoes are applied, ſo that it is almoſt impoſſible to injure the helpleſs creature. The curious reader will find two neat engravings of this uſeful contrivance, in the 26th vol. of *Annals of Agriculture*.

OZWICZIN, a town of Little Poland, 34 miles W. of Cracow. Long. 19. 10. E. Lat. 50. 10. N.

P.

PACEM, a town in the N. part of Sumatra, in the Eaſt Indies. Long. 97. 15. E. Lat. 5. 0. N.

PACHUCA, a town of Mexico, famous for its ſilver mines. Gemelli ſays, that in the ſpace of ſix leagues there are not leſs than a thouſand. One of them, called Trinity, is ſuppoſed as rich as any in Mexico, there having been taken from it in ten years' time only, above forty millions of ſilver. It is 45 miles N.N.E. of Mexico. Long. 100 4. W. Lat. 20. 32. N.

PACY, an ancient town of France, in the department of Eure, ſeated on the Eure, eight miles S. by E. of Vernon. Long. 1. 41 E. Lat. 48. 58. N.

PADANG, a ſea-port on the W. coaſt of Sumatra, in the Eaſt Indies, in the poſſeſſion of the Dutch. In 1797, it was almoſt totally deſtroyed by an earthquake, and upward of 300 lives were loſt. Long. 99. 46. E. Lat. 0. 50. S.

PADRON, a town of Spain, in Galicia, ſeated on the Ulla, 12 miles S. of Compoſtella. Long. 8. 17. W. Lat. 42. 40. N.

PADSTOW, a ſea-port in Cornwall, with a market on Saturday. It has ſome trade to Ireland, and is ſeated at the mouth of the Camel, on the Briſtol Channel, 30 miles W. of Launceſton, and 243 W. by S. of London. Long. 4. 45. W. Lat. 50. 42. N.

PADULA, a town of Naples, in Principato Citeriore, 14 miles N. of Policaſtro. Long. 15. 41. E. Lat. 40. 29. N.

PAEFENHOFFEN, a town of France, in the department of Lower Rhine, ſeated on the declivity of a mountain, near the river Motter, eight miles W. of Haguenau. Long. 7. 38. E. Lat. 48. 48. N.

PAGLIANO, a town of Naples, in Abruzzo Ulteriore, 15 miles E.S.E. of Aquila. Long. 13. 46. E. Lat. 42. 28. N.

PAINBOEUF, a ſea-port of France, in the department of Lower Loire, at the mouth of the Loire. Hence all the ſhips belonging to Nantes take their departure, and here they anchor on their arrival. It is 20 miles W. of Nantes. Long. 1. 53. W. Lat. 47. 15. N.

PAINSWICK, a town in Glouceſterſhire, with a market on Tueſday. It has a manufacture of white cloths for the army, and for the India and Turkey trade; and hence is brought a ſtone, remarkable for its beauty and neatneſs, for the pavement of floors. Painſwick is ſituate ſo high, as every way to command extenſive views over a vale of vaſt richneſs and variety, of the windings of the Severn, Malvern Hills, and parts of the counties of Salop, Hereford, and Monmouth. It is ſeven miles S.E. of Glouceſter, and 101 W. by N. of London. Long. 2. 11. W. Lat. 51. 46. N.

PAINT (*Encycl.*). The preparations employed in painting houſes, being principally white-lead, the vapour of which, whether taken into the ſtomach or lungs, or abſorbed by the ſkin from the ſurrounding atmoſphere, is the moſt ſubtle of our domeſtic poiſons, and the grinding of which is alſo extremely detrimental to health, we ſhall ſtate the following proceſs, lately invented by M. de Vaux. Should this prove an effectual ſubſtitute for the pernicious paint prepared from the oxide of lead, it will be of ineſtimable ſervice to ſociety. He directs two Paris pints of ſweet ſkimmed-milk (two quarts Engliſh meaſure), ſix ounces (6½ ounces Engliſh averdupois) of freſh ſlaked lime, four ounces of nut, caraway, or linſeed oil, and three pounds of whiteing, to be uſed in the compoſition. The lime muſt firſt be introduced into a ſtone veſſel, to which ſhould be added ſuch a proportion of milk as will produce a mixture reſembling thin cream. Next, the oil is to be gradually poured in; the whole being gently ſtirred, and the remainder of the milk added. The whiteing muſt next be crumbled in, or ſcattered on the ſurface of the fluid, which it gradually imbibes, and at length ſinks; when the whole ſhould be briſkly agitated.

M. de Vaux obſerves, that the milk ought not to be ſour; becauſe, in ſuch caſe, it would form, with the lime, a calcareous acetite, which ſtrongly attracts moiſture. Either of the oils above mentioned may be uſed; but, if white paint be required, that of caraways is preferable, as it is perfectly tranſparent.—In order to obtain a diſtemper or ſize-colour, the paint thus prepared may be tinged with levigated charcoal, yellow-ochre, &c. for painting with which, the moſt common oils may be uſed.

The quantity here preſcribed is, further, ſtated to be ſufficient for the firſt coat of ſix toiſes, or from twenty-four to twenty-ſeven ſquare Engliſh yards: it may be applied in the uſual manner; and coſts in Paris the ſum of nine ſols, or 4½d. ſterling.

Another and perhaps better ſubſtitute for white-lead paint, and one which the public ſafety demands that we ſhould reſort to, is that prepared with the *oxide of zinc*, for which a patent has been obtained, and which is almoſt equally cheap, and no leſs beautiful and durable.

PAISHAWUR, a city of Hindooſtan Proper, capital of a diſtrict in the country of Cabul. It is ſituate on the Kameh, 125 miles S.E. of Cabul, and 170 N. of Moultan. Long. 70. 36. E. Lat. 33. 18. N.

PALACIOS, a town of Spain, in Andaluſia, 12 miles S. of Seville. Long. 5. 24. W. Lat. 37. 20. N.

PALAIS, a town of France, capital of the iſland of Belleiſle, off the coaſt of Bretagne. It has a ſtrong citadel, which ſtood a long ſiege againſt the Engliſh, in 1761, and then ſurrendered on honourable terms. Long. 3. 2. W. Lat. 47. 18. N.

PALAIS, ST. a town and diſtrict of France, in the department of Lower Pyrenées, which, with the town and diſtrict of St. John Pied-de-Port, forms nearly the whole of the late province of Lower Navarre. This is only a very moderate portion of the kingdom of Navarre, wreſted, in 1512, from John d'Albert, by Ferdinand king of Arragon and Caſtile. This portion, ſeparated from Upper Navarre by the Pyrenées, made part of the kingdom of France, having been annexed to it by Henry IV. who held it in right of his mother, Jeanne d'Albert. St. Palais is ſeated on the Bidouſe, 15 miles S.E. of Bayonne. Long. 1. 4. W. Lat. 43. 21. N. See NAVARRE.

PALAMCOTTA, or TINEVELLY, a town of Hindooſtan, in the Carnatic, 410 miles S.W. of Madras. Long. 77. 54 E. Lat. 8. 43. N.

PALAMOS, a ſtrong ſea-port of Spain, in Catalonia, ſeated on the Mediterranean, 47 miles N.E. of Barcelona. Long. 2. 58. E. Lat. 41. 58. N.

PALAMOW, a town of Hindooſtan Proper, in the province of Bahar, 210 miles S.S.W. of Patna. Long. 84. 10. E. Lat. 23. 40. N.

PALANKA, a town of Upper Hungary, ſeated on the Ibola, 37 miles N. of Buda. Long. 18. 23. E. Lat. 48. 9. N.

PALAZZO, a town of Piedmont, in the county of Canavez, five miles E. of Ivrea.

PALAZZUOLO, a town of Sicily, in Val di Noto, 80 miles S. of Meſſina. Long. 15. 5. E. Lat. 37. 3. N.

Palazzuolo, a town of Italy, in the Breſciano, ſeated on the Oglio, 30 miles N.E. of Milan. Long. 9. 56. E. Lat. 45. 40. N.

PALENO, a town of Naples, in Abruzzo Citeriore, nine miles E. of Solmona.

PALENZUELA, a town of Spain, in Old Caſtile, 25 miles S.W. of Burgos. Long. 3. 15. W. Lat. 42. 5. N.

PALERNO, a town of Naples, in Calabria Citeriore, ſix miles S.S.W. of Coſenza.

PALICANDCHERRY, a town of the peninſula of Hindooſtan, in the country of Calicut, 20 miles S.W. of Coimbetore, and 66 S.E. of Calicut.

PALIMBAM, the capital of a kingdom of the ſame name, in the iſland of Sumatra, ſeated on the E. coaſt, 120 miles N.E. of Bencoolen, and ſubject to the Dutch. Long. 103. 31. E. Lat. 3. 0. S.

PALLISER'S ISLANDS, a group of Iſlands, in the South Pacific Ocean. Long. 146. 30. W. Lat. 15. 30. S.

PALMA, a town of Portugal, in Alentejo, ſeated on the river Cadoan, 20 miles E. of St. Ubes. Long. 8. 40. W. Lat. 38. 37. N.

Palma, a town of New Granada, 50 miles N.W. of St. Fé-de-Bogota. Long. 73. 40. W. Lat. 4. 30. N.

PALMARIA, a ſmall iſland in the Mediterranean, about 15 leagues from the coaſt of Naples, and three miles W. of the iſland of Ponza. Long. 12. 45. E. Lat. 40. 58. N.

Palmaria, a ſmall iſland in the Mediterranean, near the coaſt of Genoa, at the entrance of the gulf of Spezzia, ſeven miles S. of Spezzia. Long. 9. 46. E. Lat. 44. 1. N.

PALMAS, the capital of the iſland of Canaria. See Canary.

Palmas, one of the Philippine Iſlands, 16 leagues S.E. of Mindanao. Long. 127. 0. E. Lat. 5. 33. N.

Palmas, Cape, a promontory of Africa, on the Ivory Coaſt of Guinea. Long. 5. 34. W. Lat. 4. 26. N.

PALMELA, a town of Portugal, in Eſtremadura, with a caſtle on a rock, ſeated on the Gadaon, 19 miles S.E. of Liſbon. Long. 8. 56. W. Lat. 38. 29. N.

PALNAUD, a diſtrict of the peninſula of Hindooſtan, belonging to the Carnatic, but ſituate toward the river Kiſtna, to the W. of the Guntoor Circar.

PALOS, a town of Spain, in Andaluſia, with a pretty good harbour; remarkable for being the place whence Chriſtopher Columbus ſailed on his firſt adventurous voyage in 1492. It is ſeated at the mouth of the Rio Tinto, 46 miles S.W. of Seville. Long. 6. 39. W. Lat. 37. 14. N.

Palos, Cape, a promontory of Spain, in Murcia, to the S. of a town of the ſame name, 20 miles E. of Carthagena. Long. 6. 39. W. Lat. 37. 37. N.

PALOTA, a town of Lower Hungary, in the county of Alba Regalis, taken from the Turks in 1687. It is 40 miles S.W. of Buda. Long. 18. 0. E. Lat. 47. 0. N.

PALOTZA, a town of Hungary, ſituate on the Poprat, 54 miles N. of Caſſovia, and 112 N.N.W. of Zatmar. Long. 21. 20. E. Lat. 47. 42. N.

PALTE, a famous lake of Thibet, lying to the S. of Laſſa, about three days' journey, and 12 miles S. of the river Sanpoo or Burrampooter. It is 150 miles in circumference; and in the middle of it is one large iſland. On the W. ſhore of this iſland, or congeries of iſlands, is a monaſtery, and the ſeat of the Lamiſſa Turcepamo, or the Great Regenerate, in whom the Thibetians think that a divine ſpirit is regenerated, as it is in the Great Lama. The word *Lama* ſignifies a prieſt, and *Lamiſſa* is the feminine of Lama.

PAMIERS, a town of France, in the department of Arriege, with a biſhop's ſee. It is not ſo conſiderable as formerly, nor peopled in proportion to its extent. Near it is a mineral ſpring, ſaid to cure the gout and obſtructions. Pamiers is ſeated on the Arriege, eight miles N. of Foix, and 30 S. of Toulouſe. Long. 1. 32. E. Lat. 43. 8. N.

PAMLICO SOUND, a kind of inland ſea, of North Carolina, 100 miles long, and from 10 to 20 broad. It is ſeparated, in its whole length, from the Atlantic, by a beach of ſand, hardly a mile wide, generally covered by ſmall trees or buſhes. It has ſeveral inlets; but that of Ocrecock is the only one that will admit veſſels of burthen. This inlet is in long. 76. 20. W. Lat. 35. 10. N.

PAMPELONNE, a town of France, in the department of Tarn, 15 miles N. by E. of Alby. Long. 2. 17. E. Lat. 44. 10. N.

PANCRAS, St. a village in Middleſex, a little to the N.W. of London. It has a church dedicated to St. Pancras; and the church-yard is remarkable for being the principal place of interment for the Roman-catholics. At a public-houſe near the church is a medicinal ſpring. Here is the Veterinary College, eſtabliſhed in 1791, for the improvement of farriery, and the treatment of cattle in general.

PANGA, a town of the kingdom of Congo, capital of the province of Bamba. Long. 14. 25. E. Lat. 6. 30. S.

PANJAB, a country of Hindooſtan Proper, being that watered by the five eaſtern branches of the Indus. It was the ſcene of Alexander's laſt campaign, and the termination of his conqueſts. It forms a ſquare of 250 miles, and includes the whole of Lahore, and a great part of Moultan Proper. To the lower part of Moultan it is flat and marſhy, and inundated by the periodical rains which fall between May and October.

PANNANACH WELLS, a village in Aberdeenſhire, ſituate a little below the waterfall, called the Lin of Dee, in the valley of Glenmuick. It is noted for its mineral waters; and has a lodge for the accommodation of the company that frequent this place in ſummer.

PANNIPUT, a town of Hindooſtan Proper, ſituate in an extenſive plain between the cities of Delhi and Sirhind. This plain is celebrated for a battle, in 1761, between an army of 200,000 Mahrattas, and Abdallah, ſultan of Candahar, at the head of 150,000 Mahometans, in which the former were totally defeated. Panniput is 72 miles N.W. of Delhi. Long. 76. 45. E. Lat. 29. 15. N.

PANOMI, a town of Turkey in Europe, in Macedonia, 16 miles S. of Salonichi. Long. 23. 10. E. Lat. 40. 25. N.

PANORMO, a town of Turkey in Europe, in Albania, ſituate on a gulf of the Adriatic, oppoſite the iſland of Corfu, 45 miles S.S.E. of Valona. Long. 20. 2. E. Lat. 40. 0. N.

PANTALARIA, an iſland in the Mediterranean, between Sicily and the coaſt of Tunis, 17 miles in circumference. It abounds in cotton, fruits, and wine, and is ſubject to the king of Naples. Long. 12. 31. E. Lat. 36. 55. N.

PANTIKA, a town of Turkey in Aſia, in Natolia, on the N.E. coaſt of the ſea of Marmora, 12 miles S.E. of Conſtantinople.

PAOOM, one of the New Hebrides, in the South Pacific Ocean, to the S. of Malicollo. Long. 168. 28. W. Lat. 16. 30. S.

PAPER (*Encyc.*). Amongſt the great variety of vegetable

ſubſtances convertible into paper, barley-ſtraw is, perhaps, the moſt abundant and profitable material which might, in this reſpect, ſerve as a ſubſtitute. Dr. Schaeffer, a German phyſician, whoſe inventions have not always been acknowledged, obtained a yellowiſh paper of this ſtraw, after ſoaking it in boiling water, then ſteeping it in lime-water, and adding the 20th part of linen rags.

For manufacturing ſtraw into paper, his majeſty's patent, as well as an act of the legiſlature, have recently been obtained; but the ingenious editor of the *Domeſtic Encyclopædia* aſſerts, on the authority of a paper-maker near London, that the proceſſes deſcribed were well known previouſly to both grants, and that he actually procured ſpecimens of paper manufactured of raw vegetable materials, in this country, in 1799. If ſo, it follows, that the patentee is not entitled to the ſole exerciſe or monopoly of this manufacture, but any paper-maker in the United Kingdom, has a right to make uſe of the diſcovery.

In a late volume of the *Annales de Chimie*, we meet with ſome uſeful hints relative to the manner of re-manufacturing the paper of old books (or even new ones of a certain deſcription), or any letters, or other paper already uſed for writing or printing; by M. M. de Yeux, Pelletier, Molard, and Verkaven.

1. *Proceſs for re-fabricating Printed Paper*:—All paper of the ſame quality ſhould be collected, and ſeparated from ſuch as may have any writing on the pages; the edges of thoſe leaves which may have become yellow, and alſo the backs of books, being cut off by the inſtrument uſed by book-binders. —One hundred weight of paper is now to be put, ſheet by ſheet, into vats, ſufficiently capacious to contain it, together with 500 quarts of hot water; but which ought to be filled about one-third:—the whole is next ſtirred by two men for the ſpace of one hour, who are gradually to add as much water as will riſe about three inches above the paper; after which it is left to macerate four or five hours; the agitation being occaſionally repeated, ſo as to ſeparate, and at length to form the paper into a kind of paſte.

The water is now drawn off by means of pipes, and the pulp conveyed to the mill, where it is to be coarſely ground for one hour; at the expiration of which, it is boiled in a cauldron for a ſimilar ſpace, with a ſufficient quantity of water to riſe four or five inches above it. A ſhort time before the mixture begins to boil, thirteen quarts of cauſtic ley of pot-aſh are to be added to every cwt. of paper. The ley alluded to, is prepared by diſſolving 100lbs. of pot-aſh in 300 quarts of boiling water, to which are to be added 20lbs. of pulveriſed quick-lime; and the whole muſt be briſkly agitated, till it become of an uniform conſiſtence, when it is ſuffered to ſtand for 12 hours; at the end of this time it muſt be drawn off, and 75 quarts of boiling water added to the ſediment, which being ſtirred for half an hour, and ſuffered to ſtand till it become clear, is to be mixed with the liquor firſt decanted.

When the paſte has boiled in this ley for one hour, the fire is to be extinguiſhed, and the matter ſuffered to macerate for 12 hours; after which it muſt be taken out, drained, put into bags, and ſubmitted to the action of a ſtrong preſs for a ſimilar length of time, to deprive it of all moiſture; and, if it appear white, ſo that the printers' ink be properly extracted, it may be re-manufactured in the uſual manner.

2. *Proceſs for the re-fabrication of Written Paper*:—The paper muſt be ſorted; the yellow edges cut off; and the whole thrown, leaf by leaf, into a tub half-full of boiling water, where it is to be agitated as before directed. After it has macerated four hours, the water ſhould be drawn off; a freſh quantity of boiling water added; and the mixture ſtirred for half an hour; at the expiration of which the paper is again left to diſſolve for three hours.

The fluid is now drawn off, and 260 quarts of cold water poured on each cwt. of paper; which being perfectly mixed, 6lbs. of oil of vitriol are to be gradually added; and the whole ſtrongly agitated for a conſiderable time, that the paper may thoroughly imbibe the liquor.

This compoſition is next ſuffered to macerate for twelve hours, the agitation being occaſionally repeated; when the tub is to be filled up with cold water; and the mixture again ſtirred, to waſh the paper, which will now be reduced to a perfect paſte. Laſtly, after drawing off the water, the pulp muſt be put into bags, preſſed, and ground in a mill; after which it is conveyed to the vat, and worked in the manner practiſed with linen rags.

In the year 1801, a patent was granted to Mr. Koops, for extracting ink from printed paper, and reſtoring it to its original ſtate.—His proceſs varies little from that above deſcribed; the paper being agitated in hot water, to extract the ſize, and reduce it into a pulp: next, the adheſion of the ink is to be removed by a cauſtic alkali prepared of lime and pot-aſh, the quantities of which ſhould be proportioned to thoſe of the paper. After diſcharging the ink, he directs the pulp to be bleached by means of the oxygenated marine acid, in the proportion of 10 or 12 gallons to 140lbs. of the material; and, when ſufficiently whitened, it is re-manufactured in the uſual manner.—According to the patentee's account, writing paper does not require ſo large a proportion, if any, of the cauſtic alkali; but is bleached by confining it in a wooden box, rendered air-tight; into which the acid gas is thrown directly from the retort wherein it was produced.

In the laſt volume of the Repertory of Arts, p. 200, is deſcribed the method of *bleaching the pulp* uſed in manufacturing writing paper, by Citizen Loyſel.

PAPOUI, St. a town of France, in the department of Aude, ſeated on the Lembe, eight miles E. of Caſtlenaudary, and 35 S.E. of Toulouſe. Long. 2. 10. E. Lat. 43. 21. N.

PARA, a fort of Braſil, ſeated near the mouth of the river Amazon, and to the E. of the eaſtern branch of it. Long. 50. 0. W. Lat. 2. 0. S.

PARACELS, a vaſt multitude of ſmall iſlands and rocks, in the China Sea. They form a long cluſter, lying N. and S. for near 400 miles, off the coaſt of Cochin China.

PARADELLA, a town of Portugal, in Beira, 12 miles S.E. of Lamego. Long. 7. 23. W. Lat. 41. 4. N.

PARAGO, or Palawan, a large iſland in the Indian Ocean, between the Philippines and Borneo, which has a king, tributary to Borneo. The Spaniards have a fort here.

PARAGUA, the moſt weſterly of the Philippine Iſlands, about 180 miles in length and 20 in breadth. Long. 117. 44. E. Lat. 10. 0. N.

PARAMARIBO, the capital of Surinam, in Guiana, and the chief place of the Dutch colonies in South America. It has a ſmall but ſtrong citadel; and a noble road for ſhipping, where there are ſeldom leſs than 80 veſſels loading coffee, ſugar, cotton, and indigo. The ſtreets are ſtraight, and lined with orange, ſhaddock, tamarind, and lemon trees, in continual bloom. It ſurrendered to the Engliſh in Auguſt, 1799. It is ſituate on the E ſide of the river Surinam, 16 miles from its mouth. Long. 5. 25 W. Lat. 5 48. N.

PARAIBA, a town of Braſil, on a river of the ſame name. The Dutch got poſſeſſion of it, in 1635, and fortified it with a ſlight rampart; but the Portugueſe retook it ſoon after. The ſoil is pretty fertile, and produces ſugar-canes, and a great number of trees of Braſil wood. Long. 49 53. W. Lat. 6. 50. S.

PARAMOUSIC, one of the Kurile Iſlands, lying S. of that of Shoomſka. See KURILES.

PARANA, a province of Paraguay, ſo named from a large river, which uniting with the Paraguay, and afterward with the Uraguay, forms the Rio de la Plata.

PARCHIM, a town of Lower Saxony, in the duchy of Mecklenburg, ſeated on a ſmall river which falls into the Elbe. It is 20 miles S.E. of Schwerin. Long. 12. 0. E. Lat. 53. 34. N.

PARCHWITZ, a town of Sileſia, in the principality of Lignitz, with a conſiderable manufacture of cloth. It is 12 miles W. of Wohlau, and 10 N.E. of Lignitz. Long. 16. 42. E. Lat. 51. 17. N.

PARDOBITZ, a fortified town of Bohemia, in the circle of Chrudim, with a manufacture of knives and ſword-blades. It is five miles N. of Chrudim, and 55 E. of Prague. Long. 15. 45. E. Lat. 49. 55. N.

PAREIRA BRAVA (*Encycl.*). Erroneouſly ſpelt PAREIRA PRAVA.

PARELLA, a town of Piedmont, in the county of Canavez, four miles S.S.W. of Ivrea, and 20 N. of Turin.

PARILLA, or ST. PARILLA, a town of Peru, in the audience of Lima, ſeated at the mouth of the river Santa, 50 miles S.E. of Truxillo, and 230 N.W. of Lima. Long. 77. 50. W. Lat. 8. 36. S.

PARISH-DINNER, a recent mode of ſupplying the poor with wholeſome and cheap food under the ſuperintendance of the pariſh. Such inſtitutions may be adapted to circumſtances in every town and village; as will be ſeen in the following account of a pariſh dinner for *poor children*, at Epping, publiſhed by Thomas Bernard, eſq. in the Reports of the Society for bettering the Condition of the Poor.

At Epping, in the county of Eſſex, where there is a ſchool of induſtry for the employment of children, an ordinary was, on the recommendation of Mr. Conyers, opened in October laſt; and a general dinner has been provided on week days, for any children of that place whoſe parents deſire it, on the following terms:

The price of the ordinary is ſix pence a-week for each child: they dine at table in a regular manner at one o'clock, in a room which adjoins to, but is unconnected with, the rooms of the workhouſe; and which, during the reſt of the day, has been uſed as a ſpinning ſchool. Grace is regularly and decently ſaid before and after dinner; and a voluntary expreſſion of thanks and obligation to the miſtreſs, for the good dinner ſhe has provided them, generally precedes their quitting the room. Their table of diet is, on Mondays, Wedneſdays, and Fridays, baked rice pudding; on Tueſday and Saturday beef ſtew and ſoup; and on Thurſday peaſe ſoup. They are allowed to eat as much as they pleaſe; and their healthy countenances and decent behaviour evidence the plenty and comfort of their meal. The ſame dinner is alſo given, in another room, to the pariſh children and the other perſons in the poor-houſe. The number of thoſe who partook of it, in the week, from the 12th to the 17th of the preceding month of February, was 77; the expence of that week's dinner for the materials merely and their bread (but without reckoning for dreſſing and attendance) being *l.* 12*s.* 1¼*d.* which is leſs than a penny a-head each day.

A particular account of this dinner may be uſeful; as it will prove that what is provided for them is good in quality, and ſufficient in quantity; and as it will ſerve to explain to others, how they may, with ſome attention and very little expence, contribute greatly to the comfort, the health, and the good habits of the children in their own neighbourhoods.

The following is an account of the week's fare of 77 perſons, from Monday the 12th to Saturday the 17th of February, 1798, both days incluſive, with the expence of each article.

MONDAY. *Baked rice pudding.*			*s.*	*d.*
20 lb. and a half of rice			2	6¾
3 lb. of ſuet			1	6
6 gallons of milk			1	3
Salt and allſpice				2¼
			s.	*d.*
			5	6

N. B. The rice is ſoaked in the milk the night before baking, and produces with the other materials about 80 lb. weight of pudding.

TUESDAY. *Beef ſtew and ſoup.*	*s.*	*d.*	
Ox's cheek	1	6	
2 quarts of Scotch barley		4½	
3 quarts of peaſe		10¼	
1 quart of oatmeal		2¼	
1 peck of potatoes		3	
Pepper, ſalt, and allſpice		6¼	
		s.	*d.*
		3	8¼
WEDNESDAY. *Baked rice pudding*, as on Monday		5	6
THURSDAY. *Peaſe ſoup.*			
4 lb. of pork	1	8	
6 quarts of peaſe	1	8½	
2 quarts of oatmeal		4½	
Pepper, ſalt, and allſpice		6¼	
		4	3¼
FRIDAY. *Baked rice pudding*, as before		5	6
SATURDAY. *Beef ſtew and ſoup.*			
5 lb. and a half of beef	2	3½	
2 quarts of peaſe		7½	
2 quarts of Scotch barley		4½	
Pepper, ſalt, and allſpice		6¼	
		3	9¾
Onions, mint, and carrots, for the week		1	0
A quarter of a pound of bread allowed on each of the three ſoup days, being 58 lb. a-week		4	10
Six days' dinners for 77 perſons	1	14	1¼

The children are generally thoſe whoſe behaviour is approved, and who are paid for by the week; but any others, in cleanly and decent order, are allowed to dine at the ſame rate, when there is room. In caſe of ſickneſs, they may ſend for their dinners home.—The common labourers find they can maintain their children in this manner much better, and a great deal cheaper, than in the uſual way of leaving them to conſume at home a great deal of white bread, with very little comfort; for example, a labourer who has four children finds that, by appropriating 2*s.* a-week out of his earnings, all his four children have a plentiful, regular, and decent meal, ſix days in the week; with twice the benefit to them, that they could have poſſibly derived from 2*s.* worth of white bread, eaten in the uſual ſolitary, uncivilized, and comfortleſs manner.

The ſituation of Epping, a large market-town, with a ſurrounding foreſt, the ſcene and object of petty thefts, and a public road through it, was not very favourable to the induſtry and regular habits of the poor; nor was their uſual dinner, of a hunch of bread, part to be ſwallowed with a little water as they went along (the other part being moſt frequently thrown away) conducive either to their health, or to habits of economy. It is therefore a moſt pleaſing circumſtance to ſtate, that, within one month after this dinner had been regularly pro-

vided at Epping, the appearance and manners of the poor children there were totally altered. Their fallow countenances had acquired a healthful complexion and tone, from the daily and regular fupply of a plentiful meal; and their manners, by the habits of an orderly table regularly ferved and attended, were improved and meliorated. To thofe, who had been confined by illnefs, this dinner has proved of particular fervice; as it has afforded them the means of re-eftablifhment in a ftate of convalefcence; a period when the poor are fubject to great difadvantages, and are frequently a long time recovering their health and ftrength, becaufe they are not provided with regular and nourifhing food.—"Four months have now paffed," fays Mr. Bernard, "fince the children at Epping have been thus aflembled once a-day, at a decent and civilifed table. I have attended it to-day, and with very great fatisfaction have beheld the decency, the cheerfulnefs, and the general neatnefs of all the members of this little fociety; and, being able to add my own teftimony to the information I have received, I can fay, that fuch effects appear to have been already produced on the health and good order of thefe little children, as muft be extremely gratifying to every one, who intereits himfelf in the welfare of his fellow-creatures.

"One confequence of this eftablifhment has been, that feveral labourers, who have large families, and are induftrious and deferving, have found themfelves exonerated of a great part of the maintenance of their children by their richer neighbours; who each take fome of thefe little ones, in their turn, under protection, and fubfcribe for them to the public dinner. This contributes to increafe that mutual good-will and connection, which ought to fubfift between the rich and the poor; and makes the one mindful of his duty, and the other fatisfied with his condition.

"The benefits of this eftablifhment are many and various. It converts benevolence to better purpofes, and into better channels than thofe through which it commonly flows; it brings the children of the poor into notice, teaching them regular habits, and the defire of profiting by their own induftry; and it not only fupplies the perfons in the workhoufe, but feveral poor families that are out of it, with fufficient food, comfortably, and at a very cheap rate. Where a labourer requires relief out of the houfe, the overfeer, if he fee caufe, directs meffes of the parifh dinner, proportionate to the family, to be fent to his houfe; and from fifteen to twenty indigent families are fupplied in this manner with a good meal at home every day. This affords much more effectual relief, and at lefs expence to the parifh, than the little pittance of money which is ufually given, and which they have not means to make an advantageous ufe of." See PAROCHIAL, *Supp.*

PARISH-MILL. See MILL, *Supp.*

PARKGATE, a village in Cheflire, 12 miles N.W. of Chefter. It is fituate on the N.E. coaft of the river Dee, and hence packet-boats frequently fail to Ireland.

PARKSTEIN, a town of Bavaria, in the principality of Saltzbach, 16 miles N. of Naburg. Long. 12. 14. E. Lat. 59. 40. N.

PARNASSUS, now called PARNASSO, a mountain of Livadia. It has two heads, one of which was famous for being conferated to Apollo and the Mufes, and the other to Bacchus. It is the higheft in Greece, and from the top is a profpect as far as Corinth. Here alfo is a fine fountain, fuppofed to be the ancient Caftalia. It is eight miles N. of Livadia.

PAROCHIAL, any thing belonging to a parifh. (See PARISH). The mode of affording parochial relief to the neceffitous is a moft important branch of civil polity, fince the commiffion of errors in diftributing the fums raifed for the relief of the poor, have the moft fatal effects on public induftry. The following account of the mode of parochial relief at Wendover, by the Rev. Jofeph Smith, deferves particular attention.

In that place and its neighbourhood, the calculation of the relief of the poor has been made on the prefumed and fuppofed earnings of the labourer, and not on the actual amount of what he does actually acquire by induftry and exertion. The object was to render the overfeer's duty as eafy as circumftances would admit, and to make the labourers contented under the preffure of the times, by giving them the power of exerting every act of fuperior induftry to their own advantage. The fum of nine fhillings per week was adopted as an *average of earnings*; to be increafed out of the poor's-rate to fuch a fum, as would purchafe every week, for the cottager, his wife, and every child under 10 years of age, a half-peck loaf each. "If they can earn more," fays Mr. Smith, "we do not enquire the amount; but leave it to them, as an encouragement of induftry. If they are indolent, and earn lefs, it is their own lofs; as is the cafe of thofe who throw themfelves on the parifh for work, and are allowed only eight fhillings a-week.

"No allowance is, in general, made for children above 10 years of age; they having a regular fupply of work, and being deemed capable of earning their own maintenance. Single women and widows unincumbered with any family, are alfo prefumed to be able to earn their own fubfiftence by lace-making, and therefore are alfo excluded from the allowance; except in cafes of ficknefs or old age, or where they can fhew that they have not the benefit of thofe means of fupply. Thefe, however, are only fhades of difference, depending on the peculiar fupply of occupation in a country, or upon the particular regulations of a place. Wherever the attention of the parifh, or local circumftances, afford a fupply of work to women, children, or to any other clafs of applicants, it would be a dangerous experiment to permit them to confefs idlenefs, and to plead indifpofition to avail themfelves of their means of fubfiftence; and therefore to allow them to be claffed among paupers receiving relief."

To this account are annexed the following very pertinent obfervations:

"It is impoffible for thofe who refide at a diftance from the metropolis, and act as magiftrates in an agricultural country, not to extend their reflections from the prefent fcarcity and temporary preffure, to confequences which may be ftill more afflictive, and of longer duration; and which, unlefs removed by exertions beyond the power of mere parochial relief, may be augmented and continued, as a deftructive inheritance attached to the landed property;—the confequence of that parochial relief, which, in obedience to the laws, the landed property now affords the labourer, through the medium of the tenantry, to enable him to meet the great advance in the price of every neceffary of life.

"In moft parifhes this has been judicioufly calculated to make up with their actual earnings, whatever they might be, a certain allowance for each in family; fo that they who have earned leaft by their own hands, have received moft from the parifh. A very little conflideration will convince any one, that, by fuch a meafure, all fpur to induftry, and all energy to contend with difficulty, muft be entirely deftroyed. For, when the habit is acquired of applying to the parifh, and the daily earnings of the labourer, without additional refources, are inadequate to the fupport of his family, no inducement is left for him to exert his beft abilities and induftry. If the amount is to be the fame in all cafes, how can it be expected that they will toil, merely to leffen the parifh rates? The lamentable fact is, that an indolent habit has been thus fuperinduced, and labourers do not exert themfelves as they did formerly. Their fpirit is fo broken down by circumftances, that they grow

reconciled to the idea of being paupers, and relying on parish relief, in preference to the more valuable and more honourable exertions of their own industry. The alarming consequence of this is, that the poor's-rates through the country have increased, and are increasing, to a degree that may well excite the fears of all who are interested in the fate of the landed property. The narrow policy of the farmer, operates to augment the evil. The rates, at present, are paid by the occupier: he feels the frequent demand of the overseer, without reflecting upon the increased price which he receives for his commodity at market; and the overseers, in general, being unprovided with other work for the labourers who apply for employment, send them to the farmer. He imagines that he gains some remuneration for his extra rates, by receiving the labourer into his yard from the overseer at an under price; the deficiency being to be made up out of the rates of the parish. But labourers, so employed, never work cheerfully or well. The farmer scarcely ever has more labour performed than he actually pays for; and the money contributed out of the rates is all expended, not only without any return of labour, but with the melancholy consequence of having materially contributed to the extinction of honest industry, and laudable exertion.

"In some parishes in my neighbourhood, the magistrate has been able to introduce a better regulation;—that of assuming an average price of labour, as a standard from which parochial relief shall be calculated; allowing the labourer to employ his extra hours, or extra labour in task-work, for his own exclusive advantage. This, however, is by no means generally adopted; nor, if it were, would it be sufficient to correct the evil of the extinction of that character of independence, which the English labourer did once so pre-eminently possess, and by which the community was so greatly benefited. There is too much reason to fear, that without great exertions from the land-owners to restore the labourer to his former honourable state, either by assisting him with a cow and ground to keep her, or by some other effectual incitement to exertion and industry, they will not remain stationary at their present point of deterioration. Unless they improve, they will become worse. Their inclination to indolence, and to those vices which are connected with it, will increase. Their demands upon their respective parishes will become more urgent: and the poor's-rates will so increase, that tenants will no longer be able to bear the expences attendant upon the occupation of their farms. The proprietors may then discover, not only the difficulty and disadvantage of occupying their lands themselves, but that, in a parish incumbered with paupers, the land may prove insufficient to the maintenance of the parochial poor."

PARRAMATTA, a town or settlement of English convicts, in New South Wales. It is seated at the head of the harbour of Port Jackson, 11 miles W. of Sydney Cove, between Rose Hill and the landing-place in the creek which forms the head. In 1791, near 1000 acres of land were either in cultivation, or cleared for that purpose; and the soil, in most places, was found to be remarkably good. Long. 151. 39. E. Lat. 35. 50. S.

PARSBERG, a town of Bavaria, in the principality of Neuburg, 18 miles N.W. of Ratisbon. Long. 11. 55. E. Lat. 49. 8. N.

PARSCHWITZ, a town of Silesia, in the principality of Lignitz, eight miles N.E. of Lignitz.

PARTHENAY, a town of France, in the department of Two Sevres. It carries on a considerable trade in cattle and corn, and is seated on the Thoue, 17 miles S. of Thours. Long. 0. 19. W. Lat. 46. 44. N.

PARTENKIRK, a town of Bavaria, 40 miles S.W. of Munich. Long. 11. 0. E. Lat. 47. 36. N.

PARYS, a mountain in the isle of Anglesey, famous for a copper mine, which is not wrought in the common manner of subterraneous mines, but, like a stone quarry, open to day; and the quantity of ore raised is prodigious. The purest part is exported raw to the smelting works at Swansea and other places: the most impure is first calcined and deprived of most of its sulphur on the spot. Quantities of merely pure copper are obtained from the waters lodged beneath the bed of ore, by the invervention of iron. A lead ore, rich in silver, is also found in this mountain.

PAS, a town of France, in the department of the Straits of Calais, 12 miles S.W. of Arras. Long. 2. 40. E. Lat. 50. 9. N.

PAS DE CALAIS, or STRAITS OF CALAIS, a department of France, containing the late provinces of Artois and Boulonnois. Arras is the capital.

PASEWALK, a town of Upper Saxony, in Anterior Pomerania. Near it are some iron-works. It is situate on the Ucker, 21 miles W. of Stettin, and 66 S.S.E. of Stralsund. Long. 13. 57. E. Lat. 53. 27. N.

PASSAROWITZ, a town of Turkey in Europe, in Servia, remarkable for a peace concluded there, in 1718, between Emperor Charles VI. and Achmet III. It is situate near the river Morava, 33 miles E.S.E. of Belgrade, and 44 W. of Orsova. Long. 21. 16. E. Lat. 45. 6. N.

PASSO, a cape of Peru, under the equator, in long. 78. 50. W.

PASSAGE, a sea-port of Spain, in Biscay, between those of Fontarabia and St. Sebastian, and 60 miles E. of Bilboa. Long. 2. 4. W. Lat. 43. 21. N.

PASSARO, a cape on the coast of Janna, in Greece, between the gulfs of Armiro and Zeiton.

PASSARVAN, a town of the island of Java, in the East Indies. Long. 114. 15. E. Lat. 7. 0. S.

PASSENHEIM, a town of Prussia, in the province of Oberland, 70 miles S. of Konigsberg. Long. 20. 50. E. Lat. 53. 40. N.

PASSERO, CAPE, anciently called Pachinus, the most southerly point of Sicily. It is a barren island, about a mile round, separated from the rest of Sicily by a strait, half a mile broad. It has a fort, to protect the country from the incursions of the Barbary corsairs, who are often very troublesome on the coast. Off this cape, Sir George Byng, in 1735, defeated a Spanish squadron. Long. 15. 22. E. Lat. 36. 35. N.

PASSIGNIANO, a town of Italy, in the Ecclesiastical State, seated on the lake Perugia, 17 miles N.W. of Perugia. Long. 12. 5. E. Lat. 43. 16. N.

PASTO, or ST. JUAN DE PASTO, a town of South America, in Popayan, seated in a fine valley, 120 miles N. by E. of Quito. Long. 76. 55. W. Lat. 1. 50. N.

PASTRANA, or PATRANA, a town of Spain, in New Castile, seated between the Tajo and Tajuna, 32 miles E. of Madrid. Long. 2. 46. W. Lat. 40. 26. N.

PATAK, a town of Hungary, with a Protestant college, situate on the Latorcza, 25 miles S.S.E. of Cassovia. Long. 21. 35. E. Lat. 46. 33. N.

PATEHUCA, or PATIOCA, a town of New Spain, in the audience of Mexico. Near it is a silver mine. It is 70 miles N. of Mexico. Long. 99. 55. W. Lat. 21. 0. N.

PATERNO, a town of Sicily, in Val di Demona, built on the ruins of Hybla, so celebrated for its honey. It is 15 miles W. of Catania. Long. 15. 14. E. Lat. 37. 35. N.

PATHHEAD, a considerable manufacturing village in Fifeshire, a little to the E. of Kirkcaldy.

PATRIA, a town of Naples, in Terra di Livoro, situate near a lake, to which it gives name, 13 miles N.W. of Naples.

PATRIMONY OF ST. PETER; a province of Italy, in the Eccleſiaſtical State. It is 35 miles long and 30 broad; bounded on the N. by Orvieto, on the E. by Umbria and Sabina, on the S. by Campagna di Roma, and on the S.W. by the ſea. Viterbo is the capital.

PATRINGTON, a town of the E. riding of Yorkſhire, with a market on Saturday. Here the Roman road from the Picts' Wall ended. It is ſeated at the mouth of the Humber, 50 miles S.E. of York, and 191 N. of London. Long. 0. 8. E. Lat. 53. 49. N.

PATTENS, a well-known contrivance, conſiſting of a ſoal of wood attached to an iron ring. They are worn by women chiefly, during wet weather, to protect their feet from moiſture, and their garments from dirt.

As pattens formed upon the common conſtruction are liable to break, in conſequence of which frequent accidents happen, various expedients have been deviſed by thoſe who manufacture theſe articles, with a view to prevent ſuch misfortunes. A patent was granted in 1798, to Mr. Jethro Hornblower, of Whitehall, in the county of Cornwall, engineer, for a method of making pattens (to be worn by women); by altering the compoſition and clumſineſs of their ſhape; preventing them from breaking; and removing the uneaſineſs they occaſion to the feet. A more excellent contrivance, however, has been made public, by a manufacturer at Birmingham, who, by the ſimple expedient of fixing a ſpring immediately beneath the hollow of the foot, by which the inſtep is kept uniformly in contact with the tie or band of the patten, has found means to prevent the clacking noiſe, and conſequent ſplaſhing of mud upon the ſtockings, which uſually happen in walking in common pattens.

PATTENSEN, a town of Lower Saxony, in the principality of Calemberg, formerly ſurrounded with walls, moats, and ramparts. It is ſix miles S. of Hanover.

PATTI, a town of Sicily, in Val di Demona, with a biſhop's ſee, ſeated on the gulf of Patti, 28 miles W. of Meſſina. Long. 15. 22. E. Lat. 38. 11. N.

PATTIARY, a town of Hindooſtan Proper, in the country of Oude, 55 miles N.W. of Carogue, and 55 E.N.E. of Agra. Long. 79. 45. E. Lat. 27. 33. N.

PATTUN, or PUTTAN, a town of Hindooſtan Proper, capital of a Circar of the ſame name, in the country of Guzerat. It is 48 miles N. of Amedabad, and 132 S.W. of Oudipour. Long. 72. 30. E. Lat. 23. 45. N.

PATUXEN, a river of the United States, which falls into the Cheſapeak, 30 miles S. of Annapolis.

PAUL, ST. an iſland in the Indian Ocean.

PAUL, ST. a town of France, in the department of the Straits of Calais, 16 miles W.N.W. of Arras. Long. 3. 30. E. Lat. 50. 24. N.

PAUL, ST. a town of Braſil, in the province of St. Vincent, ſurrounded by inacceſſible mountains and thick foreſts. It is a kind of independent republic, compoſed of the banditti of ſeveral nations, who, however, pay tribute to the Portugueſe. Long. 45. 52. W. Lat. 23. 25. S.

PAUL-DE-FENOUILLEDES, a town of France, in the department of Gard, ſeated among mountains, on the river Egli, 30 miles N. of Montpellier. Long. 3. 58. E. Lat. 44. 7. N.

PAUL-LES-VENCE, ST. a town of France, in the department of Var, five miles W. of Nice, and 450 S.E. of Paris. Long. 7. 13. E. Lat. 43. 42. N.

PAUL-TROIS-CHATEAUX, ST. an ancient town of France, in the department of Drome, ſeated on the declivity of a hill, 16 miles S. of Montelimar. Long. 4. 57. E. Lat. 44. 21. N.

PAULA, a town of Naples, in Calabria Citeriore, ſeated near the ſea, in a fertile and well-cultivated country, 12 miles W. of Coſenza. Long. 16. 9. E. Lat. 39. 24. N.

PAULOGRAD, a town of Ruſſia, in the government of Catharinenſlaf, 32 miles E. of Catharinenſlaf. Long. 35. 54. E. Lat. 47. 10. N.

PAVOASAN, a ſea-port of Africa, in the iſle of St. Thomas, with a fort, a biſhop's ſee, and a good harbour. It belongs to Portugal, and lies under the equator, in Long. 8. 30. W.

PAUSILIPPO, a mountain of Italy, five miles from Puzzoli, celebrated for a grotto, which is a ſubterraneous paſſage, through the mountain, near a mile in length, about 20 feet in breath, and 34 to 43 in height. People of faſhion generally drive through this paſſage with torches; but the country people find their way, without much difficulty, by the light which enters at the extremities, and at two holes pierced through the mountain, near the middle of the grotto, which admit light from above. On this mountain alſo is the celebrated tomb of Virgil, overgrown with ivy, and ſhaded with a bay-tree, ſhrubs, and buſhes.

PAUTZKE, a town of Weſtern Pruſſia, in Pomerellia, 25 miles N.W. of Dantzic. Long. 18. 41. E. Lat. 54. 44. N.

PAYERNE, a town of Switzerland, in the canton of Bern, 22 miles S.W. of Bern. Long. 6. 55. E. Lat. 46. 38. N.

PAZ, a town of Peru, in the audience of Los Charcos, with a biſhop's ſee; ſeated at the foot of a mountain, in a valley abounding in wine and fruits, 350 miles S.E. of Cuzco. Long. 68. 50. W. Lat. 17. 0. S.

PAZZY, a town of Turkey in Europe, in Romania, near Gallipoli, with a biſhop's ſee. Long. 26. 59. E. Lat. 40. 33. N.

PEARL-ISLANDS, iſlands lying in the bay of Panama. The inhabitants of Panama have plantations in them.

PEASANT (*Encycl.*). See the various means of bettering the condition of this uſeful claſs of the poor in Britain, under the articles COTTAGER, COTTAGE-GARDENS, INDUSTRY, SOCIETY, &c. in this SUPPLEMENT.

PEAT-BORER, a new-invented augre, calculated for cutting into peat. An account of it is given by T. Eccleſton, eſq. of Scareſbrick-hall, in Lancaſhire, in the Tranſactions of the Society for the Encouragement of Arts, &c.

"The greateſt obſtacle to the effectual draining of many boggy lands," ſays Mr. Eccleſton, "conſiſts in the earth in the bottoms of the ditches or drains when newly cut, and more eſpecially if made to any conſiderable depth, riſing from the preſſure of the waters contained in the bog, by which the new-cut drains and ditches are frequently ſo nearly filled up, as to impede the flowing of the water they were intended to carry off, and thereby rendering the work comparatively ineffectual.

"There are different layers, or ſtrata, in moſs or peat lands, which will not allow the water eaſily to filtrate through them, and yet are of ſo ſoft and ſpongy a nature as to riſe from the preſſure of the water contained in the bog.

"It becomes neceſſary to give a free vent to the above confined water, effectually to drain ſuch lands. This has been moſt ſucceſsfully done by the augre, a model of which I have herewith preſented to the Society.

"A common augre, or even a pole, will force a paſſage, and give vent to the water for a ſhort time; but, owing to

the peat being only preſſed ſideways, and not cut out, the parts ſoon join again, and the paſſage of the water, of courſe, becomes completely obſtructed; but by means of this augre, a cylindrical column of peat of ſix inches diameter will be clearly cut out and taken thence, and a free paſſage maintained for a very conſiderable ſpace of time.

"The firſt experiment made produced a clear augre-hole of the above dimenſions, four yards in depth, in one hour; and the water, which had been pent up in the bog, roſe above the level of the bottom of the ditch, from four to ſix inches; and the bottom of the ditch, which was previouſly very ſoft, and had begun to ſwell and riſe, in a few days became more firm and ſolid, and this in ſo great a degree, that when cleared it remained without ſwelling or riſing in the leaſt. It will conſiderably reduce the expence of draining ſuch lands, by rendering them ſo firm as to cauſe the firſt end-drains to ſtand.

"The moſt proper depth to bore depends on the ſituation. Where the moſs lands lie low, and are in danger of being flooded, no greater depth than what is abſolutely neceſſary for draining the ſurface ſhould be bored, as by deep boring the land may be ſunk ſo low as to be liable to inundation."

The following are the *references to the figure in Pl.* 41.—A, the cutter of the borer, which penetrates the peat. B, the body of the borer, ſix inches in diameter. C, the aperture through which the peat introduced by boring is drawn out. D, a portion of the iron bar of the borer, to the upper part of which a croſs handle is to be fixed.

PEATHS, or PEESE, a vaſt chaſm in the mountains of the N.E. part of Berwickſhire. It is more than 160 feet deep; and over it is a noble bridge of four arches. From its vaſt height, it greatly reſembles an ancient Roman aqueduct.

PECQUENCOUR, a town of France, in the department of the North, ſeated on the Scarpe, five miles E. of Douay. Long. 3. 16. E. Lat. 50. 23. N.

PEDEE, a river of the United States, which riſes in North Carolina, and is there called Yadkin River: on entering South Carolina, it takes the name of Pedee, and flows into the Atlantic Ocean, 12 miles below George Town.

PEDENA, an ancient town of Italy, in Venetian Iſtria, with a biſhop's ſee, 25 miles S.E. of Capo d'Iſtria. Long. 14. 13. E. Lat. 45. 34. N.

PEDERNEIRA, a ſea-port of Portugal, in Eſtremadura, 18 miles N.E. of Peniche. Long. 8. 6. W. Lat. 39. 31. N.

PEDIR, a town of Sumatra, in the Eaſt Indies, 40 miles E. of Achen. Long. 96. 36. E. Lat. 5. 22. N.

PEDOMETER, (*Encycl.*). The utility of pedometers for the purpoſe of ſurveying land being obvious, various inſtruments of this deſcription have been conſtructed by ingenious mechanics, in order to facilitate the practice of geometry. Among theſe, Mr. Edgeworth's late contrivance deſerves to be firſt mentioned, on account of its great ſimplicity; but, as it is calculated only for level grounds, and is apt to be deranged by hilly or irregular ſurfaces, we decline to enter into any detail.

A pedometer, upon a new plan, was a few years ſince contrived by Mr. W. Fraſer, mathematical inſtrument-maker, of New Bond-ſtreet. It is ſtated to be perfectly correct, and not liable to be out of order. The wheel-work is conſtructed on the ſcale of 1000 paces to a mile; and, as it winds itſelf up, while in motion, being adjuſted to pockets of all ſizes, it is attended with no trouble to the wearer. It is provided with a compaſs, by means of which the traveller is enabled to aſcertain the different directions which he takes on his excurſion; while he learns the accurate diſtance which he has walked. Hence it recommends itſelf to thoſe invalids, who are obliged to take a certain degree of exerciſe within doors; as they may thus meaſure the thouſandth part of a mile.

Another machine, which deſerves more immediate attention, is the pedomete invented by Mr. Lewin Tugwell, of Beverſtone, in the county of Glouceſter, and which is repreſented in Pl. 41. where A, is the ſtock of the pedometer; B, B, B, &c. twelve ſpokes; one end of which is faſtened by means of a ſcrew to the outward ring, or periphery of the wheel, while the other is inſerted in the ſtock. C, the periphery, which is an iron ring ſixteen and half feet, or one pole, in circumference; and which is divided into twenty-five equal parts, correſponding to the links of Gunter's chain for land-meaſuring, &c. D, D, D, &c. are twelve ſmall plates, repreſenting the ſeparate ſpokes, and each of which includes two links of the chain above mentioned; the twelfth ſpoke being divided at its foot, for comprehending the twenty-fifth link. E, an iron axis, being a ſcrew with 320 circumlocutions, each of which is marked ſeparately on an engraved index on one of its ſides; and, in order to apply this part of the machine, it is ſcrewed firmly into the ſtock of the wheel, with which it revolves when in motion. F, a ſtyle, or alidade, being an expanding ſcrew-nut, that embraces the axis, along which it ſcrews, as the latter revolves with the wheel; and, as each revolution deſcribes an exact longitudinal pole (four of which are computed to a chain), the ſtyle being pendant, and moving towards its proper figure, denotes the length of ground paſſed; and it is divided into chains and poles on the index of the axis E, and into links on the periphery C. G, is a ſmall adjuſting ſcrew; which being turned, the ſtyle may be removed to the beginning of the index, after the given line, in ſurveying or meaſuring land, has been aſcertained in chains, poles, &c. H, repreſents a croſs, or ſquare, with ſights for determining perpendiculars in land-meaſuring. It is ſuſpended at its ends on the axis, whence it may be occaſionally detached by a ſimple touch of the finger and thumb, when in uſe. Further, this croſs prevents the ſtyle from being revolved with the axis by any accident. As the 320 diviſions marked on the index of the axis E, deſcribe a mile, the ſtyle F, after having paſſed over them, will ſtop: and, as it will now move round with the axis, it will carry with it the ſtandard; which will ſtrike on the wriſt of the operator, and thus prevent him from proceeding to any further diſtance, till he withdraws his hand from between ſuch ſtandard and the axis. Having received this hint, he turns the ſcrew G; puts the ſtyle F back to the bottom of the index; and continues the revolution of the machine, till he has completed his courſe.

Mr. Tugwell's contrivance is particularly calculated to prevent error in meaſuring land; as one perſon may thus ſurvey with greater accuracy and expedition, than by the uſe of the chain alone. Beſides, no fraud can poſſibly be committed by labourers, in meaſuring taſk-work; a circumſtance of the utmoſt importance to agriculturiſts.

The laſt contrivance we ſhall mention, is that of Mr. Ralph Gout, of Bunhill-row, London; whoſe new pedometrical patent watch differs from the inſtrument invented by Mr. Fraſer, in this eſſential circumſtance, that the former is connected with a time-piece, while the latter is combined with a compaſs. Thoſe who live in the metropolis, or viſit places, the ſituation of which is known to the traveller, will perhaps give the preference to Mr. Gout's capped metal watch with a pedometer, which he manufactures by ſubſcription for 15l. 15s. (or the pedometer alone, for

8l. 8s.):—on the other hand, we conceive, perſons reſiding in the country, eſpecially ſportſmen, who are generally provided with a watch, on their excurſions, will probably find Mr. Fraſer's pedometer, on account of its compaſs, the more uſeful inſtrument.

PEDRO, Point, the moſt northern point of the iſland of Ceylon, oppoſite Point Calymere, on the continent of India. Long. 80. 27. E. Lat. 9. 53. N.

Pedro, St. one of the iſlands in the South Pacific Ocean, called Marqueſas. Long. 138. 51. W. Lat. 9. 58. S.

PEER, a town of the Netherlands, in the biſhopric of Liege, 24 miles N.N.W. of Maeſtricht. Long. 5. 20. E. Lat. 51. 8. N.

PEGAU, a town of Upper Saxony, ſituate on the Elſter, 10 miles S.W. of Leipſic, and 58 W. of Dreſden. Long. 12. 22. E. Lat. 51. 13. N.

PEGNAFIEL, a town of Spain, in Old Caſtile, remarkable for its palace, caſtle, and fortifications; and its cheeſes are ſaid to be the beſt in Spain. It is ſeated on the Douero, 20 miles S.E. of Valladolid. Long. 4. 0. W. Lat. 41. 41. N.

PEGNA-MACOR, a town of Portugal, in Beira, with a caſtle, 40 miles N.W. of Alcantara. Long. 6. 32. W. Lat. 39. 50. N.

PEGNARANDA, a town of Spain, in Old Caſtile, 30 miles S.W. of Olmedo. Long. 4. 8. W. Lat. 40. 59. N.

PEINE, a town of Lower Saxony, in the duchy of Brunſwick; famous for a battle fought in 1553, when Maurice, elector of Saxony, and the margrave of Brandenburg, were killed. It is 17 miles W. of Brunſwick. Long. 10. 19. E. Lat. 52. 25. N.

PEIPUS, a large lake of Ruſſia, in the government of Livonia. The river Narova iſſues from this lake, by which it has a communication at Narva, with the gulf of Finland.

PEISHORE, or Pishour, a conſiderable city of Hindooſtan Proper, in the province of Cabul. It is ſubject to the King of Candahar, and is 50 miles N.W. of Attock. Long. 96. 54. E. Lat. 32. 44. N.

PEITZ, a town of Upper Saxony, in the Ucker marche Brandenburg. In the neighbourhood are iron mines, and manufactures of pitch and turpentine. It is 30 miles S.S.W. of Frankfort on the Oder. Long. 8. 35. E. Lat. 52. 5. N.

PELAGNISI, an iſland in the Grecian Archipelago, about eight miles in circumference. Long. 24. 12. E. Lat. 39. 30. N.

PELIGRINO, Mount, a promontory on the N. coaſt of the iſland of Sicily, nearly two miles W. of Palermo. The proſpect from this mount is beautiful and extenſive: moſt of the Lipari Iſlands are diſcovered in a clear day, and alſo a large portion of Mount Etna, although at the diſtance of almoſt the whole length of Sicily. On this mount is a cavern, in which is the image of St. Roſolia, who is ſaid to have died here; and round the cave of this ſaint (who is the patroneſs of Palermo) a church is built, where prieſts attend, to watch the precious relics, and receive the offerings of the pilgrims.

PELISSA, a town of Lower Hungary, capital of a county of the ſame name. It is ſeated near the Danube, 15 miles N. of Buda. Long. 18. 20. E. Lat. 47. 40. N.

PELISSANE, a town of France, in the department of the Mouths of the Rhone, 15 miles W.N.W. of Aix. Long. 5. 21. E. Lat. 43. 26. N.

PELLA, a town of Turkey in Europe, in Janna, 50 miles W. of Salonichi. Long. 21. 53. E. Lat. 40. 42. N.

PELLERIN, a town of France, in the department of Lower Loire, ſituate on the Loire, with a harbour for ſmall veſſels, 10 miles N. of Nantes, and 13. S.E of Painbœuf. Long. 1. 44. W. Lat. 47. 23. N.

PELOSO, a town of Naples, in Baſilicata, 35 miles W. of Bari. Long. 16. 20. E. Lat. 41. 26. N.

PEMBA, a town of Congo, capital of a province of the ſame name. Long. 18. 25. E. Lat. 7.30. S.

Pemba, or Penda, an iſland in the Eaſt-Indian Ocean, near the coaſt of Africa, about 100 miles in circumference, governed by a king, tributary to the Portugueſe. Long. 40. 0 E. Lat. 5. 50. S.

PEMBRIDGE, a town in Herefordſhire, with a market on Tueſday, ſeated on the Arrow, 12 miles N.W. of Hereford, and 145 W.N.W. of London. Long. 2. 42. W. Lat. 52. 14. N.

PENA GARCIA, a town of Portugal, in Beira, with a caſtle. It was taken by Philip V. in 1704; but he retired from it at the approach of the allies. It is ſix miles E. of Idanha Velha. Long. 6. 6. W. Lat. 39. 40. N.

PENALVA, a town of Portugal, in Beira, ſeated on a hill, with a caſtle, eight miles S. of Coimbra. Long. 8. 17. W. Lat. 40. 4. N.

PENAUTIER, a town of France, in the department of Aude, four miles N. of Carcaſſonne. Long. 2. 25. E. Lat. 43. 18. N.

PENEMUNDER, a fortreſs of Upper Saxony, in Pruſſian Pomerania, ſeated in the iſle of Uſedom, at the mouths of the Pene and Oder, in the Baltic Sea. Long. 14. 10. E. Lat. 54. 16. N.

PENGUIN ISLAND and BAY, on the coaſt of Patagonia, 182 miles N. of Port S. Julian. Lat. 47. 48. S.

PENHA GARCIA, a town of Portugal, in Beira, on the borders of Spain, nine miles E. of Caſtel Branco. Long. 6. 30. E. Lat. 39. 50. N.

PENICHE, a ſtrong town of Portugal, in Eſtremadura, with a good harbour and a citadel, 34 miles N. of Liſbon. Long. 9. 5. E. Lat. 39. 16. N.

PENICK, a town of Upper Saxony, in Miſnia, belonging to the Elector of Saxony. Here is a manufacture of woollen ſtuffs, and a pottery. It is ſeated on the Multe, eight miles E. of Altenburg. Long. 12. 44. E. Lat. 50. 59. N.

PENISCOLA, a town of Spain, in Valencia, ſeated on a high point of land on the Mediterranean, 60 miles N. of Valencia. Long. 1. 0. E. Lat. 40. 29. N.

PENISHEHR, a town of Hindooſtan Proper, capital of a diſtrict, in the country of Cabul, 46 miles N. of Cabul. Long. 68. 24. E. Lat. 35. 16. N.

PENKRIDGE, a town in Staffordſhire, with a market on Tueſday. It was formerly a large place, but now greatly reduced, and principally noted for its horſe fairs. It is ſix miles S. of Stafford, and 129 N.W. of London. Long. 2. 0. W. Lat. 52. 54. N.

PENKUM, a town of Upper Saxony, in Anterior Pomerania, 15 miles S.W. of Stettin, and 43 N.N.W. of Cuſtrin.

PENNAFLOR, a town of Spain, in Auſturias, ſeated on the Aſta, 14 miles S.W. of Oviedo. Long. 5. 56. W. Lat. 43. 15. N.

Pennaflor, a town of Spain, in Andaluſia, ſeated near the Xenil, 10 miles N. of Ecjia. Long. 4. 12. W. Lat. 37. 44. N.

PENNANT (Thomas), a diſtinguiſhed naturaliſt and traveller, was born in 1726, in Flintſhire, where his family had lived for ſome centuries. He received the rudiments of his education firſt at Wrexham, and afterwards at a ſeminary at Fulham in Middleſex. At a proper age he was entered at Ox-

ford, and having made a conſiderable proficiency in the claſſics, he applied himſelf, within the walls of that univerſity, to attain a knowledge of juriſprudence; but we do not find that he ever entered himſelf of any of the inns of court, or followed the law as a profeſſion.

The ruling paſſions of mankind are excited, and the future current of their lives frequently directed, by trivial circumſtances. One of the greateſt painters of our age was attracted with an irreſiſtible impulſe towards his art by the peruſal of a treatiſe on it; and we have the authority of the ſubject of this memoir for aſſerting, that a preſent of Willughby's Ornithology, at an early period, firſt gave him a turn for natural hiſtory, which never once abandoned him through the courſe of a very long life.

Mr. Pennant commenced his travels with great propriety at home, where he made himſelf acquainted with the manners, productions, and curioſities, of his native country, before he ſallied forth to inſpect thoſe of other nations. He then repaired to the continent; and not only acquired conſiderable additional knowledge relative to his favourite ſtudies, but became acquainted, and eſtabliſhed a correſpondence, with ſome of the greateſt men of the age.

On his return he married, and had two children, but did not come into the family fortune until he was thirty-ſeven years of age, at which time he was ſettled at Downing.

Having loſt his wife, he appears to have ſet out once more for the continent, and to have formed an acquaintance with Voltaire, Buffon, Haller, Pallas, &c. He had by this time acquired conſiderable reputation as a ſcientific man, having commenced his career as an author ſo early as 1750. His Britiſh Zoology eſtabliſhed his reputation as a naturaliſt; and this received a freſh acceſſion of celebrity in conſequence of his acquaintance with Linnæus, and his intercourſe by letters with all the celebrated naturaliſts in Europe.

Early in life he had undertaken a moſt intereſting tour to Cornwall; and he now entertained an ardent deſire to ſurvey the works of nature in the northern extremities of the iſland. He accordingly ſet out for Scotland, and in 1771 favoured the public with an entertaining account of his Tour, which was ſo well received as to paſs through ſeveral editions. Not content with the main land of Great Britain, he was ambitious to ſurvey the iſlands in the vicinity, and accordingly penetrated to the Hebrides, and viſited Man.

It is not to be ſuppoſed that he would leave his own country unexplored; on the contrary, he minutely deſcribed all its wonders. He did not fail on this occaſion to preſent the world with the reſult of his enquiries, for in 1778 he commenced the publication of his Welch Tour.

In four years after this (1782) appeared the account of the Journey from Cheſter to London, in which he refutes the vulgar opinion that it is unintereſting; and in two years more his Arctic Zoology, an admirable work, greatly prized both here and in other countries.

In 1790 appeared a quarto volume, ſimply entitled, "Of London;" in which he obſerves, that this work is compoſed from obſervations, originally made without any view of publication; and requeſts the good inhabitants of London and Weſtminſter not to be offended at his having ſtuffed their Iliad into a nutſhell.

Nothwithſtanding a parting addreſs, which was annexed, we find Mr. Pennant adventuring once more in the ocean of literature at a late period of his life. He accordingly publiſhed the Natural Hiſtory of the Pariſhes of Holywell and Downing, within the precincts of the latter of which he had reſided about half a century. He alſo preſented the public, a very ſhort time before his death, with a ſplendid work, conſiſting of 2 vols. 4to. entitled, "The View of Hindooſtan;" in the preface to which he candidly ſtates his motives for this new attempt. Theſe valuable volumes are drawn up by Mr. Pennant in the manner of his introduction to the Arctic Zoology. The plates, 23 in number, are admirably engraved, and one (the Napaul pheaſant), is beautifully coloured.

In addition to the liſt of literary labours already enumerated, is a letter on an earthquake felt at Downing in Flintſhire, in 1753; another inſerted in the ſame publication, in 1756, on coralloid bodies (κοραλλοειδης) collected by him: his Synopſis of Quadrupeds, publiſhed in 1771; a pamphlet On the Militia; a paper On the Turkey; and a volume of Miſcellanies.

Mr. Pennant attained academical honours of all kinds, having had the degree of LL.D. conferred on him by the univerſity in which he was educated, he was a Fellow of the Royal Society, and a member of the Society of Antiquaries, a Fellow of the Royal Society of Upſal in Sweden, a member of the American Philoſophical Society, an honorary member of the Linnæan Society of London, &c.

The ample fortune left him by his father enabled Mr. Pennant to keep an hoſpitable table, and alſo to preſent the profits of ſeveral of his works to public inſtitutions, particularly the Welſh charity-ſchool in Gray's-inn-lane. He encouraged ſeveral engravers by his patronage, and was not a little ſerviceable to the advancement of the fine arts.

In 1776 he married a ſecond time; on which occaſion he became united to Miſs Moſtyn, ſiſter of his neighbour, the late Sir Roger Moſtyn, in Flintſhire. The latter part of his life was cheerful, and he ſcarcely felt the approaches of old age. He died at his ſeat at Downing in his 72d year.

He has left ſeveral works behind him in MS. under the title of, "Outlines of the Globe;" and, as a proof that it will be a very voluminous and intereſting publication, it is only neceſſary to obſerve, that, The View of Hindooſtan compoſed the 14th and 15th volumes.

Mr. Pennant poſſeſſed a well-compacted frame of body, an open and intelligent aſpect, an active and cheerful diſpoſition, and a vivacity which rendered him always entertaining, as well in converſation as in writing. Though not without a ſhare of iraſcibility, his heart was kind and benevolent. He was exemplary in the relations of domeſtic life, and ſenſibly felt for the diſtreſſes of his poor neighbours, whoſe relief in ſeaſons of hardſhip he promoted with great zeal and liberality. His candour and freedom from ordinary prejudices, are ſufficiently diſplayed in his writings; and Scotland was forward to confeſs, that he was the firſt traveller from this ſide the Tweed, who had viſited the country with no unfriendly ſpirit, and had fairly preſented it under its favourable as well as its leſs pleaſing aſpect. As a writer, his ſtyle is lively and expreſſive, but not perfectly correct. His principles of arrangement in zoology are judicious, and his deſcriptions characteriſtic. If in ſome of his later works a little vanity appears, and a propenſity to think that important to the world which was ſo to himſelf, it may readily be pardoned to one who has afforded ſuch copious and valuable entertainment to the public.

PENNAR, a river in the peninſula of Hindooſtan, which flows by Gooty, Gandicotta, Cuddapah, and Vellore, and enters the bay of Bengal, at Gangapatnam.

PENNON, a fort of Barbary, ſeated on a ſmall iſland before the harbour of Algiers.

PENNON DE VALEZ, a very important ſea-port of Barbary, ſeated on a rock in the Mediterranean, near the town of Velez. It was built by the Spaniards in 1508, taken by the Moors in 1522, and retaken in 1664. It is 75 miles E. of Ceuta. Long. 4. 0. W. Lat. 35. 25. N.

PENOBSCOT, a bay of North America, in the diſtrict

of Main, at the mouth of the river Penobſcot. It is long and capacious; and its E. ſide is lined with a cluſter of ſmall iſlands.

PENRISE, a ſea-port in Glamorganſhire, with a market on Thurſday; ſeated on the Britiſh Channel, 20 miles S.E. of Carmarthen, and 219 W. of London. Long. 4. 12. W. Lat. 51. 37. N.

PENSFORD, a town in Somerſetſhire, with a market on Tueſday. It is noted for its hats and bread, and ſeated on the Chew, ſeven miles W. of Bath, and 117 W. by S. of London. Long. 2. 30. W. Lat. 51. 23. N.

PENTLAND HILLS, a ridge of mountains in Edinburghſhire, extending about ten miles from S.W. to N.E.

PENZA, a government of Ruſſia, formerly a province of Kaſan. Its capital, of the ſame name, is ſeated on the Sura, where it receives the rivulet Penza, 220 miles S.W. of Kaſan.

PENZLEIN, a town of Lower Saxony, in the principality of Mecklenburg, 53 miles E. of Stettin. Long. 15. 36. E. Lat. 53. 30. N.

PEQUIGNY, a town of France, in the department of Somme; remarkable for the interview between Lewis XI. of France and Edward IV. of England, in 1475, on a bridge built for that purpoſe. It is ſeated on the river Somme, 15 miles S.E. of Abbeville. Long. 2. 5. E. Lat. 49. 58. N.

PERAY, St. a village of France, in the department of Ardeche, noted for its wines. It is 21 miles N.W. of Privas.

PERCASLAW, a town of Ruſſia, in the government of Kiof, 44 miles S.E. of Kiof. Long. 31. 50. E. Lat. 50. 0. N.

PERECZAS, a town of Upper Hungary, capital of a county of the ſame name, 50 miles E. by N. of Tockay. Long. 22. 26. E. Lat. 48. 30. N.

PERGA, a town of Turkey in Europe, in Albania, oppoſite the iſland of Corfu. Long. 20. 19. E. Lat. 39. 40. N.

PERGAMAR, a town of Turkey in Europe, in Romania, with a biſhop's ſee; 60 miles S.W. of Adrianople, and 65 N.W. of Gallipoli. Long. 25. 55. E. Lat. 41. 10. N.

PERGAMO, an ancient town of Natolia, with a biſhop's ſee, a palace, and a caſtle. It is not ſo conſiderable as formerly, but has nine moſques, and occupies an oblong circumference of three miles, at the foot of a mountain. Here parchment was invented. It is ſeated on the Germaſti, 15 miles from its mouth, and 37 N. of Smyrna. Long. 27. 27. E. Lat. 39. 5. N.

PERIA, a town of Perſia, in the province of Irac, 90 miles W. of Iſpahan. Long. 51. 25. E. Lat. 32. 20. N.

PERIAC, a town of France, in the department of Aude, celebrated for its ſalt-works, ſix miles S.W. of Narbonne.

PERIAPATAM, a town of the peninſula of Hindooſtan, 24 miles S.W. of Seringapatam, and 54 N.E. of Tellicherry. Long. 76. 31. E. Lat. 12. 15. N.

PERINDA, a town of the Decan of Hindooſtan, in the province of Dowlatabad, 188 miles N.W. of Hydrabad. Long. 75. 50. E. Lat. 18. 33. N.

PERLEBERG, a town of Upper Saxony, the capital of the marche of Prignitz, 62 miles N.W. of Berlin. Long. 12. 36. E. Lat. 53. 25. N.

PERM, a government of Ruſſia, formerly a province of Kaſan. It is divided into two provinces, namely, Perm, the capital of which is of the ſame name, ſeated on the river Kama, where it receives the Zegochekha; and Catharinenburg, the capital of which is of the ſame name, ſeated near the ſource of the river Iſſel.

PERNALLA, a town of the Decan of Hindooſtan, in the province of Guzerat, 20 miles W. of Durampour, and 38 S. of Surat. Long. 72. 53. E. Lat. 20. 35. N.

PERNE, a town of France, in the department of the Mouths of the Rhone. It is the birth-place of the celebrated orator Flechier, biſhop of Niſmes, and a little to the W. of Apt.

PERNEAU, a town of Ruſſia, in the government of Livonia, with a caſtle. It is ſeated near the mouth of a river of the ſame name, 35 miles N. of Riga. Long. 23. 37. E. Lat. 58. 26. N.

PERNES, a ſtrong town of France, in the department of the Straits of Calais, ſeated on the Clarence, 17 miles N.W. of Arras. Long. 2. 31. E. Lat. 50. 29. N.

PERNO, a town of Sweden, in the province of Nyland, on the coaſt of the Baltic, 36 miles E. of Helſingfors. Long. 25. 40. E. Lat. 60. 30. N.

PERNOV, a town of Ruſſia, in the government of Riga, fortified and defended by a caſtle. It is 92 miles N. of Riga. Long. 24. 30. E. Lat. 58. 30. N.

PEROUSA, a town of Piedmont, the chief place of a valley of the ſame name. It is ſeated on the Cluſon, 16 miles S.W. of Turin. Long. 7. 18. E. Lat. 44. 59. N.

PERSAIN, a town of the kingdom of Pegu, near a river of the ſame name, 132 miles S.W. of Pegu. Long. 94. 55. E. Lat. 16. 45. N.

PERSIA, Gulf of, a gulf between Perſia and Arabia Felix. The entrance near Ormis is not above 30 miles over; but within it is 180 in breadth, and the length from Ormus to the mouth of the Euphrates is 420 miles.

PERTHES, a town of France, in the department of Seine and Marne, ſix miles S.S.W. of Melun.

Perthes, a town of France, in the department of Upper Marne, ſix miles N.W. of St. Dizier.

PERTIGI, a town of the iſland of Sardinia, 19 miles S.E. of Caſtel Aragoncſe.

PERTUIS, a town of France, in the department of the Mouths of the Rhine, 10 miles N. of Aix, and 27 of Marſeilles. Long. 5. 36. E. Lat. 43. 44. N.

PERUGIA, an ancient and populous city of Italy, capital of Perugino, with a ſtrong citadel, a univerſity, and a biſhop's ſee. The churches, and many other buildings, public and private, are very handſome. It is ſeated on a hill, 75 miles N. of Rome. Long. 12. 20. E. Lat. 43. 6. N.

PESCIA, a town of Tuſcany, with a biſhop's ſee. The oil made here is much eſteemed. It is 10 miles S.W. of Piſtoia. Long. 11. 22. E. Lat. 43. 47. N.

PESTI, a town of Naples, in Principato Citeriore, ſeated near the magnificent ruins of the ancient Pæſtum, 20 miles S.E. of Salerno. Long. 15. 7. E. Lat. 40. 20. N.

PETAPA, a town of Mexico, in the province of Guatimala, 20 miles S. of Guatimala. Long. 90. 30. W. Lat. 13. 20. N.

PETER AND PAUL, St. or Petropawloskoi, a ſea-port of Kamtſchatka, in the Ruſſian government of Irkutzk. The town conſiſts of ſome miſerable log-houſes and a few conical huts. Captain Clerke, who ſucceeded Captain Cook, and died at ſea, was interred here. Long. 158. 43. E. Lat. 53. 0. N.

PETERSBERG, a town of Lower Saxony, in the duchy of Magdeburg, 48 miles S.S.E. of Magdeburg.

PETERSBURG, a town of the United States, in Georgia, ſituate at the confluence of the rivers Savannah and Broad, 50 miles N.W. of Auguſta. Long. 81. 32. W. Lat. 33. 46 N.

PETERSDORF, a town of Pruſſia, in the province of Samland, 24 miles E. of Königſberg.

PETERSHAGEN, a town of Germany, in the principality of Minden, ſeated on the Weſer, three miles from Minden, and 37 W. of Hanover. Long. 9. 6. E. Lat. 52. 25. N.

PETHERTON, a town in Somerſetſhire, with a market on Tueſday; ſeated on the Parret, 18 miles S. by W. of Wells, and 133 W. by S. of London. Long. 2. 41. E. Lat. 50. 56. N.

PETIGLIANO, a town of Tuſcany, in the Sienneſe, eight miles W. of Caſtro, and 45 S.E. of Sienna. Long. 11. 42. E. Lat. 42. 23. N.

PETIT GUAVE, a ſea-port of St. Domingo, ſeated on a bay at the weſt end of the iſland. It is 200 miles E. of Jamaica. Long. 72. 52. W. Lat. 18. 27. N.

PETOUNE, a city of Eaſtern Chineſe Tartary, in the department of Kirin. It has ſcarcely any inhabitants but Tartar ſoldiers, and Chineſe condemned to exile. It is ſeated on the Songari, 112 miles N. by E. of Kirin, and 500 N.E. of Pekin. Long. 124. 55. E. Lat. 45. 3. N.

PETRELLA, a town of Naples, in the Moliſe, 11 miles E. of Moliſe.

PETRELLA, a town of Turkey in Europe, in Albania, 26 miles S.E. of Durazzo. Long. 19. 36. E. Lat. 41. 35. N.

PETRIKOW, a town of Great Poland, in the palatinate of Siradia, 80 miles S.W. of Warſaw. Long. 19. 46. E. Lat. 51. 12. N.

PETRINA, or PETRINIA, a ſtrong town of Auſtrian Croatia, ſeated on the Petrina, 27 miles E. of Carlſtadt. Long. 16. 0. E. Lat. 46. 0. N.

PETTAPOLLY, a ſea-port of Hindooſtan, on the coaſt of Coromandel, where the Dutch have a factory, 42 miles S.W. of Maſulipatam. Long. 80. 46. E. Lat. 15. 49. N.

PETTAW, a town of Auſtria, in the duchy of Stiria. It belongs to the Biſhop of Saltzburg, and is ſeated on the Drave, 28 miles S. by E. of Gratz. Long. 15. 37. E. Lat. 46. 46. N.

PETTYCUR, a harbour in Fifeſhire, one mile from Kinghorn, in the frith of Forth. It is the uſual landing place of paſſengers from Leith, on the oppoſite ſhore.

PEVENSEY, a village in Suſſex, ſituate on a ſmall river, which runs into a bay of the Engliſh Channel, called Pevenſey Harbour, 14 miles W.S.W. of Haſtings. Here is an ancient caſtle, which belonged to Robert earl of Moreton, and is ſaid to be the largeſt and moſt entire remain of Roman building to be ſeen in Britain. Pevenſey was anciently a famous haven, though now it is nearly two miles from the ſea. Here Swaine landed in 1049, when he carried off his couſin Beorn and murdered him: Godwin, and his ſon Harold, afterwards ravaged it, and took away many ſhips: and here William the Conqueror landed, when he invaded England.

PFAFENHOFEN, a town of Upper Bavaria, with a Benedictine monaſtery at a ſmall diſtance. It is ſeated on the Ilm, 19 miles N.W. of Ratiſbon. Long. 12. 3. E. Lat. 49. 27. N.

PFALGEL, a town of Germany, in the electorate of Treves. Here is a convent, which was formerly a palace of the kings of the Franks. It is three miles N.E. of Treves.

PFIRT, or FORETTE, a town of France, in the department of Upper Rhine, 10 miles W. of Baſil. Long. 7. 20. E. Lat. 47. 37. N.

PFORTZHEIM, a town of Suabia, in the marquiſate of Baden-Durlach, with a caſtle, ſeated on the Entz, 15 miles S.E. of Durlach. Long. 9. 46. E. Lat. 48. 57. N.

PFREIMB, a town of Upper Bavaria, with a caſtle, ſeated at the confluence of the Pfreint and Nab, 10 miles N.E. of Amberg. Long. 12. 21. E. Lat. 49. 21. N.

PFULLENDORF, an imperial town of Suabia, ſeated on the Andalſpatch, 37 miles S.W. of Ulm. Long. 9. 27. W. Lat. 48. 8. N.

PHANAGORIA, a ſmall and beautiful iſland of Aſia, on the E. ſide of the ſtrait of Caffa.

PHANTASMAGORIA, an appellation lately given to an exhibition of curious optical illuſions in London. Though it will be difficult, we apprehend, to prove any excluſive property in phenomena that every experimental philoſopher muſt have practiſed on a ſmaller ſcale, this has been the ſubject of a patent granted to Mr. Philipſthall, of the Lyceum, in the Strand, who deſcribes his method of repreſenting, in a dark ſpace or ſcene, human figures, in various characters, proportions, and ſizes.

"The apparatus of ſome of theſe exhibitions," ſays he, "conſiſts of two concave glaſſes, or rather two concave metal reflectors, before which an artificial light, proportionable to their focus, is applied.

"Theſe enlightened concave metal reflectors are ſecured in a cloſet or box proportionable to their ſize, and their requiſite light, in ſuch a manner that all the rays of light are directed upon a tranſparent picture, repreſenting the apparition; which picture reflects, by means of lenſes, upon a tranſparent body, and giving the neceſſary direction to this apparatus, according to the nature of its circumſtances, in ſuch a manner that the apparitions repreſent themſelves to the eye of the ſpectator arbitrarily, either in a larger or ſmaller, in a nearer or more diſtant perſpective point of view.

"In the ſame manner I can likewiſe repreſent landſcapes and buildings in a very ſtriking and deceiving manner, in a voluntary ſize.

"Another ſort of apparition is produced by the refraction of light, by means of tranſparent bodies, of various ſhapes and ſizes, which are fixed in a dark cloſet as aforeſaid, and, by means of the refraction of an artificial light, are either made viſible or inviſible. If thoſe bodies are made to liken deceaſed perſons which are required to be ſeen, then the apparition is the more ſtriking, and anſwers fully the ideas commonly formed of a ſpectre.

"A third ſort of theſe optical deceptions I produce in the following manner, viz. By opaque moveable figures, of various ſizes and ſhapes. Theſe are moderately enlightened by the refraction of a concave metal reflector, fixed in a dark cloſet; but the rays of light muſt be properly diſtributed by the refraction of a lens, of a proportionable focus, in order that the enlightened object may alone repreſent itſelf to the eye; if therefore, according to the deſcription, the enlightened figures imitate mechanically the motions of men, and appear in proper dreſs or draperies, then this becomes the moſt ſtriking illuſion, as one may by this regulation, by giving an eaſy motion to their drapery, produce various groups, and pantomime ſcenes, out of the world of ſpirits.

"A fourth ſort of optical illuſion is operated in the following manner, in order to produce a multiplicity of apparitions. There is between the tranſparent body upon which the figures reflect, another dark body ſlipped in, upon which a fixed number of figures are applied, and are diſtributed in a ſymmetrical manner; upon theſe figures either a greater or leſs light is directed, according to the diſpoſition of the groups, and gives to the apparatus the neceſſary direction, in order that thoſe which reflect upon the tranſparent bodies may move through one another, and form all manner of groups; the poſitions of which are very comic and ſtriking, and they procure the moſt agreeable entertainment."

By means of this apparatus and method of working, a thouſand different divertiſements may be produced, only by adapting it to the ſpace and place where it is exhibited, and moderating the rays of light in a ſuitable manner.

PHARZA, anciently PHARSALIA, a town of Turkey in Europe, in Janna, famous for the deciſive victory gained by Julius Cæſar over Pompey, in 48 B.C. This town is an archiepiſcopal ſee, and ſeated on the Enipeus, 10 miles S. of Lariſſa.

PHILIPPINE, a ſtrong town of Dutch Flanders. It was taken by the French in 1747, reſtored in 1748, and again taken in 1794. It is ſeated on an arm of the Scheld, 12 miles S.E of Fluſhing. Long. 3. 51. E. Lat. 51. 16. N.

PHILIPPINES, NEW, otherwiſe called PALAOS, and CAROLINAS, iſlands in the North Pacific Ocean, to the E. of the moſt ſouthern of the Philippine Iſlands. There are about 32 in all, between the equator and the Ladrones; but they are very little known to the Europeans.

PHILIPPOLI, a town of Romania, with an archbiſhop's ſee. It is chiefly inhabited by Grecks, and is ſeated on the Mariza, 82 miles N.W. of Adrianople, and 188 of Conſtantinople. Long. 24. 50 E. Lat. 42. 15. N.

PHILIPS-NORTON, a town in Somerſetſhire, with a market on Thurſday, ſeven miles S. of Bath, and 104 W. of London. Long. 2. 16. W. Lat. 52. 16. N.

PHILIPSBURG, a town of the United States, in New Jerſey, ſituate on the river Delaware, oppoſite Eaſton in Pennſylvania, 41 miles N.W. of Trenton. Long. 75. 30. W. Lat. 40. 45. N.

PHILIPSTADT, a town of Sweden, in Wermeland, ſeated in a hilly and rocky country, abounding in iron mines, between two lakes, and watered by a rivulet. It was built by Charles IX. and called after his ſon Philip. In 1775, it was deſtroyed by fire, but has been ſince rebuilt. It is 20 miles N.E. of Carlſtadt, and 140 N.W. of Stockholm. Long. 14. 10. E. Lat. 39. 30. N.

PHILIPSTOWN, a borough of Ireland, capital of King's County, 40 miles W. of Dublin. Long. 7. 3. W. Lat. 53. 18. N.

PHILIPVILLE, a ſtrong town of France, in the department of the North, ſeated on an eminence, 25 miles S.E. of Mons, and 123 N. by E. of Paris. Long. 4. 24. E. Lat. 50. 7. N.

PHILIP ISLANDS, two iſlands in the South Pacific Ocean, diſcovered by Captain Hunter in 1791, and named after the governor of New South Wales. They are five miles aſunder, but almoſt joined by a ſandy ſpit, which reaches, for about two thirds of the diſtance, from the eaſternmoſt iſland to the moſt weſterly, which laſt is the ſmalleſt. They are covered with ſhrubs, have few tall trees on them, and the land is low. Long. of the eaſtern iſland 140. 3. E. Lat. 8, 6. S.

PHILOLOGY (*Encycl.*). Dele the reference to OSSIAN and GAELIC, lines 1ſt and 2d of col. 2d.

PHILOSOPHY (*Encycl.*). The appellation of *Critical* PHILOSOPHY has been recently given to a ſyſtem of ſcience, founded by the celebrated Profeſſor Kant of Königſberg, and particularly well received in Germany. Againſt this ſyſtem ſome ſerious charges have been brought by the learned in different parts of Europe, but more eſpecially by the Abbé Barrueil; whilſt, on the other hand, it has been no leſs ably defended by its friends and admirers. It is unſuitable for us, on many accounts, but particularly in this advanced ſtate of our undertaking, to enter at great length into a ſubject ſo much controverted; for which reaſon we content ourſelves with referring to the article KANT (*Supp.*), where the reader will be gratified with ſome remarks in defence of the *Critical Philoſophy*, drawn up by a gentleman particularly well qualified for the taſk.

PHOTOMETER, an apparatus for meaſuring the intenſity of light, and likewiſe the tranſparency of the medium through which it paſſes. Count Rumford, when making the experiments which are deſcribed in the Phil. Tranſ. was led, ſtep by ſtep, to the conſtruction of a very accurate photometer, in which the ſhadows, inſtead of being thrown upon a paper ſpread out upon the wainſcot, or ſide of the room, are projected upon the inſide of the back part of a wooden box $7\frac{1}{4}$ inches wide, $10\frac{1}{2}$ inches long, and $3\frac{1}{4}$ inches deep in the clear. The light is admitted into it through two horizontal tubes in the front, placed ſo as to form an angle of 60°; their axes meeting at the centre of the field of the inſtrument. In the middle of the front of the box, between theſe two tubes, is an opening through which is viewed the field of the photometer (ſee Pl. 42. fig. 1). This field is formed of a piece of white paper, which is not faſtened immediately upon the inſide of the back of the box, but is paſted upon a ſmall pane of very fine ground glaſs; and this glaſs, thus covered, is let down into a groove, made to receive it, in the back of the box. The whole inſide of the box, except the field of the inſtrument, is painted of a deep black dead colour. To the under part of the box is fitted a ball and ſocket, by which it is attached to a ſtand which ſupports it; and the top or lid of it is fitted with hinges, in order that the box may be laid quite open, as often as it is neceſſary to alter any part of the machinery it contains.

The count had found it very inconvenient to compare two ſhadows projected by the ſame cylinder, as theſe were either neceſſarily too far from each other to be compared with certainty, or, when they were nearer, were in part hid from the eye by the cylinder. To remedy this inconvenience, he now makes uſe of two cylinders, which are placed perpendicularly in the bottom of the box juſt deſcribed, in a line parallel to the back part of it, diſtant from this back $2\frac{1}{10}$ inches, and from each other 3 inches, meaſuring from the centres of the cylinders; when the two lights made uſe of in the experiment are properly placed, theſe two cylinders project four ſhadows upon the white paper upon the inſide of the back part of the box, or the *field* of the inſtrument; two of which ſhadows are in contact, preciſely in the middle of that field, and it is theſe two alone that are to be attended to. To prevent the attention being diſtracted by the preſence of unneceſſary objects, the two outſide ſhadows are made to diſappear; which is done by rendering the field of the inſtrument ſo narrow, that they fall without it, upon a blackened ſurface, upon which they are not viſible. If the cylinders be each $\frac{4}{10}$ of an inch in diameter, and $2\frac{2}{10}$ inches in height, it will be quite ſufficient that the field be $2\frac{7}{10}$ inches wide; and as an unneceſſary height of the field is not only uſeleſs, but diſadvantageous, as a large ſurface of white paper not covered by the ſhadows produces too ſtrong a glare of light, the field ought not to be more than $\frac{3}{10}$ of an inch higher than the tops of the cylinders. That its dimenſions, however, may be occaſionally augmented, the covered glaſs ſhould be made $5\frac{1}{2}$ inches long, and as wide as the box is deep, viz. $3\frac{1}{4}$ inches; ſince the field of the inſtrument can be reduced to its proper ſize by a ſcreen of black paſteboard, interpoſed before the anterior ſurface of this covered glaſs, and reſting immediately upon it. A hole in this paſteboard, in the form of an oblong ſquare, $1\frac{7}{10}$ inch wide, and two inches high, determines the dimenſions, and forms the boundaries of the field. This ſcreen ſhould be large enough to cover the whole inſide of the back of the box, and it may be fixed in its place by means of grooves in the ſides of the box, into which it may be made to enter. The poſition of the opening above mentioned is determined by the height of the cylinders; the top of it being $\frac{3}{10}$ of an inch higher than the tops of the cylinders; and

as the height of it is only two inches, while the height of the cylinders is $2\frac{2}{10}$ inches, it is evident that the ſhadows of the lower parts of the cylinders do not enter the field. No inconvenience ariſes from that circumſtance; on the contrary, ſeveral advantages are derived from that arrangement.

That the lights may be placed with facility and preciſion, a fine black line is drawn through the middle of the field, from the top to the bottom of it, and another (horizontal) line at right angles to it, at the height of the top of the cylinders. When the tops of the ſhadows touch this laſt-mentioned line, the lights are at a proper height; and further, when the two ſhadows are in contact with each other in the middle of the field, the lights are then in their proper directions.

We have ſaid that the cylinders, by which the ſhadows are projected, are placed perpendicularly in the bottom of the box; but as the diameters of the ſhadows of theſe cylinders vary in ſome degree, in proportion as the lights are broader or narrower, and as they are brought nearer to or removed further from the photometer, in order to be able in all caſes to bring theſe ſhadows to be of the ſame diameter, which is very advantageous, in order to judge with greater facility and certainty when they are of the ſame denſity, the count renders the cylinders moveable about their axes, and adds to each a vertical wing $\frac{1}{20}$ of an inch wide, $\frac{1}{10}$ of an inch thick, and of equal height with the cylinder itſelf, and firmly fixed to it from the top to the bottom. This wing commonly lies in the middle of the ſhadow of the cylinder, and as long as it remains in that ſituation it has no effect whatever; but when it is neceſſary that the diameter of one of the ſhadows be increaſed, the correſponding cylinder is moved about its axis, till the wing juſt deſcribed, emerging out of the ſhadow, and intercepting a portion of light, brings the ſhadow projected upon the field of the inſtrument to be of the width or diameter required. In this operation it is always neceſſary to turn the cylinder outwards, or in ſuch a manner that the augmentation of the width of the ſhadow may take place on that ſide of it which is oppoſite to the ſhadow correſponding to the other light. The neceſſity for that precaution will appear evident to any one who has a juſt idea of the inſtrument in queſtion, and of the manner of making uſe of it. They are turned likewiſe without opening the box, by taking hold of the ends of their axes, which project below its bottom.

As it is abſolutely neceſſary that the cylinders ſhould conſtantly remain preciſely perpendicular to the bottom of the box, or parallel to each other, it will be beſt to conſtruct them of braſs; and, inſtead of fixing them immediately to the bottom of the box (which, being of wood, may warp), to fix them to a ſtrong thick piece of well-hammered plate braſs; which plate of braſs may be afterwards faſtened to the bottom of the box by means of one ſtrong ſcrew. In this manner two of the count's beſt inſtruments are conſtructed: and, in order to ſecure the cylinders ſtill more firmly in their vertical poſitions, they are furniſhed with broad flat rings, or projections, where they reſt upon the braſs plate; which rings are $\frac{1}{10}$ of an inch thick, and equal in diameter to the projection of the wing of the cylinder, to the bottom of which they afford a firm ſupport. Theſe cylinders are likewiſe forcibly puſhed, or rather pulled, againſt the braſs plate upon which they reſt, by means of compreſſed ſpiral ſprings placed between the under ſide of that plate and the lower ends of the cylinders. Of whatever material the cylinders be conſtructed, and whatever be their forms or dimenſions, it is abſolutely neceſſary that they, as well as every other part of the photometer, except the field, ſhould be well painted of a deep black dead colour.

In order to move the lights to and from the photometer with greater eaſe and preciſion, the obſerver ſhould provide two long and narrow, but very ſtrong and ſteady, tables; in the middle of each of which there is a ſtraight groove, in which a ſliding carriage, upon which the light is placed, is drawn along by means of a cord which is faſtened to it before and behind, and which, paſſing over pulleys at each end of the table, goes round a cylinder; which cylinder is furniſhed with a winch, and is ſo placed, near the end of the table adjoining the photometer, that the obſerver can turn it about, without taking his eye from the field of the inſtrument.

Many advantages are derived from this arrangement: firſt, the obſerver can move the lights as he finds neceſſary, without the help of an aſſiſtant, and even without removing his eye from the ſhadows; ſecondly, each light is always preciſely in the line of direction in which it ought to be, in order that the ſhadows may be in contact in the middle of the vertical plane of the photometer; and, thirdly, the ſliding motion of the lights being perfectly ſoft and gentle, that motion produces little or no effect upon the lights themſelves, either to increaſe or diminiſh their brilliancy.

Theſe tables muſt be placed at an angle of 60 degrees from each other, and in ſuch a ſituation, with reſpect to the photometer, that lines drawn through their middles, in the direction of their lengths, meet in a point exactly under the middle of the vertical plane or field of the photometer, and from that point the diſtances of the lights are meaſured; the ſides of the tables being divided into Engliſh inches, and a vernier, ſhewing tenths of inches, being fixed to each of the ſliding carriages upon which the lights are placed, and which are ſo contrived that they may be raiſed or lowered at pleaſure; ſo that the lights may be always in a horizontal line with the tops of the cylinders of the photometer.

In order that the two long and narrow tables or platforms, juſt deſcribed, may remain immoveable in their proper poſitions, they are both firmly fixed to the ſtand which ſupports the photometer; and, in order that the motion of the carriages which carry the lights may be as ſoft and gentle as poſſible, they are made to ſlide upon parallel braſs wires, 9 inches aſunder, about $\frac{1}{10}$ of an inch in diameter, and well poliſhed, which are ſtretched out upon the tables from one end to the other.

The ſtructure of the apparatus will be clearly underſtood by a bare inſpection of Plate 42.: where fig. 1 is a plan of the inſide of the box, and the adjoining parts of the photometer; fig. 2, plan of the two tables belonging to the photometer; fig. 3. the box of the photometer on its ſtand; fig. 4, elevation of the photometer, with one of the tables and carriages.

The count's firſt attempts with his photometer were to determine how far it might be poſſible to aſcertain, by direct experiments, the certainty of the aſſumed law of the diminution of the intenſity of the light emitted by luminous bodies; namely, that the intenſity of the light is every-where as the ſquares of the diſtances from the luminous body inverſely. As it is obvious that this law can hold good only when the light is propagated through perfectly tranſparent ſpaces, ſo that its intenſity is weakened merely by the divergency of its rays, he inſtituted a ſet of experiments to aſcertain the tranſparency of the air and other mediums.

With this view, two equal wax candles, well trimmed, and which were found, by a previous experiment, to burn with exactly the ſame degree of brightneſs, were placed *together*, on one ſide, before the photometer, and their united light was counterbalanced by the light of an Argand's lamp, well trimmed, and burning very equally, placed on the other ſide over againſt them. The lamp was placed at the diſtance of

100 inches from the field of the photometer, and it was found that the two burning candles (which were placed as near together as poſſible, without their flames affecting each other by the currents of air they produced) were juſt able to counterbalance the light of the lamp at the field of the photometer, when they were placed at the diſtance of 60,8 inches from that field. One of the candles being now taken away and extinguiſhed, the other was brought nearer to the field of the inſtrument, till its light was found to be juſt able, ſingly, to counterbalance the light of the lamp; and this was found to happen when it had arrived at the diſtance of 43,4 inches. In this experiment, as the candles burnt with equal brightneſs, it is evident that the intenſities of their united and ſingle lights were as 2 to 1, and in that proportion ought, according to the aſſumed theory, the ſquares of the diſtances, 60,8 and 43,4, to be; and, in fact, $\overline{60,8}^2 = 3696,64$ is to $\overline{43,4}^2 = 1883,56$ as 2 is to 1 very nearly.

Again, in another experiment, the diſtances were,

With two candles = 54 inches. Square = 2916
With one candle = 38,6 = 1489,96

Upon another trial,

With two candles = 54,6 inches. Square = 2981,16
With one candle = 39.7 = 1576,09

And, in the fourth experiment,

With two candles = 58,4 inches. Square = 3410,56
With one candle = 42,2 = 1780,84

And, taking the mean of the reſults of theſe four experiments,

	Square of the Diſtances. With two Candles.		With one Candle.
In the experiment No. 1.	3696,64	—	1883,56
No. 2.	2916	—	1489,96
No. 3.	2981,16	—	1576,09
No. 4.	3410,56	—	1780,84
	4) 13004.36		4) 6730,45
Means	3251,09	and	1682,61

which again are very nearly as 2 to 1.

With regard to theſe experiments, it may be obſerved, that were the reſiſtance of the air to light, or the diminution of the light from the imperfect tranſparency of air, ſenſible within the limits of the inconſiderable diſtances at which the candles were placed from the photometer, in that caſe the diſtance of the two equal lights united ought to be, to the diſtance of one of them ſingle, in a ratio leſs than that of the ſquare root of 2 to the ſquare root of 1. For if the intenſity of a light emitted by a luminous body, *in a ſpace void of all reſiſtance*, be diminiſhed in the proportion of the ſquares of the diſtances, it muſt of neceſſity be diminiſhed in a ſtill higher ratio when the light paſſes through a reſiſting medium, or one which is not perfectly tranſparent; and from the difference of thoſe ratios, namely, that of the ſquares of the diſtances, and that other higher ratio found by the experiment, the reſiſtance of the medium might be aſcertained. This he took much pains to do with reſpect to air, but did not ſucceed; the tranſparency of air being ſo great, that the diminution which light ſuffers in paſſing through a few inches, or even through ſeveral feet of it, is not ſenſible.

Having found, upon repeated trials, that the light of a lamp, properly trimmed, is incomparably more equal than that of a candle, whoſe wick, continually growing longer, renders its light extremely fluctuating, he ſubſtituted lamps to candles in theſe experiments, and made ſuch other variations in the manner of conducting them as he thought bid fair to lead to a diſcovery of the reſiſtance of air to light, were it poſſible to render that reſiſtance ſenſible within the confined limits of his machinery. But the reſults of them, ſo far from affording means for aſcertaining the reſiſtance of the air to light, do not even indicate any reſiſtance at all; on the contrary, it might almoſt be inferred, from ſome of them, that the intenſity of the light emitted by a luminous body in air is diminiſhed in a ratio *leſs* than that of the ſquares of the diſtances; but as ſuch a concluſion would involve an evident abſurdity, namely, that light moving in air, its abſolute quantity, inſtead of being diminiſhed, actually goes on to *increaſe*, that concluſion can by no means be admitted.

The ingenious author's experiments all conſpired to ſhew that the reſiſtance of the air to light is too inconſiderable to be perceptible, and that the aſſumed law of the diminution of the intenſity of light may be depended upon with ſafety. He admits, however, that means may be found for rendering the air's reſiſtance to light apparent; and he ſeems to have thought of the very means which occurred for this purpoſe to M. de Sauſſure.

From a number of experiments made with his photometer, Count Rumford found, that by paſſing through a pane of fine, clear, well poliſhed glaſs, ſuch as is commonly made uſe of in the conſtruction of looking-glaſſes, light loſes 1973 of its whole quantity, *i. e.* of the quantity which impinged on the glaſs; that when light is made to paſs through two panes of ſuch glaſs ſtanding parallel, but not touching each other, the loſs is 3184 of the whole; and that in paſſing through a very thin, clear, colourleſs pane of window-glaſs, the loſs is only 1263. Hence he infers, that this apparatus might be very uſefully employed by the optician, to determine the degree of tranſparency of glaſs, and direct his choice in the proviſion of that important article of his trade. The loſs of light when reflected from the very beſt plane glaſs mirror, the author aſcertained, by five experiments, to be $\frac{1}{3}$d of the whole which fell upon the mirror.

PHYSIOLOGY (*Encycl.*). In that article (p. 51, col. 1, near the bottom), a ſeeming importance has been given to the impoſture of *animal magnetiſm*. The reader will be pleaſed to eraſe the three paragraphs in which that fallacious doctrine occurs.

PIADELLA, a town of Italy, in the duchy of Milan, 20 miles N. of Como. Long. 9. 10. E. Lat. 46. 5. N.

PIANEZZA, a town and caſtle of Piedmont, ſeated on the Dora, eight miles from Turin.

PIANOZA, an iſland of Italy, off the coaſt of Tuſcany, ſix miles S. of that of Elba. It is level and low, as the name imports. Long. 10. 34. E. Lat. 42. 46. N.

PIARA, a river, which riſes in the mountains of Tyrol, and falls into the gulf of Venice, by two mouths, a little north of Venice.

PIAZZA, a town of Naples, in Principato Citeriore, 13 miles E.N.E. of Salerno.

PIAZZA, a town of Sicily, in Val di Noto. It contains 18,000 inhabitants, and is ſituate almoſt in the centre of the iſland, 15 miles N.W. of Calata Girone.

PICTS' WALL, a famous barrier againſt the Picts, of which ſome ſmall remains are left. It began at the entrance of Solway Frith, in Cumberland, and running by Carliſle, was continued from W. to E. acroſs the iſland to Newcaſtle, and ended at Tinmouth.

PIDAURA, a town of Turkey in Europe, in the Morea, the ancient Epidaurus. It is ſituate on the W. coaſt of the gulf of Engia, 25 miles E. of Napoli-di-Romania. Long. 23. 22. E. Lat. 37. 40. N.

PIENZA, a populous town of Tuſcany, in the Sienneſe, with a biſhop's ſee; 25 miles S.E. of Sienna, and 56 S. of Florence. Long. 11. 42. E. Lat. 43. 0. N.

PIERRE LE MOUTIER, St. a town of France in the department of Nievre, ſeated in a bottom, ſurrounded by mountains, and near a lake, which renders the air unwholeſome, 15 miles N W. of Moulins, and 150 S. of Paris. Long. 3. 13. E Lat. 46. 48. N.

PIERRE, St. a ſmall deſert iſland near Newfoundland, ceded to the French in 1763, for drying and curing their fiſh. They were diſpoſſeſſed of it by the Engliſh in 1793. Long. 56. 0. W. Lat. 46. 39. N.

PIETRO, St. an iſland in the Mediterranean, near Sardinia, taken by the French in 1793, but retaken ſoon after.

PIG (*Encycl.*). The following extract from an account of the advantage of a cottager keeping a pig, by the Rev. Dr. Glaſſe, is publiſhed by the Society for bettering the Condition of the Poor, &c.

" James Bramſgrove, a farmer's labourer at Greenford, in Middleſex, had ſaved by his induſtry the ſum of four guineas. With this he purchaſed a hog, which he put up to fatten in the beginning of April laſt. In the courſe of the fattening, he uſed three quarters and a half of beans, and ſeven buſhels of peaſe, with which he had been ſupplied, chiefly upon credit, by his maſter and his neighbours.—He has a wife and five children; the two eldeſt, girls; one twelve years old, the other ſomething younger. He, his wife, and his two girls, during the laſt harveſt, earned two guineas a-week, and in one week the ſum of 2l. 11s. ſo that he has continued to maintain his family, and has paid off all that was due from him for beans and peaſe.—He has ſince killed his hog, at Michaelmas; the weight was 64 ſtone 3lb.: part of it he has ſold at 7½d. per pound; the reſt he has reſerved for the uſe of his own family. Eſtimating the whole at 7½d. per pound, the value of the hog would have been above 16l.; but, as what he ſold conſiſted of the prime pieces, ſome deduction ought to be made on that account."

Where a cottager poſſeſſes any property, when he has a garden, a pig, or a cow, his advantage is to be eſtimated, not merely by the pecuniary profit produced, but by the ſuperior tone of induſtry and economy which he acquires. In the inſtance mentioned of James Bramſgrove and his family, the proſpect of increaſed comfort, and of improved means of ſubſiſtence, gave an incentive and pleaſure to all their labour and exertions, during the late harveſt. Perhaps it may be needleſs to obſerve, that habits of application and good conduct, when once acquired and *enjoyed*, continue in almoſt every inſtance, through life, a bleſſing to the poſſeſſor; and that where the cottager has acquired at home a pleaſurable object of induſtry, to which his hopes and wiſhes are directed, it has the effect of attaching him to his ſituation, of augmenting his energy, and of reconciling him to a life of labour and hardſhip.

There are ſituations, in which, on account of the high value and rent of land, or on account of there being very little graſs land or common, a cow cannot be kept, with advantage, by the cottager. There, it is probable, no better mode can be ſuggeſted of ſupplying the poor with milk, than that ſo ſucceſsfully adopted by Mr. Giſborne, near Lichfield: but a pig may be kept, and a garden cultivated with benefit to the cottager, in every part of the kingdom. See Cottager, Cow, and *Cottage*-Garden, *Supp.*

PIGEON ISLAND, a ſmall iſland, eight miles from the coaſt of Malabar, and 15 from the town of Onore. Long. 74. 6. E. Lat. 14. 1. N.

PIGNEY, a town of France, in the department of Aube, 12 miles N.E. of Troyes. Long. 4. 25. E. Lat. 48. 20. N.

PILLAU, a ſea-port of Pruſſia, on the Baltic. The harbour is good, and it is well fortified, being conſidered as the bulwark and key of the kingdom. It is 20 miles W. by S. of Königſberg, of which it is the port. Long. 20. 20. E. Lat. 54. 38. N.

PILNITZ, a town of Upper Saxony, in the margravate of Meiſſen, celebrated for a treaty entered into by the princes of Europe againſt France in 1792. It is ſeven miles S.E. of Dreſden.

PILSEN, a ſtrong town of Bohemia, capital of a circle of the ſame name. It has often been taken and retaken, and is ſeated near the confluence of the Mifa and Watto, 47 miles W. by S. of Prague. Long. 13. 55. E. Lat. 49, 46. N.

PILSNA, Pilsno, or Pilzow, a town of Little Poland, in the palatinate of Sandomir, ſeated on the Wilſake, 50 miles E. of Cracow. Long. 21. 10. E. Lat. 50. 0. N.

PINES, Isle of, an iſland in the S. Pacific Ocean, off the ſouth end of New Caledonia. It is 14 miles over in a S.E. and N.W. direction. It is high and remarkable in the middle, being quite a pointed hill, ſloping towards the extremities, which are very low. The low land has many tall pine-trees upon it. It was diſcovered by Captain Cook in 1774. Long. 167. 38. E. Lat. 22. 38. S.

PINHEL, a ſtrong town of Portugal, in Tra-los-Montes, capital of a territory of the ſame name. It is ſeated at the confluence of the Coha and Pinnel, 25 miles N. of Guarda. Long. 6. 40. W. Lat. 40. 46. N.

PIN-HIANG-FOU, a city of China, in the province of Chan-ſi. Its diſtrict contains ſix cities of the ſecond, and 28 of the third claſs. It is 240 miles S.W. of Pekin. Long. 111. 55. E. Lat. 35. 55. N.

PINNENBURG, a fort and town of Lower Saxony, in the duchy of Holſtein, capital of a county of the ſame name. It is ſeated on the Owe, 15 miles N.W. of Hamburg. Long. 9. 40. E. Lat. 53. 46. N.

PINOS, an iſland of the Weſt Indies, on the ſouth ſide of Cuba, from which it is ſeparated by a deep ſtrait. It is 25 miles long, and 15 broad, and has excellent paſtures. Long. 82. 33. W. Lat. 22. 2. N.

PINSK, a town of Lithuania, on a river of the ſame name. It was formerly a conſiderable place, but has been almoſt ruined by the Coſſacks. Long. 26. 20. E. Lat. 52. 18. N.

PIOMBINO, a ſea-port of Tuſcany, capital of a principality of the ſame name. It is ſeated on a bay, 40 miles S. of Leghorn, and 60 S.W. of Florence. Long. 10. 23. E. Lat. 42. 57. N.

Piombino, a principality of Tuſcany, lying on the Mediterranean. The iſland of Elba depends upon it, and has its own prince, under the protection of the King of the Two Sicilies.

PIPE (*Encycl.*). A patent was granted to Mr. Wilkinſon, of Broſeley, in the county of Salop, for an improved method of making leaden pipes.

It is dated March 13, 1790.—He caſts the lead in lengths, as is practiſed in the common way, *i. e* put upon a poliſhed rod or round maundrell of iron, or any metal, ſuch maundrells being made of different lengths and diameters, according to the ſize that is wanted. This rod or maundrell, with the caſt-lead upon it, is put repeatedly through or between rollers, with grooves, of different ſizes, according to the external diameter required, and extended to the length or thickneſs ordered; or drawn through metal gauges or collars, of different dimenſions, upon the ſaid maundrell, each ſucceeding collar being leſs than the former, until the ſame is extended to the length and thickneſs required; all of which may be performed with a common water wheel, or any other rotative motion.

PIPERNO, a town of Italy, in Compagna di Roma, 50 miles S.E. of Rome. Long. 13. 36. E. Lat. 41. 39. N.

PIPLEY, a town of Hindooſtan Proper, in Bengal, which formerly had Engliſh and Dutch factories. It is ſeated on a

river, 15 miles W. of Balafore. Long. 86. 31. E. Lat. 21. 20. N.

PIQUE MONTVALLIER, the higheſt mountain of the Pyreneés. It is in the form of a pike. Long. 0. 22. W. Lat. 42. 51. N.

PIRANO, a ſea-port of Venetian Iſtria, on a peninſula, 10 miles S. of Capo d'Iſtria. Long. 14. 1. E. Lat. 45. 40. N.

PIRITZ, a town of Pomerania, in the territory of Stetin. The ancient dukes of Pomerania often reſided here. It is ſeated near the lake Moldui, 20 miles S.E. of Stetin. Long. 14. 20. E. Lat. 53. 18. N.

PIRNA, a commercial town of Upper Saxony, ſituate on the Elbe, 11 miles S.E. of Dreſden. Long. 14. 0. E. Lat. 50. 54. N.

PISANO, a territory of Tuſcany, lying on the Mediterranean. It is 47 miles long, and 25 broad, and one of the beſt countries in all Tuſcany.

PISCATAQUA, a river of New Hampſhire, the mouth of which forms the only port in that ſtate, and is 60 miles N. of Boſton. Long. 70. 30. W. Lat. 43. 25. N.

PISCO, a town of Peru, in the audience of Lima, with a good road for ſhips. It is ſeated in a country fertile in excellent fruits and good wine, 140 miles S.S.E. of Lima. Long. 76. 15. W. Lat. 13. 36. S.

PISELLO, the moſt northern cape of Natolia, which projects into the Black Sea, oppoſite the Crimea.

PITCAITLY WELLS, ſome remarkable ſaline ſprings, near Perth, in Scotland, deemed beneficial in ſcorbutic caſes.

PITHEA, a ſea-port of Sweden, in Weſt Bothnia, ſeated on a ſmall iſland, at the mouth of the Pithea, in the gulf of Bothnia. It is joined to the continent by a wooden bridge, and is 80 miles S.W. of Tornea. Long. 22. 40. E. Lat. 65. 11. N.

PITSCHEN, or BITSCHEN, a town of Sileſia, in the principality of Brieg, formerly the ſee of a biſhop, afterwards removed to Breſlaw. It is 30 miles N.E. of Brieg, and 42 E. of Breſlaw. Long. 17. 55. E. Lat. 51. 5. N.

PITTSBURGH, or FORT PITT, a flouriſhing town of Pennſylvania, capital of the county of Allegany, ſituate on the W. ſide of the Allegany mountains, on a point of land between the rivers Allegany and Monongahela. Here was the French Fort du Queine; in an expedition againſt which, in 1756, General Braddock fell into an ambuſcade, and was defeated and ſlain. This fort was abandoned by the French, in 1758, on the approach of General Forbes; and its name was changed to that of Pitt, in honour to the miniſter by whom the war was then directed At this place, the Allegany takes the name of Ohio. It is 320 miles W. of Philadelphia. Long. 79. 48. W. Lat. 40. 26. N.

PIURA, a town of Peru, capital of a juriſdiction of the ſame name. This was the firſt Spaniſh ſettlement in Peru, and was founded in 1531. It is 25 miles S.S.E. of Paita. Long. 81. 0. W. Lat. 5. 55. S.

PIZZIGHETONE, a town of Italy, in the Cremoneſe, with a ſtrong caſtle, in which Francis I. of France was kept priſoner. It was taken by the French in 1796, and retaken by the Auſtrians and Ruſſians in 1799. It is ſituate on the Adda, nine miles N.W. of Cremona, and 13 S.E. of Lodi. Long. 9. 53. E. Lat. 49. 50. N.

PIZZO, a town of Naples, in Calahria Ulteriore, ſeated on the gulf of St. Eufemia, four miles from Monte-Leone.

PLACENTIA, a town of Spain, in Eſtremadura, with a biſhop's ſee, and a caſtle. It is ſeated on the Xera, in a delightful plain, almoſt ſurrounded by mountains, 80 miles S.W. of Madrid. Long. 5. 0. W. Lat. 39. 45. N.

PLACENTIA, a town of Spain, in Guipuſcoa, ſeated on the Deva, 25 miles S.E. of Bilboa. Long. 2. 40. W. Lat. 43. 10. N.

PLACENTIA, a ſea-port of Newfoundland, on a bay on the S.E. part of the iſland, 40 miles W. of St. John. Long. 53. 43. W. Lat. 47. 15. N.

PLANE (*Encycl.*). The following account of an underground inclined plane, executed at Walkden Moor, in Lancaſhire, by the Duke of Bridgewater's directions, was preſented by the Rev. Mr. Egerton, to the Society for the Encouragement of Arts, &c. who voted his Grace their gold medal:

At Worſley, the Duke of Bridgewater's navigation begins; it goes weſt to Leigh, and eaſt to Mancheſter, where it locks up into the Rochdale canal. In its way to Mancheſter, it turns out, in a weſtern direction, near Longford Bridge, to meet the Grand Trunk Canal, above Preſton Brook; and from thence it goes north-weſt to Runcorn, where it locks down into the Merſey, in the tide-way to Liverpool.

To this navigation above ground, which, in all its directions, is extended through a length of forty miles, upon one level, without tunnel or lock, except the locks at the extremities, at Worſley an under-ground navigation is joined, which goes to the different mines of coal under Walkden Moor; from which mines, by theſe navigations above ground and under ground, Mancheſter and various other places are ſupplied with that valuable article. The canals of this underground navigation lie upon two levels, or ſtories. The lower is upon the ſame level with the open navigation, which it joins at Worſley; and conſiſts, in the different lines which it purſues to the different ſeams of coals, of near twelve miles of tunnelling.

The higher is thirty-five yards and a half perpendicular height above the level of the lower, and varies from thirty-eight to ſixty-one perpendicular yards below the ſurface of the earth, and conſiſts of near ſix miles of tunnelling.

The tunnelling of each level is ten feet four inches wide, and eight feet ſix inches deep; and the depth of water, three feet ſeven inches.

Before a communication was made by an inclined plane, the coals were diſcharged by hand from the boats on the higher level, and were let down the pits in tubs, by an engine and a break-wheel, into thoſe upon the lower. To convey the boats themſelves from the canals of the higher level into that of the lower, was the intent of making this under-ground inclined plane. By the help of this machinery, the whole buſineſs is now done at once, without diſcharging or damaging the coal, and at one fourth of the expence: for the boats of the higher level, are bodily let down the inclined plane, and are floated from the foot of it through nearly three miles, in a ſtraight line, of the lower level canal, into the open navigation at Worſley: and whereas they were before obliged to be drawn up to the ſurface of the earth at great inconvenience and expence, to be repaired at a work-ſhop on Walkden Moor, they now come of themſelves, in their courſe of buſineſs, to be repaired at the great dock-yard, at Worſley.

The place where the inclined plane is conſtructed, is adapted in a ſingular way for the purpoſe. There is a bed of white rock, or grit, eight yards twelve inches deep, which dips one in four, lying exactly in the direction moſt convenient for the communication between the two levels; which bed of rock is hollowed into a tunnel, driven upon the riſe of the metals, by blaſting with gunpowder, and working it down with wedges and hammers. In this tunnel, formed through a rock reaching from the lower to the higher level, the inclined plane is fixed; and, by its being in the heart of a rock, the whole workmanſhip can be pinned, ſecured, and compacted together at the top, bottom, and ſides, moſt effectually:—an advantage which no inclined plane above ground can have, and which renders this a ſingular production, no-where perhaps to be imitated.

The run of the inclined plane is one hundred and fifty-one yards, beſides eighteen yards, the length of the locks, at the north or upper-end: and the fall is one in four, correſponding with the dip of the rock. Of theſe one hundred and fifty-one yards, about ninety-four yards are formed into a double waggon-way, in order to let two boats, namely, the empty and the loaded boats, paſs up and down; and are divided by a brick wall, ſupporting the roof, in which are openings for a perſon to eſcape out of the way of the boats; which double waggon-way joins in one, about fifty-ſeven yards from the lower level. The whole width of the double waggon-way is nineteen feet; and of the ſingle waggon-way, after the junction, ten feet. Theſe waggon-ways are ſupplied with iron rails, or gullies, laid on ſleepers, down the whole run; and the height of the roof, above the iron rails, is eight feet.

At the top of the inclined plane there is a double lock, or rather two locks, ſide by ſide, formed in the heart of the ſame rock, which deliver the loaded boats from the higher level down the inclined plane, and receive the empty boats from the lower. The length of that part of the tunnel in which theſe are formed, is eighteen yards; the width or diameter, twenty feet ſix inches; and the height of the roof, at the north end and above the locks, at *d d*, Pl. 42. fig. 1, twenty-one feet, to admit the break-wheel.

The bottom, or ſouth end of the inclined plane, is ſix feet nine inches under the ſurface of the water, where the loaded boat floats off the carriage upon the canal of the lower level.

The depth of the locks, under water, at the north end, is four feet ſix inches; at the ſouth end it is eight feet.

The wall between the locks is nine inches above the ſurface of the level water; its breadth is three feet.

The diameter of the horizontal main-ſhaft, upon which the rope works to let the loaded boats down, and to draw the empty boats up, is four feet eleven inches, and its circumference is fifteen feet five inches. The main rope is two inches and a half in diameter, and ſeven inches and a half in circumference. It is wrapped round with a ſmall cord of about an inch in circumference, for the length of about one hundred and five yards, to prevent its wearing, which it does chiefly when it drags upon the bottom, when at work, at the place where the waggon-ways unite; and, for the ſame purpoſe, rollers of eight inches diameter are fixed at intervals down the run of the inclined plane. Moreover, a hollow caſt-iron roller of eight inches and a half diameter is fixed acroſs the weſt lock, parallel to the upper weſt lock-gate, and near the north end of the lock, but half a yard higher than the gate, in order to bear up the rope, and to prevent it from ſwagging.

A hold-faſt rope is faſtened to the main-rope, to ſtay each boat upon its waggon, as they go up or down. It is marked *k k*, in Fig. 1, and its uſes are more particularly detailed in the table of reference, at *k k*, to that plate.

Upon this horizontal main-ſhaft is a break-wheel above mentioned, which regulates the motion of the loaded boat going down the inclined plane.

The number of iron teeth, or cogs, in the ſpur-wheel, which is faſtened to the ſide of the break-wheel, is three hundred and ſeventy-two: and the little nut-wheel, No. 3, fig. 2, which ſets it in motion, contains eleven teeth, or cogs. The nut-wheel is ſupported by two uprights from the pillar to the roof, and works between them. Two winches or handles, No. 4 4, fig. 2, on its axis, put the main-ſhaft, *d d*, fig. 1, or No. 1, fig. 2, in motion. The power of both united, enables a man, who uſes a force equal to forty pounds weight, to ſet forward two tons upon the waggon-road: and this force, multiplied at the winches or handles, may be uſed to ſet forward the loaded boat out of one lock, and to bring the empty boat into the other. The boats being thus put in motion, the little nut-wheel is diſengaged from the main-ſhaft, by a ſlide drawing the little nut ſideways, ſo as to diſengage the teeth, or cogs, from the cogs of the ſpur-wheel. The weight of four tons going down, bring up about one.

The ſpur-wheel, however, which is faſtened to the break-wheel, No. 2, fig. 2, is ſeldom uſed, as it is occaſionally only put in motion to regulate the ſtretch of the ropes when new, and to draw the light boat into the lock, when, at any time, it may happen to be over-weighted with materials, ſuch as mortar, props, ſlabs, &c. for the uſe of the higher level collieries, and will not move of itſelf, upon a balance, out of the lower level.

The length of the carriage, or cradle, is thirty feet; its width is ſeven feet four inches. It moves upon four ſolid caſt-iron rollers, which run upon caſt-iron plates; on one ſide of each of which there are iron creſts, which ſtand two inches higher than the plates, and prevent the carriage from running off the road.

The weight of neat coal, contained in the loaded boat, is about twelve tons: the boat weighs about four tons; and the carriage, or cradle, in which the boat is placed, when conveyed down the inclined plane, is about five tons:—in all about twenty-one tons.

At this inclined plane, thirty loaded boats are now let down with eaſe, in about eight hours; that is to ſay, four boats are let down in a little more than an hour. The boats uſed in theſe collieries are of different ſizes and dimenſions; ſome will carry ſeven, ſome eight and a half, ſome twelve tons.

The weight of neat coal, independently of the weight of the carriage and boats, which is let down the inclined plane, in twelve-ton boats, in eight hours, will conſequently be three hundred and ſixty tons. The weight of the carriage, ſuppoſe five tons, let down in the ſame time, will be one hundred and fifty tons; and the weight of the boat, ſuppoſe four tons, thirty times down, in eight hours, will be one hundred and twenty tons:—in all ſix hundred and thirty tons down in eight hours.

The weight of the carriage thirty times up, and thirty boats up, in eight hours, will be

Carriage, at 5 tons, 30 times up = 150 tons
Boat, at 4 tons, 30 times up = 120 tons

In all 270 tons up in eight hours.

So that there will be 630 tons down
270 tons up.

In all 900 tons moved at the inclined plane, in eight hours, excluſive of an indeterminate quantity of materials occaſionally brought up for the uſe of the higher level collieries.

The various feeders which are looſened by opening the coals in the higher level collieries, as well as three ſufficient reſervoirs, which may occaſionally be reſorted to, and uſed in a dry ſeaſon, keep the higher level always to its height, and afford a conſtant ſupply of water to fill the locks, for the purpoſe of working the inclined plane.

This inclined plane was begun in September, 1795: it was finiſhed, and in uſe, in October, 1797.

Of this, as of moſt of his other great works, the Duke of Bridgewater was himſelf the planner and contriver:—to project greatly, and to execute completely, are the perfection of genius.

The ſingularity of the place in which it is conſtructed; the original boldneſs of the deſign; the ingenuity and mecha-

niſm diſplayed in planning and executing it; the diſpatch with which it has been finiſhed; the ſimplicity, beauty, and harmony of its parts, tending to one united whole; and, above all, the perfection to which it is proved to have been brought, now that it is practically in uſe; render it equally aſtoniſhing with any other of the ſtupendous works which have been ſo ably planned, and ſo ſucceſsfully executed, by the firſt projector and patriotic father of Inland Navigation.

References to Plate 42. Fig. 1, *a* to *b*, dip of the metals and waggon-road on the under-ground inclined plane. From *b*, on the lower level, to the mouth of the tunnel, is three miles; A, the eaſt lock; B, the weſt lock; C, repreſents a ſection of the lock: the dotted line ſhews the horizontal depth, and the black line under it, the ſlope upon which the waggon-wheels run to receive the loaded boat, or to bring the empty boat into the lock; *d d*, the main-ſhaft, four feet eleven inches diameter, upon which the ropes work to wind the boats up and down; and here alſo the break-wheel is faſtened on, together with a ſpur-wheel, and a nut-wheel. See fig. 2, No. 1: *e*, a paſſage between the higher level and the locks; *f*, *f*, a loaded boat going down, and an empty boat going up the under-ground inclined plane; G, a brick wall, from the ſole to the top of the inclined plane, in order to give additional ſupport to the roof; *h*, *h*, *h*, *h*, openings through the brick wall G, into which a perſon may ſtep out of the way of the boats at the time they are paſſing up and down; *i*, a bell, which is rung by the rope dotted to *b*, upon the lower level, at the bottom of the under-ground inclined plane, to give notice when the empty boat is upon the waggon, or cradle, and when the men below are ready, that the loaded boat may be let down by the men above; *k*, *k*, holdfaſt-ropes faſtened to the main-ropes, and hooked on to a ring at the ſouth end of each boat, as it goes up or down, in order to ſtay the boats upon the waggon or cradle, that they may not ſwag, or ſlip off. Theſe holdfaſt-ropes are ſpliced on to the end of the main-ropes, and run above and between the two bridle-ropes when they are faſtened to the iron uprights, which are upon each ſide of the waggons, or cradles; and they run over the north end of the boat, to be hooked on to the ſouth end; *l*, *l*, the bridle-ropes faſtened to the main-ropes at O, and ſecured to two iron uprights upon each ſide of the waggon, or cradle; O, O, the places where the main ropes, the bridle-ropes, and the holdfaſt-ropes, are faſtened all together.

No. 1, an open ſpace driven into the ſide of the lock A, to which a pit is ſunk from the higher level, in order to convey the water out of the locks down to the lower level, and alſo to force a current of freſh air into the lower level collieries; No. 2, a paddle to let the water out of the lock A, into the pit No. 1; No. 3, a paddle to let the water out of the lock B, through a culvert, repreſented by dotted lines, under the lock A, into the pit No. 1; No. 7, 7, paddles in the lock-gates, to let the water out of the higher level into the locks; No. 8, 8, the two north lock-gates, one to each lock, which turn upon the heels of the gates, and ſwing round when they are opened or ſhut; No. 10, 10, two ſtops or cloughs, one to each lock, which ſerve as lock-gates to the ſouth end, and are raiſed and let down by a windlaſs; S, a ſtop, which is uſed occaſionally when the lock-gates want repairing; T, the place where the boats which are to paſs to or from the lower ſingle waggon-way are directed, at pleaſure, into either part of the double waggon-way, by a moveable iron ſleeper or plate at that point, upon which ſleeper or plate the wheels of the boat-carriage or cradle run.

Fig. 2; 1, main-ſhaft, on which the rope laps; 2, break-wheel, on one ſide of which the ſpur-wheel is faſtened; 3, nut-wheel, out of geer, but which ſlides into the ſpur-wheel, when uſed to draw the empty boat into the lock occaſionally, and which is ſupported by two uprights from the pillar to the roof; 4, 4, winches or handles, to work the nut and ſpur-wheel; 5, 5, the main-ropes faſtened to the boats, and which are lapped to prevent their wearing; 6, the ſpur-wheel, which is faſtened on one ſide of the break-wheel; and on which break-wheel is a ſtrong iron-jointed timber brace, which, according to the preſſure given thereto by the man who attends it, will allow the loaded boat to deſcend quick or ſlow, or detain it in its paſſage; 7, 7, paddles in the lock-gates, to let the water out of the higher level into the lock; 8, a hollow caſt-iron roller, to prevent the main-ropes from ſwagging; 9, ſhroud-wheel, to prevent the ropes going over the end of the main-ſhaft, ſlipping off, jerking, or breaking. This ſtands three inches above the main-ſhaft.

PLANIEZ, a ſmall iſland of the Mediterranean, in the road of Marſeilles.

PLANO, a ſmall iſland of the Mediterranean, in the bay of Alicant.

PLATA, an iſland of Peru, on the coaſt of Quito, ſurrounded by inacceſſible rocks, and about five miles long and four broad.

PLATA, a rich and populous town of Peru, capital of the audience of Los Charcos, with an archbiſhop's ſee. It is ſeated on the Chimao, 500 miles S.E. of Cuſco. Long. 63. 40. W. Lat. 19. 16. S.

PLATA, RIO-DE-LA, a province of Paraguay, on the S.W. of a river of the ſame name. It is ſubject to Spain, and at Buenos Ayres, the capital, a new vice-royalty was eſtabliſhed in 1776. See PERU.

PLAUEN, a town of Lower Saxony, in the duchy of Mecklenburg, ſeated on a ſmall river which falls into the Elbe, near a lake of the ſame name, 17 miles S. of Guſtrow. Long. 12. 13. E. Lat. 53. 40. N.

PLAUEN, a town of Upper Saxony, in Voigtland, ſeated on the Elſter, 67 miles S.W. of Dreſden. Long. 12. 17. E. Lat. 50. 32. N.

PLESHEY, a village in Eſſex, ſeven miles N. by W. of Chelmsford. It was the ſeat of the lord high conſtable of England, from the earlieſt times of that office to the year 1400. On the ſite of his caſtle is now a brick farm-houſe; and here are the remains of an ancient fortification, conſiſting of a mount, of an oval form, ſurrounded by an area that contains about two acres, and is bounded by a rampart and ditch, over which is a brick bridge.

PLESSE, a town of Sileſia, with a caſtle, ſeated on the Viſtula, 36 miles E. of Troppaw. Long. 18. 36. E. Lat. 50. 0. N.

PLETTENBERG, a town of Weſtphalia, in the county of Mark, governed by its own magiſtracy. It is ſituate on the Elſe and Oeſter, 28 miles S. of Ham. Long. 7. 48. E. Lat. 51. 8. N.

PLEYBERG, a town of Germany, in Carinthia, ſeated on the Feiſtez, at the foot of a mountain, 25 miles E. by S. of Clagenfurt.

PLOTZKAU, a town of Upper Saxony, in the duchy of Anhalt Bernberg, 24 miles W.S.W. of Deſſau. Long. 11. 45. E. Lat. 51. 48. N.

PLOUGH (*Encycl.*). Under that head, and alſo under HUSBANDRY, we have treated fully on this invaluable implement of agriculture. It remains, however, for us to notice the following new inventions which have been ſince brought forward.

1. The *Kentiſh turn-wreſt plough* conſiſts of an oak beam, about ten feet in length, five inches in depth, and four inches

n breadth; to the end of which is *tenoned* a *foot*, or piece of timber ($3\frac{1}{2}$ feet long, 4 inches thick, and $3\frac{1}{2}$ inches broad), that is mortiſed at the bottom, to the end of the *chep*. The handles are fixed on the top of the beam, through which, at the diſtance of two feet five inches from the foot, is paſſed a *ſheath* of oak, ſeven inches in width, and an inch and a half thick, being mortiſed into the chep in an oblique direction, ſo that the point of the ſhare will be two feet ten inches aſunder from the beam. The *chep* is five feet in length, four inches in width, and five deep: to this is fixed the ſhare, which weighs about 32 lbs. and is manufactured of hammered iron, being one foot eight inches in length, and from four and a half to ſeven inches wide at the point. The upper end of the beam is ſupported on a carriage, furniſhed with two wheels, that are three feet two inches in height; on the axle-tree of which a gallows is placed, and provided with a ſliding bolſter, for the purpoſe of raiſing or lowering the machine. A claſp-iron likewiſe enters through the axle, to which a ſtrong chain, or a tow paſſing over the beam, is fixed in ſuch a manner, that the plough may, by means of notches, or a pin known under the name of a *cheek*, be let out to a greater length from the axle; and will conſequently penetrate more deeply into the earth.

We have been induced to give this deſcription of the Kentiſh Plough, becauſe it is an inſtrument of great ſtrength, and eminently calculated for rocky and hilly countries, as it turns the ſoil to a conſiderable depth, laying it perfectly level, without making any furrow, or opening; a circumſtance of equal advantage and importance, in dry ſituations.—The price of the whole, with its tackle complete for drawing, is computed to be about five guineas.

2. A valuable implement has very lately been introduced into the county of Lancaſter, by Mr. Duckett, jun.—It is denominated a *Trench-plough*, and furniſhed with two ſhares, one being directly over the other, ſo that one narrow ſuperficial furrow may be drawn from the ſurface of the ſoil, while another, at a moderate depth, is taken off beneath. This machine is well adapted for ploughing in green crops, or long dung, by way of manure; and, if the ſurface of the ſoil be *foul*, it may be turned under, and freſh ſoil brought up, from the depth of 10 inches, by employing three horſes. The earth being thus looſened, the roots of plants are enabled to ſtrike downwards without any impediment; and, while the land is drained, and expoſed to the influence of the air, it is thereby conſiderably improved.

3. The *Scalp-plough*, or *Extirpator*, as it is generally termed, was lately invented by Mr. Hayward, of Stoke-Aſh, in the county of Suffolk. Its beam is ſeven feet in length, and is furniſhed with two handles. The ſhares are eight inches broad, nine in length, and are fixed to *ſtalks*, about ten inches in height, and eleven inches aſunder. This implement may be adapted to the wheels of a common plough, and will penetrate the ſoil to a greater or leſs depth, in a ſimilar manner. The object of this contrivance is, the eradication of weeds, and the clearing of ploughed lands for ſeed; in which reſpect it is ſaid to be more ſerviceable than any other inſtrument. Before the extirpator is employed, the ſoil ought to be once ploughed; and, if it have lain fallow during a ſummer, the ſcalp is paſſed over it twice; namely, the firſt time about two inches deep, and the next, in a tranſverſe direction, at the depth of about four inches. This operation, together with harrowing the ground once, will not only deſtroy all weeds, but will pulverize and prepare the ſoil for the reception of ſeed, whether drilled, or broad-caſt. Further, if lands, intended for the production of ſpring-crops, be ploughed in autumn, and the extirpator be afterwards paſſed over them, they will be rendered fit for immediate ſowing.—This machine may be drawn either by two or by three horſes, according to the nature of the ſoil, and the depth required: it poſſeſſes the peculiar advantage, that it may be worked on all arable lands, by any perſon capable of directing a plough, and that it will turn over an acre of ground, in one hour, without fatiguing either horſes or oxen.—Should the ſoil, however, be overrun with weeds, it will be adviſable to plough it with the ſcalp, twice; and, in ſome caſes, three times; a ſhort ſpace being allowed to intervene, with a view to deprive the weeds of their vegetating power.

4. Among the moſt valuable implements that have, within a few years, been conſtructed and adopted in this country, is the *Beverſtone-plough*, deſigned, or at leaſt improved, by the ingenious Mr. Lewin Tugwell, of Beverſtone, in the county of Glouceſter. See Pl. 43.

In the Domeſtic Encyclopedia, are given the following dimenſions of this uſeful plough:

	Feet.	*Inches.*
A to B	2	4
A - C	2	5
C - D	1	4
D - E	2	5
Diameter of the wheel	1	9
D to F	0	11
G - H	0	$10\frac{1}{2}$
E - I	1	$3\frac{1}{2}$
K - L	0	9
Breadth at the heel	0	9
Breadth of the fin	0	7
Top of beam at the heel to the ground	0	$8\frac{1}{2}$
The mould-board projects at the top more than the breadth at the heel	0	6
1 to 3	6	0
3 - 4	3	8
3 - 5	4	3
5 - 6	2	5
7 - 6	2	8
1 - 3	1	5
1 - 8	2	10
1 - 9	4	8
From the heel to the tuck-hole of the ſhare	2	$6\frac{1}{2}$
From the tuck-hole to the point of the ſhare	0	$8\frac{1}{2}$

This excellent machine, which conſiderably varies from the Rotherham, and other valuable ploughs, gained the prize at the *ploughing-match* in 1798, held near Pipers-Inn, Somerſetſhire, under the patronage of the Bath and Weſt of England Society. It may be eaſily worked by a pair of oxen, without a driver; and, on account of its ſimplicity, we believe that the repreſentation given in Pl. 43. will be ſufficient to guide a ſkilful carpenter in the conſtruction of a ſimilar implement.

5. The *double* or *two-furrow ſwing* and *wheel-plough*, demands the attention of every enlightened agriculturiſt: we have therefore ſubjoined a repreſentation in the plate, copied from the 2d vol. of *Communications to the Board of Agriculture.*

This machine, we underſtand, was originally invented by Mr. Duckett, but has lately been materially improved by the patriotic Lord Somerville. The conſtruction of the beam is nearly the ſame as that of the Beverſtone Plough; which his lordſhip (in his Addreſs to the Board, in 1798) acknowledges to have adopted, from a conſciouſneſs of his inability to ſubſtitute another more adapted to the purpoſe. The chief and moſt important improvement relates to the mould-board, one end of which was formerly cut off, and the deficiency ſupplied by driving in wedges, to the conſequent injury of the mould-

plate. As this expedient, however, was attended with much trouble, it was generally omitted; and, conſequently, the land imperfectly tilled. With a view to remedy ſuch inconvenience, Lord S. propoſes (after the mould-board is formed, and the plate is fitted in the uſual manner) to cut off the parts marked a, a, in the delineation before communicated, and to connect them again with the fixed part of the board, by means of flat hinges, or of thin, flexible plates of hard-hammered iron; ſo that thoſe parts may be eaſily ſet to have different inclinations with ſuch fixed part, by the aid of two ſcrews that paſs from the inſide through the lower parts of the handle of the plough, oppoſite to the backs of the moveable pieces a, a. The ſcrews, he obſerves, may be ſo regulated as to keep ſuch pieces at any degree of inclination that may be required, according to the nature of the land intended to be broken up.

The two-furrow plough is beſt adapted to light and level ſoils, particularly for ſtirring *ley-grounds*; and, as theſe cannot be laid too flat, or *ſeed-earths* be turned too much on an edge, the plough may be adapted to either purpoſe with the utmoſt facility, by this improvement of the mould-board. When the moveable parts, above alluded to, are ſcrewed outwards, a proportionate convexity or elevation will be left at the baſe of the furrow; and thus more earth will be expoſed for covering the ſeed Laſtly, as the part of the mould plate, marked with the dotted lines C, C, is moſt liable to wear off by repeated friction, Lord Somerville directs it to be made twice as thick as the other parts of the plate; viz double the thickneſs of a new crown-piece, or about one fourth of an inch; in which caſe it will remain unimpaired, nearly as long as the whole of the machinery.

The chief improvement made by Lord Somerville, being in the mould-plate of his uſeful plough, we have engraved two figures, repreſenting its internal ſtructure, in different points of view, by which its mechaniſm may be more clearly underſtood. See fig. 2 and 3 in the plate.

a, a, a, are the ſcrews that advance or withdraw the moveable mould-plate; *b, b,* the moveable plate; *c, c,* ribs, which ſerve to ſtrengthen the plates; *d,* grooves, ſunk in the mould-board for the reception of the ribs, when the mould-plate is withdrawn.

Lord S. obſerves, that "the principle of this moveable plate may not at firſt catch the attention of every reader;" but it deſerves to be generally adopted, and has indeed met with ſtrong advocates in ploughmen; for it not only relieves their right arm of conſiderable labour, that muſt otherwiſe be performed in wedging and hammering mould-plates; but much exertion is alſo ſaved to the right leg, in attempting to tread thoſe furrows flat, which had been left on an edge by the plough. Laſtly, theſe plates are indiſpenſably neceſſary, in order to qualify two-furrow ploughs for all *broad* work, and particularly breaking up leys; and ſuch implements ought (in the technical phraſe) *to work on their own baſe, cloſe at heel*; as otherwiſe the furrow will be irregularly laid; and they will be immediately "thrown out of work."

Before we conclude the account of this valuable contrivance, it is but juſtice to ſtate the reſult of a trial made at Kew, in March, 1799, on His Majeſty's farm, in conſequence of a challenge given to Lord Somerville. The quantity of land, till then in a ſtate of nature, amounted to 17½ ſtatute acres, and was worked by this implement, four Devonſhire oxen (ſix years old), and a man, with a boy as driver, in ſix days and four hours. The cattle were in good condition when they commenced the taſk; after the accompliſhment of which, they appeared in better order than before. They were allowed no corn; conſumed every day, upon an average, about 40lbs. of hay, during their continuance at Kew; and worked eight hours each day including half an hour for bait. The land, thus tilled, was viewed by many gentlemen and able agriculturiſts, who highly approved of it, and were induced to order numbers of theſe ploughs; which, we truſt, will ſoon be generally adopted.

The two-furrow plough has, indeed, been introduced into ſome of the midland counties, where it is employed with five horſes and one man, in tolerably level ſoils, which it divides as effectually as two ſingle ploughs. It is alſo uſed, together with the ſingle-wheel plough, in Staffordſhire; as it requires only a lad to drive the horſes, and to turn the plough at the end of the furrow. For breaking up the turf, an iron *flay* is ſcrewed to the coulter; by which the ſward is cut off, and turned into the furrow, ſo as to be covered with earth. Thus, by the aid of an additional horſe, the ſoil will reſemble a fallow, and may be harrowed with equal facility.

6. The lateſt Britiſh plough, which merits particular notice, is that invented by Mr. J. Turner, jun. of Bockleton, Warwickſhire; and of which the figure in the plate will convey an accurate idea.

A, is the iron at the end of the beam, to which the horſes are hooked; and which is called, in Staffordſhire, the *buck*; in the county of Worceſter, the *ear*; B, B, B, B, B, the beam; W, W, W, W, W, a ſtrong piece of wood, denominated by the inventor a *wing*, that projects in the middle; and in which one of the coulters, C, is fixed. This piece of timber is faſtened, at a proper diſtance from the *ear*, to the ſide of the beam, by means of long ſcrews paſſing throughout the latter; with the oppoſite ſide of which they connect another wing, containing a ſecond coulter, likewiſe marked with the letter C. Theſe two coulters are placed in a parallel direction, and are both ſtrengthened with a piece of iron, called the *ſtay*; one end of which is fixed about two inches beneath the wing, and the other is inſerted in the wing itſelf, F, repreſents the whole *ſtay* of the coulter C; and *f* delineates part of the other coulter C: T, denotes part of the *drock*, a piece of wood, that forms the lower extremity of the plough; and which is about ſix inches in width, three in depth, and rather more than two feet in length. To the top of the drock is faſtened an erect piece of timber, known by the name of *ſpindle*, M, M; and behind which are two tails, D *d*. To the upper end of the ſpindle M, is fixed the beam B, the end of which is faſtened between the tails, by means of an iron pin; P, I, and P, R, are two *ſhelve-boards*, combined with the drock and ſpindle; and which meet at the angular point P. The ends of both theſe boards are ſtrengthened by means of a ſhort *wooden ſtay*, that is fixed in them, as well as in the tails: *g*, repreſents this ſtay; K, a coulter faſtened to the plough-ſhare S, and which is bent at the end, in order that it may be more eaſily admitted through a hole in the beam, behind the two coulters C, C, when the ſhare is put on the end of the drock.

The object of this contrivance is the formation of ſmall drains or gutters in meadows, and paſture-land, with a view to carry off ſtagnant waters; which, by remaining on the ſurface, materially injure the ſoil. To adjuſt the plough for work, a mark is firſt made in the middle of that end of the drock which is contiguous to the tails; when a ſtraight line is traced on a level ſpot of ground, on which ſuch mark and the point of the ſhare are put, and made to coincide. Next, the fore-coulters muſt be equi-diſtant from the line; then let the dotted line, *b, y, p, n,* repreſent a ſtraight line made on level ground; *p* the point of the ſhare S; *m,* the middle point of the end of the drock T; and, if *m* and *p* correſpond with the line *b, y, p, n, x, y,* and *d, t,* will deſcribe the diſtance from each of the fore-coulters.

The moſt effectual method of working this plough is, in the opinion of its inventor, to faſten a chain round the axle-

tree of a pair of cart-wheels (the body of which has been taken off); to hook ſuch chain to the ear A, at the end of the beam; and, by lengthening or ſhortening the chain, this machine may be ſo regulated as to penetrate the ſoil to a greater or leſs depth, according to the nature of the ground. When the plough is at work, the fore-coulters C, C, cut the outſide of the gutter.—K, the coulter, divides the ground exactly in the middle: the further ſhelve-board throws out half the ſoil on one ſide, while the *near* ſhelve-board removes the other half to the oppoſite ſide; and thus a complete gutter is left, which extends from eight to ten inches in width, and is from ſix to eight inches deep.

One of the moſt important advantages reſulting from this invention, is the ſaving in manual labour, which is computed at *three-fourths;* as 400 perches of land may thus be drained in one day, by a team of five horſes, two drivers, and a holder; the expence of which, the inventor calculates at 16s.; whereas, if the ſame quantity of land were to be dug by *hand*, the coſt would amount to 3l. 6s. 8d.

Mr. Turner's plough may be applied to another valuable branch of agriculture; namely, the *planting of potatoes.* His method is as follows: Firſt, trenches are made with the machine, at the diſtance of about two feet from each other; and in which the potatoes are ſet. Some manure is next ſpread on them in ſuch trenches, and they are covered by drawing the plough through the intermediate ſpaces; ſo that each trench is filled by a ridge of ſoil. When the growing potatoes require an additional covering of mould, the weeds are previouſly cut, either by a hoe or weeding-hook; and, the two fore-coulters being taken off the plough, the implement is drawn between the ridges; it throws up an additional portion of ſoil upon them; and thus expeditiouſly effects the operation of *moulding.*

Beſide theſe, now deſcribed, ſeveral other ploughs have been contrived for particular purpoſes; but, having already given an account of the moſt valuable improvements, under the heads of DRAINING, DRILLING, &c. we ſhall refer the reader to a deſcription of M. Simonde's *Tableau de l'Agriculture Toſcany,* for an account of two ploughs, uſed in Tuſcany, and in other parts of Italy, which, from the ſimplicity of their conſtruction, deſerve to be generally known in Britain.

PLUDENTZ, a town of Germany, in the Tyrol, capital of a county of the ſame name. It is ſeated in a pleaſant plain, on the river Ill, 65 miles W. of Inſpruc. Long. 12. 10. E. Lat 47. 10. N.

PLUVIERS, or PITHIVIERS, a town of France, in the department of Eure and Loire, 20 miles N. of Orleans. Long. 2. 0. E. Lat. 48 14. N.

PLYMOUTH DOCK, a town in Devonſhire, contiguous to the royal docks in the harbour of Hamoaze, at Plymouth. It has a chapel in the dock-yard, and a church about a quarter of a mile from the town. The royal hoſpital is ſituate on the right, on an elevated ſpot that is favourable to a ſupply of wholeſome air; and on the left is the governor of Plymouth's houſe, overlooking the harbour from a rocky eminence, which is fortified with ſome regular works for the defence of the dock-yards.

PLYNLIMMON HILL, a vaſt and lofty mountain of Wales, partly in Montgomeryſhire, and partly in Cardiganſhire. The Severn, the Wye, and other rivers, have their ſource in this mountain.

PO, a river of China, in the province of Kiang-ſi. It empties itſelf into the lake Poyang-hou, a ſmall diſtance from Jaotcheou-fou.

POCKLINGTON, a town in the E. riding of Yorkſhire, with a market on Saturday; ſeated n a ſtream that falls into the Derwent, 14 miles E. of York, and 196 N. by W. of London. Long. 0. 40. W. Lat. 53. 58. N.

PODENSTEIN, a town of Franconia, in the biſhopric of Bamberg, ſeated among foreſts, near the ſource of the Putlach, 30 miles S.E. of Bamberg.

PODOLSK, a town of Ruſſia, in the government of Moſcow, 28 miles S. of Moſcow. Long. 37. 29. E. Lat. 55. 16. N.

PODOR, a fortreſs of Africa, on the river Senegal, built by the French, but ceded to the Engliſh in 1763. It was afterward retaken by the French, and confirmed to them by the peace of 1783.

POGGIBONZI, a town of Tuſcany, famous for its excellent tobacco. It had a citadel, now in ruins; and is ſeated near the Elſa, 16 miles S. of Florence.

POGGIO, a town of Tuſcany, near Florence, famous for a handſome palace of the great duke.

POIRINO, or POVERINO, a town of Piedmont, 15 miles S.E. of Turin.

POISONS (*Encycl.*). Under that article, we have noticed various vegetable ſubſtances of a poiſonous nature, and under EARTH-NUT, in this Supplement, have alluded to ſome inſtances in which a root, reſembling the latter in its external form, was eaten by miſtake, and proved fatal. The reference, in the latter, ſhould have been to the article OENANTHE, *Encycl.*

POISSY, an ancient town of France, in the department of Seine and Oiſe, ſeated near the foreſt of St. Germain, 15 miles N.W. of Paris. Long. 2. 12. E. Lat. 48. 56. N.

POL, ST. a town of France, in the department of the Straits of Calais. It is noted for its mineral waters, and is 16 miles N.W. of Arras.

POLA, an ancient and ſtrong ſea-port of Italy, in the S. part of Iſtria, with a citadel, and a biſhop's ſee. Here are the ruins of a Roman amphitheatre and a triumphal arch. It is ſeated at the bottom of a bay, and has a ſpacious harbour, 80 miles S.E. of Venice. Long. 14. 9. E. Lat. 45. 13. N.

POLACHIA, or PODLACHIA, a palatinate of Poland, 88 miles long, and 30 broad; bounded on the N. by Pruſſia and Lithuania, on the E. by Lithuania, on the S. by the palatinate of Lublin, and on the W. by that of Maſovia. Bielſk is the capital.

POLIGNANO, a populous town of Naples, in Terra di Bari, with a biſhop's ſee. It is ſeated on a craggy rock, near the ſea, 16 miles E. of Bari. Long. 17. 24. E. Lat. 41. 25. N.

POLIGNI, a town of France, in the department of Jura, ſeated on a rivulet, 32 miles S.W. of Beſançon. Long. 5. 55. E. Lat. 46. 50. N.

POLINA, an ancient town of Albania, with a Greek archbiſhop's ſee. It was formerly a conſiderable place, but is now almoſt in ruins, and is 12 miles S. of Durazzo. Long. 19. 20. E. Lat. 41. 42. N.

POLITZ, a town of Upper Saxony, in Anterior Pomerania, near the Friſch Haff, celebrated for its hops. It is eight miles N. of Stetin.

POLLOCKSHAWS, a manufacturing town in Renfrewſhire, ſeated on the river White Cart.

POLORE, a town of Hindooſtan, in the Carnatic, 26 miles S.S.W. of Arcot, and 55 N.W. of Pondicherry. Long. 78. 52. E. Lat. 12. 10. N.

POLOTZK, a government of the Ruſſian empire, formed of part of a palatinate of Lithuania, diſmembered from Poland by the treaty of partition in 1772. Its products are chiefly grain, hemp, flax, and paſture; and the foreſts furniſh

great abundance of masts, planks, oak for ship-building, pitch, tar, &c. which are chiefly sent down the Dwina to Riga.

Polotzk, a strong town of Russia, capital of a government of the same name, seated on the Dwina, at the mouth of the small river Polota, 50 miles S.W. of Vitepsk. Long. 27. 50. E. Lat. 55. 43. N.

POLTEN, St. a town of Lower Austria, seated on the Drasam, which falls into the Danube, near Holmburg, eight miles from Vienne.

POMBAL, a town of Portugal, in Estremadura, 16 miles N.E. of Leiria, and 21 S. of Coimbra. Long 8. 16. W. Lat. 39. 50. N.

POMEGUE, an island in the Mediterranean, near Marseilles.

POMERELIA, a district of Polish or Western Prussia, forcibly seized by the King of Prussia. Dantzic is the capital.

POMESANIA, a large county of Western Prussia, which extends from E. to W. from the Passerge as far as the Vistula, between E and W. Prussia. It is full of lakes and morasses.

POMONA, the principal of the Orkney Islands. See Mainland.

POND (*Encycl.*). In the first vol. of the Journal de Physique, we meet with an interesting method of making ponds water-tight, without the aid of masonry, by M. Dambourney. He directs the pit to be dug to a convenient depth; and its sides to be carefully sloped to an angle of about 40 degrees. The cement with which it is to be lined, should then be prepared in the following manner:

A sufficient quantity of brick-clay ought previously to be procured, in a moist state, so that it may be easily worked and incorporated with one-fourth part of quick-lime, slaked the preceding evening, in such a portion of water, as will reduce it to the consistence of cream-cheese; and the whole must be formed into balls, about two feet in circumference. When an adequate stock is collected, the workman descends into the cavity, and an assistant supplies him with a ball, which the former throws with all his strength on the ground, near the centre of the pit: thus, he continues the plastering with other balls, in such a direction that each may come in contact with the next following, till the sides and bottom of the intended pond are perfectly lined. If the whole cannot be finished in one day, the last row laid on in the evening should be moistened, in order that it may be sufficiently adhesive to incorporate exactly with the new part of the work on the subsequent morning. Two or three days after this composition is applied, it should be beaten with a flat piece of wood; and, accordingly as its firmness increases, the beating must be stronger, and the surface occasionally wetted, to prevent cracks, till it become one uniform, solid piece. Lastly, the whole is to be covered with a coat of any cheap oil; and (previously to the admission of water) with gravel, to the thickness of one inch. By this management, the coating will acquire a very remarkable degree of firmness; and, if the pond be constantly full, no repairs will become necessary; as the only injury to be apprehended, may proceed from intense frost, which is apt to damage such parts of the work as are exposed to the air.

In the sixth volume of Annals of Agriculture, an account is given of a simple method of making artificial ponds, in dry soils:—the figure given in Pl. 42. represents an outline of their construction.

The line A describes a circular hole made in the ground, of such size as may be found necessary; and on which a stratum of clay, B, must be carefully beaten, and trodden into a solid, compact body, from four to six inches in thickness; C, represents a layer of quick-lime about an inch, or an inch and a half thick; and which should be uniformly spread over the whole; D, is a second stratum of clay, that ought to be of a thickness similar to that above mentioned, and should be pressed down in the same manner; E, denotes stones, or gravel, either of which must be spread on the second layer of clay, to such depth as may prevent the pond from being injured by the feet of cattle; for otherwise, they will penetrate the stratifications of clay and lime; in consequence of which, the water will be discharged through the pores of the earth. When thus completed, according to the section above given, the pond will remain five feet deep, and forty-five in diameter; at which size these reservoirs are in general constructed; the letter F, representing the line of level, both of the water and of the ground.

This method of forming ponds was contrived in Yorkshire, about 25 or 30 years ago, by a well-sinker: numerous artificial pools have since been made in that, as well as the adjoining counties. The expences attending a work of the dimensions above stated, are computed to be from 4l. to 6l. according to the distance from which the clay is carried. Such a pond will remain unimpaired for a series of years; because the lime prevents worms from striking either upwards or downwards, and consequently from injuring the clay, which naturally resists moisture.

PONDESTURIA, a town of Italy, in Montferrat, seated on the S. side of the Po, 33 miles E. of Turin. Long. 8. 25. E. Lat. 45. 2. N.

PONFERRADA, a town of Spain, in Leon, on the river Sill, 40 miles S.W. of Leon. Long. 6. 6. W. Lat. 42. 30. N.

PONS, St. a town of France, in the department of Herault. It was a bishop's see before the revolution, and is seated in a valley surrounded by mountains, in which are fine marble quarries. It is 24 miles N. of Narbonne. Long. 2. 47. E. Lat 43. 29. N.

PONTA DELGADA, a sea-port of St. Michael, one of the Azores. It is defended by a citadel; and contains about 8,000 inhabitants. Long. 25. 40. W. Lat. 37. 45. N.

PONT-A-MOUSSON, a considerable town of France, in the department of Meurthe, with a university. There were lately several religious houses, and the premonstrantes had a magnificent church here. It is seated on the Moselle, which divides it into two parts, two miles N.W. of Nanci. Long. 6. 16. E. Lat. 48. 43. N.

PONT-ARLIER, an ancient town of France, in the department of Jura, seated on the river Doubs, near Mount Jura. It is a commodious passage into Switzerland, and is defended by a strong castle. Long. 6. 26. E. Lat. 46. 55. N.

PONT AUDEMER, a town of France, in the department of Eure, seated on the Rille, 13 miles E. of Honfleur, and 85 N.W. of Paris. Long. 0. 35. E. Lat. 49. 21. N.

PONT-DE-CE, a town of France, in the department of Maine and Loire, seated on the Loire, three miles from Angers, and 178 S.W. of Paris. Long. 0. 29. W. Lat. 47. 25. N.

PONT-DE-L'ARCHE, a town of France, in the department of Eure, with a castle. It is seated on the Seine, over which is a bridge, five miles N. of Louviers, and 62 N.W. of Paris. Long. 1. 15. E. Lat. 49. 5. N.

PONT-DE-VAUX, a town of France, in the department of Ain, seated on the Ressousse, 8 miles S. of Macon. Long. 4. 55. E. Lat. 46. 28. N.

PONT-DU-VESLE, a town of France, in the department of Ain. It has a manufacture of stuffs called Augustines, and also of tapestry for the coverings of arm-chairs and sofas, of the same kind as those of Aubusson. It is seated on the Vesle, 12 miles W. of Bourg. Long. 5. 4. E. Lat. 46. 16. N.

PONTE-DE-LIMA, a town of Portugal, in Entre-Douero-e-Minho, with a palace. It is ſeated on the Lima, over which is a magnificent bridge, 13 miles N.W. of Braga, and 190 N. of Liſbon. Long. 8. 44. W. Lat. 41. 51. N.

PONTEFA, or PONTAFELLA, a town of Germany, in Carinthia, ſeated on the Fella, over which is a bridge that leads to the beſt paſſage over the Alps. It is 20 miles N.W. of Friuli. Long. 13. 0. E. Lat. 46. 25. N.

PONTE-STURA, a town of Italy, in Montferrat, ſeated at the confluence of the Stura and Po, three miles S.W. of Caſal.

PONTE-VEDRA, a town of Spain, in Galicia, ſeated on the Leris, and famous for its fiſhery of pilchards. It is 10 miles E. of Porto Nova. Long 8. 27. W. Lat. 42. 20. N.

PONT-GIBAUT, a town of France, in the department of Puy de Dome. Near this place is the village of Rore, with a ſilver mine, and a vinous fountain of mineral water. It is 10 miles W.N.W. of Clermont. Long. 2. 58. E. Lat. 45. 51. N.

PONTIVY, a town of France, in the department of Morbihan, ſeated on the river Blavet. It was the firſt town after the revolution of 1789 that ſet the example of national confederations.

PONT-L'EVEQUE, a town of France, in the department of Calvados, ſeated on the Touque, 10 miles N.W. of Liſieux. Long. 0. 6. E. Lat. 49. 17. N.

PONTOISE, a town of France, in the department of Seine and Oiſe. It is ſeated on an eminence, on the Oiſe and Vienne, with a bridge over the former, whence it takes its name. In 1435, the Engliſh took it by a ſingular ſtratagem: the ground being covered with ſnow, the aſſailants dreſſed themſelves in white, with ladders painted white, and ſcaled the walls before the ſentinels could perceive their approach. Charles VII. retook it by ſtorm in 1442. The parliament of Paris was transferred to this place in 1652, 1720, and 1753. It is 43 miles S.E. of Rouen, and 27 N.W. of Paris. Long. 2. 11. E. Lat. 49. 3. N.

PONT-ORSON, a town of France, in the department of the Channel, ſeated on the Coeſnon, 20 miles E. of St. Malo. Long. 1. 30. W. Lat. 48. 30. N.

PONT-REMOLI, a town of Tuſcany, with a ſtrong caſtle, ſeated on the foot of the Apennines, 40 miles E. of Genoa, and 66 N.W. of Florence. Long. 9. 40. E. Lat. 44. 25. N.

PONT ST. ESPRIT, a town of France, in the department of Gard. It is ſeated on the river Rhone, over which is one of the fineſt bridges in Europe, conſiſting of 19 great and 4 ſmall arches. To facilitate the paſſage of the water in time of floods, apertures are made through each pier, ſix feet above the common level of the river; and to ſtem the extreme rapidity of the Rhone, the bridge is not built in a right line, but in the form of a curve. This paſſage is defended by a citadel, within which is the church of the Holy Spirit, projecting into the river. As the bridge is ſo ſlight, the goods are conveyed over in ſledges, by way of precaution. Pont St. Eſprit is 17 miles S. of Viviers, and 55 N.E. of Montpellier. Long. 4. 46. E. Lat. 44. 13. N.

PONT ST. MAIXENCE, a town of France, in the department of Seine and Oiſe, ſeated on the Oiſe, five miles N. of Senlis. Long. 2. 40. E. Lat. 49. 18. N.

PONT-SUR-SEINE, a town of France, in the department of Aube, with a caſtle, ſeated on the Seine, 17 miles N.W. of Troyes, and 55 S.E. of Paris. Long. 3. 40. E. Lat. 48. 28. N.

PONT SUR YONNE, a town of France, in the department of Yonne, ſeated on the Yonne, eight miles N.W. of Sens. Long. 3. 14. E. Lat. 48. 16. N.

PONZONE, a town of Italy, in the duchy of Montferrat, 10 miles S. of Acqui, and 18. N. of Savona. Long. 8. 35. E. Lat. 44. 30. N.

POOLOROON, or POLERON, one of the Banda Iſlands, from which the Dutch expelled the Engliſh, not for any advantage it afforded, it being a barren ſpot, but to ſecure the monopoly of the ſpice trade, by preventing the Engliſh from having any ſettlement in theſe parts. It is 100 miles S.E. of Amboyna. Long. 130. 0. E. Lat. 4. 20. S.

POOLOWOY, one of the Banda Iſlands, on which the Dutch have a regular pentagon, called Fort Revenge. Here nutmegs and the moſt delicious fruits were once abundant.

POONAH, a town of the Deccan of Hindooſtan, in Viſiapour. It is the capital of the Weſtern Mahratta empire; but it is not large, and lies open and defenceleſs. It is 100 miles S.E. of Bombay. Long. 73. 55. E. Lat. 18. 30. N.

POOR *(Encycl.)*. The comforts of the poor lie within a ſmall compaſs: they ſhould therefore be reſpected. Mere animal exiſtence is not ſufficient for rational creatures. To ſweeten the cup of life, to ſooth pain, and to relieve labour, man muſt enjoy comfort here, and his views muſt be directed to happineſs hereafter.

One great ſource of comfort to the poor man is, his wife and children, if he can but earn means of maintaining them. Humble and inſignificant as he may appear abroad, he is of conſequence and authority at home. In his own houſe he finds thoſe who reſpect him, who obey him; thoſe, to whom he may ſay, Go, and they go, and Come, and they come. He is not inſenſible to the charities of father, ſon, and huſband. The parental affection of the poor is increaſed by imperious neceſſity, and by the helpleſs condition of their offſpring. When ſick and diſpirited, it is to them the greateſt of comforts to be attended by thoſe who love and regard them;—by thoſe who have an intereſt and anxiety in their exiſtence. In times of ſickneſs and diſtreſs, the ſtouteſt heart may be overcome by the forcible ſepa ation of huſband and wife, of parent and child; whoſe mutual attachment (even if humanity could for a moment be ſilent on ſo intereſting a ſubject) it would be policy to encourage, as an incentive to virtue, and a ſurety for conduct.

The poor man, poor as he is, loves to cheriſh the idea of property. To talk of my houſe, my garden, my furniture, is always a theme of delight and pleaſure. When, therefore, his whole domeſtic eſtabliſhment is overwhelmed and deſtroyed by a removal to the workhouſe, can we wonder that he ſhould grieve for the loſs of thoſe things, which by uſe were become precious to him? The apartments of the workhouſe may be better than his cottage; but he does not like to exiſt as a mere lodger, or a permitted gueſt, though in a finer manſion than his own. The diet of the workhouſe may be more waſtefully abundant, than any which he poſſeſſes or even deſires at home; but his cottage diet, though poor and ſcanty, is his own; he has earned it by his labour; and it is ſweeter to him than more coſtly food, which he is taught to conſider as gratuitous and unmerited. His paupers coat is warm; but it belongs to the community, and not to himſelf.—And are not theſe prejudices reſpectable? Are they not conſonant to the energy of a free country?

The poor man is reconciled to poverty, by the poſſeſſion of liberty. However preſſed by narrowneſs of circumſtances,—however impelled by neceſſity to labour, yet ſtill it is one of his comforts and pleaſures, that he is free;—that he may go out or come in, work or play, at his own option. He likes to be the judge of his own wants, and to provide for them after his own manner. He even chooſes to have the free and unmoleſted determination, whether he ſhall boil or bake his Sunday's dinner. Under confinement he can enjoy no

comfort; the very thought of being under lock and key is hateful to him: no man, in his opinion, deſerves a priſon, who has not committed a crime. To be of little conſequence in the community, to have no authority beyond the narrow limits of his own cottage and garden, he is reconciled to. Habit, a ſecond nature, has made him eaſy under it; but he has an unconquerable averſion to arbitrary rule being exerciſed over all his actions. And is it in England that one would wiſh to extinguiſh theſe feelings?

Some part of the poor man's comfort (often, it muſt be acknowledged, more than his true friends would wiſh) is placed in ſocial enjoyment. When, however, the labourer does not carry this indulgence to an exceſs prejudicial to his own happineſs, or to that of his family, who will not ſay, "Much good may it do him?"—If, after his week's labour, he ſhould love to relax a little in that place which affords "an hour's importance to the poor man's heart," the gratification cannot be very blameable while it does not paſs the bounds of diſcretion. The evening chat at a neighbour's door, the Sunday's church-yard politics, the holiday feſtivities, the ruſtic games, and athletic exerciſes, are as welcome to the cottager, and afford as much relief after care and labour, as the more coſtly and faſhionable amuſements of the rich*. To get drunk, to ſquander at an alehouſe what ought to maintain his family, is worſe than wrong or imprudent:—it is unjuſt and wicked In this world, it cauſes the ruin of thoſe who depend upon him, and who look up to him for ſubſiſtence;—of that wife, and of thoſe children, to whom he ſhould be attached by every tender tie:—and, as to the next world, we read in holy Scripture (and, "God is not a man, that he ſhould lie") the drunkard ſhall not inherit the kingdom of God.—If, however, you wiſh the cottager to be more domeſtic, and thereby to become more happy, aid and encourage him in the comfort and cleanlineſs of his little manſion;—give him pleaſurable occupation at home, in the care of his pigs and cow, and in the cultivation of his garden;—aſſiſt him in the education of his children; and in the habits and reſources of life. When more intereſting objects preſent themſelves at home, the alehouſe will ſoon be forgotten and neglected. Many in all ranks of life take refuge in a public-houſe, for want of ſatisfactory occupation at home.

Laſtly, the great and eſſential comfort of the poor, and particularly in old age and in ſickneſs, is religion. In labour and fatigue, in ſorrow and anxiety, it is moſt conſoling to the afflicted mind to look up with habitual hope and gratitude to that Being, whoſe tender mercy is over all his works. It is by confidence in his wiſdom and goodneſs, and by the hope of unfailing happineſs hereafter,—by theſe conſolations delivered to us in his revealed will,—and by theſe only,—that the rugged path of life can be ſmoothed; the crooked ways of man be made ſtraight, and the rough places plain. It is, therefore, of infinite conſequence that the poor ſhould have the full benefit of religion; that they ſhould be taught, in the ſanctuary of God, the uſe of thoſe gradations of rank and wealth, which in infinite wiſdom he has thought fit to eſtabliſh in this tranſitory life, as ſtimulants to the induſtry and energy of man;—and that he ſhould be inſtructed to look forward to that bleſſed ſtate, where "they ſhall hunger no more, neither thirſt any more; neither ſhall the ſun light on them, nor any heat. For the Lamb which is in the midſt of the throne ſhall feed them, and ſhall lead them unto living fountains of waters: and God ſhall wipe away all tears from their eyes."—To the aged this comfort is of peculiar importance. At a time, when the power of labour and activity is enfeebled, and the gratification of the ſenſes diminiſhed and exhauſted, it is, indeed, true charity to give the poor the advantage and comfort of religious meditation; and to open their eyes, and raiſe their hopes, to thoſe ſcenes of bliſs, which become brighter, and more enchanting, as we approach the confines of the grave.

Health of the Poor. Under the article Golden-Rules (*Supp.*) will be found ſome valuable admonition to the poor on the ſubject of domeſtic economy. The following extract from a paper written by Dr. Ferriar, of Mancheſter, contains very uſeful information for the preſervation of their health, particularly in manufacturing and other populous towns.

Avoid living in damp cellars: they deſtroy your conſtitutions, and ſhorten your lives. No temptation of low rents can counterbalance their ill effects. You are apt to crowd into the cellars of new buildings, ſuppoſing them to be clean. This is a fatal miſtake. A new houſe is always damp for two years, and the cellars, which you inhabit under them, are generally as moiſt as the bottom of a well. In ſuch places, you are liable to bad fevers, which often throw the patient into a decline; and you are apt to get rheumatic complaints, that continue for a long time, and diſable you from working.

If you cannot help taking a cellar, be attentive to have all the windows put in good repair before you venture into it; and, if poſſible, get it white-waſhed If you attempt to live in a cellar with broken windows, colds and fevers will be the certain conſequences.

In many parts of the town you ſleep in back rooms, behind the front cellar; rooms, which are dark, and have no proper circulation of air. It would be much more healthy to ſleep in the front part: at leaſt, when you have large families, which is often the caſe, you ought to divide them, and not crowd the whole together in the back cellar.

Keep your perſons and houſes as clean as your employments will permit: and do not regret the loſs of an hour's wages, when your time is occupied in attending to cleanlineſs. It is better to give up a little time occaſionally in order to keep your houſes neat, than to ſee your whole family lying ſick, in conſequence of working conſtantly, without cleaning. It would be of great ſervice, if you could contrive to air your beds and bed-clothes out of doors, once or twice a-week.

Always waſh your children from head to foot with cold water, before you ſend them to work in the morning. Take care to keep them dry in their feet, and never allow them to go work, without giving them their breakfaſt, though you ſhould have nothing for them but a cruſt of bread, and a little water. Children who get wet feet, when they go out early faſting, ſeldom eſcape fevers or ſevere colds.

If you know that any of your neighbours are in a ſtarving condition, apply to ſome opulent perſons in the neighbourhood; get them recommended to the overſeer; or, if they are ſick, to the infirmary. Want of neceſſary food produces bad fevers; and many of you may ſuffer from

---

* Much of the preceding part of this paper is taken, though with variation and addition, from Obſervations on the Rights and Comforts of the Poor, inſerted in the Gentleman's Magazine of the year 1787. It is ſubmitted to the reader, with a view of ſuggeſting to his mind, how greatly the preſent mode of (what is called) Relief, viz. the removal of the cottager's family from his own dwelling into a pariſh workhouſe, is inimical to the comfort of the poor, and deſtructive of thoſe feelings, and of that energy, among them, which it is our duty and intereſt to preſerve in full force.

neglecting poor diſtreſſed perſons, whom timely relief would have preſerved from the diſeaſe.

Therefore when you know, or have reaſon to believe, that any of your neighbours are afflicted with fevers, and that they have not taken care to procure the aſſiſtance afforded by the infirmary, you ought, both from a regard to them, and to yourſelves, to give immediate information.

You ought to be very cautious in purchaſing old clothes, or ſecond-hand furniture; as they may be brought from houſes infected with fever; and you may introduce the infection with them into your own dwellings. Every article of this kind ought to be ſtoved, or ventilated, before it is admitted into your houſes.

Your ſick neighbours, when the fever gets into their houſes, may often require aſſiſtance from you. It would be cruel to refuſe them, yet it is hard that you ſhould be obliged to expoſe your health, and that of your family. You ought never to viſit them from idle curioſity. But when they require your help in making their beds, waſhing, or turning the ſick, you may preſerve yourſelves from being infected (ſee FEVER, *Supp.*) by tying a kerchief acroſs your face, juſt below the eyes; to prevent the exhalations, from the bodies of the ſick, from entering your mouth and noſtrils. As ſoon as you return to your own houſe, waſh your hands and face in cold water; and avoid touching any of your family for half or three quarters of an hour.

Your health will always be materially injured by the following circumſtances:—living in ſmall back buildings, adjoining to the open vaults of privies;—or in cellars, where the ſtreets are not properly ſoughed, or drained;—or in narrow bye ſtreets, where ſheep are ſlaughtered, and where the blood and garbage are allowed to ſtagnate and corrupt;—and, perhaps more than all, by living crowded together, in dirty lodging houſes, where you cannot have the common comforts of light and air.

It ſhould be unneceſſary to remind you, that much ſickneſs is occaſioned among you, by paſſing your evenings at alehouſes, or in ſtrolling about the ſtreets, or in fields adjoining to the town. Perhaps thoſe who are moſt apt to expoſe themſelves in this manner, would pay little attention to diſſuaſive arguments of any kind. However, thoſe who feel an intereſt in your welfare, cannot omit making the remark.

There is another ſubject of great importance to you, on which you ſeem to want information. A great number of children die of the natural ſmall-pox, almoſt every year. This mortality muſt be imputed in a great degree to your own negligence; for the faculty at the infirmary offer to inoculate your children, and give public notice of the proper time for making your application, twice a-year. The next period for inoculation will be in March; the ſucceeding period in September. The chance of recovery, from the ſmall-pox received by inoculation, is ſo much greater than the chance of recovery from the natural kind, that you ought to conſider yourſelves as performing a duty to your children, and to the public, in bringing thoſe who have not yet had the ſmall-pox, to be inoculated at the infirmary.

You ought to be informed, that there is ſcarcely any thing more injurious to the health of children, than allowing them to work at night in the cotton-mills. It may not always be in your power to prevent their being employed in this manner; but you ſhould be made acquainted with the danger to which you expoſe them. There is no hazard incurred by their working during the day, in clean, well-managed cotton-mills.

It is alſo proper to inform you, that you may be infected with fevers, by working in the ſame place with perſons who have juſt recovered from fevers; or by people who come from infected houſes, where they are at no pains to keep themſelves clean. You had better collect ſomething among yourſelves, to ſupport ſuch perſons for a fortnight after their recovery, than expoſe yourſelves to the riſk of catching a fever, by their returning too early to work.

Management of the POOR. The following is an extract from an account of the management of the poor, in the pariſh of Shipton Moyne, in the county of Glouceſter, by Thomas Bernard, eſq.

On the 27th of February, 1801. a veſtry was called in the pariſh of Shipton Moyne, to conſider of regulations for the better management of the poor. Their firſt object was to provide immediate relief, in ſuch a way as to furniſh employment, and to encourage induſtry. For this purpoſe it was agreed that, upon any pariſhioner applying for relief, an account ſhould be taken of the age and occupation of each individual of the family, and an eſtimate ſhould be made of what they were able to earn; and then, if they could prove that they had earned to that amount, they ſhould receive ſuch relief as would make up the amount of a certain proviſion, fixed by their rules, for the weekly ſupport of each individual in family; no extra earnings, nor any ſuperior induſtry, being ever admitted as a ground of deduction from the calculated amount of relief. In addition to this proviſion, the poor, in caſe of ſickneſs and of inability to provide medical relief for themſelves, were to be allowed whatever the pariſh ſurgeon (with the privity of the overſeer) ſhould deem proper for them.

The general principle of relief being thus eſtabliſhed, the next point was to ſecure them a regular ſupply of employment. For the occupation of the men, Mr. Eſtcourt (who has the honour of being the active promoter of theſe regulations) has agreed to furniſh land for raiſing potatoes; the produce of which is hereafter to be ſold, at a reaſonable price, to the poor of the pariſh. In the cultivation of this ground, every poor man wanting work is to be employed in taſk-work, or as ſhall be moſt uſeful to him.—For the women and children, the workhouſe, by a moſt extraordinary and incredible metamorphoſis, is converted into a real houſe of induſtry; and all the women and children of that pariſh, who are clean and decent in their perſons and orderly in their behaviour, are admitted to work in the houſe (now under the care of an aſſiſtant overſeer, whoſe character and conduct have been well approved) during the day-time; they finding their own proviſions*, and receiving the whole amount of their earnings, without any deduction whatſoever. The work-rooms (with exception of the time of meals and of cleaning the rooms) are open from ſix to ſix in ſummer, and in winter, from ſeven to ſeven: thoſe parents who do not ſend their children to ſchool, or employ them better elſewhere, being entirely excluded from all parochial relief.

In order to encourage attention to their religious duties, it has alſo been agreed, that every poor pariſhioner who has two or more children at home, and who in the enſuing year ſhall regularly attend the morning ſervice, decent and clean in perſon, and being in church before the beginning

* A cheap ordinary for the children, and indeed for adults alſo, where they might get their dinners, if they wiſhed it, might be very uſeful in this inſtance; to be paid for by a weekly deduction from their earnings. See PARISH-DINNER, *Suppl.*

of the prayers, ſhall have an annual allowance of clothing; —for each man, to the value of 20ſ.; for each woman, of 15ſ.; and for each boy or girl, of 10ſ.; a deduction of 6*d.* being made for each abſence from church, unleſs occaſioned by ſevere illneſs.

To promote the eſſential virtue of cleanlineſs, another encouragement has been propoſed: that every poor pariſhioner, who ſhall annually whitewaſh his houſe in the month of September (being ſupplied with lime and bruſhes), and ſhall have the floors waſhed clean with water every Saturday in the winter months, ſhall on every ſuch Saturday in January, February, and March, receive a donation of three pecks of coals. But no ſuch donation of clothing or fuel is to be given to a pariſhioner, in caſe, during the preceding year, any member of his family ſhall have been convicted of any crime, ſubjecting him or her to fine, whipping, or impriſonment; unleſs ſatisfactory information ſhall be given, that the reſt of the family were not privy or concerned, but had uſed all proper means to prevent the ſame.

There is, moreover, a regulation, that the village ſhop, which had been eſtabliſhed in the preceding year for ſelling the moſt neceſſary articles to the poor at prime coſt, ſhall be continued; and a liſt of the articles, and the prices, fixed up every week in a conſpicuous part of the ſhop, and of the work-rooms of the houſe of induſtry.

In addition to theſe, there were added, not only individual encouragement and reward on the part of the rich, but alſo the ſupply of potatoe gardens for the benefit of the poor. For the firſt purpoſe, a liberal ſubſcription was raiſed by the principal inhabitants; each ſubſcriber being yearly or half yearly, at his or her option, to diſtribute, or to direct the diſtribution of, his or her own ſubſcription publicly after divine ſervice; the diſtribution being to be impartially made, with a view to their regular attendance on divine worſhip—their honeſty, ſobriety, decency, and induſtry—their affectionate conduct to their relations and neighbours in ſickneſs or infirmity—the cleanlineſs of their cottages—their attention to the morals, health, and welfare of their children—and their frugality and domeſtic management, in making the beſt uſe of their means of life. The period of probation is to be for one year (from the 1ſt of October, 1801); and all candidates for the rewards are required to enter their names, in the form directed, one month, at leaſt, before the time.

The mode in which Mr. Eſtcourt has provided for his cottagers' potatoe grounds is alſo deſerving of attention. He has appropriated for this purpoſe, a field called North Leas; which has been laid out in lots of a quarter of an acre each; the cottagers being each allowed one lot, or two, according to their families, and to their ability and inclination to cultivate it to advantage. The landlord pays the tithes and taxes; manures the land, finds ſeed-potatoes, and allows the labourer 6*d.* a perch for his family's ſubſiſtence, while he is cultivating the land. For this benefit, the tenant pays the rent of 15ſ. every quarter of an acre; and undertakes to cultivate the ground, according to his landlord's regulations. He alſo agrees (in caſe the money advanced him, together with his rent, is not repaid before the crop is ready* to be taken up) half of the crop ſhall be ſet apart to be ſold at Chriſtmas, to ſecure the rent and money advanced him; the cottager receiving the overplus, and retaining the other moiety. And, in caſe the cottager neglects the cultivation of his land, the landlord may take poſſeſſion, paying him the full value of his labour thereon.

The ſubject of the management of the poor, will alſo be found treated under Cottager, Garden, Land, Houſe, and other heads, in this Supplement.

Feeding the Poor. We have, under various heads in this Supplement, ſpoken of the means by which wholeſome ſuſtenance may be provided for indigent perſons at a cheap rate; but the ſubject ſtill remains to be ſyſtematically treated. The following copy of a letter from Count Rumford to the Rev. Dr. Majendie, of Windſor, will anſwer this purpoſe moſt completely:

"In anſwer," ſays the count, "to the queſtions you have done me the honour to propoſe to me reſpecting *the means that can be uſed with the faireſt proſpect of ſucceſs, for relieving the diſtreſſes to which the poor are expoſed, in conſequence of the preſent ſcarcity of proviſions*, I would take the liberty to ſay, that in my opinion the providing of food for them in public kitchens, and ſelling it to them at ſuch low price as they can afford to pay for it, would be the beſt method that could be adopted for that purpoſe; for, beſides being an effectual relief to the poor in the moment of difficulty and diſtreſs, if in preparing this food care be taken to economize coſtly and ſcarce ingredients (which with due attention may be done to a ſurpriſing degree), the eſtabliſhment of theſe public kitchens would have a direct and very powerful tendency to diminiſh the conſumption of thoſe articles of food, the ſcarcity of which is moſt ſenſibly felt by ſociety at large.

"To this we may add, that the habit which the poor will acquire, in being fed from a public kitchen, of uſing good and palatable, and very cheap food, ſuch as may at any time be prepared by themſelves, in their own dwellings, at a much leſs expence than the victuals to which they are accuſtomed can be provided, may lead to a very important improvement in their ſyſtem of cookery.

"I verily believe that the inhabitants of Great Britain might be well nouriſhed—their hunger perfectly ſatisfied—their health and ſtrength preſerved—and the pleaſure they enjoy in eating increaſed, with two thirds of the food they now conſume, were the art of cookery better underſtood.

"I would beg leave to obſerve, that I would by no means propoſe to furniſh the victuals from the public kitchens to all poor perſons gratis.—The aged and infirm, and young children, cannot earn by their labour enough to defray the expences of their ſubſiſtence; but thoſe who are able to work ſhould not be maintained in idleneſs, at the public expence, and moſt certainly not in times of general diſtreſs. All that they can reaſonably expect is, that they and their families be enabled to ſubſiſt for as ſmall a ſum of money, or for the ſame quantity of labour, in times of ſcarcity, as their ſubſiſtence uſually coſts them in times of plenty. To do more for them at any time would be unwiſe, and in a time of general alarm would be productive of the moſt fatal evils. It would have a tendency to make them careleſs, idle, and profligate; and, inſtead of being grateful for the aſſiſtance received, they would ſoon learn to conſider it as their right; and, if it were diſcontinued, would demand it with clamorous importunity. But if the aſſiſtance afforded to the poor be ſo applied, as to be felt by them as an honourable reward for their good conduct, and as an encouragement to perſevere in their induſtrious habits, in

* This time has a reference to the coming in of harveſt work; a period when the cottager, if ever, would be able to make good his payment.

that caſe, their morals will rather be improved, than injured, by the benefits received.

"In all caſes where it is poſſible, I think that a ſchool of induſtry for children ſhould be connected with a public kitchen; and it is certainly neceſſary that meaſures ſhould be taken, for giving conſtant employment to the poor of all deſcriptions, who are able to work. The full amount of their earnings ſhould always be given to them. This is proper, not only to encourage their induſtry, but alſo to keep alive in them a ſpirit of independence, without which they ſoon become diſheartened, and extremely helpleſs and miſerable. Where the poor are paid for their labour, it is evidently juſt and proper that they ſhould defray, as far at leaſt as it is in their power, the expences of their maintenance. It ſometimes happens, though very rarely, that profitable employment cannot be found for the poor: they ſhould nevertheleſs be put to work; and even be kept to labour conſtantly and diligently, under the direction of thoſe who in ſuch circumſtances muſt provide for their ſubſiſtence. Were no profitable employment to be found for them; and were there no other way of preventing their being idle, ſome public work might be undertaken for the ſole purpoſe of employing them.

"But in the neighbourhood of Windſor, the poor can hardly be in want of uſeful employment. His Majeſty has taken care to prevent that evil. It is much to be wiſhed that his opulent ſubjects in Great Britain and Ireland might be induced to follow his illuſtrious example!

"As induſtry and economy are the preventives and the only cure for indigence, and as want is one of the ſtrongeſt inducements to labour, it is evident that much caution is neceſſary in ſupplying the wants of the poor; leſt we deſtroy the effects of thoſe incitements which Providence, in infinite wiſdom, has contrived, to rouſe mankind from a ſtate of indolence and torpid indifference, and to ſtimulate them to that conſtant exertion of their bodily ſtrength and mental faculties, which we know to be neceſſary to the health of the body and of the mind, and eſſential to happineſs and virtue. It ſeldom requires much ingenuity to make the aſſiſtance, that is given to the poor, operate as an incitement to induſtry; for rewards are as powerful motives as puniſhments, and the truly benevolent will always prefer them. But it ſhould never be forgotten, that all that which is given to the poor, or done for them, that does not encourage their induſtry, never can fail to have a contrary tendency; and conſequently muſt do real harm to them, and to ſociety."

We earneſtly hope theſe traits of the only efficient means by which the wants of the poor can be extenſively relieved, and their virtue and happineſs promoted, will not fail to ſink deeply into the minds of thoſe whoſe duty it is to attend to the ſubject. That there are not wanting in the *higheſt* claſſes of ſociety, honourable inſtances of an *active perſonal attention* to the welfare of thoſe whom Providence has placed in the *loweſt*, has been ſhewn in various articles relative to the poor in this SUPPLEMENT, and the following account of the manner in which the poor have been ſupplied with rice and beef at St. Alban's, by the Counteſs Dowager Spencer, is an additional proof of it:

"I never have found," ſays that amiable lady, "any ſupply of food for the poor of ſo much uſe, and give ſuch thorough ſatisfaction, as that which I have lately eſtabliſhed at St. Alban's. It is a mode which will not only be of uſe in times of ſcarcity, but will be very beneficial every winter when labour is ſcarce, and the weather ſevere.—My plan is, merely ſelling every week, at a low price, rice, and very excellent ſalt beef, to labourers, in proportion to their families.—This is only meant to afford ſuch a ſupply as ſhall enable the man's labour, or the pariſh allowance, with the addition of this cheap and wholeſome food, to ſupport their families in the dead time of the year.—The proportions I have allowed are as follow: the rice being ſold at 3*d.* per pound, and the beef at 4*d.*

Claſs.			
1ſt.	large families with 4, 5, or 6 children	2 lb. of rice 6*d.* 1½ lb. of beef 6*d.*	1*s.* per week
2d.	Families with only 2, or 3 children	1½ lb. of rice 4½*d.* 1 lb. of beef 4*d.*	8½*d.* ditto.
3d.	A man and woman or one child	1 lb. of rice 3*d.* ½ lb. of beef 2*d.*	5*d.* ditto.
4th.	A ſingle perſon	½ lb. of rice 1½ *d.* ½ lb. of beef 2d.	3½*d.* ditto.

"The above is what it coſts the poor; but to engage people to ſubſcribe (as I could not ſupply the whole myſelf), I have made out a plan, by which ſubſcribers may have tickets at 2*d.* a pound for the rice, and 2*d.* a pound for the beef. Thus, if any ſubſcriber wiſhes to aſſiſt any poor family, it will coſt them as follows:

Claſs.	lb.	Per week.	For 6 weeks.	For 12 weeks.	For 18 wee.
1ſt.	2 of rice 4*d.* 1½ of beef 3*d.*	7*d.*	3*s.* 6*d.*	7*s.*	10*s.* 6*d.*
2d.	1½ of rice 3*d.* 1 of beef 2*d.*	5	2 6	5	7 6
3d.	1 of rice 2*d.* ½ of beef 1*d.*	3	1 6	3	4 6
4th.	½ of rice 1*d.* ½ of beef 1*d.*	2	1 0	2	3 0

"I have fixed upon eighteen weeks for the period of ſale, ſtopping a couple of weeks between each ſix weeks. This is intended to make the poor feel the advantage which they derive from this ſupply, and to prevent their growing tired of it. It will likewiſe prolong the time, till the hay harveſt may ſupply them all with employment, and many vegetables will be coming in.

"I pay a woman a farthing a pound for meaſuring out the rice, and a halfpenny a pound for cutting and weighing the beef; but this is more than is neceſſary. If I had been provident, and had bought the rice cheap, the expence would have been trifling. As it is, I am a loſer of above a penny in the pound, when the ſubſcribers have paid their 2*d.* and the poor their 3*d.* but that regards only myſelf. Upon the beef there will likewiſe be ſome loſs, on account of the bones; of theſe I make ſoup, which might be ſold to ſupply that loſs. We have relieved, in this way, between eight and nine hundred families in the town and its environs; which made it neceſſary, in order to avoid confuſion, that they ſhould come on ſtated days:—the firſt claſs is therefore appointed on Mondays; the ſecond on Tueſdays; the third on Wedneſdays; and the fourth on Thurſdays. And as the requeſt for theſe tickets has extended to five, ſix, and ſeven miles diſtant, all which demands cannot be anſwered, I generally give the poor people who have come ſo far an occaſional ticket for that one day only, that they may not be entirely diſappointed.

"I muſt obſerve that, beſides the expreſſions of thankfulneſs from all without exception who have partaken of this charity, ſeveral women have been to tell me, that the excellence of the food has reſtored health and ſtrength to their families: one woman yeſterday informed me, that ſhe and her huſband had been, from mere poverty, got into ſo low and weak a ſtate of health, as to be ſcarcely able to earn any

thing; but that the continuance of this food, for ſome weeks together, had quite ſet them up again."

This mode of feeding the poor is perhaps "*leſs expenſive to the donor, and more acceptable to the receiver*, than any other. If any one was to give a large family half a guinea, or a poor widow three ſhillings, they would not be ſurpriſed at hearing that, in leſs than a month, the money was gone: while the ſame ſum, by this means, will laſt from the middle of January to the middle of June."

POOR'S-RATE *(Encycl.)*. The following moſt intereſting view of this ſubject is prefixed by Mr. Bernard to the ſecond volume of the Reports of the Society for bettering the Condition of the Poor.

"The *increaſe of the poor's-rate*," ſays Mr. Bernard, "has been for ſome years a juſt ſubject of alarm. Complaints have been made, and with too much reaſon, of the prevalence and magnitude of the evil. Two millions and a half annually expended in parochial relief, and a larger ſum in charities and beneſactions, producing no improvement in the condition of the poor, but rather prejudicing their means of life by the general effects of the ſyſtem,—this is a myſtery in our internal polity, difficult, but very important, to be explained.

"To ſome it has appeared the neceſſary conſequence of national proſperity. That, however, muſt be a very equivocal ſpecies of proſperity which is inimical to the comfort and happineſs of the great maſs of the people, and tends to diminiſh their means of life.—By others it has been deemed a ſymptom of national decline, common to all ſtates which have paſſed their zenith;—but this opinion is controverted by increaſe of trade and manufactures, by improvements in agriculture and every art and ſcience, and by the unrivalled energy and glory which attend the Britiſh arms in every quarter of the globe.—Others have conceived that ſpeculation in eſtates, a noxious tribe of land valuers and rent raiſers, and the conſequent preſs on the farmer to make his preſent greateſt profit with the leaſt poſſible out-goings, have given birth to an improvident ſyſtem with regard to the poor; hoſtile to any permanent improvement in their condition, and operating to diſcourage foreſight and good habits among them.

"Efforts have not been wanting to check this growing evil. Laws have been made to compel induſtry and economy; and workhouſes have been erected, and farmed to the beſt bidder, in order to deter the poor from wanting relief: but pariſhes and pariſh officers have not as yet been aware that in every inſtance, in which a poor family is driven by diſtreſs and depreſſion of circumſtances to take refuge in a workhouſe, an incumbrance has been entailed on the funds of the pariſh, never to be redeemed, even in part, except by a change of ſyſtem; by encouraging that induſtry and prudence, which no act of parliament can compel; and by aſſiſting them with increaſed means and advantages of life, calculated to enable them to ſupport themſelves and their families in their own cottages, without parochial relief.

"The poor in ſome parts of England have been deprived of many of their reſources*; and have been reduced, as their ſole ſubſiſtence, to the purchaſe of daily bread with the daily ſtipend of their labour. This has gradually deprived them of foreſight, and of every effort that looks to futurity; and has left them to proceed in a ſpiritleſs continuation of daily labour, until ſickneſs, misfortune, or increaſe of family, drives them into the workhouſe; there to remain the life penſioners of the public, and to leave their widows the nurſes and drudges of the houſe, and their children to acquire idle and unprincipled habits, among the dregs of the pariſh.

"The land owner ſhould be aware that this is waſte committed upon his eſtate, in the moſt deſtructive and irreparable way. It is not the pulling down of an unneceſſary hovel, the premature repetition of a crop of wheat corn, or the ploughing up a ſlip of paſture ground (the uſual trivial objects of impeachment of waſte), that is the ſubject of conſideration; but it is the relaxation of the nerve of the country, the deſtruction of the power of cultivating the land, the converſion of the ſtrength and energy of a people into weakneſs and debility, and the exchange of the means of wealth and proſperity for ſources of enormous and increaſing expence.

"It is an eſſential part of political wiſdom to give ſcope and increaſe to the energy of individuals, by affording to all the opportunity and hope of advancement in life. Where character, conduct, induſtry, and attention, receive their aſſured reward, candidates will not be wanting; and the example of a few will be reflected in the virtues of the many. If the child, in proportion to diligence and good conduct, be better fed, better clothed, more favoured, and have that pittance of reward laid up in ſtore, which in their narrow ſcale of life conſtitutes wealth, the number of induſtrious and well behaved children will increaſe:—If the young man finds that, by reſerving out of his wages a little fund of wealth againſt his marriage, he can convert theſe early ſavings into the means of increaſed produce and comfort during life, and become the poſſeſſor of a cow, a garden, and his own cottage, he will acquire early habits of prudence and economy, and will enter into life with a better and more principled ſyſtem of conduct:—and if the cottager who exerts himſelf in bringing up and placing out his family, is encouraged and aſſiſted in his honeſt endeavours; and, in caſe of any untoward and unfortunate interruption of his plan of economy, receives timely relief, and is preſerved from the apprehenſion of a workhouſe; the thrift and the ſucceſs of a few will produce many imitators; and the proſpect of improved circumſtances will awaken the energy of the poor, in every part of the kingdom.

"Many and various would be the advantages of giving to the poor a pleaſing and beneficial employment for their leiſure hours, and affording them the means of productive huſbandry at home, and within their own cottage and ground;—of ſupplying them to more advantage with the neceſſaries of life, and of relieving them from the burthen of their children, by placing them in a courſe of induſtry and occupation.—Where meaſures of this kind can be brought to produce any effect at all on millions, the benefit muſt be of very great magnitude. We may calculate the number of little hands hitherto idle, and now by a proper ſyſtem of employment to be brought into action; we may eſtimate, in part, the benefit of ſo numerous a claſs of men being protected from petty extortion and impoſition, and being fairly and honeſtly ſupplied with the neceſſaries of life; and we may reckon up, by long arithmetical deduction, the number

---

* Whoever travels through the midland counties, and will take the trouble of enquiring, will generally receive for anſwer, that formerly there were a great many cottagers who kept cows, but that the land is now thrown to the farmers: and if he enquires ſtill further, he will find that, in thoſe pariſhes, the poor's-rates have increaſed in an amazing degree. See Cow, Land, Cottager, &c. *Suppl.*

of acres which might be advantageouſly cultivated, and the myriads of hours which would be added to the amount of national labour, if every cottager was permitted and encouraged to improve the ſlips of waſte land, which ſtill remain in every part of the country, a diſcredit to the Engliſh nation:—but it is not within the compaſs of political arithmetic, to calculate the increaſe of proſperity and ſecurity, which we might derive from the general introduction of ſuch a ſyſtem."

It is the endeavour of the Society for bettering the Condition of the Poor (ſee SOCIETY, *Suppl.*) to ſearch for and diſſeminate uſeful and practical knowledge with regard to them; to co-operate in every plan that tends to increaſe their economy and domeſtic comfort; to hold up the induſtrious and thriving cottager as an example of imitation; and to promote his good habits, his induſtry, his welfare, and his happineſs. "At the ſame time," continues Mr. Bernard, "we are not unmindful of *the danger of diminiſhing the inducements to exertion*, by theoretical philanthropy, or by injudicious or miſapplied liberality; which may habituate the mind to a reliance on regular and periodical aſſiſtance, and (making exertion and foreſight of leſs moment) deprive the poor of that beſt and moſt honourable relief, which can only be derived from themſelves. It is of the utmoſt conſequence that charity be directed to her true end—that of elevating and benefiting the object of her attention, inſtead of rendering it helpleſs and without reſource; and that ſhe ſhould operate by increaſing the energy, the virtue, and the hopes of the poor; ſo as to attach them to their ſituation in life, and to give ſtability and principle to the moral and religious character of ſo large and ſo valuable a part of the community.

"Impreſſed with this idea, the ſociety has propoſed that the principle which has directed the reſearches of the preſent age, in natural philoſophy, in agriculture, in medicine, in every art and ſcience in which the limits of human knowledge have been ſucceſsfully extended,—that this principle ſhould be adopted in the concerns of the poor; and actual exiſting facts be made the means of practical and ſyſtematic inveſtigation, into what has really augmented their virtue and happineſs, and has been ſanctioned by uſe and experience.—After a variety of inefficacious attempts, during more than two centuries, to enforce induſtry and prudence by penal laws and compulſory ſtatutes, the ſociety has ventured to ſubmit to the conſideration of the public, whether the ſame object may not be attained by encouragement, by kindneſs, by management,—and by giving effect to that maſter-ſpring of action, 'the deſire implanted in the human breaſt of bettering its condition.' The influence of this invigorating ſpirit on commerce, on manufactures, and on agriculture, has been felt and acknowledged with pride and pleaſure by every Engliſhman: and there can remain no doubt but that the ſame principle, which has produced ſuch beneficial effects among the thriving and active members of the other claſſes of ſociety, would, if properly encouraged, generate among the poor of the ſame nation, that degree of induſtry and prudence, which we have in vain endeavoured to produce by compulſion.

"I am very far from meaning to ſuggeſt upon this ſubject, that nothing is at preſent done, or that all is practicable. Much, I am convinced, has been recently done; and with ſuch effect in exciting induſtry, as affords incontrovertible evidence of its utility.—All, I am ſatisfied, cannot be completely effected; but that, until the corruption of our nature is done away, there will ever be unhappy perſons of every rank and order, and in every claſs of ſociety, ſuffering under the conſequence of an erroneous courſe of life, and placed as landmarks to direct the conduct of others.—In fact, in that and in every important undertaking, there is danger from the expectation of too great, or of too rapid a progreſs. His who advances gently and gradually, and with caution, may have the hope of proceeding ſurely and ſucceſsfully; and if, in a work intereſting to millions, only part of the object be attained, and every ill conſequence avoided, the labour of the individuals employed will be well applied.

"It is not at all eſſential to my purpoſe, that I ſhould write a panegyric on the virtues of the poor. The contagion of bad example is generally caught by the lower from the higher orders; and I ſee nothing very exemplary in our own conduct, to induce me to doubt but that the poor are as good and as prudent, and as induſtrious, as we ſhould have been in the ſame circumſtances, and under the ſame diſadvantages. If this be conceded, the vices and faults of the poor muſt be deemed the vices and faults of an unfavourable ſituation, rather than of individual delinquency. Remove thoſe diſadvantages, and you add as much to moral character as to perſonal comfort.

"In the Reports of the ſociety (to be had, in a cheap form, at Hatchard's, Piccadilly), the rich and the benevolent will find ſubjects of experiment, methods of procedure, and accounts of expence. In the various details they will meet with ſomething or other to put in action every valuable principle of the human mind. They will only have to employ their diſcretion, in proportioning the mode and extent of their operations to their means and circumſtances. 'Many benevolent minds (ſays the Biſhop of Durham) ſuffer their excellent diſpoſitions for doing good to remain unemployed in the great ſervice of chriſtian charity, not for want of means, or of objects, but for want of knowing what good may be done within their own ſphere, and how.'—To remove this difficulty, to ſupply the public with details on every ſubject reſpecting the poor, to ſuggeſt the mode of active and uſeful charity, which in its effects ſhall not contribute to the increaſe of idleneſs and vice,—theſe are, and I truſt will continue to be, the objects of the ſociety.

"Upon the propoſed ſubjects of enquiry, ſome information has been already collected; and the ſociety is much gratified to find that it is producing immediate and beneficial effects, not only in this, but in a neighbouring kingdom. (See DUBLIN and CORK, *Suppl.*) As to pariſh relief, the fact is now pretty well aſcertained, that the beſt and moſt economical application of the parochial funds, is that which tends to aſſiſt and encourage induſtry (ſee OVERSEERS, *Suppl.*) and good management among the poor, in their own cottages, in the care and conduct of their own families, and in placing out their children at an early age in a courſe of employment (ſee PRENTICE, *Suppl.*); and that in thoſe pariſhes, where the cottager has been ſupplied with a good cottage and garden, and the means of keeping his cow at a fair and moderate rent, the labourers are the ſteadieſt and moſt orderly men, the poor's-rate is greatly reduced, and the value of landed eſtates much improved.

"With regard to protecting the poor from impoſition in the purchaſe of the neceſſary articles of life, it appears that, with very little coſt or trouble, great aſſiſtance may be given to them; and that more may be done for their real benefit in this reſpect, at a very trivial expence, than by millions, either added to our poor's-rates, or diſpenſed in the preſent ſyſtem of pecuniary charity:—that, in many parts of England, a weekly ſale of coals in ſmall quantities at prime coſt, is a relief to the diſtreſs, and a preſervative to the morals, of the poor; and that a ſupply of corn, potatoes, milk, cheeſe,

bacon, and other neceſſary articles of food, to the labourer, at the wholeſale price, whether by the farmer for whom he works, or from a village ſhop ſet up by the land proprietor, produces a very great ſaving to the labourer, encourages him in habits of thrift and economy, and attaches him to his ſituation in life.

"The poor have, in general, benefited by the means offered to them much more rapidly and effectually than their moſt ſanguine friends could have expected. All the prejudice againſt Soups and novel cookery has vaniſhed, wherever the experiment has been fairly made. Upon this ſubject, and that of village kitchens, a variety of information is ſubmitted to the reader, reſpecting the village dinners prepared for children and others at Oakham and Epping (ſee Parish-dinner, *Suppl.*); and the ſeveral charities recently eſtabliſhed, for ſupplying the poor with ſoups and other different articles of food, in villages,—in London,—at country manſions,—and in manufacturing towns. It is no ſmall recommendation of theſe charities, that they tend to ſhew the poor their real intereſt, and to inſtruct them in preparing for themſelves a more nouriſhing and more economical diet, than what they at preſent poſſeſs. They alſo give a fourfold effect to the operation of charity. In villages, they ſend comfortable and neceſſary relief into the houſes of many aged and forlorn perſons. In London, they ſupply food to a variety of thoſe objects which the circumſtances of ſuch a city, the corruption of human nature, and the viciſſitudes of things, too abundantly produce in a great metropolis. In country manſions, at a very trifling expence, they extend relief to a wide circle around; and draw bleſſings and affection on the proprietor and his family. But their influence is moſt beneficial among manufactories; in which the conteſts of nations, the mutability of faſhion, and the ebb and flow of proſperity, do perpetually produce objects of diſtreſs, beyond any power of adequate parochial relief. The value of theſe charities can only be appreciated by thoſe who have attended the conduct of them. During the preceding winter above five thouſand manufacturers in London, and almoſt as many more at Birmingham diſtreſſed by the preſſure of the times, have gratefully received from theſe ſoup-ſhops their daily ſupply of food for themſelves and their families, at a fourth of what it muſt otherwiſe have coſt them; and have been thereby preſerved from want and deſpair.

"It has been too clearly proved, that by the converſion of many corn mills into mills for manufactories, and by other circumſtances, the cottager has been ſubjected to a grievous monopoly in reſpect of bread, which is now become his prime neceſſary of life. The injury to the poor by this alone (if we may eſtimate from the facts which have come before us) is nearly equal to two thirds of all the poor's-rates collected in England, and conſiderably exceeds 1,000,000l. a-year. There is no doubt but the eſtabliſhment of parochial mills (ſee Parish Mill, Flour, &c. *Suppl.*) throughout the kingdom, would at once correct this monſtrous and abominable evil, without any loſs of income to the proprietors of the mills; which will afford five per cent. on the expenditure, and leave an annual ſurplus for charity to diſtribute, in the encouragement and ſupport of the induſtrious poor.

"Of Friendly Societies (ſee *Suppl.*) the benefit is well known; and it is enough to ſtate what general experience gives teſtimony to, and what is confirmed by all the information which has been laid before the ſociety, that their effects, when legally and properly eſtabliſhed, are ſure and unvaried in promoting induſtry, economy, philanthropy, and every virtue, among the poor.

"As to Cottages (ſee *Suppl.*), with exception of ſome favoured diſtricts, it is too obvious that they are deficient both in number and condition; the inhabitants ſuffering in health and cleanlineſs, for want of that accomodation, which in this climate is neceſſary to life and well-being. It is due to the cottager, to ourſelves, and to the general appearance of the country, that neatneſs and comfort in theſe habitations, by timely repairs, and by the very trivial expence of frequent White-washing (ſee *Suppl.*), ſhould be allowed to have their full effect in inducing habits of cleanlineſs, and, in the conſequence, of regularity and morality in the poſſeſſors.

"Of pariſh workhouſes (ſee House, Workhouse, and Industry, *Suppl.*) it is not too much to ſay, that, however well managed, yet if they are made the common receptacle of all who apply for relief, they will, in their general effect, be the cauſe of injuſtice and unkindneſs to many individuals, and of prejudice and injury to the pariſh. If none were placed there but the aged and infirm, who have no domeſtic retreat to recur to,—none, who could do better out of them (the diſabled cottager, receiving relief in his cottage, the ſturdy idler being ſubjected to legal correction, and the child finding an aſylum in a *Pariſh* School, *Suppl.*), the poor who, for want of domeſtic connection and the means of ſuſtenance, are compelled to take refuge in a poorhouſe, would find it a decent and well-regulated aſylum; while the cottager would preſerve his little eſtabliſhment at home, and not be compelled, by temporary diſtreſs, to become a permanent burthen to his pariſh; the idle and the ſturdy would receive merited puniſhment; the pariſh-child would be boarded and inſtructed at leſs expence by ſome cottager's widow, from whoſe care he would go, at an earlier age, and with more character and principle, into ſervice.

"There are ſeveral other ſubjects of enquiry, upon which we muſt refer the reader to the Reports themſelves. On one only we ſhall trouble him with any further remarks; and that is upon county Jails and houſes of correction (ſee House, *Suppl.*).—The plan which has been ſucceſsfully adopted at Dorcheſter, and in a very few other inſtances,—that of encouragement and inducement to work, by a liberal ſhare of earnings, and by a diſtinction of food and treatment between the idle and induſtrious, and between the profligate and the well-diſpoſed; the plan of ſending them forth from the priſon, with character, and the means and habits of induſtry and livelihood, is fully developed in the account of the Dorcheſter jail and houſe of correction. The detail of the effects produced there, is confirmed by experience in every other inſtance, to which it has been properly applied. It is congenial to the nature of man, and to our own feelings. Let us not then deſpair, but that the example will be ſpeedily followed in other counties, for the benefit of the inhabitants, and for the reform and reſtoration of many wretched and hopeleſs priſoners, now ſuffering under the ſervitude of vicious habits, without the means or proſpect of releaſe.

"In almoſt every eſtabliſhment for the employment and benefit of the poor, the finding and keeping for them regular and proper work and occupation is one of the greateſt embarraſſments. This, more than any other cauſe, has checked the exertions of thoſe who have been at times very anxious to promote the welfare of their poor neighbours. But, before they give up their labour of love, we entreat them to reflect, that, if the obtaining for a few neceſſitous families, who dwell near them, a regular ſupply of uſeful occupation, is difficult for the rich, and for thoſe who poſſeſs talents, and leiſure, and influence, what muſt be the nature of the difficulties which will attend the induſtrious efforts of the poor, the helpleſs, the ignorant, and the uninſtructed. If

we are impoſed upon, placed in a ſituation of embarraſſment, when we ſeek the means of induſtry for them, what muſt be *their* diſtreſs and confuſion in the ſame attempt.—Surely this conſideration ſhould rouze us to overcome, by activity and perſeverance, that which to them may be inſurmountable; and to provide thoſe means of induſtry and thrift, which, in the preſent ſtate of this country, it is impoſſible for many of the poor to obtain for themſelves.

"The queſtion whether the rich ſupport the poor, or the poor the rich, has been frequently agitated by thoſe who are not aware that, while each does his duty in his ſtation, each is, reciprocally, a ſupport and a bleſſing to the other. All are parts of one harmonious whole; every part contributing to the general maſs of happineſs, if man would but endeavour to repay his debt of gratitude to his Creator; and, by a willing habit of uſefulneſs, to promote the happineſs of himſelf and of his fellow-creatures. In this way the higher claſſes of ſociety may, by ſuperiority of power and education, do more ſervice to the other parts of the community, than what they receive; the welfare of the poor being then, in truth, more promoted and aſſured by the gradations of wealth and rank, than it ever could have been by a perfect equality of condition; even if that equality had not been in its nature chimerical and impracticable; or (if practicable) had not been hoſtile and fatal to the induſtry and energy of mankind. —Rank, power, wealth, influence, conſtitute no exemption from activity or attention to duty; but lay a weight of real, accumulated reſponſibility on the poſſeſſor.

> Is heaven tremendous in its frowns? moſt ſure:
> And, in its favours, formidable too.
> Its favours here are trials, not rewards;
> A call to duty,—no diſcharge from care;
> And ſhould alarm us full as much as woes.
>
> YOUNG.

"If the poor are idle and vicious, they are reduced to ſubſiſt on the benevolence of the rich: and if the rich (I except thoſe to whom health and ability, and not the will, is wanting) are ſelfiſh, indolent, and neglectful of the conditions on which they hold ſuperiority of rank and fortune, they ſink into a ſituation worſe than that of being gratuitouſly maintained by the poor. They become paupers of an elevated and diſtinguiſhed claſs; in no way perſonally contributing to the general ſtock, but ſubſiſting upon the labour of the induſtrious cottager;—and whenever Providence thinks fit to remove ſuch a character, whether in high or in low life, whether rich or poor, the community is relieved from an uſeleſs burthen."

On the motives for co-operation with this excellent Society, Mr. Bernard expreſſes himſelf in the following juſt and forcible terms:—"If," ſays he, "there ſhould be among my readers, any one whoſe views are directed to himſelf only, I could eaſily ſatisfy him, that his means of ſelf-indulgence would be increaſed, his repoſe would be more tranquil, his waking hours leſs languid, his eſtate improved, its advantages augmented, and the enjoyment permanently ſecured, by his activity in the melioration of the condition, the morals, the religion, and the attachment, of a numerous and very uſeful part of his fellow-ſubjects.—To the patriot, who wiſhes to deſerve well of his country, I could prove that, from the increaſe of the reſources and virtues of the poor, the kingdom would derive proſperity—the different claſſes of ſociety, union—and the conſtitution, ſtability. To the rich, who have leiſure, and have unſucceſsfully attempted to fill up their time with other objects, I could offer a permanent ſource of amuſement;—that of encouraging the virtues and induſtry of the poor, with whom by property, reſidence, or occupation, they are connected;—that of adorning the ſkirts of their parks and paddocks, of their farms and commons, with picturesque and habitable cottages, and fruitful gardens; ſo as to increaſe every Engliſhman's affection for an iſland replete with beauty and happineſs;—that of aſſiſting the poor in the means of life, and in placing out their children in the world; ſo as to attach them by an indiſſoluble tie, and a common intereſt, to their country, not only as the ſanctuary of liberty, but as an aſylum, where happineſs and domeſtic comforts are diffuſed, with a liberal and equal hand through every claſs of ſociety."

POOROONDER, a fortreſs of Viſiapour, in the Deccan of Hindooſtan. It is ſeated on a mountain, 18 miles E.S.E. of Poonah; is the place of refuge for that capital in caſe of an invaſion; and here the archives of government are kept.

POOTE, a town of France, in the department of the Mayenne, and chief place of a canton, in the diſtrict of Villaine: two leagues and a half E.N.E. Villaine, and four W.S.W. Alençon.

POPERINGUE, a town of Auſtrian Flanders, on a river of the ſame name. Six miles W. of Ypres. Long. 2. 38. E. Lat. 50. 51. N.

POPO, a kingdom on the Slave Coaſt of Guinea. The inhabitants have ſcarcely any houſes to dwell in, beſide the king's village, which is an iſland in the midſt of a river. Their chief trade is in ſlaves.

PORCAH, a town of the peninſula of Hindooſtan, in the country of Travancore, taken from the Dutch by the Engliſh in 1795. It is 75 miles N.W. of Travancore. Long. 76. 30. E. Lat. 9. 15. N.

PORCHESTER, a village in Hampſhire, four miles N. of Portſmouth, at the upper end of the harbour, between Fareham and Portſea Iſland. In has an ancient caſtle, which has ſerved, of late years, for the reception of priſoners of war.

PORCO, a town of Peru, in the audience of Los Charcos, a little to the W. of Potoſi. Long. 64. 60. W. Lat. 19. 40. S.

PORCUNA, a town of Spain, in the province of Juen, eight miles S.S.W. of Anduxar.

PORSELON, or PORSELOUC, a rich and commercial town of the kingdom of Siam, ſituate on a large river which runs into the gulf of Siam.

PORT AU PRINCE, a ſea-port of St. Domingo, ſeated on a bay on the W. ſide of the iſland, of which part it is the capital. It was taken by the Engliſh and royaliſts in 1794. Long. 72. 10. W. Lat. 18. 45. E.

PORT DE FRANCAIS, a harbour on the W. coaſt of America, diſcovered by M. de la Pérouſe in 1786. It is of a circular form, not to be fathomed in the middle, and bordered by peaked mountains, of an extenſive height, covered with ſnow. The natives on this coaſt are deſcribed as the moſt complete thieves, poſſeſſed of an activity and obſtinacy capable of executing the moſt difficult projects. Skins were found here in great abundance, particularly thoſe of the ſea otter. In this harbour is a ſmall iſland. Long. 137. 30. W. Lat. 58. 37. N.

PORT DESIRE, an harbour of S. America, where ſhips ſometimes touch in their paſſage to the Pacific Ocean. It is 100 miles N.E. of Port St. Julian. Long. 65. 40. W. Lat. 47. 50 S.

PORT LOUIS, a French fortreſs, on the S.W. coaſt of Hiſpaniola, demoliſhed by Admiral Knowles in 1747, but ſince rebuilt. Long. 73. 16. W. Lat. 18. 18. N.

PORT LOUIS, a town and harbour of the Iſle of France, in the Indian Ocean, ſtrongly fortified. Long. 57. 28. E. Lat. 20. 9. S.

PORT PAIX, a town on the N. coaſt of St. Domingo,

in the Weſt Indies, with a good harbour. Long. 72. 55. W. Lat. 19. 58. N.

PORT PATRICK, a ſea-port in Wigtonſhire, confined by the ſea on one ſide, and on the other by over-hanging rocks and hills. It is noted for its ferry to Donaghadee in Ireland, from which it is only 20 miles diſtant; and a packet-boat ſails from hence for that place every day. The harbour is good; and has one of the fineſt quays in Great Britain, with a reflecting light-houſe. It is 107 miles S.W. of Edinburgh, and 487 N.W. of London.

PORT ROYAL, a town and fort of the iſland of Martinico, 21 miles S.E. of St. Pierre. Long. 61. 9. W. Lat. 14. 3. N.

Port Royal, a town of the United States, in Virginia, on the river Rappahannoc.

PORT ST. JULIAN, a harbour on the coaſt of Patagonia, where ſhips uſually touch that are bound for the Pacific Ocean. Long. 68. 44. W. Lat. 49. 10. S.

PORT ST. MARY, a ſea-port of Spain, in Andaluſia. The Engliſh made a deſcent here in 1702, with a deſign to beſiege Cadiz, but without ſucceſs. It is ten miles N.E. of Cadiz. Long. 6. 0. W. Lat. 35. 37. N.

PORT SANDWICH, a harbour in the iſland of Mallicolo, in the S. Pacific Ocean. Long. 167. 53. E. Lat. 16. 25. S.

PORT VENDRE, a ſea-port of France, in the department of the Eaſtern Pyrenées and late province of Rouſillon. It was taken by the Spaniards in 1793, but retaken the next year. It is 25 miles S. by E. of Perpignan.

PORTADOWN, a town of Ireland, in the county of Armagh, with an extenſive linen manufacture. It is ſituate on the river Bann, nine miles N.E. of Armagh, and 16 N. of Newry.

PORTAFERRY, a town of Ireland, in the county of Down, on the rapid ferry of Strongford, 80 miles N. of Dublin.

PORTALEGRE, a ſtrong town of Portugal, in Alentejo, with a biſhop's ſee. It is ſeated at the foot of a high mountain, in a pleaſant country, 30 miles N.W. of Elvas, and 90 N.E. of Liſbon.

PORTARLINGTON, a borough in Ireland, partly in King's and partly in Queen's County. It is ſeated on the river Barrow, 31 miles N. of Kilkenny, and 36 S.W. of Dublin.

PORTERAGE, the ſum paid to a porter who carries home a parcel after its arrival from the country. By the 39 Geo. III. c. 58. the rates of porterage, within the cities of London and Weſtminſter, and the borough of Southwark, and the ſuburbs and liberties thereof reſpectively, and other parts contiguous thereto, not exceeding the diſtance of half a mile from the end of the carriage pavement in the ſeveral ſtreets and places within the ſaid cities, borough, and liberties, are as follow, viz.

For any diſtance not exceeding one quarter of a mile, *three pence*.

For any greater diſtance than a quarter of a mile, but not exceeding half a mile, *four pence*.

For any greater diſtance than half a mile, but not exceeding one mile, *ſix pence*.

For any greater diſtance than one mile, but not exceeding one mile and a half, *eight pence*.

For any greater diſtance than one mile and a half, but not exceeding two miles, *ten pence*; and ſo in the like manner the additional ſum of three pence for every further diſtance not exceeding half a mile.

PORTLAND, a ſea-port of the United States, capital of Cumberland County, in the diſtrict of Main. It is ſeated on a peninſula, and has an excellent harbour, 150 miles N.N.E. of Boſton. Long. 69. 30. W. Lat. 44. 10. N.

PORTLAND ISLANDS, a cluſter of iſlands in the S. Pacific Ocean. They are low, and covered with wood; and the centre one is in long. 149. 8. E. lat. 2. 38. S.

PORTLAND-POWDER, a particular compound, the recipe for which was imported from Switzerland, by an anceſtor of the Duke of Portland. It conſiſts of equal parts of round birthwort (*ariſtolochia rotunda*, L.); of gentian; of the tops and leaves of germander, ground-pine, and centaury; dried, pulverized, and ſifted. Theſe are to be carefully incorporated; and one dram of the compoſition is to be taken every morning in a glaſs of wine and water, tea, or any warm liquid; after which the patient ſhould faſt an hour and a half. Such courſe is to be continued for three months without intermiſſion; at the expiration of which, the doſe muſt be reduced to one half, and taken as before, for the ſpace of ſix months; when it is to be continued every ſecond day, for twelve months longer.—This famous noſtrum has long been held in high eſtimation, for its ſuppoſed efficacy in curing the *gout*; and though, in the hands of judicious perſons, it undoubtedly forms a powerful alterative, yet it muſt be claſſed among thoſe quack-medicines that, by the length of time to which their operation is to be extended, cannot fail of doing frequent miſchief. This indeed has been abundantly ſhewn in a paper lately inſerted, by Dr. Fothergill, in the Medical and Phyſical Journal, where inſtances are adduced of the fatal reſult of the trials made with this remedy, even where it has ſucceeded in removing the gout.

PORTO, a ſmall ſea-port of Italy, in the patrimony of St. Peter. It is the ſee of a biſhop, who is generally a cardinal, and dependent only on the pope. It is ten miles S.W. of Rome.

PORTO CAVALLO, a ſea-port of Terra Firma, on the coaſt of Caraccus. Here the Engliſh were repulſed, when they attacked it, in 1743. Long. 64. 30. E. Lat. 10. 20. N.

PORTO DEL PRINCIPE, a ſea-port on the N. coaſt of Cuba, with a good harbour. It is ſeated in a large meadow, where the Spaniards feed a great number of cattle. Long. 78. 15. W. Lat. 21. 52. N.

PORTO GALLETO, a ſea-port of Spain, in the bay of Biſcay, ſeated on a ſmall river, eight miles N. of Bilboa. Long. 3. 11. W. Lat. 43. 22. N.

PORTO GRUARO, a town of Italy, in Venetian Friuli, with a biſhop's ſee. It is ſeated on the Lema, 15 miles W. of Marano.

PORTO HERCOLE, a ſea-port of Italy, in the ſtate of Preſidii, ſituate on a peninſula, four miles S. of Orbitello. Long. 11. 12. E. Lat. 42. 14. N.

PORTO NOVA, a ſea-port of Spain, in Galicia, ſeated near the mouth of the Leris, 54 miles W. of Orenſe. Long. 8. 36. W. Lat. 42. 19. N.

PORTO PEDRO, a ſea-port in the Iſland of Majorca. Long. 2. 41. E. Lat. 39. 37. N.

PORTO PRAYA, a town and bay of St. Jago, one of the Cape de Verd Iſlands. The town ſtands on an elevated plain, and is the reſidence of the Portugueſe governor of the iſlands. Long. 23. 29. W. Lat. 14. 56. N.

PORTO SANTA MARIA, a ſea-port of Spain, in the bay of Cadiz, containing nearly 10,000 inhabitants. The principal trade is in ſalt. It is ſeven miles N. of Cadiz.

PORTSEA, an iſland between Chicheſter Bay and the harbour of Portſmouth, in Hampſhire. It is a low tract of conſiderable extent, ſeparated from the main-land by a creek, over which is a bridge. At the S.W. extremity of it is ſituate the town of Portſmouth.

PORTSMOUTH, a town of the United States, the largeſt in New Hampſhire, ſeated on Piſcataqua River, two miles from the Atlantic Ocean. Its harbour is one of the fineſt on the continent, well defended by nature, both againſt ſtorms

and an enemy; and it has a light-houſe at the entrance. It is 24 miles N. of Boſton. Long. 70. 37. W. Lat 42. 46. N.

PORTUGALETE, a town of Spain, in the province of Biſcay, ſituate on a bay of the Atlantic, 12 miles N.W. of Bilboa. Long. 3. 18. W. Lat. 43. 40. N.

POSATA, a town of the iſland of Sardinia, on the E. coaſt, 45 miles E.S.E. of Caſtel Aragoneſe. Long. 90. 30. E. Lat. 40. 36. N.

POSEGA, a ſtrong town of Sclavonia, capital of a county of the ſame name. It was taken from the Turks by the Auſtrians, in 1687. It is ſeated in a fertile country, on the river Oriana, 120 miles W. by N. of Belgrade. Long. 18. 59. E. Lat. 45. 36. N.

POSNAIA, or Posen, a commercial town of Great Poland, in a palatinate of the ſame name, with a good caſtle, and a biſhop's ſee. The cathedral is magnificent. By the partition of Poland, it became ſubject to the King of Pruſſia. It is ſeated in a pleaſant plain, on the river Warta, 27 miles W. of Gnefna, and 127 W. of Warſaw.

POSSINHO, a town of Portugal, in Eſtremadura, ten miles N.E. of Santareni.

POSTAGE *(Encycl.)*. By the act 41 Geo. III. c. 7. for repealing the duties of poſtage, and granting other duties in lieu thereof, the former rates of poſtage were, from and after April 5, 1801, to ceaſe, and in lieu of the rates repealed, the following were to take place:

General Poſt.] A diſtance not exceeding fifteen meaſured miles, 3*d.* double 6*d.* treble 9*d.* ounce weight 1*s.*—Above fifteen and not exceeding thirty miles, ſingle 4*d.* double 8*d.* treble 1*s.* ounce 1*s.* 4*d.*—Above thirty and not exceeding fifty miles, ſingle letter 5*d.* double 10*d.* treble 1*s.* 3*d.* ounce 1*s.* 8*d.*—Above fifty and not exceeding eighty miles, ſingle letter 6*d.* double 1*s.* treble 1*s.* 6*d.* ounce 2*s.* 6*d.*—Above eighty and not exceeding one hundred and twenty miles, ſingle letter 7*d.* double 1*s.* 2*d.* treble 1*s.* 9*d.* ounce 2*s.* 4*d.*—Above one hundred and twenty and not exceeding one hundred and ſeventy miles, ſingle letter 8*d.* double 1*s.* 4*d.* treble 2*s.* ounce 2*s.* 8*d.*—Above one hundred and ſeventy and not exceeding two hundred and thirty miles, ſingle letter 9*d.* double 1*s.* 6*d.* treble 2*s.* 3*d.* ounce 3*s.*—Above two hundred and thirty and not exceeding three hundred miles, ſingle letter 10*d.* double 1*s.* 8*d.* treble 2*s.* 6*d.* ounce 3*s.* 4*d.*—For one hundred meaſured miles above three hundred miles, ſingle letter a further ſum of 1*d.* double 2*d.* treble 3*d.* ounce 4*d.*—Above three hundred meaſured miles, and not amounting to one hundred miles, the like further ſum for every ſingle letter 1*d.* double 2*d.* treble 3*d.* ounce 4*d.*—And where the diſtance above three hundred meaſured miles ſhall exceed one hundred miles, and ſo progreſſively for any like exceſs of diſtance of one hundred miles, the like further ſum for every ſingle letter 1*d.* double 2*d.* treble 3*d.* ounce 4*d.*

Foreign Letters.] Letters to or from any part of the United Kingdom of Great Britain and Ireland, from or to any places out of the ſaid kingdom, not within his majeſty's dominions, in addition to all other rates now payable, ſingle letter 4*d.* double 8*d.* treble 1*s.* ounce 1*s.* 4*d.*

Rates by the Two-penny Poſt.] For every letter originally ſent by the poſt known by the name of the penny-poſt (and not firſt paſſing by the general poſt), the poſtage whereof ſhall not be paid on putting the ſame into the office of the ſaid poſt, the rates herein-after mentioned ſhall be paid, viz.

For the conveyance of every letter ſent by the ſaid poſt from any place within the cities of London and Weſtminſter, the borough of Southwark, and the reſpective ſuburbs thereof, the ſum of 2*d.*—For the conveyance of every letter put into ſuch laſt-mentioned poſt office to be forwarded by the general poſt, the ſum of 2*d.*—For every letter or packet firſt paſſing by the general poſt, and then paſſing by the two-penny poſt, over and above the general poſtage, 2*d.*—Merchants' accounts, bills of exchange, and bills of lading, ſhall be rated as ſo many ſeveral letters.

The poſtmaſter general may undertake the conveyance of letters to and from places not being poſt towns, for ſuch ſums for extra ſervice as may be agreed upon between the poſtmaſter general and the inhabitants; but the inhabitants of ſuch places may act as heretofore.

Iriſh Letters.] There ſhall alſo be paid for every letter conveyed by packet boats from or to the ports of Holyhead or Milford haven, to or from any ports in Ireland, over and above the rates payable for ſuch letters, a packet poſtage, viz. for every ſingle letter 2*d.* treble 6*d.* ounce 8*d.*

This act is not to alter the rates of poſtage upon ſingle letters ſent by or to ſeamen or ſoldiers, made payable by 35 Geo. III. c. 53. nor the manner of charging for patterns or ſamples of cloth, &c. under that act.

POST-HORSES *(Encycl.)*. By the act 25 Geo. III. c. 51. all poſtmaſters, innkeepers, or other perſons, ſhall pay annually 5*s.* for a licence. Perſons letting poſt-horſes without a licence, forfeit 10*l.* and keeping more than one inn under one licence, 20*l.* They are to paint *licenſed to let poſt-horſes* on the fronts of their houſes, on pain of 5*l.* And there ſhall be paid for every horſe hired for travelling poſt, one penny halfpenny for every mile ſuch horſe ſhall be hired to travel poſt.

For every horſe hired for a day, or leſs time, if the diſtance ſhall be aſcertained, one penny halfpenny per mile; and if the diſtance ſhall not be aſcertained, 1*s.* 9*d.* for each horſe, to be paid by the perſon by whom the horſe ſhall be hired.

Every licenſed perſon to paint, on the outſide pannel of each door of the chaiſe, his chriſtian and ſurname, and place of abode, on pain of 5*l.*

POT-ASH *(Encycl.)* In June, 1801, a patent was granted to Mr. Howard, of Mancheſter, for a method of making a Britiſh barilla and potaſh, and of obtaining a greater quantity of alkali than by any means hitherto diſcovered. The inventor's method is by ſaturating with quick lime the aſhes made from bleachers' waſte lye, rock ſalt, ſoda, natron, common ſalt, black aſhes of the ſoap-boilers' lye, kelp, tobacco aſhes, &c. ſal enixum, caput mortuums of the vitriolic and muriatic acid; and alſo for ſeparating the vitriolic and muriatic acids as they exiſt in common ſalt, ſea water, bleachers' waſte lye, and the lye or ſalt of ſoap-boilers' waſte lye; theſe, or any or all of them together, or any other ſubſtance, that wholly or in part contains a vegetable mineral or foſſil alkali.

"To obtain the alkali," ſays he, "contained in aſhes made from the bleachers' waſte ley, rock ſalt, common ſalt, ſoda, natron, black aſhes of the ſoap-boilers' waſte lye, kelp, or tobacco aſhes, I take of the rock ſalt, common ſalt, black aſhes from the ſoap-boilers' waſte lye, kelp, or tobacco aſhes, or any or all of them, twenty hundred weight; or of aſhes made from bleachers' waſte lye, ſoda, or natron, or any or all of them, 10 cwt.; and grind, pound, or roll them ſufficiently fine, as to paſs through a fine ſieve. To which I add 16 cwt. of cokes or cinders, charcoal, ſmall coal, dyers' waſte wood, ſawyers' duſt, or any other combuſtible, deſtitute of ſulphur, being firſt ground and ſifted. Theſe I mix till they appear of one ſameneſs, and then ſpread on an even floor a thin layer of them; to which I add a layer of quick lime, on which I ſprinkle as much common water, lye, brine, or ſea water, as the maſs will abſorb. This done, I continue the layers until 1600 weight of lime is added: I let them here ſaturate, and whilſt warm I cut down the layers,

and add a ſufficient quantity of common water, lye, brine, or ſea water, as when ground, beat, or trodden with the feet, or any other mode, it aſſumes the appearance of mortar; which, when done, and perfectly dried, either upon iron plates or pans, or any other more convenient way, introduce it into the reverberating furnace, and bring the ſame into a flux, at a moderate temperature, which in two, three, or four hours, or more (according to quantity), being repeatedly ſtirred, and the ſame temperature kept up, will produce what I call my Britiſh barilla.

"To obtain the alkali contained in ſal enixum and caput mortuums of vitriolic and muriatic acids, I take, if of ſal enixum or reſiduum of muriatic acid, 20 cwt. and if of vitriolic acid, 35 cwt.; to each of which quantities ſeparately, or a due proportion of them jointly, I add of natron 10 cwt. of black aſhes of the ſoap-boilers' waſte lye, 15 cwt. of kelp, 20 cwt. of ſalts obtained from the ſoap-boilers' waſte lye, 20 cwt., or any other neutral ſalt or alkali in proportion to its quality; to which I add 32 cwt. of cokes or cinders, charcoal, or ſmall coal, ſawyers' duſt, or dyers' waſte wood, or any other combuſtible ſubſtance deſtitute of ſulphur. The above, ground, ſifted, and well mixed, to be ſpread on an even floor, as before, until 32 cwt. of quick lime be added, and then proceed as before, which will alſo produce my Britiſh barilla.

"To obtain the ſeparation of the vitriolic and muriatic acids as they exiſt in common ſalt, brine, or ſea water, the bleachers' waſte lye, and the ſoap-boilers' waſte lye, or the ſalts obtained therefrom, I take of ſalts obtained from the ſoap-boilers' waſte lye 20 cwt., or of common ſalt 20 cwt., and 10 cwt. of tobacco aſhes. Theſe, either ſeparately or jointly, in the above proportions; to which, if ſalts obtained from ſoap-boilers' waſte lye is uſed, add 16 cwt., and if common ſalt and tobacco aſhes, 28 cwt. (or a due proportion, according to the ſalts uſed), of cokes or cinders, charcoal, &c. as before, to be ground, ſifted, and mixed, as before. Theſe ſpread in layers, and ſprinkled with lye, brine, or ſea water, until, if ſoap-boilers' ſalts are uſed, 16 cwt. of quick lime is uſed; and if common ſalt and tobacco aſhes, then 28 cwt. of quick lime is uſed, or in that proportion, and then to undergo the aforementioned proceſſes for making the Britiſh barilla.

"If to make potaſhes, I add to every 20 cwt. of the whole maſs 20 cwt. of black aſhes, ſalts obtained from ſoap-boilers waſte lye, or any other neutral ſalt or alkali, in due proportion, which I treat in the manner before mentioned with the aforeſaid maſs, or I introduce it in like proportion at the time of charging the reverberating furnace; but I prefer the former: in two, three, or four hours, from the introduction (according to the quantity), it will become a liquid maſs, which I then tap, and call my Britiſh potaſh."

Notwithſtanding the proportions above preſcribed, the writer is aware that great diverſity of opinion upon the proportions of each ingredient will be found amongſt the conſumers: firſt, on account of the alkaline baſis, and ſecondly, with regard to the cauſticity deſired; but he is of opinion, that the proportions he has laid down are preferable to any other.

POT-ASH-CAKE, a kind of biſcuit, much uſed in the United States of America; and which is baked in the following manner:—Take two pounds of wheaten flour, and half a pound of butter; to theſe muſt be added half a pound of ſugar, that has previouſly been combined with a pint of milk; and a large tea-ſpoonful of ſalt of tartar, cryſtals of ſoda, or any other pure pot-aſh, which has likewiſe been diſſolved in a ſmall quantity of water. The whole is to be carefully mixed, and kneaded together: when properly rolled, it may be formed into cakes, which ought to be expoſed to a briſk heat of an oven; as their lightneſs depends much on the expedition with which they are baked.

Pot-aſh-cake is equally nutritious and wholeſome: being ſpeedily prepared, it deſerves to be adopted, eſpecially where yeaſt cannot be eaſily procured.

POTATOE *(Encycl.)*. From vol. II. of the Reports of the Society for bettering the Condition, &c. of the Poor, we ſhall extract an intereſting paper on the preſervation of potatoes, by Mr. Millington.—According to his ſtatement, three pounds of potatoes were peeled, raſped, and put in a coarſe cloth between two boards, in a napkin-preſs, till they were compreſſed into a very thin cake, that was placed on a ſhelf to dry. The roots yielded, on expreſſion, about one quart of juice; which, being mixed with an equal quantity of cold water, depoſited in the courſe of an hour, upwards of one dram of white flour or ſtarch, in every reſpect fit for making fine paſtry.—Mr. M. preſented in 1799 to the above-mentioned ſociety, a cake, which had been thus prepared in the year 1797. In bulk, it occupied only one-ſixth part of the original roots; and loſt about two-thirds in weight by the proceſs. Mr. Millington's ſecond method of preſerving theſe roots, is as follows: Five pounds of potatoes were properly cleaned and pounded in a mortar, without being previouſly peeled; and then preſſed in a ſmall wine-preſs into a thick cake; the whole being completed in the manner above deſcribed. This cake alſo was ſweet and wholeſome, but did not poſſeſs the clear whiteneſs of the former; nor does it appear that ſuch as were prepared according to the laſt proceſs, will remain ſweet for the ſame length of time as thoſe conſiſting of peeled potatoes.—At all events, this contrivance deſerves to be further purſued and improved; for, independently of the immediate advantages that will reſult from ſupplying mariners with vegetables, it is an object of the greateſt importance, when conſidered as a mean of preſerving ſo uſeful, though periſhable, an article for years; and of laying up a ſtore in plentiful ſeaſons, againſt the time of ſcarcity.

Another mode of keeping potatoes, was lately and ſucceſsfully tried, by the patriotic Bath and Weſt of England ſociety; and which certainly is leſs complex than that before deſcribed. It conſiſts ſimply in ſlicing potatoes, without taking off the rind or ſkin, and afterwards drying them in an oven or kiln. The roots thus prepared will remain ſweet for almoſt any length of time: the ſociety ſent ſome to Jamaica in a barrel, which had been four years from Britain, and, on their return, were found not to be in the leaſt degree affected.

POTENZA, a town of Naples, in Baſilicata, with a biſhop's ſee. It was almoſt ruined by an earthquake in 1694. It is ſeated near the ſource of the Baſiento, eight miles S.E. of Naples.

POTOMAC, or PATOMAC, a river of Virginia, which falls into the bay of Cheſapeak. On the banks of this river is now erecting the city of Waſhington, the intended metropolis of the United States.

POTTON, a town in Bedfordſhire, with a market on Saturday, 12 miles E. of Bedford, and 48 N. by W. of London. Long. 0. 18. W. Lat. 52. 11. N.

POUGHKEEPSIE, the capital of Ducheſs County, in the ſtate of New York, ſituate on the E. ſide of Hudſon's River, N. of Wappinger's Creek.

POUGUES, a village of France, in the department of Nievre, noted for its ferruginous mineral waters. It is five miles N.W. of Nevers.

POULTICES *(Encycl.)*. Theſe are generally prepared of bread and milk, to which is added oil, lard, or other unctuous matter, to prevent their adheſion to the parts inflamed. In

large hoſpitals, the conſumption of theſe articles for ſuch purpoſe being very conſiderable, while the bread and milk are liable to become ſour in warm weather, the following ingredients have, by Mr. Payne, ſurgeon, been propoſed as ſubſtitutes:—Take, of the fineſt pollard, three parts; of genuine linſeed flour, one part; both by meaſure; and, of boiling water, four parts: mix theſe ingredients with a ſpoon or a broad knife; and they will, in general, form a poultice of a proper conſiſtence, without requiring oil, lard, or other emollient ointment: though, if the inflammation be conſiderable, a ſmall quantity of oil may be added, to prevent adheſion.

POULTON, a town in Lancaſhire, with a market on Monday, ſeated near the mouth of the Wyre, 18 miles S.W. of Lancaſter, and 231 N.W. of London. Long. 3. 6. W. Lat. 53. 52. N.

POURSELUC, a town of the kingdom of Siam, 280 miles N. of Siam. Long. 100. 40. E. Lat. 18. 58. N.

PORZAIN, a town of France, in the department of Puy de Dome, ſeated on the Sioule, 36 miles N. by E. of Clermont, and 190 S. of Paris. Long. 3. 15. E. Lat. 46. 21. N.

POYANG-HOU, a lake of China, in the province of Kiang-ſi, formed by the confluence of four conſiderable rivers. It is 250 miles long.

PRABAT, a town of the kingdom of Siam, 100 miles N. of Siam. Long. 101. 10. E. Lat. 15. 40. N.

PRACHALITZ, a town of Bohemia, capital of a circle of the ſame name, 66 miles S. of Prague. Long. 13. 55. E. Lat. 48. 56. N.

PRADES, a ſmall handſome town of France, in the department of the Eaſtern Pyrenées, ſeated on the river Tet, in a fine plain, in the middle of mountains, 22 miles S.E. of Montlouis. Long. 2. 35. E. Lat. 42. 26. N.

PRAGA, or PRAGUE, a town of Poland, in the palatinate of Maſovia, ſeated on the Viſtula, oppoſite to Warſaw, of which it is conſidered as a ſuburb.

PRAGILAS, a town of Piedmont, ſeven miles W. of Turin. Long. 7. 30. E. Lat. 45. 5. N.

PRATO, a town of Tuſcany, ſeated on the Biſentino, 12 miles N.W. of Florence. Long. 19. 54. E. Lat. 43. 52. N.

PRAYA. See PORTO PRAYA, *Supp.*

PRECOP, or PEREKOP, a town and fortreſs of Ruſſia, in the government of Catharinenſlaf, and province of Taurida, ſeated on the iſthmus that joins the Crimea to the continent. Long. 35. 40. E. Lat. 46. 40. N.

PRECOPIA, a town of Turkey in Europe, in Servia, ſeated on the river Morave, 20 miles W. of Niſſa. Long. 22. 5. E. Lat. 43. 31. N.

PREGEL, a river which iſſues from a lake in Poland, and croſſing Eaſt Pruſſia, falls into the eaſtern extremity of the Friſche Haf (an inlet of the Baltic) below Königſberg.

PREGNITZ, a town of Franconia, in the principality of Culmbach, ſituate on a river of the ſame name, 10 miles S. of Bareith. Long. 11. 55. E. Lat. 49. 50. N.

PREMESLAW, a populous town of Auſtrian Poland, with a ſtrong caſtle, and a Greek and Latin biſhop's ſee. It is ſeated on the river Sana, 27 miles W. of Lemburg. Long. 21. 0. E. Lat. 49. 0 N.

PRENSLO, a town of Germany, capital of the Ucker marche of Brandenburg. It contains ſix churches, and is ſeated on the lake and river Ucker, 60 miles N. by E. of Berlin. Long. 13. 52. E. Lat. 53. 25. N.

PRENTICE, or APPRENTICE (*Encycl.*). The following extract from an account of a charity for placing out poor children, at Greetham, in the county of Durham, by the Rev. John Brewſter, is publiſhed by the Society for bettering the Condition of the Poor.

"In November, 1790," ſays Mr. Brewſter, "a fund, ariſing from a rent charge of 6l. a-year, for apprenticing and placing out poor children at Greetham, fell under my direction. The beneficial effects attending this ſmall inſtitution induce me to make this communication; from which, I truſt, it will appear that much good may be done in this way at a ſmall expence.

"The following is a general ſtatement of the truſt account for the laſt ſeven years.

Receipts from November, 1790, to November, 1797.

	£.	s.	d.
Received the balance remaining in hand, November, 1790	12	10	—
Received rent charge of 6l. a-year for ſeven years	42	—	—
	54	10	—

Payments during the ſame period.

Paid for putting out nine apprentices, and for clothing two girls for ſervice, at 2l. 19s. 6d. each	32	14	6
Paid for one apprentice, at 7l. 16s. one at 4l. one at 3l. 3s. one at 1l. 14s. 6d. and two at 1l. 1s. each	18	15	6
Paid for clothing one girl for ſervice	1	1	—
Paid for partly clothing one boy for ſea	—	10	6
	53	1	6
Allowed the overſeer of the poor for receiving the rent, at one ſhilling per annum, for ſeven years	—	7	—
Balance in hand, 7th November, 1797	1	1	6
	54	10	—

"To place the children of the poor, as early as poſſible, in trades or occupations, anſwers two uſeful purpoſes;—the removing the expence of maintenance from the parent or the pariſh, and the training of the child in habits of induſtry and virtue. I have ſtated the ſpecific ſums expended for each child, in order to ſhew how little is required on ſuch occaſions. In one or two inſtances, the pariſh added ſomething, to ſupply the deficiencies of the fund, which could not admit of large deductions; and, with only that aid to this very ſmall fund, fifteen children have been apprenticed, and four clothed for ſervice, in the courſe of the laſt ſeven years.

"Services in huſbandry, or menial trades, are the uſual deſtinations of village children. To adapt, therefore, this plan to the uſe of towns, it will be requiſite to enlarge the ſcale of expence, according to the ſituation. But, in diſtributing charitable funds of this nature, it will not be an unneceſſary caution, that the overſeers of the poor be not entruſted with the *ſole* management of them: for though they are often men of real integrity, yet they will ſometimes be ſo far intereſted, as to wiſh to confine the effects of the inſtitution to the children of *chargeable* poor only, for the ſake of alleviating the burthen of the pariſh. In all pariſhes there are many poor perſons, who receive no charitable ſupport at all, and yet have large families to ſend out into the world. Theſe ought to be the firſt objects of attention: as, in all probability, it is from the exertions of their induſtry that they have been hitherto enabled to preſerve themſelves in an independent ſituation; and with a little aid of this kind, it is moſt likely that they may be able to go on without any call for parochial relief."

Mr. Brewſter, in a ſubſequent report, tranſmits an account of the particular trades to which the children were apprenticed; in order that the quantum of apprentice-fee may be better known for different trades calculated for poor children in country ſituations.

	Sex.	Trade.	Term.	Feet. £. s. d.

15.	ditto	ſailor clothed	——	0 10 6
16.	female	ſervice	til 21	2 19 6
17.	male	taylor	7 years	1 1 0
18.	ditto	farmer's ſervant	7 years	2 19 6
19.	ditto	taylor	till 21	2 19 6

The variation in the apprentice-fee ariſes from different circumſtances; either of health in the child, ability in the parent, or from the nature of the occupation to which the child is placed; and in ſome inſtances the child is boarded by the maſter, and ſometimes by the parent.

This plan has been adopted by the truſtees of the charity-ſchool at Stockton-upon-Tees; and with good ſucceſs. The ſchool conſiſts of about forty ſcholars of different ſexes. Seven of theſe, two boys and five girls, have been diſcharged in the courſe of the laſt year, and placed either at trades or ſervices at an expence of 40s each: one boy as a writer to an attorney, another as an apprentice to a wool-comber; and one girl as an apprentice to a glover, and four in ſervice.

The adoption of this plan has been attended with the beſt conſequences to the ſchool. It has occaſioned a more regular attendance, and better behaviour in the children; as conduct is indiſpenſably neceſſary, if they expect this reward. The charity-ſchool is, in ſome meaſure, ſupplied with ſcholars from the Sunday-ſchool; and the maſter ſays, this new regulation has a conſiderable influence even upon that.

In towns, where funds of this nature may be made ſufficiently ample, it is likely that the inſtitution may have a further beneficial effect, by reſcuing from a menial trade or occupation, a child of particular abilities.

PRERAU, a town of Moravia, capital of a circle of the ſame name. It is 13 miles miles S E. of Olmutz, and 126 E S.E of Prague Long. 17. 29. E. Lat. 49. 18. N.

PRESENZANO, a town of Naples, in Terra di Lavoro. It appears by an inſcription, that it is the ancient Ruſæ, and its territory has the name of Coſta Rufraria. It is 28 miles N. of Naples. Long. 14. 20. E. Lat. 41. 20. N.

PRESIDII, State of, a territory of Tuſcany, in the Sienneſe. It includes ſix fortreſſes, ſeated on the coaſt of Tuſcany, and which Spain reſerved, when it ceded Sienna to the grand duke. They were deſigned to facilitate the communication between the Milaneſe and the kingdom of Naples. In 1735, they were ceded to the king of the Two Sicilies. Their names are Orbitello, Telemone, Porto Hercole, Porto San-Stephano, Monte Philippo, and Porto Longone.

PRESOVIA, a town of Little Poland, ſeated on the Viſtula, 20 miles E. of Cracow. Long. 20. 16. E. Lat. 50. 10. N.

PRESTIMA, a town of Portugal, in Beira, 11 miles N. of Coimbra.

PRESTON PANS, a village in Haddingtonſhire, noted for its ſalt works, and for the defeat of the royal army by the rebels in 1745. It is four miles W. of Haddington.

PREVESA, a ſea-port of Turkey in Albania, with a biſhop's ſee. It ſtands on the ruins of the ancient Nicopolis, built by Emperor Auguſtus, in memory of his victory over Antony. It belongs to the Venetians, and was taken by them in 1684. It is ſeated on a mountain, on the gulf of Larta, 70 miles N.W. of Lepanto. Long. 21. 5. E. Lat. 39. 14. N.

PREUILLY, a town of France, in the department of Indre and Loire. Near it are mines of iron; and to the S.W. is La Haye, a ſmall town on the Creuſe, famous as the birth-place of Deſcartes. Preuilly is ſeated on the Claiſe, 18 miles S. of Loches.

PRIAMAN, a ſea-port of the Eaſt Indies, in Sumatra, where the Dutch have a factory. Long. 98. 0. E. Lat. 1. 0. S.

PRIBODA, a town of Sweden, in the province of Smaland, 16 miles S.S.W. of Carlſcrona. Long. 15. 18. E. Lat. 56. 10. N.

PRIEBUS, a town of Sileſia, in the principality of Sagan, ſituate on the Neiſſa, 15 miles S.W. of Sagan. Long. 15. 12. E. Lat. 51. 32. N.

PRINCE'S ISLAND, a ſmall iſland on the weſt coaſt of Africa, 250 miles S.W. of Loango. Long. 6. 40. E. Lat. 1. 49. N.

Prince's Island, a ſmall iſland of Aſia, at the S.W. extremity of the ſtraits of Sunda, a few leagues from the coaſt of Java. It is very woody, and not much cleared. The inhabitants are Javaneſe, whoſe rajah is ſubject to the ſultan of Bantam; and their cuſtoms are very ſimilar to thoſe of the natives about Batavia. The beſt anchoring place is in long. 105. 17. E. lat. 0. 36. S.

PRINCE OF WALES, Cape, the moſt weſtern extremity of all America, hitherto known, diſcovered by Captain Cook in 1778. Long. 168. 5. W. Lat. 65. 46. N.

PRINCE OF WALES, Fort, the moſt northern ſettlement of the Hudſon's Bay Company, ſeated on the weſt ſide of Hudſon's Bay, at the mouth of Churchill River. Long. 94. 7. W. Lat. 58. 47 N.

PRINCE WILLIAM HENRY'S ISLAND, an iſland in the Eaſtern Ocean, lying W.N.W. of Tench's iſland. It is pretty high, well wooded, and 70 miles in circuit. The natives are quite naked, and ſeem to be the ſame ſort of people as thoſe on Tench's iſland, and the canoes of the ſame conſtruction. It was diſcovered by Lieutenants Ball and King, in 1790. A high mountain riſing in the centre of it, was called Mount Philip. Long. 149. 30. E. Lat. 1. 32. S.

Prince William Henry's Island, an iſland of the South Pacific Ocean, diſcovered by Captain Wallis, in 1767. Long. 141. 6. W. Lat. 17. 0. S.

PRINCESS ANN TOWN, a town of the United States, in Maryland, 114 miles S. of Philadelphia. Long. 75. 48. W. Lat. 38. 10. N.

PRISDENIA, a town of Turkey in Europe, in Bofnia, with a biſhop's ſee, and a magnificent church. It is ſeated on the Drin, 32 miles N.E. of Albanapolis, and 195 N. of Belgrade. Long. 21. 3. E. Lat. 42. 0. N.

PRISTINA, a town of Turkey in Europe, in Servia. It was pillaged by the Auſtrians in 1689; and is ſeated on the Ruſca, 58 miles N.W. of Niſſa, and 150 S.E. of Belgrade. Long. 22. 5. E. Lat. 42. 43. N.

PRITZWALK, a town of Upper Saxony, in the marche of Prignitz, 44 miles N. of Brandenburg, and 54 N.W. of Berlin. Long. 12. 13. E. Lat. 53. 9. N.

PRIVAS, a town of France, in the department of Ardeche, ſeated on a hill, near the confluence of three ſmall rivers, 16 miles N. of Viviers. Long. 4. 41. E. Lat. 44. 45. N.

PROCIDA, an iſland of Italy, in the gulf of Naples, near that of Iſchia. It is eight miles in circumference, and very fertile and populous. The capital, of the ſame name, is a ſmall fortified place, on a high craggy rock, by the ſea-ſide. Long. 14. 8. E. Lat. 40. 43. N.

PRODANO, an iſland in the Mediterranean, near the weſt coaſt of the Morea, formerly called Sphacteria. It is 36 miles S.S.E. of Zante. Long. 21. 24. E. Lat. 37. 15. N.

PROM, a town of the kingdom of Burmah, ſeated on the Menan, 200 miles N.W. of Pegu. Long. 94. 0. E. Lat. 17. 50. N.

PROSPEROUS, a village of Ireland, in the county of Kildare; it has a conſiderable manufacture of cotton, and is 16 miles S.W. of Dublin.

PROVIDENCE, an iſland in the Atlantic, which the Engliſh buccaniers fortified, but afterwards abandoned. It is 150 miles E. of the coaſt of Nicaragua. Long. 80. 44. W. Lat. 13. 25. N.

PROVIDENCE, a river of North America, which riſes in the ſtate of Maſſachuſets, and waters the town of Providence, from whence it is navigable to Narraganſet Bay, which it enters on the weſt ſide of Rhode Iſland.

PROVIDENCE, a town of the ſtate of Rhode Iſland, with a conſiderable manufacture of cloth, and a large foreign trade. Here is an elegant college, called Rhode Iſland College. Providence is ſeated on both ſides of a river of the ſame name, 30 miles N.W. of Newport. Long. 71. 26. W. Lat. 31. 50. N.

PROVINS, a town of France, in the department of Seine and Marne, famous for its mineral waters and excellent conſerves of roſes. It is ſeated on the Vouzie, 30 miles S.E. of Meaux, and 47 S.E. of Paris. Long. 3. 22. E. Lat. 48. 34. N.

PRUCK, a town of Auſtria, ſeated on the Leita, 22 miles S.W. of Preſburg, and 22 S.E. of Vienna. Long. 16. 58. E. Lat. 48. 5. N.

PRUCK, a town of Stiria, ſeated on the Muehr, 66 miles S.W. of Vienna. Long. 15. 25. E. Lat. 47. 24. N.

PRUTH, a river of Poland, which riſes in Red Ruſſia, in the mountain of Crapach, croſſes part of the palatinate of Lemburg, runs through all Moldavia, and falls into the Danube.

PSKOF, or PLESKOF, a government of Ruſſia, once a republic, ſubdued by Ivan Vaſſilivitch, and formerly compriſed in the government of Novogorod.

PSKOF, or PLESKOF, a lake of Ruſſia, in a government of the ſame name.

PSKOF, or PLESKOF, a town of Ruſſia, capital of a government of the ſame name, with an archbiſhop's ſee, and a ſtrong caſtle. It is ſeated on the river Welika, 80 miles S. of Narva, and 150 S. by W. of Peterſburg. Long. 27. 52. E. Lat. 57. 58. N.

PUCKHOLI, a town of Hindooſtan Proper, in the province of Lahore, 86 miles S.W. of Caſhmere, and 145 N.W. of Lahore. Long. 72. 5. E. Lat. 33. 45. N.

PUDDAR, a river of Hindooſtan Proper, which riſes in the S.W. part of Agimere, divides the provinces of Cutch and Guzerat, and falls into the gulf of Cutch.

PUDOGA, a town of Ruſſia, in the government of Olonetz, ſituate on the eaſt coaſt of the lake Oneſkoe, 108 miles E. of Olonetz. Long. 36. 30. E. Lat. 61. 36. N.

PUEBLA, a town of Spain, in Galicia, near the Atlantic, 25 miles S.S.W. of Compoſtella. Long. 8. 7. W. Lat. 42. 34. N.

PUEBLA, a town of Spain, in Eſtremadura, ſeated near the Guadiana, 15 miles W. of Meridad. Long. 6. 23. W. Lat. 38. 42. N.

PUEBLA-DE-LOS-ANGELOS, a town of New Spain, in the audience of Mexico, and province of Tlaſcala, of which it is the capital, with a biſhop's ſee. It is 62 miles S.E. of Mexico.

PUEBLA-NUOVA, a ſea-port of New Spain, in the audience of Guatimala, and province of Veragua. It is ſeated on a bay of the Pacific Ocean, 200 miles W. of Panama. Long. 83. 28. W. Lat. 8. 48. N.

PUENTE-DEL-ARCOBISPO, a town of Spain, in Eſtremadura, which belongs to the Archbiſhop of Toledo, and is ſeated on the river Tajo, over which is a handſome bridge, 40 miles S.W. of Toledo. Long. 4. 15. W. Lat. 39. 38. N.

PUERTO-BELLO, PUERTO RICO, &c. For all names, which, in the Spaniſh language, ſignify a *port*, ſee PORTO; for, although that word is not Spaniſh, but Italian, it is neceſſary to adhere to it in this work, in conformity to the Engliſh pronunciation.

PUGLIA, the modern name of the ancient Apulia, containing the three provinces of Capitanata, Bari, and Otranto, on the eaſt ſide of the kingdom of Naples.

PULAON, an iſland in the Indian Ocean, lying on the weſt of the Philippines. It is very fertile, and ſubject to its own king, who is tributary to that of Borneo. Long. 129. 12. E. Lat. 9. 30. N.

PULHELY, a ſea-port in Carnarvonſhire, with a market on Wedneſday. It is ſeated at the head of an inlet of Cardigan Bay, between two rivers, ſix miles S. of Newin, and 143 N.W. of London. Long. 4. 15. W. Lat. 52. 52. N.

PULO-CANTON, an iſland in the Indian Ocean, on the coaſt of Cochin-China. Long. 109. 35. E. Lat. 15. 10. N.

PULO-CONDORE, the name of ſeveral iſlands in the Indian Ocean, the principal of which is the only one inhabited. It is 13 miles in length, and nine in breadth, but in ſome places not above a mile over. The ſoil of theſe iſlands is blackiſh, and pretty deep, but the hills are ſomewhat ſtony. The trees are not very thick, but large, tall, and fit for any uſe. The principal fruits are mangoes, a ſort of grapes, and baſtard nutmegs. The animals are hogs, lizards, and guanas; and there are birds of various kinds, not known in other parts. The inhabitants are ſmall of ſtature, of a dark complexion, with ſmall black eyes, thin lips, white teeth, little mouths, and black ſtraight hair. Their chief employment is to get tar out of large trees. They are idolators, and have images of elephants in their temples. Long. 107. 20. E. Lat. 8. 40. N.

PULO-DINDING, an iſland in the Indian Ocean, on the weſt coaſt of the peninſula of Malacca. It belongs to the Dutch.

PULO-TIMON, an iſland in the Indian Ocean, on the eaſt coaſt of the peninſula of Malacca. It is often touched at for taking in wood, water, and other refreſhments, and there is a great plenty of green turtles. Long. 104. 25. E. Lat. 3. 0. N.

PULO-UBY, an iſland in the Indian Ocean, at the entrance of the bay of Siam, 20 miles in circumference. It yields good water and plenty of wood. Long. 105. 56. E. Lat. 8 25. N.

PULO-WAY, an iſland in the Indian Ocean, near the north point of that of Sumatra. It is the largeſt of the iſlands that form the entrance of the channel of Achem, and is peopled by men baniſhed from Achem. Long. 95. 39. E. Lat. 5. 30. N.

PULTAUSK, a town of Great Poland, in the palatinate of Maſovia, ſeated on the Nareu, 20 miles N.E. of Warſaw. Long. 21. 47. E. Lat. 50. 30. N.

PULTOWA, a fortified town of the Ukraine, famous for a battle in 1709, between Peter the Great and Charles XII. of Sweden, wherein the latter was totally defeated. It is 100 miles S.W. of Belgorod. Long. 34. 25. E. Lat. 49. 26. N.

PUMP-ENGINE. See FIRE-ENGINE; *Supp.*

PUNA, an iſland in the Pacific Ocean, 35 miles long and 12 broad, lying at the entrance of the bay of Guiaquil, 115 miles N of Paita. Long. 81. 6. W. Lat. 3. 17. S.

PUNBETE, a town of Portugal, in Eſtremadura, ſix miles W.N.W. of Abrantes.

PUNTA DEL-GUDA, the capital of St. Michael, one of the Azores, with a ſtrong caſtle, and a harbour. Long. 25. 42. W. Lat. 37. 47. N.

PURBECK, ISLE OF, a rough and heathy tract in Dorſetſhire, to the ſouth of Poole Bay.

PURCHENA, a town of Spain, in the province of Granada, 60 miles E. of Granada, and 60 W. of Carthagena. Long. 2. 5. W. Lat. 37. 19. N.

PURFLEET, a village in Eſſex, ſituate on the Thames, four miles W. of Grays-Thurrock. It has extenſive limeworks, and a large magazine of gun-powder.

PURMERENS, a town of North Holland, on a brook of the ſame name, 10 miles N. of Amſterdam, and 13 S.E. of Alcmaer.

PURRYSBURG, a town of the United States, in Georgia, built by a colony of Swiſs. It is ſeated on the river Savannah, 30 miles N.W. of the town of Savannah. Long. 80. 40. W. Lat. 32. 22. N.

PUSCHIAVO, a town of the country of the Griſons, three miles north from a lake to which it gives name. It is 17 miles W.S.W. of Bormio, and 20 E. of Chiavenna. Long. 9. 40. E. Lat. 46. 20. N.

PUTALA, or PATELI, a mountain of Great Thibet, ſeven miles eaſt of Laſſa. On its ſummit is the palace of the grand lama, the high-prieſt and ſovereign of Thibet.

PUTNEY, a village in Surrey, ſeated on the Thames, five miles W.S.W. of London. It is the birth-place of the unfortunate Thomas Cromwell, earl of Eſſex, whoſe father was a blackſmith here; and of Nicholas Weſt, biſhop of Ely, his contemporary, a great ſtateſman, whoſe father was a baker. On Putney-common is an obeliſk, erected in 1786, by the city of London, in commemoration of Mr. Hartley's invention of fire-plates, for ſecuring buildings from fire; and near it is the houſe in which that gentleman made his experiments, one in particular, in 1776, when his majeſty, and ſome of the royal family, were in a room over the ground floor, perfectly ſafe, while the room under them was furiouſly burning.

PUY, a populous town of France, in the department of Upper Loire, ſeated on the mountain Anis, near the river Loire. The principal church is famous for a prodigious quantity of relics; and our Lady of Puy is celebrated in the annals of ſuperſtition. The late canons of Puy have had kings and dauphins of France at their head. Puy has manufactures of lace and ſilk ſtuffs, and is 45 miles N.E. of Mende.

PUYCERDA, a ſtrong town of Spain, in Catalonia, and capital of Cerdagna. It is ſeated between the Carol and Segra, in a plain, at the foot of the Pyrenées, 53 miles W. of Perpignan, and 67 N.W. of Barcelona. Long. 1. 50. E. Lat. 42. 36. N.

PUY-DE-DOME, a department of France, containing part of the late province of Auvergne, and almoſt all Limagne, a territory 12 leagues long and ſix broad, one of the moſt fertile plains in France. The borders of this circular plain are mountainous, once ſo many volcanoes, but now covered with habitations, herds, and flocks. Clermont is the capital.

PUY-EN-ANJOU, a town of France, in the department of Maine and Loire, 10 miles S.W. of Saumur, and 160 of Paris. Long. 0. 13. W. Lat. 47. 6. N.

PUYLAURENS, a town of France, in the department of Tarn, eight miles S.W. of Caſtres, and 23 E. of Toulouſe. Long. 1. 57. E. Lat. 43. 35. N.

PUY L'EVEQUE, a town of France, in the department of Lot, 14 miles W. of Cahors. Long. 1. 17. E. Lat. 44. 25. N.

PUY MOISSON, a town of France, in the department of Lower Alps, 15 miles S. of Digne. Long. 6. 10. E. Lat. 43. 55. N.

PUZZOLI, a celebrated, but now inconſiderable town of Italy, on the bay of Naples. Here is a temple of Jupiter Serapis, an intereſting monument of antiquity, being quite different from the Roman and Greek temples, and built in the manner of the Aſiatics; probably by the Egyptian and Aſiatic merchans ſettled at Puzzoli, which was the great emporium of Italy, till the Romans built Oſtia and Antium. The ruins of Cicero's villa, near this place, are of ſuch extent, as to give a high idea of the wealth of this great orator. Puzzoli is 10 miles W. of Naples.

PYRBAUM, a town of the upper palatinate of Bavaria, capital of a lordſhip of the ſame name. It is 13 miles S.E. of Nuremberg.

PYRENEES, EASTERN, a department of France, containing the late province of Rouſſillon. Although great part of the country is mountainous, it is fertile; producing corn, excellent wines, olives, oranges, and leather of a ſuperior quality. Perpignan is the capital.

PYRENEES, LOWER, a department of France, containing the late provinces of Baſques and Bearn. Pau is the capital. See NAVARRE.

PYRENEES, UPPER, a department of France, containing the late province of Bigorre. Here are excellent horſes and good partridges. The valleys are very fertile; furniſhing rye, millet, Spaniſh corn, and flax. The mountains have mines of lead, iron, and copper, and quarries of ſlate, marble, and jaſper. Tarbes is the capital.

PYRNA, a town of the electorate of Saxony, in Miſnia. It has a caſtle, on a mountain called Sonnenſtein, which has been ſometimes uſed as a ſtate priſon. Near it is a fine quarry of ſtone, which is tranſported to different places by the river Elbe. Pyrna is ſeated on the Elbe, 10 miles S.E. of Dreſden. Long. 13. 56. E. Lat. 51. 6. N.

PYRSTEIN, a town of Bavaria, in the biſhopric of Paſſau, 10 miles N. of Lintz, and 22 E. of Paſſau.

PYSECK, a town of Bohemia, in the circle of Prachin, ſeated on the Attoway, near the Muldaw, 50 miles S. of Prague. Long. 14. 46. E. Lat. 49. 16. N.

Q.

QUACK MEDICINES; vile compounds, calculated to defraud the credulous of their money and health.

By the act 25 Geo. III. c. 79. the quack medicine venders within the limits of the two-penny poſt are to take out a licence annually, and pay 20s: in any other part of the kingdom, 5s.

And upon every packet, box, bottle, phial, or other incloſure, containing any drugs, oils, waters, eſſences, tinctures, powders, or other preparation or compoſition whatſoever, uſed or applied, or to be uſed or applied, externally or internally, as medicines or medicaments for the prevention, cure, or relief of any diſorder or complaint incident to, or in any wiſe affecting the human body, which ſhall be uttered or vended in Great Britain, there ſhall be charged a ſtamp duty according to the rates following; (that is to ſay), where the contents of any ſuch packet, box, bottle, phial, or other incloſure aforeſaid, ſhall not exceed the price or value of 1s. there ſhall be charged a ſtamp duty of one penny halfpenny.

Where the contents of any ſuch packet, box, bottle, &c. ſhall exceed the price of 1s. and not exceed 2s. 6d. there ſhall be charged a ſtamp duty of 3d.:—above 2s. 6d. and under 5s. a ſtamp duty of 6d.:—and if of the price of 5s. or upwards, a ſtamp duty of 1s.

The above duties not to extend to articles mentioned in the books of rates; nor to unmixed drugs ſold by a ſurgeon, apothecary, chemiſt, or druggiſt, not claiming an excluſive right to the ſame; and which are not prepared or ſold under letters patent, nor by any public notice, or advertiſement, or recommended as noſtrums.

Perſons vending quack medicines without a licence, are to forfeit 5l. Venders are to uſe ſtamped labels; and if they vend or expoſe to ſale any medicines without a proper ſtamp, they are to forfeit 5l. for each box, bottle, or phial. The diſcount on theſe ſtamps, for prompt payment, is, if the duty amounts to 10l. or upwards, 2l. per cent. per annum; and if the duty amounts to 50l. or upwards, 5l. per cent. per annum.

Perſons uſing ſtamps fraudulently, after they have been once ſold or uſed, forfeit 10l. Buyer or ſeller may inform. Places of making and of vending are to be entered at the neareſt ſtamp-office, on pain of 10l.

The penalties are recoverable either by action or information in the courts at Weſtminſter, and half are to the informer and half to the king, if the informer proſecutes within ſix months; afterwards the crown is entitled to the whole, and the informer is to be rewarded at the diſcretion of the commiſſioners of ſtamps, by not exceeding one moiety after deducting the coſts.

QUADRA AND VANCOUVER'S ISLAND, an iſland on the N.W. coaſt of America, on the W. coaſt of which Nootka Sound is ſituate. It was ſo named by Captain Vancouver in compliment to Senor Quadra, the Spaniſh commandant at Nootka. It is about 300 miles in length, and 80 in its greateſt breadth.

QUADRANT (*Encycl.*). An ingenious paper pointing out an eaſy and accurate method of adjuſting the glaſſes of Hadley's quadrant on land, for the back-obſervation, appear in the Tranſactions of the American Philoſophical Society.

"Various methods of adjuſting the glaſſes for the back-obſervation," ſays the author of the paper, Mr. Robert Patterſon, "have been propoſed; but theſe are either very inaccurate and troubleſome, or inapplicable to the common octant, and require ſome appendage to the inſtrument, with which but very few have yet been made.

"The following method of making this adjuſtment will not, I flatter myſelf, be found liable to any of the above objections.—It may be made on land, in a few minutes, at any time of the day when the ſun ſhines; requires no additional apparatus, but what any perſon may readily make for himſelf; and the adjuſtment may be relied upon as equally accurate with that for the fore-obſervation.

"*Deſcription of the neceſſary apparatus.*—Take a piece of plane glaſs (a piece of looking glaſs will do very well)—take the poliſh off one ſide of it, and cement it, with the rough ſide down, on the flat ſide of the ſegment of a wooden ball. The ball may be about three or four inches in diameter, and the piece of glaſs of about the ſame dimenſions. Or the glaſs may be cemented to a piece of board, and this board to a three or four pound ſhot, or ſmall hand-granade, when either of theſe may be conveniently had.

"Next take a piece of triangular board, of about four inches on the ſide. Near the corners of this board let there be inſerted three ſmall nails, or pieces of wire, to ſerve as feet for it to ſtand on."

Method of making the adjuſtment, or finding the quantity of the index-error.—"At any time when the ſun ſhines ſet your triangular board on a table, the ſill of a window, or any other convenient ſtand, expoſed to the ſun, and place the ball, with the piece of glaſs, on the triangular mortice; which, touching the ball only in three points, will conſequently keep it ſteady in any poſition. Turn the ball into ſuch a poſition that the plane of the glaſs may be, as nearly as you can judge, parallel to the equator; and then incline this plane, in the direction of the meridian paſſing through the ſun, till the ſun be about 45° above it.

"Now take your octant, and, by the fore-obſervation, bring one of the limbs of the ſun's image, ſeen by a double reflection from the ſpecula of the inſtrument, exactly into contact with the image of the ſame limb, ſeen by a ſingle reflection from the ſurface of the glaſs plane, and read off the angle pointed out by the index. Immediately turn round your inſtrument, and bring the ſame limbs into contact by the back-obſervation. If the angle now pointed out by the index be exactly the ſupplement (to 180°) of the former angle, the horizon-glaſs for the back-obſervation will be truly adjuſted, or exactly at right angles with the horizon-glaſs for the fore-obſervation: but if theſe two be not equal, then take half their difference, which will be the correction or index-error for the back-obſervation; ſuppoſing the fore-horizon-glaſs to have been previouſly well adjuſted. This correction will be additive to all angles meaſured by the back-obſervation, when the angle pointed out by the index in the firſt of the above obſervations is greater than the ſupplement of the other, and *vice verſa*.

"For the ſake of greater accuracy, you may repeat theſe obſervations till you have taken two, four, or ſix ſets: obſerving that if in your firſt ſet you begin with the fore-obſervation, as above directed, then in your ſecond ſet you muſt begin with the back-obſervation, and ſo on. A mean of the corrections thus obtained may be taken as the *true* correction of adjuſtment."

Mr. P. concludes his paper with the following miſcellaneous remarks, relative to this ſubject.

1. "If the arch of exceſs beyond 90° be but ſmall, as

in ſome octants is the caſe, then it may be neceſſary to place the index one or two degrees before the 0, on the extra arch, and adjuſt the fore-horizon-glaſs to this poſition of the index. You will thus obtain a greater range for the index in adjuſting the back-horizon-glaſs.

2. " When the reflecting glaſs plane is placed in the poſition above mentioned, viz. at right angles to the plane of the meridian paſſing through the ſun, then the ſun's path in the heavens will, for ſeveral minutes, be very nearly parallel to the ſaid plane; and therefore no ſenſible error is to be apprehended from the increaſe or decreaſe of the ſun's altitude above this plane during the interval between the firſt and ſecond obſervations in the ſame ſet. But even if this ſhould be the caſe, from the glaſs plane being placed conſiderably *out* of the above poſition, yet, by conducting the obſervations as above directed, the ſmall errors ariſing from this ſource will naturally correct one another.

3. " When the poliſh is taken off one ſurface of a piece of glaſs, then the image of the ſun, being reflected only from one ſurface, will appear ſingle and diſtinct; whereas the image reflected from both ſurfaces will, moſt frequently, appear double or indiſtinct; ariſing from the want of paralleliſm between the ſurfaces.

4. " The image of the ſun ſeen by a ſingle reflection from one ſurface of the glaſs plane, and that ſeen by a double reflection from the ſpecula of the inſtrument, will both appear nearly of the ſame ſhade or degree of brightneſs; and this will ſeldom be ſo intenſe as to require any ſcreen or coloured glaſs to be interpoſed between the eye and the image.

5. " In making obſervations with this inſtrument, whether for the purpoſe of adjuſting the glaſſes, or for any other purpoſe, where great accuracy is required, it is neceſſary that the point on the index-ſpeculum from which the firſt reflection is made, that on the horizon-glaſs from which the ſecond reflection is made, and the eye-hole through which the image is viewed, be all in a plane, parallel to the plane of the inſtrument. This will be effected by wrapping a piece of tape, or the like, round the index ſpeculum, leaving only a bare ſtrip, of about a quarter of an inch broad, parallel to the plane of the inſtrument, and at the ſame height above it as the eye-hole, and tranſparent part of the horizon-glaſs.

6. " The eye-hole is generally made too ſmall. In meaſuring angles on land, as in the practice of ſurveying (for which purpoſe this inſtrument is much preferable to any other in common uſe), in taking altitudes at ſea, in meaſuring the angular diſtance of the ſun and moon, but eſpecially of the moon and a ſtar, the eye has generally need of all the light that can be admitted from the object ſeen by direct viſion.—The eye-hole, therefore, ſhould, I think, be nearly as large as the ordinary ſize of the pupil of the eye; nor is any inaccuracy, in this caſe, to be apprehended from the line of viſion not being parallel to the plane of the inſtrument; the eye being capable of placing itſelf, with great exactneſs, oppoſite the *centre* of the eye-hole.

" The ſame objection and remedy are applicable to the ſlits in the ſight-vanes, of the common ſurveying inſtruments.

7. " Mr. Maſkyline, and others, recommend the ſun itſelf as the beſt object by which to adjuſt the fore-horizon-glaſs.—There is however conſiderable difficulty attending this mode of adjuſtment.—The ſun is too bright to be viewed directly without a piece of coloured glaſs interpoſed between it and the eye; and even if the eye-piece be furniſhed with ſuch an appendage (which in the common octant is ſeldom the caſe), ſtill the two images will be of very different ſhades; and either the one ſeen by direct viſion will be too bright, or that ſeen by reflection will be too faint, for an accurate obſervation of their coincidence or contact.—This difficulty may, however, be obviated in the following manner:

" Every octant is furniſhed with at leaſt two coloured glaſſes, of different ſhades:—take the darkeſt of theſe out of its frame, and with a thread faſten it on *behind* the horizon-glaſs, and turn down the other, between this and the index-ſpeculum: the two images of the ſun will thus be generally of the ſame ſhade, or nearly ſo, and the adjuſtment may then be made with the utmoſt eaſe and ſafety to the eye. Or, which is perhaps better, place your eye behind the fore-horizon-glaſs, and, looking through this towards the centre of the index-ſpeculum, hold the inſtrument in ſuch a poſition as that the line of viſion may be directed to any point in the heavens, &c. at the angular diſtance of 90 degrees from the ſun; and then, the index being placed at 0, two images of the ſun will appear, both by a ſingle reflection, one from the index-ſpeculum, and the other from the back part of the fore-horizon-glaſs; and by bringing theſe images into coincidence or contact, as when you look directly at the ſun, the adjuſtment may be made, or the index-error found, with great eaſe and exactneſs. If the images of the ſun ſhould be too bright for the eye, one of the coloured glaſſes belonging to the inſtrument may be held before the eye. The two images of the ſun, thus viewed, will appear nearly of the ſame ſhade, ſince the one, from the index-ſpeculum, which would otherwiſe appear the brighteſt, will loſe part of its light by paſſing through the horizon-glaſs.

" After all, I am of opinion, that this adjuſtment may be made with equal accuracy, and much more eaſe, by any well-defined object on land, as the edge of a chimney, the roof of a houſe, or the like, at a ſufficient diſtance.

" Any one may ſatisfy himſelf that this is the caſe, by repeatedly meaſuring the error of adjuſtment in the common way, *viz.* by moving the index till he produces an apparent coincidence between the object ſeen directly, and by reflection. If a chimney, or the like, be the object viewed, he will ſcarce ever find any of theſe errors to differ from the mean error more than *one minute*; and the difference of ſuch errors, when the ſun is uſed, will not be leſs, but generally greater.

" If the diſtance between the index-ſpeculum and the line of direct viſion (*viz.* a line joining the eye-hole and horizon-glaſs) ſhould not exceed three inches, which it ſeldom does, then the parallax of the inſtrument will not amount to a quarter of a minute, and may therefore be ſafely neglected; provided the object viewed be at the diſtance of two-thirds of a mile. If a ſuitable object, at ſuch a diſtance, cannot be readily found, then you may take one at any given diſtance, and compute the parallax to be allowed for that diſtance, thus—multiply the conſtant number 95 (the nat. tang. of 1′ to rad. $\frac{1}{3\,6}$) by the diſtance, in inches, of the centre of the index-ſpeculum above the line of direct viſion, and dividing the product by the diſtance of the object in yards, the quotient will be the parallax of the inſtrument, or correction of adjuſtment, for that diſtance in minutes. For example, if the height of the index-ſpeculum above the line of viſion be three inches, and the diſtance of the object 150 yards: then $\frac{95 \times 3}{150} = 1'.9$ will be the error of adjuſtment. If, therefore, you place the index ſo much behind the 0, on the limb of the inſtrument, and then adjuſting the horizon glaſs by an object at the above diſtance, the adjuſtment will be true for an object conſidered as at an infinite diſtance.

" From the above rule it is obvious, that much exactneſs in meaſuring or eſtimating the diſtance of the object you adjuſt it by is not neceſſary, provided that diſtance be not

very ſmall; for, in the above example, an error in the diſtance even of ten yards would have produced an error of no more than about $\frac{1}{10}$ of a minute in computing the parallax of the inſtrument.

8. "In meaſuring angles by this inſtrument, when the object ſeen by direct viſion is at no great diſtance, the parallax of the inſtrument muſt be taken into conſideration. In ſuch caſes it is commonly recommended previouſly to adjuſt the horizon-glaſs by that object; but this, in the back-obſervation, would be attended with very great difficulty;—it will therefore be beſt always to keep the back-horizon-glaſs at the ſame adjuſtment, and make the neceſſary correction, as above directed, for the diſtance of the object."

QUADRELLA, a town of Naples, in Terra di Lavoro, 20 miles E.N.E. of Naples.

QUAKENBRUGGE, or QUAKENBURG, a town of Weſtphalia, in the biſhopric of Oſnaburg, ſeated on the Haſe, 22 miles W. of Oſnaburg. Long. 8. 20. E. Lat. 52. 46. N.

QUARTEN, a town of Switzerland, near the lake Wallenſtadt,, five miles E. of Glarus.

QUEAUX, a town of France, in the department of Vienne, 21 miles S.E. of Poitiers. Long. 0. 40. E. Lat. 46. 25. N.

QUEENSTADT, a town of Lower Saxony, in the principality of Halberſtadt, five miles N.E. of Halberſtadt.

QUEICH, a river of Germany, which paſſes by Landau, and runs into the Rhine, near Germerſheim.

QUENTIN, ST. a ſtrong town of France, in the department of Aiſne, with a conſiderable manufacture of lawns and cambrics. Near this place, in 1557, Philip II. of Spain, gained a ſignal victory over the French, and afterwards took the town by ſtorm. In memory of this, he built the Eſcurial. The town was reſtored to France in 1559. It is ſeated on an eminence, on the river Somme, 21 miles S. of Cambray, and 83 N. by E. of Paris. Long. 3. 29. E. Lat. 49. 50. N.

QUERFURT, a town of Upper Saxony, capital of a principality of the ſame name, ſubject to the Prince of Saxe-Weiſſenfels. It is 12 miles S.E. of Mansfeldt. Long. 12. 20. E. Lat. 51. 27. N.

QUERGUENECY, an iſland of the Mediterranean, on the coaſt of Tripoli. It has a fort and ſeveral villages.

QUESNOY, a town of France, in the department of the North, with an old caſtle. It was taken by the allies in 1711, and retaken the ſame year. In 1793 it was taken by the Auſtrians, and retaken the next year. It is ſeated in an extenſive plain, on the little river Ronelle, nine miles S.E. of Valenciennes, and 122 N.E. of Paris. Long. 3. 40. E. Lat. 50. 15. N.

QUIBERON, a peninſula of France, in the department of Morbian, to the N. of Belleiſle. It has a village of the ſame name, and a fort, on the bay of Quiberon. In July 1795 it was taken by ſome French regiments in the pay of Great Britain; but owing to the deſertion and treachery of ſome of the ſoldiers, the republicans retook it by ſurpriſe ſoon afterward.

QUICARO, an iſland in the North Pacific Ocean, near the coaſt of Veragua, in New Spain, about 20 miles long and ſix broad. Long. 82. 30. W. Lat. 7. 25. N.

QUILLAN, a town of France, in the department of Aude, 11 miles S. of Limoux, and 21 S. of Carcaſſone. Long 2. 10. E. Lat. 42. 52. N.

QUILLEBOEUF, a town of France, in the department of Lower Seine, ſeated on the Seine, eight miles S.W. of Caudebec, and 22 W. of Rouen.

QUILLOTA, a town, and juriſdiction, of Chili. Long. 35. 41. W. Lat. 32. 45. S.

QUILMANCI, a town on the coaſt of Zanguebar, in the kingdom of Melinda. It is ſituate at the mouth of a river of the ſame name, and belongs to the Portugueſe. Long. 39. 40. E. Lat. 33. 30. S.

QUILOA, a ſea-port on the coaſt of Zanguebar, with a ſmall citadel. It is tributary to the Portugueſe; and is ſeated in a fertile country, 300 miles N. of Moſambique. Long. 39. 9. E. Lat. 9. 30. S.

QUILON, or COYLON, a Dutch factory, on the coaſt of Malabar, in Travancore, 14 miles N.N.W. of Anjengo. It was taken by the Engliſh in 1795. Long. 76. 32. E. Lat. 9. 2. N.

QUIMPER, a town of France, in the department of Finiſterre, with a biſhop's ſee; ſeated at the confluence of the Oder and Benaudet, 30 miles S.E. of Breſt, and 332 W. by S. of Paris. Long. 4. 2. W. Lat. 47 58. N.

QUIMPERLAY, a town of France, in the department of Finiſterre, ſeated on the Iſotte, ſeven miles from the ſea, and 20. E. by S. of Quimper. Long. 3. 33. E. Lat. 47. 52. N.

QUINGEY, a town of France, in the department of Doubs, ſeated on the Louve, 12 miles S.W. of Beſançon. Long. 6. 5. E. Lat. 47. 5 N.

QUIN-NONG, or CHIN-CHIN, a bay on the eaſt coaſt of the kingdom of Ciampa, much frequented by the veſſels of the country, being an excellent harbour. The entrance is very narrow, and ſhips of burthen can only get in at high water. Long. 109. 15. E. Lat. 13. 52. N.

QUIRIEU, a town of France, in the department of Rhone and Loire, ſeated on an eminence, near the river Rhone, 12 miles S. of Lyons. Long. 4. 55. E. Lat. 45. 35. N.

QUIRIMBA, the name of ſeveral iſlands on the coaſt of Zanguebar. They are all fertile in fruits and paſtures.

QUIRPON, an iſland in the North Atlantic Ocean, near the north coaſt of Newfoundland. Long. 55. 22. W. Lat. 51. 40. N.

QUISAMA, a maritime province of the kingdom of Angola, lying along the river Coanza. It is a mountainous country, and very little cultivated, but the Portugueſe get abundance of ſalt there.

QUITEOA, a town of Morocco, in the province of Draſs, with a caſtle. Long. 5. 0. W. Lat. 28. 6 N.

QUISTELLO, a town of Italy, in the duchy of Mantua, ſeated on the Seccia, three miles from its confluence with the Po. It is famous for an action between the French and Auſtrians in 1734, when Marſhal Broglio was ſurpriſed in his bed. It is 15 miles S.E. of Mantua. Long 11. 1. E. Lat. 45. 0. N.

QUITO, an audience of Peru, lying between two chains of the high mountains called the Andes. Several diſtricts of this country are occupied almoſt entirely by Indians; and the city of Quito alone contains between 50 and 60,000 of all the different races. This is the only province in Spaniſh America that can be called a manufacturing country.

QUIXOS, a province of Peru, in the audience of Quito.

QUIZAMA, a province in the ſouth part of the kingdom of Angola. It is full of mountains, and badly cultivated, but produces honey, wax, and ſalt. The inhabitants are warlike, and have not ſubmitted to the Portugueſe.

QUIZINA, a chain of mountains in the kingdom of Fez, 100 miles in length, extending from the deſert of Gret to the river Nocor.

QUOJA, a kingdom on the coaſt of Guinea, which reaches from Sierra Leone to the Grain Coaſt.

R.

RAAJEGUR, a town of Hindoostan Proper, in the province of Malwa, 74 miles N.E. of Ougein, and 214 S.S.W. of Agra. Long. 76. 56. E. Lat. 24. 2. N.

RABASTEINS, a town of France, in the department of Tarn, with a decayed castle, seated on the Tarn, 18 miles W. by S. of Alby. Long. 1. 52. E. Lat. 43. 46. N.

RACHORE, or ADONI-RACHORE, a city of the peninsula of Hindoostan, capital of a district of the same name, subject to the nizam of the Deccan. It is seated on the south bank of the Kistna, near its confluence with the Tungebadra, 315 miles N. by . of Seringapatam. Long. 78. 15. E. Lat. 16. 30. N.

RACKERSBURG, a strong town of Austria, in Stiria, with a castle on a mountain. It is seated on an island, formed by the Muehr, 22 miles S.E. of Gratz, and 100 S. of Vienna. Long. 15. 58. E. Lat. 46. 54. N.

RACLIA, a small uninhabited island of the Archipelago, near that of Nio.

RADEBERG, a town of Upper Saxony, in the margravate of Meissen, 10 miles N.E. of Dresden. Long. 13. 56. E. Lat. 51. 5. N.

RADICOFANI, a town of Tuscany, seated on a mountain, and defended by a citadel on an adjacent hill, 56 miles S.E of Sienna. Long. 11. 40. E. Lat. 42. 42. N.

RADIMPOUR, or RADUNPOUR, a town of Hindoostan Proper, in the provinces of Agimere, situate on the Puddar, 175 miles N. of Surat, and 250 S.W. of Agimere. Long. 71. 48. E. Lat. 23. 58. N.

RADMANDORF, a town of Germany, in Carniola, near the source of the river Save, 16 miles West of Crainburg.

RADOM, a town of Little Poland, in the palatinate of Sandomir, capital of a county of the same name. It is seated on a brook that falls into the Vistula, 30 miles N. of Sandomir, and 50 S. of Warsaw. Long. 21. 1. E. Lat. 51. 25. N.

RAGIVOLO, a town of Italy, in the Mantuan, seated between Mantua and Reggio, 42 miles from each.

RAGNITZ, a town of Prussian Lithuania, with a very ancient castle, situate on the Niemen, 56 miles E.N.E. of Konigsberg. Long. 21. 30. E. Lat. 55. 30. N.

RAGOOGUR, a town of Hindoostan Proper, in the province of Malwa, 116 miles NE of Oudein, and 256 S. of Delhi. Long. 77. 30. E. Lat. 24. 23. N.

RAGUSEN, or RAGUSIAN DALMATIA, a territory of Dalmatia, lying along the coast of the gulf of Venice, about 55 miles in length, and 20 in breadth. It is a republic, under the protection of the Turks and Venetians, to each of whom it pays an annual tribute. Ragusa is the capital.

RAHNIS, or RANIS, a town of Upper Saxony, in the circle of Neustadt, 54 miles S.S.W. of Leipsic. Long. 11. 30. E. Lat. 50. 33. N.

RAJAMUNDRY, the capital of one of the Northern Circars, in the peninsula of Hindoostan, 150 miles S.W. of Cicacole. Long. 81. 57. E. Lat. 17. 10. N.

RAJAPOUR, a town of the Deccan of Hindoostan, in the Concan, seated on a river of the same name, 50 miles N. of Goa. Long. 73. 56. E. Lat. 16. 19. N.

RAJEMAL, a town of Hindoostan Proper, in Bengal, formerly a place of great trade, but now in a ruinous state. It is seated on the west bank of the Ganges, 190 miles N. by W. of Calcutta.

RAIN, a town of Austria, in Stiria, capital of a county of the same name, with a castle. It is seated on the Save, 68 miles S. of Gratz. Long. 15. 32. E. Lat. 46. 20. N.

RAIN LAKE, or LONG LAKE, a lake of North America, lying to the east of the Lake of the Woods, with which it communicates by a river, and to the west of the Lake Superior. It is nearly 100 miles long, but in no part more than 20 wide.

RAKESBURG, or RAKELSPURG, a town of Austria, in Stiria, which has a considerable trade with Hungary and Croatia. It is situate on an island in the river Muehr, 36 miles S.E. of Gratz, and 90 S. of Vienna. Long. 16. 10. E. Lat. 46. 45. N

RAKKA, a town of Turkey in Asia, in Diarbeck, seated on the Euphrates. It has a castle going to decay, and is an indifferent place; but old Rakka, whose ruins are near it, was a magnificent city. It is 100 miles S.W. of Diarbekar. Long. 38. 55. E Lat 36. 1 N

RAKONITZ, a town of Bohemia, capital of a circle of the same name. It is seated on a river, which falls into the Miza, 30 miles W. of Prague. Long. 14. 5. E. Lat. 52. 4. N.

RAMA, an ancient town of Palestine, now called Ramula by the Turks. The streets are narrow, and the houses contemptible; but there are many fine ruins of Christian churches and other buildings, which shew what it has been formerly. It is 20 miles W. by N. of Jerusalem. Long. 34. 55. E. Lat. 32. 0 N.

RAMADA, a sea-port of New Granada, 100 miles E. of St. Martha. Long 72. 20. W. Lat 11. 10. N.

RAMANAD, a town of Hindoostan, in the Carnatic, 54 miles S.W. of Madura, and 88 S. of Tanjore. Long. 78. 56. W. Lat. 9. 20. N.

RAMANANCOR, an island of Asia, lying toward Cape Comorin. It is 23 miles in circumference; is very sandy, and has only a few villages and a temple. Long. 79. 45. E. Lat. 9. 25. N.

RAMBERT-LE-JOUG, St. a town of France, in the department of Ain, seated near a branch of Mont Jura, called le Joug, 18 miles N.W. of Belley. Long. 5. 30. E. Lat. 45. 53 N.

RAMBERVILLIERS, a town of France, in the department of the Vosges, 30 miles S.E. of Nanci. Long. 6. 44. E. Lat. 48. 21. N.

RAMBOUILLET, a town of France, in the department of Seine and Oise. Here was a palace, in which Francis I. died, in 1547, and Lewis XVI. made it a magnificent royal residence; but it was demolished in 179[illegible], by order of the National Convention. It is 27 miles S.W. of Paris.

RAMEHEAD, a promontory of Cornwall, S.W. of

Plymouth, at the entrance of Plymouth Sound. On its summit is a chapel (a sea-mark) belonging to the village of Rame. Long. 4. 20. W. Lat. 50. 18. N.

RAMERA, a town of France, in the department of Aube, seated on the Aube, 18 miles N.E. of Troyes. Long. 4. 30. E. Lat. 48. 32. N.

RAMLA, a town of Palestine, the ancient Arimathea, now in a ruinous state; it is, however, the residence of a Turkish aga, who has about 200 troops under him. Here is a manufacture of soap, which is sent into all parts of Egypt. It is 18 miles N.W. of Jerusalem. Long. 35. 15. E. Lat 32. 8. N.

RAMMEKENS, a sea-port of the isle of Walcheren, in the Dutch province of Zealand. It was one of the towns put into the hands of the English, as a security for a loan in the reign of Queen Elizabeth. It is four miles S. of Middleburg. Long. 3. 40. E. Lat. 51. 29. N.

RAMMELSBERG, a lofty, steep, and extensive mountain of Germany, in that part of the Hartz Forest which lies within the principality of Grubenhagen. On this mountain are twelve silver mines; and at the foot of it is seated the city of Goslar.

RAMPANO, a town of Turkey in Europe, in the Morea. Long. 20. 17. E. Lat. 36. 54. N.

RANDERAT, a town of Westphalia, in the duchy of Juliers, 10 miles N.W. of Juliers. Long. 6. 30. E. Lat. 51. 5. N.

RANDERSON, or RANDERS, an ancient town of Denmark, in North Jutland, seated near the mouth of the Gude, 25 miles E. of Wiburg. Long. 10. 35. E. Lat. 56. 20. N.

RANNOCH, LOCH, a lake in the north part of Perthshire, 11 miles in length. It receives the waters of Loch Ericht, from the north, and communicates with Loch Tumel on the east, and Loch Lidoch on the west. On its south side is an ancient forest of birch and pine.

RANTAMPOUR, a fortress of Hindoostan Proper, in the east quarter of Agimere. It is very celebrated in the Indian histories, and is 120 miles from Agra.

RANTZOW, a town of Lower Saxony, in the duchy of Holstein, 24 miles N. of Lubec. Long. 10. 42. E. Lat. 54. 16. N.

RAOLCONDA, a town of the Deccan of Hindoostan, in Golconda, near which is a rich diamond mine. It is 270 miles S.W. of Hydrabad. Long. 76. 40. E. Lat. 14. 30. N.

RAON, L'ETAPE, a town of France, in the department of Meurthe, seated at the foot of Vosges, at the confluence of the Etape and Marte, 30 miles S.E. of Nanci. Long. 6. 47. E. Lat. 48. 26. N.

RAPALLO, a town of Italy, in the territory of Genoa, seated on a gulf of the same name, 20 miles E. of Genoa. Long. 9. 11. E. Lat. 44. 26. N.

RAPE (*Encycl.*). The oil which these seeds yield by expression, is employed for various useful purposes in domestic life, and particularly for burning in lamps; but, as it is apt to become rancid, M. Thenard has published the following practical method of purifying it. He directs one-half or two parts of concentrated sulphuric acid to be added to 100 parts of oil, and the whole to be perfectly incorporated by agitation: the fluid immediately becomes turbid, assuming a dark green cast; and, in the course of three quarters of an hour, the colouring particles begin to collect in lumps. The agitation must now cease; and double the weight of oil of vitriol, diluted with pure water, should be added:—in order to mingle these different ingredients, the stirring ought to be renewed for the space of half an hour; after which the whole may be left to settle for seven or eight days. At the end of that time, the oil will be found on the surface; on being gently drawn off, and filtered through cotton or wool, it will be almost entirely divested of colour, smell, and taste; so that it will burn clear, without any interruption. The refuse of rape, after expressing the oil, is known by the name of rape-cake, the economical uses of which are various.

RAPHOE, a town of Ireland, in the county of Donegal, with a bishop's see. The cathedral serves as a parish church. It is eleven miles S.W. of Londonderry, and 21 N.E. of Donegal.

RAPOLLA, a town of Naples, in Basilicata, with a bishop's see, 56 miles W. of Bari, and 70 E. of Naples. Long. 15. 51. E. Lat. 40. 56. N.

RAPPAHANNOC, a river of Virginia, which rises in the mountains, called the Blue Ridge, and running E.S.E. falls into the Chesapeak, in lat. 35. 30. N.

RARITAN, a river of New Jersey, which, passing by Brunswick and Amboy, enters Arthur Kull Sound, and helps to form the fine harbour of Amboy.

RASEBORG, a sea-port of Sweden, capital of a canton in Nyland. It is seated on the gulf of Finland, 37 miles S.E. of Abo. Long. 23. 18. E. Lat. 60. 16. N.

RASEN. See MARKET RASEN, *Supp.*

RASOCALMO, a cape on the north coast of Sicily, near a town of the same name, W. of Cape Faro, and N. of Messina.

RASTADT, a town of Bavaria, in the archbishopric of Saltzburg, seated on the Ens, 48 miles E. by S. of Saltzburg. Long. 14. 10. E. Lat. 47. 31. N.

RAT (*Encycl.*). Besides the remedies already mentioned, there are many other contrivances for exterminating rats: and, as the subject is of considerable importance to every house-keeper, we shall subjoin an account of some other means, which have been found remarkably successful.

Mr. Charles Taylor, secretary to the Society for the Encouragement of Arts, &c. directs one or two table-spoonfuls of dry oatmeal to be uniformly, but thinly, spread on a tile or plate, in order that the quantity taken away may be more easily ascertained. The rats, if not interrupted, will regularly feed there; and they must be supplied for two or three successive days with fresh meal, when three drops of oil of aniseed are to be mixed with a double portion of oatmeal; and the composition deposited at the usual place, for a similar period of time. On the fourth day, one half only of the usual quantity must be given of the scented preparation, and on the succeeding night, the following mixture must be placed at the hole:—Let four ounces of dry oatmeal, perfumed with six drops of the oil of aniseed, be thoroughly incorporated with half an ounce of carbonated barytes (aerated heavy spar of Derbyshire), which has been previously pulverized, and sifted through fine cambric or muslin. This compound must be spread on the tile or slate, and exposed as usual; all the doors, or other communications, being shut for the space of twenty-four hours, that the vermin may eat it undisturbed by any cats, dogs, or other animals; and also to prevent the possibility of any accident happening to the latter. In the course of a few hours, after the rats have eaten the composition, they will be seen frequently to reel about, as if they were intoxicated, or paralytic; though, at length, they return to their haunts and perish. Mr. Taylor observes that, as they are very cunning, the mixture ought to be left for forty-eight hours, in case a small portion only be eaten; after which time the remainder should be burnt.

Mr. Funke, in his valuable Natural History, calculated for German schools, communicates the following curious

method of expelling, or rather dispersing, rats from dwelling-houses:—Take one or more of these predatory creatures caught alive in a trap, and immerse them to the neck in a mixture consisting of equal quantities of tar and train oil: thus anointed, set the animals at liberty. The offensive smell of this preparation compels them to traverse all the holes of their companions with the most distressing anxiety; in consequence of which they collectively disappear.—Another expedient practised in Germany, is that of confining a live rat in a cage, and feeding it exclusively with living mice or rats. Having been for some time accustomed to such food, the captive animal is, after a short fasting, suffered to return to its former habitation, where it is said to persecute, and indiscriminately devour its own species.

RATENAU, a town of Germany, in the middle marche of Brandenburgh, seated on the Havel, 15 miles N.W. of Brandenburgh. Long. 13. 49. E. Lat 52. 46. N.

RATENBURG, a town of Germany, in the Tyrol, with a castle, seated on the river Inn, 15 miles S. by W. of Kufstein. Long. 12. 5 E. Lat. 47. 30. N.

RATINGEN, or Rattingen, a town of Westphalia, in the duchy of Berg, four miles N.E. of Dusseldorf. Long. 6. 53. E. Lat. 51. 16. N.

RATTENBERG, a town of Germany, in the Tyrol, with a citadel, situate on the Inn, 26 miles E.N.E. of Inspruck, and 44 S.W. of Saltzburg.

RATZIA, or Rascia, the eastern division of Sclavonia, subject to the house of Austria. It takes its name from the river Rasca, which falls into the Morave; and its inhabitants are called Rascians.

RAVELLO, a sea-port of Naples, in the Principato Citeriore, with a bishop's see. It has magnificent palaces and fine houses, and is 10 miles W. of Salerno, and 25 S.E. of Naples. Long. 14. 41. E. Lat. 40. 36. N.

RAVENSTEIN, a town of Dutch Brabant, capital of a county of the same name, with an ancient and strong castle. It belongs to the elector palatinate, but has a Dutch garrison. It is seated on the Maese, 10 miles S.W. of Nimeguen. Long. 5. 35. E. Lat. 51. 46. N.

RAVITZ, a town of Poland, in the palatinate of Posnania, with a considerable manufacture of cloth, 24 miles S. of Posen.

RAUSCHENBERG, a town of Germany, in the principality of Hesse, four miles N. of Marpurg, and 32 S.S.W. of Cassel. Lon. 8. 46. E. Lat. 50. 32. N.

RAWA, a town of Poland, capital of a palatinate of the same name, 56 miles S.W. of Warsaw.

RAWEE, a river of Hindoostan Proper, one of the five E. branches of the Indus, into which river it falls, about 20 miles W. of Moultan, after having received the united waters of the Chelum and Chunaub. The Rawee is the Hydraotes of Alexander.

RAYNAL (Abbé), whose baptismal names were William Thomas, was one of the society of Jesuits, for their extensive learning no less universally known than for the happy talents which its superiors possessed, of assigning to each member his proper employment. Raynal, however, after having acquired among them a taste for literature and science, had probably become refractory, for he was expelled from the order; and the cause of his expulsion, according to the Abbé Barruel, was his impiety, though our author himself assures us, that he did not utter his atrocious declarations against Christianity till he had ceased to be a member of the order of Jesuits. He then associated himself with Voltaire, D'Alembert, and Diderot, and was by them employed to furnish the theological articles for the *Encyclopédie*. But though his religious opinions were certainly lax, and his moral principles very exceptionable, he could not even then be what, in a Protestant country, would be deemed a man remarkable for impiety; for he employed the Abbé Yvon, whom M. Barruel calls an odd metaphysician, but an inoffensive and upright man, to write the articles which he was engaged to furnish. In the conducting of this transaction, he shewed, indeed, that he possessed not a proper sense of honour; for he paid poor Yvon with twenty-five louis d'ors for writing theological articles, for which he received himself six times that sum. This trick was discovered, Raynal was disgraced, and compelled to pay up the balance to Abbé Yvon; but though he had thus shewn himself to be without honour, it is difficult to believe that he had yet proceeded so far as to blaspheme Christ, since he had employed a Christian divine to supply his place in the *Encyclopédie*.

His first work of eminence, and that indeed upon which his fame is chiefly built, is his Political and Philosophical History of the European Settlements in the East and West Indies. That this history is written in an animated style, and that it contains many just reflections, both political and philosophical, is known to all Europe; for it has been translated into every European language. Its beauties, however, are deformed by many sentiments that are irreligious, and by some that are impure. It was followed, we think in 1780, by a small tract, entitled The Revolution of America; in which the author pleads the cause of the revolted colonists with a degree of zeal, censures the conduct of the British government with a keenness of asperity, and displays a knowledge of the principles and intrigues of the different factions which at that period divided the English nation, that surely was not natural to the impartial pen of a philosophic foreigner. Hence he has been supposed to have been incited to the undertaking, and to have been furnished with part of his materials, by that desperate faction which uniformly opposed the measures of Lord North, and secretly fomented the rebellion in America. Be this as it may, he propagated, both in this tract and in his history, a number of licentious opinions respecting government and religion, of which he lived to regret the consequences.

A prosecution was instituted against him by the French government on account of his History of the East and West Indies; but it was conducted with so little severity, that he had sufficient time to retire to the dominions of the King of Prussia, who afforded him the protection he solicited, although his majesty's character was treated by the author in his book with no great degree of veneration. Raynal also experienced the kindness of the Empress of Russia: and it is not a little remarkable of this singular personage, that, although he was always severe in discussing the characters of princes, yet the most despotic among these heaped upon him many marks of favour and generosity.

The great trait of Raynal's character was a love of liberty, which, in his earlier writings, he did not properly define; but when he lived to see some of the consequences of this, in the progress of the French Revolution, he made one glorious effort to retrieve his errors. In the month of May, 1791, he addressed to the constituent assembly one of the most eloquent, argumentative, and impressive letters that ever was written on any subject; a letter which, if the majority of them had not been intoxicated with their newly acquired consequence, must have given some check to their mad career. He proved very completely, that it was not the business of the assembly to abolish every ancient institution; that the genius of the French people is such, that they never can be happy or prosperous but un-

der a well-regulated monarchical government; and that, if they wished not the nation to fall under the worst kind of despotism—the despotism of a low faction—they must increase the power of the king. "Alas! (says he) what are my sufferings, when in the heart of the capital, in the centre of knowledge, I see this misguided people welcome, with a ferocious joy, the most criminal propositions, smile at the recital of murder, and celebrate their crimes as conquests!" He had then seen comparatively but little; but he lived to see more—to see his countrymen celebrate, as virtues, crimes, compared with which the atrocities of 1790 appear almost harmless. Being stripped of all his property, which was large, by the robbers of the revolution, he died in poverty in March, 1796, and in the 84th year of his age.

Besides the works which we have already mentioned, he wrote a History of the Parliament of England, and a History of the Stadholderate; but these are both of them more remarkable for a species of style and loftiness of invention than for useful observation or solid argument. He wrote likewise The History of the Divorce of Catharine of Arragon by Henry the Eighth, which is not so much a recital of, and commentary upon, the fact from which he takes the title, as it is an able picture of universal Europe at that period, of the views, interests, and power, of all the different potentates. At the time of his death he was preparing a new edition of all his works, in which were to be made many alterations; and he is said to have left among his manuscripts a History of the Revocation of the Edict of Nantes, in four volumes; but it is also very certain, that, during the sanguinary reign of Robespierre, he burnt a great part of his papers.

READING, the capital of the county of Berks, in Pennsylvania, seated on the Schuykill, 46 miles N.W. of Philadelphia. Long. 75. 54. W. Lat. 40. 22. N.

REALMONT, a town of France, in the department of Upper Garonne, 31 miles N.E. of Toulouse. Long. 2. 0. E. Lat. 43. 50. N.

REALVILLE, a town of France, in the department of Lot, eight miles N.E. of Montauban, and 20 S. of Cahors. Long. 1. 24. E. Lat. 44. 7. N.

REBEL, a town of Lower Saxony, in the duchy of Mecklenburg, seated on the lake Muritz, 30 miles S.E. of Gustrow. Long. 12. 36. E. Lat. 53. 32. N.

REBNICK, a populous town of Turkey in Europe, in Walachia, with a bishop's see, seated on the Aluta, 45 miles S.W. of Targowisco.

RECCANATI, a town in Italy, in the marquisate of Ancona, with a bishop's see. It is a trading place, and has a great fair in September, which continues 15 days. The tomb of Pope Gregory VII. is in the cathedral. It is seated on a mountain, near the river Munsone, 14 miles S. of Ancona, and 110 N.E. of Rome. Long. 13. 34. E. Lat. 43. 24. N.

RECEIPTS (*Encycl.*). The following duties have been laid on receipts by the act 31 Geo. III. c. 25.—For every piece, &c. upon which shall be written, &c. any receipt, discharge, or acquittance for money, amounting to 40*s.* and not amounting to 20*l.*—two pence.

Amounting to 20*l.* and not 50*l.*—four pence.

Amounting to 50*l.* and upwards—six pence.

And by 35 Geo. III. c. 55. from and after July 5, 1795, if amounting to 100*l.* and not amounting to 500*l.* an additional six pence. Total one shilling. If amounting to 500*l.* or upwards, a further additional duty of one shilling. Total two shillings. To be paid by the person by whom such receipts shall be required; salaries, pensions, debts, or other sums payable from the crown, excepted; in which case the duty shall be paid by the person giving such receipts.

The following exemptions from the above duties are allowed.—Nothing in the above acts shall extend to any receipt for any legacy, or share of a personal estate, or to any receipt given by the treasurer of the navy, for money received for the service of the navy; or to the receipt of any agent for money imprested to him on account of the pay of the army or ordnance; or to any receipt by any officer, seaman, or soldier, for wages, pay, or pension, due from the navy, army, or ordnance; nor to any receipt to be given for the consideration of the purchase of any share in any public stock or fund; or in the stocks of the bank, East-India, or South-Sea companies, or for the dividends thereof; nor to any receipt given for money deposited in the banks of England or Scotland, or in the house of any banker; nor to any receipt on the back of any bill of exchange, promissory or other note; nor to any release by deed.

Nor shall this act extend to any receipt to be given upon any bill or note of the bank of England; or to any letter acknowledging the receipt of any bills, notes, or securities for money; or to any receipt for the consideration of money on or in any deed, bond, mortgage, or instrument; nor to any receipt for drawbacks or bounties; nor to any certificates of over-entry of customs.

The following new regulations respecting receipts have been established by the act 35 Geo. III. c. 55.—The full sum, and the true date, shall be inserted; and all notes, memorandums, or writings whatever, whereby any money shall be acknowledged to have been paid, settled, received, accounted for, balanced, discharged, released, or in any manner satisfied, or which shall in any manner signify such acknowledgment, and whether the same shall or shall not be signed, shall be deemed a receipt, and liable to the duties. *f.* 5.

Every receipt, discharge, or acquittance, note, memorandum, or writing, which shall express any general acknowledgment of any debt, claim, account, or demand, being paid, settled, received, accounted for, balanced, discharged, released, or satisfied, or whereby any money shall be acknowledged to be in full, and whether signed or not, shall be deemed a receipt for 500*l.* and be liable to the duty of two shillings; and no such receipt, &c. shall be available in law or equity for any other money than the sum therein expressed, unless the same shall be stamped with the stamp of two shillings. *f.* 6.

Every note, memorandum, or writing whatever, which shall signify any acknowledgment of any part of any debt, claim, account, or demand, being paid, settled, received, accounted for, balanced, discharged, released, or satified, whether signed or not, shall be deemed a receipt, and liable to duty. *f.* 7.

And every person who shall write or sign, or cause to be written or signed, any receipt, discharge, or acquittance, liable to duty, without the same being first duly stamped, or upon which there shall be a stamp of lower denomination than is charged in respect thereof, shall forfeit 10*l.* if the sum paid shall not amount to 100*l.*—and 20*l.* if it amounts to 100*l.* or upwards. *f.* 8.

And any person who shall give any receipt, discharge, or acquittance, or any note, memorandum, or writing, acknowledging the payment of money, in which a less sum shall be expressed than the sum actually paid, or who shall separate the sum paid into divers sums with intent to evade the duties, or shall, with the like intent, write off any part

of any debt, claim, or demand, or who shall be guilty of or concerned in any fraudulent contrivance whatever with intent to defraud his majesty of any of the duties, shall forfeit 50*l.* *f.* 9.

Receipts on unstamped paper, brought to the stamp-office within 14 days after given, may be stamped on payment of 5*l.* over the duty; and if brought to be stamped after 14 days, and within one calendar month after given, may be stamped on payment of 10*l.* above the duty; and in that case the parties are not to be liable to any of the penalties above mentioned.

One moiety of all penalties shall, if sued for within three months, be to his majesty; and the other, with full costs, to the person who shall inform, &c. and which may be recovered in any of the courts at Westminster, within England; and in the exchequer at Edinburgh, within Scotland.—But one justice may hear and determine any offence which subjects the offender to any pecuniary punalties—and persons aggrieved may appeal to the quarter-sessions.—The justice may mitigate penalties, not less than one moiety besides costs.—Witnesses refusing to attend the justices, &c. to forfeit 40*s.*—and if the penalties are not prosecuted for within the limited time, they are only recoverable by the crown; and if the whole penalty is recovered by the crown, the informer is to be rewarded by the commissioners of stamps, at their discretion—not exceeding one moiety.

RECHLINGHAUSEN, a town of Germany, in the archbishopric of Cologne, capital of a county of the same name, with a strong citadel, and a chapter of noble ladies. It is seated on the Lippe, 20 miles W. of Ham. Long. 8. 36. E. Lat. 51. 27. N.

RECULVER, a village in Kent, the regulbium of the Romans, seated near the mouth of the Thames, 12 miles W. of Margate. It is noted for its church, which was anciently collegiate, and has two spires, which serve for a sea-mark, and are called by mariners the Two Sisters.

RED *(Encycl.)*. The following observations on dyeing with madder, followed by a simple and invariable process for obtaining, in its greatest beauty and solidity, the colour known by the appellation of *Levant* or *Adrianople* RED, by Citizen Haussman, were sent to the editor of the Annales de Chimie, by the celebrated Chaptal, who is minister of the interior of the French Republic.

"I have already shewn," says Citizen Haussman, "in the Annales de Chimie and Journal de Physique, that metallic earths and oxids possess neither in a greater nor less degree the property of attracting or retaining the colouring parts of vegetable and animal substances; alum and oxid of iron possess it more powerfully than oxid of tin, the power of attraction of the latter, nevertheless, far surpasses that of other metallic earths and oxids, as far as regards the colouring parts of the said substances.

"Alum, as well as metallic oxids, does not retain with the same power of adhesion the colouring parts of all vegetable and animal substances indiscriminately; those of madder adhere more strongly than of other colouring substances, which may be classed in the following order: grains of kermes, cochineal, campeachy wood, yellow India wood, quercitron, fernambuc wood, red India wood, Avignon nuts, &c. gall nuts, sumach, and other astringent, colouring substances act principally by means of the gallic acid, and may, with regard to their degree of solidity, be placed immediately after madder: it is not the same with Prussian acid, which colours different metallic oxids, from which it may be extracted, when cold, by alcaline lyes.

"To judge of the solidity of the colours produced by vegetable and animal substances, the best method is to make use of a lye of oxygenated muriate of pot-ash, or of soda with alcaline carbonate. The longer or shorter resistance which the colours make in this lye will shew what they will do, if acid, alcaline, soapy and other counteragents are employed.

"In the art of dyeing and manufacture of printed calico, by staining with madder (garançage), is understood the process whereby the colouring particles of the madder are transferred by the alum or oxide of iron, and attached to any kind of stuff by means of water assisted by heat.

"The brightness and solidity of colours obtained from madder, depend not only on the management, but likewise on the state of the purity of the water, as well as of the madder. It is therefore absolutely necessary to avoid or to render inactive every acid, alkaline, or saline substance, that may be contained in the water or madder itself. I have shewn that by means of the addition of carbonate of lime (pulverised chalk) you may correct the madder, which I had imagined contained the gallic acid, but which my friend Charles Bertholdi, professor of the central school of the Upper Rhine, afterwards discovered to be sulphuric acid in conjunction with magnesia.

"The important discovery of this addition of chalk, which I made 25 years ago, has given birth to many fabrics, and has brought to perfection all those established near waters which do not carry with them, or retain in a dissolved state, that earthy salt without which it is absolutely impossible to obtain bright and solid colours from madder. This chalk has, since that period, become a new article of commerce, and as its price is very moderate, I have not yet determined the exact proportion to be used; I usually take one part to 4, 5, and 6 parts of madder.

"In order to obtain the colours of madder of a perfect brightness, it is not sufficient to attend to the quality of the water and of the madder; it is likewise of importance to observe the degree of heat of the bath. A low temperature will retard the extraction and attraction of the colouring particles, whilst, on the other hand, if too high, it at the same time promotes the adhesion of the dark particles of the madder, which tarnish and obscure the tints intended to be produced; black only is improved by augmenting the heat. I have invariably observed, that by taking the fire from under the cauldrons, as soon as one can no longer bear to hold one's hand in the liquid they contain, and afterwards suffering the dye to remain two or three hours, one procures the most satisfactory results: for the copper then retains a sufficient heat to keep the liquid at the same temperature, particularly when, according to custom, large cauldrons are used. It would otherwise be extremely difficult to fix a degree of heat, by means of thermometers, with spacious furnaces.

"The dusky particles of madder, as well as of other colouring substances, are probably only parts of the colouring substances themselves combined with oxygen. The produce of this combination, although it acquires a greater degree of solubility, proves, nevertheless, more difficult to be removed in the finishing, if the heat has not been properly attended to in dyeing. I have frequently observed, that madder and other colouring substances, after being long exposed to the atmospheric air, no longer afforded such deep and bright colours as before, either because these substances absorb the oxygen of the atmosphere, or because this essential is supplied by the water which they attract, or naturally contain as a constituting principle, and which is decomposed by a slow and imperceptible fermentation. A piece of cotton or linen cloth dyed red, heightened with madder, and exposed in a field, may con-

firm the idea of its changing to a dusky hue; but this deep colour becomes clearer and clearer, after growing dull, and at length assumes a more agreeable crimson tint in the finishing. I have demonstrated in a Memoir on Indigo, inserted in the *Journal de Phyſique*, of the year 1788, that the nitric acid changes this blue to a yellowish sediment (see INDIGO, *Supp.*). A similar change takes place in exposing in a field this same sediment attached to any kind of stuff whatever, and the yellow that results from both methods is more soluble in warm water than in the same liquid when cold. It appears, however, that the combination of the oxygen is not the only cause of the changing of the colours, for curtains of any kind of stuff dyed, or coloured in any manner whatever, by vegetable or animal substances and exposed to the day-light, lose their colour entirely, in process of time, on the side exposed to the rays of the sun, whilst the opposite side preserves the same colour for a great length of time. Although, therefore, the sun's rays give more vigour to the animated bodies of the animal and vegetable kingdom, by disengaging from them the oxygen gas, yet they appear to act destructively on the same inanimate bodies, by decomposing their constituting principles. At any rate, it will be the best way to keep the colouring ingredients in dry places and covered up from the light, which probably acts no otherwise on these bodies, than by decomposing the aqueous constituting part, whose two essential principles may transfer themselves to the carbone, to form carbonic acid, and likewise other resinous and oily substances. These conjectures prove, at least, that the action of the sun's rays, or more properly of light, on bodies in general, presents an extensive field for interesting experiments.

"If, in dyeing with madder, we obtain more lively colours by a careful management of the heat, we, at the same time, sacrifice a small portion of the colouring particles of the madder, which cannot be entirely exhausted, except by adding thereto gall-nuts or sumach, and afterwards augmenting the heat to ebullition; but as the colours obtained by this method fade more or less in proportion to the quantity of the madder, of the gall-nuts, or of sumach, it must not be used but with precaution, and principally for common purposes, for calicoes, cotton yarn, or thread. To prevent, as much as possible, the waste of madder, one might, after having finished dyeing the articles of value, and before the common ones are put into the cauldron, add thereto gall-nuts or powder of sumach, with a fresh and small portion of madder; attention must then be paid not to suffer the ebullition to take place till two hours after.

"I have endeavoured, in various trials, to exhaust the madder by simple ebullition, and without any other addition than that of chalk; but it always appeared to me to be attended with injury to all the colours excepting black; I thought that even the effect of the madder was far superior when the heat was managed with moderation, and that accumulated heat easily decomposed the colouring substance. This tendency to decomposition, and particularly by fermentation, if ever so little damped or diluted with water, has hitherto prevented my obtaining from it a substantial colour, sufficiently deep and solid to be applied to any stuff whatever. I have moreover observed, that too great a degree of heat in the first instance, when the dye is intended to be used a second and third time, not only prevented my obtaining lively and agreeable tints, but also the requisite strength. The aqueous vehicle of the madder at too a high a temperature never fails to weaken the power of adhesion of alum and oxid of iron to stuffs, and to take away a portion of them, which, upon examining the bath, is easily discovered by persons accustomed to the business.

"I repeat, that, for common articles and of little value, it is indispensably necessary to use gall-nuts or sumach, in order to save one-half, or even two-thirds, of the madder; but the colours thus obtained are less brilliant and less solid. The addition of chalk must nevertheless not be forgot; without it the gallic acid would carry away a portion of the alum and coloured oxid of iron, the loss of which would weaken and tarnish the tints; it would likewise injure the white that might have been preserved in the stuffs. Without adding gall-nuts or sumach, I consider it impossible totally to exhaust the madder of colouring particles; whence I presume that their adhesion is promoted by the viscid nature of the tanning principle of those astringent substances, which carries away the colouring particles by its combination with them. I must further observe, that gall-nuts, as well as sumach, lose the quality of staining black, and on the contrary acquire the property of staining or colouring alum yellow, and oxid of iron a green olive, with the addition of chalk, whose calcareous basis unites with the gallic acid. Are these yellow and olive-green colours produced by any particular substance contained in the gall-nuts and sumach, or do they originate in the tanning principle? This question remains to be examined.

"The quantity of madder to be used in dyeing ought not only to be proportionate to the extent of surface to be dyed, but also to the concentration of the liquors of *acetite of alum and iron*, improperly denominated mordants: that is to say, to the greater or less quantity of alum or oxid of iron which these saline liquors, either separate or combined, may have left or deposited by the evaporation of the acetic acid, when drying upon the articles to be coloured. If the articles to be dyed are not very numerous, or particularly if most of them are to exhibit only vivid tints, the madder may be applied but once; but the application of madder may be repeated twice and even thrice, when the articles are numerous, and are intended to present deeper tints. Three quarters of a pound of madder of a good quality are sufficient for dyeing a piece of calico of a white ground, six ells in length (three quarters wide), and which is to contain but few coloured objects: the quantity of this colouring substance will increase in proportion to the mass of alum or oxid of iron, expended on a piece of stuff of the same dimensions: it may be augmented to 6, 8, 10, and even 12 pounds for well covered grounds, of a brilliant colour, and of the utmost deepness. Attention and experience in the management of a dyeing establishment will not fail to point out, with sufficient accuracy, the proper proportions.

"Whatever care may have been taken with the madder, to prevent the adhesion of dusky particles, it requires much more, that the colours obtained may possess all the beauty and solidity they can possibly acquire in the finishing, preceded by a very long ebullition in perfectly clear water. This ebullition alone may be made to answer the purposes of finishing by the addition of bran; the reds will assume a more lively hue by using soap, with or without the addition of bran; carbonate of potash or soda substituted for soap will extract the tints from crimson: but I must observe, that to prevent the danger of turning the reds into brown, and in such a manner as never to be able to recover them, they must, by all means, previous to the application of soap or alkali, be exposed to the action of

the most violent heat that can be given to water; the success of this operation will be the more complete by giving very little vent to the aqueous vapours, and by forming, as it were, a digester with the cauldrons employed. The solidity of the colours will be proportionate to the time they have been exposed to the action of the boiling water. It is needless to mention, that the same risk is not incurred of injuring the colours by soap and alkaline carbonates, when the madder, instead of being kept at a moderate heat, has been made to boil, as is customary in many dye-houses; but in this case the colours obtained are more difficult to be finished.

"As water charged with oxygenated muriatic acid destroys the colouring particles of madder, and also of other vegetable and animal substances by decomposing them, and afterwards more concentrated acids can, in their turn, clear away from the surface of stuffs the colourless alum and oxid of iron, I cannot possibly countenance the idea of a chemical combination of colouring particles with alum and metallic oxids, which, being fixed and coloured upon any stuff whatever, make in my opinion only compound aggregates.

"The finishing of impressions with objects in white, requires modifications, which I shall detail at another opportunity, as soon as I shall find leisure: it will therefore now be sufficient to state, that, after having for some time prosecuted the experiments inserted in the Annales de Chimie of the year 1792, I discovered a red infinitely more beautiful and solid than the Levant, by fixing alum on cotton yarn or on thread by an alkaline solution of that earth mixed with linseed oil. The following is the process I employed.

"After having made a caustic lye, with one part of good potash of the shops, dissolved in four parts of boiling water and half a part of quick lime, which I afterwards killed, I dissolved one part of pulverised alum in two parts of boiling water, and whilst this solution of sulphate of alum was still quite hot, I, with all possible expedition, to prevent the recrystallisation, kept pouring into it, and stirring at the same time without intermission, the above caustic lye, till the alum it had at first precipitated after the saturation of the sulphuric acid was re-dissolved. I afterwards suffered this solution of alum to stand; it exhaled ammoniac, and as it cooled formed a precipitate of sulphate of potash in very small crystals; after which I mixed with it a 33d part of linseed oil, with which the alkaline solution of alum forms a kind of milk. As the oil by degrees separates from this mixture under the appearance of cream, it ought to be stirred again before it is used; the skains of cotton or thread should successively be dipped in it, pressed equally, and hung to dry on a line in the order in which they were taken out of the mixture: they must be dried under cover from the rain in summer, and in a warmed place in winter, and remain 24 hours; they should then be washed in clear running water, and again dried; then dipped in the alkaline lye, squeezed and dried a second time, in the same manner as before; taking care, however, to recommence the immersion in the lye with those skains which came last out of the oily composition, because the first invariably take away a greater portion of the oil than the latter: it will be advisable also to use the whole of the mixture at once, that it may not have time to attract the carbonic acid with which the lower region of the atmosphere, particularly of workshops, is always charged; for the alkali in returning to the state of carbonic suffers the alum to precipitate, and loses the property of commixing with oil.

"Two impregnations of the alkaline solution of alum, mixed with linseed oil, are sufficient to obtain a fine red; but, by continuing to impregnate the skains a third and even a fourth time under the same circumstances as the first, colours of the utmost brilliancy will be obtained.

"The deepness of the red intended to be obtained will be proportionate to the quantity of madder employed in dyeing; by taking the same weight of madder as that of the skains, it will produce a red which the finishing will turn to a roseate tint; on the contrary, you will obtain a more or less lively carmine by using two, three, and even four parts of madder, never forgetting the addition of chalk, if the water employed containeth none; four parts of this colouring substance will produce a red of such beauty and brilliancy, that it could never be brought into circulation in commerce, on account of its high price. By diluting the alkaline solution of oily alum with two or three parts of water, and impregnating the skains twice, thrice, and even four times in the manner mentioned above, bright tints will be produced without using much madder; but they will not be so deep as those produced by means of the same solution concentrated, and as small a quantity of madder.

"The best manner of procuring clear and lively tints at the same time would be to expose, for a sufficient length of time, deep and finished reds to the action of the lye of oxygenated muriate of potash or of soda, with the addition of alkaline carbonate to procure such a degree of colour as might be required; but it may easily be conceived that this method would be the most expensive.

"To have the alkaline solution of oily alum always as nearly as possible in the same state of concentration, it will be necessary to use an aerometer, to determine the degree of strength of the caustic lye, before it is employed in the process of the solution of alum. This caustic lye may, at first, be made of the best potash that can be procured in the shops, and the degree it may give to the aerometer should be noticed, that, if afterwards one were obliged to use potash of inferior quality, one might by evaporation bring the lye obtained therefrom to the degree fixed.

"The caustic lye, made with four parts of good potash of the shops [or perhaps soda], cannot contain much extraneous salt. In making a great quantity, and after having poured off the limpid part, it will be necessary to shake the vessel twice every day for some time, in order to be able to pour off the rest of the alkaline liquor; and, that no part of what remains in the vessel may be lost, it should be diluted with fresh water, which may afterwards be used for dipping the cotton, which, before it is subjected to the dye, should be purified and cleaned; which may be done by lie, soap, or simply boiling it in water, and afterwards rinsing and drying it. As squeezing with the hands might derange the filaments of the skains of cotton yarn and thread, and consequently weaken the thread, it will be advisable, in operations on a large scale, to squeeze them by means of a press.

"As to the thread, intended to be dyed a deep, beautiful, and solid red, it should be previously well bleached, and impregnated at least four times successively with the alkaline solution of oily alum; not only because alum and metallic oxids adhere less readily to thread than to cotton, but likewise because these mineral substances, after being coloured, more easily quit thread than cotton in the finishing. It still remains to be examined, whether, between each impregnation of the alkaline solution of oily alum, the cotton yarn or thread requires to be left a longer or shorter time before being rinsed and dried.

" All gross oils may be used for this mixture with proper precaution, but linseed oil mixes best, and remains longest suspended in the alkaline solution of alum; but I never tried fish oil; perhaps it might be preferable. Perhaps, likewise, in processes on a large scale, it might be advisable to diminish the quantity of linseed oil in the mixture with the alkaline solution of alum; for I have frequently had occasion to observe, that too much oil was injurious to the attraction of the colouring parts of the madder: a 33d part of linseed oil always produced the best effect in my experiments on a small scale.

" As to the process of dyeing thread or cotton yarn sufficiently charged with alum by the oily alkaline solution of that earth, the skains must first be cleared from every saline substance, and likewise from superfluous oil, by rinsing them for a considerable time in clear running water; after this they must be arranged, without drying, in a machine that it will be necessary for every one to adapt to the form of the cauldron wherein it is to be placed, so that during the operation of dyeing the skains may be continually moved and turned about, in order to imbibe equally and throughout, the colouring particles. The bath must be composed of madder mixed with a sixth part of pulverized chalk, diluted with about 30 or 40 parts of water. The heat must not be carried beyond such a point that a person might hold his hand in the bath, for an hour, without scalding; and it should be kept at that degree two hours longer, either by taking away the fire, if the furnace preserve sufficient heat, or by supplying it with a little fuel from time to time. Three hours' dyeing are sufficient to exhaust the madder: upon leaving the bath, the skains should be washed in plenty of water to clear them; they must then be submitted to the action of the finishing, which consists in boiling them a long time in water containing a quantity of bran tied in a bag, and adding thereto soap and alkaline carbonate, to give the red a roseate or crimson hue.

" As I never had occasion to dye cotton yarn or thread upon a large scale, I performed the process in a small copper, which served me at the same time for finishing: with regard to the last operation, I confined myself to boiling the skains, after well arranging them, in water, containing a small bagful of bran, for eight hours successively; and, in order not to interrupt the ebullition, I replaced the part evaporated with fresh boiling water. In this finishing I used neither soap nor alkali, and, notwithstanding, I obtained a red surpassing in beauty and solidity that of the Levant, and capable in every respect of standing a comparison with the best dyes of France, or Paul Remy and Son's, of Lausanne.

" For dyeing my red, I used three parts of the best madder to one part in weight of the dry cotton yarn.

" With the precaution I took to obtain an equal colour, I could dye at once; but I would advise this operation to be always performed at twice, taking, each time, half the quantity of madder and chalk, if one cannot continually keep turning the skains in the cauldron; it may likewise serve for finishing, by adapting to it a cover, leaving but a confined passage for the vapours, which one should endeavour to condense as much as possible, because it would be expensive to replace the evaporated part with fresh boiling water. Perhaps, in working upon a larger scale, and by concentrating the heat in cauldrons shut almost close, there might be no necessity to employ eight hours of ebullition to finish and give solidity to the colours. I have every reason to believe, that it was the finishing of Levant red that gave birth to the idea of bleaching with vapours: it might have been observed, that, in finishing, colours lose considerably in deepness; perhaps, at the same time, it may have been seen, that the pieces of packthread, used to arrange the skains, were bleached in finishing, and particularly by the addition of alkalis.

" A very great variety of colours, and of different tints, may be procured by adhering to the same process as I have detailed for obtaining beautiful and solid reds. For this purpose, the alkaline solution of oily alum must only be made use of, when such a tint of oxid of iron, or indigo blue, has been given as may be thought proper; but, whatever colour or tint may be intended to be given previous to fixing the alum on the skains of cotton, yarn, or of thread, these skains ought always to be first thoroughly boiled and cleansed, the power of adhesion of the sediment of indigo, as well as that of oxid of iron, and likewise of coloured alum, being augmented by the colouring particles of the madder, if they are submitted to the action of the heat of boiling water, before they are impregnated with the alkaline solution of oily alum. The manner of dyeing all kinds of blue tints with indigo being already well known, it is not worth while to detail it; and as to producing a yellow rust colour, which is done with very little expence, it depends only on soaking the skains thoroughly in a solution of sulphate of iron, on pressing them equally, and immersing them afterwards in a caustic lye of potash, which will precipitate and fix the oxid of iron of a disagreeable colour, but which will uniformly assume a yellow tint like rust, by attracting and saturating itself with the oxygen of the atmospheric air: this yellow will be more or less deep, in proportion to the greater or less quantity of iron contained in the solution; one may likewise give more brilliancy, and even more equality, to yellow rust-colour, by soaking the skains a second time in the ferruginous solution, and immersing them in the caustic lye. Care must be taken not to use soda for this operation, as it generally contains sulphur which turns black the oxid of iron by mineralizing it.

" Skains coloured blue and yellow rust-colour, treated with the alkaline solution of oily alum, will procure, with the madder, purple colours, violet, lilac, &c. &c. It may easily be imagined, that if, instead of madder, the same skains prepared for dyeing with madder are coloured with kermes, cochineal, fernambuc, campeachy wood, Santa Martha wood, woad, yellow wood, Avignon nuts, &c. &c. a vast variety of tints will be obtained: these tints may even be multiplied to infinity, by mixing the colouring ingredients of one, with the other, in various proportions.

The affinity of adhesion of the colouring parts of all these ingredients, varies also in this particular, that the tints produced by a yellow or olive green dye, are changed or totally metamorphosed by a second tincture of madder, kermes, cochineal, or fernambuc; and will furnish orange tints, capuchin, carmelite, brass, &c. &c. As the previous preparation of the skains by the alkaline solution of oily alum, may be too expensive for some of these colours, the process which I detailed in the Annales de Chimie of the year 1792, page 250, 17, 18, and 19, may be substituted in its stead, which consists in treating the skains alternately with soap and sulphate of alum, whose excess of acid has been saturated, either with carbonate of alkali or of lime: this process is very expeditious; the skains may be prepared and dyed, on the same day, particularly in summer, red, as well as any other colours, which, for the most part, may be subjected to ebullition; and the operation of finishing with bran, for a quarter of an hour, half an hour, and some even for a whole hour. It must still be obsery-

ed, that it is only the colours of madder, whose bases of alum and oxid of iron have been fixed upon stuffs, by means of an alkaline oily solution, that can acquire perfect solidity by the action of the heat of boiling water; and that the solidity is far inferior in all those colours of madder whose earthy and ferruginous bases have been transferred to the stuffs by acid dissolvents.

"Alum, plentifully fixed on cotton or linen stuff, by means of one of the most concentrated alkaline solutions, very readily attracts the colouring particles in dyeing with madder. The effect is not the same, if the same earth is transferred to it by means of the most concentrated acetic solution of alum; it is absolutely impossible to complete dyeing at one single time, even if one were to be so lavish of madder as to take infinitely more than would be required to obtain a satisfactory result, from repeating the process three or four times*. This singularity will give occasion for new and interesting experiments; my observations prove, mean while, that dyeing with madder in general requires to be managed with the most scrupulous attention."

REDHEAD, a promontory in Angusshire, on the German Ocean, lying S. of Montrose. Here are the ruins of a castle, almost surrounded by the sea. Till the year 1793, this cape was the point beyond which coal was not permitted to pass without paying a heavy duty, which was taken off by a commutation duty on spirits.

REDON, a town of France, in the department of Isle and Vilaine. It serves as a mart for the commerce of Rennes, and is seated on the Vilaine, 20 miles E of Vannes, 225 E. by S. of Paris. Long. 2. 10. W. Lat. 37. 48. N.

REDONDELLA, a commercial town of Spain, in Galicia, with a castle. It was pillaged by the English in 1702. There is a fishery for anchovies on the coast. It is seated at the bottom of a bay of the Atlantic, eight miles S of Ponte Vedra. Long. 8. 15. W. Lat. 42. 18. N.

REDONDO, a town of Portugal, in Beira, with a castle. It has a manufacture of cloth, and is seated at the mouth of the Mondego, 17 miles S.W. of Coimbra. Long. 8. 34. W. Lat. 40. 4. N.

REES, a strong town of Germany, in the duchy of Cleves, seated on the Rhine, 10 miles S.E. of Cleves, and 10 N.W. of Wesel. Long. 6. 4. E. Lat. 51. 40. N.

REFINING (*Encycl.*). The following is extracted from the specification of a Patent granted to Mr. Wakefield, of Northwich, in Cheshire, for a new method of refining sugar. It is dated June 2, 1801.

"Pressure is to be applied to the sugar intended to be refined, which may be done by weight, or by rollers, or by the screw or wedge, with the help of a steam-engine, or any engine, mill, or power capable of acting, by way of pressure, with great force. The sugar so to be refined is to be placed in such a situation as to be conveniently acted upon by the pressure to be applied, and is to be contained or inclosed in a cloth, felt, vessel, or covering, either having pores or holes therein, or otherwise so constructed that moisture may be discharged from the sugar through, or out of, the cloth, vessel, or covering; and to such sugar, previously containing moisture in it, or having moisture added or given to the substance thereof, or by such moisture being communicated to the inclosing cloth, felt, or vessel, or other covering, the pressure is to be applied forcibly, so as to make the moisture, or a part thereof, pass from the sugar, and out of, or through, the said covering. And thus a part of the colouring matter, and of the impurities of the sugar, will be expelled; and the degree of refinement procured will be proportioned to the quantity of pressure applied, and the quantity of moisture expelled or squeezed out of the sugar. From the moisture or substance thus forced out, there may be extracted some sugar, melasses, and rum, or other spirits, by the usual processes. And every sort of sugar, from the lowest to the highest degree in quality and value, will be very much accelerated in the refinement thereof, in several stages of the progress towards refinement, by pressure applied in the manner above described; the pressure being used as often as the workman shall think fit, according to the previous quality and state of the sugar, and the nature of the operations that are to follow."

REFORM, a building or receptacle in the vicinity of London, opened by the PHILANTHROPIC SOCIETY, for the reception of criminal poor children, and for the protection and maintenance of the innocent offspring of persons who have been executed or transported.

"The great object of the society (say the committee in their *address to the public*), which has now been instituted upwards of twelve years, is to unite the purposes of charity with those of industry and police; and thereby, while it affords relief to a description of persons of all others the most to be pitied, to make it the interest of every individual to contribute to the support and extension of this institution.

"Among the calamities to which the children of indigent parents are exposed, the want of moral and religious instruction, with early habits of industry, is the most to be lamented; such wretched objects are not only subjected to the temptations attendant upon poverty, but are without the disposition and ability to gain an honest livelihood. When to these circumstances are added the baneful example of parents, whose crimes have subjected them to banishment, or an ignominious death, the condition of such children is truly deplorable, and demands the benevolence of the Christian, the interference of the statesman, and the exertions of the patriot.

"There are no reflecting minds, or feeling hearts, but must have frequently lamented the fatal depravity which pervades the lower classes of the people, especially in the more populous part of this kingdom; and there are few who have not, at one time or other, trembled for their own safety in consequence of this depravity.

"With the increase of crimes our penal laws have multiplied; but while it is obvious that to prevent crimes is better than to punish them; and while every humane person must view with the deepest compassion and regret the numbers that are annually swept away by banishment, or consigned to an ignominious death, it is worthy of observation, that previous to this institution, the proper remedy for these disorders had not been adverted to, nor any plan of *preventive police* so much as projected.

"No nation has been more distinguished than Great Britain, for its various and excellent charities.—The truth, however, is, that most of our charitable institutions have confined their beneficence to the deserving, but unfortunate part of the community; whilst the offspring of the vicious and dishonest have been unhappily involved in the guilt of their parents. Those who have violated the laws in any instance have been excluded from society, or at least have been treated with extreme severity when received again within its protection; and before this institution, no asylum

* The concentrated acetic solution of oxid of iron is attended with nearly the same difficulties.

was ever opened for the repenting culprit, where the wanderer might be recalled from the error of his way, not by harsh and cruel treatment, but by gentleness and kindness; where he might prove the excellence and benefits of virtue, and contemplate her no longer under an austere and threatening aspect; where, by his own industry, he might contribute to his own subsistence, and be no longer under the *necessity* of stealing for bread*. It is the peculiar characteristic of this Society, to continue its care and attention till its objects have attained to such a mature age, as to be able to think and act for themselves, and have acquired such habits as will probably ensure their future good conduct through life.

"It is a well-known fact, that of the multitudes who fall victims to the violated laws of their country, the majority are trained and educated by experienced thieves, in a course of dishonesty, and are as regularly brought up to this way of life, as other persons are to common trades and professions. Hence their dexterity and adroitness in all the departments of this dangerous system; hence their union with each other, which renders their attempts so much the more formidable; which frequently eludes the pursuit of justice, and even intimidates those who see the wrong publicly committed.

"To break the chain of these pernicious confederacies, and to cut off all their supplies, is the intention of the Philanthropic Society, which aims at the prevention of crimes, by removing out of the way of evil counsel and example, those children, whose destruction, without their assistance, would be inevitable.

"In order to carry into effect these desirable purposes, the doors of the Reform have been thrown open for the reception of the infant offspring of convicted felons; for although such children may not have begun as yet the criminal practices of their profligate parents, yet it is to be feared, the pernicious sentiments and principles imbibed from those parents, and their wretched connections, will operate so forcibly on their youthful minds, as to render them more open to temptation than the children of parents of an opposite description.

"Another class still more wretched, and the next object of this institution, are those who have already commenced their criminal course by the commission of petty thefts or fraudulent practices, and, in consequence of detection, have been brought before a magistrate and discharged for want of legal evidence to produce conviction, although no doubt remained of their actual guilt; also those who have been tried and convicted; but by reason of their tender years, or some other mitigating circumstances, are recommended by the judges of assize, or other magistrates, before whom such trial took place. Such recommendations are particularly attended to by the committee."

For the employment of the children the REFORM has been erected with suitable workshops, &c. in St. George's Fields, London. There, under the direction of the several master workmen, are carried on the trades of a Printer, Copper-plate Printer, Book-binder, Shoemaker, Taylor, Ropemaker and Twine-spinner; to one or other of which the boys are apprenticed, carefully instructed, and excited to industry by rewards that bear a proportion to their exertions. The girls are educated as menial servants, and have otherwise abundant employment in washing the linen, making their own clothing, shirts for the boys, &c. Several of them have been placed out in service, and, upon producing testimonials of their good behaviour, have received the rewards which the committee have thought it right to hold out for their encouragement. A steward resides upon the spot to keep the accounts, distribute the provisions, &c. and the whole is under the care of a superintendant, also resident on the spot, who sees that the master tradesmen do their duty, and that the children conduct themselves properly in every respect.

The important task of inculcating religion and morals is assigned to the society's chaplain; and the children are supplied with such books as are likely to promote those salutary ends.

The whole number of children of both sexes that have been received by the society amount to 464, and the number now in the Reform (1802) is 165. Among these were many who, though young in years, were yet old in iniquity. There are amongst them boys who have been guilty of felonies, burglaries, and other crimes: yet, singular as it may appear, these very children are now become no less remarkable for their industry, decency, and obedience, than they formerly were for the opposite vices.

In order to extend its benefits to a still greater number of objects than the funds will enable them to maintain within the Reform, the committee endeavour to obtain masters out of the Reform, for those boys that have become entitled to good characters, by paying an annual sum with each for the two or three first years of their apprenticeship; and propose to distribute rewards to such of those boys who behave well, either at the end of their several apprenticeships, or at any intermediate periods, when they appear to merit them.

It is impossible not to feel interested in behalf of this very superior public charity, which does *more* than provide for the *temporal wants* of the objects under its protection. We heartily wish it perpetuity and extension.

REGEN, a town of Bavaria, on a river of the same name, 12 miles N.N.E. of Deckendorf, and 40 E. of Ratisbon. Long. 13. 2. E. Lat. 48. 50. N.

REGENSTEIN, a town of Lower Saxony, in the bishopric of Halberstadt, six miles S. Halberstadt, and seven W. of Quedlingburg. Long. 0. 41. E. Lat. 51. 26. N.

REGGIO, an ancient city of Italy, in a duchy of the same name, with a citadel, and a bishop's see. It has been ruined several times by the Goths and other nations. In the cathedral are paintings by the greatest masters; and in the square is the statue of Brennus, chief of the Gauls. The inhabitants are about 22,000, who carry on a great trade in silk. It was taken by Prince Eugene in 1706, and by the King of Sardinia in 1742. It is seated in a fertile country, 15 miles N.W. of Modena, and 80 S.E. of Milan. Long. 11. 5. E. Lat. 44. 43. N.

REGINA, a town of Naples, in Calabria Citeriore, 14 miles N. of Cozenza. Long. 16. 21. E. Lat. 39. 34. N.

REGNANO, a town of Italy, in the patrimony of St. Peter, seated near the Tiber, 17 miles N. of Rome. Long. 12. 36. E. Lat. 42. 11. N.

REICHENAU, an island of Suabia, in the Zeller See, or lower lake of Constance. It is three miles long and one broad; contains about 1600 inhabitants, all catholics; three parishes, and a rich abbey, of which the Bishop of Constance is abbot. In this convent was interred Charles le Gros, who was emperor, and king of France, but was

* These unfortunate children are frequently forced on desperate courses; with blasted reputations, with dangerous connections, and coming from suspicious places, what private family will open a door to receive them?

deposed in 887, and died in extreme want and misery. This island is three miles W. of Constance, and belongs to the bishop of that place.

REICHENAU, a town of Switzerland, in the country of the Grisons, seated in a rich and fertile valley, at the conflux of the two branches that form the Rhine. Here are two curious bridges. One of these is thrown across the lower branch of the Rhine, and is 105 feet in length. The other, built across the Rhine, below the point of union, is a wooden one, of a single arch, the span of which is 220 feet. Reichenau is seven miles S.W. of Coire.

REICHENBACH, a river of Switzerland, which has its source at the foot of Mount Wetterhorn, and rolls its numerous cataracts down the steep sides of Mount Sheidec, till it unites with the Aar, near Meyringen. It conveys into the Aar the gold dust that is found in the bed of that river.

REICHENFELLS, a town of Germany, in the duchy of Carinthia, 24 miles N.E. of Clagenfurt, and 24 E. of Muhrau. Long. 14. 4. E. Lat. 47. 9. N.

REICHENHALL, a town of Upper Bavaria, on the Sala, with a rich salt spring, nine miles S.W. of Saltzburg, and 64 S.W. of Munich. Long. 13. 2. E. Lat. 47. 28. m.

REICHENSTEIN, a town of Silesia, famous for the silver mines in its neighbourhood. It is 12 miles W. of Grotskaw.

REICHSHOFEN, a town of France, in the department of Lower Rhine, with a castle, in the neighbourhood of Haguenau.

REID (Thomas) a distinguished moral and metaphysical writer, was the son of the Rev. Lewis Reid, minister of the parish of Strachan, in the county of Kincardine, North Britain. He was born at the parsonage house of Strachan in April 1710, and received the rudiments of his education at the parish school of Kincardine-oniel; and was removed from thence to the Marischal College, Aberdeen, when not more than twelve years of age.

After the usual course of four years employed in the study of Latin, Greek, Mathematics, and Philosophy, he probably took his degree of M. A. which at that period, and for a long time subsequent to it, was the universal practice in the university of Aberdeen, and then commenced the study of theology. In due time he was licensed to preach the gospel according to the forms of the church of Scotland; but continued to reside for some years in Aberdeen, cultivating his favourite science, mathematics.

The mathematical chair in the Marischal College was then filled by Mr John Stuart, a man of great eminence in his profession; but who, like many other profound mathematicians, was not happy in his mode of communicating science, at least to the duller part of his pupils. Mr. Reid occasionally read lectures for the professor, and became very popular with his fellow pupils. He could not however spend his life in the study of mathematics, and in reading barren lectures for other men. He had been educated for the church; and it was in the church only that he had the prospect of gaining a livelihood. He was accordingly presented, we know not in what year, to the church of *New Machar* in Aberdeenshire, at a time when the good people of Scotland were very far from being reconciled to the rights of patronage; and the consequence was, that his settlement met with much popular opposition. Even a little riot took place in the church at his ordination; but he soon gained the affections of his flock by his good sense, his acknowledged worth, and his unwearied attention to all their wants, which he was ever ready to relieve to the utmost extent of his abilities. So deeply rooted indeed was their regard for him at last, that though it is now almost half a century since his relation to the parish of New Machar ceased, his memory continues to be revered in that parish even at the present day.

In the year 1751, about the beginning of the session or annual term, one of the professors of philosophy in King's College, Aberdeen, died; and the late Dr. John Gregory, then professor of medicine, with the Rev. Dr. Macleod, the present sub-principal of King's College, were deputed to visit Mr. Reid, and to request his immediate acceptance of the vacant professorship. He yielded to the request, not without some hesitation, and was admitted professor of philosophy on the 22d of November.

He was now in the very situation for which Nature seemed to have intended him. He had not only an opportunity, but it was his duty to cultivate the science to which his attachment was so strong; and the duties of his office made him turn his attention more closely than he had hitherto done to another science, in which he was destined to make a more conspicuous figure than he ever made even in his favourite mathematics.

It was during his professorship in the university of Aberdeen that he wrote his Essay on Quantity, which was published in the 45th volume of the Philosophical Transactions, and is perhaps the finest specimen of metaphysical mathematics, if we may use such an expression, that is extant in our own or in any other language. It was during the same period that he published his Enquiry into the Human Mind on the Principles of Common Sense; a work of unquestionable merit, which has contributed more than any other work whatever to give a rational turn to metaphysical speculations. It was about this period that the degree of D. D. was conferred upon him by his mother-college,

The well-earned fame of Dr. Reid attracted the attention of the University of Glasgow to him as the fittest person to succeed the celebrated Dr. Adam Smith; and he was admitted professor of moral philosophy in that university on the 11th of June, 1764. There his attention was not distracted by a multitude of sciences, which it was his duty to teach; and he had leisure to improve his metaphysical system, though he continued through life to amuse himself occasionally with mathematical speculations.

In the year 1773 appeared, in Lord Kames's Sketches of the History of Man, A brief Account of Aristotle's Logic: with remarks by Dr. Reid. It would seem that he had entered upon this task rather reluctantly, and merely in compliance with the solicitations of his friend, the author of the Sketches.

But when it is known that the late Dr. Doig of Stirling, to whom Greek was as familiar as his mother tongue, and an equally learned doctor of Oxford, who has been reading Aristotle ever since he was fourteen years of age, agreed in opinion, that a more accurate view of his logic could not be given in the same compass than had been given by Dr. Reid, we may surely affirm, with some degree of confidence, that this small work adds much to the fame of its author.

Though Dr. Reid's health continued good, and his mental faculties unimpaired, till a very short time before his death, he ceased for some years to read lectures from his professorial chair, employing that time in preparations for eternity, and in fitting his lectures for the press. These were published in two volumes 4to: the first in 1785, under the title of Essays on the Intellectual Powers of Man, dedicated to his friends Dr. Gregory and Professor Stewart, both of the University of Edinburgh; and the second in

1788, under the title of Essays on the Active Powers of Man, without any dedication or preface. He continued to enjoy the fame acquired by this work, as well as the affection of his friends, and the reverence of the public for eight years, dying at Glasgow in the end of September, or the beginning of October, 1796, in the 87th year of his age. He had been married, and he left behind him one daughter.

To do justice to the biography of such a man as this, we should here attempt to draw his intellectual character, and to appreciate the merits of his works; but to perform this task in a manner at all worthy of him, or we hope of ourselves, would require more room than our limits permit us to allot to any article of the kind; and our readers will be pleased to learn, that they may confidently expect an account of his life, with a critique on his works, by a man better qualified to do justice to both, than the writer of this short sketch pretends to be. His works are in the hands of the speculative public; and by that public will be duly valued, as long as sound sense shall be preferred to impious jargon. How long that may be, God only knows; but if any thing can guard the minds of our youth against that sophistry of which the object is to attribute real agency to material fluids, and to represent the elective attractions of chemistry as perfectly similar to human volitions, it will be the unbiassed study of Dr. Reid's Essays on the Intellectual and Active Powers of Man. They will there find metaphysics divested of mystery, and the profoundest speculations rendered intelligible by the constant use of words in one determined sense.

Candour however obliges us to acknowledge, that he has advanced some doctrines which we cannot admit as true. Though not in general partial to Locke, he has adopted his notions respecting our power of abstraction, with hardly any other variation than the substituting of the term *conceptions* for Locke's favourite phrase *ideas*. He has likewise endeavoured to prove, that we may distinctly conceive what cannot possibly exist. These mistakes, however, for such they appear to us, are infinitely more than counterbalanced by his clear, acurate, and satisfactory disquisitions on our notions of *active power*. Had Dr. Reid never written a sentence but the essay which treats of this delicate and important subject, he would have been entitled to a place in the very first rank of useful metaphysicians; for, previous to the appearance of his works, we had nothing written directly on *power* but contradictory and unintelligible jargon. We recommend the serious perusal of this essay, the first in his second volume, to such of our readers as fancy that they distinctly conceive the powers of chemical agents, and that intelligence and volition may result from mechanical organization, or any combination whatever of matter and motion.

REIFFERSCHEID, a town of Germany, capital of a county of the same name, in the archbishopric of Cologne. It is 32 miles S. W. of Cologne, and 42 W. of Coblentz. Long. 6. 50. E. Lat. 50. 20. N.

REISSENBURG, a town of Prussia, in the province of Oberland, anciently the residence of the bishops of Pomerania. Near it is an ancient castle. It is 78 miles S. W. of Konigsburg. Long. 20. 5. E. Lat. 53. 52. N.

REMIREMONT, a town of France, in the department of the Vosges. It had lately a chapter of canonesses, who were obliged to prove their nobility, and whose abbess was a princess of the empire. It is seated on the Moselle, at the foot of Mount Vosges, 42 miles S. by E. of Nanci. Long. 6. 47. E. Lat. 48. 3. N.

REMY, St. a town of France, in the department of the Mouths of the Rhone. A triumphal arch, and a mausoleum, in the neighbourhood, display the taste of the Augustan age: the first is not entire; but the second is in the best state of preservation. St. Remy is 10 miles N. E. of Arles.

RENDSBURG, a town of Lower Saxony, in the duchy of Holstein, with a castle. It is seated in an island formed by the river Eyder, 12 miles S.E. of Sleswick. Long. 10. 6. E. Lat. 54. 30. N.

RENNEBON, a town of Germany, in the bishopric of Strasburg, 10 miles E. of Strasburg.

RENTI, a town of France, in the department of the Straits of Calais, seated on the River Aa, 12 miles S. W. of Aire, and 50 N. W. of Arras. Long. 2. 20. E. Lat. 50. 36. N.

REOLE, a town of France, in the department of Girone, seated on the Garonne, 20 miles S.E. of Bourdeaux. Long. 0. 4. W. Lat. 44. 30. N.

REPAILLE, a town of Savoy, in Chablais, seated on a river which falls into the lake of Geneva, and famous for the retreat of Amadeus, duke of Savoy, in 1440, where he went to enjoy the pleasures of a country life. Here is a Carthusian monastery, remarkable for its extensive prospects. It is three miles from Thonon, and 20 N.E. of Geneva. Long. 6. 21. E. Lat. 46. 26. N.

REPEHAM, a town in Norfolk, with a market on Saturday. It has two churches in one church-yard, and is seated in a valley, 15 miles N.W. of Norwich, and 109 N.E. of London. Long. 1. 7. E. Lat. 52. 50. N.

REPOSITORY, a building or apartment destined to receive any collection of curious or valuable articles either for inspection or sale. Thus the collection of models and new inventions at Woolwich (lately destroyed by fire) was called "The Repository." The same appellation is also given to a charitable institution at Bath, where a *Repository for the Benefit of the Poor* has been opened, and is thus described by Mrs. Bernard in the Reports of the Society for bettering the Condition of the Poor.

Towards the end of the year 1796, a Repository was opened at Bath by several ladies, for the reception of works of industry and ingenuity, to be sold for the benefit of the poor. It is supported by subscription, and is conducted by a committee of ladies chosen from among the subscribers; of whom one attends the sale every day from twelve to three, and three or four meet on Saturday, to look over the books, and to pay the poor people. During the two first years articles were sold for the benefit of 200 poor persons, and the receipts amounted to 1133*l.* 11*s.* 4*d.* The last year's receipt was 700*l.*

There are at present sixty-three poor women, who regularly bring their work, and come every Saturday to be paid for such part as is sold; many of them are widows with large families, and some very infirm; particularly one poor woman, who employs herself in making stay-laces, and is paralytic; so much so, as to be unable even to lift her head from the pillow. Her work is remarkably neat, and well done; and she not only earns some addition to her means of subsistence, but relieves herself from the weariness of many painful hours. The articles sold consist of sets of childbed linen for the poor, shifts, shirts, stockings, gloves, garters, laces, purses, rugs, and the like. These are chiefly the work of the poor; besides which there are all kinds of fancy works, contributed by the ladies, and sold for the benefit of particular poor persons, whose names are written on each article, and who attend to receive the money; it being a rule that the poor object, for whose benefit any charitable person may wish to em-

ploy her ingenuity, should be the bearer of the work, his or her name being ticketed upon it by the donor, and should *in person* receive the money.

The plan is similar to that adopted in London; the substance of its regulations being the same, except where it has been deemed expedient to omit any part, or vary the form of them, from local circumstances, or the relative situation of the two cities. With it is connected a very useful charity, for lending out childbed linen to the poor. The School of Industry at Bath also receives assistance from it, by its affording a vent for the work of the children.

A charity box is placed at the door of the apartment; into which, to prevent the inconvenience that might arise from idle visits of curiosity, sixpence is requested to be put by those who do not purchase any thing.

The object of this institution (to use the words of its conductors) is "the encouragement of industry, in all descriptions of persons reduced to distress; by affording them a ready sale for the articles which are admitted into the Repository, at the price fixed by the owners; the value whereof is paid to them, without any deduction, as soon as they are sold.

This charity is very beneficial; not only in the means of acceptable employment which it offers to the poor, but in the useful occupation that it affords to the rich; converting caprice and fashion into sources of relief, and making the amusements of the idle and the young, contributory to charity and benevolence. Amid the pleasures and dissipation of Bath, it must be no small satisfaction to those parents whose health obliges their families to be occasionally resident there, that a place of amusement of this kind should be opened for their children, and that it should be powerfully recommended by fashion:—a place, where they may, at an early age, be instructed to employ the means, and enjoy the gratification, of being useful to the poor, and of soothing and relieving their distresses. For it must occur to them, before it can be suggested, that habits of this kind, when, at an early and teachable age, they are acquired and enjoyed, will remain through life a blessing, and an ornament, to the possessor.

Particular circumstances, in Bath and London, may make this charity peculiarly proper and commendable; but there is no country town in England, where the rich may not derive pleasure, the poor receive benefit, and society in general be improved, by the imitation of this example.

REPPEN, a town of Upper Saxony, in the new marche of Brandenburg, 16 miles S.S.E. of Custrin. Long. 14. 28. E. Lat. 52. 30. N.

REQUENA, a town of Spain, in New Castile, with a castle. It was taken by the English in 1706, and retaken by the French the next year. It is seated on the Oliana, 40 miles W. of Valencia, and 130 E. by S. of Madrid. Long. 0. 40. W. Lat. 39. 24. N.

REQUESTS, Court of *(Encyl.)*. By the act called the *London Small Debt Act*, 39 and 40 Geo. III. c. 104. so much of the former acts relating to the Court of Requests within London, viz. 3 Jac. I. c. 15. and 14 Geo. II. c. 10. as restrains the jurisdiction of that court to debts not exceeding 40s. is repealed.

And it is enacted, that it shall be lawful for any person, whether residing within the city of London or elsewhere, and who may have any debt, not exceeding 5l. owing to him from any person residing within the city of London, and the liberties thereof, or keeping any house, warehouse, shop, shed, stall, or stand, or seeking a livelihood, or trading or dealing within the same city or liberties, to cause such debtor to be summoned before the commissioners of the said Court of Requests, who may order and direct payment, either in one sum, or by instalments at stated periods, and no certiorari is to be allowed to remove the proceedings.

Debts due by persons under age for necessaries may be recovered; and servants under age may recover wages: also attorneys are subject to the processes of the court.

But the act does not extend to any debt arising upon title of freehold or leasehold, or to any debt by speciality, which shall not be for payment of a sum certain; nor to any debt concerning testaments, or matrimony, or any ecclesiastical matter, although the same shall not exceed 5l.

And if any action be commenced in any other court than the said Court of Requests, for any debt not exceeding 5l. and the plaintiff obtain a verdict, he shall not be entitled to costs; and if the verdict be given for the defendant, and the judge shall certify that the debt ought to have been sued for in the Court of Requests, he shall have double costs.

But this is not to restrain persons from recovering rents by distress or action, though the rent does not exceed 5l.

And debtors may plead the statute of limitations.

Debtors committed in execution are to remain in custody as follows, and for no longer time, viz. when the debt does not exceed 20s. (exclusive of costs) twenty days; 40s. forty days; 3l. sixty days; 5l one hundred days.

RESHT, a town of Persia, capital of Ghilan, seated on the S.W. coast of the Caspian Sea, 110 miles N. of Casbin. Long. 52. 16. E. Lat. 37. 18. N.

RETHEL, an ancient town of France, in the department of the Ardennes, seated on a mountain, near the river Aisne, 20 miles N.E. of Rheims, and 108 N.E. of Paris. Long. 4. 26. E. Lat. 49. 30. N.

RETIMO, a sea-port of Candia, with a bishop's see, and a citadel, where the bashaw resides. It was taken in 1647, by the Turks, who have kept it ever since. The silk, wool, honey, wax, laudanum, and oil, are preferred to all others. It is seated on the N. coast of the island, 45 miles from Candia. Long. 24. 45. E. Lat. 35. 22. N.

REVEL, a town of France, in the department of Upper Garonne, nine miles N. of St. Papoul. Long. 2. 10. E. Lat. 43. 26. N.

Revel, a government of Russia. See Esthonia.

REVELLO, a town of Piedmont, in the marquisate of Saluzzo, near the Po, on the top of a very high mountain, strongly fortified by nature and art. It is three miles N.W. of Saluzzo.

REVERO, a strong town of Italy, in the Mantuan, seated on the Po, opposite Ostiglia, 10 miles N.E. of Mirandola, and 20 S.E. of Mantua. Long. 1. 9. E. Lat. 44. 58. N.

REUS, a town of Spain, in Catalonia. It has a considerable trade in wine, brandy, and nuts, which are carted down to Salo, an open but safe road, five miles off. About 20,000 pipes of brandy are annually exported. It is seated in the middle of a most fruitful plain, 35 miles N.E. of Tortola, and 60 W.S.W. of Barcelona.

REUSS, a river of Switzerland, which rises in the lake of Locendro, between the mountains of Petina and Locendro, flows through the lake of Lucern, and the town of that name, and adjoining the Aar, falls into the Rhine, below Zurzach.

REUX, a fortified town of the Netherlands, in Austrian Hainault, eight miles N.E. of Mons.

REWAH, a town of Hindoostan Proper, in the province of Allahabad, 57 miles S.S.W. of Allahabad. Long. 81. 36. E. Lat. 24. 35. N.

REYNA, an ancient town of Spain, in Andalusia, seated in a plain, with a castle, built upon an eminence, three miles from Lerna, and in a territory abounding in wine and cattle.

REZAN, a government of Russia, formerly a province of the government of Moscow. It is fertile in corn, and populous; and had anciently its own princes.

RHE, an island on the W. coast of France, in the department of Lower Charente. It is four leagues long and two broad, and very populous. Its products are bitter wine, abundance of salt, excellent brandy, and the liquor called aniseed. It is defended by four forts, and is eight miles W. of Rochelle. St. Martin is the capital.

RHEDA, a town of Westphalia, in the county of Lingen 10 miles N. of Lipstadt. Long. 7. 22. E. Lat. 51. 17. N.

RHEINAU, a town of Switzerland, in Thurgau, with an abbey, on an island formed by the Rhine, between Schaffhausen and Eglisau.

RHEINBACH, a town of Germany, in the electorate of Cologne, 19 miles S. of Cologne, and 53 E. of Liege. Long. 6. 9. E. Lat. 51. 39. N.

RHEINFELDEN, a strong town of Suabia, the best of the four forest-towns, belonging to the house of Austria. It has been often taken and retaken, and is seated on the Rhine, over which is a bridge of several arches, eight miles E. of Basle. Long. 7. 46. E. Lat. 47. 36. N.

RHEINHAUSEN, a town of Germany, in the bishopric of Spire, situate on the Rhine, three miles S.E. of Spire.

RHEINMAGEN, or REMAGEN, a town of Westphalia, situate near the Rhine, 19 miles N.N.W. of Coblentz. Long. 6. 30. E. Lat. 50. 38. N.

RHEINSABERN, a town of Germany, in the bishopric of Spire, with a castle, 15 miles S. of Spire.

RHEINTHAL, a fertile valley of Switzerland, lying along the Rhine, which divides it from a territory of Austria, till it reaches the lake of Constance. It belongs to the eight ancient cantons, and to that of Appenzel. The Protestant inhabitants are the most numerous.

RHEINWALD, a large valley in the country of the Grisons; so called from the Hinder Rhine, which takes its rise on Mount Vogelsberg, at the distance of 12 miles, and runs through the valley. Splugen is the capital.

RHENEN, a city of the United Provinces, in Utrecht, seated on the Leck, 20 miles S.E. of Utrecht. It was taken by the French in 1672, and 1795. Long. 5. 22. E. Lat. 51. 59. N.

RHINE, Lower, a department of France, containing the late province of Lower Alsace. Strasburg is the capital.

Rhine, Upper, a department of France, containing the late province of Upper Alsace. Colmar is the capital.

Rhine, Palatinate of the, an electorate of Germany, in the circle of the Lower Rhine; bounded on the N. by the archbishoprics of Mentz and Treves, on the E. by Franconia and Suabia, and on the W. and S. by France. It is 100 miles in length, and 70 in breadth, and the principal rivers are the Rhine and Neckar. It has suffered more by the wars with France, than all the provinces of Germany put together; for, in the last century, Lewis XIV. ordered the whole country to be laid waste by fire and sword. Heidelberg is the principal town, but Manheim is the electorate residence. This electorate is also called the Lower Palatinate, to distinguish it from the Upper Palatinate of Bavaria.

RHODE ISLAND, one of the United States of America, bounded on the N. and E. by Massachusets, on the S. by the Atlantic, and on the W. by Connecticut. These limits comprehend what has been called Rhode Island and Providence Plantations. It contains five counties, and 29 townships. It is as heathful as any part of North America, and is principally a country for pasture. Providence and Newport are the chief towns.

Rhode Island, an island of North America, in a state of the same name. It is 13 miles long and four broad, and divided into three townships. This island is a noted resort of invalids from the southern climates, being exceedingly pleasant and healthful, and is called with propriety the Eden of America.

RHONE, Mouths of the, a department of France, containing part of the late province of Provence. Aix is the capital.

RHONE AND LOIRE, a department of France, including the late provinces of Forez and Lyonois. The capital is Lyons.

RHYNDS, or Rinns of Galoway, the W. division of Wigtonshire, almost cut off from the other parts of the country by Loch Ryan and the bay of Luce.

RIALEXA, a town of New Spain, in Nicaragua, seated on a small river, five miles from the Pacific Ocean, where there is a good harbour. The air is unwholesome, on account of the morasses. It is 60 miles W. of Leon de Nicaragua. Long. 89. 10. W. Lat. 12. 25. N.

RIBADEO, a sea-port of Spain, in Galicia, situate at the mouth of the Eo, with a good harbour, defended by two castles. It is 15 miles N.E. of Mondonedo. Long. 7. 2. W. Lat. 43. 30. N.

RIBAS, a town of Spain, in New Castile, on the river Xarama, eight miles from Madrid.

RIBEIRA GRANDE, a town of St. Jago, the principal of the Cape de Verd Islands, with a good harbour. It is seated between two high mountains. Long. 23. 24. W. Lat. 15. 0. N.

RIBEMONT, a town of France, in the department of Aisne, seated on an eminence, near the river Oise, 10 miles W. by S. of St. Quentin. Long. 3. 21. E. Lat. 49. 48. N.

RIBERAC, a town of France, in the department of Dordogne, 17 miles E. of Perigueux, and 27 S.S.E. of Angoulesme. Long. 1. 5. E. Lat. 45. 15. N.

RIBNIC, a town of Turkey in Europe, in Walachia, with a bishop's see, 44 miles S. of Hermanstadt, and 130 E.S.E. of Temeswar. Long. 23. 40. E. Lat. 45. 19. N.

RIBNITZ, a town of Lower Saxony, in the duchy of Mecklenburg, with a nunnery for noble women. It is seated on a bay of the Baltic, 12 miles N. of Rostock. Long. 12. 55. E. Lat. 54. 10. N.

RICE *(Encycl.)*. The following account of some experiments in cultivating rice in Britain, by Sir Joseph Banks, bart. were communicated in a letter to the President of the Board of Agriculture, dated April 15, 1799. "As I conceive," says Sir Joseph, "the introduction of new esculent vegetables, a matter of material importance to the agricultural interests of this country, and that even an unsuccessful experiment on this subject may be, though not perhaps fitting for publication, a proper document to be lodged in the archives of the Board of Agriculture, I take the liberty of submitting the following remarks to your lordship's better judgment.

"The dry, or mountain rice, which I received last year from the Board of Agriculture, for trial, had been procured at some considerable expence by Sir John Murray, from the neighbourhood of Serinagur, a city in India, situated at the foot of Mount Imaus, where snow lies till

late in the spring; and where the climate has been supposed to resemble that of England, sufficiently to make it probable, that the vegetable productions of the one, would equally succeed in the other country; I consider it as a duty owing to the patriotic exertions of Sir John, to give your lordship and the Board some account of the result of the trial of it, made by me at Spring Grove, near Hounslow, in Middlesex.

"It was not till near the end of May, when the samples, being six sorts, were delivered out by the Board, and they were sown immediately, on the 21st day of that month, on six small beds in a garden, under the shelter of a pale, in a south exposure.

"The grains were sown very thin, in order that the progress of their vegetation might be better noted; in a very few days they appeared above ground. The season being warm, with a moderate supply of rain, it was seldom necessary to water them: however, when they appeared to flag, which generally happened after three or four dry days had taken place, they were well sprinkled with a watering pot.

"In less than a month they had grown several inches high: each sort had acquired an appearance very different from the rest; some were pale green, and had broader blades; some were deeper coloured, and narrower in the blade; and one sort had a brown hue on the whole plant; and the bases of the leaves in this kind were nearly black.

"During the month of August, they tillowed much more than I have observed any other corn to do: so much so, that although they had been sown very thin, they became a dense compact bed of plants; the blades in some of the kinds standing as close or closer to each other, than the thickest sown barley ever does.

"At the close of the month, the blades were from a foot to eighteen inches high; the plants continued to tillow, each root having by this time produced from ten to twenty offsets, but no symptom of a rising stem was at all observable.

"In the middle of September, they had still continued to tillow, and the blades to lengthen, so that some of them were at least two feet long. As the frosts of the autumn were nearly now approaching, it became an object of some importance to examine the state in which the plants really were, in order to ascertain the probability of their having produced ears, or possibly of their having ripened corn, if they had been sown a month or two earlier. The most careful inspection was therefore made by dissection, but no traces could be found of the rudiment of a joint beginning to form itself on the crown of the root, or of the embrio of the glumes of the ear, which in all kinds of corn are first discernible in that part.

"About this period I was taken ill, and obliged to desist from observing their future progress; but a frost soon after followed, which cut the blade down to the earth, and at once destroyed all hopes of these kinds of rice producing grain in our climate: the quantity of the blade was however so uncommonly great, that it is not impossible it might be advantageous to sow it as food for cattle, for a very large proportion of stock might certainly be maintained upon an acre of it.

"Before the frost set in, I had ordered a tuft of each kind of the rice to be transplanted into a pot, and placed in a hot-house, in order, if possible, to ascertain the natural period of this grain; whether, like winter corn, it requires eight or nine months to come to perfection, or, like our Lent corn, arrives at the same period in five or six; but all of these died, notwithstanding great attention was paid to them: some seed, however, which I had given to Mr. Lambert, succeeded better; it was sown in his hot-house in the month of June, where it throve well, but did not produce ears till near Christmas, a period of seven months; from whence, as it is not probable the grain would have ripened in less than two months from the time when the ear appeared, it is easy to deduce, that in the neighbourhood of Serinagur these kinds of rice are either sown as winter corn, or the climate there is far better suited to promote the quick progress of vegetation, than ours is. It was, when it produced ears, about three feet and a half high, and some of the stems had five joints, including the radical one: had it been in a more suitable climate, it would certainly have grown taller, for the flowers dropped off without producing seed.

"In the course of this spring I have forwarded a few seeds, which were left from Sir John Murray's importation, to Portugal; if they succeed, I shall probably hear of it; and in that case, if your lordship feels interest on the subject, I shall certainly do myself the honour of communicating such information concerning them, as I am able to obtain."

The following extract from an account of the benefit of the use of rice, by the matron of the Foundling Hospital, is published by the Society for bettering the Condition of the Poor.

"During the scarcity of wheat in July, 1795, one of the measures adopted at the Foundling Hospital, with a view of lessening the consumption of flour, was the substitution of rice puddings for those of flour, which, by the table of diet, were used for the children's dinner twice a-week. The flour puddings, for each day, had taken about 168lb. weight of flour; the rice puddings, substituted in their place, required only 21lb. of rice, to make the same quantity of pudding; the result of the experiments being that, in a baked pudding made with milk, one pound of rice will go very nearly as far as eight pounds of flour.

"The use of the puddings has ever since been continued in the Hospital, with this variation, that the quantity of rice has been increased to 24lb. weight for each day's dinner; and it now continues the substitute for near 168lb. of flour before used: the ingredients in the rice puddings at present, being 24lb. of rice, 6lb. of treacle, and 18 gallons of milk; and the produce, upon an average*, 180lb. of

---

* In order to ascertain correctly the comparative weight of the materials in their liquid state, with that of the pudding after it is baked, the weight has been carefully taken several times. The amount has not always been *precisely* the same, but the average is nearly as follows:

Weight of 18 gallons of milk, being about 1 lb. 3 oz. the pint - -	171 lb.
24lb. of rice - - - - - - - - - - - -	24 lb.
6lb. of treacle - - - - - - - - - - -	6 lb.
Total of the ingredients - - - - - - - - - -	201 lb.
Average weight of the rice pudding in a solid state - - - -	180 lb.
Average waste in dressing - - - - - - - - -	21 lb.

good substantial pudding; a very sufficient dinner for the 170 persons who dine on it.

"The milk is the better kind of London milk; about equal to good skim-milk in the country. The expence of the dinner is as follows:—24lb. of rice, five shillings; 6lb. of treacle, two shillings; and 18 gallons of milk, twelve shillings: the total for 170 persons being nineteen shillings, or rather more than five farthings per head.* The saving to the Hospital, by this use of rice during the year, was something more than 200l. and the national saving in the consumption of flour, from that circumstance only, during the same period of scarcity, being one year ending July 1796, appears to be nearly 17,472lb. weight of flour."

From this account it will appear how much benefit, as well national as individual, may be derived from the general use of rice. There is hardly any way in which it can be stewed down, either with bacon, or with meat seasoned with salt and pepper, and some leeks or onions, or with cheese, in which it will not make a cheap, pleasant, and nutritious dish: and it is particularly proper for poor families, or for workhouses and public charities.

RICHELIEU, a town of France, in the department of Indre and Loire, with a fine palace and extensive park. It was built by Cardinal Richelieu in 1637. The streets are as straight as a line, and it contains a handsome square. It is seated on the Amable and Vide, 27 N. of Poitiers, and 152 S.W. of Paris. Long. 0. 20. E. Lat. 47. 2. N.

RICHMOND, the capital of the state of Virginia. It has an elegant state-house, on a hill in the upper part of the town, and is seated on the north side of James river, at the foot of the falls, 60 miles W. by N. of Williamsburg. Long. 77. 30. W. Lat. 37. 25. N.

Richmond, a town of Staten Island, in the state of New York and county of Richmond. Its inhabitants are chiefly Dutch and French. It is nine miles S.W. of New York.

Richmond, a borough in the north riding of Yorkshire, with a market on Saturday. It was inclosed by a wall, with three gates, now in ruins; and it has a castle, on an inaccessible mount, and two churches. It sends two members to parliament, is governed by a mayor, and has a manufacture of woollen stockings, caps, &c. It is seated on the Swale, over which is a bridge, 40 miles N.W. of York, and 230 N.N.W. of London. Long. 1. 55. W. Lat. 54. 28. N.

Richmond, a village in Surrey, with a stone bridge over the Thames, nine miles west-south-west of London. It was anciently called Sheen; but Henry VII. called it Richmond, on account of his having been earl of Richmond in Yorkshire. Here was a palace, in which Edward III. Henry VII. and Queen Elizabeth, expired. Richmond is still distinguished by its beautiful royal gardens, which, in summer, are open every Sunday; and in these is a noble observatory. Here is an extensive royal park, called Richmond, or the New Park; surrounded by a brick wall, built by Charles I.

RICHMONDSHIRE, a district in the north riding of Yorkshire, formerly a county of itself. It abounds in romantic situations, and is noted for the industry of its inhabitants, who manufacture knit stockings and other coarse goods. Many lead mines are in this district, of which Richmond is the chief town.

RICHTENBURG, a town of Germany, in Anterior Pomerania, 25 miles E.N.E. of Rostock. Long. 12. 50. E. Lat. 54. 10. N.

RICKMANSWORTH, a town in Hertfordshire, with a market on Saturday, seated on the Coln, eight miles S.W. of St. Alban's, and 18 W.N.W. of London. Long. 0. 16. W. Lat. 51. 42. N.

RIDLEY (James), the supposed author of the *Tales of the Genii*, under the feigned name of "*Sir Charles Morell.*" This assumed title, with the addition of "*formerly ambassador from the British settlements in India, to the great mogul,*" is annexed to the title pages of the volumes in question, and concurred with the rest of the fiction, viz. the assertion in the same page of the tales being translated from "*a Persian MS.*" to impress the public mind with the idea of their being really of Eastern origin. The name of "Morell" perhaps occurred to the author as a proper name to designate the *moral* tendency of his writings; be that as it may, the fictitious appellations of Sir Charles Morell have too long usurped the laurels which belonged to our author.

This gentleman was the second son of the Rev. Dr. Glocester Ridley, well known by his very masterly life of his ancestor, Bishop Ridley, the martyr, who suffered for his attachment to the reformed religion, in the reign of Mary. James Ridley was educated at Winchester school, under Dr. Barton: and, as it is related by a contemporary of Ridley's now living, he then, in his boyish days, shewed a great inclination and talents for theatrical exhibitions. He, at any time, willingly left the play-ground if he could persuade his companions to join him in acting the parts of some favourite dramatic writer. He was, at the usual time, elected fellow of New College, where he staid but a little time, for in the graduate book his name is not inserted; a proof that he did not take the degree generally conferred at the expiration of seven years. Ridley married when very young; and the chaplaincy of Romford was conferred on him by his father, to whom the tithes of that parish were let by the New College. About this time, probably, his 26th year, he published his Tales of the Genii, but with what success is not apparent; for the Monthly Review, the only one which took notice of the publication, considered the volumes worthy only of the nursery; and ranked them with the frivolous productions of fairy tales, &c. This review appeared about the year 1763. So unjust a criticism, on a work of uncommon genius, could have arisen only from the haste or a total want of taste in the writer of that article, which is also unworthily placed in the Monthly Catalogue. Neither the Biographia Britannica, nor any other biographical publication, has mentioned (as the writer of this article believes) the name of the author of the Tales of the Genii. This omission seemed to call aloud for some notices of the author and his work: and the present attempt to bring both before the public in an advantageous light, claims the indulgence of the reader, from the willingness, rather than from the capacity to do justice to the talents of a man who contributed to sink into oblivion his own merits, by too great diffidence. Previous to his great work, Ridley, always ardent in the cause of virtue, determined to stem the torrent of those pernicious writings which endeavour to substitute sentimental feelings for the sound and sacred principles of religion and morality: a proceeding so perverse or so base, that the genius of Fielding or Rousseau can in no degree

* Where skim-milk, as in the country, may be had at 2d. a gallon, the price of this dinner would hardly exceed a halfpenny a head.

compensate for the badness of the design. In the life of James Lovegrove, Ridley pourtrays a young man without the advantages of personal beauty, but by the mere influence of good principles, aspiring to, and at length obtaining, a lady of beauty and fortune in marriage. Whilst other novelists exhibited their heroes in all the splendor of youth, elegance, wealth, and extraordinary graces, Ridley led his hero to honour and happiness, under the disadvantages of a very moderate share of health, wealth, or beauty: and he also differed essentially from his brother novelists, as Lovegrove was neither exquisitely handsome, nor infamously profligate. He thought with the great poet—

Virtue can see to do what virtue would,
By her own radiant light, &c.

Since the time of the immortal Spenser, the powers of allegorical instruction have never been so nobly and so beautifully exerted. The moral duties are enforced by the profoundest philosophy; and on their personifications all the ornaments of a very rich imagination are most profusely bestowed. The good Genii, according to the mythology of the East, assemble before their king, and, at his command, report by what exertions they rescued Virtue from persecution, supported her under temptations and dangers, and crowned her ardent enterprises with merited success, against the machination of their enemies, the evil Genii. The important lesson, that neither riches, honour, nor pleasure, lead to happiness, is set forth in the very entertaining and variegated History of the Talisman of Orosmades, or of the Merchant of Abudah. The Adventures of Urad, or the Fair Wanderer, is an impressive and instructive lesson to every beautiful unprotected female. In the words of the author, "to guard the soft female heart from the delusions of the faithless, said Icaragem (the king of the Genii), is worthy of our race; and the sage Honadir (the good Genius and narrator of the tale) has wisely combined chastity and prudence in her delightful instructions: but female delicacy makes an unequal opposition to brutal cunning, unless the protection of the just one overshadow the footsteps of the virtuous maid. Wherefore, Alla is the first and chief supporter of the female sex, who will, assuredly, when requested, confound the vain artifices of man, and exalt the prudent counsels of the modest fair-one:" (end of the Tale of Urad, the Fair Wanderer). The above tales are taken by chance, from the rest, as a specimen of the useful subjects on which they treat, and to obviate any suspicions that they are formed for the meridian of the nursery. Spenser, sometimes, strives to produce very complicated allegories to set off circumstances and reflections of little value; but the author of the Tales of the Genii, has strictly followed the precept of Horace—

Nec Deus intersit nisi dignus Vindice nodus.

No *Genius* is employed to disturb the order of nature, but for some great moral purpose; nor his attributes ostentatiously displayed for the sake of exhibiting the writer's well-known faculty of imagination. In the Tale of the Inchanters, or Misnar, Sultan of India, those potent agents of magic power are described as leaving the divan, after the virtuous sultan had refused their wicked councils, with so much horrific and satanic majesty, that neither Milton, nor Spenser, nor Dante, nor Tasso, would have blushed to own these congenial efforts at ideal character.

A very delightful fiction is introduced in the Tale of Mirglip, the Dervise of the Groves. The dervise shews his royal pupil his pleasure-grounds: the latter observing various seats disposed in very opposite situations of hill and dale, shade and sun-shine, enquires their purpose of erection. The dervise here describes his friends; and, in a charming allegorical strain, describes their manners, disposition, and acquisitions, by the peculiar situation and adjunct circumstances which distinguish one seat and situation from another. The names of the persons are anagrammatised thus—Phesoj Ecneps, Joseph Spence, &c. The writer of this article apprehends that these valuable fictions are not sufficiently known to men of taste and knowledge. His fears are that the term *Tales of the Genii* may convey to many minds the same opinion of puerile fiction and grotesque imagery, which they appear to have excited in the judgment of the writer of the critique in the Monthly Review before alluded to. But the following sublime and interesting passage alone, that concludes these entertaining volumes, must be sufficient to rescue them from such a sentence. After the author closes his reign of fiction, and acknowledges the regions of his fancy are exhausted, he addresses the reader as follows:—

"Kind reader, the Genii are no more; and Horam, the phantom of my mind, speaks not again. Fiction himself, and fiction all he seemed to write; nor useless shall his life be deemed by those who blush at worse than pagan vices in enlightened climes. In friendly guise, these sheets were written to lead thee unto virtue; and the proud gaudy trappings of the East, with all its wild romantic monsters, have risen far above their usual sphere to serve the cause of moral truth. But then, perchance, you'll ask, what shall that truth avail, now all the beauteous wildness is no more, which was the spring and mover of this pagan virtue? The Genii all are fled, who watched attendant the virtuous mind, and crowned it with success; and the reward ceasing, the incentive to noble actions ceases with it. If, then, you will yet spare a few moments and listen to me, I trust you shall not long lament the loss of Horam and his friendly Genii; for were the foundations of morality laid only in phantom and imagination, persuasion would be so fruitless that every moral writer, dissatisfied with his ill success, might justly cast his works into the flames.

"Prepare, then, for a scene more worthy of your sight than human fancy could conceive. A scene tremendous, wonderful, and great; full of mercy and of truth; where heaven itself inclines to earth, and God becomes an offering to mankind. Behold the moral veil rent in twain, and from thick clouds of darkness the sun of righteousness arise!—Behold death nailed on the cross, and Mercy springing from the grave; redemption brought to man by an heavenly being far superior to angels or ministering spirits; and the voice of God declared to us by his son, whom he hath appointed heir of all things; by whom also he made the worlds; who being the brightness of his glory, and the express image of his person, and upholding all things by the word of his power, when he had by himself purged our sins on the cross, sat down on the right hand of the Majesty on high."

RIESBERG, a town of Westphalia, capital of a county of the same name; situate on the Ems, 12 miles N.N.W. of Paderborn. Long. 8. 50. E. Lat. 51. 55. N.

RIETI, a town of Italy, in the duchy of Spoleto, with a bishop's see; seated on the river Veline, near the lake Rieti, 27 miles S. by E. of Spoleto, and 37 N.E. of Rome. Long. 13. 5. E. Lat. 42. 23. N.

RIEUX, a town in France, in the department of Upper Garonne. Before the revolution of 1789, it was a bishop's see. It is seated on the Rise, 25 miles S.W. of Toulouse, and 83 W. of Narbonne. Long. 1. 17. E. Lat 43. 16. N.

RIEZ, a town of France, in the department of the Lower Alps. Before the revolution of 1789, it was a

bishop's see. It is populous, though small, but was formerly much larger than at present. It is seated in a plain, abounding with good wine and excellent fruits, 35 miles N.E. of Aix, and 50 N.E. of Toulon. Long. 6. 22. E. Lat. 43. 51. N.

RIMMEGEN, a town of Westphalia, in the duchy of Juliers, seated on the Rhine, and remarkable for several Roman antiquities.

RINCOPING, or RINKIOBING, a town of Denmark, in North Jutland, seated on the west coast, 50 miles N. by W. of Ripen.

RINGLEBEN, a town of Upper Saxony, in the principality of Eisenach, six miles N. of Erfurt, and 26 E.N.E. of Eisenach. Long. 11. 25. E. Lat. 51. 5. N.

RINGSTED, an ancient town of Denmark, in the isle of Zealand, where the kings of Denmark formerly resided and were buried. It is 30 miles S.W. of Copenhagen. Long. 12. 10. E. Lat. 55. 28. N.

RINGWOOD, a town in Hampshire, with a market on Wednesday, and a considerable manufacture of worsted knit hose; seated on the Avon, 30 miles S.W. of Winchester, and 91 W. by S. of London. Long. 1. 41. W. Lat. 50. 49. N.

RINTLEN, or RINTELN, a town of Westphalia, in the county of Schawenburg, with an university. It is subject to the Landgrave of Hesse-Cassel, and seated on the Weser, 15 miles S.E. of Minden, and 35 S.W. of Hanover. Long. 9. 20. E. Lat 52. 13. N.

RIO-DE-LA-HACHA, a small province of Terra-Firma, in the form of a peninsula, between the gulf of Venezeula on the east, and a bay of the Caribbean Sea on the west. Rio-de-la-Hacha, the capital, is seated at the mouth of a river of the same name, 100 miles E. of St. Martha. Long. 72. 34. W. Lat. 11. 30. N.

RIO-DE-LA-MADALENA, a river in Terra-Firma, which rises in the mountains north of Popayan, and running north, falls into the Carribbean Sea, between Carthagena and St. Martha. It is also called Rio Grande.

RIO-DE-LA-PLATA. See PLATA.

RIO-DE-MIRANDO, a river of Spain, which rises in the mountains of Austrias, and separating that city from Galicio, enters the bay of Biscay at Rivadeo.

RIO-GRANDE, a river of Africa, which runs from east to west through Negroland, and falls into the Atlantic Ocean, 11°. N. latitude.

RIONS, a town of France, in the department of Gironde, seated on the Garonne, 18 miles S.E. of Bourdeaux.

RIPA TRANSONE, a populous and strong town of Italy, in the marquisate of Ancona, with a bishop's see, five miles W. of the gulf of Venice, and eight S. of Fermo. Long. 13. 50. E. Lat. 42. 59. N.

RIPLEY, a town in the west riding of Yorkshire, with a market on Monday, seated on the Nyd, 23 miles W.N.W. of York, and 221 N. by W. of London. Long. 1. 30. W. Lat. 54. 4. N.

RIPPON, an ancient borough in the west riding of Yorkshire, with a market on Thursday. In its neighbourhood is the celebrated park of Studley, including the venerable remains of Fountain's Abbey. Rippon was once famous for its religious houses, and has now a collegiate church, adorned with three lofty spires. It is noted for its manufacture of hardwares, particularly spurs, and the market-place is one of the finest squares of the kind in England. It is governed by a mayor, sends two members to parliament, and is seated on the Ure, 28 miles N.W. of York, and 218 N.N.W. of London. Long. 1. 29. W. Lat. 54. 11. N.

RIQUIER, an ancient town of France, in the department of Somme, seated on the Cardon, five miles N.E. of Abbeville, and 95 N. of Paris. Long. 1. 59. E. Lat. 50. 10. N.

RISBOROUGH, a town in Buckinghamshire, with a market on Saturday, 20 miles S. of Aylesbury, and 37 W.N.W. of London. Long. 0. 42. W. Lat. 51. 40. N.

RITBERG, a town of Westphalia, capital of a county of the same name, with a castle seated on the Ems, 12 miles N.W. of Paderborn. Long. 8. 42. E. Lat. 51. 52. N.

RIVA, a strong town of Germany, in the bishopric of Trent. It was taken by the French in 1703, but soon abandoned. It is seated at the mouth of a small river, on the lake Garda, 17 miles S.W. of Trent. Long. 11. 7. W. Lat. 46. 4. N.

RIVADAVIA, a town of Spain, in Galicia, seated at the confluence of the Minho and Avia, in a territory that produces the best wine in Spain, 15 miles W.S.W. of Orense. Long. 7. 55. W. Lat 42. 13. N.

RIVADEO, a sea-port of Spain, in Galicia, seated on a rock, at the mouth of the Rio-de-Mirando, 45 miles N.N.E. of Lugo. Long. 6. 47. W. Lat 43. 38. N.

RIVALLO, a town of Naples, in Terra di Lavoro, seated on a mountain, 20 miles from Naples.

RIVALLO, a town of Piedmont, situate on the Sangon, six miles S.W. of Turin, and 19 E.S.E. of Susa.

RIVALTA, a town of Italy, in the duchy of Milan, situate on the Adda, 15 miles E. of Milan.

RIVAROLO, a town of Piedmont, situate on the Orio, 15 miles N. of Turin, and 12 N.W. of Carmagnola.

RIVESALTES, a town of France, in the department of eastern Pyrenées, famous for fine wine. It is seated on the Egly, eight miles N. of Perpignan.

RIVOLI, a town of Piedmont, with a magnificent castle, nine miles W. of Turin. Long. 7. 32. E. Lat. 45. 4. N.

RIVOLO, a town of Italy, in the Veronese, seated on the lake Garda, 20 miles N.W. of Verona. Long. 11. 1. N. Lat. 45. 34. N.

ROA, a strong town of Spain, in Old Castile, with a citadel, seated on the Douero, in a country fertile in corn and wine, 10 miles S.W. of Aranda, and 70 N. of Madrid. Long. 3. 22. W. Lat. 41. 35. N.

ROAD-HARROW *(Encycl.)*. Roads being frequently disfigured, and otherwise injured, by the deep ruts which are necessarily made by the continual passing and re-passing of narrow-wheel carriages, various machines have been contrived, with a view to facilitate the repairing of highways, and to fill up such excavations. From these, we shall first communicate the *Road-Harrow*, invented by Mr. Harriott, to whom the Society for the Encouragement of Arts, &c. in 1789, voted a reward of ten guineas. As this machine may not only be employed with great advantage by the surveyors of public roads, but will also be found very serviceable in repairing and improving the private ways, or avenues, belonging to manors, we have given a representation in 2d pl. 43.

The model, from which the figure was taken, is on the scale of two inches to one foot; so that the head of the harrow is three feet wide from one side of the bar to the other externally. These bars are four inches square, five feet long, and, to prevent them from being split, they are contrived lengthwise, instead of being in a transverse direction. The mould-boards are four feet two inches in length, ten inches in depth, and two in thickness: they extend eleven inches beyond the bars, in order that the stones (which are brought to the surface by the teeth of

the harrow) may be drawn into a smaller compass. These mould-boards are, further, shod with an iron bar, and lined with a plate of the same metal, to the height of the spot where they are marked black, in the engraved figure; and such parts of the delineation as are represented of a deeper colour, distinguish the iron from the wood-work. The teeth are one foot in length from the inferior side of the bars to their points, which ought to be steeled: they are 1¼ inch square, and are fixed by means of strong nuts and screws, with collars both on the upper and lower side of such bars.

Mr. Harriott's road-harrow is drawn by two horses abreast: the outside animal is led by a boy on that quarter; while the other horse walks in the proper path, and a man keeps the harrow steady by the handles: consequently they take one inside and one outside quarter in their progress, and the remainder two quarters in their return.

By this excellent machine, a man, boy, and two horses, may with ease repair three miles in length in one day; harrowing down the quarters, and drawing the stones together, which are dropped into the ruts, by means of the mould-boards, in a more effectual manner than if they were stubbed in by a man. Lastly, the work is performed not only more expeditiously, but also at one tenth part of the expence incurred, when the roads are repaired by manual labour.

In the 8th volume of the *Repertory of Arts*, &c. we meet with an account of a contrivance for preventing the wheels of carriages from making ruts in roads, by Robert Beatson, esq. This object is effected by fixing between the other wheels a *protector*, or small roller, or broad wheel: the circumference of its upper part should be about 1½ inch beneath the axletree, while the lower one ought to be at a similar distance from the ground. Such roller must be secured to the axletree, so as to be able to support the whole weight of the carriage, in case the principal wheels descend into any deep ruts. The size of the protector varies according to the proportions of these wheels; but Mr. B. observes, that two feet in diameter will be sufficient for single carts; and that double carriages, or waggons, will require it to be rather larger and broader. By thus elevating the roller a little distance above the lower surface of the wheels, the latter will, on good roads, support the weight of the load; and, if the middle or horse-path be firm, they cannot sink into old, or form any new, ruts; because the protector will roll in the middle, and thus afford an easier draught to the cattle. The additional weight of the machine, if it be properly constructed, Mr. Beatson conceives, will be inconsiderable; when compared with the utility of such contrivance, and the great reduction in the expence both of making and of repairing roads. A more comprehensive account of this invention the reader will find in the work above cited.

ROANNE, a populous and commercial town of France, in the department of Rhone and Loire, seated on the Loire, where it begins to be navigable for barks. Hence the merchandise of Lyons, Marseilles, and the Levant, is conveyed down the Loire, and by the canal of Braire, into the Seine, and thence to Paris. Roanne is 50 miles N.E. of Clermont, and 210 S.E. of Paris. Long. 4. 12. E. Lat. 46. 13. N.

ROASTER, a most ingenious kind of oven, lately invented by Count Rumford, by means of which the culinary process of *roasting* meat is effected in the most complete way, and with the least possible consumption of fuel. Under the article Oven, in this supplement, we have described, from Part II. of the Count's 10th Essay, an invention little inferior to this as a *roaster*, and more desirable in small families, since it also answers the purpose of *baking* at the same time.

Count Rumford gives the following account of the *roaster*, and of the principles on which it is constructed: "When I first set about to contrive this machine," says he, "meditating on the nature of the mechanical and chemical operations that take place in the culinary process in question, it appeared to me that there could not possibly be any thing more necessary to the roasting of meat than heat, in certain degrees of intensity, accompanied by certain degrees of dryness; and I thought, if matters could be so arranged, by means of simple mechanical contrivances, that the cook should be enabled, not only to regulate the degrees of heat at pleasure, but also to combine any given degree of heat with any degree of moisture or of dryness required; this would unquestionably put it in her power to perform every process of roasting in the highest possible perfection.

"The means I used for attaining these ends, will appear by the following description of the machinery I caused to be constructed for that purpose.

"The most essential part of this machinery, which I shall call the body of the roaster (see 2d pl. 43. fig. 1), is a hollow cylinder of sheet-iron, which, for a roaster of a moderate size, may be made about 18 inches in diameter, and 24 inches long; closed at one end, and set in an horizontal position in a mass of brick-work, in such a manner that the flame of a small fire, which is made in a closed fire-place directly under it, may play all round it, and heat it equally and expeditiously. The open end of this cylinder, which should be even with the front of the brick-work in which it is set, is closed either with a double door of sheet-iron, or with a single door of sheet-iron covered on the outside with a pannel of wood; and in the cylinder there is an horizontal shelf, made of a flat plate of sheet-iron, which is supported on ledges rivetted to the inside of the cylinder, on each side of it. This shelf is situated about three inches below the centre or level of the axis of the body of the roaster, and it serves as a support for a dripping-pan, in which, or rather over which, the meat to be roasted is placed.

"This dripping-pan, which is made of sheet-iron, is about two inches deep, 16 inches wide above, 15¼ inches in width below, and 22 inches long; and it is placed on four short feet, or, what is better, on two long sliders, bent upwards at their two extremities, and fastened to the ends of the dripping-pan, forming, together with the dripping-pan, a kind of sledge; the bottom of the dripping-pan being raised by these means about an inch above the horizontal shelf on which it is supported.

"In order that the dripping-pan on being pushed into or drawn out of the roaster may be made to preserve its direction, two straight grooves are made in the shelf on which it is supported, which, receiving the sliders of the dripping pan, prevent it from slipping about from side to side, and striking against the sides of the roaster. The front ends of these grooves are seen in fig. 1, as are also the front ends of the sliders of the dripping-pan, and one of its handles.

"In the dripping-pan, a gridiron (seen in fig. 1) is placed, the horizontal bars of which are on a level with the sides or brim of the dripping-pan, and on this gridiron the meat to be roasted is laid; care being taken that there be always a sufficient quantity of water in the dripping-pan to cover the whole of its bottom to the height of at least half or three quarters of an inch.

" This water is essential to the success of the process of roasting: it is designed for receiving the drippings from the meat, and preventing their falling on the heated bottom of the dripping-pan, where they would be evaporated, and their oily parts burnt or volatilized, filling the roaster with ill-scented vapours, which would spoil the meat, by giving it a disagreeable taste and smell.

" It was with a view more effectually to defend the bottom of the dripping-pan from the fire, and prevent as much as possible the evaporation of the water it contains, that the dripping pan was raised on feet or sliders, instead of being merely set down on its bottom on the shelf which supports it in the roaster.

" A late improvement has been made in the arrangement of the dripping-pan, by an ingenious workman at Norwich, Mr. Frost, who has been employed in putting up roasters in that part of the country; an invention which I think will, in many cases, if not in all, be found very useful. Having put a certain quantity of water into the principal dripping-pan, which is constructed of sheet-iron, he places a second, shallower, made of tin, and standing on four short feet, into the first, and then places the gridiron which is to support the meat in this second dripping-pan. As the water in the first keeps the second cool, there is no necessity for putting water into this; and the drippings of the meat may, without danger, be suffered to fall in o it, and to remain there unmixed with water. When Yorkshire puddings, or potatoes, are cooked under roasting meat, this arrangement will be found very convenient.

" In constructing the dripping-pans, and fitting them to each other, care must be taken that the second do not touch the first, except by the ends of its feet; and especially that the bottom of the second (which may be made dishing) do not touch the bottom of the first. The lengths and widths of the two dripping-pans above, or at their brims, may be equal, and the brim of the second may stand about half an inch above the level of the brim of the first. The horizontal level of the upper surface of the gridiron should not be lower than the level of the brim of the second dripping-pan; and the meat should be so placed on the gridiron that the drippings from it cannot fail to fall into the dripping-pan, and never upon the hot bottom or sides of the roaster.

" To carry off the steam which arises from the water in the dripping-pan, and that which escapes from the meat in roasting, there is a steam tube belonging to the roaster, which is situated at the upper part of the roaster, commonly a little on one side, and near the front of it, to which tube there is a damper, which is so contrived as to be easily regulated without opening the door of the roaster. This steam-tube is distinctly seen in fig. 1; and the end of the handle by which its damper is moved, may be seen in fig. 2.

" The heat of the roaster is regulated at pleasure, and to the greatest nicety, by means of the register in the ash-pit door of its fire-place (seen in fig. 2.) and by the damper in the canal, by which the smoke goes off into the chimney; which damper is not represented in any of the figures.

" The dryness in the roaster is regulated by the damper of the steam-tube, and also by means of a very essential part of the apparatus—the blow pipes—which still remain to be described. They are distinctly represented in the figs. 1, 2, and 3.

" These blow-pipes, which lie immediately under the roaster, are two tubes of iron, about 2½ inches in diameter, and 23 inches long, or about one inch shorter than the roaster; which tubes, by means of elbows at their further ends, are firmly fixed to the bottom of the roaster, and communicate with the inside of it. The hither ends of these tubes come through the brick-work, and are seen in front of the roaster, being even with its face.

" These blow-pipes have stoppers, by which they are accurately closed: but when the meat is to be browned, these stoppers are removed, or drawn out a little, and the damper in the steam-tube of the roaster being at the same time opened, a strong current of hot air presses in through the tubes into the roaster, and through the roaster into and through the steam-tube, carrying and driving away all the moist air and vapour out of the roaster.

" As these blow-pipes are situated immediately below the roaster, and just over the fire, and are surrounded on every side by the flame of the burning fuel (see fig. 3), they are much exposed to the heat; and when the fire is made to burn briskly, which should always be done when the meat is to be browned, they will be heated red hot, consequently the air which passes through them into the roaster will be much heated; and this hot wind, which blows over the meat, will suddenly heat and dry its surface in every part, and give it that appearance and taste which are peculiar to meat that is well roasted.

" When these roasters were first proposed, and before their merit was established, many doubts were entertained respecting the taste of the food prepared in them. As the meat was shut up in a confined space, which has much the appearance of an oven, it was natural enough to suspect that it would be rather baked than roasted; but all those who have tried the experiment have found that this is by no means the case. The meat is roasted, and not baked: and however bold the assertion may appear, I will venture to affirm, that meat of every kind, without any exception, roasted in a roaster, is better tasted—higher flavoured—and much more juicy and delicate, than when roasted on a spit before an open fire.

" In enumerating the excellences of this new implement of cookery, there is one of indisputable importance, which ought not to be omitted. When meat is roasted in this machine, its quantity, determined by weight, is considerably greater than if it were roasted upon a spit before a fire. To ascertain this fact, two legs of mutton, taken from the same carcase, and made perfectly equal in weight before they were cooked, were roasted on the same day, the one in a roaster, the other on a spit before the fire; and, to prevent all deception, the persons employed in roasting them were not informed of the principal design of the experiment. When these pieces of roasted meat came from the fire, they were carefully weighed; when it appeared, that the piece which had been roasted in the roaster was heavier than the other, by a difference which was equal to six per cent, or six pounds in an hundred. But this even is not all; nor is it indeed the most important result of the experiment. These two legs of mutton were brought upon table at the same time, and a large and perfectly unprejudiced company was assembled to eat them. They were both declared to be very good; but a decided preference was unanimously given to that which had been roasted in the roaster, it was much more juicy, and was thought better tasted. They were both fairly eaten up; nothing remaining of either of them that was eatable. Their fragments, which had been carefully preserved, being now collected and placed in their separate dishes; it was a comparison of these fragments which afforded the most striking proof of the relative merit of these two methods of roasting meat, in respect to the economy of food. Of the leg of mutton which had been roasted in the roaster,

hardly any thing visible remained except the bare bone; while a considerable heap was formed of scraps not eatable, which remained of that roasted on a spit."

"I believe," adds the Count, "I may venture to say, that the result of this experiment is deserving of the most serious attention, especially in this country, where so much roasted meat is eaten, and where the economy of food is every day growing to be more and more an object of public concern."

We must refer our readers to Count Rumford's Essay for directions respecting the management of this valuable invention, and for various other important particulars relating to it. Many persons of rank have been induced to prefer them in their kitchens; and they may be inspected at the Royal Institution in London.

Description of the figures in the plate.—Fig. 1. Represents the iron roaster with its materials complete; *a* is the body or the roaster, of cast-iron; *b* the hollow door, formed of two circular pieces of plate-iron; *c* a pipe of sheet-iron for carrying off the steam from the meat, having a small register at *g*; *d d* two cast-iron blow-pipes, which being placed within the fire-place, transmit *hot air*, when the stopper is drawn forth, for the purpose of *browning* the meat; *e* the dripping pan, placed on a horizontal shelf, and containing a trivet on which the meat is to be placed; *f f* the two turn-buckles which fasten the door, seen more distinctly in fig. 2; *g* a small wire handle which turns the register within the steam-pipe *c*; *h* a square frame of iron, through which a small twisted-wire brush may be introduced to sweep the soot, when necessary, from the top and sides of the roaster. The same letters refer to the same parts in the other figures.

Fig. 2. Shews the roaster set in brick-work, with its closed fire-place; *i* is the double door of sheet iron, more distinctly shewn at *i*, *m*, in fig. 3; *k* the ash-pit door with its register *l*.

Fig. 3. Is a section of the roaster, fire-place, and brick-work; *m* is the inner plate of the fire-place door; *n* the grate on which the burning fuel B rests above the ash-pit; A C D the open space which surrounds and passes behind the roaster from the fire-place beneath; E F the passages by which the smoke escapes; G shews the inside of the roaster which contains a piece of meat, *o*, supposed to be roasting.

ROBBEN ISLAND, sometimes called Penguin Island, a barran sandy island, near the Cape of Good Hope. Long. 18. 22. E. Lat. 33. 50. S.

ROBIL, a town of Lower Saxony, in the duchy of Mecklenburg, seated on the river Muretz.

ROCAMADOUR, a town of France, in the department of Lot, 23 miles N. of Cahors. Long. 1. 32. E. Lat. 44. 48. N.

ROCCA-D'ANFO, a strong town of Italy, in the Bresciano, seated on the lake Idro, 25 miles S.E. of Trent. Long. 11. 40. E. Lat. 45. 50. N.

ROCCA-ANNONE, and ROCCA-D'ARBAZZE, two forts of Italy, in Montferrat, each of which is seated on a mountain, in the road from Asti to Alexandria.

ROCELLA, a town of Naples, in Calabria Ulteriore, near which is a celebrated coral fishery, 10 miles N.E. of Geirace. Long. 16. 47. E. Lat. 38. 20. N.

ROCHE, a town of Switzerland, subject to the canton of Bern, which has here a director of the salt works. Roche is celebrated for the residence of the celebrated Haller, who filled that office from 1758 to 1766.

ROCHE, or ROCHE-EN-ARDENNES, a town of the Netherlands, in the duchy of Luxemberg, with a strong castle, seated on a rock, near the river Ourte, 22 miles S. of Liege, and 32 N.W. of Luxemberg. Long. 5. 40. E. Lat. 50. 15. N.

ROCHE BERNARD, a town of France, in the department of Morbihan, seated on the river Vilaine, 23 miles E. of Vannes.

ROCHE CHOUART, a town of France, in the department of Upper Vienne, with a castle on the top of a mountain, on the declivity of which the town is seated, near a small river that falls into the Vienne, 60 miles S. by E. of Poitiers, and 189 S. by W. of Paris. Long. 0. 53. E. Lat. 45. 46. N.

ROCHE MACHERAN, a town of the Netherlands, in the duchy of Luxemburg, with a strong castle, 15 miles N.E. of Luxemburg. Long. 6. 25. E. Lat. 49. 46. N.

ROCHE-POSAY, a town of France, in the department of Indre and Loire, remarkable for its mineral waters. It is seated on the Creuse, 25 miles S. of Roche. Long. 0. 50. E. Lat. 45. 46. N.

ROCHE-SUR-YON, a town of France, in the department of Vendee, seated near the Yon, 20 miles N.W. of Luçon, and 202 S.W. of Paris. Long. 1. 31. W. Lat. 46. 40. N.

ROCHEFORT, a town of the Netherlands, in the duchy of Luxemburg, with a castle, said to have been built by the Romans. Here the celebrated general La Fayette was seized and made prisoner by the Austrians. It is surrounded by rocks, 15 miles S.E. of Diant, and 50 N.W. of Luxemburg. Long. 5. 10. E. Lat. 50. 12. N.

ROCHEFORT, a town of France, in the department of Morbihan, 17 miles E. of Vannes, and 40 S.W. of Rennes. Long. 2. 26. W. Lat. 47. 42. N.

ROCHEFOUCAULT, a town of France, in the department of Charente, with a castle. It is seated on the Tardouere, 12 miles N.W. of Angoulême, and 208 S. by W. of Paris. Long. 0. 29. E. Lat. 45. 46. N.

ROCHESTER, a village in Northumberland, on the Watling-street, N.W. of Otterburn, and near the source of the Read. It has some Roman altars, inscriptions, and and other antiquities.

ROCHETTA, a town of Italy, in the county of Nice, 16 miles N.E. of Nice. Long. 7. 33. E. Lat. 43. 52 N.

ROCHILZ, a town of Upper Saxony, in the territory of Leipsic, with a castle, copper-mines, and a handsome bridge over the Muldaw, 24 miles S.E. of Leipsic, and 36 W. of Dresden. Long. 12. 46. E. Lat. 51. 10. N.

ROCKBRIDGE, a county in the state of Virginia, between the Allegany Mountains and the Blue Ridge, which receives its name from a curious natural bridge. See CEDAR CREEK.

ROCKINGHAUSEN, a town of Germany, in the palatinate of the Rhine, 26 miles W. of Worms.

ROCKISAW, a town of Bohemia, in the circle of Pilsen, 11 miles E. of Pilsen.

ROCOUX, a village of the Netherlands, near Liege, remarkable for a victory gained by the French over the allies in the year 1746.

ROCROY, a town of France, in the department of Ardennes, seated in a plain surrounded by forests. It is celebrated for the victory which the Prince of Condé, then Duke of Enghien, gained over the Spaniards, in 1643. It is 26 miles N. of Rethel. Long. 4. 27. E. Lat. 49. 56. N.

RODACH, a town of Upper Saxony, in the principality of Coburg, situate on a river of the same name, six miles W.N.W. of Coburg.

RODESTO, RODOSTO, or RUDISTO, a populous seaport of Turkey in Europe, in Romania, with a Greek

bishop's see. It is seated on the side of a hill, on the sea of Marmora, 62 miles S.W. of Constantinople. Long. 27. 37. E. Lat. 41. 1. N.

RODEZ, an ancient town of France, in the department of Aveiron. Here are four great annual fairs, where mules are sold for Spain; and some manufactures of grey cloths and surges. It is a bishop's see; and the steeple of the cathedral, remarkable for its height, is much admired for its architecture. It is seated in the midst of mountains, on a hill, at the foot of which flows the rapid Aveiron, 30 miles W. by S. of Mende. Long. 2. 39. E. Lat. 44. 21. N.

RODOK, a town of Hindoostan Proper, in the province of Delhi, 50 miles E. of Hissar, and 60 W.N.W. of Delhi. Long. 76. 30. E. Lat. 29. 10. N.

ROER, a river of Westphalia, which rises in the duchy of Juliers, passes by the town of that name, and falls into the Maese above Runemonde.

ROER, a river of Germany, which rises in the circle of Upper Rhine, waters Arensberg, and falls into the Rhine below Duisburg.

ROEUX, a town of the Netherlands, in the Austrian Hainault, eight miles N.E. of Mons. Long. 4. 12. E. Lat. 50. 31. N.

ROGLIANO, a town of Naples, in Calabria Citeriore, nine miles S.S.E. of Cosenza. Long. 16. 23. E. Lat. 39. 15. N.

ROGONATPOUR, a town of Hindoostan Proper, in the country of Bengal, 106 miles S.W. of Moorshedabad, and 108 N.W. of Calcutta.

ROHACZOW, a town of Lithuania, capital of a district of the same name; seated at the confluence of the Dnieper and Ordrwa, 37 miles N.W. of Rzeczica, and 158 N. of Kiof. Long. 30. 40. E. Lat. 53. 2. N.

ROHAN, a town of France, in the department of Morbihan, seated on the Aoust, 20 miles N. of Vannes. Long. 2. 42. W. Lat. 48. 0. N.

ROHILCUND, or ROHILLA, a territory of Hindoostan Proper, whose inhabitants are called Rohillas. It lies to the N. of Delhi, and is subject to the nabob of Oude, by whom it was conquered in 1774. Bereilly is the capital.

ROLDUC, a town of the Netherlands, in the duchy of Limburg, capital of a territory of the same name, with a castle, seven miles N. of Aix-la-Chapelle. Long. 6. 6. E. Lat. 50. 55. N.

ROLLRICH STONES, in Oxfordshire, N. of Stanton Harcourt, six miles W. of Oxford. It is a circle of stones standing upright, which the vulgar have a notion were men petrified. Antiquaries disagree with respect to the origin and intention of this ancient monument.

ROM, or ROEM, an island of Denmark, on the E. coast of South Jutland. It is five miles in length, and half as much in breadth, and contains a few villages.

ROMAIN-MOTIER, a town of Switzerland, in Pays de Vaud, capital of a bailiwic, with a castle. It is seated at the foot of a mountain, in a narrow valley, through which flows the river Diaz.

ROMANO, a strong and populous sown of Italy, in Bergamosco. It carries on a great trade in corn, and is seated on a river that runs between the Oglio and Serio.

ROMANS, an ancient town of France, in the department of Drome, seated in a fine plain, on the river Isere, 22 miles S.W. of Grenoble, and 30 S. of Vienne. Long. 5. 12. E. Lat. 45. 2. N.

ROMELIA, the general name given by the Turks to their European dominions.

ROMENAY, a town of France, in the department of Saone and Loire, eight miles S.E. of Tournus, and 15 N.N.E. of Macon. Long. 5. 5. E. Lat. 46. 30. N.

ROMERSTADT, a town of Moravia, in the neighbourhood of which are some iron mines. It is 20 miles N.N.E. of Olmutz. Long. 17. 45. E. Lat. 52. 20. N.

ROMHILDEN, a town of Franconia, with a castle. It belongs to the Duke of Saxe Altenburg.

ROMNA, a town of Russia, in the government of Tchernigof, 28 miles S.S.E. of Tchernigof. Long. 33. 24. E. Lat. 50. 36. N.

ROMONT, or RODMONT, a strong town of Switzerland, in the canton of Friburg, seated on a mountain, 10 miles from Friburg, and 12 from Bern. Long. 7. 1. E. Lat. 46. 50. N.

ROMSDAL, a town of Norway, capital of a provostship, in the diocese of Drontheim, 100 miles S.S.W. of Drontheim. Long. 7. 54. E. Lat. 62. 28. N.

RONCEVALLOS, a town of Spain, in Navarre, situate in a valley to which it gives name, 14 miles N.N.E. of Pampeluna. Long. 1. 25. W. Lat. 42. 54. N.

RONDA, a strong town of Spain, in Grenada, with a castle. It was taken from the Moors in 1485, and is seated on a craggy rock near the Rio Verde, 20 miles N.W. of Gibraltar, and 62. S.E. of Seville. Long. 5. 12. W. Lat. 36. 40. N.

RONNEBURG, a town of Upper Saxony, in the principality of Altenburg, 12 miles S.W. of Altenburg, and 60 W. of Dresden. Long. 12. 7. E. Lat. 50. 48. N.

ROOM (*Encycl.*). In June, 1801, a patent was granted to Mr. Winter, of Shacklewell, in Middlesex, for a kind of paper manufacture for covering the floors of rooms, for packing goods, and various other purposes.

"*First*," says the patentee, "I procure from the tanners' yards the waste tan or bark, after it has been used for the purposes of tanning. This I cause to be well washed, and freed from dirt, and the fibrous parts picked and separated from those which are more brittle. The tan or bark so prepared I cause to be boiled for a considerable time until the fibres are so softened as readily to separate, and be bruised. I then bruise this softened tan or bark, either by passing it through large iron or wooden rollers, after the manner of flattening mills, except that the rollers are placed by the side of each other in a horizontal position, in order to their being fed, instead of being placed one above the other; or by large wooden stampers or mallets, shod with iron. When it has been thus bruised, I cause it to be again well washed in large sieves, through which pass the remaining brittle particles, and leave the fibres fit for use.

"*Secondly*, I procure, from the different manufacturers of leather, the shreds, or scrapings, or parings of leather, of any description, which are the refuse of sweepings of their shops or warehouses; which pieces of leather I cause to undergo the same operations of picking, washing, and bruising, as before mentioned, with respect to the tan or bark, until it becomes a pulp; but I do not wash it again after it is reduced into that state.

"*Thirdly*, I procure the short hair of animals, of any description, which I cause to be also well washed, and (when it is dry) separated by being beaten with sticks, so that it may the more completely interweave and unite with the other before-mentioned ingredients of the fibres of the tan or bark, and pulp of the leather.

"My principal ingredients being so prepared, I take a proportionate quantity of each, accordingly as I want my

manufacture to be firm or flexible, fit to be used in the sheathing of ships, covering of floors, for button-boards, or the common packages of merchandize, but generally in the proportion of one hundred weight of the fibres of the tan or bark to half a hundred weight of the pulp of the leather, and one quarter of a hundred weight of the hair; the whole of which I cause to be well mixed together, adding thereto, and strewing, as equally as possible, amongst the whole mass, a small quantity (that is, in the proportion of five pounds to one hundred weight of the principal mixture) of refuse tow or wadding, or the sweepings or refuse of wool-chambers, previously cut short and separated. This mixture is then beaten altogether with hammers or stampers, in large mortars, and a little water added to it, as occasion may require, to keep, as much as possible, any particular ingredient from adhering together. After being thus beaten, until the ingredients are fully blended and intermixed, the whole is conveyed into receivers or vats, and warm water (previously made a little glutinous by boiling in it a few pounds of the pieces of pelts or skins from which glue is made, or of the glue itself, in quantity accordingly as I want my water to be of a stronger or weaker gluten, but generally in the proportion of four pounds of the skins, or two pounds of glue, to ten gallons of water, skimming off the fat which arises on the boiling of the pieces of pelts) added by degrees, the whole of the mass being kept constantly stirred until the particles float in the water. In this state it is moulded in frames, similar to those commonly used in the manufacture of paper; from which frames it is turned out and pressed between flannels, till the water has drained from it; and, when nearly dry, it is taken from the flannels, and again put into a press without the flannels; whence it is taken out, and hung up to dry: when dried, it is fit for use."

ROOT-STEAMER, an useful machine, employed in America, for steaming potatoes, carrots, and other roots, with the view of feeding cattle; and which, for the simplicity of its contrivance, and the facility with which vegetables may be thus prepared, deserves to be more generally known in Britain. We have therefore given a representation of it in Pl. 45.

The apparatus there delineated, consists of a brick-stove, in which a pot or kettle is fixed: over this boiler is placed a hogshead or cask, the top of which is open (we believe it might with more advantage be covered with a wooden lid); while the bottom is drilled with numerous holes, about one inch in diameter; so that the steam may freely pass through the roots. In this vessel, the potatoes, &c. after being washed, are deposited; and, when sufficiently steamed, they afford a more invigorating and fattening food for cattle, than in a raw state.

A root-steamer on an improved construction is sold by the Rev. Mr. Cook, the inventor of the drill machine. This is so contrived as to be easily lifted off the boiler by means of a compound lever, and the roots discharged in an instant by withdrawing a pin which keeps the perforated bottom of the cask in its place.

ROQUE, St. a large village of Spain, in Andalusia, at the entrance of the Isthmus which separates Gibraltar from the continent. It is seated on the top of a hill, overlooking the bay, and has several batteries, and a fort at each end, to defend the lines which run across the isthmus.

ROQUE DE MARSAN, a town of France, in the department of Landes, seated on the Douese, 10 miles N.E. of Monte de Marsan.

ROQUEBRUNE, a town of Italy, in the principality of Monaco, with a castle, seated near the sea, three miles from Monaco.

ROQUEMAURE, a town of France, in the department of Gard, seated on a craggy rock, near the Rhone, 22 miles N.E. of Nismes. Long. 4. 48. E. Lat. 44. 2. N.

ROQUETAS, a town of Spain, in Granada, on the coast of the Mediterranean, 10 miles S.W. of Almeria, and 52 S.E. of Granada. Long. 2. 5. W. Lat. 56. 51. N.

ROSANA, a town of Lithuania, in the palatinate of Novogrodec, seated near the Zolva, 20 miles S.W. of Novogrodec. Long. 25. 45. E. Lat 55. 30. N.

ROSCHAD, a commercial town of Switzerland, in a bailiwic of the abbey of St. Gallen, with a castle on a mountain. It is seated on the lake of Constance.

ROSES, a sea-port of Spain, in Catalonia, with a citadel, seated on the bay of Roses, in the Mediterranean, 15 miles N.E. of Gironna. It was taken by the French in 1693, and in 1795. Long. 3. 1. E. Lat. 42. 16. N.

ROSES, OTTAR OF (*Encycl.*). The Royal Society of Edinburgh received from Dr D. Monro the following account of the manner in which that costly perfume is prepared in the East It was given him by a gentleman who had actually assisted in making it. A large quantity of the petals of the rose, freed from every extraneous matter, are steeped in pure water, in an earthern or wooden vessel, which is exposed daily to the sun, and housed at night, till a scum rises to the surface. This scum, which is the *ottar*, is carefully absorbed by a very small bit of cotton tied to the end of a stick. The oil, as it is collected, is squeezed out of the cotton into a very diminutive vial, and stopped for use. The collection of it should be continued from time to time whilst any scum is produced.

ROSHAAN, a country of Asia, lying to the W. of the kingdom of Burmah, to which it is subject.

ROSIENNE, a town of Samogitia, seated on the Dubisse, 70 miles S. of Mittau, and 188 N.E. of Warsaw. Long. 23. 45. E. Lat. 55. 30. N.

ROSOY, a town of France, in the department of Seine and Marne, with a magnificent castle, 15 miles S. of Meaux. Long. 2. 59. E. Lat. 48. 40. N.

ROSS, a sea-port of Ireland, in the county of Cork. It is united to Cork as an episcopal see, and is seated on a bay of the Atlantic, 20 miles S.W. of Kinsdale. Long. 8. 58. W. Lat. 51. 32. E.

ROSS, NEW, a sea-port of Ireland, in Wexford, situate on the Barrow, which is navigable for large vessels up to the quay. The town has a considerable trade, and exports a great quantity of butter and beef. It is 11 miles N.E. of Waterford, and 17 W. of Wexford. Long. 6. 58. W. Lat. 51. 22. N.

ROTA, a town and castle of Spain, in Andalusia, at the entrance of the bay of Cadiz, seven miles N. of Cadiz. Long. 6. 16. W. Lat. 36. 35. N.

ROTA, an island of Asia, one of the principal of the Ladrones.

ROTAS, a town of Hindoostan Proper, in the country of Bahar, 65 miles S.E. of Benares, and 85 S.W. of Patna. Long. 83. 50. E. Lat. 24. 50. N.

ROTENBERG, a town of Germany, in Bavaria, the capital of a lordship of the same name, 12 miles N.E. of Nuremberg, and 46 N.W. of Ratisbon. Long. 11. 20. E. Lat. 49. 35. N.

ROTENBERG, a town of Switzerland, in the canton of Lucern, four miles N. of Lucern.

ROTENBURG, a free imperial town of Franconia, seated on the Tauber, 15 miles N.W. of Anspach. Long. 10. 23. E. Lat. 49. 23. N.

Rotenburg, a town of Suabia, in the county of Hoenburg, with a castle. It belongs to the house of Austria, and is remarkable for its mineral waters. It is seated on the Neckar, seven miles W. of Tubingen. Long. 8. 55. E. Lat. 48. 28. N.

Rotenburg, a town of Germany, in the langravate of Hesse-Cassel, with a castle, seated on the Fulde, 25 miles S. of Cassel. Long. 9. 30. E. Lat. 50. 55. N.

ROTTERDAM, one of the Friendly Islands, in the S. Pacific Ocean, discovered by Tasman. Long. 174. 30. W. Lat. 20. 16. S.

ROTTINGEN, a town of Franconia, in the bishopric of Wurtzburg, situate on the Tauber, nine miles N.E. of Mergentheim, and 13 W.N.W. of Rottenburg. Long. 8. 55. E. Lat. 49. 35. N.

ROTHWEIL, a free imperial city of Suabia, in alliance with the Swiss cantons since the year 1513. A mile and a half from this place is a famous abbey, where they receive none but noble women. It is seated on the Neckar, near its source, and also near the Danube, 27 miles S.S.W. of Tubingen. Long. 8. 44. E. Lat. 58. 9. N.

ROVERBELLA, a town of Italy, in the duchy of Mantua, 12 miles N.N.W. of Mantua. Long. 10. 42. E. Lat. 45. 18. N.

ROUBLE. See St. George, *Supp.*

ROUSSELART, a town of France, in the department of the north, 10 miles N.E. of Ypres, and 20 S.E. of Ostend. Long. 3. 0. E. Lat. 50. 58. N.

ROXBURGH, a town and castle of Scotland, which gives name to a county. It is situate near the Tiviot, 19 miles S.W. of Berwick, and 32 S.E. of Edinburgh. Long. 2. 47. W. Lat. 55. 46. N.

ROYAN, once a large town of France, in the department of Lower Charente, famous for a siege maintained by the Huguenots against Lewis XIII. in 1622. It is now almost in ruins, and is seated at the mouth of the Garonne, 30 miles S. of Rochelle. Long. 0. 57. W. Lat. 45. 38. N.

ROYES, a strong town of France, in the department of Somme. Some mineral waters were discovered here a few years ago. It is 12 miles N.W. of Noyon, and 60 N. by E. of Paris. Long. 2. 51. E. Lat. 49. 46. N.

RUATAN, an island of New Spain, in the bay of Honduras, 10 miles from the coast, with a good harbour.

RUBIERA, a small but strong town of Italy, one of the keys of the Modenese, seated on the Seccia, eight miles N.W. of Modena. Long. 11. 14. E. Lat. 44. 39. N.

RUDAW, a town of Prussia, remarkable for the victory obtained by the knights of the Teutonic order in 1370, over Kinstud, great-duke of Lithuania; in memory of which a stone pillar was erected, which is still remaining. It is 12 miles N.N.W. of Konigsberg.

RUDDER (*Encycl.*). The following is extracted from the specification of a patent granted to Capt. Bolton, of the Royal Navy, for an improved rudder, and the means of preserving the rudder of a vessel: it is dated June 23, 1801.

His invention consists in fixing the rudder, so that when the vessel touches the ground, it will rise of itself, or it may be lifted at will by any of the ordinary mechanical powers, as screws, lever, tooth and pinion, &c. This is effected by hanging the rudder on a metal bar, bolt, or slide, passing through the braces, or a solid frame fixed to the stern-post; those braces on the aft side being made to correspond to the bar, bolt, or slide. In Pl. 41. fig. 1, A is the rudder; B the bar, bolt, or slide, to which the rudder is hung; C, Braces corresponding to B, and which confine it to the stern-post; D, the stern-post; E, screw-bolt, passes through the head of B (which is tapped), by turning the lever *d*, raises the rudder; F, iron tiller, which spars the rudder-head, and through which the rudder and B slide when lifting. *a*, pintles; *b*, goodings, cast solid with B. Capt. Bolton's *improved rudder* consists of the means of enlarging its size whenever it may be necessary. The rudder is slit down, or it may be made in two parts, in which is inserted a piece of wood, or metal plate, similar to A, fig. 2, the upper end of which is circular, and furnished with teeth, and turns on its centre. A bolt, B, passes through, or at the back of the rudder, and either throws out or draws in A, by turning to the right or left. In order to strengthen the rudder, either screw or shoulder-bolts, as *b*, *b*, may be fitted; and grooves, as *a*, *a*, will traverse over them.

RUDKIOBING, a sea-port of Denmark, in the island of Langeland, which has a considerable trade in corn and provisions. Long. 10. 45. E. Lat. 55. 1. N.

RUDOLFWERD, a strong town of Germany, in Carniola, with an abbey. It is seated on the Gurck, in a country fertile in good wine, 45 miles S.E. of Laubach. Long. 15. 20. E. Lat. 46. 8. N.

RUFFAC, a town of France, in the department of Upper Rhine, seated on the Rotbach, seven miles S. of Colmar, and 17 N.W. of Basle. Long. 7. 27. E. Lat. 47. 58. N.

RUFFEC, a town of France, in the department of Charente, seated on the Anche, 24 miles N. of Angoulême.

RUGBY, a town in Warwickshire, with a market on Saturday, and a famous free-school. It is 11 miles S.E. of Coventry, and 85 N.N.W. of London. Long. 1. 12. W. Lat. 52. 24. N.

RUGLEY, a town in Staffordshire, with a market on Tuesday, seated on the Trent, 10 miles S.E. of Stafford, and 126 N.W. of London. Long. 1. 48. W. Lat. 52. 57. N.

RUGENWALD, a town of Prussian Pomerania, the chief place of the duchy of Wenden, with a castle, seated on the Wipper, eight miles from the Baltic, and 35 N.E. of Colberg. Long. 16. 27. E. Lat. 54. 35. N.

RUMFORD, a town in Essex, with a market for hogs on Tuesday, and for corn on Wednesday, 12 miles E.N.E. of London. Long. 0. 13. E. Lat. 51. 36. N.

RUMILLY, a town of Savoy, seated on an elevated plain, at the confluence of the Seram and Nepha, five miles from Annecy. Long. 6. 10. E. Lat. 45. 56. N.

RUMSEY, a corporate town in Hampshire, with a market on Saturday. It is governed by a mayor, has a manufacture of shalloons, and several paper and corn mills. It is eight miles N.N.W. of Southampton, and 74 W. by S. of London. Long. 131. W. Lat. 51. 2. N.

RUNGPOUR, a town of Hindoostan Proper, in Bengal, 73 miles N.E. of Mauldah, and 106 N.N.E. of Moorshedabad.

RUNKEL, a town of Westphalia, situate on the Lahn, with a citadel, on a high hill, formerly the residence of the counts, 14 miles E. of Nassau. Long. 8. 5. E. Lat. 50. 23. N.

RUNNYMEAD, a celebrated mead, near Egham, in Surrey, where King John was compelled to sign Magna Charta and Charta de Foresta. See Wraysbury.

RUPEL, a river of the Austrian Netherlands, formed by the junction of the Senne and Demer, below Mechlin. After

receiving the canal from Brussels, it joins the Scheldt, at Rupelmonde.

RUPELMONDE, a town of Austrian Flanders, seated on the Scheldt, opposite the mouth of the Rupel, eight miles S.W. of Antwerp, and 22 N.E. of Ghent. Long. 4. 23. E. Lat. 51. 7. N.

RUPERDORF, a town of Bohemia, in the circle of Konigingratz, four miles N.N.W. of Braunau.

RUPERT, Fort, a fort belonging to the Hudson's Bay Company, seated on the E. side of the S. end of Hudson's Bay. Long. 80. 0. W. Lat. 51. 3. N.

RUREMONDE, a strong town of Austrian Guelderland, with a bishop's see. It suffered greatly by fire in 1665, and has been taken and retaken several times; particularly in 1793, by the French, who were obliged to evacuate it soon after, but took it again the next year. It is seated near the confluence of the Maese and Roer, 12 miles S. of Venlo, and 70 N.E. of Mechlin. Long. 5. 50. E. Lat. 51. 8. N.

RUSS, a town of Prussian Lithuania, and principal place of a district, situate at the mouth of the river Russe, 20 miles N.W. of Tilsit. Long. 21. 50. E. Lat. 55. 20. N.

RUSSELSHEIM, a town of Germany, in the principality of Hesse Darmstadt, situate on the Maine, six miles E. of Mentz, and 13 N.W. of Darmstadt. Long. 8. 16. E. Lat. 49. 55. N.

RUSTGADEN, a town of Sweden, in the province of Dalecarlia, 23 miles S.S.W. of Fahlun. Long. 16. 30. E. Lat. 60. 18. N.

RUTCHESTER, a village in Northumberland, the Vindobala of the Romans. Severus' wall runs on the middle of the E. rampart, and Adrian's vallum passes about the distance of a chain to the S. of it. This fort has been very considerable, and the ruins of it are remarkable. It is six miles N. of Hexham.

RUTHIN, a town in Denbighshire, with a market on Monday. It is seated in a vale, on the river Clwyd, and had a strong castle, now in ruins. It is 15 miles S.W. of Holywell, and 206 N.W. of London. Long. 3. 30. W. Lat. 53. 7. N.

RUTLAM, a town of Hindoostan Proper, in the province of Malwa, 48 miles W. of Ougein, and 136 E. of Amedabad. Long. 74. 58. E. Lat. 23. 25. N.

RUTIGLIANO, a town of Naples, in Terra di Bari, five miles S.E. of Bari.

RUTTUNPOUR, a city of the peninsula of Hindoostan, in Orissa, and the capital of one of the Western Mahratta chiefs. Long. 82. 36. E. Lat. 22. 16. N.

RUVO, a populous town of Naples, in Terra di Bari, with a bishop's see, 16 miles W. of Bari. Long. 16. 44. E. Lat. 41. 26. N.

RUZA, a town of Russia, in the government of Moscow, 48 miles W.N.W. of Moscow. Long. 36. 2. E. Lat. 55. 46. N.

RYACOTTA, a town of Hindoostan, in the Mysore country, 75 miles S. of Seringapatam, and 85 W.S.W. of Arcot. Long. 76. 45. E. Lat. 30. 15. N.

RYAN, Loch, a lake in the N.W. angle of Wigtonshire. The sea flows into it through a narrow pass; and it was formerly crowded, in the season, with shoals of herrings.

RYDAL-WATER, a lake in Westmoreland, a little to the W. of Ambleside. It is one mile in length, spotted with little islands; and communicates, by a narrow channel, with Grasmere-water to the W. and, by the river Rothay, with Windermere-water to the S.

RYDROOG, a town and fortress of Hindoostan, in the Mysore country, 128 miles N. of Seringapatam. Long. 76. 52. E. Lat. 14. 40. N.

RYEGATE, a borough in Surrey, with a market on Tuesday. It had a castle, some ruins of which are still to be seen; particularly a long vault, with a room at the end, large enough to hold 500 persons, where (according to tradition) the barons, who took up arms against King John, held their private meetings. It is seated in a valley, called Holmesdale, 16 miles E. of Guilford, and 21 S.W. of London. Long. 0. 15. W. Lat. 51. 16. N.

RYMENAUT, a town of Brabant, situate on the Dyle, five miles E. of Mechlin.

RZECZICA, a town of Lithuania, capital of a territory of the same name. It is seated at the confluence of the Wyedszwck and Dnieper, 125 miles N. of Kiof. Long. 31. 5. E. Lat. 50. 32. N.

S.

SAADAH, a ſtrong and populous town of Arabia Felix, where much Turkey leather is made. It is 140 miles W.N.W. of Sanaa. Long. 44. 55. E. Lat. 17. 50. N.

SAALEFELD, a town of Upper Saxony, in the principality of Altenburg. Here are manufactures of cloth and ſilk ſtuffs: it is likewiſe the mint-town for the circle of Upper Saxony. It ſtands on the Saal, 20 miles N.N.E. of Coburg, and 46 S.W. of Altenburg. Long. 11. 22. E. Lat. 50. 31. N.

SAATZ, or ZATEC, a town of Bohemia, which gives name to a circle. It is ſituate on the Eger, 25 miles S.W. of Leutmeritz, and 44 S. of Dreſden. Long. 4. 15. E. Lat. 50. 16. N.

SABA, a town of Perſia, in Irac-Agemi, on the road from Sultania to Kom. Long. 52. 15. E. Lat. 34. 56. N.

SABANDGE, a town of Turkey in Aſia, in Natolia. Here all the roads from Aſia to Conſtantinople meet. It is ſituate on a lake which abounds in fiſh, 60 miles E.S.E. of Conſtantinople. Long. 29. 40. E. Lat. 40. 30. N.

SABATZ, or SABACZ, a town and fortreſs of Turkey in Europe, in Servia. It was taken by the Imperialiſts in 1789. It is ſituate on the Drave, 22 miles S. of Peterwaradin, and 28 W. of Belgrade. Long. 20. 2. E. Lat. 45. 5. N.

SABIA, a kingdom on the E. coaſt of Africa, bounded on the N. by Sofala, on the E. by the Moſambique, on the S. by unknown regions, and on the W. by Manica. It has mines of gold, and many elephants. Manbone is the capital.

SABIA, a cape of Africa, in the kingdom of Tripoli, at the bottom of the gulf of Sidra.

SABIE, a ſea-port of Denmark, ſituate on the E. coaſt of N. Jutland, at the mouth of a river of the ſame name, 23 miles N.N.E. of Alburg. Long. 10. 18. E. Lat. 57. 20. N.

SABIONCELLO, a peninſula of Dalmatia, to the S. of the gulf of Narenta, and to the N. of a channel which ſeparates the iſlands of Curzola and Melida.

SABIONCELLO, a town of Dalmatia, in the republic of Raguſa, ſituate on the peninſula of the ſame name, 45 miles N.W. of Raguſa. Long. 17. 40. E. Lat. 43. 20. N.

SABIONETTA, a ſtrong town of Italy, in the Milaneſe, capital of a duchy of the ſame name, with a caſtle. It belongs to the houſe of Auſtria, and is 20 miles E. of Cremona. Long. 10. 30. E. Lat. 45. 0. N.

SABLE, an ancient and populous town of France, in the department of Sarte, with a caſtle. In the neighbourhood are ſome quarries of black marble. It is ſeated on the Sarte, 25 miles N.E. of Angers, and 135 S.W. of Paris. Long. 0. 24. W. Lat. 47. 50. N.

SABLES D'OLONNE, a commercial town of France, in the department of Vendée, with a port capable of containing veſſels of 150 tons. It is ſeated on the bay of Biſcay, 31 miles W. of Luçon. Long. 1. 36. W. Lat. 46. 30. N.

SACCAI, a ſtrong city and ſea-port, one of the moſt famous in Japan, with ſeveral caſtles, temples, and palaces. It is ſeated on the ſea, and has a mountain on one ſide, which ſerves as a rampart, 300 miles S.W. of Jedo. Long. 134. 5. E. Lat. 35. 0. N.

SACCHAROMETER, an inſtrument contrived by Mr. Richardſon of Hull, upon the principle of the HYDROMETER, for *meaſuring the ſweetneſs of* WORTS, or malt infuſions; by compariſon with the ſpecific gravity of the water employed in the proceſs. The principle is well known, and the making of ſuch an inſtrument is in every one's power without any preciſe inſtructions.

SADDLE (*Encycl.*). The following is the ſpecification of a patent granted to Mr. Inglis, of Chelmsford, in Eſſex, for a ſaddle upon a new conſtruction, the ſtirrup-bars of which are ſo contrived that ſhould the rider, by accident, be thrown off, or fall from, his horſe, he will immediately upon falling be diſengaged. It is dated May 21, 1801.

"The nature of my invention," ſays Mr. Inglis, "is to give elaſticity to the ſeat of the ſaddle, and conſequently eaſe to the rider, by means of a ſpring introduced into the long ſtraining web; and to attach the ſtirrup-bar to the ſaddle by means of a bolt or faſtening, connected with the rider in ſuch a manner, that on falling off, or by being thrown, he draws the bolt or faſtening, and detaches the ſtirrup from the ſaddle. The manner in which this is performed is as follows: Take a common ſaddle-tree, and being provided with a ſtrong ſpring of ſteel, or other metal (ſee Pl. 44. fig. 2), inſtead of fixing the long ſtrained web in the uſual manner, take a piece, of a ſufficient length, when doubled, and put over one arm of the ſpring, as at *a*, and nailed to the head of the tree in the uſual manner, will juſt ſuffer the ſpring to clear the head, and work free; the other part of the web is to go over the other arm of the ſpring at *b*, and inſtead of being nailed down on each ſide upon the bar of the ſaddle-tree, within ſide the cantle, is to be paſſed through two ſlits, to be cut in the two ſides of the cantle, about three quarters of an inch above the bar, and nailed on the lower part of the outſide of the cantle, as deſcribed in fig. 3. By the web being thus elevated, and paſſed through the cantle, it will be allowed to play with the elaſticity of the ſpring without being preſſed down upon the tree, and in fixing this part of the long web, care muſt be taken that the ſpring be not ſtretched in doing it, nor the web left ſlack, but it muſt be drawn and fixed in a workman-like manner; the ſpring will then reſt in a horizontal poſition over the gullet of the ſaddle, immediately behind the head, and the long web will receive its elaſtic effect therefrom. The ſaddle in this ſtate is repreſented in the drawing fig. 1. The ſteel ſpring, as ſeen naked in this drawing, is then to be covered with two pieces of web, each three quarters of an inch broader than the diſtance between the parts of the web already on the ſpring at *a* and *b*, and of ſufficient length to nail on each ſide on the bar of the tree. One of theſe pieces muſt be ſtrongly ſewed underneath the ſpring to each part of the web at *a* and *b*, and the other piece over the ſpring to the web in the ſame manner, which will not only prevent the ſpring being over ſtretched, but will alſo prevent the ſtuffing of the ſaddle from interfering with it. Then ſew a piece of ſmall, but ſtrong, cord or ſtring round and over the ſpring, through the parts of the web, drawing the ſtring or cord tight, and faſten both ends on the under ſide of the web, which will prevent the ſpring from

being ſtretched during the croſs-ſtraining. Then croſs-ſtrain the long web to a proper form, in the uſual manner, except that the croſs-ſtraining muſt not be brought quite ſo forward as the ſpring, but muſt be ſewed behind, and not upon the ſpring, ſo as not to interrupt its motion. Then proceed to finiſh the ſaddle, as uſual; and immediately previous to putting in the pannel, remove the cord or ſtring from the ſpring, and ſuffer it to have its freedom. This deſcription is equally ſufficient to enable a workman to make a lady's ſaddle, as the ſpring is to be fixed in the ſame manner.

"The ſtirrup-bar conſiſts of three parts. Fig. 4, is an open box, rivetted on the bar of the ſaddle-tree, a little higher than the bar, on a common tree. Fig. 5, is the ſtirrup-bar, which ſupports the ſtirrup, with a ſhort ſhank to be introduced into the box, where it is bolted by a double ſpring bolt, fig. 6; the two prongs of which paſs through two correſponding holes in the bar and box, and thus attach the bar and ſtirrup to the ſaddle: to this bolt, fig. 6, a ſmall ſtrap is ſewed. The rider being then ſeated, is to button the ſtraps round his thighs a little above each knee; or ſhould he fall, or be thrown from his horſe, the ſtraps will draw the bolts, and the ſtirrups will immediately drop from the ſaddle. Before he diſmounts he muſt unbutton the ſtraps; or, if he wiſh to try the effect of the invention, he may diſmount with the ſtraps on, when the ſpring bolts will be drawn, and the ſtirrups diſengaged from the ſaddle. Inſtead of the ſtraps going round the thighs, they may be attached to the body in any other manner, ſo as to draw the bolts on falling or being thrown."

SAFFI, a trading town of Morocco, with a caſtle. The Portugueſe were long in poſſeſſion of it, but they forſook it in 1641. It is ſurrounded by ſeveral eminences, which command the town. Long. 8. 58 W. Lat 32. 28. N.

SAGAN, a town of Sileſia, capital of a principality of the ſame name, belonging to Prince Lobkowitz. It has double walls, a caſtle, and a priory of the Auguſtine order. By permiſſion of the emperor, in 1709, a Lutheran ſchool was founded here. It is ſeated on the Bober and Queis, 62 miles N.W. of Breſlaw. Long 15. 22. E Lat. 51. 42. N.

SAGREZ, a ſtrong town of Portugal, in Algarva, with a harbour and a fort, four miles W of Cape St. Vincent, and 125 S. of Liſbon. Long. 9. 4. W. Lat. 37. 4. N.

SAGUR, a town of Hindooſtan Proper, in the province of Malwa, ſituate near the Bunnaſs River, 87 miles N.W. of Gurrah, and 112 S. of Agra. Long. 78. 53. E. Lat. 23. 45 N.

SAID, a town of Upper Egypt, ſeated on the Nile, 150 miles S. of Cairo. Long 31. 20. E. Lat. 27. 32. N.

SAL, one of the Cape de Verd Iſlands, 42 miles in circumference, lying to the E. of St. Nicholas. It has its name from the great quantity of ſalt made here from the ſea water, which overflows part of it, from time to time. It is 300 miles W. of the coaſt of Africa. Long. 22. 56. W. Lat. 16. 38. N.

SALA, or SALBERG, a town of Sweden, in Weſtmania, near which is a very large ancient ſilver mine. This town was firſt built by King Guſtavus Adolphus in 1624, and deſtroyed by fire in 1736. It is ſeated on a river, 30 miles W. of Upſal, and 50 N.W. of Stockholm. Long. 17. 45. E. Lat. 59. 50 N.

SALARANO, a town of Italy, in the Milaneſe, ſituate on the Lambro, five miles W.S.W of Lodi, and 15 S.E. of Milan. Long. 9. 22. E. Lat. 42. 44. N.

SALECTO, a town of the kingdom of Tunis, near which are the remains of a large caſtle. It is ſeated near the Mediterranean, 22 miles S.S.E. of Monaſter. Long. 11. 3. E. Lat. 35. 13. N.

SALEM, a ſea-port of the ſtate of Maſſachuſets, capital of the county of Eſſex. It is the oldeſt town in the ſtate, except Plymouth, and carries on a large foreign trade. It is 15 miles N.E. of Boſton. Long. 71. 30. W. Lat. 42. 16. N.

SALEM, a ſea-port of the ſtate of New Jerſey, 37 miles S.S.W. of Philadelphia. Long. 75. 32. W. Lat. 39. 37. N.

SALEM, a town of North Carolina, in the county of Surrey. It is the principal ſettlement of the Moravians in this ſtate, and 170 miles W. of Edenton. Long. 80. 21. W. Lat. 36. 2. N.

SALERS, a town of France, in the department of Cantal, ſeated among the mountains, nine miles N. of Aurillac.

SALIES, a town of France, in the department of Lower Pyrenées, remarkable for its ſprings of ſalt water, from which the white ſalt is made. It is ſeven miles W. of Orthez.

SALIGNAC, a town of France, in the department of Upper Vienne, 10 miles S. by W. of Limoges. Long. 1. 18. E. Lat. 45. 42. N.

SALIGNAS, a town of Spain, in Biſcay, ſeated on the Deva, at the foot of a mountain, eight miles N. by E. of Vittoria, and 28 S.S.E. of Bilboa. Long. 2. 54. W. Lat. 43. 5. N.

SALINAS, a town of Spain, in Guipuſcoa, near Mount St. Adrian, 16 miles N.E of Vittoria, and 28 S.S.W. of St. Sebaſtian. Long. 2. 45 W. Lat. 43. 5. N.

SALINS, a conſiderable town of France, in the department of Jura, with a ſtrong fort. It is remarkable for its ſalt-works, the largeſt of which is in the middle of the town, and is like a little fortified place. It is ſeated in a fertile valley, on a ſtream that has its ſource in the town, 29 miles S. of Benſançon, and 200 S.E. of Paris. Long. 6. 5. E. Lat. 46. 56. N.

SALM, a town of Germany, capital of a county in the duchy of Luxemburg, 11 miles S S.E. of Spa, and 38 N. of Luxemburg. Long. 5. 55. E. Lat. 50. 25. N.

SALM, a town of France, in the department of Meurthe, with a caſtle, ſeated at the ſource of the Sar, 20 miles W. of Straſburg, and 55 S.E. of Nanci. Long. 7. 15. E. Lat. 48. 34. N.

SALO, a town of Italy, in the Breſciano; taken by the French in Auguſt, 1796. It is ſeated on the lake Digarpa, 17 miles N.E. of Breſcia. Long. 10. 49. E. Lat. 45. 38. N.

SALOBRENA, a ſea-port of Spain, in Granada, with a caſtle. It carries on a great trade in ſugar and fiſh, and is ſeated on a rock, near the mouth of a river of the ſame name, 12 miles E. of Almunecar, and 36 S. of Granada. Long. 3. 30. W. Lat. 36. 31. N.

SALON, a town of France, in the department of the Mouths of the Rhone, ſeated on the canal of Craponne, 20 miles N.W. of Aix. Long. 5. 5. E. Lat. 43. 38. N.

SALONE, a town of Livadia, with a biſhop's ſee. The inhabitants are Chriſtians and Turks, pretty equal in number; and Jews are not ſuffered to live here. It is ſeated on a mountain, on the top of which is a citadel, 20 miles N.E. of Lepanto. Long. 23 1. E. Lat. 38. 50. N.

SALPE, a town of Naples, in Capitanata, near which are ſome ſaltworks. It is ſituate on a lake, near the ſea, 23 miles S. of Manfredonia, and 92 E.N.E. of Naples. Long. 16. 10. E. Lat. 41. 12. N.

SALSONNA, a town of Spain, in Catalonia, ſeated on the Lobregat, 44 miles N.W. of Barcelona. Long. 1. 38. E. Lat. 41. 56. N.

SALT (*Encycl.*). To remove and leſſen the known inconveniences in the manufacture of ſalt, Mr. Manley, of

Great Budworth in Cheſhire, invented and adopted the following apparatus, and proceſſes, for which he has obtained a patent.

"My firſt head of improvement (ſays he in his ſpecification) conſiſts in adding to the common apparatus for ſalt-making another pan, which I call a heating ciſtern, or preparing-pan. This is placed contiguous to the common ſalting-pan, and is heated by an extenſion of the flues from the ſaid ſalting-pan, and therefore without requiring any additional fuel. The preparing-pan may be made of iron, or any other ſuitable material, and of a form the beſt adapted to different ſalt-works, and either with or without a cover. It ſhould hold at leaſt as much brine as will ſerve for one charge of the ſalting-pan.

"The conſtruction of the pans will be explained by a reference to the drawing hereto annexed or ſubjoined. In Plate 44. fig. 1, is the ground plan of a ſalting-pan, of the uſual form, with a preparing-pan adjoining to it. *a, a, a, a,* is the ſalting-pan; *b, b, b, b,* the preparing-pan; *c, c, c, c,* flues which convey the flame from beneath the ſalting-pan to the preparing-pan; *d,* the chimney; *e,* a damper; *f, f, f, f,* fire-doors; *g, g, g, g,* grates. The arrows ſhew the courſe of the flame through the flues.

"Theſe pans may be uſed in the following manner: (allowing for ſuch variations as may be found adviſable from occaſional differences in the quality of the brine, or the particular convenience of the manufacturer). The rough brine, in the ſtate in which it is pumped out from the well, or drawn from the reſervoir, is to be ſent directly to the preparing-pan, inſtead of going at once into the ſalting-pan, which is done in the preſent method of manufacture. The rough brine is then heated in the preparing-pan, by means of the ſame fire which is heating the brine already in the ſalting-pan. The rough brine, by being thus heated in the preparing-pan, is brought, without expence of fuel, to the degree of heat requiſite for depoſiting the earthy and metallic impurities ſeparable from it by mere heat. Theſe impurities ſubſide to the bottom, leaving the brine above them clear and hot, ready to be afterwards evaporated in the ſalting-pan before uſed, as ſoon as this pan is able to receive it, or in any contiguous ſalting-pan. The clarified brine may be drawn off from the ſediment by a ſyphon, or by any other ſuitable method; after which the ſediment is to be let off through a waſte-pipe at the bottom of the preparing-pan, and the whole well waſhed out. The preparing-pan is then to be filled with freſh brine, and heated as before, by the ſame fire which is ſupplying the ſalting-pan, ſo as to prepare a change of clear and hot brine for a ſubſequent evaporation.

"The improvement in the proceſs of ſalt-making, which I have here ſpecified, will ſave a conſiderable quantity of fuel, inaſmuch as the brine may be brought in the preparing-pan, without any additional expence of fuel, to the ſame ſtate, for which in the uſual mode of manufacture a fire muſt be kept up for ſeveral hours under the ſalting-pan.

"The above improvement will likewiſe ſave much of the time neceſſary to the proceſs of evaporation, as well as much of the time and labour now employed in clearing out the ſediment, and it will contribute to leſſen the quantity of the pickings, and conſequently the frequency of their removal.

"My ſecond head of improvement in the manufacture of ſalt, which is quite diſtinct from the firſt, is to add to the brine a certain quantity of fixed alkali, eſpecially of barilla, or any other ſpecies of the mineral alkali, whereby ſeveral of the earthy ſalts contained in the brine, and not ſeparable from it by mere heat, are decompoſed, and the earth precipitated in the form of a ſediment, which may be removed without much difficulty. The quantity of the alkali, and the time at which it ſhould be added, muſt depend on the degree of concentration of the brine, and eſpecially on the nature and proportion of its contents; and as theſe differ much in different ſprings, and even in the water of the ſame ſpring at different times, they muſt therefore be left to the manufacturer to determine for himſelf according to circumſtances.

"My third head of improvement in the manufacture of ſalt, which is quite diſtinct from the two former, conſiſts of a peculiar method of conſtructing the flues for conveying the flame and heated air of the furnaces beneath the pans, ſo as to leſſen the requiſite conſumption of fuel. Many attempts have been made at various times to increaſe or retain the heat under ſalt-pans by means of circuitous, angular, or otherwiſe lengthened flues, all of which attempts have been fruſtrated by the heaving or riſing of the pan, when the liquor which it contains is fully boiling, which has allowed the flame to paſs directly over the croſs and midfeather walls to the chimneys, inſtead of circulating through the flues.

"To remedy this inconvenience, let flue-plates be formed of plates of iron bent to an angle lengthwiſe, in order to afford a face or flanch part, to be rivetted, or otherwiſe faſtened, to the bottom of the boiler, whilſt the other part of the width of the plates project downwards from the bottom of the pan, and is either to be received looſely in a groove of the croſs and midfeather walls, or elſe to hang down for ſome inches beſide them. By this method the flame and heated air will be kept within the flues, notwithſtanding the riſe and fall of the pan, and the advantage in ſaving fuel which is derived from the circuitous courſe of the flues will be ſecured.

"Figure 2, exhibits one of the methods of applying theſe plates. *a, a, a, a,* is the ſalt-pan; *b, b, b,* grates; *c, c, c,* flues; *d,* the chimney; *e, e, e,* dampers; *f, f, f,* fire-doors. The dark lines repreſent the iron plates, and the lighter parts on each ſide repreſent the brick partition walls of ſupport, between which the plates are received looſely. The arrows ſhew the courſe of the fires through the flues.

"The above conſtruction may be applied both to ſalt-pans and to pans of any deſcription which are intended to bear the fire."

SALTZA, a town of Lower Saxony, in the duchy of Magdeburg. It takes its name from the ſalt-pits, and is 12 miles S.S.E. of Magdeburg. Long. 11. 54. E. Lat. 52. 3. N.

SALTZWEDEL, a town of Upper Saxony, in the old marche of Brandenburg, formerly reckoned one of the Hanſe towns. Here are flouriſhing manufactures of cloth, ſerge, and ſtockings. It is ſituate on the Jetze, 20 miles N.N.W. of Gardeleben, and 48 E.N.E. of Zell. Long. 11. 30. E. Lat. 52. 55. N.

SALVADOR, St. the capital of the kingdom of Congo, with a large palace, where the king and a Portugueſe biſhop reſide. It is ſeated on a craggy mountain, 240 miles E. by S. of Loango. Long. 15. 39. E. Lat. 4. 50. S.

SALVADOR, St. a populous city of Braſil, with an archbiſhop's ſee, and ſeveral forts. It contains many religious houſes, and carries on a conſiderable trade. The houſes are two or three ſtories high, and the walls thick and ſtrong, being built of ſtone. The principal ſtreets are large, and there are many gardens, full of great variety of fruit-trees, herbs, and flowers. The chief commodities are ſugar, tobacco, woad for dyers, raw hides, tallow, and train-oil. It is ſeated on an eminence, on the bay of All Saints, 120 miles S.W. of Sergippy. Long. 40. 10. W. Lat. 13. 30. S.

SALVATERRA, a town of Portugal, in Eſtremadura, with a royal palace, ſeated on the Tajo. Long. 7. 51. W. Lat. 38. 59. N.

SALVATERRA, a ſtrong town of Portugal, in Beira. It

was taken by the French in 1704, and by the allies in 1705. It is ſeated on the Elia, 12 miles N.E. of Alcantara. Long. 6. 14. W. Lat. 39. 30. N.

SALVATIERRA, a town of Spain, in Galicia, ſeated on the Minho, 56 miles S. of Compoſtella. Long. 8. 16. W. Lat. 41. 48. N.

SALVATIERRA, a town of Spain, in Biſcay, ſeated at the foot of Mount St. Adrian, 30 miles E. by S. of Vittoria. Long. 2. 17. W. Lat. 42. 54. N.

SAMARAND, a populous town on the eaſtern part of the iſland of Java.

SAMARCAND, an ancient and populous city, in the country of the Uſbec Tartars, with a caſtle and a univerſity. It was the birth-place and ſeat of Tamerlane the Great. It carries on a trade in excellent fruits, and is ſeated near the Sogde, which runs into the Amo, 138 miles E. by N. of Bokhara. Long. 65. 15. E. Lat. 39. 50. N.

SAMATHAN, a town of France, in the department of Eure, with a ſtrong caſtle on a mountain. It is ſeated in a valley, on the river Save, five miles N. of Lombez. Long. 1. 0. E. Lat. 43. 34. N.

SAMBAS, a town of the iſland of Borneo, capital of a kingdom of the ſame name, near the W. coaſt. In its vicinity diamonds are found. Long. 109. 0. E. Lat. 2. 20. N.

SAMBRE, a river of the Netherlands, which riſes in Picardy, and paſſing by Landrecy, Maubeuge, Thun, and Charleroy, falls into the Maeſe, at Namur.

SAMOGITIA, a province of Poland, 175 miles long, and 125 broad; bounded on the N. by Courland, on the E. by Lithuania, on the W. by the Baltic, and on the S. by Weſtern Pruſſia. It is full of foreſts and high mountains, which feed a great number of cattle, and produce abundance of honey. Here are alſo very active horſes, in high eſteem. The inhabitants are clowniſh, but honeſt; and they will not allow a young woman to go out in the night without a candle in her hand, and two bells at her girdle. Roſienne is the principal town.

SAMSO, or SAMSOI, an iſland of Denmark, on the E. coaſt of North Jutland. It is eight miles long, and three broad, and very fertile. Long. 10. 33. E. Lat. 56. 2. N.

SAMSON, ST. a town of France, in the department of Eure, ſeated on the river Rille, five miles from Pontaudemer.

SANA, or ZANA, a town of Peru, and capital of a juriſdiction in the biſhopric of Truxillo. It is ſituate in a charming valley, fertile in fruit and corn, and adorned with the moſt beautiful flowers, whence it has been ſometimes called Miraſloris. It is 90 miles N. of Truxillo. Long. 78. 30. W. Lat. 40. 35. N.

SANCERRE, a town of France, in the department of Cher. The wines produced in its environs are ſcarcely inferior to thoſe of Burgundy. It is ſeated on a mountain, near the river Loire, 22 miles N.W. of Nevers, and 110 N. of Paris. Long 2. 59. E. Lat. 47. 18. N.

SANCIAN, an iſland of China, on the coaſt of Quan-tong, 40 miles in circumference, and famous for being the burying place of St. Francis Xavier, whoſe tomb is to be ſeen on a ſmall hill.

SANCOINS, a town of France, in the department of Cher, ſeated on the Argent, 15 miles S.W. of Nevers.

SANDECZ, a ſtrong town of Little Poland, in the palatinate of Cracow. There are mines of gold and copper in its territory, and it is ſeated at the foot of Mount Krapack, 32 miles S.E. of Cracow. Long. 20. 32. E. Lat. 49. 43. N.

SANDERSLEBEN, a town of Upper Saxony, in the principality of Anhalt Deſſau, ſituate on the Wipper, 16 miles S.E. of Quedlingburg, and 31 S.W. of Deſſau. Long. 11. 22. E. Lat. 51. 38. N.

SANDHAMN, a ſea-port of Sweden, in the province of Upland, where all veſſels on their paſſage to and from Stockholm are examined. It is 10 miles E. of Stockholm. Long. 18. 20. E. Lat. 59. 20. N.

SANDO, an iſland of Japan, on the N. coaſt of Niphon; with a town of the ſame name. It is 87 miles in circumference. Long. 139. 30. E. Lat. 38. 35. N.

SANDUGAL, a town of Portugal, in Beira, ſeated on the Coa, 12 miles S.S.E of Guarda.

SANDVLIET, a town of Brabant, on the river Scheldt, 12 miles N.W. of Antwerp. Long. 1. 12. E. Lat. 51. 22. N.

SANDY HOOK, a ſmall iſland of the United States, near the coaſt of New Jerſey. It was formerly a peninſula, but the ſea broke through the iſthmus and formed it into an iſland in the winter between 1777 and 1778. It is ſeven miles S. of Long Iſland.

SANEN, or GESSENAY, a town of Switzerland, in the canton of Bern, ſituate on a river of the ſame name, 24 miles S. of Friburg, and 25 E.S.E. of Lauſanne.

SANGUESA, a town of Spain, in Navarre, ſeated on the Arragon, 20 miles S.E. of Pampeluna. Long. 1. 17. W. Lat. 42. 34. N.

SANOKE-BANCABOUR, a town of Hindooſtan, in the kingdom of Myſore, 117 miles E. by N. of Goa. Long. 75. 44. E. Lat. 15. 39. N.

SANTA CLARA, an iſland of Peru, in the bay of Guyaquil, 90 miles W. of Guyaquil. Long. 82. 36. W. Lat. 2. 18. S.

SANTA FE', the capital of New Mexico, ſeated among mountains, near the Rio-del-Norte, 950 miles N. of Mexico. Long. 106. 35. W. Lat. 35. 32. N.

SANTORINI, an iſland of the Archipelago, to the N. of Candia, and to the S. of Nio. It is eight miles in length, and nearly as much in breadth; and near it are three or four other ſmall iſlands, each of which bears evident marks of a volcanic origin. It produces plenty of barley, cotton, and wine, in which, and the cotton manufactures, its trade conſiſts. Fruit is ſcarce, except figs, and it has neither oil nor wood. The inhabitants are all Greeks, about 10,000 in number, and though ſubject to the Turks, they chooſe their own magiſtrates. Pyrgos is the capital. Long. 26. 1. E. Lat. 36. 10. N.

SAONE AND LOIRE, a department of France, including part of the late province of Burgundy. Macon is the capital.

SAOIGIS, a town of Piedmont, in the county of Nice, ſituate on the ſummit of a rock. It was taken by the French in 1794. It is 17 miles N.E. of Nice. Long. 7. 33. E. Lat. 36. 38. N.

SAPIENZA, three ſmall iſlands, and a cape, near the S. coaſt of the Morea. The largeſt iſland was anciently named Sphracteria. The pirates of Barbary conceal themſelves behind it, to ſurpriſe veſſels which come from the gulf of Venice, or the coaſt of Sicily. Long. 21. 35. E. Lat. 36. 50. N.

SARATOF, a government of Ruſſia, formerly a province of Aſtracan. It is divided into 12 diſtricts, of which that of the ſame name is the principal.

SARATOF, a town of Ruſſia, capital of the government of that name. It is ſeated on the ſide of a mountain, near the river Volga, 220 miles S. of Kaſan, and 300 N.W. of Aſtracan. Long. 49. 25. E. Lat. 52. 4. N.

SARATOGA, a fort of the ſtate of New York, memorable for the ſurrender of an army of Britiſh and Heſſians, under the command of General Burgoyne, to the Americans, in 1777. It is ſeated on the E. ſide of Hudſon's River, 50 miles N. of Albany.

SARBOURG, a town of Germany, in the electorate of Treves, ſeated on the Sare, eight miles S. of Treves. Long. 6. 40. E. Lat. 49. 37. N.

SARBOURG, a town of France, in the department of Meurthe, ſeated on the Sare, at the foot of a mountain, 15 miles E. of Marſal, and 50 S.E. of Metz. Long. 7. 9. E. Lat. 48. 46. N.

SARBRUCK, a town of France, in the department of Moſelle, ſeated on the Sare, 14 miles E.S.E. of Sarlouis, and 40 E. by N. of Metz. Long. 7. 2. E. Lat. 49. 14. N.

SARDAM, a ſea-port of North Holland, where there are vaſt magazines of timber for building ſhips, and naval ſtores, with a great number of ſhipwrights; and here is ſeen the hut in which Peter the Great reſided, while he worked as a ſhipwright in this town. Sardam is ſeated on the Wye, ſeven miles N.W. of Amſterdam. Long. 4. 45. E. Lat. 52. 28. N.

SARDO, a town of Turkey in Aſia, in Natolia. It was formerly called Sardis, and was the capital of Lydia, under the famous King Crœſus. It was afterwards one of the ſeven churches of Aſia, celebrated in the book of Revelation, but was deſtroyed by an earthquake in the reign of Tiberius. It now contains only a few wretched huts. However, here is a large caravanſary, where there are handſome lodgings for travellers, it lying in the great road from Smyrna to Aleppo; and the Turks have a moſque, formerly a chriſtian church. The inhabitants are now almoſt all ſhepherds, who feed their flocks in the neighbouring plains. There are alſo a few Chriſtians, who employ themſelves in gardening, but they have neither church nor prieſts. It is 70 miles E. of Smyrna. Long. 28. 30. E. Lat. 38. 44. N.

SARGANS, a town of Switzerland, capital of a county of the ſame name, in the canton of Zuric, with a caſtle on a rock, where Andrew Doria was defeated by Barbaroſſa. It is ſeated on the top of a hill; and near it are mineral ſprings.

SARGEL, a large and ancient ſea-port of Africa, in Tremeſen, with a caſtle, ſeated on the ſea-coaſt, 25 miles S.S.W. of Algiers. Long. 2. 15. E. Lat. 36. 30. N.

SARGUEMINE, a town of France, in the department of Moſelle, ſeated on the Sare, nine miles S. by E. of Sarbruck. Long. 7. 6. E. Lat. 49. 8. N.

SARK, a little iſland belonging to Great Britain, lying between Guernſey and Jerſey, on the coaſt of Normandy.

SARK, a river of Scotland, which riſes in the E. part of Dumfrieſſhire, and for many miles forms the boundary with England.

SARLAT, a town of France, in the department of Dordogne. It was lately a biſhop's ſee, but is a poor place, ſeated in a bottom, ſurrounded by mountains, 27 miles S.E. of Perigueux, and 87 E. by N. of Bourdeaux. Long. 1. 19. E. Lat. 44. 5. N.

SARLOUIS, a ſtrong town of France, in the department of Moſelle, ſeated on the iſthmus of a peninſula formed by the river Sare, 20 miles E. of Thionville, and 32 N.E. of Metz. Long. 6. 48. E. Lat. 49. 21. N.

SARNEN, a town of Switzerland, in the canton of Underwalden, near a lake to which it gives name. It had formerly a ſtrong caſtle, and is nine miles S. of Lucern. Long. 8. 7. E. Lat. 46. 55. N.

SARNO, a river of the kingdom of Naples, which riſes near Sarno, and falls into the bay of Naples.

SARNO, a town of Naples, in Principato Citeriore, with a biſhop's ſee. It is ſeated on the Sarno, near its ſource, 12 miles N.E. of Salerno, and 20 S.E. of Naples. Long. 14. 49. E. Lat. 40. 46. N.

SARP, or SARPEN, a town of Norway, in the province of Chriſtianſand. Near it is a great cataract, the noiſe of which may be heard to the diſtance of 20 miles. It is ten miles W.S.W. of Fredericſtadt. Long. 10. 47. E. Lat. 59. 9. N.

SARREAL, a town of Spain, in Catalonia, ſeated on the Francoli, in the neighbourhood of which are quarries of alabaſter, ſo tranſparent that windows are glazed with it. Long. 2. 0. E. Lat. 41. 30. N.

SARTE, a department of France, including the late province of Maine. It takes its name from a river which joins the Maine and the Loire, above Angers. The capital is Mans.

SARVERDEN, a town of France, in the department of Moſelle, ſeated on the Sare, 18 miles S. of Sarbruck. Long. 7. 7. E. Lat. 48. 58. N.

SARWAR, a town of Lower Hungary, capital of a county of the ſame name, ſeated on the Raab, 50 miles W. by N. of Buda. Long. 16. 48. E. Lat. 47. 30. N.

SARZANA, a ſtrong town of Italy, in the territory of Genoa, with a biſhop's ſee. It was given to the Genoeſe, by the Great Duke of Tuſcany, in lieu of Leghorn. It is ſeated at the mouth of the Magra, 50 miles S.E. of Genoa. Long. 9. 52. E. Lat. 44. 8. N.

SASERAM,, a town of Hindooſtan Proper, in Bengal, ſeated at the foot of a mountain, near a great lake, in the middle of which is an iſland with the magnificent mauſoleum of the Emperor Shere Shah, which had a fine bridge leading to it; but both are greatly decayed. It is 50 miles S.E. of Benares. Long. 86. 44. E. Lat. 26. 10. N.

SASSARI, a city of Sardinia, capital of the territory of Lugari, with a caſtle and an archbiſhop's ſee. It contains 30,000 inhabitants, and is famous for a fountain called Roſſel, which is ſaid to be more magnificent than the beſt at Rome. It is ſeated in a plain, ſix miles N. of Alghero. Long. 8. 39. E. Lat. 40. 46. N.

SASSEBES, a ſtrong town of Tranſylvania, capital of a county of the ſame name; ſeated at the confluence of two rivers, which fall into the Maroch. Long. 26. 40. E. Lat. 46. 26. N.

SAS VAN GHENT, a ſtrong town of Dutch Flanders. It has fine ſluices, and is ſeated on a canal, which communicates with Ghent, about eight miles N. from it. It was built by the inhabitants of Ghent, as a bulwark to that town, but was taken, in 1644, by the Dutch, from whom the French took it in 1794. Long. 3. 49. E. Lat. 51. 11. N.

SATALIA, a ſtrong ſea-port of Natolia, on the coaſt of Caramania. It is divided into three towns, and has a ſuperb moſque, which was formerly a church. The country around is very fertile; and the citrons and oranges are extremely fine. It is 150 miles W. by S. of Cogni, and 265 S. by E. of Conſtantinople. Long. 32. 21. E. Lat. 37. 1. N.

SATGONG, or SATAGONG, a village of Hindooſtan Proper, in Bengal. In the 16th century it was a large city, in which the European traders in Bengal had their factories. It is ſeated on a creek of the Hoogly River, four miles N.W. of Hoogly.

SATTARAH, a town of the Deccan of Hindooſtan, in the province of Viſiapour, formerly the capital of the Mahrattah ſtate. It is ſituate near the ſource of the Kiſtnah, 50 miles S. of Poonah, and 77 W. of Viſiapour. Long. 74. 8. E. Lat. 17. 45. N.

SAVENAY, a town of France, in the department of Lower Loire, 18 miles N.W. of Nantes, and 32 W. of Ancenis. Long. 1. 55. W. Lat. 47. 23. N.

SAVENDROOG, a ſtrong fortreſs of Hindooſtan, in the kingdom of Myſore. It is ſituate on the top of a vaſt rock, riſing half a mile in perpendicular height, from a baſe of above eight miles in circumference, and divided at the ſummit by a chaſm, that forms it into two hills; theſe having each its

peculiar defences, ſerve as two citadels, capable of being maintained, independently of the lower works, which are alſo wonderfully ſtrong. Notwithſtanding this, it was taken by the Engliſh, in 1791, after a ſiege of ſeven days. It is 18 miles W. of Bangalore.

SAVERDUN, a town of France, in the department of Arriege, ſeated on the Arriege, 25 miles S.S.E. of Toulouſe. Long. 1. 36. E. Lat. 43. 14. N.

SAVERNE, a town of France, in the department of Lower Rhine, with a palace, the occaſional reſidence of the late archbiſhops of Straſburgh. It is ſeated at the foot of Mont Voſges, in a fertile country, which produces plenty of wine, 18 miles N.W. of Straſburgh, and 120 E. of Paris. Long. 7. 33. E. Lat. 48. 41. N.

SAVGILIANO, a ſtrong town of Piedmont, capital of a territory of the ſame name, with a rich Benedictine abbey. It is ſeated on the Maira, five miles W. of Foſſano, and 26 S. of Turin. Long. 7. 44. E. Lat. 44. 30. N.

SAULGEN, a town of Suabia, capital of a county of the ſame name, which belongs to the Baron of Walburg.

SAULIEU, a town of France, in the department of Côte d'Or. Here was anciently a college of the Druids, and a wood in which they performed their ſacrifices, and where the ruins of a druidical temple are ſtill viſible. It is ſeated on an eminence, 25 miles W. of Dijon, and 142 S.E. of Paris. Long. 4. 7. E. Lat. 47. 17. N.

SAVOLAX, a diſtrict of Sweden, in the province of Finland, about 200 miles in length, and 100 in breadth, bordering on Ruſſia.

SAVONIERS, a town of France, in the department of Indre and Loire, five miles from Tours. Near it are caverns, famous for their petrifications.

SAURUNGPOUR, a town of Hindooſtan Proper, in the province of Malwa, 42 miles N.N.E. of Indore, and 43 N.E. of Ougein. Long. 76. 32. E. Lat. 23. 35. N.

SAUVES, a town of France, in the department of Gard, ſeated on the Vidoure, 12 miles S.W. of Alais.

SAUVETERRE, a town of France, in the department of Lower Pyrenées, with an old ruined caſtle, 20 miles W.N.W. of Pau.

SAUVETERRE, a town of France, in the department of Aveiron, 12 miles S.E. of Villefranche.

SAVU, an iſland in the Indian Ocean, to which the Dutch have a kind of excluſive trade, having entered into an agreement with the rajahs that their ſubjects ſhall trade with no ſhips, but thoſe of the Dutch Eaſt-India Company. Long. 122. 30. E. Lat. 10. 35. S.

SAXENBURG, a town of Germany, in the duchy of Carinthia, ſituate on the Drave, 38 miles W. of Clagenfurt. Long. 13. 40. E. Lat. 46. 52. N.

SAXENHAGEN, a town of Weſtphalia, in the county of Schawenburg, 20 miles N.W. of Hanover. Long. 9. 36. E. Lat. 52. 30. N.

SAXMUNDHAM, a town in Suffolk, with a market on Thurſday, ſeated on a hill, 29 miles N.E. of Ipſwich, and 89 N.E. of London. Long. 1. 40. E. Lat. 52. 18. N.

SAYBROOK, a town of the United States, in Connecticut. It is the moſt ancient town in the ſtate, and ſituate on Connecticut River, 18 miles W. of New London. Long. 73. 2. W. Lat. 41. 16. N.

SAYCOCK, one of the iſlands of Japan, divided from Niphon by a narrow channel. The Dutch factors are permitted to reſide in the little iſland of Diſnia, which is on the W. ſide of this. Long. 132. 28. E. Lat. 34. 0. N.

SAYPAN, one of the Ladrone Iſlands, larger and pleaſanter than that of Tinian; lying between 140 and 150° E. long. and in 15. 22. N. lat.

SCALE-BEAM. Under the article BALANCE we have ſpoken fully on the conſtruction of ſcale-beams. To what we have there ſaid we purpoſe to add the deſcription of a *ſtand* or *ſupport* applicable to ſcale-beams of every ſize, and calculated to render the operations, for which theſe inſtruments are uſed, more expeditious and convenient, without diminiſhing their accuracy. This account is the production of Citizen Prony, member of the National Inſtitute of France, and publiſhed in the Annales de Chimie.

"Several experiments," ſays he, "in which I was engaged during the courſe of the laſt winter, put me under the neceſſity of contriving a ſupport, which might be applied promiſcuouſly to every kind of balance, whether provided with a ſuſpending handle or not, and which, without detriment to its accuracy, ſhould afford me commodious means of ſucceſſively raiſing and lowering it. It is well known how embarraſſing and laborious the operation of weighing is, when performed with balances ſupported by the hand; though this is often only the ſmalleſt inconvenience with which their uſe is attended.

"Various artiſts have contrived ſupports, commodious in their uſe, and ingenious in their principle; but as each of theſe ſupports can only be adapted to a ſingle balance, they become ſo expenſive as to be out of the reach of the majority of artiſts and experimentaliſts. I think, therefore, I ſhall do them an acceptable ſervice, by publiſhing, in compliance with the requeſt of ſeveral eminent chemiſts, the deſcription of a ſupport, which, beſides the advantage of being adapted for all kinds of balances, poſſeſſes that of being conſtructed, at a ſmall expence, either in wood or metal.

"It was my intention to have added to this deſcription ſome views relative to the theory and conſtruction of balances, of which I conceived that artiſts, acquainted with the elements of geometry and arithmetic, might avail themſelves for perfecting the machines uſed for weighing; but as this part of my labour has extended itſelf to a greater length than I had at firſt imagined, I ſhall publiſh it ſeparately.

"A triangular foot of copper A *a*, *a*, *a* (figs. 1 and 2, Plate 45. repreſenting the elevation and ſection of my apparatus), has its three extremities *a*, *a*, *a*, firmly ſcrewed down upon a table or horizontal plane. Into the part A of this foot is ſcrewed a cylindrical rod A B, which may be of any arbitrary length: it may even be convenient to have two of theſe of different lengths, in order that they may be changed, when we wiſh to employ the machine for very large balances. Thoſe which I have made uſe of are, the one half a metre, and the other one metre, in length.

"A vertical pulley, P, is placed at the top of the ſtem A B, in ſuch a manner that the ſame vertical plane paſſes through the axis of the rod, and through the horizontal axis of the pulley; the block or collar C D of this pulley has at its lower part a tube C B, into which enters, with a gentle friction, the ſuperior extremity of the rod A B; a ſcrew E ſerves to keep the pulley in a fixed poſition.

"Another pulley P is fixed at the bottom of the rod A B, in ſuch a poſition, that the tangent of the pulleys P and *p* is parallel with the axis of the rod A B.

"A cord K *t p* H G P F, to the end of which is ſuſpended, on the outſide of the vertical table K, a ſmall weight *k*, paſſes through a hole *t* made in the foot *a*, rolls over the pulleys *p* and P, and is attached at F to a piece *m m*' *n q*, which has the form of a fork, and to which are ſuſpended (as I ſhall ſhortly explain) the balance, the weights, and the ſubſtances that are to be weighed. F *m* is a button, which being ſcrewed at the top of the fork, receives the end of the cord, and by means of a knot made on it ſuſtains the fork.

"The tail or handle of this fork is of a priſmatic form at the part *m*' *n*; this priſmatic part enters a groove *f f* made at

the extremity N of the horizontal piece N O, ſo that it can ſlide freely in this groove either upwards or downwards, its courſe being however limited at m^1, where it is ſtopped by the enlarged handle of the fork, and at n by the greater width produced by the ſeparation of the two branches of the fork.

"The piece N O, which is hollow, and interſected, at O, by the ſtem A B, can ſlide along and turn round this ſtem: when it is brought to its proper height, it is ſecured by means of the ſcrew V, and it is then neceſſary, firſt, that it ſhould be at ſuch a height that, when the ſtop m reſts on the ſide of the groove $f f$, or when N O can move no further down, the ſcales of the balance ſhall be in contact with the table or horizontal plane, in order that we may afterwards be able to raiſe it the whole height of $f n$; ſecondly, that the cord F F be in one and the ſame vertical plane with H G.

"The groove at T ought to be ſituated in ſuch a manner that the axis of the priſmatic part of the tail of the fork, and the cord F F^1, ſhall always be in the ſame vertical plane, or in a parallel line with the axis of the ſtem A B.

"Theſe diſpoſitions being made, let us imagine the two branches $n q$ of the fork to be perforated with holes of different diameters, in order to receive horizontal pins ($g g$) of different ſizes; and we ſhall have all that is requiſite for the ordinary operations of weighing, performed in the air, with balances, the beams of which are ſuſpended from above.

"In fact, whatever kind of balance we uſe, we are to introduce the extremity of its ſuſpending handle into the fork $n q$, and inſert into the round hole, which the handle of the balance always has at its ſuperior extremity, any one of the pins that will enter with eaſe; we then apply the piece O N, in ſuch a manner as to fulfil the conditions above laid down for the poſition of this piece; after which, it is to be fixed by the ſcrew V. This being done, the ſcales of the balance are to be charged, which being in contact with the table, or horizontal plane, can have no motion. When the ſcales are charged, we lay hold of the ſmall ball k, and draw the cord which ſuſpends it ſo as to raiſe the balance very ſlowly: if the ſcales be not in equilibrio, the cord is to be looſened till they reſt again upon the table, and ſo ſucceſſively.

"A counterpoiſe Q, ſuſpended to the cord F G, ought to preſerve the equilibrium with the weight of the balance. By means of this precaution, it comes to paſs, that the common centre of gravity of all the forces ſupported by the pulley P falls in all caſes upon the axis of the ſtem A B, which thus has no tendency to bend.

"If we wiſh now to uſe a hydroſtatic balance, we adapt to the ſtem A B a ſmall board O N, fig. 3, which, by means of a cylindrical hole at O, may ſlide along the rod A B, and be fixed at any arbitrary height by a ſcrew at V. Another piece, or board, K^1 K^1, is placed upon V^1 N^1, in ſuch a manner that the holes T T correſpond with the centre of the ſcales, under which are placed the hooks intended for holding the ſubſtances ſuſpended in the water, and K^1 K^1 is fixed upon V^1 N^1 by means of ſcrews V^1.

"Theſe arrangements being made, let the piece N^1 O^1 and the board K^1 K^1, be placed in ſuch a manner that, firſt, the whole height of the balance be placed between this piece and the board, and that the ſcales L L be in contact with the board K^1 K^1, their centres correſponding with holes made in T T. Secondly, that K^1 K^1 be ſufficiently elevated to enable us to place under it the veſſels W W, filled with water, and conveniently to immerſe, in one of theſe veſſels, the ſubſtances which we wiſh to weigh hydroſtatically.

"According to the common practice, theſe ſubſtances are ſuſpended by a very thin wire; but by placing, after my method, two veſſels, and ſuſpending to the two ſcales wires of equal diameter, the one of which ſupports the ſubſtance that is to be weighed, and the other merely in part immerſed, the magnitude of the diameter will have no influence upon the accuracy of the operation; for, let us ſuppoſe the apparatus to be adjuſted in ſuch a manner, that at firſt the two wires were in equilibrio with each other (which may eaſily be obtained by varying the height of the water in the veſſels), theſe two wires will ſtill be in equilibrio, when the beam F F^1, being elevated, will remain in its horizontal poſition: whence it follows, that if one of the wires have ſuſpended to it a ſubſtance immerſed in the water, and we place in the oppoſite ſcale, and conſequently out of the water, a weight adequate to keep the equilibrium with the immerſed ſubſtance, for a horizontal poſition of the beam, the equilibrium will ſtill be maintained, whatever may be the elevation or depreſſion of the beam, provided it continue in a horizontal poſition; for the lengths of the wires, either above or below the ſurface of the water, being equal, the difference between the ſpecific weight of the water and that of the metal will operate equally upon both extremities of the beam. It is evident that this advantage will not be obtained if we employ only the wire to which the ſubſtance is ſuſpended, and that the equilibrium, eſtabliſhed for a certain elevation and a horizontal poſition of the beam, will not apply to other elevations of the beam by preſerving it in the horizontal poſition.

"It is to be remarked, that my method compenſates not only for the exceſs of the ſpecific weight of the wires over that of the water, but alſo for that which depends upon the adheſion of the fluid to the wires, and the covering of water which they carry along with them.

"All that has been ſaid hitherto applies only to balances that are provided with ſuſpending handles; but, in order to render this ſupport abſolutely univerſal in its uſe, it was neceſſary that it ſhould be poſſible to adapt it to a beam which had nothing but its centres; for which purpoſe I contrived an apparatus, which is ſuſpended, like thoſe of a common balance, to the fork $n q$, and which may receive the centres of any beam. The engraved plates of my machine repreſent it provided with this apparatus, the conſtruction of which is as follows.

"A piece $s s^1$ has a ſcrewed hole bored into it at s^1, into which the ſcrew $d d$ is inſerted half its length. Another hole, made at s, in a perpendicular direction to the firſt, receives the pin $g g$, to which all the inferior apparatus is ſuſpended. This hole s ſupplies the place of that which is found at the upper extremity of the ſuſpending handles of balances.

The two other vertical pieces r, r, fig. 4, have at their upper part cylindrical holes not ſcrewed, in which the ſcrew $d d$ can turn freely. Theſe ſuperior parts are placed at an arbitrary diſtance, and retained in their ſituation by means of four nut-ſcrews u, u, u, u, each of the pieces being faſtened between two of theſe nut-ſcrews. A cylindrical rod $h h$ traverſes the inferior parts of theſe pieces $r r$, and is fixed there by means of nut-ſcrews, in ſuch a manner that the ſuperior and inferior points of the pieces $r r$ are invariably at the ſame diſtance.

"Each of theſe pieces $r r$ has, upon the ſurface which is perpendicular to the direction of $d d$ and $h h$, a groove $e e$, and a circular aperture X, having at its lower part a ſmall bracket of poliſhed ſteel $a a$, intended to ſupport one of the centres of the beam. Into the upper part of the grooves $e e$ a rule e^1 e^1 is introduced, which muſt enter with tightneſs, and which, with the pieces $d d$ and $h h$, give ſuch a ſolidity to the apparatus, that the adjuſtment of its parts cannot be in the ſmalleſt degree deranged. The remainder of the groove, which is not occupied by e^1 e^1, ought to be of a length ſomewhat greater than that of the largeſt cock or index adapted to the beams which we ſhall have to uſe.

"The method of uſing the apparatus which I have juſt de-

ſcribed, is very ſimple. The beam which we intend to employ is placed between the two branches *r r*, which are removed from each other till the centres can be brought oppoſite to the circular holes X; the pieces *r*, *r*, are then brought together in ſuch a manner that the centres enter theſe holes X, and ſo as ſtill to leave ſome room for motion between theſe pieces and the body of the beam, in order that the oſcillations of the balance may be perfectly free. The pieces *r*, *r*, are brought parallel with each other, and the adjuſtment of the apparatus is rendered perfectly firm, by means of nut-ſcrews, by the ſmall cylindrical rod *h h*, and by the rule e^1 e^1. The apparatus being adjuſted in this manner, it is ſuſpended to the fork *n q*, hy inſerting the pin *g g* into the hole *s*, and the balance is uſed in the manner that has already been explained. We know the equilibrium to be eſtabliſhed, and the beam to be horizontal, when the index *y y* divides the breadth of the ſpace *e e* into two equal parts; but, in order to aſcertain the circumſtance with greater accuracy, I have ſuſpended to the rule e^1 e^1 a plummet e^1 *i*. by means of which we may diſtinguiſh the ſlighteſt deviations of the index from the perpendicular direction."

Such is the deſcription and uſe of Cit. Prony's ſupport for the ſcale-beam, which, in practice, he ſays, perfectly anſwered his expectations.

SCALITZ, or SCALA, a town of Upper Hungary, in the county of Poſon. There is a very advantageous paſſage by it, from Moravia to Hungary, and it is ſeated on the Marck, 50 miles N. of Preſburg. Long. 17. 17. E. Lat. 49. 4. N.

SCHAGEN, or SCAGERIF, a promontory of North Jutland, in Denmark, at the entrance of the paſſage out of the ocean into the Categate. Long. 10. 6. E. Lat. 57. 16. N.

SCHAMACHIE, a town of Perſia, capital of Schirvan. It was formerly very large, but is now decayed, above 6000 houſes having been thrown down by an earthquake. It has manufactures of ſilks and cottons, and is ſeated on the W. ſide of the Caſpian Sea, 250 miles N.E. of Taurus. Long. 37. 5. E. Lat. 40. 50. N.

SCHANTZ STERNEY, a fortreſs in the Ruſſian government of Wiburg, ſeated on the Neva, a little E. of Peterſburgh. Long. 31. 15. E. Lat. 60. 0. N.

SCHARNITZ, a fortified town of Germany, in the Tirol. It is a paſſage of great importance, on the confines of Bavaria, 12 miles N of Inſpruc.

SCHAUENBURG, a territory of Weſtphalia, 22 miles long, and 10 broad, belonging to the landgrave of Heſſe Caſſel.

SCHAUMBURG, a town and caſtle of Germany, which give name to a lordſhip, in the circle of Lower Rhine, 23 miles N.N.W. of Mentz, and 25 W.S.W. of Wetzlar. Long. 8. 2. E. Lat. 50. 10. N.

SCHELESTADT, a ſtrong town of France, in the department of Upper Rhine, ſeated on the river Ill, 20 miles S.W. of Straſburg. Long. 7. 40. E. Lat. 48. 17. N.

SCHELLENBURG, a fortreſs of Bavaria, remarkable for a victory obtained here by the allies, over the French and Bavarians, in 1704. It is 22 miles W. of Ingolſtadt. Long. 10. 58. E. Lat. 48. 46. N.

SCHELLING, an iſland of the United Provinces, in Frieſland, lying at the entrance of the Zuider-Zee. Long. 5. 10. E. Lat 53. 20. N.

SCHENCK, a fortreſs of Dutch Guelderland, ſeated on the point where the Rhine divides into two branches, the Rhine and the Wahal. It is of great importance, as the centre of communication between Holland and Germany, and is 13 miles E. of Nimeguen. Long. 5. 26. E. Lat. 51. 55 N.

SCHENINGEN, a town of Lower Saxony, which gives name to a diſtrict, in the principality of Wolfenbuttle. It is 16 miles N. of Halberſtadt, and 18 E.S.E. of Wolfenbuttle. Long. 11. 25. E. Lat. 52. 22. N.

SCHIEDAM, a town of the United Provinces, in Holland, ſeated on a canal, which communicates with the Maeſe, four miles E. by S. of Rotterdam. Long. 4. 30. E. Lat. 51. 54. N.

SCHILTA, a ſtrong town of Upper Hungary, in the county of Neitra, ſeated on the river Waag.

SCHINTZNACH, a town of Switzerland, in the canton of Bern, remarkable for its agreeable poſition on the Aar, and its tepid mineral waters. Near it, on a lofty eminence, are the ruins of the famous caſtle of Hapſburg.

SCHIRVAN, a province of Perſia, bounded on the N. by Dagheſtan, on the E. and S.E. by the Caſpian Sea, on the S.W. by Erivan, and on the W. by Georgia. It is about 150 miles in length, and 90 in breadth. Schamachie is the capital.

SCHLEUSSINGEN, a town of Franconia, in the county of Henneburg, ſeated on the Schleuſs, 10 miles S.E. of Smalkald, and 19 N.N.E. of Schweinfurt. Long. 11. 2. E. Lat. 50. 43. N.

SCHLEYDEN, a town of Weſtphalia, in a county of the ſame name, annexed to the county of Mark. It is 40 miles N. of Treves. Long. 6. 40. E. Lat. 50. 45. N.

SCHLITZ, a town of Suabia, which gives name to a county. It is ſituate on a ſmall river that runs into the Fulda, ſeven miles N.N.W. of Fulda, and 33 E. of Gieſen. Long. 9. 40. E. Lat. 50. 45. N.

SCHLUSSERBURG, a town and fortreſs of Ruſſia, ſituate on the Neva, near lake Ladoga. The fortreſs ſtands on an iſland in the river, and has frequently been uſed as a ſtate-priſon. It is 36 miles E. of Peterſburg. Long. 30. 55. E. Lat. 50. 55. N.

SCHMIDBERG, a town of Sileſia, in the duchy of Jauer. Almoſt all the inhabitants are ſmiths, whence the place takes its name. It is ſeated at the foot of a mountain, near the ſource of the Bauber.

SCHNEEBERG, a town of Upper Saxony, ſituate on an eminence near the Mulda. Here are manufactures of thread, ſilk, gold, and ſilver-lace; and in the neighbourhood are ſilver mines, which formerly were very productive. It is ſeven miles N.W. of Schwartzburg.

SCHOMBERG, a town of Germany, in the electorate of Treves, ſeated on a mountain, 15 miles from Limbourg.

SCHONECK, or SCHOENECK, a town of Germany, in the electorate of Treves, with a caſtle, ſeated on the Eyms, 27 miles N. of Treves. Long. 6. 26. E. Lat. 50. 12. N.

SCONEN, SCANIA, or SKONE, a province of Sweden, bounded on the W. by the Sound, which ſeparates it from Zealand; on the N. by Halland and Smoland; and on the E. and S. by Bleckingen and the Baltic. It is 58 miles long, and 40 broad, and is a fertile country. Lunden is the capital.

SCHONGAW, a town of Upper Bavaria, ſeated on the Lech, 30 miles S. of Augſburg.

SCHOOL (*Encycl.*). We have given an account of various ſchools eſtabliſhed in Britain already; but ſome more recently eſtabliſhed muſt not be overlooked. The following is extracted from an account of two ſchools founded by the Rev. Mr. Gilpin at Boldre in Hampſhire; publiſhed by the Society for bettering the Condition of the Poor.

Two ſchools at Boldre in the New Foreſt, Hants, were eſtabliſhed and opened on the firſt of July, 1791, by the Rev. Mr. Gilpin; one for twenty boys, the other for twenty girls, to be ſelected from the children of the day-labouring poor of the pariſh; a preference being given (in order to encourage reading) to children who have learnt to read a chapter in the

Teſtament: but, if the preſcribed number of ſuch ſcholars cannot be found, the deficiency is ſupplied by ſuch children as cannot read.

Sixty-three boys and fifty-nine girls have already been admitted, including thoſe at preſent in the ſchools. Their attendance commences at nine o'clock, when all the ſcholars are aſſembled for prayers. From twelve to one is allowed for dinner, which the children bring with them to ſchool; they are diſmiſſed in ſummer at five, and in winter at four o'clock; except on Saturdays, when the ſchool breaks up at twelve. If any one is abſent, or is beyond the fixed time, without a proper excuſe, ſuch child is puniſhed by an hour's confinement and employment, at noon in winter, and in the evening in ſummer: and if the children have been kept at home, ſo as to continue abſent, without leave (which leave is to be entered in a book for the inſpection of the viſitors), they are uſually diſmiſſed the ſchool, and their places filled up by ſuch as will attend and make a better uſe of their time. As to vacation, a week is allowed at Whitſuntide, a fortnight at Chriſtmas, and a month at harveſt, in order to give them an opportunity of benefiting by harveſt work.

The girls are taught to read, knit, ſpin, ſew, and mend their own clothes, ſo as to fit them to be uſeful daughters, and good wives: the boys (beſides being improved in their reading), are inſtructed in writing and arithmetic; in the firſt, ſo far as to write a legible hand, for which one copy a day is thought ſufficient; and in arithmetic, ſo far as the four firſt rules, and particularly in the tables that belong to thoſe rules.

No preciſe time is fixed for admiſſion: in order that the children in the pariſh may be encouraged to an early proficiency in reading, as the qualification for a place in the ſchool: nor is any preciſe time fixed for the removal of either the boys or girls; as it is preſumed that as ſoon as thay are made *really uſeful*, their parents will wiſh to take them away, and thereby room will be left for the admiſſion of other children. They uſually come from ſeven to nine years of age, and quit the ſchool at thirteen or fourteen. As an incitement to induſtry, a ſeparate account is kept of the produce of each girl's ſale-work; and ſuch produce is laid out for them in clothes and neceſſaries, at the end of the year. Petty offences are puniſhed by a little extra confinement in play-hours; but no corporal correction is allowed, except for lying, ſwearing, ſtealing, indecent language, or immorality.

At the end of November, the annual account of the work of the girls is made up; and from thence to Chriſtmas, their working hours are employed *gratis*, in making up ſhirts and ſhifts for the children in the ſchool, and in knitting ſtockings (a pair each for the boys and girls) the worſted for which is given them.—At the end of the year all the children attend at the vicarage; where their clothes are examined: if there has been neglect on their part, it is noticed: and additions are, at the ſame time, made to their clothing.

The great object of the founder of theſe ſchools is to promote in theſe children the *knowledge and practice* of religion; in order that they may be able therein to inſtruct their own children, when they have families; an inſtruction, that, from local circumſtances, is much wanted in the neighbourhood of the New Foreſt. For this purpoſe, Mr. Gilpin has drawn up an eaſy explanation of the duties of religion, by way of queſtion and anſwer. This the children are taught to repeat, as well as their catechiſm, and are examined in it on Tueſday and Friday after dinner, and on Sunday afternoon.

The annual expence of this uſeful eſtabliſhment does not exceed 40 guineas a-year. The maſter, who lives in the houſe, has for ſalary, and finding fuel, &c. 21. year, and the habitation and garden. The miſtreſs lives in the village; ſhe has ten guineas a-year: and Mr. Gilpin's donations of clothing to the children, and ſome other incidental expences, amount to nearly ten guineas a-year more.

The ſchool-houſe is a neat brick building, with the boys' ſchool at the end next the road; and, at the other, the dwelling houſe, compriſing the ſchool of the girls, and looking into the garden. It is built on a healthy and beautiful ſituation, with a gradual deſcent to Lymington river. It coſt 210l. On the walls of the ſchool rooms are various texts of ſcripture inſcribed in tablets. The children ſtand round the table at particular times, and read them over, with a view of imprinting on their memory ſome of the moſt uſeful precepts in the Teſtament.

For the permanent endowment of theſe ſchools after his death, Mr. Gilpin purpoſes to provide by the ſale of his drawings and ſketches, which, as we have been told, he has formed for that purpoſe into eighty-nine lots, each lot containing ſeveral drawings. How valuable an addition they will make to the collections of the artiſt, the connoiſſeur, and the lover of the fine arts, it will be unneceſſary and preſumptuous in us to endeavour to explain. The value of the drawings, enhanced by the object to which the produce is deſtined to to be applied, muſt render them an enviable poſſeſſion to every one, whenever (in conſequence of that event which the friends of humanity hope may be long delayed) they ſhall be offered to the public.

The benefit of ſuch ſchools, as thoſe founded by Mr. Gilpin at Boldre, is important in every ſituation, and at all times; but, in the New Foreſt, where the children of the poor have too much diſpoſition to partake of the natural wildneſs of the place, they are peculiarly neceſſary and beneficial.

To this we ſhall add the *Rules of a Spinning School* at Oakham, in the county of Rutland, publiſhed by Lord Winchilſea in the ſame work, with the hope of encouraging the eſtabliſhment of ſimilar inſtitutions in other parts.

1ſt, All inhabitants of the pariſh ſhall be admitted.

2d, No perſons to receive relief from the pariſh upon account of their families, who refuſe to ſend their children to the ſchool: unleſs they can prove, to the ſatisfaction of the overſeers, that they can employ them to more advantage elſewhere.

3d, They are to be inſtructed gratis in ſpinning jerſey, and linen, and in knitting: thoſe who chooſe it, in reading; and thoſe who can bring work with them, in ſewing.

4th, The hours of work to be from eight to one, and from two to ſeven; from one to two, dinner and reſt. No work after dinner on Saturdays.

5th, A dinner to be provided for thoſe who chooſe to dine at the ſchool on the working days: for which they are to pay each 6d. per week.

6th, In caſe of illneſs, the dinner may be ſent for to their homes.

7th, The portions, if the dinner is ſent out, to be as follows:

One pint and half of peas porridge.
ditto ditto of rice milk.
One pint and half of rice broth.
One pound and half of potatoe pudding.

Thoſe who dine at the ſchool, to have as much as they chooſe to eat, and a quarter of a pound of bread each: except on the pudding and rice milk days, when no bread is allowed.

8th, The *whole of the earnings* to belong to the children.

A ſpinning ſchool had been eſtabliſhed at Oakham, in 1787: but, till this arrangement took place, the children uſed to go home to their dinner; which was attended with great inconvenience in wet and bad weather, and with loſs of time; as, frequently, when the weather was very

bad, they did not return after dinner; and ſometimes did not go at all.

In order to eſtabliſh the preſent ſyſtem, the dinners, for the firſt fortnight, were given gratis, and the parents invited to taſte them; after that they were informed, that the children of thoſe who approved of the plan, *might* dine there, upon paying *ſixpence a-week*; and thoſe whoſe parents preferred their dining at home, *might* continue to do ſo. The whole of the parents approved much of their dining at the ſchool; and the whole number, which amounts to between ſixty and ſeventy, dine there, and pay their money. They do more work in the week by theſe means, and get a much better dinner than they could at home. Several children come there, whoſe parents do not receive relief.

By purchaſing the different articles wholeſale, by the uſe of barley bread (which is cuſtomary at that place), and by means of a Rumford copper, the expence for the dinners and fuel has never exceeded the *ſixpence per head*. The peas porridge, and pudding, are thoſe recommended in Count Rumford's eſſay.

Lord Winchilſea conceives, that the ſucceſs, which has hitherto attended this plan, is owing to its having been left to the *option* of the parents, whether their children ſhould dine there or not.

SCHOONHOVEN, a ſtrong town of the United Provinces, in Holland, with a commodious haven, ſeated on the Leck, 14 miles E. of Rotterdam. Long. 4. 54. E. Lat. 51. 58. N.

SCHORNDORF, a town of Suabia, in the duchy of Wirtemburg, with a ſtrong caſtle. Here are ſalt ſprings, from which a great deal of ſalt is made. This place was poſſeſſed by the French in Auguſt, 1796. It is ſeated on the Rems, 11 miles N.E. of Stutgard. Long. 8. 54. E. Lat. 48. 56. N.

SCHWALBACH, a village of Germany, in the circle of Upper Rhine and county of Naſſau, frequented for its mineral waters, which are of a ſimilar nature to thoſe of Spa. It is ſeated on the river Aa, nine miles N. of Mentz.

SCHWARTZ, a town of Germany, in the Tirol, famous for its mines of different metals. It is ſeated on the river Ill, 14 miles N.E of Inſpruc. Long. 11. 42. E. Lat. 47. 19. N.

SCHWELM, a town of Weſtphalia, in the county of Mark. Near it are ſome medicinal ſprings. It is 22 miles N.E. of Cologne, and 22 E. of Duſſeldorf. Long. 7. 25. E. Lat. 51. 10. N.

SCHWERIN, a town of Lower Saxony, capital of the duchy of Mecklenburgh Schwerin. It is divided into four parts; namely, Schwerin, the New Town, the iſland of Schelf, and the Moor, which are all nearly encircled by a beautiful lake. The cathedral is a fine Gothic pile, with a lofty ſpire. The ducal palace and gardens are on an iſland in the lake, and have a communication with the town by a drawbridge. It is 33 miles W. by S. of Guſtrow. Long. 11. 48. E. Lat. 53. 48. N.

SCIATI, an iſland of the Archipelago, near the coaſt of Janna, 20 miles to the N. of Negropont, and almoſt at the entrance of the gulf of Salonichi. It is 22 miles in length, and eight in breadth. Long. 23. 40. E. Lat. 39. 26. N.

SCOPELO, an iſland of the Archipelago, five miles E. of Sciati, and 17 N. of Negropont. It lies at the entrance of the gulf of Salonichi, and is 10 miles long and five broad. It is very fertile, produces plenty of good wine, and contains 12,000 inhabitants, who are almoſt all Greeks.

SCOPIA, or Uscapia, a town of Turkey in Europe, in Bulgaria, with an archbiſhop's ſee. It is ſeated on the Vardar, over which is a bridge of 12 arches, 67 miles W.S.W. of Soffa. Long. 22. 25. E. Lat. 42. 10. N.

SCUTARI, a ſtrong town of Turkey in Europe, capital of Upper Albania, with a biſhop's ſee. It is ſeated on the lake Zeta, at the mouth of the river Bocana, 20 miles N E. of Antivari, and 47 N.W. of Albanopolis. Long. 10. 25. E. Lat. 42. 35. N.

Scutari, a town of Turkey in Aſia, in Natolia, with a good harbour, ſeated on the E. ſide of Conſtantinople, of which it is conſidered as a ſuburb, being directly oppoſite. It contains a handſome moſque, and is built on the ſide of a hill. Long. 29. 4. E. Lat. 41. 0. N.

SCYTHE, or Sithe, an inſtrument of huſbandry employed for the purpoſe of cutting graſs, and alſo for the mowing of corn.

Before we attempt a deſcription of the lateſt improvements on this rural inſtrument, we ſhall briefly obſerve, that the well known *Hainault*, or *French ſcythe*, for reaping wheat, has of late years met with many advocates in Britain. It conſiſts, according to the deſcription given by Dr. Templeman, of a ſhort blade, being one-third of the length of thoſe commonly uſed in England; with a wooden handle to be held in the right hand, having a bend and a broad rounded piece at the upper end, for the ſupport of the arm. Further, an iron hook is fixed to a ſtaff, four feet in length, made of oak or aſh, to be uſed with the left hand, with a mortiſe near the end, for the conveniency of the huſbandman's carrying the ſcythe on his ſhoulder. On the handle of the ſcythe, and ſtaff of the hook, at about half a yard from the bottom, are placed leather loops for the fingers, to keep the two graſps at proper diſtances from the ground.

Having already ſtated the diſadvantages, which cannot be avoided in the uſe of *ſickles* for cutting corn under the head of huſbandry, and likewiſe pointed out the ſuperior utility of ſcythes, we ſhall now give a deſcription of *two* inſtruments, which are eminently calculated for both purpoſes. Theſe ſcythes were firſt introduced to public notice by the Patriotic Society of Milan, in one of the earlier volumes of their Tranſactions. Convinced of the inconveniences ariſing from the uſe of the common inſtruments, they procured a model of a *Sileſian ſcythe*, with which the corn of that country is uniformly mown. Having cauſed a ſimilar inſtrument to be conſtructed, it was accordingly tried; and, notwithſtanding its imperfect manufacture, as well as this circumſtance, that the labourer had never uſed a ſcythe on ſuch principles, it was fully proved, that *nearly half the uſual time was ſaved*, and the fatigue or labour was conſiderably leſſened. Further, the corn was thus cut without receiving any injury from the concuſſion in falling to the ground, on which it was ſpread in a regular manner, ſo that it could be eaſily formed into ſheaves. The Milaneſe Society was afterwards preſented with an Auſtrian implement, different from the Sileſian in a few reſpects, which will be noticed in the ſubſequent account.

Figure 1, Pl. 46. repreſents the *Sileſian ſcythe*, which varies little from that commonly employed for mowing graſs: the blade, however, is ſomewhat ſmaller, and has four wooden teeth which are fixed parallel to it, with a view to prevent the grain from being ſcattered, when it is cut: ſo that the labourer is enabled to lay it on the ground in an even and regular way. *a*, *b*, the handle, which is two Milaneſe braſſes and nine inches and a half, or about four feet and four inches Engliſh meaſure, in length. *b*, *c*, repreſents the blade, being one braſs, and three and a half Milaneſe inches, or about two feet one inch long.—The piece of wood, in which the teeth are inſerted, is one braſs, one inch and a half, or nearly two feet in length.

The *Auſtrian ſcythe* greatly reſembles the inſtrument above delineated, excepting that the blade is larger, and the number of wooden teeth is increaſed to five, which are conſequently longer.

The Patriotic Society of Milan obſerve in their Memoir, that the difference in the conſtruction of theſe two implements, will render it neceſſary to employ each of them in a peculiar manner, which can only be acquired by practice. They further remark, that though, in mowing graſs, the feet are kept in a direction nearly parallel to each other, it will be adviſable to place them, when corn is reaping, in a line, one behind the other, the right foot being thruſt forward, and the left drawn towards it; becauſe, in the latter caſe, if they were advanced in a parallel manner, the labourer would be obliged to turn and bend his body in a very inconvenient poſture.

Such of our agricultural readers as are accuſtomed to the uſe of the common ſcythe, will eaſily aſcertain the moſt ſuitable and advantageous mode of employing the inſtrument now deſcribed: and, before we complete the hiſtory of the new implements, it will not be too great a digreſſion from the ſubject to give (from the Domeſtic Encyclopædia) the manner of reaping wheat in Flanders, by means of a very ſimple ſcythe, greatly reſembling that above explained by Dr. Templeman; and a model of which is preſerved in the Repoſitory of the "Society for the Encouragement of Arts, &c." in London. Another account, as well as a repreſentation of this uſeful implement, was communicated to the public by Mr. Adam Walker, in 1788, and inſerted in the 9th volume of *Annals of Agriculture*, where he obſerves, that corn, thick clover, and vetches, are thus cut down with great regularity, and ſuch expedition, as to ſurpaſs the ſickle, in the proportion of three to one.

After the above-given deſcriptions, and obſervations, relative to the *Sileſian ſcythe*, had been publiſhed, the Milaneſe Patriotic Society made additional experiments, from which it appeared, that when the ſtalks of corn are bent down in conſequence of heavy rains, the wooden teeth are apt to catch ſome of the ears, to the ſtalks of which the blade does not extend; and this not being cut below, the ears are pulled down and the grain is ſcattered. This accident happens principally, when the labourers, not being ſufficiently acquainted with the uſe of the ſcythe, are unable to adapt it to particular circumſtances.

To remedy theſe inconveniences, it occurred to an ingenious blackſmith, to add a *collector* or *gatherer*, made of cloth, the conſtruction of which is repreſented in the plate at fig. 2. *a, b, c,* is a common ſcythe. *c, d, m, l, o, f, n, e,* The *gatherer*; which at *c, d, e,* is compoſed of a thin iron plate; having a cavity at its extremity, for receiving the point of the blade. At *e, d,* are holes for ſewing in the cloth, which is light, coarſe, and cheap: it is likewiſe fixed to two thick iron wires, the upper of which is continued to *f,* where it terminates in a hole, in the handle:—the other is ſecured to the back of the blade. The method of fixing the gatherer to ſuch blade, will be more clearly underſtood by referring to the figure, delineated in the plate, fig. 2. and repreſenting one of the irons, which are ſecured by means of ſcrews to the back of the ſcythe. Theſe irons proceed from, and conſtitute a part of, the upright irons, *m, n, l, o,* that ſerve to keep the gatherer extended.

This contrivance is very ſimple and cheap; an attempt, however, has been made to ſimplify it ſtill further, by ſubſtituting for the gatherer two iron hoops, repreſented in the figure laſt referred to, by the dotted lines, marked *h, g, k, i,* with a croſs-piece that ſerves to connect them; thus ſaving the cloth and iron plate before deſcribed.—Experiments, however, have been made with both theſe implements; from the reſult of which it appears, that the gatherer is, upon the whole, preferable to the hoops, as no ears of corn are left behind; and that the latter alteration promiſes to be moſt ſerviceable, when there is no ſhort corn, that can inſinuate itſelf between ſuch iron hoops.

SEAFORD, a borough and ſea-port in Suſſex, which ſends two members to parliament, but has no market. It is eight miles S.S.E. of Lewes, and 59 S. by E. of London. Long. 0. 10. E. Lat. 50. 50. N.

SEATON, or Port Seaton, a ſea-port, in Haddingtonſhire. Here is a ruinous palace, in which Mary queen of Scots occaſionally kept her court, after her return from France. In the chapel are ſeveral curious monuments of marble. Seaton has a conſiderable trade in ſalt and coal, and is ſituate on the Frith of Forth, nine miles E. of Edinburgh. Long. 2. 54. W. Lat. 56. 0. N.

SEBASTIA, a town of Turkey in Aſia, in Paleſtine, the remains of the ancient city of Samaria. It is 34 miles N.N.E. of Jeruſalem. Long. 35. 40. E. Lat. 32. 15. N.

SEBASTIAN, St. a large city of Braſil, capital of the province of Rio Janeiro, and a biſhop's ſee. It has a very extenſive and commodious harbour, defended by numerous forts. The city ſtands on low ground, which was formerly ſwampy, and is ſurrounded by high hills, which exclude the benefit of the refreſhing ſea and land breezes; ſo that it is ſuffocatingly hot, and unhealthy, in the ſummer. The different mechanics carry on their buſineſs in diſtinct parts of the town; particular ſtreets being ſet apart for particular trades. On the S. ſide of a ſpacious ſquare is the palace of the viceroy; and there are ſeveral other ſquares, in which are fountains, ſupplied with water by an aqueduct, of conſiderable length, brought over valleys by a double row of arches. A Benedictine convent and a fort are on the extreme point, jutting into the harbour, oppoſite to which is Serpent Iſland, where there are a dock-yard, magazines, and naval ſtore-houſes. In another part of the harbour, at a place called Val Longo, are the warehouſes for the reception, and preparation for ſale, of the ſlaves imported from Africa. St. Sebaſtian is ſeated near the mouth of the Rio Janeiro, in the Atlantic. Long. 42. 44. W. Lat. 22. 54. S.

SEBASTOPOLIS, or Sagatopoli, a town of Mingrelia, on the Black Sea. It was put under the protection of Ruſſia, in 1783. It is 220 miles W.N.W. of Tefflis, and 260 N.N.W. of Erivan. Long. 55. 15. E. Lat. 46. 10. N.

SEBOURG, a town of France, in the department of the North, 12 miles E. of Valenciennes, and 12 S.E. of Condé. Long. 3. 50. E. Lat. 50. 22. N.

SECHURA, a town of Peru, in the biſhopric of Truxillo, ſituate near the mouth of a river of the ſame name, 30 miles S.S.E. of Paita, and 180 N.N.W. of Truxillo. Long. 81. 10. E. Lat. 5. 55. S.

SECKAU, a town of Germany, in Upper Stiria, with a biſhop's ſee; ſeated on the Gayle, nine miles N. of Judenburg, and 90 S.W. of Vienna. Long. 14. 27. E. Lat. 47. 19. N.

SECKENHEIM, a town of Germany, in the palatinate of the Rhine, near which the elector, Frederic I. gained an important victory in 1462. It is four miles E. of Manheim.

SECKINGEN, a town of Suabia, one of the foreſt towns. It belongs to the houſe of Auſtria, and is ſeated on an iſle, formed by the Rhine, ſix miles S.E. of Rheinfelden, and 27 W. of Scaffhauſen. Long. 7. 57. E. Lat. 47. 34. N.

SECKINGTON, a village in Warwickſhire, near Tamworth; famous for a battle, fought in 757, between Cuthred, king of the Weſt Saxons, and Ethelbald, king of the

Mercians. On the north ſide of its church are the ruins of a fort, and near it an artificial hill, 45 feet high.

SEECHING, a town in Norfolk, with a market on Tueſday, ſeated on a ſmall navigable river, four miles S. of Lynn, and 93 N.E. of London. Long. 0. 24. E. Lat. 52. 44. N.

SEER, a town of Arabia, capital of a principality, in the province of Oman. It is 108 miles W.S.W. of Julfar. Long. 54. 38. E. Lat. 25. 10. N.

SEEZ, an ancient and conſiderable town of France, in the department of Orne, with a biſhop's ſee; ſeated in a fine country, near the ſource of the Orne, 12 miles N. of Alençon, and 102 W. by S. of Paris. Long. 0. 15. E. Lat. 48. 36. N.

SEGESTAN, a province of Perſia, bounded on the north by Koraſan and Balck, on the eaſt by Candahar and Sableſtan, on the S. by Mackerran, on the S.W. by Kerman, and on the W. by Covheſtan and Farſiſtan.

SEGESWAR, a town of Tranſylvania, capital of a county of the ſame name. It is built in the form of an amphitheatre, on the ſide of a hill, near the river Kokel, 47 miles north of Hermanſtadt. Long. 24. 55. E. Lat. 47. 4. N.

SEGRA, a river of Spain, which riſes in the Pyrenées, and runs S.W. through Catalonia, paſſing by Puy-Cerda, Urgel, Belaguer, Lerida, and Mequinenza, where it falls into the Ebro.

SEGURA, a town of Portugal, in Beira, with a caſtle on a mountain. It is near the rivers Elia and Tago, eight miles S.E. of Caſtel-Branco, and 30 N.W. of Alcantara.

Segura, a town of Spain, in New Caſtile, and territory of La Mancha, ſeated among the mountains of Segura, 35 miles N.E. of Baeza. Long. 2. 39. W. Lat. 37. 56. N.

Segura, a river of Spain, which riſes in the mountains of Segura, in New Caſtile, and croſſing Murcia, and the ſouth part of Valencia, falls into the Mediterranean.

SEHARANPOUR, a town of Hindooſtan Proper, capital of a diſtrict of the ſame name, between the Jumma and the Ganges, in the country of Delhi. It is 86 miles N. of Delhi. Long. 77. 15. E. Lat. 30. 4. N.

SEINE, a river of France, which riſes in the department of Côte d'Or, and flowing by Troyes, Melun, Paris, and Rouen, falls into the Engliſh Channel, at Havre de Grace.

Seine, Lower, a department of France, including part of the late province of Normandy. Rouen is the capital.

SEINE AND MARNE, a department of France, including part of the late province of the Iſle of France. Meux is the capital.

SEINE AND OISE, a department of France, including part of the late province of the Iſle of France. Verſailles is the capital.

SEINSHEIM, a town of Franconia, with a caſtle, 33 miles N.W. of Nuremburg. Long. 10. 28. E. Lat. 49. 40. N.

SEIR, or Hor, a mountain in Arabia Petræa, which formerly bounded Judea on the S. and ſeparated it from Idumea. It is now called Sardeny, and is 140 miles E. of Cairo, in Egypt.

SELAM, a town of Mexico, in the province of Jucatan, ſituate near the ſea-coaſt, 45 miles N.W. of Merida. Long. 90. 28. W. Lat. 39. 12. N.

SELBY, a town in the Weſt Riding of Yorkſhire, with a market on Monday, ſeated on the Ouſe, 12 miles S. of York, and 182 N. by W. of London. Long. 1. 2. W. Lat. 53. 47. N.

SELESHIA, anciently Seleucia, a town of Turkey, in Aſia, in Caramania, 10 miles from the ſea, and 58 W. of Teratſo.

SELIGENSTADT, a town of Germany, in the electorate of Mentz, formerly imperial. It is ſeated at the confluence of the Gernſpentz and Maine, 14 miles E. of Francfort, and 27 E. of Mentz. Long. 8. 32. E. Lat. 49. 54. N.

SELIVREA, a town of Turkey in Europe, in Romania, with an archbiſhop's ſee. It was a large place, but is now much decayed. It is ſeated on the ſea of Marmora, 35 miles W. of Conſtantinople. Long. 28. 12. E. Lat. 41. 4. N.

SELLES, a town of France, in the department of Loir and Cher, with a caſtle, over which is a bridge, 12 miles S.E. of Blois, and 105 S.S.W. of Paris. Long. 1. 36. E. Lat. 47. 25 N.

SELTZ, a town of France, in the department of Lower Rhine, ſeated on the Rhine, 270 miles E. of Paris. Long. 8. 12. E. Lat. 48. 53. N.

SEMENNUD, a town of Egypt, on the E. branch of the Nile, eight miles S.S.W. of Manſoura, and 53 N. of Cairo. Long. 31. 30. E. Lat. 31. 5. N.

SEMIGALLIA, the E. part of the duchy of Courland, ſeparated by the river Mafza, from Courland Proper. Mittau is the capital.

SEMINARI, a town of Naples, in Calabria Ulteriore, 22 miles N.E. of Reggio. Long. 10. 21. E. Lat. 38. 20. N.

SEMINOLAS, a diviſion of the Creek Indians, which inhabit a fertile country on the rivers Appalachikola and Flint, in the ſtate of Georgia, in North America.

SEMLIN, a town of Sclavonia, on the W. ſide of the Danube and Save, oppoſite Belgrade, and 70 miles S.E. of Eſſeck. Long. 21. 0. E. Lat. 45. 20. N.

SEMPACH, a lake of Switzerland, in the canton of Lucern, three miles long and one broad. The banks on each ſide ſlope gently to the edge of the water, and are checkered with wood.

Sempach, a town of Switzerland, in the canton of Lucern: celebrated for the battle which eſtabliſhed the liberty of the Swiſs, and in which Leopold duke of Auſtria was defeated and ſlain. The anniverſary of this battle, which happened July 9, 1386, is commemorated with great ſolemnity, both at Sempach and Lucern. Sempach is ſeated on a lake of the ſame name, ſeven miles N.W. of Lucern. Long. 7. 57. E. Lat. 47. 10. N.

SEMUR, a town of France, in the department of Côte d'Or, with a caſtle. It has a manufacture of cloth, and is ſeated on the Armançon, over which are two bridges, 37 miles N. of Autun, and 135 S.E. of Paris. Long. 4. 19. E. Lat. 47. 28. N.

SEMUR-EN-BRIENNOIS, an ancient town of France, in the department of Saone and Loire, 40 miles N.W. of Lyons, and 175 S. of Paris. Long. 4. 22. E. Lat. 46. 14. N.

SENA, or Marzali, a town of Monomotapa, on the river Zambeze, where the Portugueſe have a factory. Long. 32. 3. E. Lat. 18. 2. S.

SENEFFE, a town of Auſtrian Brabant, four miles S. of Nivelle; famous for a battle gained by the French over the Prince of Orange, in 1674.

SENEZ, a town of France, in the department of Lower Alps, ſeated in a rough barren country, 46 miles N.E. of Aix, and 49 N.W. of Nice. Long. 6. 40. E. Lat. 43. 59. N.

SENLIS, an ancient town of France, in the department of Oiſe, lately a biſhop's ſee. The cathedral has one of the higheſt ſteeples in France. It is ſeated on the ſide of a hill, on the river Nonnette, almoſt ſurrounded by a large foreſt, 20 miles N.W. of Meaux, and 27 N.E. of Paris. Long. 2. 40. E. Lat. 49. 12. N.

SENS, an ancient town of France, in the department of Yonne, with a biſhop's ſee. The metropolitan church is a handſome Gothic ſtructure. The dauphin and dauphineſs, parents of Lewis XVI. were interred in this church; and here was lately their monument, a maſter-piece of Couſton's,

crowned by two urns united, expreſſive of the unalterable affection of this virtuous pair. It was the laſt requeſt of the unfortunate monarch, their ſon, to the National Convention, that his remains might be interred with theirs; a requeſt which they refuſed. Sens is ſeated in a fertile country, at the confluence of the Vanne with the Yonne, 25 miles N. of Auxerre, and 60 S.E. of Paris. Long. 3. 22. E. Lat. 48. 12. N.

SERA, a town of the peninſula of Hindooſtan, in the Myſore country, 55 miles N. of Seringapatam, and 58 N.W. of Bangalore. Long. 75. 54. E. Lat. 13. 28. N.

SERAIO, a town of Turkey in Europe, capital of Boſnia, 110 miles S.W. of Belgrade. Long. 18. 5. E. Lat. 44. 24. N.

SERAMPOUR, a town of Hindooſtan Proper, in Bengal, ſeated on Hoogly River, a ſmall diſtance above Calcutta. It is a Daniſh ſettlement, and carries on a conſiderable trade.

SERAVALLE, a town of Italy, in the duchy of Milan, 24 miles N. of Genoa. Long. 8. 36. E. Lat. 44. 44. N.

SERCELLI, a ſea-port of the kingdom of Algiers, a little to the W. of Algiers. Long. 2. 20. E. Lat. 36. 50. N.

SERDOBOL, a town of Ruſſia, in the government of Wiburg, ſituate on the lake Ladoga, 60 miles N.N.E. of Wiburg. Long. 30. 15. E. Lat. 61. 45. N.

SERFO, or SERFANTE, an iſland of the Archipelago, 50 miles N.W. of Naxia. It is eight miles long and five broad, and full of mountains and rocks, in which are mines of iron and loadſtone. The inhabitants are all Greeks, and have but one town, called St. Nicholo, which is a poor place. Long. 25. 10. E. Lat. 37. 19. N.

SERGAG, a town of Ruſſia, in the government of Niznei Novogorod, 48 miles S.E. of Niznei Novogorod. Long. 45. 20. E. Lat. 56. 50. N.

SERGIPPY, a ſea-port of Braſil, capital of a government of the ſame name. It is ſeated at the mouth of the Rey, 120 miles N.E. of St. Salvador. Long. 39. 46. W. Lat. 31. 30. N.

SERPA, a ſtrong town of Portugal, in Alentejo, ſeated on a rugged eminence, with a caſtle, three miles from the Guadiana, and 83 S.E. of Liſbon. Long. 7. 45. W. Lat. 37. 47. N.

SERRES, a town of France, in the department of Upper Alps, 15 miles S.W. of Gap.

SERVULO, a caſtle of Auſtrian Iſtria, ſeated on a high mountain, four miles from Trieſt. Near it is a famous cavern, in which the ſparry exudations have formed various figures of blue and white colours.

SESSA, an ancient town of Naples, in Terra di Lavoro, with a biſhop's ſee. It was formerly very conſiderable, and is 30 miles N. of Naples. Long. 14. 19. E. Lat. 41. 20. N.

SESTRI-DI-LEVANT, an ancient town of Italy, in the territory of Genoa, 30 miles W. of Genoa. Long. 9. 28. E. Lat. 44 23. N.

SE-TCHUEN, a province of China, bounded on the N. by Chen-ſi, on the E. by Hou-quang, on the S. by Koeitcheou, and on the W. by Thibet. It is watered by the great river Yang-tſe-king, and is rich, not only on account of the great quantity of ſilk it produces, but its mines of iron, tin, and lead, as well as its amber, ſugar-canes, and lapis lazuli. It likewiſe abounds in muſk, rhubarb, &c. Tching-tou-fou is the capital.

SETIMO, a town of Piedmont, ſeated on the Po, eight miles N. of Turin. Long. 7. 47. E. Lat. 45. 14 N.

SETLEGE, a river of Hindooſtan Proper, the moſt eaſterly of the five eaſtern branches of the Indus. About midway between its ſource and the Indus, it receives the Beyah, and joins the Indus a great way to the S. of Moultan.

SETTENIL, a town of Spain, in Granada, eight miles N. of Ronda, and 38 N.W. of Malaga. Long. 5. 10. W. Lat. 36. 48. N.

SETTIA, a town of the iſland of Candia, with a Greek biſhop's ſee, 48 miles E.S.E. of Candia. Long. 26. 2. E. Lat. 35. 3. N.

SETTLE, a town in the Weſt Riding of Yorkſhire, with a market on Tueſday. It is ſeated on the Ribble, over which is a bridge, 28 miles E. by N. of Lancaſter, and 235 N.N.W. of London. Long. 2. 15. W. Lat. 54. 6. N.

SEVEN ISLANDS, iſlands to that number, in the Frozen Ocean, lying in long. 18. 48. E. lat. 80. 31. N. Among thoſe iſlands Captain Phipps, with the Race-horſe and Carcaſs, were ſurrounded by the ice, from the 31ſt of July to the 10th of Auguſt, 1773, when a briſk wind at N.N.E. effected their deliverance.

SEVENOAKS, a town in Kent, with a market on Saturday. It obtained its name from ſeven large oaks which were near it when it was firſt built. Here is an hoſpital for the maintenance of aged people, with a free ſchool, firſt erected by Sir William Sevenoaks, lord mayor of London in 1418, who is ſaid to have been a foundling, charitably educated by a perſon of this town. Queen Elizabeth having augmented the revenues of the ſchool, it was called Queen Elizabeth's School; and the whole was rebuilt of ſtone in 1727. Near this town is Knole, an ancient palace of the ſee of Canterbury, which Archbiſhop Cranmer exchanged with the crown for other lands, and Queen Elizabeth gave to Thomas lord Buckhurſt, afterward earl of Dorſet, from whom it deſcended to the preſent Duke of Dorſet. In 1450, the rebel John Cade defeated the royal army near this town. It is ſix miles N.W. of Tunbridge, and 23 S.S.E. of London. Long. 0. 18. E. Lat. 51. 19. N.

SEVER, ST. a town of France, in the department of Landes, ſeated on the Adour, 20 miles E. of Dax, and 65 S. by E. of Bourdeaux. Long. 0. 35. W. Lat. 43. 45. N.

SEVERNDROOG, an iſland of Hindooſtan Proper, 60 miles S. of Bombay. Here was a ſtrong fort that belonged to Angria the pirate, which was taken by Commodore James, in 1756.

SEVERO, a town of Naples, in Capitanata, with a biſhop's ſee, ſeated in a plain, 75 miles N.E. of Naples. Long. 15. 34. E. Lat. 41. 40. N.

SEVRES, Two, a department of France, including part of the late province of Poitou. It is ſo named from two rivers, one of which flows W. by St. Maxient and Niort, into the bay of Biſcay, oppoſite the iſle of Rhé, and the other takes a N.W. direction, paſſes by Cliſſon, and enters the river Loire, oppoſite Nantes. St. Maixent is the capital.

SEWALICK, MOUNT, a chain of mountains that borders on the level country, on the N. of the province of Delhi, in Hindooſtan Proper. At Hudwar, the Ganges forces its way through this ridge into the plains of Hindooſtan.

SEYSSEL, a town of France, in the department of Ain. It is divided by the Rhone, which here begins to be navigable, into two parts; of which the eaſtern was ceded to the King of Sardinia, by the treaty of Turin, in 1760. It is 14 miles N E. of Belley. Long. 7. 45. E. Lat. 46. 6. N.

SEZANNE, a town of France, in the department of Marne, ſeated on a little river, 27 miles N.W. of Troyes, and 65 S.E. of Paris. Long. 4. 10. E. Lat. 48. 41. N.

SEZZA, a town of Naples, in Terra di Lavoro, with a biſhop's ſee, 29 miles N N.W. of Naples, and 72 S.E. of Rome. Long. 13. 45 E. Lat. 41. 19. N.

SHABUR, a town of Egypt, on the W. branch of the

Nile, 48 miles S.E. of Alexandria, and 50 N.N.W. of Cairo. Long. 30. 58. E. Lat 30. 47. N.

SHAHJEHANPOUR, a town of Hindooſtan Proper, in the province of Malwa, 20 miles N.E. of Ougein, and 196 S. of Agimere. Long. 76. 18. E. Lat. 23. 26. N.

SHEFFORD, a town of Bedfordſhire, with a market on Friday, ſeated between two rivulets, which unite their ſtreams below the town, and fall into the Ouſe. It is eight miles S.E. of Bedford, and 41 N. by W. of London. Long. 0. 21. W. Lat. 52. 8. N.

SHEFNAL, a town in Shropſhire, with a market on Friday, nine miles N.E. of Bridgenorth, and 136 N.W. of London. Long. 2. 22. W. Lat. 52. 42. N.

SHELBURNE, a town of Nova Scotia, ſituate at Port Roſeway. It extends two miles on the water ſide, and one mile backward, with wide ſtreets croſſing each other at right angles. The harbour is deep, capacious, and ſecure. About a mile from Shelburne, and ſeparated from it by a ſmall river, is the Black Town, containing about 1200 free blacks, who ſerved on the royal ſide during the American war. Shelburne is 100 miles S.W. of Halifax. Long. 65. 0. W. Lat. 43. 46. N.

SHELLA; a town of Morocco. It is conſidered as a ſacred aſylum, and none are allowed to enter it but Mahometans. It is four miles E. of Sallee.

SHENAN (*Encycl.*). The note referred to in that article is to the following effect. Shenan, an eaſtern dyeing-drug, may be procured at any of the ports in the Levant. It is the *Salicornia*—the eaſtern jointed-kali, and grows in that part of the world plentifully. The leſſer ſpecies of *ſalicornia* found on the coaſts of Britain is not found to equal the foreign in the proceſs of dyeing; though the experiments yet made towards aſcertaining the fact are by no means deciſive.

SHEPTON MALLET, a town in Somerſetſhire, with a market on Friday, and a conſiderable manufacture of ſecond cloths, the principal material of which is fine Engliſh wool. It is ſeated under Mendip Hills, 17 miles S.W. of Bath, and 114 W. of London. Long. 2. 30. W. Lat. 51. 9. N.

SHERBORN, a town in Dorſetſhire, with a market on Thurſday and Saturday. It was formerly a biſhop's ſee, and had three churches, though now but one, which was the cathedral, and in it are interred the Saxon kings Ethelbard and Ethelbert. It had alſo a caſtle, now in ruins. Here is a famous free-ſchool, founded by Edward VI.: two large ſilk mills; and a conduit of excellent water, which is continually running. It is 16 miles N. by W. of Dorcheſter, and 118 W. by S. of London. Long. 2. 41. E. Lat. 50. 54. N.

SHEVAGUNGA, a town of the peninſula of Hindooſtan, in the Myſore country, 25 miles N.W. of Bangalore. Long. 77. 18. E. Lat. 13. 20. N.

SHIPPENSBURG, a town of Pennſylvania, in Cumberland County, 21 miles N.E. of Chambersburg. Long. 77. 35. W. Lat. 45. 50. N.

SHIPTON, an ancient town in Worceſterſhire, though ſurrounded by Warwickſhire, with a market on Saturday. It is ſeated on the Stour, 14 miles W. of Banbury, and 83 N.W. of London. Long. 1. 25. W. Lat. 52. 5. N.

SHOALES, Isles of, in North America, on the coaſt of New Hampſhire. They lie conveniently for the cod fiſhery, which was formerly carried on here to great advantage; but the inhabitants are now few and poor.

SHOGLE, a town of Syria, ſeated on the Aſi, anciently called Orontes, over which is a bridge of 13 arches. It is 18 miles S. by E. of Antioch, and 45 S.W. of Aleppo. Long. 36. 40. E. Lat. 35. 20. N.

SHOOMSKA, one of the Kurile Iſlands, three leagues S. of Cape Lopatka, in Kamtſchatka. Its inhabitants conſiſt of a mixture of natives and Kamtſchadales.

SHOP, the lower front apartment of a houſe in which goods are diſplayed for ſale by retail. Shops of this deſcription are too generally known to require particular notice; but the following extract from an account of a *Village* SHOP at Greenford, in Middleſex, by the Rev. Dr. Glaſſe, will ſhew that ſome recent eſtabliſhments uſeful to the poor have been opened under the appellation of ſhops.

"In January, 1800," ſays Dr. Glaſſe, "I reſolved to open a village ſhop at Greenford, as nearly as poſſible on the plan of that at Mongewell: for this purpoſe I fitted up a room near my houſe, and appointed an intelligent young woman, one of my ſervants, to the office of ſhop-keeper; the time of ſale being limited to the hour between twelve and one o'clock; which I knew would not be inconvenient to thoſe for whom the ſhop was intended, as they almoſt all live near to my houſe. I propoſed to ſupply them with bacon, cheeſe, butter, rice, ſoap, ſugar, and tea. We had no difficulty in conducting the ſale of any of theſe articles, except the laſt, which, being a ſubject of exciſe, could not be dealt in without a licence ſpecially taken out for that purpoſe. This I thought at firſt might be diſpenſed with; but the exciſeman is obliged, by his oath, to require it. Accordingly a licence was obtained, at the expence of only a few ſhillings; and the young woman's name, as a dealer in tea, &c. was written on the door of her ſhop.

"The principal objection to a village ſhop, was, in this inſtance, removed by an eſtabliſhed ſhop-keeper in the village having juſt left off buſineſs; there being only one remaining, the keeper of which had other ſufficient means of ſupport. I was therefore doing no material injury to any one, in the ſervice which I was endeavouring to render to many.

"I determined to lay in every article for ſale of the beſt kind, and to ſell it at the prime coſt; and the poor, in conſequence of an arrangement, which had their comfort and advantage for its ſole object, were immediately ſupplied for ready money only with the neceſſaries of life; at a price, which, on compariſon with what they had been accuſtomed to pay, appeared to them to be extremely moderate and reaſonable. It is true, however, that, at the beſt, every article which they now purchaſe, muſt come to them exceedingly dear.

"Whoever deals at the ſhop, is ſupplied with a card or ticket, inſcribed with his or her name; which is to be given to the pariſh clerk, in church, by ſome one grown up perſon of the family, after morning or evening ſervice. This ticket the clerk is to bring to the ſhop on Monday: and if by the abſence of any ticket it appears that the owner was abſent from church on the preceding day, ſuch owner, unleſs a ſatisfactory reaſon can be given, is deprived of the advantages of the ſhop for the enſuing week.

"The receipts, in ſix months, are rather better than 150l. and the ſavings, to the poor, beſide the prevention of frequent journeys to Brentford (four miles), and that chiefly on Sunday morning, are different on different articles; on none leſs than 15 per cent.; on ſome, 20 per cent. and on others, 25 per cent.

"I ſhould have mentioned, that, although the hour of applying to the ſhop is limited on other days, to between twelve and one, yet on Saturdays it is open from ſix till nine in the evening. The labourers have prevailed on their employers to lay aſide the practice of paying wages on Sunday; and urge, as an argument, the neceſſity of their carrying money in their hands when they go to this ſhop, to purchaſe the neceſſary ſupplies for their families, on Saturday evening. I hope I ſhall be able to continue this mode of aſſiſtance to the poor, and to extend it with effect to other articles; particularly to thoſe of coals and potatoes; the latter of which

we are now ſelling to the poor, at one halfpenny a pound; but they are ſmall, though of the beſt ſort. Our price for coals never exceeds one ſhilling a buſhel; which, at the preſent coſt of the article, will require a ſubſcription to ſupport it: as, if the demand were great, the deficiency would be too conſiderable to be conveniently ſupported by an individual.

"It is but too obvious, how much the poor are impoſed upon by the petty ſhopkeepers, in the neceſſaries which they are enabled to purchaſe. The *quality* of the goods is not the beſt: the *price* is extravagantly high; and the *quantity* is reduced by deceitful weights, and a ſcanty meaſure. This is ſo often the caſe, as to call for a particular attention to two recent acts of parliament for the inſpection of weights and balances: and I cannot help conſidering thoſe officers who undertake this enquiry, when they faithfully diſcharge their duty, as public benefactors.

"One great advantage, which I hope my poor neighbours will derive from my ſhop, will be an eſtabliſhed habit of *paying ready money*; for we have no book debts. In too many caſes, the ready caſh uſed to go *elſewhere*, doing no good, but much harm: while the poor ſhopkeeper was the principal creditor, and thought himſelf juſtified in charging an extravagant price, to make himſelf amends for long credit, and frequent loſſes of the whole debt.

"There is another benefit much more important, which, I hope, will ariſe from this little inſtitution: and that is, that the poor will acquire a habit of attending public worſhip on the Lord's day. By the church ticket, required to be delivered to the clerk, the congregation is greatly increaſed; the habit of indolence, perhaps, rather than downright irreligion, which kept them from church, is overcome, and an improvement in the morals of my *cuſtomers* may reaſonably be expected."

A ſhop of this kind had been opened, in 1794, at Mongewell in Oxfordſhire. An account of its beneficial effects is related in the Reports of the Society for bettering the Condition of the Poor by the Biſhop of Durham.

SHOREHAM, a borough in Suſſex, with a market on Saturday. It ſends two members to parliament, and is commonly called New Shoreham, to diſtinguiſh it from the Old, which lies near it, and is now of little account. It is ſeated on an arm of the ſea, which makes it a place of ſome trade, and many ſmall veſſels are built here. It is 16 miles N.W. of Newhaven, and 56 S. by W. of London. Long. 0. 15. W. Lat. 56. 54. N.

SIARA, a town of Braſil, capital of a captainſhip of the ſame name, which lies between thoſe of Maragnan and Rio-Grande, on the N. coaſt. In the neighbourhood is a fort, on a mountain, near the river Siara. Long. 39. 35. W. Lat. 3. 15. S.

SIASKOI, a town of Ruſſia, in the government of Peterſburg, near the lake Ladoga, 24 miles N.E. of New Ladoga. Long. 30. 47. E. Lat. 60. 16. N.

SICAL, a town of Mexico, on the N. coaſt of the province of Jucatan, 70 miles N.W. of Merida. Long. 90. 30. W. Lat. 39. 30. N.

SICHEM, a town of Auſtrian Brabant, to the S. of which is a celebrated monaſtery. It is ſeated on the Demer, 18 miles E. of Mechlin. Long. 5. 0. E. Lat. 51. 6. N.

SIDAYE, a ſtrong town on the N. coaſt of the iſland of Java, with a harbour. Long. 113. 15. E. Lat. 6. 40. S.

SIDEROCAPSA, a town of Turkey in Europe, in Macedonia, famous for a gold mine in its neighbourhood. It is five miles from the gulf of Conteſſa. Long. 13. 44. E. Lat. 40. 30. N.

SIDRA, an iſland of the Archipelago, between the gulf of Napoli and that of Engia. Long. 24. 0. E. Lat. 37. 0. N.

SIDRA, a ſpacious gulf on the coaſt of Barbara between Tripoli and Barca, which takes its name from a ſmall iſland at the bottom of the gulf.

SIEDENBERG, a town of Weſtphalia, in the county of Hoye, nine miles S.S.W. of Hoye.

SIEGBURG, a town of Weſtphalia, in the duchy of Berg, ſubject to the elector palatine. It is ſeated on the Sieg, 15 miles S.E. of Cologne. Long. 7. 22. E Lat. 50. 43. N.

SIEGMARINGEN, a town of Suabia, capital of a county of the ſame name. It is 26 miles N. of Conſtance, and 44 S. of Stutgard. Long. 9. 10. E. Lat. 48. 2. N.

SIEGSTADT, a town of Norway, in the province of Aggerhuys, 58 miles N. of Chriſtiania. Long. 10. 55. E. Lat. 60. 0. N.

SIENNOI, a town of Ruſſia, in the government of Mohilef, 60 miles N.N.W. of Mohilef. Long. 29. 45. E. Lat. 54. 30. N.

SIGNAU, a town of Switzerland, and principal place of a diſtrict, in the canton of Bern, 12 miles S.E. of Bern. Long. 7. 18. E. Lat. 46. 44. N.

SIGNET (*Encycl.*). All the ſupreme courts of Law in Scotland have ſeals or *ſignets* proper to their ſeveral juriſdictions. The courts of ſeſſion and juſticiary formerly uſed the ſame ſignet, which was called the king's, becauſe the writs ran in his name; and though the juſticiary at laſt got a ſeparate ſignet, yet that of the ſeſſion is ſtill named *the king's* ſignet. In the ſignet office are ſcaled ſummonſes of citation, letters of executorial diligence, or for ſtaying of diligence; and, generally, whatever paſſes by warrant of the ſeſſion, and is to be executed by officers of the court. All, before ſealing, muſt be ſigned by the writers or clerks of the ſignet. But letters of diligence, where they are granted in a depending proceſs, merely for probation, though they paſs by the ſignet, muſt be ſubſcribed by a clerk of ſeſſion. The clerks of the ſignet alſo prepare and ſubſcribe all ſignatures of charters, or other royal grants, that paſs the exchequer.

SIGTUNA, an ancient town of Sweden, in Upland, ſeated on the lake Maeler, between Stockholm and Upſal.

SIGUENZA, a town of Spain, in New Caſtile, with an archbiſhop's ſee, a univerſity, and a caſtle, in which is an arſenal. The univerſity conſiſts of ſeveral colleges; but the moſt conſiderable ſtructure is the cathedral. It is ſeated on a hill, at the foot of Mount Atienca, 60 miles N.E. of Madrid. Long. 2. 41. W. Lat. 41. 6. N.

SILHET, a town of Hindooſtan Proper, capital of a diſtrict of the ſame name, in the country of Bengal. It is 100 miles N.E. of Dacca, and 200 E.N.E. of Moorſhedabad. Long. 91. 57. E. Lat. 24. 52. N.

SILISTRIA, or DORESTRO, a town of Turkey in Europe, in Bulgaria, with a citadel, and an archbiſhop's ſee. It is ſeated near the confluence of the Miſſovo and Danube, 97 miles N.E. of Nicopoli, and 170 N.E. of Adrianople. Long. 27. 31. E. Lat 45. 0. N.

SILKEBURG, a town of Denmark, in N. Jutland, with a caſtle, which was formerly of great ſtrength. It is 18 miles W. of Arhuſen. Long. 9. 30. E. Lat. 56. 3. N.

SILLEBAR, a ſea-port on the W. coaſt of Sumatra, a little S. of Bencoolen. Long 101. 0. E. Lat. 4. 0. S.

SILLE-LE-GUILLAUME, a commercial town of France, in the department of Sarte, 20 miles N.E. of Mans.

SIMANCAS, a town of Spain, in Leon, with a caſtle, in which, on account of its ſtrength, Philip ordered the archives of the kingdom to be kept. It is ſituate on the Deuro, eighty miles S.W. of Valladolid. Long. 4 30. W. Lat. 41. 45. N.

SIMBIRSK, a government of Ruſſia, formerly a province of the kingdom of Kaſan. The capital, of the ſame name, is ſeated on the Volga, 100 miles S. by W. of Kaſan. Long. 48. 34. E. Lat. 54. 22. N.

SIMI, the ancient Syme, an iſland in the Mediterranean, between the iſland of Rhodes and the continent of Aſia, ſix miles N. of Rhodes. Long. 27. 33. E. Lat. 36. 35. N.

SIMMEREN, a town of Germany, in the circle of Lower Rhine, capital of a duchy of the ſame name, with a caſtle. It belongs to the elector palatine, and is ſeated on the Simmeren, 26 miles W. of Mentz, and 35 E. of Triers. Long. 7. 41. E. Lat. 49. 51. N.

SIMOGU, a town of the peninſula of Hindooſtan, in the Myſore country, ſituate on the Tumbadra, 93 miles N.W. of Seringapatam. Long. 75. 30. E. Lat. 13. 21. N.

SIMONS, St. an iſland of North America, on the coaſt of Georgia, oppoſite the mouth of the Alatamaha. It is fifteen miles long and four broad, and has a good town called Frederica.

SIMONTHORNA, a ſtrong town of Lower Hungary, in the county of Tolna, with a caſtle. It was taken from the Turks in 1686, and is ſeated on the Sarwige, eight miles from Tolna. Long. 18. 16. E. Lat. 46. 40. N.

SINCAPOUR, an iſland and town at the moſt ſouthern extremity of the peninſula of Malacca, from which it is ſeparated by the ſtrait of Sincapour. It is 100 miles S.E. of the city of Malacca. Long. 104. 10. E. Lat. 1. 10. N.

SINDELFINGEN, a town of Suabia, in the duchy of Wirtemburg, ſix miles S. W. of Stutgard, and 30 E. of Baden. Long. 9. 5. E. Lat. 48. 45. N.

SINES, a town of Portugal, in Eſtremadura, 40 miles S. of St. Ubes. Long. 8. 55. W. Lat. 37. 40. N.

SING, a ſtrong town of Dalmatia, built by the Turks in oppoſition to Cliſſa. It was taken by the Venetians in 1686. It is eight miles N. of Cliſſa, and 16 N. of Spalatro. Long. 17. 30. E. Lat. 47. 10. N.

SI-NGAN-FOU, a city of China, capital of the province of Chen-ſi. It is one of the largeſt and moſt beautiful in the empire next to Pekin. In its territories (which contain ſix cities of the ſecond and thirty-one of the third claſs) bats of a ſingular ſpecies are found; they are as large as domeſtic fowls, and the Chineſe prefer their fleſh to that of chicken. It is 480 miles S.W. of Pekin. Long. 108. 43. E. Lat. 34. 16. N.

SINGILIES, a town of Ruſſia, in the government of Simbirſk, ſituate on the Volga, 24 miles S. of Simbirſk. Long. 48. 34. E. Lat. 54. 1. N.

SINGO, a town of Turkey in Europe, in Macedonia, on the gulph of Monte Santo. Long. 24. 0. E. Lat. 40. 13. N.

SINGOR, a town in the peninſula of Malacca, ſeated at the mouth of a ſmall river, in the bay of Patan. Long. 101. 25. E. Lat. 6. 40. N.

SINIGAGLIA, a ſtrong town of Italy, in the marquiſate of Ancona, with a caſtle and two harbours. It is ſeated at the mouth of the Nigola, in the gulph of Venice, 17 miles S.E. of Peſaro, and 30 E.S.E. of Urbino. Long. 13. 29. E. Lat. 43. 45 N.

SINOB, or Sinope, a decayed ſea-port of Turkey in Aſia, in Natolia, ſurrounded by walls, with double ramparts; but the caſtle is much neglected. The inhabitants are Turks, who will not admit any Jews, and the Greeks are obliged to live in the ſuburbs. It is the birth-place of Diogenes the cynic philoſopher, and ſeated on the iſthmus of a peninſula in the Black Sea. Long. 33. 55. E. Lat. 41. 5. N.

SINOGU, a town of the peninſula of Hindooſtan, in the Myſore country, 50 miles S.E. of Bednore, and 90 N.W. of Seringapatam. Long. 75. 30. E. Lat. 13. 30. N.

SINTZHEIM, a town of Germany, in the palatinate of the Rhine, ſeated in a moraſs, 12 miles S.E. of Heidelberg. Long. 9. 0. E. Lat. 49. 15. N.

SION, an ancient town of Switzerland, capital of the Valais, and an epiſcopal ſee, whoſe biſhop is a prince of the empire. It is ſituate near the Rhone, at the foot of three inſulated rocks, that riſe immediately from the plain. The higheſt, called Tourbillon, ſupports the old ruinous and deſerted epiſcopal palace. On the ſecond, denominated Valeria, are the remains of the old cathedral, and a few houſes belonging to the canons. On Mayoria, the third rock, ſtands the preſent epiſcopal palace, an edifice of ſtone, built in 1547; the apartments furniſhed with great plainneſs and ſimplicity. Sion was formerly the capital of the Seduni, and ſome Roman inſcriptions ſtill remain. It is 50 miles E. of Geneva. Long. 7. 12. E. Lat. 46. 6. N.

SIOUT, one of the largeſt and moſt populous towns in Egypt. It has ſeveral moſques, and is the ſee of a Coptic biſhop. Here are the ruins of an ancient amphitheatre, and ſome ſepulchres of the Romans. It is ſurrounded by fine gardens, and palm-trees that bear the beſt dates in Egypt. This place is the rendezvous of thoſe who go in the caravan to Sennar, in Nubia. It is a mile from the Nile, and 185 S. of Cairo. Long. 31. 24. E. Lat. 27. 2. N.

SIRADIA, a town of Great Poland, capital of a palatinate of the ſame name, with a caſtle. It is ſeated in a plain, on the river Warta, 62 miles N.E. of Breſlaw, and 105 N.W. of Cracow. Long. 18. 55. E. Lat. 51. 32. N.

SIRAF, a town of Perſia, in the province of Lariſtan, ſituate on the Perſian Gulf, 30 miles S.W. of Lar. Long. 52. 25. E. Lat. 35. 20. N.

SIRAVAN, a town of Perſia, in the province of Kuſiſtan, 48 miles N.N.E. of Suſter. Long. 51. 5. E. Lat. 31. 50. N.

SIRGIAN, a town of Perſia, in the province of Kirman, celebrated for its beautiful pottery, and a manufacture of ſtuffs. It is 180 miles E. of Schiras.

SIRHIND, an ancient city of Hindooſtan Proper, in the province of Delhi. Procopius takes notice, that in the time of Juſtinian (the ſixth century) ſilk was brought from *Serinda*, a country in India. Sirhind is 195 miles N.W. of Delhi. Long. 75. 35. E. Lat. 30. 15. N.

SIRIK, a town of France, in the department of Moſelle, with a caſtle, on a neighbouring hill. It is ſeated on the Moſelle, 23 miles N. of Metz. Long. 6. 38. E. Lat. 49. 36. N.

SIRINAGUR, a large rugged country of Aſia; bounded on the N. and N.E. by the Thibetian mountains, on the S.E. by Napaul, on the S. by Rohilla, on the S.W. by Delhi, and on the N.E. by Lahore. The capital, of the ſame name, is 160 miles N. of Delhi. Long. 77. 38. E. Lat. 30. 59. N.

SIRIUS ISLAND, an iſland of the Pacific Ocean, about 18 miles in circuit, diſcovered by Lieutenant Ball, in 1790. Long. 162. 30. E. Lat. 10. 52. S.

SIRMICH, or Sirmium, a town of Sclavonia, capital of a county of the ſame name, with a biſhop's ſee. It is ſeated on the Boſweth, near the Save, 42 miles S.E. of Eſſeck. Long. 20. 19. E. Lat. 45. 13. N.

SIRONG, or Seronge, a town of Hindooſtan Proper, in the province of Malwa, celebrated for its manufacture of painted cottons and chintzes. It is 120 miles N.E. of Eugein. Long. 78. 4. E. Lat. 24. 4. N.

SISIZAN, a ſea-port on the E. coaſt of Luconia, one of the Philippine Iſlands. It is ſituate almoſt immediately oppoſite to Manilla, and in the vicinity of very high mountains, which render the air extremely moiſt. Long. 123. 45. E. Lat. 14. 20. N.

SISSAC, a town of Switzerland, in the canton of Baſil, capital of the province of Siſgow. It is 17 miles S.E. of Baſil.

SISSEG, a town of Auſtrian Croatia, with a monaſtery,

ſeated on the Save, 28 miles S.E. of Zagrad, and 42 E. of Carlſtadt. Long. 16. 17. E. Lat. 46. 6. N.

SISSEK, a ſtrong town of Croatia, ſituate at the confluence of the Save and Kulpa, 40 miles E. of Carlſtadt. Long. 22. 10. E. Lat. 45. 48. N.

SISSOPOLI, a town of Turkey in Europe, in Romania, with an archbiſhop's ſee; ſeated on a peninſula of the Black Sea, 25 miles S. of Meſembria, and 97 N.W. of Conſtantinople. Long. 28. 9. E. Lat. 42. 30. N.

SISTERON, a town, and late epiſcopal ſee, of France, in the department of Lower Alps, with a citadel on the top of a rock, which was the priſon of Caſimir V. king of Poland. It is ſeated on the Durance, 45 miles N. E. of Aix, and 407 S.E. of Paris, Long. 6. 1. E. Lat. 44. 11. N.

SITIA, a town on the N. coaſt of the iſle of Candia, near a bay of the ſame name, 58 miles from Candia. Long. 26. 29 E. Lat. 35. 0. N.

SITTARD, a town of Weſtphalia, in the duchy of Juliers, ſeated near the Maeſe, 10 miles S. of Ruremonde. Long. 5. 50. E. Lat. 50. 58. N.

SIVRAI, a town of France, in the department of Vienne, ſeated on the Charante, 25 miles S. of Poitiers, and 100 S.S.W. of Paris. Long. 0. 23. E. Lat. 46. 16. N.

SKAITING (*Encycl.*). It is well known that Norway is, during four or five months, covered with ſnow, which, at ſome diſtance from the ſea coaſt, is ſo deep that it becomes impoſſible for the traveller to quit the beaten road either on horſeback or on foot. Even the road itſelf muſt be new beaten after each new fall of ſnow: and that operation is performed by means of a machine ſomewhat reſembling a plough, pointed before, and gradually widening behind, which, being drawn by horſes, cuts its way through and levels at the ſame time.

Notwithſtanding the difficulties which the Norwegian winters thus naturally preſent, the chace has ever been a favourite exerciſe with the inhabitants of the country, which formerly abounded with fierce animals, beſides deer and ſmaller game. To make the moſt of the ſhort days in that climate by traverſing the foreſts with increaſed celerity, the Norwegian deviſed the uſe of ſkaits, very different however from thoſe which we uſe in our more ſouthern lands for the purpoſes of amuſement. The Norwegian ſkaits are a pair of boards, about four or five inches broad, from half an inch to an inch thick, ſlightly hollowed in the middle underneath, to prevent unſteadineſs, and to advance in a ſtraight line. The board for the left foot is ten feet long, the other only about ſix. They are both bent a little upward at the extremities, but higher before than behind. They are tied to the feet with thongs faſtened in the middle, where they are left higher and thicker than in the other parts. The ſkait for the right foot is often underlaid with rein-deer ſkin or ſeal ſkin, which glides very ſmoothly along when the ſkaiter moves forward in the direction agreeing with the grain of the hair, but which preſents a reſiſtance when he preſſes his foot in a backward direction cauſing the hair to briſtle.

It is an aſcertained fact that a good ſkaiter, when the ſnow is tolerably firm, can travel more rapidly over a level country, and continue his rapid march for a longer time, than the beſt horſe trotting on the fineſt road.

If he has to deſcend a mountain, he moves with ſuch impetuoſity, that he is obliged to moderate his firſt effort in ſpringing forward, leſt he ſhould loſe his breath in the deſcent. He aſcends more ſlowly, and not without ſome difficulty, becauſe he is obliged to mount in a zig-zag direction. Nevertheleſs he reaches the ſummit in as ſhort a time as would ſuffice for the beſt foot-man. And, if the ſnow have acquired any ſmall degree of conſiſtency, he never ſinks into it.

Experience having proved, that, in ſpite of the multiplied obſtacles ariſing from the ſeverity of the winter, Norway had been repeatedly attacked by the enemy during that ſeaſon —and this mode of performing long excurſions being in general uſe among the inhabitants—it was natural that the idea ſhould occur of forming a military corps of ſkaiters.

Accordingly ſuch a plan has been adopted; and the corps, conſiſting of 960 men, is divided into two battalions, one for the northern part of the country, the other for the ſouthern.

Their preſent uniform conſiſts of a ſhort green jacket, a grey ſurtout with a yellow cape, grey pantaloons, and a black leathern cap.

Their arms are a carabine hung with a ſling which paſſes over the ſhoulder, a broad cutlaſs, and a ſtaff three yards and half long, an inch and quarter thick, having at the end an iron point, and, at ſome diſtance from the extremity, a circular piece of iron. The principal uſe is to check the exceſſive rapidity of the ſkaiter's motion in deſcending heights. On theſe occaſions he places it between his legs, and drags it after him, or he drags it by his ſide. On other occaſions he makes uſe of it to puſh himſelf forward in aſcending: in ſhort he variouſly employs it according to circumſtances. This ſtaff ſerves him alſo as a ſupport for his carabine when he wiſhes to fire a ſhot; though indeed the Norwegian peaſants in general ſhoot very well without any ſuch aid, and ſeldom miſs their aim.

To the exerciſe of ſkaiting, this corps unites alſo that of the ordinary chaſſeurs or light troops, of which it is to be conſidered as conſtituting a part: it performs all the ſame functions as they, nor differs from them except in the circumſtance of marching on ſkaits, which gives it a great advantage over the others. The ſkaiters, moving with great agility, and being ſecured by the depth of the ſnow from all purſuit either by infantry or cavalry, may ſafely hover round a hoſtile army on its march, may watch all its motions, haraſs and gall it on each ſide of the road, without incurring any danger. Even diſcharges of cannon would produce little effect on a number of ſkaiters ſcattered at two or three hundred yards diſtance from each other, and whoſe movements beſides are ſo rapid, that, at the moment while the cannoniers fancy they ſtill have them in ſight, they have already vaniſhed, to make their appearance anew when leaſt expected.

If the enemy halt, that is the time when the ſkaiters enjoy their full ſuperiority over them. Whatever precautions the hoſtile army may have adopted, they are momentarily expoſed to the attacks of men who do not ſtand in need of either roads or paths, but indiſcriminately traverſe moraſſes, lakes, and rivers, provided they only be covered with ſnow. Even though the ice beneath ſhould be too weak to bear either horſe or man, the ſkaiter is ſafely wafted over it by the rapidity of his motion. Indeed there is not any corps better calculated, in the winter-ſeaſon, for the ſervice of reconnoitring, carrying intelligence reſpecting the enemy, or performing the office of couriers.

It may, however, be ſuppoſed that they find a difficulty in turning round, on account of the great length of their ſkaits; but that is not the caſe. The ſkaiter draws back his right foot, to which is faſtened the ſhorter ſkait, places it vertically to the left, then raiſes the left, and, placing it parallel to the right, he is turned. If he wiſhes to turn completely back, he has only to repeat the manœuvre.

In their ordinary winter exerciſes, the ſkaiters form themſelves in three ranks, at eight paces diſtance between the ranks, and three between the files; and, unleſs when they deſignedly ſcatter themſelves, they exactly obſerve thoſe diſtances, that they may not impede each other in the uſe of their ſkaits.—When they have occaſion to fire, the middle and

rear ranks advance close to the front; each file thus forming a little body apart,

The baggage and camp-equipage of this corps are conveyed in sledges placed on skaits. A single man easily draws one of these sledges by means of a leathern thong, which passes over his right shoulder and crosses to his left side, like the sling for the carbine.

An improvement on this plan has been suggested—that of attaching to the corps a few pieces of light artillery, to be drawn upon skaits in the same manner as the baggage.

SKARA, a town of Sweden, in West Gothland, with the ruins of an ancient palace, the residence of the Gothic kings. It is seated on the Lida, in a morass, 17 miles N.E. of Falkoping. Long. 14. 0. E. Lat. 58. 16. N.

SKEEN, a town of Norway, in the government of Aggherhuys, remarkable for its mines of iron and copper. It is seated near the Categate, 40 miles W. of Fredericstadt.

SKIDDAW, a mountain in Cumberland, one of the most remarkable in England, being above 1000 yards perpendicular height from the surface of the lake of Derwent-water, to the north of which it is situate. Here eagles and other birds of prey resort. This mountain is not difficult of access, and is almost covered with grass, which gradually grows coarser in the ascent. The whole top is covered with a loose brown slaty stone.

SKILSKOER, a town of Denmark, in the island of Zealand, situate on a bay, 48 miles S.W. of Copenhagen. Long. 11. 27. E. Lat. 55. 16. N.

SKIPTON, a town in the West Riding of Yorkshire, with a market on Saturday; seated among hills, near the river Aire, 41 miles S. by E. of Richmond, and 231 N. by W. of London. Long. 2. 42. W. Lat. 53. 55. N.

SLAGELSE, a town of Denmark, in the island of Zealand, 42 miles W.S.W. of Copenhagen. Long. 11. 29. E. Lat. 55. 26. N.

SLATINA, a town of Turkey in Europe, in Moldavia, 18 miles N.W. of Niemecz. Long. 26. 5. E. Lat. 47. 10. N.

SLAUGHTERING, a term used to denote the killing of calves, oxen, or other horned cattle.

The instrument at present generally employed for this purpose, is a common *axe*; by which the animal is at least stunned, in case he does not fall after one or two blows; yet, as the *knocking down* of cattle carries with it an idea of ferocity, a milder and more humane method of terminating their existence ought to be substituted for that practice. Such desirable object may be attained by adopting the mode of slaughtering which prevails in Portugal; namely, the "laying down cattle," by separating the spinal marrow with a peculiar knife; in consequence of which, the animal is *unnerved*, and falls instantaneously: in Plate 44. we therefore give a representation of the instrument employed in that kingdom.

The whole knife is eleven inches in length; the handle being $4\frac{1}{2}$, and the blade $6\frac{1}{2}$ inches. In order to use it, the person who is about to "lay down" an animal, must place himself in front of the latter, holding it by the horn in the left hand; and passing the knife over its brow, through the vertebræ of the neck, into the spinal marrow.—For the knowledge of this practice, we are indebted to the humane Lord Somerville; who, during his late residence in Portugal, caused a person to be instructed in the use of the knife above described. His lordship has liberally offered to comply with the request of those whose business is to slaughter cattle, and who may be desirous of additional information. He further observes (in *The System followed during the two last Years by the Board of Agriculture, &c.*) that the man alluded to, has laid fifteen oxen in a row "with more regularity and expedition than would at first, perhaps, be credited."—Lord S. likewise is of opinion, that if the practice of carters *head lining* or walking at the heads of oxen, were adopted in Britain, the animals would probably be induced to stand more quietly; in consequence of which the operation will become "as safe as it is easy."

SLAWKAW, or AUSTERLITZ, a town of Moravia, capital of a circle of the same name. It is 10 miles E. of Brinn. Long. 16. 57. E. Lat. 49. 5. N.

SLEAFORD, a town of Lincolnshire, with a market on Monday. It had formerly a castle, now in ruins, and has a large market-place, in the form of a parallelogram. It is seated on the Slea, which is navigable hence to the Witham, 18 miles S. of Lincoln, and 115 N. of London. Long. 0. 21. W. Lat. 53. 1. N.

SLONIM, a town of Lithuania, in the palatinate of Novogrodeck, with a castle, seated on the Sezraa, 40 miles S.W. of Novogrodeck, and 60 S.E. of Grodno. Long. 23. 57. E. Lat 53. 0. N.

SLOOTEN, or SLOTEN, a town of the United Provinces, in Friesland, seated on a lake called Slooten-mere, three miles from the Zuider Zee, and 18 N.W. of Steenwick. Long. 5. 26. E. Lat. 52. 55. N.

SMITH'S ISLAND, an island in the Pacific Ocean, discovered by Lieut. Ball, in 1790. Long. 161. 54. E. Lat. 9. 44. S.

SMOLAND, or SMALAND, a province of Sweden, in Gothland, 112 miles long and 62 broad. It has immense forests of pine and fir; and the approach to the villages is announced by groves of oak, beech, and birch, and numerous plots or parterres of arable land among pastures and rocks. An acre of land has been frequently observed to be laid out with alternate slips of rye, barley, flax, and hemp; the intervals between and around, sown with grass. In many parts, the trees are cut down, and burnt in order to manure the soil. Calmar is the capital.

SMOW, a noted cavern, on the N. coast of Sutherlandshire, between Cape Wrath and Loch Eribol. It runs so far under ground, that its extremity, it is said, could never be explored.

SMYNHUSEN, a town of Lower Saxony, in the duchy of Holstein, six miles E. of Lunden.

SNACKERBURG, a commercial town of Lower Saxony, in Brunswick Lunenburg, seated at the confluence of the Utchf with the Elbe, 35 miles E. by S. of Danneberg. Long. 12. 22. E. Lat. 53. 10. N.

SNEECK, a town of the United Provinces, in Friesland. It is called Smitz by the natives, and is seated on a lake of the same name in marshy land, eight miles S. of Franeker. Long. 5. 26. E. Lat. 53. 2. N.

SNEIRNE, a town of Persia, in the province of Irac, 57 miles W.N.W. of Amadan. Long. 46. 24. E. Lat. 35. 45 N.

SNETSHAM, a town in Norfolk, with a market on Friday, seated on a small inlet of the sea, 12 miles N.N.E. of Lynn, and 111 N. by E. of London. Long. 0. 32. E. Lat. 52. 55. N.

SNIATIN, a trading town of Little Poland, capital of Poketia, seated on the Pruth, eight miles E. of Colomi, and 45 S.E. of Halitz. Long. 26. 7. E. Lat. 48. 44. N.

SOANA, or SUANE, an ancient town of Tuscany, in the Siennese, with a bishop's see. The badness of the air has caused it to be almost deserted, and it is now no more than a village. It is seated on a mountain, near the river Flora, 30 miles S.E. of Sienna. Long. 11. 46. E. Lat. 42. 40. N.

SOANE, a river of Hindooſtan Proper, which riſes on the S. confines of Allahabad, iſſuing from the ſame lake, which is the ſource of the Nerbudda; and flowing in an oppoſite direction to that river 1500 miles, it falls into the Ganges, above Patna.

SOCIETY (*Encycl.*). Amongſt the moſt important of the various aſſociations for charitable and benevolent purpoſes in Britain, is the formation of a ſociety in London, for encouraging the induſtry, and promoting the welfare of the poor, inſtituted in 1796, under the name of a *Society for bettering the Condition and increaſing the Comforts of the Poor*; an eſtabliſhment which has been the means of adding much to the general maſs of national happineſs. Its objects are deſcribed to be—"every thing that concerns the happineſs of the poor—every thing by which their comforts can be increaſed. To remove the difficulties attending parochial relief, and the diſcouragement of induſtry and economy, by the preſent mode of diſtributing it; to correct the abuſes of workhouſes; and to aſſiſt the poor in placing out their children in the world:—in this, and in the improvement of their habitations and gardens; in aſſiſtance and information as to the uſe of fuel, ſo as to give them more benefit from it; and in adding to, and in meliorating their means of ſubſiſtence, by public kitchens, and by other means."—In theſe reſpects it has been proved that much may be done by the union of liberal and benevolent minds—much by the circulating of information, and by perſonal aſſiſtance and influence.

It muſt afford a ſtrong additional inducement to efforts of this nature to conſider, that, in proportion as we can multiply domeſtic comforts, in the ſame degree we may hope to promote the cauſe of morality and virtue. For a very gratifying illuſtration of this, as well as for the moſt important improvements in fuel, food, and in the mode of aſſiſting the poor, the world is indebted to the philanthropy and abilities of Count Rumford. (See the articles CORN, FUEL, SOUP, &c. *Supp.*)

It is not, however, merely the increaſe of the comforts and morals of the poor, great as that benefit may be, that this ſociety has in a great meaſure effected: its improvements and experiments apply more or leſs to farms, manufactories, private families, and to every ſituation of life.

His majeſty, the ready patron of every uſeful undertaking, when informed of the plan and object of the ſociety, was graciouſly pleaſed to take it under his protection, and at a ſubſequent meeting the ſociety came to the following reſolution:

"That the general object of the ſociety be to collect information reſpecting the circumſtances and ſituation of the poor, and the moſt effectual means of meliorating their condition; in order that any comforts and advantages which the poor do now actually enjoy in any part of England, may eventually be extended to every part of it, with as much improvement and additional benefit as may be to the poor; and with a tendency, gradually to diminiſh parochial expences. For the attainment of theſe ends, it appears to the ſociety, that the circulation of uſeful and practical information, derived from experience, and ſtated briefly and plainly, ſo as to be generally read and underſtood, may be of very great national and individual benefit; and may induce and enable all well diſpoſed perſons to unite in the promotion of an object ſo important to the happineſs and welfare of the community at large, and particularly of that valuable branch of it, the labouring poor.

"The following are ſelected as the ſubjects of information, upon which the Society is deſirous of obtaining and circulating hints:

1. *Pariſh Relief*—how it may be beſt directed for the benefit of the poor.
2. *Friendly Societies*—their good effects, and how they may be beſt encouraged.
3. *Pariſh Workhouſes*—the amendment of them.
4. *Cottages*—the increaſing the comfort and neatneſs of them.
5. *Cottage Gardens*—and the means of enabling the cottager to keep a cow, or of ſupplying him with milk.
6. *Pariſh Mills* for corn; and pariſh ovens.
7. *Village Shops*, for better ſupplying the poor with the neceſſaries of life.
8. *Village Kitchens*, and *Soup Shops*.
9. *Cottage Fire-places and chimneys*—the improvement of them.
10. *Fuel*—how the poor may be better ſupplied with it.
11. *Apprentices* to manufacturers, and all pariſh apprentices.
12. *County Jails*—the means and effects of reforming them.
13. *Beggars*—the leaſt exceptionable modes of aſſiſting them.
14. *Public Rooms* for the reſort of the induſtrious poor in cold weather.

For proofs of what has been effected by the Society already, ſee the ſeveral heads in this SUPPLEMENT. We ſhall now introduce to the reader's notice a ſubordinate inſtitution of this kind, namely, the *Society for bettering the Condition of the Poor at Clapham*, eſtabliſhed in 1799. It conſiſts both of ladies and gentlemen, willing to take an active part in promoting the welfare of the poor. The objects of this ſociety, are *the diſcovery and relief of caſes of real diſtreſs, the aſſiſting and rewarding of honeſt induſtry, the detection of fraud and impoſture, the diſcouragement of idleneſs and vice, and the employment of children at an early age*, ſo as to improve both the condition and the morals of the poor.

The members of the ſociety meet at each other's houſes, in winter, one evening in the month, and in the ſummer once in two months, for the purpoſe of converſation and communication on the preceding ſubjects. They have divided the pariſh of Clapham into eight diſtricts, and have appointed four or more ladies and gentlemen, as viſitors for each diſtrict. The duty of the viſitors is to inform themſelves of the circumſtances and character of every poor perſon within their diſtrict; and to meet for the purpoſe of acting in concert, and of becoming more acquainted with the real ſtate of the poor; ſo as to report at the general meeting every peculiar caſe of diſtreſs: with their opinion, as to the means of improving the conduct, and bettering the condition, of the objects of their attention. A journal was agreed to be kept of the obſervations of the Society, and of the effects produced by its labours; and a correſpondence has been opened with the officers of the pariſh, ſo as to form a channel for the mutual communication of intelligence.

The firſt act of the ſociety was to draw out an accurate liſt of all the poor of the pariſh of Clapham; diſtinguiſhing each individual's reſpective occupation, family, reſidence, and place of legal ſettlement.—From this account, two diſtinct liſts have been made out; one in the order of reſidence—the other in an alphabetical order; and a liſt of the allowances granted by the pariſh has been obtained of the overſeers. It appeared by the returns, that there were in the whole 348 families in the pariſh, which were likely to become objects of charitable aſſiſtance; viz.

In the 1ſt diſtrict	-	46 families.
2d	- -	71
3d	- -	50
4th	- -	52

		348

Of theſe 61 were ſingle perſons; 59 had wives, but no children; and the remaining 287 had wives and children; the number of children being, upon an average, not more than two to each family.—There were in all 572 children, and the total amount of poor was 1207 perſons.

For each diſtrict, a lady was appointed as ſub-treaſurer; whoſe office it was to keep the accounts of the diſtrict, and to call meetings of the viſitors; no viſitor having a power (except in caſes of emergency) to give any material relief, but what ſhall be directed at a diſtrict meeting. Their accounts are paſſed at the general meeting. The meaſure of ſub-dividing the diſtricts among the viſitors was ſoon after adopted, in ſome inſtances, with very good effect.

The rector, with the concurrence of the churchwardens and veſtry, added the ſacrament money, about 100l. a-year, to the funds of the ſociety.—In caſe of application for relief, it was recommended to the viſitors to take the opportunity of gaining information reſpecting the character of the perſon applying; as to regular attendance on public worſhip, the care and ſchooling of their children, and the induſtry and earnings of every branch of the family. This information is uſeful to direct both the kind and the quantity of relief, ſo as to aſſiſt and encourage virtue and induſtry.

In caſe of any infectious diſorder, the treaſurer is directed to conſult with the medical gentlemen of the ſociety, concerning the moſt effectual means of preventing the danger of communication; and he has the authority immediately to take the neceſſary ſteps, at the expence of the ſociety. Of the benefit of this regulation ſeveral inſtances have appeared. The ſmall-pox had attacked ſeveral poor families with much violence; ſome of the children, yet uninfected, were ſucceſsfully inoculated at the expence of the ſociety. A dangerous ſpecies of putrid and ſcarlet fever had broken out at different periods, in ſome of the houſes of the poor; it was prevented from ſpreading beyond the families in which it originated. A putrid and ſcarlet fever, in a neighbouring pariſh, was at the ſame time extremely fatal to the children of the poor; and three months had elapſed, before its ravages ceaſed.

There is hardly any thing for the improvement and benefit of the poor, that may not be adopted and effected by ſuch a ſociety as that of Clapham. They came to very early reſolutions to furniſh the poor *gratis*, with unſlaked lime to white-waſh their cottages: to provide liſts of the poor in the different diſtricts; to furniſh grown-up perſons with ſuitable employment; and to place children at ſchool, and from thence in ſervice; to eſtabliſh in the village a friendly ſociety, under their own care and patronage; —to purchaſe blankets to lend the induſtrious poor in winter;—and that, whenever a poor married woman ſhould depoſit a weekly ſum in the hands of the viſitor to provide for her confinement, the ſociety would repay it, with the addition of as much more, at the time of her lying-in.

In order to provide for the ſick poor ſuch refreſhments as might be ordered by the viſitors or medical attendants, the ſociety engaged an agent at 3s. a-week. She is a middle-aged woman, not burthened with a family, not going out to waſhing for her livelihood; and a perſon in whoſe cleanlineſs, aſſiduity, integrity, and ſkill in cookery, they and the poor can place a confidence. To her care are intruſted the ſtores for the relief of the ſick; conſiſting of ſago, wine, oatmeal, &c. and alſo the materials for work. She has been furniſhed with a book of receipts for preparing refreſhments for the ſick, to be ſent by the order of any of the viſitors, ſhe keeping a regular account of the ſame. It is her duty to regiſter the names of the nurſes and charwomen in the pariſh, who are deſerving of recommendation, in order that thoſe who want employment may have an opportunity of ſtating that they are unoccupied; and that houſekeepers, who want a nurſe or helper in the houſe, may know who is diſengaged. It is alſo her office, upon reference from the viſitors, to make enquiries reſpecting the character of any perſon, when the viſitors do not ſucceed in procuring ſatisfactory information upon the ſubject.—Three ladies of the ſociety undertook to purchaſe for her the neceſſary utenſils and ſtores, to furniſh her with ſufficient information and inſtructions, and to ſuperintend her in the execution of her office.

For the deſirable object of forming early habits of attention and induſtry (there being already at Clapham, ſchools for children of riper age), a knitting and reading ſchool for boys and girls under ſix years of age was eſtabliſhed under the care of one of the ladies, at the requeſt and expence of the ſociety. An induſtrious woman, who had a comfortable room adapted to the purpoſe, agreed to take any number of children, and at any hour that might be thought proper, to inſtruct them in knitting and reading; and, on Sunday, to open it as a Sunday ſchool. For this, and her firing and all expences, ſhe was to be allowed five ſhillings a-week. The ſchool was opened in the beginning of December laſt with fifteen boys, whoſe number was ſoon increaſed to twenty-one, and the monthly account of whoſe work already makes an article in the minutes of the ſociety.

In the early part of the winter the ſociety provide blankets, to be numbered, marked, and lent to the poor, under the following regulations: 1ſt, That a note ſhould be given with them, expreſſing the day on which they were lent, and that on which they were to be returned. 2d, That an account ſhould be kept by the ſociety's agent, in her book, of the number of each blanket, the perſon to whom lent, and the time when lent, and when returned. 3d, That the blankets lent to any poor family for the winter ſeaſon, ſhould be returned on the firſt of May, clean waſhed if required. 4th, That in caſes where any infectious diſorder might have prevailed in the family to which they have been lent, a diſcretionary power be given to the viſitor to permit them to be kept. And 5th, That all the blankets, upon being returned to the ſociety, ſhould be baked, in order to purify them, before they are laid up in the ſociety's ſtore.

It is difficult to ſay what may not be done for the poor, or to what degree their religious and moral habits, and their domeſtic comforts and enjoyments, may not be increaſed, by the formation, in every large pariſh in England, of ſocieties like that at Clapham: ſocieties which, without the incumbrance of an eſtabliſhment, give to the rich all the power and effect of co-operation; which offer to the poor every incitement to virtue and induſtry; and, while they relieve the diſtreſſed and unfortunate, while they educate the young and comfort the aged, impreſs on the minds of all a juſt ſenſe of the value of character, and of moral and religious habits, and render them uſeful to themſelves and to the community.

It is no ſmall merit in the ſociety at Clapham, that it has afforded ſatisfactory evidence that the ſyſtem of dividing

the poor into diſtricts, and of thereby diminiſhing labour by arrangment of attention (a ſyſtem recommended by the precepts of Count Rumford, and by the example of Hamburgh), is applicable and practicable in every pariſh in England. However the mind may be intimidated by the difficulties which muſt embarraſs the attempt of an individual, to improve the habits and increaſe the comforts of a whole pariſh, or of a larger diſtrict; there are very few of our countrymen, and ſtill fewer, we truſt, of our fair countrywomen, who would, at any period, ſhrink from the duty of occaſionally viſiting their eight or ten adjoining cottagers; and of attending a ſociable monthly meeting of their friends and acquaintance, in order to conſider how their poor neighbours might be made more happy and virtuous in themſelves, and more uſeful to the neighbourhood.

This mode of keeping down the poor-rates, of preventing crimes, and of encouraging honeſty, induſtry, and economy, will never be very irkſome in the detail, while it only occaſionally occupies a tedious hour, and promotes a pleaſant and ſatisfactory monthly meeting of the neigbourhood. This, when directed "to the diſcovery and relief of caſes of real diſtreſs,—to the aſſiſting and rewarding of honeſt induſtry,—to the detection of fraud and impoſture,—to the diſcouragement of idleneſs and vice,—to the employment of children in early habits of induſtry,—and to whatever has a tendency to improve the condition and morals of the poor" (and theſe are the declared objects of the ſociety at Clapham), muſt, except in a very debaſed ſtate indeed, afford ſatisfactory occupation to every human being;—to the miſer, in the improvement of his property,—to the anxious mind, in the ſecurity of it,—to the ſenſualiſt, in enjoyment,—and to the pious and benevolent, in the promotion of the virtue and happineſs of their fellow-creatures.

This ſociety is directed by principles different from thoſe which too frequently actuate the parochial overſeer. The great object of the ſociety is the improvement of the poor. They apply leiſure, talents, information, and every power which they derive from inſtruction, ſituation, and property, for the aſſiſtance of thoſe who do not poſſeſs the ſame advantages; not with the petty and unſtable object of affording capricious or momentary relief; but in the well-founded hope of conferring permanent benefit, by increaſing their reſources, by improving their principles, and encouraging them in habits of induſtry, ſobriety, and frugality.

Charity of this kind has not only the advantage of increaſed effect by co-operation, and of impartial benevolence in embracing all objects within the diſtrict, in proportion to their claims and neceſſities; but alſo of acting upon collective information, and of directing joint exertions ſyſtematically, and to the proper end. The enquiry reſpecting the induſtry, economy, and character of the poor, muſt neceſſarily increaſe the value and prevalence of thoſe virtues, at the ſame time that it enables the individual to direct his relief moſt effectually to the advantage of the ſufferer.—If it is temporary diſtreſs occaſioned by ſickneſs, proviſion is made for their immediate comfort and ſpeedy recovery; and, while the ordinary parochial fund is reſorted to in the uſual way, the ſociety adds the leſſer comforts, and thoſe aids to the recovery, which pariſh relief can never completely afford: ſuch is a nurſe, whoſe employment may perhaps be as much charity to her, as to the ſick on whom ſhe attends; whoſe care, where quiet is peculiarly neceſſary, may remove ſome of the children during the day, and place them with a neighbour or friend; and whoſe attention may prevent the patient from returning to hard labour, before his ſtrength is ſufficiently recruited and confirmed.

In checking the progreſs of infectious diſorders, a ſociety like that of Clapham may be of infinite ſervice. It is the duty of the viſitor in that caſe immediately to inform the treaſurer, who is authorized to take medical advice, as to the moſt effectual means of ſtopping the contagion. A very trifling ſum, ſeaſonably expended in the removal and care of the infected perſon, and in purifying and white-waſhing his habitation, may ſave thouſands of uſeful lives, and prevent an irretrievable loſs, and inſupportable expence to the pariſh. (See HOUSE OF RECOVERY, and WHITE-WASH, *Supp.*)

For a period when the weaker and more helpleſs ſex ſtand in great need of kindneſs and aſſiſtance, the ſociety has made a very acceptable proviſion, by doubling the ſum which may be depoſited for the aſſiſtance of any poor woman at her lying-in. Beſides this, the placing, at ſuch a time, ſome of their chidren at ſchool, and providing a nurſe, may be at times an act of very uſeful and neceſſary charity.

The forming of children to early habits of induſtry, is another primary object of this ſociety; which adopts the principle that every child, above mere imbecility, ſhould produce ſomething towards its own ſupport. If what it can produce is *only a penny a-week*, even that ought not to be neglected. The habit of ſaving ſmall ſums is the foundation of economy; and conſtant occupation is one grand preſervative from vice. For this purpoſe, it is of great moment to find regular employment for the poor; and it is much to be regretted that proceſſes for the abridgment of labour have, in many parts of the kingdom, deprived the poor of the means of induſtry.

The habit of cleanlineſs, producing as it does many valuable moral virtues, is an important effect of this ſociety. Another is, the inſtitution of friendly ſocieties under their immediate care and patronage; and particularly ſuch a one as may afford relief to women as well as to men; and, with the contributory aid of the rich, ſecure liberal and certain advantages to the members. Beſides this, the encouraging of the poor to buy for ready money, and the donation of rewards to cottagers for the ſupport of large families, and for the degree of induſtry and ſobriety they may poſſeſs, and for other commendable points of character, may, with attention and diſcretion, be of the greateſt uſe in improving the condition, not only of the poor, but of the neighbourhood and of the community at large.

Whatever have been the advantages to the poor, the beneficial effects produced by ſuch a ſociety upon the rich, are likely to be equally great. Ladies who have not been accuſtomed to enquire perſonally into the ſtate of their neceſſitous neighbours, may thus be excited to be extremely active in aſſiſting them, and in deviſing the beſt methods of doing them good. When the rich are induced to viſit the families of labourers, and to make the compariſon between their own comforts and thoſe of others, they receive from ſuch occupation much mental improvement, and become properly grateful for their own benefits and ſituation in ſociety. It may then become neceſſary to caution them againſt too warm and liberal an application of their charity, and againſt that degree and ſpecies of benevolence, which, inſtead of aiding and inſtructing the poor to help themſelves, render them more helpleſs and hopeleſs. It is then very important to hold up to conſtant view the wiſe and excellent maxims adopted at Hamburgh; *that if the manner in which relief is given be not a ſpur to induſtry, it becomes in effect a premium to ſloth and profligacy*; and that if the charitable or parochial ſupport of an idle perſon exceeds what any induſtrious perſon in the ſame circumſtances can earn, idleneſs will become more profitable than induſtry, and beggary a better trade than the work-ſhop.

Philanthropic SOCIETY. See REFORM, *Supp.*

SOCONUSCO, a province of New Spain, in the audience of Mexico, 88 miles long and nearly as much broad; bounded on the N. by Chiapi, on the E. by Guatimala, on the S. by the Pacific Ocean, and on the W. by Guaxaca. It is ſheltered from the north winds by high mountains, which renders the air exceeding hot; and the ſoil is not very fertile. There are few Spaniards ſettled here.

SOCONUSCO, or GUEVETLAN, a town of New Spain, capital of a province of the ſame name, 440 miles S.E. of Mexico. Long. 98. 16. W. Lat. 15. 12. N.

SOCZOWA, a town of Turkey in Europe, in Moldavia, ſeated on the Sereth, 32 miles S.W. of Jaſſy. Long. 26. 20. E. Lat. 47. 16. N.

SODBURY, or CHIPPING SODBURY, a town in Glouceſterſhire, with a market on Thurſday, and noted for its fine cheeſe. It is ſeated in a bottom, near the towns, 15 miles E.N.E. of Briſtol, and 112 W. of London. Long. 2. 15. W. Lat. 51. 36. N.

SOEBORG, a town of Denmark, in the iſland of Zealand, nine miles W.N.W. of Elſinore.

SOEST, a large town of Weſtphalia, in the county of Marck, formerly free and imperial, but now belongs to the King of Pruſſia. The ſtreets are watered with ſtreams that proceed from a lake, and the inhabitants are generally Papiſts. It is 12 miles S.W. of Lipſtadt, and 30 S.E. of Munſter. Long. 8. 11. E. Lat. 51. 41. N.

SOFFA, or SOPHIA, a town of Turkey in Europe, capital of Bulgaria, with an archbiſhop's ſee. It is ſeated at the foot of the mountains of Argentaro, on the river Bogana, 135 miles W.N.W. of Adrianople, and 155 E. of Scutari. Long. 23. 58. E. Lat. 42. 36. N.

SOFROY, a town of the kingdom of Fez, noted for a very handſome moſque. It is ſeated on a hill, at the foot of a mountain of the ſame name, part of Mount Atlas, and between two rivers, 12 miles E. of Fez. Long. 4. 48. W. Lat. 33. 40. N.

SOGNO, a town of the kingdom of Congo, in a province of the ſame name, which is a dry ſandy country, but yields a great deal of ſalt. The inhabitants are ſaid to be Chriſtians, converted by the Portugueſe, and the Capuchins have a church here. It is ſeated on the Zaire, near its mouth, 185 miles W.S.W. of St. Salvador. Long. 13. 15. E. Lat. 5. 50. S.

SOHAGEPOUR, a town of Hindooſtan Proper, capital of a diſtrict, in the province of Allahabad, 120 miles S. of Allahabad, and 230 S.W. of Patna. Long. 82. 20. E. Lat. 23. 50. N.

SOHAM, a town in Cambridgeſhire, with a market on Saturday, ſeated on a fen of the ſame name, near Sohammere, which takes up 1000 acres of land. It is five miles S.E. of Ely, and 70 N. by E. of London. Long. 0. 14. E. Lat. 52. 21. N.

SOHO, a village in Staffordſhire, two miles N.W. of Birmingham. It was recently founded by Mr. Boulton, as a manufacture for every article common to the Birmingham trade, the plated ware uſually made at Sheffield, and of elegant pieces of ſilver both light and maſſive. Here alſo are made the improved ſteam engines, now adopted in numerous concerns throughout the kingdom. In 1797, an ingenious apparatus for coining and ſtamping was employed here by government, on a copper coinage of penny and two-penny pieces; and in 1799, halfpenny and farthing pieces were likewiſe coined at this mint.

SOIGNIES, a town of Auſtrian Hainault, ſeated near a foreſt of the ſame name, on the river Senne, eight miles N.E. of Mons, and 17 W. of Bruſſels. Long. 4. 14. E. Lat. 53. 29. N.

SOLDANIA BAY, a bay on the S.W. coaſt of Africa, a little to the N. of the Cape of Good Hope. Long. 18. 4. E. Lat. 33. 10. S.

SOLENHOFEN, a town of Franconia, in the principality of Anſpach, 29 miles S. of Anſpach. Long. 10. 45. E. Lat. 44. 46. N.

SOLFATARA, a mountain of Naples, in Terra di Lavoro, ſurrounded by other mountains, in the form of an amphitheatre. It has a kind of cavity, above a mile in diameter, which was no doubt the crater of a volcano at preſent extinct. The earth here is warm and white; and if opened to ſome depth is inſupportable from the heat and exhalations. The ground is almoſt every-where hollow, and is ſuppoſed to have a ſubterraneous communication with Mount Veſuvius. Here are manufactures of ſulphur and alum, from which the King of Naples derives a conſiderable revenue. Near it is a ſmall lake full black thick water, which ſeems to be always boiling.

SOLFWITZBORG, or SYLVISBORG, a town of Sweden, in the province of Blekingen, 33 miles W.S.W. of Carlſcrona. Long. 14. 31. E. Lat 56. 2. N.

SOLIHUL, a town in Warwickſhire, near which, to the W. is a triangular Daniſh camp, on an eminence, containing about nine acres. It is 12 miles W. of Coventry, and 107 N.W. of London.

SOLINGEN, a town of Weſtphalia, in the duchy of Berg, ſeated near the river Wipper, 15 miles S.E. of Duſſeldorf. Long. 7. 10. E. Lat. 51. 10. N.

SOLKAMSK, a town of Ruſſia, in the government of Perm, famous for its ſalt-pits and good horſes. It is ſeated on the Uſſolka, which falls into the Kama, 430 miles N.E. of Kaſan. Long. 57. 26. E. Lat. 5. 16. N.

SOLMS, a town of Germany, capital of a county of the ſame name, in the circle of Lower Rhine. It has a ſtrong caſtle, belongs to a branch of the houſe of Naſſau, and is ſeated on a hill, 10 miles S.E. of Herborn. Long. 8. 31. E. Lat. 50. 35. N.

SOLOR, an iſland in the Indian Ocean, to the S. of Celebes, governed by its own king. Long. 123. 55. E. Lat. 9. 0. S.

SOLSERINA, a town of Italy, in the duchy of Mantua, 17 miles N.W. of Mantua. Long. 10. 40. E. Lat. 45. 20. N.

SOLTAU, a town of Lower Saxony, in the principality of Luneburg Zell, 29 miles N.N.W. of Zell, and 29 W.S.W. of Luneburg. Long. 10. 2. E. Lat. 53 10. N.

SOLTWELD, a town of Germany, in the old marche of Brandenburg, ſeated on the Jetze, 40 miles N.W. of Stendal. Long. 11. 36. E. Lat. 53. 6. N.

SOLWAY FRITH, an arm of the ſea, between Cumberland in England, and Kircudbrightſhire in Scotland.

SOMBRERO, a cluſter of uninhabited iſlands in the Weſt Indies, belonging to the Engliſh. The moſt remarkable of them is a league long, and conſiſts of an eminence, to which the Spaniſh diſcoverers, finding ſome reſemblance to a hat, gave the name of *Sombrero*. It is 80 miles N.W. of St. Chriſtopher. Long. 63. 37. W. Lat. 18. 38. N.

SOMMA, a town of Naples, in Terra di Lavoro, near which is annually produced between 7000 and 8000 pounds weight of ſilk of the beſt quality. It is 10 miles E. of Naples.

SOMME, a department of France, including the late province of Picardy. It takes its name from a river which riſes in the department of Aiſne, and watering St. Quentin, Peronne, Amiens, and Abbeville, enters the Engliſh channel. Amiens is the capital.

SOMMERFELD, a town of Upper Saxony, in the

duchy of Croſſen, 15 miles S. of Croſſen, and 72 S.E. of Berlin.

SOMMIERES, a town of France, in the department of Gard. It has a manufacture of thick ſerges, which bear its name; and is ſeated on the Vidourle. 10 miles W. of Niſmes. Long. 4. 11. E. Lat. 43. 48. N.

SONCINO, a ſtrong town of Italy, in the Cremoneſe, ſeated on the Oglio, 20 miles N.W. of Cremona. Long. 9. 44. E. Lat. 45. 24. N.

SONDERBORG, a ſea-port of Denmark, in the iſland of Alſen. It has one of the beſt harbours in Denmark, and a royal palace in which Chriſtian II. king of Denmark, was confined as a priſoner 13 years. It is 16 miles E.N.E. of Flendſburgh. Long. 9. 49. E. Lat. 54. 57. N.

SONDERSHAUSEN, a town of Upper Saxony, ſituate on the Wipper, 20 miles N.E. of Mulhauſen, and 26 N. of Erfurt. Long. 11. 5. E. Lat. 48. 25. N.

SONDRIO, a town of the country of the Griſons, capital of the Valteline. It is built in a very romantic ſituation, at the extremity of a narrow valley, and occupies both ſides of the Malenco, a furious torrent, which frequently overflows its banks. Sondrio is 34 miles N.E. of Como. Long. 9. 40. E. Lat. 46. 11. N.

SONERGON, or SUNNERGAUM, a village of Hindooſtan Proper, once a large city, the provincial capital of the eaſtern diviſion of Bengal, before Dacca was built, and famous for a manufacture of fine cotton cloths. It is ſeated on a branch of the Burrampooter, 13 miles S.E. of Dacca.

SONG-KIANG-FOU, a city of China, in the province of Kiang-nan. It is celebrated for the prodigious quantity of cotton cloth which it exports to foreign countries, but has only four cities in its diſtrict.

SONORA, a province of New Navarre, extending along the E. ſide of the gulf of California, in about 96° W. long. and 29° N. lat. It lies in the moſt delightful part of the temperate zone; and all its productions, whether animal or vegetable, are perfect in their kind. Some rich mines of gold and ſilver were diſcovered here by the Spaniards, in 1771, in an expedition againſt ſome fierce tribes of hoſtile and predatory Indians.

SOOLOO, an iſland of the Eaſtern Ocean, ſituate S.W. of Mindanao, almoſt midway between that iſland and Borneo. It is 30 miles long and 12 broad, and contains about 60,000 inhabitants. It is governed by a king or ſultan, and the natives are Malays, and conſequently Mahometans. The populouſneſs of this little ſpot is cauſed by its advantageous ſituation, which renders it a great mart. The Engliſh Eaſt-India Company have a reſident here. Long. 121. 25. E. Lat. 5. 58. N.

SOPHIANIA, a town of Perſia, in Aderbeitzan, ſeated in a valley, 25 miles N.W. of Tauris. Long. 47. 25. E. Lat. 38. 35. N.

SOPHIENBERG, a town of Denmark, in the iſland of Zealand, with a royal palace, 13 miles N. of Copenhagen. Long. 12. 40. E. Lat. 55. 54. N.

SOPRA SELVA, a valley of Switzerland, in the country of the Griſons. It extends from Mount St. Gothard to Reichenau, and in the moſt populous valley of the Grey League.

SOPRON, a ſtrong town of Lower Hungary, capital of a county of the ſame name, ſeated on a ſmall river, 27 miles S.W. of Preſburg, and 30 S.E. of Vienna. Long. 17. 0. E. Lat. 47. 46. N.

SORA, a town of Naples, in Terra di Lavora, with a caſtle and a biſhop's ſee; ſeated on the Garigliano, 65 miles N.W. of Naples. Long. 14. 4. E. Lat. 41. 54. N.

SORA, a ſtrong town of Denmark, in Zealand, with a college for the nobility, nine miles W. of Ringſted. Long. 11. 53. E. Lat. 55. 26. N.

SORAW, a town of Germany, in Luſatia, ſeated near the Bober, 25 miles S. of Croſſen, and 32 N.E. of Gorlitz. Long. 15. 48. E. Lat. 51. 40. N.

SORIA, a town of Spain, in old Caſtile, built on the ruins of the ancient Numantia, near the ſource of the Douero, 74 miles S.E. of Burgos. Long. 2. 2. W. Lat. 41. 48. N.

SORIANO, a town of Naples, in Calabria Ulteriore, 17 miles E.N.E. of Nicotera.

SOROCK, a town of Poland, ſeated on the Dnieſter, with a ſtrong caſtle. The Turks were obliged to raiſe the ſiege of this place in 1602.

SOROE, a town of Denmark, in the iſland of Zealand, ſurrounded by three freſh-water lakes. Here is a royal academy, endowed with the revenues of a rich convent which was diſſolved at the revolution. It is 35 miles S.W. of Copenhagen. Long. 12. 15. E. Lat. 55. 5. N.

SOSPELLO, a town of Piedmont, in the county of Nice. It has a trade in dried fruits, particularly figs; and is ſeated at the foot of three very high mountains, on the river Bevera, 15 miles N.E. of Nice. Long. 7. 34. E. Lat. 43. 52. N.

SOVANO, a town of Tuſcany, in the Sienneſe, with a biſhop's ſee, 25 miles W. of Orvietto. Long. 11. 48. E. Lat. 42. 42. N.

SOUILLAC, a town of France, in the department of Lot, ſeated on the Boreſe, 32 miles N. of Cahors. Long. 1, 21. E. Lat. 44. 55. N.

SOUND, a ſtrait between Sweden and Denmark, through which ſhips uſually ſail from the Categate into the Baltic. It is about four miles broad, and here the Danes take toll of all merchant-ſhips that paſs into the Baltic.

SOUP (*Encycl*). The following extract from an account of the manner and expence of making ſtewed ox's head for the poor, by Mrs. Shore of Norton-hall, in Derbyſhire, is publiſhed by the Society for bettering the Condition of the Poor.

"One of the members of the ſociety having requeſted the particulars of the ox-head ſtew, which is given away at Norton-hall," ſays Mrs. Shore, "I have prepared the following account:—The whole is divided into fifty-two meſſes; each meſs containing a piece of meat, a piece of fat, and a quart of ſoup. The diſtribution of it has been continued ſince October, 1792, once a-week, and ſometimes oftener, from October to May. The poor people receive it very thankfully, and generally reſerve part of the meſs for the ſecond day.

"The manner of preparing it is as follows:—Waſh the ox's head very clean and well, and then put it into thirteen gallons of water; add a peck and a half of pared potatoes, a quartern of turnips, half a quartern of onions, a few carrots, a handful of pot-herbs, and the liquor of any boiled meat of the family, in which no vegetable has been boiled; thicken it with two quarts of oatmeal, and add pepper and ſalt to your taſte:—ſet it to ſtew with a gentle fire, early in the afternoon, allowing as little evaporation as may be, and not ſkimming off the fat; but leaving the whole to ſtew gently over the fire, which ſhould be renewed and made up at night. Make a ſmall fire under the boiler at ſeven o'clock in the morning, and keep adding as much water as will make up the waſte by evaporation, keeping it gently ſtewing till noon, when it will be ready to ſerve for dinner. The whole is then to be divided into fifty-two meſſes; each containing (by a previous diviſion of the meat and fat) a piece of meat and fat, and a quart of ſavoury nouriſhing ſoup.

" The expence of the materials in the northern counties, where it has been tried, may be thus ſtated:

	s.	d.
An ox's head - - - - -	1	6
A peck and a half of potatoes - -	0	7½
Onions, turnips, &c. - - -	0	4½
	2	6

" This amounts, excluſive of fuel and trouble, to rather more than a halfpenny for each meſs, or not quite two pence halfpenny a gallon; but in the dearer parts of England, the articles being purchaſed by retail, the meſs may coſt as much as three farthings or a penny.

" The beef and other bones, and cruſts of bread, of the family, may be added to the ſtew; and will improve the ſoup, without any additional expence.

" The above is ſubmitted to the conſideration of thoſe houſe-keepers who have not yet adopted a ſimilar charity, as a cheap and uſeful mode of relieving their poor neighbours, and of gradually teaching them a better ſyſtem of diet than they at preſent poſſeſs. The ſum of 2s. 6d. a-week for ſeven months (amounting to £3. 15s. a-year) in the cheap parts of England, and a few ſhillings more in the others, is the expence of a charity which may retain on its liſts fifty-two poor perſons, and ſupply them with the comfort of two meals a-week."

This receipt was tried in Auckland workhouſe; and was extremely liked by the poor. Though the expence was very ſmall, yet the quantity produced being a great deal more than the people of the workhouſe could uſe, the cottagers near the workhouſe were deſired to ſend for meſſes of it; and had, in conſequence, the benefit of a plenteous and unexpected meal. It is now inſerted in their table of diet, to be made once a-week for the benefit of the poor, both in and out of the workhouſe.

Count Rumford, in his valuable eſſays, has *demonſtrated* the practicability of making ſoup *abundantly equal to human ſuſtenance, under all circumſtances of bodily exertion, of vegetable ingredients only*, without a particle of animal matter. On this he fed the ſoldiery and poor of various deſcriptions, in Bavaria, for a long time; and thoſe who partook of this excellent cookery were *unable to diſtinguiſh it from the ſoup compoſed of animal broth*, except from its ſuperiority in *flavour* and effect.

SOUP-HOUSE, a recent kind of charitable inſtitution, found neceſſary for the poor in Britain, during the late ſcarcity. The following is extracted from an account of the ſoup-houſe, in Weſt-ſtreet, St. Giles's, by Sir Frederick Morton Eden, bart.

The ſoup-houſe in Weſt-ſtreet, Seven Dials, was opened on the 10th of January, 1800, upon the plan of giving general relief for all applicants, from any part of the metropolis. The quantity of ſoup ſold there in three months, between the middle of January and the middle of April, 1800, amounted to 118,457 quarts; for which the ſum of £493. 11s. 5d. was received from the applicants. From that time to the 25th of July, it was conceived that the individuals would be more relieved, and with more benefit to the public, by a ſupply for their families of potatoes and pork; and of ſavoury rice, prepared according to the receipt of the ſociety for the poor. The latter, they had the pleaſure to find, was very acceptable to the applicants; particularly to thoſe who had ſeveral ſmall children. In one week above 4,400 quarts of ſavoury rice were purchaſed by the poor; and during the period from the 18th of April to the cloſe of the ſeaſon in July, the following articles were ſold at the ſoup-houſe:

66,270 pounds of potatoes,
81,600 herrings,
14,842 quarts of ſavoury rice,
1,988 pounds of boiled pork.

By theſe means, during the winter of 1800, many thouſand perſons, who had no other means of ſupport, received occaſional relief; and it was a very gratifying circumſtance to the committee which conducted the ſoup-houſe, that in many inſtances perſons, who had at firſt come dirty and negligent in their apparel, became in a ſhort time decent and neat in their perſons, and regular and orderly in their behaviour.

The liberal and well-directed aſſiſtance of the Committee at Lloyd's, encouraged the exertions of the Committee of the ſoup-houſe in Weſt-ſtreet; and on the 4th of December, 1800, when it appeared that the general preſſure would continue another ſeaſon, the Committee of Management for the ſoup-houſe renewed their labours with increaſed activity. It is the peculiar misfortune of the poor, who conſtitute a very conſiderable part of the neighbouring population of St. Giles's and St. Ann's Soho, that, generally ſpeaking, they are unknown to the ſubſcribers; being reſident in ſtreets or courts entirely occupied by the poor, and being moſtly engaged in occupations which do not afford them means of acceſs to thoſe who could recommend them as objects of relief. Many families, not having the means of procuring recommendations from the ſubſcribers, applied at the ſoup-houſe, in conſequence of an inſtruction given them; and the gentlemen concerned in the management of that truſt, viſited perſonally above a hundred families in the greateſt diſtreſs; and, by enquiry, aſcertained the deſcription of the reſt. In conſequence of information ſo affecting, they thought it their duty to extend the relief of the charity, not merely to perſons recommended by the ſubſcribers, but alſo to the other diſtreſſed families, who had not the ordinary means of procuring tickets of recommendation.

Notwithſtanding the time loſt in attendance (an inconvenience which at firſt appeared to be indiſſolubly connected with this ſpecies of charity, but which, in this ſoup-houſe, has ſince been in a great meaſure remedied), the number of adults and children, receiving relief at the ſoup-houſe, amounted to about 14,000 individuals; who, at a time of ſcarcity, have thus been furniſhed with wholeſome food, and with coals, at a reduced price.—Of the latter article, 250 chaldrons, in the courſe of this winter, have been laid in the vaults under the adjoining chapel, and have been ſold in ſmall quantities to the poor, four days in the week, at the hours moſt convenient to them, at one ſhilling a buſhel.

The eſtabliſhment of ſoup-houſes has afforded unequivocal proof, if proof were wanting, that the prejudices of the induſtrious claſſes reſpecting diet, are not inſuperable.

That, on a ſubject ſo important to the labourer as the daily ſupply of his family with the principal neceſſary of life, and the mode of preparing his food, he ſhould feel diſpoſed to abide by the deciſion of his forefathers, and to think the general practice the beſt, becauſe it is the general practice, might reaſonably be expected. He has not leiſure, nor can he afford, to riſk experiments to mend the meal, which he muſt procure from the ſweat of his brow. It is not from his manufacturing ſkill that his meſs can be improved, or from his architectural knowledge that his dwelling can be rendered more comfortable. While he labours for others, merchants, manufacturers, and philanthropiſts, muſt plan for him. Viſionary projects may often diſguſt him, and render him averſe to innovation; but he is ſel-

dom ſo ignorant of his true intereſt as not to adopt improvements, which have been fairly tried, and ſatisfactorily explained to him. In truth, the changes which have taken place in the domeſtic economy of the great maſs of the people are not inconſiderable. In the middle of the ſeventeenth century, tea, ſugar, and potatoes, and even wheaten bread (articles which now conſtitute a great part of the ſubſiſtence of the labouring claſſes) were almoſt wholly unknown to them; and the experience of very modern times has ſhewn that good meat ſoup, fiſh of various kinds, and ſavoury rice, prepared at a fourth part of the expence of leſs palatable food, may be introduced at the tables of the poor. To familiarize them, however, to judicious and economical cookery at home,—wealth, ſcience, and benevolence, muſt continue their exertions. The poor of the metropolis, more particularly, not only want clear and explicit directions how their food may be prepared to the beſt advantage; but cheaper fuel than they can in general procure, and an improved kitchen apparatus. Theſe, however, are objects which do not fall within the ſcope of a ſoup eſtabliſhment.

Various are the advantages which have reſulted from inſtitutions of this nature. They are uſually opened in winter, a period of the year in which relief is moſt acceptable to the poor. They, probably, not only benefit the immediate applicants, but eventually others, to whom habit and local circumſtances ſtill render bread a principal article of ſubſiſtence. While the ſcarcity of corn continues, thoſe who will make white bread the great article of their ſubſiſtence, will be benefited by thoſe who can be ſatisfied with ſubſtitutes; and it is to be hoped that cheap and nutritious food may be thus brought into general uſe, by the extenſion of the knowledge of thoſe culinary proceſſes, which are neceſſary for preparing it.

It ſhould, however, be remembered that ſoup-houſes are extraordinary reſources, only to be uſed in times of difficulty and diſtreſs; when there is a deficiency of food, or when the regular exertions of induſtry are impeded by an unforeſeen preſſure or calamity. In a well-ordered ſtate, the permanent welfare of the labouring claſſes muſt be the reſult of their own energies. To open the doors of a ſoup-houſe, as well in ſummer when work may eaſily be had, as in winter when it cannot,—in years of plenty, as in years of ſcarcity,—is an indirect aſſurance to the labourer that the difference between the produce of his induſtry and the price of proviſions ſhall always be equalized from the contributions of the opulent. Such attempts may be partially made; but in their effects they muſt be often pernicious: as a general ſyſtem, they are impracticable.

Soup-houſes hitherto have been ſupported by liberal ſubſcriptions, and managed at a moderate expence. The active zeal of the firſt promoters has, in moſt inſtances, rendered their adminiſtration pure and diſintereſted: but this active zeal has been excited, becauſe the preſſure of the preſent period is conſidered as extraordinary. In ordinary ſeaſons the ſubſcriptions would be leſs liberal, and the management leſs gratuitous, and perhaps leſs diſintereſted.

A mixture of evil will blend itſelf with every human contrivance. In order to diſtribute food with order and economy, ſoup-houſes require the perſonal attendance of applicants. Hence ariſes a loſs of time, the moſt valuable property of the poor. He who carries his corn to a pariſh mill to be ground, inſtead of purchaſing his flour from a neighbouring baker, and he who waits his turn to be ſupplied with a cheap meal from a ſoup-houſe, muſt deduct from the money price of the article thus bought, the time loſt in purchaſing it. The benefit in both caſes may be conſiderable; but in both cases the loſs of time muſt be calculated, and allowed as a draw-back.

It may be doubted whether the morals of the lower claſſes, particularly of children, are not injured, by their being brought together in great numbers. Whatever pains may be taken to exclude improper objects, it is almoſt impoſſible for a ſoup-houſe to relieve ſeveral hundred families, without often obliging the modeſt and induſtrious poor to aſſociate with the idle and the profligate. An eſtabliſhment of this kind muſt be content not to ſcrutinize the merits of applicants "too curiouſly;" it muſt forget "their vices in their woe," and not refuſe a meal to fix ſtarving children, becauſe the father is idle, or the mother is diſſolute.

It is a conſiderable objection to the permanency of ſoup-houſes, that a charitable fund raiſed for ſupplying articles of ſubſiſtence, at reduced prices, to induſtrious perſons who are not abſolutely paupers, may leſſen the diſtinction between independence and poverty; and gradually obliterate that ſpirit of independence, which is the chief motive for perſonal exertion.

SOUR, or SUR, a ſea-port of Turkey in Aſia, in Syria, where ſtood the famous city of Tyre, of which there is now nothing remaining but ruins. Long. 35. 50. E. Lat. 33. 18. N.

SOUR, or SUR, a river in the Netherlands, which runs from W. to E. through Luxemburg, and falls into the Moſelle, a little above Treves.

SOURI, a town of Perſia, in Lariſtan, ſituate on the Perſian Gulf, 110 miles S.W. of Ormus. Long. 55. 30. E. Lat. 26. 18. N.

SOUSA, or SUSA, a ſtrong town of the kingdom of Tunis, capital of a province of the ſame name, with a caſtle and a good harbour. It is a place of ſome trade, and ſeated on a high rock, near the ſea, 65 miles S.E. of Tunis. Long. 11. 15. E. Lat. 35. 52. N.

SOU-TCHEOU-FOU, a city of China, the ſecond in the province of Kiang-nan. It is ſo interſected by canals of freſh water, that Europeans compare it to Venice; and the country round it is ſo delightful, that the Chineſe call this city the paradiſe of the world. The brocades and embroideries made here are eſteemed throughout the whole empire. Its population is prodigious; but its juriſdiction extends over only one city of the ſecond, and ſeven of the third claſs. Long. 112. 20. E. Lat. 38. 40. N.

SOUTERRAINE, a town of France, in the department of Creuſe, 24 miles N. of Limoges.

SOUTHAM, a town in Warwickſhire, with a market on Monday, and noted for its cider. It is 13 miles S. of Coventry, and 83 N.W. of London. Long. 1. 23. W. Lat. 52. 36. N.

SOUTHEND, NEW, a village in Eſſex, ſeated at the mouth of the Thames, 44 miles E. of London. Being the neareſt place to the metropolis, for ſea-bathing; it is much reſorted to, and has handſome accomodations for the company.

SOUTHWELL, a town in Nottinghamſhire, with a market on Saturday. It is an ancient place, and has a collegiate church. It is 10 miles N.E. of Nottingham, and 139 N.N.W. of London. Long. 0. 51. W. Lat. 53. 6. N.

SOUTHWOLD, a corporate town and ſea-port in Suffolk, with a market on Thurſday. It is ſeated on a cliff, near a fine bay, with a harbour to the S. and the river Blythe, and a drawbridge on the W.; ſo that it is almoſt ſurrounded with water, eſpecially at every high tide. Here a much eſteemed ſalt is made, and it has alſo a trade in corn, beer, and herrings. It is commonly called SOWLE or SOLE,

and its bay is named Solebay. In this bay was the great ſea fight between the Dutch admiral De Ruyter, and James duke of York, in which the victory was undecided. Southwold is 20 miles S. of Yarmouth, and 104 S.E. of London. Long. 1. 54. W. Lat. 52. 24. N.

SOUTO MAJOR, a town of Portugal, in Beira, 14 miles N.W. of Pinnel. Long. 6. 48. W. Lat. 41. 5. N.

SOVIGNY, a town of France, in the department of Rhone and Loire, ſeated on the Queſne, 50 miles S.E. of Bourges, and 167 S. of Paris. Long. 3. 21. E. Lat. 46. 30. N.

SOWING-MACHINE. A patent was granted, in 1784, to Mr. Wright, of Cranage in Cheſhire, for a machine upon an entirely new principle, for ſowing wheat, beans, peas, and other grain, and ſeeds; which may be fixed to a plough. The drawing, marked A, in Pl 47. repreſents this machine as fixed to a plough-beam; and on one ſide of the box or caſe is taken away, for the purpoſe of diſplaying as much as poſſible the mechaniſm of it, and the way in which it works: and it may be fixed to the beam of any plough, and this is the way in which it ſhould be uſed when it is meant to ſow only one row under furrow; or the machine may be ſo varied as that the motion may be communicated to more ſeed-plates than one, and theſe being fixed to a drilling inſtrument, may be contrived to ſow two or four rows at once; but the account here intended to be given is of that intended to ſow only one row: the ſeed-plates, ſo called becauſe they are the means of ſowing and diſtributing the ſeed, muſt be adapted to the nature and magnitude of the ſeed, or grain, intended to be ſown, and they may be eaſily and ſoon changed at the pleaſure of the uſer to ſow different kinds of ſeed or grain, as will hereafter appear: the ſeed or grain is to be put into a box, canniſter, or hopper, B, at the upper part of the machine, and the ſeed-plates, which are round, flat, and made of braſs, receive their motion from a wheel paſſing upon the ground; theſe ſeed-plates turn horizontally between the bottom of the box B in which the ſeed is put C, and the top of the lower box or caſe D; the channels or apertures in them are ſo ordered as to diſpenſe a limited and certain quantity of the ſeed or grain intended to be ſown, which quantity may be increaſed or diminiſhed, upon any given ſpace or length of furrow, by changing the pinion-wheel, and adding another with a greater or leſſer number of teeth, whereby the plate moves quicker or ſlower with relation to the movement of the plough. A block of wood E, which is the baſis or foundation of the machine, is fixed on the under ſide of the plough-beams; by means of two long iron bolts, theſe paſs through the block and through the plough-beam, and are ſcrewed together on the upper ſide of the plough-beam: this wooden block ſhould be ſeventeen inches long, three inches broad, and three inches deep. To this block of wood E, on the left hand, is fixed an iron frame F, which projects about ſix inches; the two ſtrong iron arms G, which ſupport this frame, are ſhouldered, and paſs through the arms of an iron plate, and then through the block of wood E. The frame F is the ſegment of a circle, the radius of which is about ſix or ſeven inches; and the cheeks of it are connected together at top and bottom by two thin iron bars, rivetted into the two cheeks: the open ſpace between the two ſemi-circular cheeks is about three inches, and the range between the cheeks is about ſeven inches; on the left-hand ſide this block of wood, and cloſe upon it, there is an univerſal joint H, in the iron axis I; from this joint to the left hand, for ſix inches, the axis I is perfectly round, and about three fourths of an inch diameter; on this part of the axis there is a wooden roller K, buſhed with braſs, about five inches long, and three in diameter at the larger or outer end, and one inch and a half at the ſmaller: this roller plays up and down the open range in the iron frame, and effectually prevents the wheel upon the ground from having any movement ſideways, which it otherwiſe would have. From the round part of the axis upon which the roller plays, the axis is continued ſquare for two inches and a half more, with a further allowance of half an inch, which is formed into a ſcrew; the large wheel upon the ground L, which moves the whole machine, has a ſquare mortiſe in its centre, which exactly correſponds with the ſquare part of the iron axis I; when this is put on and fixed by the nut, the wheel and axis turn together: this wheel gives movement to the ſeed-plates. Though fixed on twenty-one inches diameter for the large wheel on the ground, as the moſt convenient height for the ploughs commonly uſed in Cheſhire, it may be made more or leſs, and conſtructed of wood hooped with iron, or of caſt-iron; the wheel, when fixed to work, will be diſtant from the plough-beam, on the left-hand or land ſide, about ten inches. By the contrivance of the univerſal joint and the roller, the wheel, in its circular motion on the ground, riſes and falls, and paſſes over ſtones, or any other irregularities, without affecting the movement of the plough, or ſtraining the inſide, or other movements of the machine; from the univerſal joint on the left ſide, the block of wood before mentioned, the iron axis I is continued through the block; and, about two inches and a half to the right-hand ſide of it, there is a perpendicular plate of iron, about one inch and a quarter broad, three inches long, and a quarter of an inch thick; on each ſide the block of wood theſe are let in, and buſhed with braſs, or theſe plates may be formed of caſt-iron; and through theſe the ſpindle or axis from the great wheel paſſes: it is here half an inch diameter, and perfectly round for three inches in length; the other two and a half ſquare; on this ſquare part of the axis is fixed the pinion M, with eight leaves or bars: this pinion muſt be made of hardened ſteel; or it may be made of caſt-copper, with a ſmall allowance of tin to harden it; the pinion muſt be nearly two inches long, and one inch and a quarter diameter, with a ſquare mortiſe through it, correſponding with the ſquare of that part of the axis I, upon which it is fixed. Betwixt the pinion and the plate, on the right-hand ſide the block of wood, there muſt be put a collar of braſs, to make up the whole length of two inches and a half: a broad-headed ſcrew, at the extremity of the iron axis I, fixes all this work; and, when it is neceſſary to repair, clean, or oil any part of the movement, this broad-headed ſcrew being taken out ſets all at liberty: the pinion and collar come off on the inſide the box N; and the round ſpindle, or axis I, comes out on the outer, or other ſide; the long pinion M is eſſentially neceſſary, as it admits of pinion wheels O, of different diameters, with any number of teeth, from ſixteen to forty-eight, to work upon it, from one common centre, as will appear afterwards; the block of wood before mentioned forms the left-hand ſide of the box N; two boards, three quarters of an inch thick, form the front and back part of the box; a board, three quarters of an inch thick, forms the bottom; and on the right-hand ſide is a door that opens outwards; the top, or cover, is a braſs plate, about ſeven inches ſquare, and a quarter of an inch thick; when the whole is put together, it forms a cube of near ſix inches withinſide. In or near the centre, in the bottom of the box, is a round hole, three quarters of an inch diameter; on the outſide of the bottom is fixed a braſs plate, let in level with the ſurface, about four inches long, by one inch and a quarter broad, with a hole three quarters of an inch diameter;

by means of two ſtaples, rivetted into this plate, a flat double iron bolt P, with a ſpring upon it, ſlides into a rebatement, turned out of the upright iron ſhaft, or ſpindle, Q, as will be ſeen in the drawing of the ſeparate parts; by ſlipping the bolt back, the upright ſpindle Q is readily taken out, and by puſhing it forwards it confines the ſpindle from riſing or ſinking, and to all intents anſwers the purpoſe of a ſtep or ſtop for the ſpindle to turn upon: the upright ſhaft, or ſpindle, Q, is about eight inches long, the lower part projecting under the bottom of the box, through the bolt P, about an inch; then a circular groove for the bolt P to ſlide into; this is turned out of the iron about one eighth of an inch deep, and as much wide; the ſhaft is round at the lower end, and three quarters of an inch diameter; at two inches from the circular grove it becomes ſquare: on this ſquare part the different pinion-wheels O are fixed; the upper part is again turned round; this upper round part paſſes through a round hole in the braſs top D of the box N, correſponding with the diameter of the round part of the ſpindle; the ſpindle riſes one quarter of an inch above the upper ſurface of the braſs top D; and here it is again formed into a ſquare of half an inch; on this ſquare ſhoulder the different ſeed-plates are put, by a ſquare mortiſe, in their centres, correſponding with this ſquare upper projecting part of the upright ſpindle Q; in order the better to ſhew this iron ſpindle, a ſeparate drawing of it is added, marked Q q. The ſeed-plates for different ſeeds differ ſomewhat, but are all round, flat, and made of braſs; as they cannot be ſeen in the place where they work between C and D, ſeparate drawings of them are therefore added. That for wheat, R, is ſomething more than ſix inches diameter, and rather more than one eighth of an inch thick; two open channels or circles are cut through it, near the circumference; theſe are connected by bars alternately diſpoſed, ſo that there is little or no interruption to the ſeed dropping, as the plate turns round; theſe open ſpaces, with the interpoſing rim, are about an inch wide. In the plate for beans or peas, S, there is only one open circle, about an inch wide, with ſixteen thin partitions, to connect the rim with the body of the plate; this is braſs, nealy half an inch thick, and of the ſame diameter as the other; the partitions are fluſh with the bottom of the plate, but do not riſe more than half-way up the rim on the upper ſide: this will better appear from the drawing S. The plate for turnips, rape, lucern, or other ſmaller ſeeds, T, muſt be about ſix inches diameter, ſomething thicker than the diameter of a turnip ſeed, but not equal to two; the holes muſt be made as appears in the drawing, and to open ſucceſſively upon the opening in the braſs table D, upon which all the ſeed-plates turn, and made large enough to contain four or five ſeeds, more or leſs, as they are ordered; for in this article perſons differ about the quantity of ſeed they think neceſſary to be ſowed in a given ſpace. In order to connect the ſeed-box B with the lower box N, between which two the ſeed-plates move, as above deſcribed, there muſt be fixed, near the four corners of the braſs plate D, on the top of the box N, four round upright pillars; theſe are about one quarter of an inch diameter, and about an inch and a half long: they may be made of braſs, or iron, or may be rivetted into the four corners of the braſs top of the box N. Four round mortiſes are to be made in the bottom of the ſeed-box B, correſponding with theſe upright pillars; the ſeed-box muſt be put on theſe pillars, and ſlipped down, and then, by means of four thumb-ſcrews, which ſcrew into the bottom of the box B laterally and horizontally, and act againſt the upright pillars, the box may be kept in its poſition: the bottom of the ſeed-box B is a ſquare piece of wood (beach, mahogany, or other cloſe-grained wood, is what I have uſed), nearly ſeven inches ſquare, and one inch and a quarter thick, perfectly ſmooth and level; this has four holes through it, correſponding with the four upright pillars before mentioned, and likewiſe a large ſemicircular opening, five inches long, and an inch wide; through part of this opening the ſeed deſcends from the box above, and part of it is occupied by the bruſhes, hereafter mentioned; but, as this cannot appear in the machine when it is together, a ſeparate drawing is made of it U, which repreſents the under-ſide of it, with the bruſhes that act upon the ſeed-plates: this wooden table forms the bottom of the ſeed-box or hopper B; this hopper may be formed of wood, tin, copper, or rolled iron, and made to contain from one gallon to two; a triangular piece of wood or braſs is fixed, by a ſcrew, near the centre of this wooden table U, and is made to ſlide and cover the opening in it, towards the right-hand of it, for about half-way, and under the briſtle-bar *t*, and the bruſh *t t*, hereafter mentioned, are placed: it is made to ſlide, for the purpoſe of taking out, repairing, or changing the bruſhes, and a ſeparate drawing is made of it U U, which repreſents the upper-ſide of the bottom, and the triangular ſliding cover: when the ſeed-plate is put upon the ſquare ſhoulder of the upright ſpindle Q, which projects above the braſs top D of the lower box N, then the ſeed-box or hopper B muſt be put on, and fixed by the lateral horizontal thumb-ſcrews, and the ſeed-plate will then, by the action of the great wheel L, by means of the pinion M and the pinion-wheel O, turn horizontally upon the braſs table D, without any reſiſtance but what is occaſioned by the ſeed paſſing under the briſtle-bar; there muſt be a ſemicircular opening in the braſs table D (of which, as it cannot be ſeen in its place in the drawing, a ſeparate drawing is made of it V), about two inches long, and one inch wide; this muſt be to the right of the briſtle-bar *t*, in the table C or U, that nothing may fall through it from the opening in C or U, till it has paſſed under the briſtle-bar *t*; and the opening in the table C or U, being to the left of the briſtle bar *t*, no ſeed can eſcape when the ſeed-plate ſtands ſtill; but ſo ſoon as this is put in motion, whatever is received from the ſeed-box into the open channels of the ſeed-plate, as they paſs under this opening, is forced by the diviſions in the ſeed-plate under the briſtle-bar *t*; and ſo ſoon as they paſs under that bar, they drop through the opening in the braſs table D or V into a perpendicular conducting pipe W, which conveys them downwards to the moveable conducting pipe X, and that depoſits them upon the ground; this pipe W is made of tin, and joins cloſe under the opening in the table D or V, and is as wide at top as that opening, narrowing as it deſcends through the box N, and is faſtened againſt the inſide of the front of that box; on the under or outſide of the bottom of the box N, is fixed an oblique flat conducting pipe, made of ſtrong tin, or thin iron, or copper, X; this comes immediately under, and receives the ſeed from the pipe W; this pipe X turns on a round iron rod or ſwivel, that is paſſed through a hole in a flat piece of copper, projecting from the bottom of the box N, and is fixed on the fore-part of the box N on the outſide; and by means of a ſtrong ſpring acting againſt this rod or ſwivel, in a groove turned out of it near the top, and the upper end of the rod being confined in a round iron ſtaple that will admit it to turn round in it, the rod and pipe are kept from ſlipping down, and may be turned to the right or left under the bottom of the machine, to drop the ſeed in what part of the furrow the uſer thinks fit; but, as this pipe, and the rod and ſpring, cannot be ſeen in the machine as put together, a ſeparate drawing of the pipe and rod are

made Y, of the front part of the box, with the ſpring and ſtaple which confine it, Z; the ſeed-plates are put in motion by the motion of the wheel upon the ground L, which is communicated to them when they are put on the ſpindle Q, by means of the pinion M acting upon the pinion-wheels O; theſe pinion-wheels O may be made of braſs, or caſt or forged iron, and in ſize may be from two inches diameter to five, with any number of teeth required. What Mr. Wright has uſed have been wheels with twenty-four, thirty-two, and forty teeth; the rim of the wheels is about half an inch deep, and a quarter of an inch thick; on the upper ſide of the centre there is a collar, which riſes about an inch above the upper ſide of the wheel: there is a ſquare collar through this mortiſe, correſponding with the ſquare of the upright ſpindle Q, upon which it is put, lodging upon that part of the ſpindle towards the bottom where it is round; on the collar, on the upper part, all round, is a ſhoulder projecting horizontally a quarter of an inch, under which comes the end of the horizontal arm of a lever of iron of this form L, fixed to the inſide of the box N, on that ſide that is next the ploughman, by means of a ſtrong wire paſſing from the top of the upright arm of the lever L through the box N, towards the ploughman, and a cord from the wire to the ploughman; he can at any time raiſe up the pinion-wheel O, ſo as to clear it from the pinion M, and ſtop it from working or moving the ſeed-plate as long as he pleaſes, though the plough be going on, and the wheel on the ground L in motion all the time; and again, by letting go the cord the wheel O will fall immediately down upon the pinion M, and inſtantly renew its work; and by this means turnip, rape, lucern, and other ſmaller ſeeds, may be ſown in drills or rows, in what intervals the uſer thinks proper. As the lever is fixed on the ſide of the box N, which in the drawing is taken away to ſhew the mode in which the machine works, a ſeparate drawing is made, A 2; which repreſents the ſituation and operation of the lever upon the pinion-wheel. The operation of this lever gives the machine ſeveral conveniences, particularly in going to the field, or returning; it likewiſe gives the ploughman a perfect command over the inſtrument. If intervals are required betwixt the rows, as in ſowing peas, beans, or wheat, this is ſoon effected by raiſing the pinion-wheel out of work, at the uſer's diſcretion; when it is kept in conſtant movement, and ſows the ſeed in every furrow, it is then the ſame as broad-caſt ſowing; with this difference, that one-half the quantity of ſeed may be ſaved, or in other words, the farmer may ſow what number of grains in every yard-length of furrow he thinks proper. The wheat ſeed-plate uſed by Mr. Wright delivers out, every revolution it makes, three drams in weight, with little or no variation; this weight, in counting, amounts to 300 grains, or thereabouts. The firſt or large wheel on the ground is nearly ſixty-five inches in circumference. When the pinion-wheel, with twenty-four teeth, is in work, the plough will open a furrow 195 inches, or nearly five yards and a half, for one revolution of the ſeed-plate, and the machine drop about fifty grains of wheat every yard. When the pinion-wheel with thirty-two teeth is at work, the plough will go ſomething more than ſeven yards: there would then drop ſomething more than forty ſeeds every yard. When the forty-toothed wheel is at work, the plough will go nine yards; and in that compaſs about thirty-four ſeeds would drop every yard. Mr. Wright has not computed the diſtance the plough goes, nor the number of grains dropped in a yard, with a mathematical exactneſs, becauſe, in an operation of this kind, it is not neceſſary: by making the channels in the ſeed-plates greater or leſſer, by changing the pinion-wheels for others with more or leſs teeth, the machine may be made to drop preciſely any quantity named. When it is neceſſary to change the pinion-wheel O for a different one, it is done immediately by drawing back the bolt P under the bottom of the machine, which lets the upright ſpindle Q fall down; the pinion wheel is then taken off, another put on the ſpindle, the ſpindle replaced, with the upper end in the braſs top of the box; and the bolt P ſliding upon the circular groove, in the lower end of the ſpindle, faſtens and fits it for work immediately: a ſeparate drawing of the bolt is added, marked B 2. What remains to be deſcribed are the bruſhes or bars of hogs' briſtles. Theſe are let into the large open ſpace in the wooden table C or U, before mentioned, under the triangular ſliding cover above deſcribed, and ſtand perpendicular to the horizontal ſeed-plates: they are readily taken out to be repaired, and as ſoon replaced again. Their elaſticity prevents their injuring the corn, in paſſing under them. They are the only part of the machine that can fairly be injured by uſe; and, as theſe may require renewing, it will be neceſſary to be particular in deſcribing the manner of making them. The braſs frame conſiſts of two parts: the firſt a ſtrong plate of braſs, about one inch and a half long, and three quarters of an inch broad; upon this are rivetted two cheeks of braſs, about the eighth of an inch thick, and a quarter of an inch broad, ſo as to leave an open ſpace betwixt cheeks an inch wide; the cheeks muſt be in length the thickneſs of the wooden table before mentioned. When theſe are rivetted together, they may be called one part of the frame; the other part conſiſts of a ſtrong braſs plate, one inch and a half long by three quarters; two holes muſt be drilled through the former part, to admit two ſcrews; and this laſt muſt have two female ſcrew holes. Fill the vacancy in the firſt part mentioned with the beſt Ruſſia briſtles; duſt ſome powdered roſin among them; fill it as full as it will contain; then apply the other part, and paſs two wires through the ſcrew-holes, to preſerve the communication; then put the whole into a hand-vice, and ſcrew it hard; apply the upper part to a hot iron, burn off the redundant briſtles, and continue the heat till the roſin is melted, and the whole cemented together; when it is cool, take out the wires, and put in the ſcrews; the briſtles below the cheeks muſt be cut off level with the cheeks, by a broad chiſel; this bruſh or bar is fixed even with the upper ſurface of the ſeed-plate, and a ſeparate drawing is made of it, C 2. The ſecond bruſh, to the right of this, is made in the ſame manner; only a piece of braſs is rivetted in the middle ſpace, betwixt the two cheeks, to divide the bruſh into two parts; the briſtles here are left longer than the cheeks, by the eighth of an inch. The uſe of this bruſh is to ſweep out any grain that may accidentally lodge in the open channels of the wheat ſeed-plate, and force them back again down the conducting pipe: a ſeparate drawing is made of this bruſh, D 2. The bruſh for beans and peas is made exactly in the ſame manner; only the briſtles muſt not be cut off ſquare with the cheeks of the braſs frame, but left a quarter of an inch longer than the cheeks of the frame; when the bean-plate is intended to be uſed, the former bruſh for wheat, marked in the ſeparate drawing C 2, muſt be taken out, and this put in its place; the ſecond, or double bruſh, D 2, need not be removed, as it does not act in that caſe: a ſeparate drawing of this bruſh for beans and peas is added, marked E 2.

SPA, a town of Germany, in the biſhopric of Liege, famous for its mineral waters. That called the Old Spa conſiſts of miſerable cottages, and is properly nothing but the ſuburb to the other. The houſes of the New Spa are

all wood, dark, and ſmall, and yet it is affirmed they can make 1200 beds for ſtrangers. The church of the capuchins, and the pariſh church, are both ſeated upon eminences. The inn called the Court of London, is very large, the beſt in the place, and moſt frequented. The names of the five principal wells are Pouhon, Geronſterd, Saviniere, Watpotz, and Tunnelet. The inhabitants are employed in making toys for ſtrangers. Spa was taken by the French in 1794. It is ſeated in a valley, ſurrounded by mountains, 17 miles S E. of Liege. Long. 5. 50. E. Lat. 50. 30. N.

SPAITLA, a town of the kingdom of Tunis, near which are extenſive and magnificent ruins. It is 90 miles S.W. of Tunis, and 100 S.S.E. of Bona. Long. 9. 15. E. Lat. 35. 40. N.

SPALDING, a town in Lincolnſhire, with a market on Tueſday. It is ſeated near the mouth of the Welland, and from its neatneſs, and the canals in the ſtreets, reſembles a Dutch town. It has a good carrying trade in corn and coal; and much hemp and flax is grown in its neighbourhood. Near it is the greateſt heronry in England, the herons building together on high trees like rooks. It is 14 miles S. by W. of Boſton, and 100 N. of London. Long. 0. 2. E. Lat. 52. 45. N.

SPALLANZANI (Lazarus), a diſtinguiſhed philoſopher and phyſiologiſt, was born at Scandiano, in the department of Croſtolo, in Italy, on the 10th of January, 1729; he was the ſon of John Nicholas Spallanzani, a counſellor of great repute, and of Lucia Zigliani: he commenced his ſtudies in his own country, and at the age of fifteen went to Reggio de Modena, where he proſecuted them with the utmoſt aſſiduity. The Jeſuits, who initiated him into the ſtudy of polite literature, and the Dominican friars who heard of his vaſt improvements, were deſirous of attaching him to their orders; but his paſſion for knowledge led him to Bologna, where his relation, Laura Baſſi, a lady deſervedly celebrated for her genius, her eloquence, and her knowledge of natural philoſophy and mathematics, was, at that time, one of the moſt illuſtrious profeſſors of that univerſity, and, indeed, of all Italy. Under the direction of this enlightened guide, Spallanzani learned to prefer the ſtudy of Nature to that of her commentators, or to eſtimate the real value of the commentary in proportion to the compariſon it bore with the original; he ſoon perceived the wiſdom of her inſtructions, and ere long experienced their happy effects.

Spallanzani's taſte for philoſophy was by no means excluſive; he ſtudied his own language with peculiar attention, made a conſiderable proficiency in the Latin, and more particularly applied himſelf to the French and Greek. Spallanzani, in conformity to the inclinations of a father who loved him, applied to the ſtudy of juriſprudence; he was even on the point of being admitted a doctor, when Anthony Valliſnéri, profeſſor of natural hiſtory at Padua, induced him to renounce that intention, by promiſing the conſent of his father, who was ſo ſenſibly affected at his thus devoting himſelf to his will, that he left him at liberty to purſue his own inclinations: from that moment he addicted himſelf to the ſtudy of mathematics; but without diſcontinuing that of the ancient and modern languages.

Spallanzani was ſoon well known in Italy; and his own country was the firſt to do homage to his talents. In the year 1754, the univerſity of Reggio choſe him profeſſor of logic, metaphyſics, and Greek; he continued to deliver his lectures there for ſix years, conſecrating to phyſical reſearches thoſe intervals of leiſure which his vocation admitted. Some new diſcoveries excited his paſſion for natural hiſtory, which was continually augmented by the ſucceſs of his early efforts. His obſervations upon the animalcula in infuſions, attracted the attention of Haller, and of Bonnet, who pointed out the path by which he himſelf had aſcended to ſuch a degree of eminence, and already proclaimed him to the learned world as Nature's interpreter.

In 1760, Spallanzani was invited to the univerſity of Modena: though his intereſt might have prompted him to accept the advantageous offers of the reſpective univerſities of Coimbra, Parma, and Ceſena, yet his patriotiſm and attachment to his family decided him in the reſolution of limiting his exertions to the ſervice of his country. The ſame conſiderations induced him to reject, ſome years after, the propoſals of the academy of Peterſburgh. He reſided at Modena till the year 1768, and had the ſatisfaction of ſeeing that his own unaided powers had created a race of illuſtrious men, who ſtill ſhine forth the glory of Italy. In the number of theſe muſt be reckoned Venturi, profeſſor of natural philoſophy at Modena; Belloni, biſhop of Carpi; Luccheſini, ambaſſador of the late King of Pruſſia; and Angelo Maſſa, the poet of Parma.

During his reſidence at Modena, Spallanzani publiſhed, in 1765, a treatiſe, entitled, *Saggio di Oſſervazioni Microſcopiche concernente il Siſtema di Needham Buffon.* In this pamphlet he eſtabliſhed, upon the moſt ingenious and well-founded experiments, the animality of microſcopic animalcula. He ſent his work to Bonnet, who formed his judgment of the author by this production, and who lived to ſee the accompliſhment of the favourable prediction which he then pronounced. From that moment the cloſeſt intimacy was cemented between theſe two philoſophers; which continued to the end of their lives.

In the ſame year Spallanzani produced a diſſertation truly original; *De Lapidibus ab aqua Reſiliantibus:* he there demonſtrated, by the moſt ſtriking experiments, contrary to the received opinion, that the phenomenon which, in the ſtyle of infantine recreation, is termed ducks and drakes, is not produced by the elaſticity of the water; but by the change of direction which the ſtone undergoes in its motion after having ſtruck upon the water when it aſcends the inflexion of the cavity indented by the ſhock.

In 1768, Spallanzani prepared the philoſophers for the ſurpriſing diſcoveries with which he was to preſent them in the courſe of his life, by publiſhing his *Prodromo di un Opera da Imprimerſi ſopra le Riproduzioni Animali.* He there ſketched the plan of a work which he was compoſing on this important ſubject: but this ſimple proſpectus revealed more ſources of philoſophical information than all the books which had hitherto appeared; becauſe it pointed out the method which muſt be purſued in thoſe myſterious enquiries, and collected, under one view, many unexpected facts; particularly the exiſtence of tadpoles, anterior to the period of fecundation, in many ſpecies of toads and frogs; the regeneration of the head in decapitated bodies of ſnails, which he had already communicated to Bonnet in the year 1766, and which was, for a ſhort time, diſputed, notwithſtanding the repeated confirmation of this phenomenon by Heriſſant and Lavoiſier; he alſo finally demonſtrated it ſome time afterwards, in a work entitled *Memoire della Societa Italiana*; by the inſtance of the reproduction of the tail, legs, and jaws, in the mutilated aquatic ſalamander. Theſe facts aſtoniſh to this day, when reflected on, though time may have rendered them familiar to our ſenſes; and it is not eaſy to decide which preſents greater claims to admiration, the ability of Spallanzani in affording ſuch inconteſtible proofs, or the indefatigability and undaunted boldneſs which he manifeſted in purſuing and demonſtrating the reſults of his

arduous and ſurpriſing experiments. It will ever be a ſubject of regret, that the project of his great work was not realiſed; but a variety of circumſtances prevented him from yielding to the ſolicitations of his friends in that particular.

The phyſiology of Haller, which Spallanzani was ſtudying, fixed his attention on the circulation of the blood, in which he diſcovered many remarkable phenomena. In 1768, he publiſhed a ſmall work, *Dell' azione del' cuore ne' vaſi ſanguigni nuove Oſſervazioni:* and he reprinted it in 1773, with three new diſſertations; *De' Fenomeni della Circolazione oſſervata nel' giro univerſali de' Vaſi; de Fenomeni della Circolazione Languente; de moti del ſangue indepedente dell' azione del cuore e del pulſare delle Arterie.* This book, little known, compriſes a ſeries of the moſt refined and delicate obſervations and experiments upon a ſubject of which our knowledge was before extremely ſuperficial.

When the univerſity of Pavia was re-eſtabliſhed upon a more extenſive plan, the Empreſs Maria-Thereſa, through the medium of the Count de Firmian, invited Spallanzani to fill the place of profeſſor of natural hiſtory. His great reputation obtained him this diſtinction, which was ſolicited for him by many celebrated men.

On his arrival at the univerſity, Spallanzani ſelected Bonnet's *Contemplation de la Nature* for the ſubject of his lectures: he ſupplied its deficiences, developed the ideas, and illuſtrated the juſtneſs of its theory by his own experiments; he tranſlated it into Italian, and enriched it with notes: he likewiſe added a preface, where he took occaſion to remark the ſubjects of animal and vegetable economy; which more eſpecially merited the attention of his pupils, as it ſometimes pointed out to them the means of ſucceeding in theſe reſearches. He publiſhed the firſt volume of his tranſlation in 1769, and the ſecond in 1770.

Spallanzani's intimacy with Bonnet, influenced his genius, which inſenſibly adopted the ſevere methodical manner of the Genevan philoſopher; he gloried in being his pupil, and employed his meditations upon his admirable productions with ever new delight; whence it happened that he was powerfully incited to ſearch in nature the proofs of Bonnet's opinion upon the generation of organic bodies; a ſubject which, for a conſiderable time, engroſſed his whole attention. In the year 1776, he publiſhed the two firſt volumes of his *Opuſcoli di Fiſica Animale e Vegetabile*; they conſiſt of illuſtrations of a part of the microſcopic obſervations which had already appeared. Wholly abſorbed by the great phenomenon of generation, he examined the opinion of Needham, in order to demonſtrate its impoſſibility.—Needham, diſſatisfied with Spallanzani's microſcopic obſervations, which invalidated his doctrine of an imaginary vegetable power imparting motion to matter, challenged the profeſſor of Reggio to reviſe what he had publiſhed; but he avoided a formal reply by publiſhing a ſeries of new facts and experiments.

He demonſtrated that the animalcula of infuſions are produced by germens: that there are ſome, *e. g.* certain ſpecies of eggs and ſeeds, which are equally proof againſt the ſeverity of the moſt intenſe cold and the heat of boiling water. On this occaſion he treated of the influence of cold upon animals, and proved, that the lethargic numbneſs of ſome during winter does not at all depend upon the impreſſion which the cold makes upon the blood, ſince a frog, deprived of its blood, becomes lethargic when it is chilled in ice, and then ſwims as uſual when it has recovered its natural warmth. He demonſtrated, in the ſame manner, that odours, various liquors, and a vacuum, act upon animalcula as upon other animals; that they are oviparous, viviparous, and hermaphrodites.

The ſecond volume of this work is a voyage into regions ſtill more unknown. A ſublime pencil had already delineated them; but the picture was not finiſhed from nature. Spallanzani gives a hiſtory of ſpermatic animalcula, which their eloquent hiſtorian invariably confounds with the animalcula of infuſions. One cannot but admire the modeſt diffidence of this new philoſopher, ſtruggling almoſt always againſt the conviction of his own ſenſes, and the authority of Buffon; and he appears to admit, with much reluctance, the reſult of theſe obſervations, multiplied and varied in a thouſand different ways, which expoſe the weak foundations upon which the ſyſtem of organic molecules is erected.

Spallanzani afterwards deſcribes the wheel-animal and the ſloth, two ſpecies of animalcula, the monſters of the microſcopic world, ſingular from their figure and organization, but ſtill more ſo from their faculty of reſuming life after a total ſuſpenſion of all its apparent acts during many years: it is this phenomenon which he more eſpecially conſiders in order to aſcertain the limits and conditions of it, to enable him to inveſtigate its cauſes, and connect them with others to which they are analogous. He annexed to this collection an account of that appearance on certain bodies which is called mould; he ſhewed that its ſeeds float in the air; and he remarked, that theſe microſcopic funguſes were diſtinguiſhed from other plants by their tendency to grow in all directions, without being ſubjected to the almoſt univerſal law of the perpendicularity of the ſtem to the ſoil.

Spallanzani was entruſted with the cabinet of natural hiſtory in the univerſity; but he found himſelf almoſt the nominal depoſitary of a treaſure which did not exiſt: he himſelf laid the foundations of it; and it is become, by his endeavours, one of the moſt valuable and uſeful.

He enriched it by his repeated travels both by ſea and land, into Europe and Aſia, acroſs the Appennine mountains, the Alps and Krapacks, to the bottom of mines, amidſt the ruins of volcanoes, and on the brink of their craters: by theſe means he completed that vaſt collection of curioſities, which all the world's wealth could never have purchaſed; becauſe wealth can never ſupply the place of genius and diſcernment.

In 1779, Spallanzani traverſed Switzerland and the Griſon territories. He proceeded to Geneva, where he reſted a month with his friends; who were no leſs charmed with his converſation than with his writings. He then returned to Pavia, and publiſhed, in 1780, a new work in two volumes, entitled *Diſſertazioni di Fiſica Animale e Vegetabile.* Some of Spallanzani's experiments upon digeſtion, which he made for the improvement of his pupils, led him to ſtudy that myſterious operation. He repeated the experiments of Reaumur upon gallinaceous fowls; and obſerved, that trituration, which is, in this caſe, an aſſiſtant to digeſtion, is, nevertheleſs, not the efficient cauſe of it. He diſcerned, that the gizzard of theſe birds, which, equal in ſharpneſs to the keeneſt lancet, pulveriſes nuts and fibers, does not digeſt the powder which it forms; but that the nutritious matter thus reduced to powder undergoes a new tranſformation in the ſtomach, in order to render it an aliment congenial to the nature of the blood and the humours of the body. He laid it down as an eſtabliſhed principle, that digeſtion operates in the ſtomach of a great number of animals by the active energy of a certain juice, which diſſolves the aliments received; and with a view to render his demonſtration more inconteſtable, he

had the courage to try ſome experiments upon himſelf, and the addreſs to complete his proofs by artificial digeſtions made in glaſſes upon his table, effected from mixing the maſticated nutriment with the gaſtric juice, which he found means to extract from the ſtomachs of animals.

This work gave offence to John Hunter. He publiſhed, in 1785, ſome obſervations upon digeſtion, where he took occaſion to make very ſevere animadverſions on Spallanzani, who revenged himſelf by publiſhing this work in Italian, and addreſſing to Caldani, in 1788, *Una Lettera Apologetica in riſpoſta alle Oſſervazioni del Signor Giovanni Hunter.*

The ſecond volume treats of the propagation of animals and plants. Spallanzani proves, by experiments equally new and ſurpriſing, the exiſtence of the germ before fecundation; he demonſtrates the exiſtence of tadpoles in the females of five different ſpecies of frogs, toads, and ſalamanders, before fecundation; he relates the ſucceſs of fecundations effected by art upon the tadpoles of theſe five ſpecies, and even upon a quadruped; he ſhews, in the ſame manner, the ſeed in flowers, before the emiſſion of their prolific powder; and, by a nice and delicate anatomy, of which, perhaps, an idea can hardly be formed, he ſhews, in the *ſpartium junceum*, the lobe as well as the ſeeds in their integuments; he traces them through their different ſtages of budding, before and after the poſſibility of being fecundated, and leaves not the ſhadow of a doubt, but that the ſeed and its integuments exiſt a long time before the flower begins to bud, and conſequently, a long time before the prolific power can exiſt. He repeated his obſervations upon many ſpecies of plants, with the ſame reſults; in ſhort, he raiſed ſome individual plants from female flowers, which contained fruitful ſeed, though there cannot be even the ſlighteſt ſuſpicion of their having any communication with the prolific powder of the male flowers. Spallanzani, as was cuſtomary with him, took the opportunity preſented by the academic vacations of the year 1781, to make a tour abroad, the principal object of which was to increaſe the collection of curioſities in the cabinet of Pavia. He ſet out in July for Marſeilles, where he commenced a new hiſtory of the ſea, which, though incomplete, would furniſh an infinite number of new and curious facts, relating to ſeveral inhabitants of the waves. He afterwards proceeded to Maſſa and Carrara, in order to obſerve the quarries of that marble in ſuch great eſteem among ſtatuaries; he returned to Spezzia, and brought back to Pavia an immenſe collection of fiſhes, both of the teſtaceous and cruſtaceous deſcription, which he depoſited in this cabinet, of which his travels had rendered him the worthy truſtee. With the ſame views, and with ſimilar ſucceſs, he viſited the coaſts of Iſtria in 1782, and the Appennine mountains in 1783, where he had an opportunity of obſerving the dreadful ſtorms and the ſingular vapour which have rendered that year famous in meteorology. His fame daily increaſed: the Emperor Joſeph II. knew him when he was in Lombardy; from the very firſt he ſought the converſation of Spallanzani, and teſtified the great eſteem which he entertained for his talents, by preſenting him with his own portrait ſet in gold.

The univerſity of Padua made him an offer, in the year 1785, of the profeſſorſhip of natural hiſtory, then vacant by the death of Anthony Valliſneri, promiſing him, at the ſame time, more conſiderable perquiſites than thoſe which he enjoyed at Pavia; but the archduke doubled his ſalary, and permitted him to accompany to Conſtantinople the Chevalier Zuliani. He ſet out on this journey the 21ſt of Auguſt; on his road he made many obſervations upon the marine productions which he met with in thoſe latitudes, as well as upon the meteorological events daily occurring. He touched at ſeveral iſlands in the Archipelago, which he ſurveyed with a philoſophical eye; he deſcended towards Troy, in order to viſit thoſe romantic abodes ſo beautifully deſcribed by the bard whom he moſt admired, and, ſlowly moving through thoſe poetical receſſes, he made ſome geological obſervations truly original.

Spallanzani arrived at Conſtantinople on the 11th of October, and continued there eleven months. The phyſical and moral phenomena of this country, hitherto unknown to him, rivetted his attention; he traverſed the ſhores of both the ſeas, climbed the neighbouring hills, and viſited the iſland of Chalki, where he diſcovered to the Turks a copper-mine, of which they were before entirely ignorant. He proceeded to the iſland of Principi, ſome miles diſtant from Conſtantinople, where he diſcovered an iron mine wholly unknown. He ſet out on his return to Europe the 16th of Auguſt, 1786, loaded with oriental ſpoils, compoſed of animals peculiar to thoſe regions.

A ſea voyage was, in every reſpect, the ſafeſt as well as the moſt convenient; but Spallanzani regarded with an eye of perfect indifference the dangers attending long journeys by land, when he entertained any hopes of meeting with new inſtruction; he boldly confronted all the perils of theſe deſert regions deſtitute of civil government. Having reached Bucharеſt, he was detained there nine days by the celebrated and unfortunate Maurocani, hoſpodar of Wallachia: this prince, juſtly renowned for his liberal patronage of the ſciences, received him with the moſt flattering marks of diſtinction; made him a preſent of ſeveral rarities of his country, and provided him with horſes, and an eſcort of thirty ſoldiers through the whole extent of his dominions. Spallanzani paſſed through Hermanſtadt to Tranſylvania, and arrived at Vienna on the 7th of December, after having viſited the numberleſs mines of Tranſylvania, Hungary, and Germany.

Spallanzani remained five days in the metropolis of Auſtria, held two conferences of conſiderable length with the Emperor Joſeph II. was entertained by the principal noblemen of the court, and viſited by all men of literature. At length he arrived at Pavia; the ſtudents came out of the city gates to meet him, and accompanied him to his houſe, in all the rapturous ardor of unfeigned joy, and, by the moſt irreſiſtible compulſion, dragged him to the auditory. Impelled by their deſire to hear him, they compelled him to aſcend the chair, whence he was accuſtomed to deliver his lectures. Spallanzani, ſenſibly affected by this conduct, painted to them, in the moſt eloquent and animated manner, his gratitude and attachment: kind wiſhes, cries of joy, and ſhouts of applauſe, were renewed with more ardor, and he was compelled to requeſt them to reſtrain their ſatisfaction, and to permit him to retire to his own houſe, that he might obtain that repoſe of which he found himſelf ſo much in need. He had, at this time, more than 500 ſtudents.

The cabinet of Pavia was always the dear object of Spallanzani's thoughts; among the numerous rarities which he had there collected, his mind was only intent on thoſe which were ſtill wanting. He was ſtruck with its deficiency in volcanic ſubſtances, of which a few only were collected, without order, unintereſting, and uninſtructive, though Italy was the theatre where the volcanic fires, for ſo many ages, had diſplayed their deſolating energy. He reſolved to inſtruct his diſciples, his country, and himſelf, on theſe phenomena, ſo important and ſo little known, and to collect

the documents of their hiſtory on the ſpot where they are the inceſſant terror of the ſurrounding inhabitants, and the uſeleſs ſubject of philoſophical obſervations: he prepared himſelf for this important undertaking by a laborious courſe of ſtudy. He ſet out for Naples in the ſummer of 1788; and, in the courſe of a dangerous voyage, examined, with minuteneſs and undaunted courage, the terrible phenomena of Veſuvius, Lipari, Etna, Sylla, and Charybdis. By theſe means, at the age of ſixty, he amaſſed that invaluable collection of anecdotes compriſed in his work entitled *Voyages dans les deux Siciles*, where he embraces the opportunity of comparing the deſcriptions which Homer, Pindar, Virgil, Diodorus Siculus, and Strabo, have given of thoſe celebrated places, with what he himſelf ſaw.

In the travels of Spallanzani is found a new volcanology; he teaches the mode of calculating the degree of intenſity in the heat of volcanic fires, as well as of inveſtigating its cauſe. He has, by analyſis, almoſt aſcertained that peculiar ſpecies of gas, which, like a ſtrong lever, tears from the earth's entrails, and hurls, even to the ſummit of Etna, thoſe torrents of melted pumice ſtone which are diſgorged by that volcano. He diſcloſes the nature of pumice ſtones, which he has ſince demonſtrated in ſome of artificial fabrication. He proves that the burning of theſe mountains proceeds from the inflammation of hydrogen carbonic gas; and this ſolution equally applies to the phenomena of Barigazzo, and ſeveral other places, ſome of which were then burning in ſecret. He found means to render thoſe fires ſerviceable in making lime, and they are ſtill made uſe of for this purpoſe. Spallanzani concludes this excellent production with ſome intereſting reſearches relative to ſwallows, taking occaſion to deſcribe, under the impulſe of a refined imagination, the amiable manners, and the rapidity of flight for which this ſpecies of birds are diſtinguiſhed; the uſeful hints which they furniſh to an obſerver for the invention of an aërial poſt; their migrations regulated by the temperature of the air, and its propitiouſneſs to the birth of certain inſects; laſtly, he diſcuſſes the celebrated problem of their ſtate of torpor during winter, and he proves that an artificial cold, more intenſe than that of our climates, does not render theſe birds lethargic. He then treats of the owl ſpecies; and, in concluſion, ſpeaks of eels and their mode of generation, which ſtill remains a problem to be ſolved; but he gradually conducts the reader through his reſearches, to the very ſtep which promiſes complete ſolution.

Spallanzani anxiouſly obſerved the progreſs of French chemiſtry, which he adopted without the leaſt heſitation; it was formed for a judicious mind like his, which delighted to account for the phenomena which it obſerved. When Gottling publiſhed his experiments upon the combuſtion of phoſphorus in azote, Spallanzani wiſhed to try the ſolidity of theſe arguments which were brought againſt his favourite ſyſtem, and, therefore, publiſhed in 1797 his *Chemico eſame degli Eſperimente del Signore Gottling, Profeſſore a Iena*, where he refuted the concluſions of that chemiſt, by diſproving the facts which had produced them.

Spallanzani frequently diſcovered what before would have been conſidered impoſſible. In 1793 he again made a diſplay of this kind, which he publiſhed in his *Lettere ſopra il ſoſpetto d'un nuovo Senſo nei Pipiſtrelli*; he there informed the world that bats, deprived of ſight, act in every reſpect with the ſame preciſion as thoſe who poſſeſs that ſenſe; that they avoid equally well the ſlighteſt obſtacles, and know exactly the proper places to perch, when their flight is at an end. Theſe extraordinary experiments were confirmed by ſeveral of the moſt diſtinguiſhed naturaliſts, and made Spallanzani ſuſpect a new ſenſe in theſe birds, becauſe he thought he had demonſtrated, by excluſion, that their other ſenſes were not able to ſupply the defect of ſight; but the anatomical details of Profeſſor Jurine, upon the organ of hearing in this ſingular bird, made him incline to the opinion that the ear might ſerve inſtead of the eye, as in all thoſe caſes where bats are in the dark.

Spallanzani terminated his literary career by a letter addreſſed to the celebrated chemiſt, Giobert; *Sopra le piante chiuſe ne' vaſi dentro l'aqua e l'aria, eſpoſte a l'immediata lume ſolare e l'ombra.* It is a melancholy event for this department of ſcience, that his death deprived it of the diſcoveries which he was on the point of effecting.

All theſe productions, though printed and generally applauded, ſtill did not form the ſum of Spallanzani's labours. He had for a long time employed his ſtudies on the phenomena of reſpiration, upon their reſemblances and differences through the extenſive and various circle of animated nature; and he endeavoured to reduce to ſome certain method his reſearches on this ſubject, which muſt ſtill excite aſtoniſhment by a number of facts but little known. He left a valuable collection of experiments and obſervations upon animal reproductions, upon ſponges, the nature of which he defines, and upon a thouſand intereſting phenomena, which he knew how to draw from the obſcurity which enveloped them. He had almoſt finiſhed his travels to Conſtantinople, and had collected a ſtock of materials for the hiſtory of the ſea.

Spallanzani's reputation was equal to the number, extent, and difficulty of his labours. France, Germany, and England, were all eager to poſſeſs his works in their reſpective languages. He was admitted into the academies and learned ſocieties of London, Stockholm, Gottingen, Holland, Lyons, Bologna, Turin, Padua, Mantua, and Geneva. He maintained a correſpondence with the academic ſocieties of Paris and Montpellier; he received from the great Frederic himſelf the diploma as member of the academy of Berlin, and maintained a direct correſpondence with him. Salicetti, while commiſſioner in the French army of Italy, offered him the profeſſorſhip of natural philoſophy at Paris, which he refuſed, on account of his advanced age: and the college of phyſicians at Madrid received him into their body.

In perſon, Spallanzani was rather tall; his aſpect ſerene, yet noble; his forehead large; his eyes black and ſparkling; his complexion dark, and his conſtitution robuſt. During the whole courſe of his life he was afflicted with no diſorders, if we except a fit of the ague, which he caught in the mines of Schemnitz, at a time when the ſeaſon was intenſely cold. In the year 1795 he was attacked by a ſlight retention of urine, and ſeveral fits of the gout, which, however, did not ſuſpend, in the leaſt degree, his ſcientific purſuits.

He was generally eſteemed; his virtues, untinctured by auſterity, diſplayed themſelves in all the circumſtances of his life. He was beloved by all his relations, whom he inſpired with his own taſte; his brother Nicolas, a doctor of laws, aſſiſted him in his experiments, and continued them, when he returned to Pavia; his ſiſter is an eminent naturaliſt, perfect miſtreſs of her brother's cabinet of natural hiſtory, acquainted with the moſt abſtruſe properties of every piece, and all the refined inductions which may be drawn from them.

Spallanzani paid great attention to the education of his nephews, and had the pleaſure of ſeeing the eldeſt titular profeſſor of phyſic at Padua.

On the 3d of February, 1799, Spallanzani had ſome returns of his urinary diſorder; he paſſed the night reſtleſs, and in the morning became delirious. His intimate friends, Tourdes, a French phyſician, and the celebrated Profeſſor

Scarpa, exerted every effort that genius, knowledge, and friendſhip, could inſpire, to ſave him; but he died on the 6th, edifying with his piety thoſe who were ſtanding round his bed. His death penetrated his whole family with grief, drew tears from all his friends, filled his pupils with the deepeſt affliction, and depreſſed with ſorrow a nation proud of having given him birth. The 13th, his colleague, Profeſſor Gregorio Fontano, made an eloquent motion in the Legiſlative Aſſembly at Milan, to erect a monument to Spallanzani by the ſide of thoſe of Friſi, Beccaria, and Verri.

SPANDAU, a town of Germany, in the middle marche of Brandenburg, ſurrounded on all ſides by moraſſes, and cloſe to it is a fine fortreſs. The arſenal is in ſubterranean vaults, and there is a priſon for ſtate criminals. It is ſeated on the Havel, 8 miles N.W. of Berlin, and 17 N.E. of Brandenburg. Long. 13. 23. E. Lat. 52. 36. N.

SPARTEL, Cape, a promontory on the coaſt of Barbary, at the entrance of the ſtraits of Gibraltar. Long. 5. 56. W. Lat. 35. 50. N.

SPARTIVENTO, Cape, a promontory of the kingdom of Naples, at the S.E. extremity of Calabria Ulteriore. Long. 16. 40. E. Lat. 37. 50. N.

SPEIGHTS TOWN, a ſea-port of Barbadoes, formerly much frequented by the Briſtol traders, and thence called *Little Briſtol*. It is ſituate on the N.W. coaſt of the iſland. Long. 58. 31. W. Lat. 13. 15. N.

SPELLO, a town of Italy, in Umbria. Here are the ruins of a theatre, and other remains of antiquity. It is ſeated on a hill, 3 miles N.W. of Foligni, and 13 N. of Spoletto. Long. 12. 24. E. Lat. 42. 50. N.

SPEZZIA, or Spetia, a town of Italy, in the territory of Genoa, with a good harbour. It is ſeated at the foot of a hill, at the bottom of a gulf of the ſame name, 47 miles S.E. of Genoa, and 65 N.W. of Florence. Long. 9. 37. E. Lat. 44. 10. N.

SPIELBERG, a town of Suabia, in the principality of Oettingen, 8 miles N.E. of Oettingen, and 13 S.S.E. of Anſpach.

SPIGELBURG, a town of Weſtphalia, capital of a county of the ſame name, 22 miles S.W. of Hildeſheim. Long. 9. 46. E. Lat. 51. 56. N.

SPIGNA, a town of Italy, in Montferrat, with a caſtle, 15 miles N. by W. of Savona, and 40 S.E. of Turin. Long. 8. 26. E. Lat. 44. 45. N.

SPILEMBURGO, a town of Italy, in Venetian Friuli, 37 miles N.W. of Aquileia, and 47 N. by E. of Venice. Long. 12. 15. E. Lat. 46. 10. N.

SPINALONGA, a ſea-port of the iſland of Candia, with a good harbour and a citadel. It is ſituate near a cape of the ſame name, 30 miles E. of Candia. Long. 25. 48. E. Lat. 35. 20. N.

SPIRE, a biſhopric of Germany, in the circle of Upper Rhine, 50 miles in length, and 30 in breadth, where broadeſt. It is divided into two parts by the Rhine, and is a fertile country.

Spire, a free imperial city of Germany, capital of a biſhopric of the ſame name. It was burnt by the French in 1689; and, in 1693, the imperial chamber, which was in this city, was removed to Wetzlar. It was taken, in 1792, by the French, who evacuated it the next year, but re-entered it in 1794. It is ſeated on the W. ſide of the Rhine, 7 miles N. of Philipſburg. Long. 8. 32. E. Lat. 49. 19. N.

SPIREBACH, a town of Germany, in the palatinate of the Rhine, ſeated on a river of the ſame name, 8 miles N. of Landau. Long. 8. 12. E. Lat. 49. 20. N.

SPIRITU-SANTO, a ſea-port of Braſil, capital of a government of the ſame name, with a caſtle. Long. 41. 0. E. Lat. 20. 10. S.

Spiritu-Santo, a town of the iſland of Cuba, 155 miles E.S.E. of Havannah. Long. 79. 47. E. Lat. 22. 15. N.

SPITAL, a town of Germany, in Carinthia, with a caſtle, ſeated on the Liſer, near the Drave, 30 miles W. of Clagenfurt. Long. 13. 37. E. Lat. 46. 53. N.

Spital, an ancient village in Lincolnſhire, 11 miles N. of Lincoln. It was part of the Roman cauſeway, leading from London, by Lincoln, to the Humber. Here are two ſprings, one called Julian's Well, and the other Caſtleton Well. Great numbers of Roman coins have been dug up in this village.

SPLUGEN, a town of the country of the Griſons, capital of the valley of Rheinwald, ſeated near the ſource of the Hinder Rhine, 42 miles S.W. of Coire.

SPONHEIM, a town of Germany, capital of a county of the ſame name, in the circle of Upper Rhine, 27 miles W. of Mentz, and 46 E. of Treves. Long. 7. 21. E. Lat. 49. 54. N.

SPREE, a river of Germany, which riſes in the mountains of Bohemia, and paſſing through Luſatia, into the marquiſate of Brandenburg, runs by Berlin, and falls into the Havel, oppoſite Spandaw.

SPRINGFIELD, a town of Maſſachuſets, in the county of Hampſhire, ſeated on the E. ſide of Connecticut river, 96 miles W. of Boſton.

SPROTTAU, a town of Sileſia, in the duchy of Glogau, with walls flanked by towers, and a ſtrong caſtle. It is ſeated at the confluence of the Bober and Sprotta, 20 miles S.W. of Glogaw. Long. 15. 38. E. Lat. 51. 40. N.

SQUILACE, a town of Naples, in Calabria Ulteriore, with a biſhop's ſee. It was formerly famous, but is now a ſmall place, ſeated on the Favelone, near a gulf of the ſame name, 30 miles S.W. of St. Severino. Long. 16. 40. E. Lat. 39. 3. N.

STABLO, or Stavelo, a town of Germany, in the biſhopric of Liege, with a celebrated abbey, whoſe abbot is a prince of the empire. Here is a manufacture of leather, which is ſent to foreign parts. It is ſeated on the Recht, 9 miles S. of Limburg. Long. 6. 5. E. Lat. 50. 29. N.

STADE, a town of Lower Saxony, in the duchy of Bremen, with a fortreſs, a college, and three churches. It is the principal town of the duchy, ſubject to the elector of Hanover; Bremen, the capital, being a free imperial town. It is the ſeat of the regency and chief courts of juſtice of the duchies of Bremen and Verden; and is ſeated on the Swingel, near its confluence with the Elbe, 22 miles W. of Hamburg, and 45 N.E. of Bremen. Long. 9. 17. E. Lat. 53. 36. N.

STADTHAGEN, a town of Weſtphalia, in the county of Schauenberg. Here is a palace belonging to the Prince of Schauenberg Lippe, in the garden of which is a mineral ſpring. It is 8 miles E. of Minden. Long. 9. 14. E. Lat. 52. 24. N.

STAFARDA, a town of Piedmont, in the marquiſate of Saluzzo, ſeated on the Po, with a rich abbey. It is famous for a victory gained by the French, in 1690, over the Duke of Savoy. Long. 7. 25. E. Lat. 44. 34. N.

STAFFELSTEIN, a town of Franconia, in the biſhopric of Bamberg, ſituate on the Lauter, 16 miles N.N.E. of Bamberg. Long. 11. 12. E. Lat. 50. 15. N.

STAFFURTH, a town of Upper Saxony, in the principality of Anhalt Bernburg, 9 miles N.W. of Bernburg, and 21 S.S.W. of Magdeburg. Long. 11. 40. E. Lat. 51. 55. N.

STAGIRA, a town of Turkey in Europe, in Macedonia, ſeated on the gulf of Conteſſa. It is remarkable for being the birth-place of Ariſtotle, whence he is called the Stagirite. It is now called Lyba Nova, and is 16 miles from Conteſſa. Long. 22. 48. E. Lat. 41. 15. N.

STAGNO, a ſea-port of Raguſan Dalmatia, with a biſhop's ſee, ſeated on a peninſula in the gulf of Venice, 30 miles N.W. of Raguſa. Long. 17. 50. E. Lat. 43. 12. N.

STAIN, a town of Auſtria, ſeated on the Danube, over which is a toll-bridge, 65 miles W. of Vienna. Long. 15. 0. E. Lat. 48. 11. N.

STALBRIDGE, a town in Dorſetſhire, with a market on Tueſday, and a manufacture of ſtockings. Here is an ancient croſs of one ſtone, 21 feet high, on a baſe of eight feet. It is 20 miles N. by E. of Dorſetſhire, and 111 W. by S. of London. Long. 2. 18. W. Lat. 50. 57. N.

STAMPALIO, an iſland of the Archipelago, 60 miles W. of Rhodes, and 37 from the coaſt of Natolia. It is 15 miles long and 5 broad, almoſt without inhabitants, and wants freſh water.

STAMPS (*Encycl.*). The following rules for ſtamping executed deeds and inſtruments, we apprehend will prove uſeful: they are publiſhed in KEARSLEY's uſeful "*Tax Tables*," for 1802.

Deſcription of Inſtruments, and where to be brought.	Within what Time.	Penalties payable.	Regulations, and under what acts.
Agreements, Head Office or Country	21 Days	None	23 G. 3. c. 58.
Receipts for money, head office	14 days	5l.	Applicable to unſtamped receipts as well as thoſe put on wrong ſtamps, 33 G. 3. c. 55.
Ditto, country	1 Calend. Month	10l.	
Receipts for legacies or perſonalty, head office or country	21 days	None	Country diſtributors to tranſmit receipts to the head office within 21 days. 36 Geo. 3. c. 52.
Ditto, head office	3 calend months	10l. per cent.	
Bills, notes, drafts, and orders, for money, head office or country	before payable	2l.	Confined to bills, &c. on wrong ſtamps of equal or ſuperior value to the proper ones. 37 G. 3. c. 136.
	after payable	10l.	
Deeds and bonds (for exceſs of words), head office or country	1 calend. month	None	The firſt claſs to be tranſmitted by country diſtributors to the head office, within 21 days, and certified there only. Action brought for penalty on not duly ingroſſing, not to abate if the inſtrument be not ſtamped within a month, though it ſhould afterwards be ſtamped. 37 G. 3. c. 19, as to Deeds and Bonds. 37 G. 3. c. 90, as to Agreements and atteſted Copies.
Agreements (for ditto), head office	6 calend. months	10l. only	
Atteſted copies (for ditto), ditto	any time after	10l. per ſkin, &c.	
Single 10s. deeds, head office or country	60 days	None	Country diſtributors to ſign receipts for the duty, and deliver deeds to the bringer thereof to get ſtamped. 37 Geo. 3. c. 111.
Ditto, head office	any time after	10l. only	
All inſtruments, matters, and things (except bills, notes, drafts, and orders*			If it appear to the commiſſioners on oath or affirmation, made before any one of them, or otherwiſe to their ſatisfaction, that any inſtrument has been ingroſſed or written on parchment, or paper, not duly ſtamped, either by accident or inadvertency, or from urgent neceſſity, or unavoidable circumſtances, and without any fraudulent intention, they may ſtamp the ſame within ſixty days, and remit the penalty. 37 G. 3. c. 136.
1. On wrong ſtamps of equal or ſuperior value to proper ones, head office or country	60 days, or any time after, at the option of the parties	5l. only	
2. Unſtamped, or on ſtamps of leſs than legal value, and liable to accumulated penalties exceeding 10l. head office	Ditto	10l. per ſkin, &c.	

Apprentices' Indentures and Articles of Clerkſhip come under the deſcription of Deeds, in reſpect to the original ſtamp duty; but the ſtatute of 8 Anne, c. 9. requires a further ſtamp to be impreſſed on theſe proportioned to the amount of the premiums, for which purpoſe the inſtruments are to be produced, and ſuch duty paid at the head office within one calendar month, or in the country within two calendar months, from the date and execution.

Aſſignments of Bail Bonds by 4 Anne, c. 16. and of Replevin Bonds, when the diſtreſs is for rent, by 11 G. 2. c. 19. may be ſtamped on payment of the ſingle duty at any time before action brought—Poſteas are alſo allowed to be ſtamped after being indorſed on the Record.

In all caſes the New Stamp is to be paid for, excluſive of the penalty, and without any allowance for the ſtamp miſuſed.

STANCHIO, a fertile iſland of the Archipelago, near the coaſt of Natolia, 12 miles N.E. of Stampalio, and 40 N.W. of Rhodes. It is the ancient Cos, the birth-place of Hippocrates and Appelles; and is 25 miles long and 10 broad. The capital, of the ſame name, is ſeated at the foot of a mountain, at the bottom of a bay, and near a good harbour. Long. 26. 54. E. Lat. 36. 45. N.

* Agreements and Receipts for Money, and Legacies, do not come within this exception, being ſpecially provided for.

STANDON, a town in Hertfordſhire, with a market on Friday, eight miles N. of Hertford and 27 of London. Long. 0. 5. E. Lat. 51. 56. N.

STANEMORE, a dreary diſtrict in the Eaſt angle of Weſtmoreland. Here is a fragment of Rerecroſs, ſet up as a boundary between England and Scotland, when Cumberland belonged to the latter.

STANTON, a town in Lincolnſhire, with a market on Monday, 16 miles E. of Lincoln, and 129 N. of London. Long. 0. 2. W. Lat. 53. 18. N.

STANTZ, a town of Switzerland, capital of the canton of Underwalden, ſeated in a plain, at the foot of the Stanzberg, and near the lake of Lucern, 39 miles S. of Zuric. Long. 8. 22. E. Lat. 46. 51. N.

STANWIX, Fort, in the ſtate of New York, ſeated on Mohawk river, near its ſource, 60 miles N.W. of Albany. Long. 75. 15. W. Lat. 43. 15. N.

STARAIA RUSSA, a town of Ruſſia, in the government of Novogorod, ſeated on the river Polifi, not far from the lake Ilmen, 40 miles S. by E. of Novogorod. Long. 33. 2. E. Lat. 57. 40. N.

STARGARD, a town of Upper Saxony, in Pruſſian Pomerania, with a college, and the ruins of a caſtle. It has manfactures of ſerges, ſhaloons, tammies, druggets, &c. and is ſeated on the Ihna, 18 miles S.E. of Stetin, and 37 N.W. of Landſperg. Long. 25. 8. E. Lat. 53. 32. N.

Stargard, a town of Germany, in Mecklenburg Strelitz, 30 miles S. of New Brandenburg.

STATEN ISLAND, an iſland of North America, which forms the county of Richmond, in the ſtate of New York. It is 18 miles long and ſix broad, and contains upward of 3000 inhabitants. On the S. ſide is a conſiderable tract of level land; but, in general, this iſland is rough, and the hills high. Richmond is its only town of any note.

STATEN LAND, a barren craggy iſland, on the S.E. ſide of the iſlands which form the ſtraits of Magellan, in 55° S. lat. Between this iſland and Tierra del Fuego is the ſtrait of Le Maire.

STAVANGER, a ſea-port in Norway, in the province of Bergen, capital of a territory of the ſame name, with a biſhop's ſee. It is ſeated on a peninſula, near the fortreſs of Doſwick, 75 miles S. of Bergen. Long. 5. 45. E. Lat. 59. 6. N.

STAVEREN, an ancient ſea-port of the United Provinces, in Frieſland, formerly a conſiderable town, but now much decayed, the harbour being choked up with ſand. It is ſeated on the Zuider-Zee, eight miles W. of Slooten, and 15 N.E. of Enchuyſen. Long. 5. 13. E. Lat. 52. 54. N.

STAUBBACH, a celebrated cataract of Switzerland, near the village of Lauterbrunn, in the canton of Bern. It ruſhes down a precipice 930 feet high with ſuch impetuoſity, as to reſolve itſelf into a fine ſpray, which, viewed in ſome particular ſituations, reſembles a cloud of duſt. Hence it derives its name: the word Staubbach, in German, ſignifying a ſpring of duſt. The roaring noiſe it makes is accompanied by a tempeſt, occaſioned by the violent agitation of the air, excited by the rapidity of the fall. The brook which forms this torrent is named the Kupfer-Bachlein, or Rivulet of Copper.

STAUFFEN, a town of Auſtrian Suabia, in the Briſgau, ſituate on the Mehlbach, eight miles S. of Faiburg, and 24 N.N.E. of Baſle. Long. 7. 44. E. Lat. 48. 55. N.

STAUFFENBURG, a town of Germany, in the principality of Upper Heſſe, five miles N.N.E. of Gieſſen, and ten E.N.E. of Wetzlar.

STAVROPOL, a town of Ruſſia, in the government of Simbirſk, ſituate on the Volga, 42 miles S.S.E. of Simbirſk. Long. 28. 58. E. Lat. 53. 44. N.

Stavropol, a town of Ruſſia, in the government of Caucaſus, ſituate on the Volga. Long. 41. 50. E. Lat. 44. 56. N.

STAUNTON, a town of Virginia, on the river Potomac, 30 miles W.N.W. of Charlotteſville.

STEAM-ENGINE (*Encycl.*). We have already ſpoken at great length on the conſtruction of theſe important machines; but various improvements having ſince been ſuggeſted, we think it indiſpenſable, in the ſupplement of a work of this ſort, not to omit the deſcriptions given by their different inventors.

The following is extracted from the ſpecification of a patent granted to Meſſrs. James and John Roberton, of Tradeſtown, Glaſgow, engineers, for a method of applying ſteam in the working of ſteam-engines, by which a very great ſaving of that vapour is effected, and a proportional ſaving of fuel in raiſing and applying ſteam for the uſe of ſteam-engines; and a method of conſtructing furnaces for the application of fire to ſteam-engine boilers, and boilers of various deſcriptions; and alſo for the application of fire to many other purpoſes by means of a furnace. Theſe gentlemen aſſert, that, by their invention, a very conſiderable ſaving of fuel is effected, from the immediate converſion of the whole, or very near the whole, of the ſmoke ariſing from the fuel, into flame. This patent is dated Auguſt 13, 1800. See Pl. 48 and 49.

"In the beſt-conſtructed ſteam-engines there is a conſiderable quantity of ſteam which eſcapes paſt the ſides of the piſton in time of working, and is loſt without producing any mechanical effect whatever; ſo the principle of the ſaid invention of a new and improved method of applying ſteam in the working of ſteam-engines, by which a very great ſaving of that article is effected, and a proportional ſaving of fuel in raiſing and applying ſteam for the uſe of ſteam-engines, conſiſts in preventing ſo great a quantity of ſteam from eſcaping, and in making the ſteam, which actually does eſcape, act on another piſton, and add to the power of the engine. In all forms of the engine after ſpecified and deſcribed in the drawings hereto prefixed, to which reference is had, it is to be obſerved, that there are two ſteam-cylinders, with piſtons fitted to each, the one cylinder of a leſſer, and the other of a larger ſize: theſe act together in producing the effect. To theſe cylinders are annexed a condenſing veſſel and air-pump, as in many others, or varied in this, as circumſtances or inclination require. The other parts of this engine, in its various forms, are either pointed out, or correſpond with many engines in uſe, which are well known, and require no explanation. But the ground on which the patentees' claim of preference is founded is the mode of conducting the ſteam on and between the piſtons, as formerly mentioned, and more fully explained in the practical deſcription of the engine.

"Fig. 1 (Plate 48). Firſt form differs little in conſtruction from many other engines, except that in place of one working cylinder in theſe, there are two in this (ſee fig. 1), the leſſer (*n*) being placed on the top of the larger (*m*), and made faſt to it. To each cylinder there is a piſton fitted, which are connected together by a cylinder D; or this cylinder is ſo made as to have the piſtons in one piece with it. This cylinder is made ſo that it may nearly fill the ſmall cylinder *n*; that is, that it may work up and down ſo that the external ſurface of the one may not rub on the internal ſurface of the other. The ſteam and conducting pipes, with the valves, are explained in the following deſcription of the operation of the engine:

" Let the working handles, with the valves, be placed in ſuch a manner that ſteam from the boiler may have free acceſs through the pipes and cylinders into the condenſing veſſel, to free the whole of the air, as in the uſual manner. When this is done, the engine is ſet to work by the valves *b* and *c* being ſhut, and by that of *a* left open, and water let into the condenſing veſſel C, when a vacuum takes place in it by means of the condenſation of the ſteam, and alſo in the under part of the large cylinder *m*, below its piſton (there being a communication from it to the condenſing veſſel by the pipe F): ſame time the ſteam from the boiler has free acceſs through the pipe A. and valve *a*, into the ſmall cylinder *n*, above its piſton *h*, and exerts its force upon it, and preſſes it downwards with as much force as in the uſual manner. But as it is found, from experience, that a conſiderable quantity of ſteam eſcapes paſt the piſton, this ſteam is in part detained by the ſecondary piſton *g*, and exerts its force on that part or annular ſection *s s* that is contained betwixt the cylinder *m* and D, and aſſiſts in forcing the whole downwards; while at the ſame time the ſteam which is lodged in this annular ſpace *s s*, and around the cylinder D, prevents ſo great a quantity from eſcaping paſt the firſt piſton as would otherwiſe be the caſe were there no ſecondary piſton, and the vacuum much more complete below the firſt piſton, conſequently there is a greater power produced from a ſmaller quantity of ſteam than with a ſingle piſton. During the time of the piſton's deſcent the ſteam valve *a* is ſhut, and the elaſticity of the ſteam within the cylinders carries the piſtons forward to near the bottom of their cylinders, when the valves *b* and *c* are opened by the handles and plug-work admitting the ſteam to paſs from the upper ſides of both piſtons through the pipes B and E to the condenſing veſſel C, while the counter weight at the other end of the beam, or this connected with a fly-wheel, raiſes the piſtons again when the valves *b* and *c* are ſhut, and that of *a* opened by the plug-work, when the engine makes another ſtroke as before. The piſton rod R joins the working-beam in any of the uſual modes, and in other reſpects the engine is much the ſame as in common practice; to this form of the engine, a conſiderable improvement takes place by means of another valve, and which conſtitutes the ſecond form of the engine (ſee fig. 2); the form differs little from the laſt; but in admitting the ſteam from the upper cylinder below the piſton of the larger, and aſſiſting the returning ſtroke, and conſequently producing a ſtill greater effect from the ſame quantity of ſteam than in the firſt form; it may be underſtood from the following deſcription of the operation of the engine in this ſtate: let the working-handles be placed ſo that ſteam from the boiler may have free acceſs through the pipes and cylinders into the condenſing veſſel, to free them of air as in the uſual manner; when this is done, the engine is ſet for working by the valves *b* and *c* being ſhut, and *a* and *d* left open, and water let into the condenſing veſſel C; when a vacuum takes place by means of the condenſation of the ſteam, and alſo in the under part of the larger cylinder *m* below its poſition *g* (there being a communication betwixt them through the valve *d* and pipe F), and the ſteam from the boiler having free acceſs through the pipe A, the valve *a* will exert its force on the piſton *h* of the ſmall cylinder, preſſing it downwards with as much power as in the uſual manner, but as a quantity of ſteam eſcapes the piſton, it produces the ſame effect as mentioned in the firſt form; during the time of the piſton's deſcent, the ſteam valve *a* is ſhut, and the elaſticity of the ſteam within the cylinders carries the piſtons forward to near the bottom of the cylinders, when the valve *d*, which admits the ſteam from the lower part of the large cylinder *m* to the condenſing veſſel, is ſhut, while the valves *b* and *c* are opened; by this means the ſteam which remains above the piſton *h*, in the ſmall cylinder, having free acceſs through the pipe BE to the bottom of the large cylinder *m*, below its poſition *g*, exerts its force equally on equal areas, as of each piſton; and the annular ring, or ſection *s s*, being exhauſted by the valve *c* being open, this admits the ſteam to paſs through it, and the pipe E, to the condenſing veſſel C; this ſteam therefore which remains above the ſmall piſton, and below the large piſton, will force the piſtons upwards in proportion to the ſteam's denſity, and the difference of the areas of the piſton, that is, a force in proportion to the denſity of the ſteam, and the exceſs of the area of the large piſton to that of the ſmall one, when the piſtons arrive at the top of the cylinders, the plug-tree turns the handles of their poſition for another ſtroke. &c. It would be needleſs to deſcribe any more of the practical part of the engine, as it may be ſeen from inſpection of the draught, and correſponds with many of thoſe in common uſe, and which are well known. In this ſtate of the engine, there are three circumſtances take place, which renders the engine more powerful with the ſame quantity of ſteam than thoſe with a ſingle piſton; the firſt is, the ſteam which eſcapes the firſt piſton acts on the annular ring of the ſecond piſton, and increaſes the power; the ſecond is, the ſteam which eſcapes and is detained in the annular ſpace, or ſection *s s*, acts againſt the ſteam which paſſes the firſt piſton, and prevents ſo great a quantity from eſcaping as would take place were there no ſecondary piſtons; the third is, the quantity of ſteam which remains in the upper cylinder being let into the lower, and aſſiſting the aſcent of the piſton. In this and the firſt form, it is neceſſary to have a ſmall pipe with a cock in it, ſo connected with the upper part of each cylinder, that a little ſteam may be made to paſs through it by opening the cock a little when the piſtons are newly packed. and ſo admitting a ſmall quantity of ſteam to act upon the ſecondary piſton at this time, when little eſcapes the firſt, and when the friction of the piſtons is greateſt.

" Third form of the engine (ſee fig. 3) conſiſts of two cylinders, a larger and ſmaller, placed along ſide of each other vertically, and which may be placed ſo that a line joining their centres may be either in the direction of the working-beam, or at right angles to it, the operations being the ſame in both caſes, but the laſt is preferable; the other parts of the engine are obvious, from the drawing and the following explanation. The ſteam is admitted from the boiler by the pipe A, and all the valves being kept open, and the whole cleared of air, as mentioned in the former caſes, the valves *b d* and *e* are ſhut, while thoſe of *a c* and *f* are left open, and water let into the condenſing veſſel C, and a vacuum takes place, as alſo in the large cylinder *m* below its piſton (there being a communication to the condenſing veſſel C through the valve *f* and the pipe F), and there being a communication from the bottom of the ſmall cylinder *n* to the top of the large cylinder *m* (through the pipe B and valve *c*), the ſteam in the cylinder *n*, below its piſton, the ſteam in the pipe B, and that which is above the piſton *g* of the large cylinders *m*, will exert their force in puſhing the piſton forward, and reſiſting the deſcent of the ſmall piſton *h*; but the ſuperior ſtrength of the ſteam from the boiler exerting its power on the top of piſton *h* of the ſmall cylinder, will cauſe it to deſcend; as the piſtons go forward in their reſpective cylinders, the ſtrength of the ſteam above the piſton *g* of the large cylinder, and under the piſton *h* of the ſmall cylinder, will diminiſh, but the ſuperior ſtrength of the ſteam above the piſton *h* to the ſmall cylinder will cauſe a quantity of the ſteam to paſs it, which will in part exert its force on the piſton *g* of the large cylinder, and aſſiſt in forcing it down in the cylinder; indeed, what ſteam remains betwixt the two piſtons exerts

equal forces on equal areas of each piſton, but the piſton of the large cylinder, being of greater area than that of the ſmall cylinder, will be forced down with a power as much greater (as it retards the piſton of the ſmall cylinder) as its area is greater than the other. During the deſcent of both piſtons (which move in the ſame direction in the ſame time) the valve *a* is ſhut, which admits the ſteam into the ſmall cylinder, and the elaſticity of the ſteam which remains above the piſton *h* of the ſmall cylinder, together with the leſs denſe ſteam betwixt the piſtons, carries both piſtons forward to near the bottom of the cylinders, when the returning ſtroke begins by the valves *b d* and *e* being opened, and the valves *c* and *f* ſhut (the valve *a* being ſhut during the deſcent of the piſtons). By ſuch means, the ſteam above the piſton *h* of the ſmall cylinder has free acceſs below it, through the valve *b* and pipe B, alſo to the underſide of the large piſton through the valve *e*. In this ſtate, the ſteam is equally ſtrong on the top and bottom of the piſton *h* of the ſmall cylinder; but the ſteam below the piſton *g* of the large cylinder exerting its force againſt it whilſt there is a vacuum made in the upper ſide of the cylinder above the piſton (the ſteam having free acceſs through the valve *d* and pipe E F to the condenſing veſſel), this piſton will therefore be forced upwards, and as two piſtons are faſtened by their rods to the beam in ſuch a manner as to move together, they will both aſcend together to near the top of their cylinders, when the plug-tree turns their handles and valves for another ſtroke. The valves *a c* and *f* being opened, and thoſe of *b d* and *e* ſhut, and the ſtream from the boiler exerting its force on the piſton *h* of the ſmall cylinder, while the ſteam which remained at the laſt ſtroke below the ſaid piſton, and of leſs denſity, together with what paſſes the piſton *h*, exerts its force on the bottom of the piſton *h* of the ſmall cylinder, and on the top of the piſton *g* of the large cylinder, and the work goes on as aforeſaid. In this form of the engine, there are three circumſtances take place which render it more powerful, with the ſame quantity of ſteam, than thoſe with a ſingle piſton; the firſt is, the ſteam which is lodged between the piſtons, together with what paſſes the firſt piſton, acts on the ſecond piſton with a power much greater, as it retards the firſt, as the ſecond piſton is longer in area than the firſt; the ſecond is, the ſteam, which remained above the piſton of the ſmall cylinder, after its deſcent, acts upon the piſton of the large cylinder, in the time of its aſcent; and the third is, what ſteam remains in the ſmall cylinder, after its aſcent, contributes, along with the ſteam which eſcapes the piſton of the ſmall cylinder, to prevent ſo great an eſcape of ſteam paſt it, as would otherwiſe be the caſe, were there no ſecondary piſtons; the other parts of the engine may be ſeen from inſpection of the draught, and correſpond with what is in common uſe.

"Fourth form of the engine (ſee fig. 4) conſiſts of two cylinders, a leſſer and a larger, the piſton rods of which are connected by a toothed wheel, or ſhort beam placed betwixt them, which gives motion to the machinery by a crank, or otherwiſe; by this method, the piſton of the one cylinder aſcends, while the other deſcends; the operation of the ſteam in theſe cylinders and piſtons is directly the ſame as the laſt, only the piſtons move contrary to one another, the ſteam being directed on the piſtons ſo as to produce this motion, though the acting principle is directly the ſame; the ſame deſcription as the laſt will fully explain it, and the ſame letters of reference ſerve, only, that the ſteam acts on the top of the piſton of the large cylinders in the ſame way as it acts on the bottom of it in the former caſe. Theſe caſes may ſtill be varied by placing the ſmall cylinder in the firſt caſe undermoſt, and admitting the ſteam from below, and in the two laſt caſes by admitting the ſteam into the ſmall cylinder below; but the principle, or mode of action, will ſtill be the ſame: indeed, the ſame principle may be varied many ways, but, perhaps, in none better than the following:

"Fifth form (ſee fig. 5, No. 1 and No. 2) conſiſts alſo of two cylinders, as before, and larger, which are placed alongſide of each other, as in the third form. Fig. 5, No. 1, is a ſide view or ſection of the engine; but the large cylinder, which ſtands immediately behind the ſmall one, is not ſeen as well as many of its parts. In fig. 5, No. 2, is an upright ſection of the cylinders and pipes, as the face, the framing or body of the engine. In this draught, the cylinders, pipes and valves, and condenſing veſſel, are laid open in ſo plain a manner, that, with the explanation, an idea of the engine may very eaſily be conceived; the letters of reference are chiefly applicable to No. 2; but when the letters are placed on No. 1, they refer to the ſame as on No. 2. The operation and explanation are as follows: the ſteam is admitted from the boiler into the ſmall cylinder *n*, through the pipes A A, and valves *a* and *e*, both above and below the piſton *h*, of the ſmall cylinder, all the valves being kept open, and the handles wrought in the uſual manner, to drive the air out of the cylinders, communicating pipes, and the condenſing veſſel; the handles are ſet to their due working poſture, that is, the valves, *b*, *c*, and *e*, are ſhut, while thoſe of *a*, *d*, and *f*, are opened, and water let into the condenſing veſſel, when a vacuum takes place in the large cylinder *m*, below its piſton *g* (the ſteam having free acceſs through the valve *f*, and pipe F, to the condenſing veſſel), and the ſteam which remains above the ſaid piſton, together with that which is under the piſton *h* of the ſmall cylinder, and communicating pipe D, exerts its force in puſhing down the piſton *g* of the large cylinder, there being a communication for the ſteam between them, through the valve *d* and pipe D. The ſteam from the boiler exerts its force on the top of the piſton *h* of the ſmall cylinder, and, as the piſtons move forwards in their cylinders, the denſity of the ſteam under the piſton *h*, and above the piſton *g*, will diminiſh, being expanded to a larger ſpace; but the ſuperior denſity of the ſteam from the boiler, acting on the top of the piſton *h*, of the ſmall cylinder, will cauſe a quantity of ſteam to paſs it, which exerts its force in part on the piſton *g*, of the large cylinder; indeed, what ſteam is lodged between the two piſtons exerts equal forces on equal areas of each piſton, but the piſton *g*, being of larger area than the piſton *h*, will therefore be forced down with a power as much greater as it retards the piſton in the ſmall cylinder, as the area of the large piſton is greater than that of the leſſer; at the ſame time the ſteam which remained beneath the piſton of the ſmall cylinder, prevents ſo much ſteam from eſcaping paſt its ſides, as it would do were there only a ſingle piſton, and the vacuum below it much more complete during the deſcent of the piſtons (which move in the ſame direction, in the ſame time); the valve *a*, which admits the ſteam from the boiler, from the top of the leſſer cylinder, above its piſton, is ſhut, and the elaſticity of the ſteam which remains above the piſton *h* of the ſmall cylinder, together with the leſs denſe ſteam above the piſton *g* of the large cylinder, carries both piſtons forward to near the bottom of their reſpective cylinders, when the returning ſtroke begins by the valves *a* and *f* being ſhut (the valve *a* being ſhut during the piſtons' deſcent), and the valves *b* c and *e*, opened by the plug-work. When the large cylinder is exhauſted above its piſton, the ſteam having free acceſs through the pipes D and E, and the valve *e*, to the condenſing veſſel, while the ſteam from the boiler having free acceſs through the pipes A A, and valve *e*, to the bottom of the piſton *h*, of the ſmall cylinder, and the ſteam of leſs denſity, from the laſt ſtroke of the engine, which remains above the ſaid piſton,

together with what eſcapes paſt its ſides, in time of its aſcent, having free acceſs through the valve *b* and pipe B to the under ſide of the large cylinder *m*, and below its piſton *g*, and exerts its force in preſſing it upwards, with a power as much greater as it retards the piſton of the other, as the piſton of the large cylinder is greater than the other; then the piſton *h*, of the ſmall cylinder, will be preſſed up with a force in proportion to the difference of the denſity of the ſteam above and below it; at the ſame time, the ſteam which remains above the piſton prevents ſo much of it from eſcaping paſt the ſmall piſton, as would be the caſe were the vacuum more complete: during the aſcent of the piſtons, the valve *c* is ſhut, and the elaſticity of the ſteam which remains below the piſton *h*, of the ſmall cylinder, carries it forward, as doth alſo the leſs denſe ſteam of the piſton *g* of the large cylinder; indeed, the operation of the ſteam is the ſame, both in the aſcent and deſcent of the piſtons.

" Sixth form (ſee fig. 6) conſiſts alſo of two cylinders, the leſſer and larger, the piſton-rods of which are, as in the fourth form, connected by a toothed wheel, or ſhort beam placed betwixt them, which gives motion to the machinery by a crank; or otherwiſe the operation of the ſteam in this form is directly the ſame as in the laſt, or fifth form, except that the ſteam is ſo conducted as to make the one piſton aſcend while the other deſcends; the explanation of the laſt ſerves this alſo, and letters of reference are placed ſo, only where the top or bottom of the large piſton is mentioned; the contrary muſt be underſtood for the explanation of this form: in all forms of the engine in time of working, the denſity of the ſteam, on the ſecondary piſton, is never allowed to be near its natural ſtate (namely, that denſity it hath at coming from the boiler, or nearly the ſame with that of the atmoſphere), the other end intended would be in a great meaſure fruſtrated, as the quantity which eſcaped the ſecondary piſton in that ſtate would be attended with as bad effect as that purpoſed to be remedied by the patentees. It will be obſerved, that this is effected by ſhutting the valve which admits the ſteam from the boiler before the piſton has moved through the whole length of the cylinder; though the preventing the waſte of ſteam is the main thing intended, yet the conſtruction of the engine is ſuch, that the elaſticity of the ſteam is carried a great length, and uſefully employed, before it gets into the condenſing veſſel; theſe forms of the engine may be applied either to the raiſing of water, or driving machinery, the ſame as thoſe in common uſe. The patentees do not pretend to fix upon any exact ratio betwixt the ſize of the two cylinders: experience and motives of economy may cauſe a variation in this.

" Specification and deſcription of the nature of a new and improved method of conſtructing furnaces, for the application of fire to ſteam-engines and boilers of various deſcriptions, and alſo to the application of fire to many other purpoſes and branches of manufacture where heat is applied by means of a furnace, by which invention and improvement a very conſiderable ſaving of fuel is effected, from the immediate converſion of the whole, or very nearly the whole, of the ſmoke ariſing from the fuel into flame: firſt, the ſaid invention in principle conſiſts in ſupplying the burning fuel more fully with air, having this fuel more in a body together, and a leſs quantity in combuſtion, at the ſame time, than what uſually takes place in other furnaces, which are applied to the ſame uſes; in applying the fuel with a portion of freſh air, admitted from an opening made for that purpoſe, and directed in ſuch a manner as it may come in contact with the ſmoke from the kindling coal and great heat of the furnace together, and the fuel being more fully ſupplied with air, and conſequently a greater degree of heat taking place, and the ſmoke and freſh air uniting in the great heat, the ſmoke is enflamed, and rendered uſeful in adding to the heat of the furnace; beſides, this portion of freſh air is ſo conducted as to act partly on the kindling or kindled fuel, and raiſing it to a greater degree of heat, after it has ſerved its purpoſe by uniting with and enflaming the ſmoke; and therefore is employed, in ſome meaſure, uſefully, even after the coal has ceaſed to ſmoke: ſecondly, to the above may be added, the form of the furnace, which is ſo conſtructed, that the full kindled fuel is kept backward in the furnace, while the freſh coal lies before, and is more gradually kindled than if introduced further among the full kindled fuel, while the heat of the furnace is little injured or damped by the introduction of freſh coal, as is more fully deſcribed in the practical deſcription of the furnace. The coal is admitted into the furnace by a hopper, feeder, or mouth piece, A (fig. 7 and 8), made of caſt-iron (but which may be made of other materials), and inclined to the horizon, as in fig. 7; ſo that the coal in it may, in ſome meaſure, fall into the fire-place, above the bars, as the fuel is ſpent: in the upper part of this hopper, feeder, or mouth-piece, is a plate, *a* (fig. 7 and 8), placed at a ſmall diſtance, or from about three eighths to three fourths of an inch from the upper ſide of the hopper, betwixt which plate, and upper plate, or ſide of the hopper, a ſtream of air ruſhes downward on the fire, at about half a right-angle to the horizon, which ſtream of air aſſiſts in conſuming the ſmoke, as formerly mentioned, and more fully deſcribed hereafter. B, fig. 7, is a ſection of the bars, which are, in general, a little inclined to the horizon, as in the figure, that the fuel may more eaſily fall, or be puſhed backwards, in the furnace; at *c*, is an opening above the bars, and below the lower end of the hopper, which is in general fitted with a grated door or doors, which open for the more convenient cleanſing of the furnace, and the grated form of the doors is alſo deſigned for admitting air into the fuel, as well as at the bars, conſequently the air is more concentrated in the middle of the burning fuel, and produces a greater heat than if admitted only betwixt the bars; this grated form of the doors is alſo convenient for the admiſſion of a poker or inſtrument for puſhing backward the kindled fuel, while the freſh coal, or that which is not ſo well kindled, falls down to ſupply its place: in ſome others of theſe furnaces, the opening below the lower end of the hopper, and above the fore end of the bars, is left without doors at all; at this opening, it is convenient, when the fire is mended, to puſh the coal from the fore ſide backward, as mentioned above, or it may be puſhed backward with a hooked poker, P, by applying the hooked part of it through the furnace bars below; by either of which means, the kindled coals are put backwards, while the freſh coal, or that which is not ſo well kindled, falls down to ſupply their place; that is, the coals in the ſituation *c* are puſhed towards *d*, while thoſe in the ſituation *f* fall down to ſupply the place of thoſe which were driven from *c* towards *d*; by ſuch means, the ſtrength or heat of the fire is not much damped by the introduction of freſh coal, and the coals which have fallen from *f* towards *c*, are not ſo rapidly kindled as if introduced above the burning fuel, ſame time the ſmoke which ariſes from theſe newly-introduced coals, paſſes partly through the full-kindled coal and partly over, and in contact with the great heat of the burning fuel, and, meeting at the ſame time with the current of freſh air coming downwards, and tending alſo to drive the ſmoke ſtill nearer to the bright kindled fuel, does in general completely inflame the ſmoke, and render it uſeful in adding to the heat of the furnace. Another end obtained by the ſtream of freſh air, is to keep in ſome meaſure the great heat of the furnace from acting ſo

violently on that part of the hopper which is neareſt it, and moſtly expoſed to its heat, and liable to be damaged thereby, which it does by the continual current of freſh cool air that is in contact with thoſe parts; the conſtruction of the furnace may be much varied, but the chief improvements are, that the fuel in combuſtion is ſupplied with air by the foreſide as well as by the bars, the hopper is placed in ſuch a ſituation that the kindled or unkindled coal may in part fall to the foreſide of the furnace above the bars, as the other fuel is puſhed backward in the furnace, and the admiſſion of freſh air to paſs over the burning fuel by means of a definite ſpace or ſpaces, opening or openings, made for that purpoſe; ſo that this ſtream, current, or currents of air, partly come in contact with the burning fuel itſelf, forcing alſo the ſmoke with more immediate union with the burning fuel and great heat of the furnace. The patentees do not pretend any claim to the admiſſion of freſh air as a new principle, as they are ſenſible that this has been known long ago, and practiſed by admitting it at the furnace door, ſhutter, or mouth-piece, and at the opening the coals are admitted into the furnace; their claim reſts upon what has been formerly ſtated, together with the form of the furnace, and its variations after mentioned; the ſucceſs of the furnace depends alſo in a conſiderable degree on what is called the draught of the furnace; that is, the chimney and flues ſo conſtructed, as a ſufficient current of air may paſs through the fire to bring it to a proper degree of heat; alſo, that the current of freſh air may have ſuch force as to come pretty much in contact with the burning fuel, and to convey the ſmoke along with it through the hotteſt of the flame; if this is not the caſe, the ſmoke will not be ſo completely conſumed in theſe furnaces. The hopper is allowed to be kept as full of coal as poſſible, and either wholly or in part ſmall coal, ſo as to prevent air as much as poſſible getting in by that paſſage; this muſt be attended to when the furnace is in its ordinary working ſtate; yet, ſometimes, it is neceſſary to keep this opening of the hopper, either wholly, or in part, open, when there is little heat wanted.

The following is a deſcription and reference to the draughts in Pl. 49.; fig. 7, is a ſide view, or ſection of the furnace, as if applied to a boiler, and cut through the middle. Fig. 8, is a front view of the furnace in perſpective, the hopper having a diviſion in the middle, and two regulating plates for the admiſſion of freſh air. Figs. 7 and 8, A, the hopper into which the coals are put to ſupply the furnace, *a* the regulating plate; above which and below the higher plate *b* of the hopper, a ſtream of freſh air is admitted to this plate; *a* is made to turn on a pin pivot or centre, ſo that it may be brought nearer to, or recede further from the uppermoſt at the point *n*, fig. 7, for regulating the quantity of air admitted betwixt the plate as occaſion requires; this plate is ſometimes made faſt, or kept ſo, after adopting a ſpace which is judged ſufficient for the quantity of freſh air, but on other occaſions, as in ſteam-engines, it is adviſable ſo give it leſs or more opening according to the ſtate of the fire, that is, when coals are newly introduced into the fire-place, to give the greateſt quantity of freſh air, and when they are pretty well kindled to give leſs air. FFF, fig. 7, the flues beneath and round the boiler; that round the boiler may be in any of the preſent well-conſtructed forms; that beneath the boiler, as in the drawing, with a breaſt D, to prevent the coal getting ſo far backward in the furnace, and alſo to direct the flame on the bottom of the boiler; this breaſt is alſo neceſſary for the more complete combuſtion of the ſmoke, as by that means, the freſh air, ſmoke, and flame, are more completely combined than if the breaſt were wanting, or ill-formed: at *r* is repreſented a ſhutter, which is ſometimes uſed in ſteam-engine boilers for the purpoſe of getting the refuſe of the fuel taken from the furnace by opening the ſaid ſhutter; in other caſes, the breaſt of the furnace D coincides with *d* at the ends of the bars. G, figs. 7 and 8, the grated doors, or opening into the fire-place; I, the aſh-pit below the furnace; L, fig. 8, a catch, or bar, which ſlides along the bottom plate of the hopper for keeping the grated doors ſhut: HHH, &c. the brick-work for furnace and boiler. K, fig. 7, a piece of caſt-iron in a horizontal poſition, which joins the under plate of the hopper, for the more eaſe and convenience in putting in the coals, the hopper may be made in one or more pieces, as inclination or choice may direct, or of any materials which it may be thought prudent to adopt, but they are uſually made with five plates of caſt-iron; M repreſenting one of the ſide plates, N the uppermoſt, O the undermoſt, and P the regulating-plate; the ſide plates having tenons which fit into mortices in the top and bottom plate, which may eaſily be conceived; on the ſide plates are detents or abutments, which ſerve as a centre for the regulating-plate to turn upon; on this plate are alſo two abutments which reſt on the other abutments of the ſide plates when this plate is put into its place; this plate by ſuch means may be taken out, or put in at any time it is found neceſſary, without meddling with any other part of the hopper: another method is to have the bottom plate to come out, and in the ſame manner as the regulating plate; alſo, that it may fold up or down to any inclination; this form is very commodious for allowing acceſs into the fire-place to get it repaired, or the like, or for having the fire quickly taken from it altogether, for by folding the plate to a level as repreſented by the dotted line, fig. 9, the coal which is in the hopper is prevented from falling into the fire-place, and there is a greater ſpace left to get into it; this form may either admit or not of the grated doors; indeed the ſimple opening does very well. Fig. 9, is a repreſentation of the ſide of the hopper, in this form: another method of the hopper and letting in of air, is by making the underſide of the top plate with cheeks, or grooves, as that the freſh air may ruſh down in them above the fuel that lies in the hopper, for when the hopper is fitted in as cloſe with coal as it can be, theſe grooves of cheeks prevent the coal from getting into them, and form ſeparate and definite ſpaces for the air to ruſh down on the burning fuel, and perform the ſame office as the regulating plate, though the proper quantity cannot be ſo well adjuſted this way, yet the only way to accompliſh this is to have theſe grooves or cheeks made as near the proper ſize as poſſible; they ought alſo to be ſo narrow, that little of the coal will get betwixt them. Fig. 10, is a front view of the hopper, in the ſtate where A repreſents the opening the coals are put into; another method is to let in the current of freſh air above the uppermoſt plate of the hopper, this may be done either by another plate placed above, or the building ſo formed over it, as that a proper quantity of freſh air may get in, and in a proper direction; indeed, this may be accompliſhed many ways in a greater or leſſer degree, by letting in a definite quantity, directed in ſuch a manner as to come in contact with the fuel, though perhaps in no way better than the methods explained: to make this furnace more complete, doors are placed to the front, with a ſufficient ſpace below them to let air into the furnace, theſe doors are repreſented by SS, fig. 8, as ſtanding open; they are kept ſhut while the furnace is going, except when coals are put in, or the bars cleanſed, or the like when they are opened for that purpoſe; the uſe of theſe doors is to prevent, in a great meaſure, the radiant heat that comes from under the bars and from the opening at the foreſide from eſcaping; this alſo adds ſomething to the draught or well-going of the furnace, as this heat when ſuffered to eſcape rarifies the air before the

furnace, which air paſſes upwards, performing in a ſmall degree that which a chimney does, and depriving the fire of a portion of air which it otherwiſe has when the doors are ſhut: theſe furnaces are made of various ſizes, according to the uſes they are applied to; in ſome large ones there is a diviſion in the middle of the hopper, as in fig. 8; this ſize, as meaſured by the ſcale, will ſerve a ſteam-engine boiler of about nine or ten feet diameter; leſſer furnaces do not need this diviſion in the middle of the hopper."

We next preſent the reader with the ſpecification of a patent granted to Mr. Murray, of Leeds, for a method of conſtructing the air-pump, and ſundry other parts belonging to a ſteam-engine, by which a conſiderable ſaving will be made in the conſumption of fuel, and an increaſed power obtained. It is dated Auguſt 4, 1801.

"Firſt, in reſpect to the principles of the new air-pump," ſays the inventor, "I cauſe the air to be diſcharged from the air-pump without its having to make any effort in opening of valves, or preſſing through a body of water, and in cauſing the water and the air to be diſcharged ſeparately, and different ways; this is effected by diſcharging the air alone by one bucket, and the water alone by another, or by an eduction pipe of 28 feet in length, as in figs. 1, 2, 3 (Pl. 50.). Secondly; an improved method of packing the cylinder-lid, ſtuffing-boxes for valves, &c. I cauſe the removeable parts of each to come in immediate contact with one another; this is effected by placing the neceſſary packing on the upper ſide of the cylinder-lid (inſtead of being betwixt the cylinder and lid as formerly), which prevents the piſton-rod receiving friction from any oblique preſſure, by the cylinder-lid being ſcrewed down more upon one ſide than the other, which is unavoidably the caſe in all other methods of packing-lids, valves, ſtuffing-boxes, and other ſimilar things, where great accuracy is required, as in fig. 4. Thirdly; an improvement in the valves and working geer, the principle of which conſiſts in the advantageous form in which they are made, and in the two uppermoſt valves being inverted, and the communication by the valve-rods paſſing through reſervoirs of oil, or liquid matter, which will prevent any air getting into the engine to impair the vacuum; the principle of the cylinder-lid is here applied in fixing the ſtuffing-boxes for the valves, and valve-box lids, which is of the utmoſt importance to their operating well, as the oblique preſſure (which cannot be prevented in the old method) throws the valves out of their ſeats, and renders them proportionally imperfect, fig. 5. Fourthly; a new principle, opening and ſhutting the valves by a circular motion (inſtead of the plug and hand-geer now in uſe), which prevents the engine making a falſe ſtroke, or turning the wrong way round, by which means a ſteam-engine is rendered as ſteady in its motion as a water-wheel, as in figs. 6, 7, 8, 9. Fifthly; a new method of connecting the piſton-rod to the parallel-motion, as deſcribed in fig. 10. Sixthly; an improved method of conſtructing fire-places for conſuming the ſmoke ariſing from ſteam-engines, and other fires, fig. 11. Now I do declare, that the ſix above-mentioned principles comprehend the real object of my inventions. And, in order for the better comprehenſion and underſtanding how the aforeſaid may be reduced to practical uſe, I do hereby further declare, that although I vary my mode of conſtruction, as a difference of circumſtances may require, to produce the ſame effect, and obtain the main purpoſes intended; yet I principally adhere to the methods herein deſcribed, as being fully anſwerable to what is required, and beſt calculated to be underſtood from the drawings and deſcriptions thereof. And the ſame is deſcribed fully in the drawing or plan added hereto, and contained in the ſkin of parchment hereunto annexed. (See the plate.) Figs. 1, 2, and 3, are plans exhibiting the principle of the air-pump. A, the condenſer; B, the air-pump; C, the air-piſton; D, the air-valve, which is opened and ſhut by the working parts of the engine, and has an elaſtic rod; E, the valve for diſcharging the air; F, the exhauſting-pipe, having a free communication betwixt the condenſer and the top of the air-pump, when the valve D is open; G, the eduction-pipe; H, a bucket, and balance-valve, for diſcharging the water down the bored eduction-pipe in fig. 3; I, the delivering-valve for water in figs. 2 and 3; K, in fig. 1, a bucket for lifting the water upwards as in a common pump; L, a foot-valve for preventing the return of the water during the deſcent of the bucket K; M, the barrel of the pump for diſcharging water alone; N N, in fig. 2, an eduction-pipe, thirty feet long or upwards, where the water is diſcharged by its own gravity, and may be attached to the air-pump, or condenſer, as the dotted lines ſhew. Fig. 4, exhibiting the principle of the top, ſtuffing-boxes for valves, &c. A A, the cylinder-lid. B B, the top ring that is ſcrewed down with bolts to the flanch of the cylinder. C C, the packing of paper, hemp, or other materials, laid on to the cylinder-lid A, and under the top ring B B. D D, a ſhoulder bored in the top of the cylinder, for the lid A to be turned and ground into; this method applies to ſteam-cylinders, air-pumps, ſtuffing-boxes for valves, as is ſhewn in the other figures. Fig. 5, plan of the working valves and ſide pipes. A A A, the rods that lift the valves. B B, ſtuffing-boxes for the valves to work through, fixed in the ſame manner as the cylinder-lid in fig. 4. C C, rings for fixing the ſtuffing-boxes. D D D, mortiſes for the levers for the opening of the valves. E E, are the two inverted top valves. F F, are reſervoirs for holding oil, or other liquid matter. G G, two circular valve-boxes for admitting the ſteam. Figs. 6, 7, 8, and 9, ſhew the principle of opening and ſhutting the valve by a circular motion. A, the axletree. B, a wheel to be turned from the motion of the fly-wheel, or other parts of the engine or mill-work. C C C C, cranks with rollers fixed upon the axletree A, parallel to each other, or at right angles, as circumſtances may require. D D, circular box rods for receiving alternate motion from the circular motion of the cranks C C. E E, tappet plates for the cranks to work againſt. F F, levers for the mortiſes D D D in fig. 5, for lifting the valves. Figs. 8 and 9, ſhew the ſame principle, but differ from the other by having ſtraight plates to work againſt inſtead of circular ones. G G G G, handles for ſetting the engine to work, and may be ſupported at H H H H. The axletrees A A, muſt make the ſame number of revolutions as the engine does ſtrokes, which may be eaſily regulated by the wheel-work. Fig. 10, ſhewing the method of connecting the piſton rod to the parallel motion. A, the piſton rod. B, the top cone end of the rod. C, two half-ſockets which fit the cone end of the rod. D, the outermoſt ſocket. E, the cone part of this ſocket, fitting the outſide of the ſocket C. F, the cotter for preſſing the rod A, with its ſockets C, into the cone part of the outſide ſocket D, which fixes the whole together as in one piece, without cutting any holes in the rod, as is the caſe in the old method. Fig. 11, ſhewing the method of conſtructing a fire-place for conſuming of ſmoke. A, the boiler. B B B B, brick-work. C, the funnel for conveying coals to the fire. D, ſliding plate for leſſening the aperture of the funnel, and regulating the quantity of coals in. E, the fire-place. F, the grate-bars lying in a frame, and moving upon a joint at No. 1. No. 2, the grate-bars lowered down for the purpoſe of cleaning out the fire. G, charging-box for puſhing the fire further on the grate-bars, and making room for freſh coals as the others are conſumed; this box is filled with holes for the purpoſe of letting air into the fire. H, a ſmall wheel and rack for working the charging-box G in large fires; but

the box may be thruſt in by the handle I in ſmall ones. K, a lever for turning the wheel H. No. 3, plan of the grate-bars frame taken out of its place to the pivots that it turns upon when it is lowered to clean out the fire. 4, plan of the charging-box G, to ſhew the method of working it by wheel-work, either by hand, or by a motion from the engine."

Theſe ſeem the moſt important of the recent inventions in aid of this valuable machine, but other contrivances worthy of attention will be found fully deſcribed in the Repertory of Arts, &c.

STEEGE, a ſea-port of Denmark, in the iſland of Moen, 38 miles S.S.W. of Copenhagen. Long. 12. 20. E. Lat. 55. 5. N.

STEEL (*Encycl.*). The following is extracted from the ſpecification of a patent granted to Meſs. Wilde and Ridge, of Sheffield, for making ſaws, ſteel doctors for printers, plates made of iron, ſprings, and other articles; dated Auguſt 25, 1796.

" When the ſteel or iron is pared or cut into proper ſhape, the ſaws, &c. are put into a frame of metal, or otherwiſe: they may then be made red-hot in the ſaid frame, and ſtretched by ſcrew, ſpring weight, or any other proper power or purchaſe, and ſo formed into a curved, ſtraight, or any other direction wanted. They are then to be immerſed in water, or a compoſition of oils or greaſe, to be hardened in the frame in the direction wanted; and when ſo hardened they are alſo to be tempered in the ſame direction in the frame over fire; and when the ſaw, doctor for printers, or plate, is over the fire, it muſt be kept in motion over the fire until the oil or greaſe upon the ſaid ſaw, doctor, or plate, ſmokes. It is then to be gently ſtretched, and continually kept moving over the fire until a blue blaze alternately appears and diſappears. It is then to be ſtretched with as much power as will bring it into the direction required. The ſaw, doctor, or plate, is next to be put into another frame, which may be made to move upwards and downwards, or in any other direction neceſſary, by crank, or any other movement, between proper ſtones, or between plates of metal, blocks of wood, or any other material that will grind or poliſh with ſand, emery, or other proper material to grind and poliſh the ſaws, ſteel doctors for printers, plates made of iron, alſo of ſteels, beads, mouldings, and fender plates, made of iron and ſteel united, or of iron or ſteel, and all ſorts of ſprings made of ſteel, and divers other articles made of iron and ſteel united, and alſo of iron or ſteel. But if the ſaw, doctor, or plate, is not intended to be hardened, it muſt be made red-hot, and ſtretched with as much power as will bring it into the direction wanted; it muſt then lie in the open air, in the frame, in the ſaid direction required, till cold; then to be ground by a machine for the purpoſe of grinding and poliſhing in a frame the ſaid ſaws, ſteel doctors for printers, plates made of iron, alſo of ſteel, beads, mouldings, and ſender plates, made of iron and ſteel united, or of iron or ſteel, and all ſorts of ſprings made of ſteel, and divers other articles made of iron and ſteel united, and alſo of iron or ſteel." This machine is to move the article to be manufactured by means of a crank, or otherwiſe, ſo as to ſharpen, grind, and poliſh the plates, and form beads and mouldings, and various other articles."

STEENBERGEN, a ſtrong town of Dutch Brabant, in the marquiſate of Bergen-op-Zoom. It has a communication with the Maeſe, and is ſeven miles N. of Bergen-op-Zoom, and 17 W. of Breda. Long. 4 28. E. Lat. 51. 32. N.

STEENKEER, a town of Norway, in the province of Drontheim, 36 miles N.E. of Drontheim. Long. 11. 34. E. Lat. 63. 50. N.

STEENKIRK, a village of Auſtrian Hainault, famous for the victory obtained over William III., in 1692, by the Duke of Luxemburg. It is 15 miles N. of Mons, and 16 W. of Bruſſels.

STEENWYCK, a ſtrong town of the United Provinces, in Overyſſel, ſeated on the river Aa, 20 miles S.E. of Slooten, and 32 N. of Deventer. Long. 5. 50. E. Lat. 52. 50. N.

STEEVENS (George), an eminent Engliſh author, received the early part of his education under the tuition of the Rev. R. Wooddeſon, at Kingſton-upon-Thames, at which ſchool he was contemporary with Gibbon, the hiſtorian. He went from thence to Eton. Afterwards he was admitted a fellow-commoner of King's College, Cambridge. He alſo accepted a commiſſion in the Eſſex militia, on its firſt eſtabliſhment.

In 1766 he publiſhed " Twenty of the Plays of Shakſpeare," in 4 vols. 8vo. Dr. Johnſon had brought out, the preceding year, an edition of our great bard; this induced an interview between the reſpective commentators: abilities and reſources were combined, and the public ſoon felt the benefit of this conjunction.

The year 1773 ſaw the firſt fruits of this great coalition in a complete edition of the poet, in 10 vols. 8vo; which edition, with occaſional amendments, was twice reprinted between the years 1773 and 1785.

Mr. Steevens certainly poſſeſſed, in an eminent degree, the requiſites for his important undertaking. He had ſtudied the age of Shakſpeare; he was intimately and perfectly acquainted, not only with the laws, manners, and writings of that period, but he was equally verſed in the provincial peculiarities, whether of language or cuſtom, which prevailed in different parts of the kingdom, and particularly in thoſe where Shakſpeare paſſed the firſt years of his life. Fortune likewiſe favoured his ſtudies: he had ample pecuniary reſources, from which he is known to have expended nearly 200l. in the purchaſe of curious and illuſtrative books, while preparing each edition of Shakſpeare. He had the ſecond folio of that poet, with notes and alterations of ſcenes by Charles II. in his own hand; and he was aſſiduous in enriching his own Shakſpeare with 1500 portraits of all the perſons in the notes and text: of ſuch productions he was a critical judge, excelling himſelf in painting, with which he frequently amuſed his hours. Thus qualified and prepared, he produced, in 1793, that invaluable edition of Shakſpeare, then publiſhed in 15 vols. 8vo. Uncommon indeed, and fully meriting the countenance which he obtained, were his exertions in the completion of this truſt: he gave an inſtance of editorial activity and perſeverance that is without example. To this work he devoted, ſolely and excluſively of all other attentions, a period of eighteen months; and, during that time, he quitted his houſe every morning at one o'clock with the Hampſtead patrole, and proceeded, reckleſs of the weather or the ſeaſon, to the chambers of his friend, Mr. Iſaac Reid, in Barnard's-inn, where he was privileged to admit himſelf, and found a room prepared to receive him, with a ſheet of the Shakſpeare letter-preſs ready for correction. There, too, was every book he might wiſh to conſult; and on Mr. Reid's pillow he could apply, on any doubt or ſudden ſuggeſtion, to a knowledge of Engliſh literature perhaps equal to his own. This nocturnal toil greatly accelerated the printing of the work; as, while the printer ſlept, the editor was awake; and there was a ſort of perpetual motion in its progreſs towards publication; and thus, in leſs than twenty months, did he complete his laſt edition of Shakſpeare, in fifteen large octavo volumes—an almoſt incredible labour, which proved the perſevering energy of his mind. The edition of Mr. Malone, if we err not, employed nine years. It may not be unneceſſary to ſay, that he read the proofs of Boydell's ſplendid Shakſpeare, and

that his own large octavo edition is now reprinting. He poſſeſſed a ſtrong original genius, and an abundant wit; his imagination was of every colour, and his ſentiments were enlivened with the moſt brilliant expreſſions. He was alſo a claſſic of the firſt order, and equally acquainted with the belles-lettres of Europe; and he had ſtudied hiſtory, ancient and modern, but particularly that of his own country. His converſational alluſions to the ſciences always evinced the eaſy familiarity of intimate acquaintance. That he contented himſelf with being a commentator muſt have ariſen in the habits of his life, and in his devotion to the name with which his own will deſcend to the lateſt poſterity. Many of his *jeux d'eſprit* might probably be collected: of this deſcription are a few ſtanzas in Dodſley's Annual Regiſter, under the title of the "Frantic Lover." His manners were ſingular and eccentric: he never took a pinch of ſnuff after he loſt his box in St. Paul's Church-yard, though this recreation had been the cuſtom of his life, and though he was in the habit of making all his memorandums by bits of paper in his box: he would ſometimes break off his longeſt habits, without any oſtenſible reaſon. Animated and logical in argument, and piquant in wit, his colloquial powers ſurpaſſed thoſe of other men; and his jokes, which were remembered by all who heard them, and repeated by all who remembered them, often procured him a kind of malevolent fame which he had by no means juſtly incurred. He would frequently, in his ſportive and almoſt boyiſh humours, condeſcend to a ſpecies of ribaldry but little above O'Keefe; indeed, he loved what is called *fun*—a diſpoſition which has a tendency to miſchief. As he managed a liberal fortune with diſcretion, he was enabled to gratify his wiſhes, which he did without any regard to expence, in forming his diſtinguiſhed collections of claſſical learning, literary antiquity, and the arts therewith connected. He bought largely at Sir Clement Dormer's, where he got his Xenophon, worth upwards of 40l. for twelve guineas. He was rich in books and prints. Neither was he deficient in generoſity: though never ſeen to give eleemoſynary ſixpences to ſturdy beggars or ſweepers of the croſſings, few perſons diſtributed bank-notes with more genuine munificence; and ſome of his acts of pecuniary kindneſs, ſuch as could only proceed from a mind adorned with the nobleſt ſentiments of humanity, might be named. Educated at an era when urbanity was the characteriſtic of a gentleman, he poſſeſſed all the graces of exterior accompliſhment; all that could ſoften the aſperities of life, and harmoniſe the ſocial intercourſe. Mr. Steevens paſſed the latter years of his life chiefly at Hampſtead in retirement, ſeldom mixing with ſociety but in bookſellers' ſhops, or in the Shakſpeare Gallery, or at the morning converzatione of Sir Joſeph Banks. When death, by one ſtroke and in one moment, makes ſuch a diſperſion of knowledge and intellect—when ſuch a man is carried to his grave—the mind can feel but one emotion: we conſider the vanity of every thing beneath the ſun—"we perceive what ſhadows we are, and what ſhadows we purſue." Mr. Steevens bequeathed his valuable Shakſpeare, illuſtrated with near 1500 prints, to Lord Spencer; his Hogarth (perfect, with the exception of one or two pieces) he left to Mr. Windham; and his corrected copy of Shakſpeare to Mr. Reid, together with a bequeſt of 200 guineas. His library is become the property of Miſs Steevens, his relation, to whom he has left the bulk of his fortune, and who is his reſiduary legatee. There are only two or three other ſmall legacies in money. Mr. Steevens died in January, 1800.

STEGLBURG, a ſea-port of Sweden, in Eaſt Gothland, ſeated on the Baltic, 25 miles S. of Nikoping, and 82 S.W. of Stockholm. Long. 16. 40. E. Lat. 58. 16. N.

STEIN, a ſmall independent town of Switzerland, under the protection of the canton of Zuric. It is ſeated on the Rhine, where it iſſues from the lake of Conſtance, 15 miles W. of Conſtance, and 25 N.E. of Zuric. Long. 8. 48. E. Lat. 47. 32. N.

STEINAU, a town of Sileſia, capital of a circle, in the principality of Wohlau, 10 miles W.N.W. of Wohlau, and 20 S.E. of Glogau. Long. 16. 50. E. Lat. 52. 23. N.

STEINFURT, a town of Weſtphalia, in the county of Bentheim, with an academy, ſeated on the Vecht, 16 miles N.W. of Munſter. Long. 7. 41. E. Lat. 12. 15. N.

STEINHEIM, a town of Germany, in the electorate of Mentz, ſeated on a hill, near the river Maine, with a caſtle, nine miles from Francfort. Long. 8. 54. E. Lat. 49. 52. N.

STEKE, a town of Denmark, on the N. coaſt of the iſle of Mona, with a caſtle. It is almoſt ſurrounded by a lake. Long. 12. 15. E. Lat. 55. 4. N.

STENAY, a fortified town of France, in the department of Meuſe, ſeated on the river Meuſe, 24 miles N. by W. of Verdun. Long. 5. 19. E. Lat. 50. 28. W.

STENDAL, a town of Germany, in the marquiſate of Brandenburg, ſeated on the Ucht, 30 miles N. by E. of Magdeburg. Long. 12. 6. E. Lat. 52. 41. N.

STENNIS, a village in the iſland of Orkney. At this place, between Kirkwall and Stromneſs, is a curious bridge, or cauſeway, acroſs a narrow neck of land, between two lakes. At the end of this cauſeway, ſome ſtones of aſtoniſhing magnitude, and 20 feet high, have been erected; and there are many huge maſſes of ſtone in the neighbourhood, ſimilar to Stonehenge, on Saliſbury Plain.

STEREOTYPE, a mode of letter-preſs printing, in which whole pages of a work are worked off from a ſolid block of metal, inſtead of thoſe *compoſed* of ſingle letters arranged by the ſide of each other. An account of the origin and progreſs of letter-preſs-plate or ſtereotype printing, appears in the Philoſophical Magazine, from which we draw the following particulars.

We have ſhewn in the article PRINTING, the progreſſive ſteps by which typography was brought to that ſtate of perfection to which it has attained. It is a curious fact, however, that all the improvements followed each other in ſuch quick ſucceſſion, that in a few years from its firſt invention in Europe, we find the printers in poſſeſſion of all our common modes of working, and producing ſpecimens of their art, which even now cannot be ſurpaſſed. Some of the early printed miſſals upon vellum are proofs of this.

But if we have reaſon to be ſurpriſed at the quick ſteps by which printing with moveable types was perfected, we have more cauſe to wonder why with the acquiſition of moveable types the art became ſtationary. The tranſition from ſolid pages, cut at an expence and labour beyond the value of the intereſt of any capital that could be required to be ſunk in printing an edition of any work, made it a deſirable object to deviſe means for making the ſame letters do over and over, not only for different ſheets in ſucceſſion of the ſame work, but for ſubſequent publications. Hence came the firſt moveable types; which, however, as we have already obſerved, were all cut ſingly. The ſucceſs which followed the attempts made to leſſen this labour of cutting, by making well-formed letters, once cut, ſerve for ever, by the facility of multiplication which founding afforded, ought, one would think, inſtantly to have led to a further improvement. If founding could be applied to ſingle letters, why not to pages, to get rid of a ſacrifice of capital ſubmitted to at firſt, becauſe of the enormous expence of block cutting! *Founding of pages*, on the firſt view of it, promiſes many advantages in point of economy; and to ſcience it holds out what can never otherwiſe be obtained—the poſſibility of procuring in a ſhort time

immaculate editions. From books caſt into ſolid pages, no more copies would be printed than might be wanted for immediate ſale; the money thus ſaved from being ſunk in paper, to be piled up in warehouſes for years, as at preſent, would ſerve as ſurplus capital to print other works; and thus the printer, his workmen, and the bookſellers, would all be benefited; (for it would be eaſy to prove, did our preſent limits allow it, that not only the buſineſs of the preſsmen, but of the compoſitors, would be materially benefited and increaſed by the general adoption of ſuch an improvement); and all errors, as ſoon as diſcovered, could be rectified in the plates, to prevent them from appearing in after copies, inſtead of running through a large edition as at preſent.

It appears that this art, or one extremely ſimilar, was practiſed many years by Mr. Foulis, and before him by Mr. Ged, concerning whom Mr. Nicholls has publiſhed an intereſting pamphlet, entitled Biographical Memoirs of William Ged; including a particular account of his progreſs in the art of block-printing, 1781. The firſt part of the pamphlet was printed from a MS. dictated by Ged, ſome time before his death: the ſecond part, written by his daughter, for whoſe benefit the profits of the publication were intended: the third was a copy of propoſals that had been publiſhed by Mr. Ged's ſon, in 1751, for reviving his father's art; and to the whole was added, Mr. Mores's narrative of block-printing.

From this publication it appears, that ſo far back as the year 1725 Mr. Ged had begun to proſecute plate-making. In 1727 he entered into a contract with a perſon who had a little capital, but who, on converſing with ſome printer, got ſo intimidated, that at the end of two years he had laid out only 22l. In 1729 he entered into a new contract with a Mr. Fenner, Thomas James a type-founder, and John James the architect; and ſome time after, a privilege was obtained from the univerſity of Cambridge to print Bibles and Prayer-books. But it appears that one of his partners was actually averſe to the ſucceſs of the plan, and engaged ſuch people for the work as he thought moſt likely to ſpoil it. A ſtraggling workman who had wrought there, informed Mr. Mores, that both Bibles and Common-prayer books had been printed, but that the compoſitors when they corrected one fault, made purpoſely half a dozen more, and the preſsmen, when the maſters were abſent, battered the letter, in aid of the compoſitors. In conſequence of theſe baſe proceedings, the books were ſuppreſſed by authority, and the plates ſent to the king's printing-houſe, and from thence to Mr. Caſlon's foundery.

After much ill uſage, Ged, who appears to have been a perſon of great honeſty and ſimplicity, returned to Edinburgh. His friends were anxious that a ſpecimen of his art ſhould be publiſhed, which was at laſt done by ſubſcription. His ſon, James Ged, who had been apprenticed to a printer, with the conſent of his maſter, ſet up the forms in the night-time, when the other compoſitors were gone, for his father to caſt the plates from; by which means, Salluſt was finiſhed in 1736.

Beſides the Salluſt, another work, printed ſome years after, from plates of Mr. Ged's manufacture, is The Life of God in the Soul of Man, printed on a writing-pot, 12mo, and with the following imprint: Newcaſtle: printed and ſold by John White, from plates made by William Ged, goldſmith in Edinburgh, MDCCXLII. It is a very neat little volume, and is as well printed as books generally were at the time. By the writer of this account, in conjunction with Mr. Foulis, of Glaſgow, ſeveral ſmall volumes were actually printed from plates of the ſtereotype, and the editions ſold to the trade without any intimation of their being printed out of the common way. The firſt eſſays were, in the loweſt ſenſe of the word, common: one or two ſmall hiſtories, and a cheap edition of the Economy of Human Life. They alſo printed a Greek volume, Xenophon's Anabaſis, 1783, and had plates for ſeveral ſmall volumes of the Engliſh Poets almoſt finiſhed, but the latter were never put to preſs.

Twice, then, had this art been invented and practiſed in Britain, when about three years ago, Didot, the celebrated French printer, applied it to logarithmic tables, and afterwards to ſeveral of the Latin claſſics, and to various French publications, which he has executed with conſiderable accuracy. The preſs-work has been carefully attended to, and does great credit to the printer. Indeed, after what Didot has done, clamour and prejudice will attempt in vain, in future, to decry letter-preſs-plate, and his name will always be mentioned as a principal promoter of this uſeful art, the introduction of which will be marked as a diſtinct æra in the hiſtory of printing. Some of his countrymen indeed (for we cannot ſuppoſe Didot would attempt it) wiſh to aſcribe to him the whole merit of the invention, and to have it believed that it originated with himſelf. The facts ſtated, ſhew with how little juſtice this claim is made. It is true he may have diſcovered, for himſelf, the ſecret of the art; but it is hardly credible that he could be ignorant of Ged's progreſs, and of Foulis's, eſpecially as it is well known that, when patents are obtained, a ſpecification of the proceſs is obliged to be put upon record, of which any one may obtain an office copy at a ſmall expence.

Having ſtated what relates immediately to the invention of modern ſtereotype, it would not be ingenuous were we not to ſtate that claims have been ſet up in favour of a Dutchman as having practiſed the art even prior to Ged. The following extract, tranſlated from Niew Algemein Konſt en Letter Bode, 1798, No. 232, will put our readers in poſſeſſion of all we have yet met with reſpecting this printer.

"Above a hundred years ago, the Dutch were in poſſeſſion of the art of printing with ſolid or fixed types, which in every reſpect was ſuperior to that of Didot's ſtereotype. It may, however, be readily comprehended that theſe letters were not cut in ſo elegant a manner, eſpecially when we reflect on the progreſs which typography has made ſince that period. Samuel and J. Leuchtmans, bookſellers at Leyden, have ſtill in their poſſeſſion the forms of a quarto Bible which were conſtructed in this ingenious manner. Many thouſand impreſſions were thrown off, which are in every body's hands, and the letters are ſtill good.

"The inventor of this uſeful art was J. Vander Mey, father of the well-known painter of that name. About the end of the 16th century he reſided at Leyden. With the aſſiſtance of Muller, the clergyman of the German congregation there, who carefully ſuperintended the correction, he prepared and caſt the plates for the above-mentioned quarto Bible. This Bible he publiſhed alſo in folio, with large margins ornamented with figures, the forms of which are ſtill in the hands of Elwe, bookſeller at Amſterdam; alſo an Engliſh New Teſtament, and Schaaf's Syriac Dictionary, the forms of which were melted down; and likewiſe a ſmall Greek Teſtament, in 18mo.

"As far as is known, Vander Mey printed nothing elſe in this manner; and the art of preparing ſolid blocks was loſt at his death, or, at leaſt, was not afterwards employed. The cauſe may readily be conceived; for, though this proceſs in itſelf is very advantageous, it is far more expenſive than the uſual method of printing, except in thoſe caſes when ſuch works are to be printed as are indiſpenſably neceſſary, and of ſtanding worth. The number of theſe, however, is certainly ſmall; eſpecially as we are acquainted with no inſtance

in the annals of Dutch printing, that any dependence can be placed on the ſale of 150,000 copies, as was the caſe with the brothers Guyot."

The publiſher of the preceding notice ſuppoſes, nay, aſſerts, that the expence of ſtereotype precludes its uſe, except in ſuch inſtances as thoſe adopted by Didot.

STEREOMETER, an inſtrument lately invented in France, for meaſuring the volume of a body, however irregular, without plunging it in any liquid. If the capacity of a veſſel, or, which is the ſame thing, the volume of air contained in that veſſel, be meaſured, when the veſſel contains air only, and alſo when the veſſel contains a body whoſe volume is required to be known, the volume of air aſcertained by the firſt meaſurement, deducting the volume aſcertained by the ſecond, will be the volume of the body itſelf. Again, if it be admitted as a law, that the volume of any maſs of air be inverſely as the preſſure to which it is ſubjected, the temperature being ſuppoſed conſtant, it will be eaſy to deduce, from the mathematical relations of quantity, the whole bulk, provided the difference between the two bulks under two known preſſures be obtained by experiment.

Let it be ſuppoſed, for example, that the firſt preſſure is double the ſecond, or, which follows as a conſequence, that the ſecond volume of the air be double the firſt, and that the difference be fifty cubic inches, it is evident that the firſt volume of the air will likewiſe be fifty cubic inches. The ſtereometer is intended to aſcertain this difference at two known preſſures.

The inſtrument is a kind of funnel AB (fig. 1, Pl. 45.), compoſed of a capſule A, in which the body is placed, and a tube B, as uniform in the bore as can be procured. The upper edge of the capſule is ground with emery, in order that it may be hermetically cloſed with a glaſs cover M, ſlightly greaſed. A double ſcale is paſted on the tube, having two ſets of graduations; one to indicate the length, and the other the capacities, as determined by experiment.

When this inſtrument is uſed, it muſt be plunged in a veſſel of mercury, with the tube very upright, until the mercury riſes within and without to a point C of the ſcale. See fig. 2.

The capſule is then cloſed with the cover, which being greaſed, will prevent all communication between the external air, and that contained within the capſule and tube.

In this ſituation of the inſtrument, in which the mercury ſtands at the ſame height within and without the tube, the internal air is compreſſed by the weight of the atmoſphere, which is known and expreſſed by the length of the mercury in the tube of the common barometer.

The inſtrument is then to be elevated, taking care to keep the tube conſtantly in the vertical poſition. It is repreſented in this ſituation, fig. 2 ſecond poſition. The mercury deſcends in the tube, but not to the level of the external ſurface, and a column DE of mercury remains ſuſpended in the tube, the height of which is known by the ſcale. The interior air is therefore leſs compreſſed than before, the increaſe of its volume being equal to the whole capacity of the tube from C to D, which is indicated by the ſecond ſcale.

It is known, therefore, that the preſſures are in proportion to the barometrical column, and to the ſame column diminiſhed by the ſubtraction of DE. And the bulks of the air in theſe two ſtates are inverſely in the ſame proportion; and again the difference between theſe bulks is the abſolute quantity left void in the tube, by the fall of the mercury; from which data, by an eaſy analytical proceſs, the following rule is deduced: multiply the number which expreſſes the leſs preſſure by that which denotes the augmentation of capacity, and divide the product by the number which denotes the difference of the preſſures. The quotient will be the bulk of the air when ſubject to the greater preſſure.

To render this more eaſy by an example, ſuppoſe the height of the mercury in the barometer to be 78 centimetres, and the inſtrument being empty, to be plunged in the mercury to the point C. It is then covered, and raiſed until the ſmall column of mercury DE is ſuſpended, for example, at the height of ſix centimetres. The internal air, which was at firſt compreſſed by a force repreſented by 78 centimetres, is now compreſſed only by a force repreſented by 78—6, or 72 centimetres.

Suppoſe it to be obſerved, at the ſame time, by means of the graduations of the ſecond ſcale, that the capacity of the part CD of the tube which the mercury has quitted is two cubic centimetres. Then by the rule $\frac{78}{6} \times 2$ give 24 cubical centimetres, which is the volume of the air included in the inſtrument when the mercury roſe as high as C in the tube.

The body of which the volume is to be aſcertained, muſt then be placed in the capſule, and the operation repeated. Suppoſe, in this caſe, the column of mercury ſuſpended to be eight centimetres, when the capacity of the part CD of the tube is equal to two centimetres cube. Then the greateſt preſſure being denoted by 78 centimetres, as before, the leaſt will be 70 centimetres, the difference of the preſſures being 8, and the difference of the volumes two cubical centimetres. Hence $\frac{70}{8} \times 2$. gives the bulk of the included air under the greateſt preſſure 17,5 cubic centimetres. If therefore 17,5 centimetres be taken from 24 centimetres, or the capacity of the inſtruments when empty, the difference 6,5 cubic centimetres will expreſs the volume of the body which was introduced. And if the abſolute weight of the body be multiplied by its bulk in centimetres, and divided by the abſolute weight of one cubic centimetre of diſtilled water, the quotient will expreſs the ſpecific gravity of the body in the common form of the tables where diſtilled water is taken as unity, or the term of compariſon.

After this deſcription and explanation of the uſe of his inſtrument, the author proceeds with the candour and acuteneſs of a philoſopher to aſcertain the limits of error in the reſults; an object ſeldom ſufficiently attended to in the inveſtigation of natural phenomena. From his reſults it appears, that with the dimenſions he has aſſumed, and the method preſcribed for operating, the errors may affect the ſecond figure. He likewiſe gives the formulæ, by means of which the inſtrument itſelf may be made to ſupply the want of a barometer in aſcertaining the greateſt preſſure.—He likewiſe adverts to the errors which may be produced by change of temperature. To prevent theſe as much as poſſible, the actual form of the inſtrument and arrangements of its auxiliary parts are ſettled, as in fig. 3, by which means the approach of the hand near the veſſel and its tube is avoided. In this figure, the vertical poſition of the tube is ſecured by the ſuſpenſion of the veſſel, and a perforation in the table through which the tube paſſes. The table itſelf ſupports the capſule in its firſt poſition, namely, that at which the cover is required to be put on.

Mr. Nicholſon, from whoſe Journal this abſtract is immediately taken, ſuppoſes, with great probability, that the author of the invention had not finiſhed his meditation on the ſubject, when the memoir giving an account of it was publiſhed. "If he had," ſays the ingenious journaliſt, "it is likely that he would have determined his preſſures, as well as the meaſures of bulks, by weight. For it may be eaſily underſtood, that if the whole inſtrument were ſet to its poſitions by ſuſpending it to one arm of a balance at H (fig. 3), the

quantity of counterpoiſe, when in equilibrio, might be applied to determine the preſſures to a degree of accuracy much greater than can be obtained by linear meaſurement.

STERNBERG, a town of Germany, in the marquiſate of Brandenburg. It carries on a great commerce in cattle, and is 20 miles N.E. of Francfort on the Oder. Long. 15. 11. E. Lat. 52. 30. N.

STERNBERG, a town of Lower Saxony, in the duchy of Mecklenburg, 16 miles S.E. of Wiſmar. Long. 11. 50. E. Lat. 53. 45. N.

STERTZINGEN, a town of Germany, in the Tyrol, ſeated at the foot of a mountain, on the river Eyſoch, 12 miles N.W. of Brixen.

STEVENSWAERT, a fortreſs of Dutch Guelderland, ſeated on the Maeſe, 20 miles N.E. of Maeſtricht.

STEWART's ISLANDS, five iſlands in the Pacific Ocean, diſcovered by Captain Hunter, in 1791, and named by him in honour of Admiral Keith Stewart. Long. 163. 18. E. Lat. 8. 26. S.

STEYNING, a borough in Suſſex, with a market on Wedneſday. It ſends two members to parliament, and is 15 miles W. of Lewes, and 51 S. by W. of London. Long. 0. 15. W. Lat. 50. 56. N.

STEYRE, a town of Upper Auſtria, in the quarter of Traun. It carries on a great trade in iron, and is ſeated at the confluence of the Steyre and Ens, 20 miles S.E. of Lintz. Long. 14. 23. E. Lat. 48. 6. N.

STEYREGG, a town of the archduchy of Auſtria, 36 miles E.S.E. of Paſſau, and 84 W. of Vienna. Long. 15. 20. E. Lat. 48. 15. N.

STICKHAUSEN, a town and citadel of Weſtphalia, in the county of E. Frieſland, 18 miles E.S.E. of Embden. Long. 7. 13. E. Lat. 53. 14. N.

STILIGIANO, a town of Naples, in Baſilicata, famous for its baths, and ſeated near the river Salandrella.

STIRRUP; ſee SADDLE, *Supp.*

STIRUM, a town of Germany, in the duchy of Berg, ſeated on the Roer, 12 miles N. of Duſſeldorp. Long. 6. 52. E. Lat. 51. 24. N.

STOCHEM, a town of Germany, in the biſhopric of Liege, ſeated on the Maeſe, 12 miles N. of Maeſtricht. Long. 5. 42. E. Lat. 51. 4. N.

STOCKACH, a town of Suabia, in the landgravate of Nellenburg. Near this town, on March 25, 1799, the Archduke Charles gained a victory over the French, under General Jourdan. It is ſeated on a river of the ſame name, 12 miles N. of Conſtance. Long. 9. 10. E. Lat. 47. 50. N.

STOCKERAU, a town of the archduchy of Auſtria, ſituate on the Danube, ſix miles N.W. of Neuberg.

STOCKPORT, a town in Cheſhire, with a market on Friday. It has a conſiderable manufacture of cotton and printed goods, and is ſeated on the Merſey, ſix miles S. of Mancheſter, and 175 N.N.W. of London. Long. 2. 18. W. Lat. 55. 35. N.

STOCKZOW, a town of Sileſia, in the principality of Teſchen, ſeated on the Viſtula, 12 miles S.E. of Teſchen. Long. 18. 32. E. Lat. 49. 45. N.

STOKESLEY, a town in the N. riding of Yorkſhire, with a market on Saturday, 36 miles N. of York, and 239 N. by W. of London. Long. 1. 2. W. Lat. 54. 29. N.

STOLHOFFEN, a town of Suabia, in the marquiſate of Baden, ſeated in a moraſs, near the Rhine, eight miles S.W. of Baden, and 12 N.E. of Straſburg. Long. 8. 10. E. Lat. 48. 41. N.

STOLPEN, a town of Upper Saxony, in Pruſſian Pomerania, ſeated in a valley, on a river of the ſame name, 50 miles N.E. of Colberg, and 66 N.W. of Dantzic. Long. 16. 45. E. Lat. 54. 32. N.

STONE, a town in Staffordſhire, with a market on Tueſday, ſeated on the Trent, ſeven miles N. by W. of Stafford, and 140 N.W. of London. Long. 2. 6. W. Lat. 52. 54. N.

STONEHAVEN, or STONEHIVE, a town in Kincardineſhire, with a good harbour ſecured by a ſtone pier. Near it are the ruins of the caſtle of Dunnotyre, on a lofty perpendicular rock, almoſt ſurrounded by the ſea. Not far hence, is a precipitous cliff, called Fowl's Cleugh, remarkable for the reſort of the birds called kittiwakes, the young of which are much ſought after in the hatching ſeaſon. In this town is a manufacture of canvas, and ſome trade in dried fiſh and oil. It is 14 miles S. by W. of Aberdeen.

STORKAU, a town of Upper Saxony, in the Ucker marche of Brandenburg, 24 miles E.S.E. of Berlin, and 26 W.S.W. of Frankfort on the Oder. Long. 13. 35. E. Lat. 52. 24. N.

STORMARIA, a principality in the duchy of Holſtein, bounded on the N. by Holſtein Proper, on the E. by Wageria and Lawenburg, and on the S. and W. by Lunenburg and Bremen, from which it is ſeparated by the Elbe. Gluckſtadt is the capital.

STOSSEN, a town of Upper Saxony, in Thuringia, ſix miles S. of Weiſſenfels, and ſix S.E. of Naumburg.

STOURBRIDGE, a town in Worceſterſhire, with a market on Friday. It is noted for its glaſs and iron works; and is ſeated on the Stour, over which is a bridge; 22 miles N. of Worceſter, and 124 N.W. of London. Long. 2. 0. W. Lat. 52. 32. N.

STOURMINSTER, a town in Dorſetſhire, with a market on Thurſday. Near it are the ruins of an ancient caſtle, which was the ſeat of the W. Saxon kings. It is ſeated on the Stour, over which is a ſtone bridge, 20 miles N.E. of Dorcheſter, and 111 W. by S. of London. Long. 2. 37. W. Lat. 50. 56. N.

STOVE *(Encycl.)*. In the Annales de Chimie, Citizen Guyton has given an account of the ſtoves uſed in Sweden, with apertures emitting heat.

"It is well known," ſays he, "by the accounts of travellers, that the cold felt in Sweden, during a common winter, exceeds by ſeveral degrees that of our moſt ſevere winters in France; and yet in no country do the inhabitants defend themſelves from the inclemency of the ſeaſon at a ſmaller expence. But though theſe facts are well known, we cannot accumulate too many documents and proofs, when we would convert a vague tradition into a certain conviction, and induce mankind to abandon any ancient long-eſtabliſhed cuſtom.

"As to the conſtruction of theſe ſtoves, the authors I have examined obſerve, that it coſts very little, ſaves much of the iron formerly employed, and only requires bricks or ſquare tiles.

"They recommend laying them on their broadeſt ſide (de champ), to chooſe them as thin as poſſible for the interior walls, and to place the circulating flues ſo that the rain that falls down the flues of the chimney may never find its way into them.

"They alſo give ſome directions relative to the feeding theſe ſtoves, which is ſo eaſy, that in the largeſt public eſtabliſhments, a ſingle individual lights all the fires. This ſupply conſiſts in putting in as much wood as the fire-place, which is very ſmall, will hold, in only introducing ſawed wood of equal length, and as ſoon as it is burnt, ſhutting the ſlide that cuts off the communication of the circulating flues with the chimney-flue; by which means, all the heat the fuel has produced, is retained in theſe channels, eſcaping ſlowly, and ſo

as only to ſpread itſelf through the apartment; whereas any piece of wood that could not have burnt out in an equal ſpace of time, would require the ſlide to continue open, and the current of air neceſſary for its combuſtion would carry off, through the flue of the chimney, the greater part of the heat at firſt produced."

References to Plate 51.—Fig. 1, repreſents a front view of the ſtove, its height being 164 centimetres, or about 61 inches French, excluſive of the vaſe, which is merely an unconnected ornament ſtanding on the flat ſurface at top. Its breadth is 85 centims, or about 31 ½ inches French; its depth is 58 centimetres, or about 21 ½ inches French; the height may vary according to that of the room, and may without inconvenience be extended to two metres. It may alſo be reduced for a laboratory ſtove, which ought to have a ſand-bath breaſt-high.

The two other dimenſions are determined by thoſe of the bricks employed in conſtructing the internal circulating flues. which bricks ought to be in certain fixed proportions, that the ſmoke may paſs freely, and yet that it may not be accompanied by a quantity of air ſufficient to condenſe it, or to lower the temperature below the degree of heat requiſite for its complete combuſtion.

V V. The external furniture of the two heating apertures; *m m*, apertures where the air enters, which afterwards iſſues from the heating apertures. Theſe are cloſed whenever the air is brought in from without by a connected tube under the floor; which is far more favourable to the renewal of the reſpirable air of the apartment, and prevents the danger ariſing from currents of cold air attracted by the fire-place; which becomes neceſſary, whenever the volume of air in the apartment is inſufficient to ſupply at once the conſumption of the fire and the circulation in the heating tubes.

Fig. 2, is the plan of the foundation of the hearth at the line A B, in fig. 1; *l l*, are the vacancies to receive and conduct the air into the compartments where it is to be heated, previous to its iſſuing from the heating apertures, whether it be brought from without or through the apertures *m m*, in fig. 1.

Fig. 3, is a plan at the line C D, in fig. 1, that is below the door of the fire-place; *n n, n n*, the double caſt-iron plates forming the compartments, where the air receives heat from the fire; *o o*, vacancies between theſe iron-plates.

Fig. 4, is a front ſection at the line I K in fig. 3, the darts ſhewing the direction of the ſmoke in the circulating flues in front. The iron plates *n n*, are here again repreſented in their perpendicular poſition, with the tongues that form the compartments on each ſide of the fire-place. One of theſe plates is repreſented in front, fig. 7; T, is an aperture reſerved at the bottom of the fourth circulating flue, to eſtabliſh, if *needful*, the draught of air in the fire-place, by burning a few ſlips of paper, or other light combuſtible ſubſtance. This precaution, however, may be neglected, as ſoon as the ſtove has been ſufficiently heated to expel all its internal moiſture.

The door of this air-pump, as it were, muſt ſhut accurately. For this purpoſe it is enough to cut a piece of brick, which may be pierced ſo as to receive a handle, and affix upon it a piece of wrought iron as a covering.

Fig. 5, is a plan taken at the line E F, in fig. 1.

Fig. 6, is a lateral ſection at the line G H, in fig. 3, ſhewing the height of the fire-place, and the firſt direction of the flame. V, ſhews the diſpoſal of the heating-flues: the dotted lines ſhew in profile, the partitions forming the four great circulating-flues; R, the tube that conveys the ſmoke from the circulating flues into the chimney, being furniſhed with a key to intercept the communication. This is a common flue-pipe of plate-iron; but it would be more advantageous to uſe, in that part where the ſlide or ſtopple acts, ſome ſubſtance that is a worſe conductor of heat, as for inſtance, a pipe made on purpoſe, of earthen-ware.

The angle formed by this tube in its way to the chimney, renders it unneceſſary to repeat, that the firſt condition is that the body of the ſtove be detached from the wall. That now deſcribing, is 25 centimetres from the neareſt point of the niche where it ſtands; S, is an elongation of the perpendicular tube which enters the chimney; it is intended as a receptacle for the water that may be condenſed in the upper part, and to prevent its penetrating into the interior of the ſtove. The cover that terminates this elongation, facilitates the cleanſing the pipe without taking it to pieces. The dotted lines forming the ſquare ſpace Q, ſhew the place where a niche or oven, which actually exiſts in ſome of the Swediſh ſtoves, may be fixed, and which advantageouſly varies the maſonry-work that would otherwiſe fill that ſpace. All theſe figures being drawn on the ſame ſcale, the proportions may be eaſily preſerved throughout.

The conſtruction of this ſtove is neither difficult nor expenſive. The external ſurface may be coated with china tiles ſimilar to thoſe uſed in common ſtoves, that is to ſay, thin in the middle, and with a rim all round; which renders them more firm. They may alſo be fixed by a plate of metal in form of a girt. The back may be plain brick. The vaſe which ſtands on a ſlab of marble, or ſtone, is only an ornament.

In caſe heating apertures ſhould not be wanted, the whole internal part may be built of bricks, of a convenient ſhape, cemented with diluted potters'-earth, and laid on their broad ſurface *(de champ)* for the circulating flues, without any other iron-work than a caſt-iron plate over the fire-place, the door, and its frame.

The additional expence attending the heating aperture, conſiſts merely of the four caſt-iron plates, with their tongues and grooves to form the compartments repreſented in fig. 7. All the reſt is made of iron rolled and nailed; which being once bedded in brick-work, can never ſuffer the air to eſcape.

Theſe iron plates with grooves, have been well known ſince the adoption of Dr. Franklin's ſtove, and there is an engraving of them in his works; but if there be any difficulty in procuring them, the deficiency may be ſupplied in two ways:

1ſt. By ends of caſt-iron pipes placed vertically beſide each other, thus ſerving as ſides to the fire-place, and communicating with each other by ſmall channels above and below, conſtructed in the brick-work.

2d. By common ſmooth caſt-iron plates, ſoft enough to be pierced with a drill, in order to affix, with rivetted nails, wrought iron-plates bent into ſquares throughout their length, which are a complete ſubſtitute for the tongues and channels in caſt-iron, and as they are never expoſed to the flame, there is no danger of their failing.

It may eaſily be perceived that this laſt method is the moſt advantageous, becauſe it occupies leſs ſpace, and yet offers a larger ſurface to receive the heat and communicate it to the air; but there are many objections to ſtoves of this kind.

STOWEY, a town in Somerſetſhire, with a market on Tueſday, ſeven miles W. by N. of Bridgewater, and 145 W. by S. of London. Long. 3. 9. W. Lat. 51. 10. N.

STRABANE, a town of Ireland, in the county of Tyrone, ſituate on the Mourne, 11 miles S.S.W. of Londonderry. Long. 7. 19. W. Lat. 54. 50. N.

STRADELLA, a ſtrong town of Italy, in the Milaneſe, with a caſtle, ſeated on the Verſa, near the Po, 10 miles S.E. of Pavia, and 47 N.W. of Parma. Long. 9. 12. E. Lat. 45. 5. N.

STRAELEN, a town of the Netherlands, in Pruſſian Guel-

derland, five miles S.W. of Gueldres. Long. 5. 57. E. Lat. 51. 23. N.

STRANGFORD, a ſea-port of Ireland, in the county of Down, ſeated on the narrow channel that connects Lough Strangford with the Iriſh Sea, ſeven miles E. of Down. Long. 5. 30. W. Lat. 54. 31. N.

STRANGFORD, LOUGH, a deep inlet of the ſea, in the county of Down, on the E. coaſt of Ireland. It is 17 miles long, and five broad, and abounds with excellent fiſh, particularly ſmelts; and off the bar, about Auguſt, is a periodical herring fiſhery. The bar, or entrance into it from the Iriſh Sea, is three miles below Strangford. It contains 54 iſlands, that have names, and many others that are nameleſs. The burning of kelp profitably employs a great number of hands in theſe iſlands. Four of them are called Swan Iſlands, from the number of ſwans that frequent them.

STRATFORD-ON-AVON, a corporate town in Warwickſhire, with a market on Thurſday. It is memorable as the birth-place of Shakſpeare, who was buried there in 1616. It is governed by a mayor, and ſeated on the Avon, over which is a ſtone bridge, eight miles S.W. of Warwick, and 94 N.W. of London. Long. 1. 44. W. Lat. 52. 15. N.

STRATFORD, FENNY, a town in Buckinghamſhire, with a market on Monday, ſeated on the Roman Watling-ſtreet, 12 miles E. of Buckingham, and 45 N.W. of London. Long. 0. 42. W. Lat. 51. 58. N.

STRATFORD, ST. MARY'S, a conſiderable village in Suffolk, which has a ſhare in the woollen manufacture. It is 12 miles S.W. of Ipſwich.

STRATFORD, STONY, an ancient town in Buckinghamſhire, with a market on Friday. It has two churches; and is ſeated on the Ouſe, and on the Roman highway, called Watling-ſtreet, eight miles N.E. of Buckingham, and 52 N.W. of London. Long. 0. 50. W. Lat. 52. 3. N.

STRATTON, a town in Cornwall, with a market on Tueſday. It is ſeated between two rivulets, which here unite and fall into the Briſtol Channel at a ſmall diſtance. It is 18 miles N.W. of Launceſton, and 221 W. by S. of London. Long. 4. 43. W. Lat. 50. 55. N.

STRAUBINGEN, a town of Bavaria, capital of a territory of the ſame name. It is a large place, with broad ſtreets, handſome churches, and fine convents. It was taken, in 1743, by the Auſtrians, who demoliſhed the fortification; but it was reſtored in 1745. It is ſeated on the Danube, 22 miles S.E. of Ratiſbon, and 65 N.E. of Munich. Long. 12. 35. E. Lat. 48. 54. N.

STREBLA, a town of Upper Saxony, near which the Pruſſians were defeated by the Auſtrians in 1760. It is ſeated on the Elbe, 14 miles N.W. of Meiſſen, and 28 N.W. of Dreſden. Long. 23. 15. E. Lat. 51. 30. N.

STRELITZ, OLD, a town of Lower Saxony, in the duchy of Mecklenburg Strelitz. It had a palace, which was burnt down in the night, in 1712; Duke Adolphus Frederic III. and his family, narrowly eſcaping. It is ſeated in a plain, almoſt ſurrounded by moraſſes, 35 miles S.W. of New Brandenburg.

STRELITZ, NEW, a town in the duchy of Mecklenburgh Strelitz, which owes its origin to the deſtruction of the ducal palace in Old Strelitz; in conſequence of which, Duke Adolphus Frederic III. began to erect a magnificent palace, two miles from the ſite of the old one, at a place called Glieneke, which was before his hunting ſeat; and, in 1733, he founded a new town adjoining to the palace, and ordered it to be called New Strelitz. It is regularly planned in the form of a ſtar. The centre is a ſpacious market-place, and thence a number of ſtreets branch out in ſtraight lines. The chief ſtreet leads to the palace, and the next to a pleaſant lake.

STRENG, or STRENGUES, a town of Sweden, in Sudermania, with a biſhop's ſee, and a college. It is ſeated on the lake Maeler, 30 miles W. of Stockholm. Long. 17. 40. E. Lat. 59. 20. N.

STRIEGAU, a town of Sileſia, in the principality of Schwiednitz, nine miles N.W. of Schwiednitz.

STROMSHOLM, a town of Sweden, in Weſtmanland, ſituate on the lake Mælar, 45 miles S.W. of Upſal. Long. 16. 24. E. Lat. 59. 30. N.

STROMBERG, a town of Weſtphalia, capital of a ſmall diſtrict, in the biſhopric of Munſter. It is 20 miles S.E. of Munſter, and 20 N.W. of Paderborn. Long. 7. 43. E. Lat. 51. 45. N.

STROMBERG, a town of Germany, in the palatinate of the Rhine, 26 miles W. of Mentz, and 48. E. of Treves. Long. 7. 21. E. Lat. 49. 57. N.

STROMSOE, a town of Norway, in the province of Aggerhuys, 18 miles S.W. of Chriſtiania. Long. 10. 20. E. Lat. 59. 43. N.

STROMSTADT, a town of Sweden, in the province of W. Gothland, celebrated for its ſhell-fiſh. Long. 11. 4. E. Lat. 59. 43. N.

STUHLWEISSENBURG, a ſtrong town of Lower Hungary, capital of Ekekerſdegewar. It had the title of regalis, or royal, becauſe formerly the kings were crowned and buried here. It has been ſeveral times taken by the Turks, but has been in the hands of the houſe of Auſtria ever ſince 1688. It is ſeated on the Rauiza, 20 miles S.W. of Buda, and 162 N. by W. of Belgrade. Long. 18. 40. E. Lat. 47. 19. N.

STULINGEN, a town of Suabia, ſubject to the Duke of Furſtenburg, with a caſtle, 35 miles W. of Conſtance. Long. 8. 24. E. Lat. 47. 45. N.

STUTGARD, a city of Suabia, capital of the duchy of Wirtemburg. It is ſurrounded by walls and ditches, and has an ancient caſtle, with a rich cabinet of curioſities, a ducal palace, an orphan houſe, and a college. The ſtreets are narrow in the city, and the houſes generally of wood; but there are fine houſes and ſtraight ſtreets, in one of the ſuburbs. Stutgard was taken by the French in June, 1796. It is ſeated in a plain among mountains, near the river Neckar, 36 miles E. of Baden, and 52 N.E. of Straſburg. Long. 9. 10. E. Lat. 48. 50. N.

SUANES, SUANI, or SUANETI, a poor and ſimple people of Aſia, who inhabit one of the four diviſions of Imeritia. They ſubſiſt by raiſing cattle, and by a little agriculture.

SUAQUAM, a ſea-port of the country of Abex, ſeated on a ſmall iſland of the ſame name, on the W. ſide of the Red Sea. It is the reſidence of a Turkiſh governor under the Baſhaw of Cairo, and was once a very flouriſhing place, but is now gone to decay. Long. 37. 55. E. Lat. 19. 56. N.

SUBBIACO, a town of Italy, in Campagna di Roma, with a caſtle, ſeated on the Teverone, 33 miles E. of Rome.

SUCCESS BAY, a bay of Tierra del Fuego. The S. promontory, at its entrance, called Cape Succeſs, is in long. 65. 27. W. lat. 55. 1. S.

SUCHTELEN, a town of Weſtphalia, in the duchy of Juliers, 12 miles E. of Ruremonde, and 21 N. of Juliers. Long. 6. 2. E. Lat. 51. 18. N.

SUDERHAMN, a town of Sweden, in the province of Helſingland. It has a conſiderable trade in linen, butter, timber, and flax. It is ſituate at the mouth of a river, near

the gulf of Bothnia, 20 miles N. of Geſle. Long. 17. 5. E. Lat. 63. 20. N.

SUDERKOPING, a town of Sweden, in E. Gothland, 10 miles S. of Nordkoping, and 90 S.W. of Stockholm. Long. 15. 56. E. Lat. 58. 19. N.

SUDERMANIA, or SUDERMANLAND, a province of Sweden Proper, 62 miles long, and 42 broad; bounded on the N. by Upland and Weſtermania, on the E. by the peninſula of Tarin, on the S. by the Baltic, and on the W. by Nericia. It is the moſt populous part in Sweden, and abounds in corn, and mines of divers metals. Nikoping is the capital.

SUDERTELGE, a town of Sweden, in the province of Sudermania. It was formerly a conſiderable ſtaple town, and has ſtill a manufacture of worſted and ſilk ſtockings. It is 16 miles W.S.W. of Stockholm. Long. 18. 0. E. Lat. 59. 10. N.

SVENBORG, a ſea-port of Denmark, in the iſland of Funen, with the beſt harbour in the iſland. Here are manufactures of woollen and linen. It is 22 miles S. of Odenſee. Long. 10. 37. E. Lat. 55. 9. N.

SUGELMESSA, or SIGELMESSA, a province of Barbary, bounded on the S. by the kingdom of Tafilet, and on the N. by Mount Atlas. It is about 100 miles in length; abounds in corn, dates, and other fruits, and has mines of iron, lead, and antimony. The government is a republic. The capital, of the ſame name, is ſeated on the Zig, 150 miles N.N.E. of Tafilet. Long. 5. 5. W. Lat. 29. 40. N.

SULLY, a town of France, in the department of Loiret, ſeated on the Loire, 20 miles S.E. of Orleans. Long. 2. 26. E. Lat. 47. 40. N.

SULMONA, a town of Naples, in Abruzzo Citeriore, with a biſhop's ſee. It was anciently called Sulmo, and is remarkable for being the birth-place of Ovid. It is ſeated on the Sora, 26 miles S.W. of Chieti. Long. 14. 55. E. Lat. 42. 0. N.

SULPHURET, a new chemical name, applied to any combination of ſulphur with other ſubſtances on which it is capable of acting. Dr. Higgins invented a *ſulphuret of lime*, which he propoſes to be uſed in the arts as a ſubſtitute for pot-aſh. Four pounds of the flowers of ſulphur and twenty of ſlaked lime in fine powder are mixed, and boiled in 16 gallons of water, about half an hour, ſtirring it now and then. Soon after the agitation of boiling has ceaſed, the clear ſulphuret of lime is to be drawn off. On the dregs, 16 gallons of freſh water are added, and, after boiling and ſtraining, 33 gallons more, for the purpoſe of obtaining the whole of the ſulphuret. Theſe dilutions are ſufficient to render the liquid (when all is mixed together) of a proper ſtrength for a *bleaching liquor*; and thus about 60 gallons are obtained from four pounds of brimſtone.

SULTANIA, a conſiderable town of Perſia, in Irac-Agemi. Here is a magnificent moſque, which contains the tomb of Sultan Chodabend. It is 50 miles N.W. of Caſbin. Long. 51. 53. E. Lat. 36. 16. N.

SULTANPOUR, a town of Hindooſtan Proper, in the province of Lahore, 62 miles S.E. of Lahore. Long. 73. 50. E. Lat. 30. 25. N.

SULTANPOUR, a town of Hindooſtan Proper, in the province of Oude, 32 miles S. of Fyzabad, and 50 N. of Allahabad. Long. 82. 30. E. Lat. 29. 5. N.

SULTZ, a town of Suabia, in the duchy of Wirtemburg, near the Neckar, where are ſome ſalt-works ſufficient to ſupply the duchy with ſalt. It is 12 miles S.E. of Frendenſtadt, and 12 N. of Rothwell. Long. 8. 35. E. Lat. 48. 18. N.

SULTZ, a town of France, in the department of Upper Rhine, with a medicinal ſpring, 12 miles S.S.W. of Colmar.

SULTZBACH, a town of Germany, in the palatinate of Bavaria, with a caſtle, ſubject to the Duke of Neuburg-Sultzbach. It is 10 miles N.W. of Amberg, and 32 N. of Ratiſbon. Long. 11. 56. E. Lat. 49. 38. N.

SULTZBURG, a town of Suabia, in the margravate of Baden-Durlach, with a fine palace. It is ſeated in a territory, fertile in good wine, eight miles S.W. of Friburg. Long. 7. 30. E. Lat. 47. 54. N.

SUMBUL, a town of Hindooſtan Proper, in the province of Oude, 45 miles W.N.W. of Bereilly, and 65 E. of Delhi. Long. 78. 55. E. Lat. 21. 25. N.

SUMBULPOUR, or SUMELPOUR, a town of the peninſula of Hindooſtan, in the province of Oriſſa, 144 miles W.N.W. of Cattack, and 280 W. of Calcutta. Long. 83. 40. E. Lat. 21. 25. N.

SUMEH, a town of Turkey in Aſia, in the province of Natolia, 14 miles E. of Pergamo.

SUMEREIN, a town of Lower Hungary, ſeated in the iſland of Schut, made by the river Danube. It is 16 miles S. of Preſburg. Long. 17. 23. E. Lat. 48. 4. N.

SUNBURY, a ſea-port of the United States, in Georgia, with a ſafe and convenient harbour. Several ſmall iſlands interlocking with each other, render the paſſage to ſea winding, but not difficult. The town being very healthy, is the reſort of the planters from the adjacent places of Midway and Newport, during the ſickly months. It is 34 miles S. of Savannah. Long. 81. 15. W. Lat. 35. 34. N.

SUNBURY, the county-town of Northumberland, in Pennſylvania, ſeated below the junction of the E. and W. branches of the Suſquehannah, 126 miles N. of Philadelphia. Long. 76. 50. W. Lat. 40. 51. N.

SUNDERBUNDS, or THE WOODS, a tract of country, conſiſting of that part of the Delta of the Ganges, in Bengal, which borders on the ſea. In extent it is equal to the principality of Wales. It is completely enveloped in woods, infeſted with tigers, and compoſed of a labyrinth of rivers and creeks, all of which are ſalt, except thoſe that immediately communicate with the principal arm of the Ganges. Here ſalt, in quantities equal to the whole conſumption of Bengal and its dependencies, is made and tranſported with equal facility; and here alſo is found an inexhauſtible ſtore of timber for boat building.

SUNDERBURG, a town of Denmark, in the iſland of Alſen, with a caſtle. It is ſeated on a ſtrait, called Sunderburg Sound, 12 miles E. of Flenſburg. Long. 10. 0. E. Lat. 54. 51. N.

SUNDERDOO, or MELUNDY, a fortified iſland and ſea-port of the Deccan of Hindooſtan, on the Concan coaſt, reduced by Commodore James in 1756. It is about 10 miles N.E. of Vingorla Rocks, and 36 N.N.W. of Goa. Long. 73. 20. E. Lat. 16. 3. N.

SUNDERLAND, a ſea-port in the biſhopric of Durham. It is a flouriſhing town, and, for the exportation of coal, is next in conſequence, on that ſide of the kingdom, to Newcaſtle. Its port, at the mouth of the Wear, will not admit very large ſhips; but veſſels hence can get out to ſea much more readily than from the Tyne. The coal is brought down the Wear from numerous pits near its banks. Here are ſeveral glaſshouſes; and there is an exportation of grindſtones and other articles. It is 13 miles N.E. of Durham, and 264 N. by W. of London. Long. 1. 14. W. Lat. 54. 56. N.

SUNDERLAND, a town of the United States, in Maſſachuſets, ſituate on Connecticut River, 100 miles W. of Boſton.

SUNDI, a province of Congo, which lies along the river Zaire. Its rivers render it extremely fertile, and in the mountains are mines of ſeveral metals. The capital is of the ſame name. Long. 17. 55. E. Lat. 4. 50. S.

SUNDSWALL, a ſea-port of Sweden, in the diviſion of Norland, and province of Medelpadia. The chief trade is in tar, bark of birch trees, deals, and linen. It is ſeated near the gulf of Bothnia, 195 miles N. by W. of Stockholm. Long. 18. 5. E. Lat. 62. 45. N.

SUNNEBERG, or SONNEBERG, a town of Brandenburg, in the territory of Sternburg, with a caſtle, ſeated on the Darta, 50 miles E. by N. of Berlin. Long. 15. 10. E. Lat. 52. 41. N.

SUPERIOR, LAKE, a lake of N. America, ſo called from its being the largeſt on that continent. According to the French charts it is 1500 miles in circumference. It contains many iſlands; two of them very large, eſpecially Iſle Royale, which is 100 miles long, and, in many places, 40 broad. The Indians ſuppoſe theſe iſlands to be the reſidence of the Great Spirit. Upward of 30 rivers enter this lake, ſome of which are of conſiderable ſize. It abounds with trout and ſturgeon. Storms affect this lake as much as they do the Atlantic Ocean. It diſcharges its waters from the S.E. corner, through the ſtraits of St. Marie, into Lake Huron.

SUPINO, an ancient town of Naples, in Moliſe, with a caſtle. It is ſeated at the ſource of the Tamara, at the foot of the Apennines, 17 miles N. by W. of Benevento.

SURE, a river of Ireland, in Tipperary, which flows by Clonmel and Carrich to Waterford, and falls into St. George's Channel.

SURGOOJA, a town of the peninſula of Hindooſtan, capital of a province of the ſame name, in the country of Oriſſa. It is 180 miles S.S.W. of Patna.

SURINGIA, a commercial town of Japan, in the iſland of Niphon, capital of a province of the ſame name, with a caſtle, where the emperors formerly reſided. Long. 139. 5. E. Lat. 39. 30. N.

SURSEE, a town of Switzerland, in the canton of Lucern, ſeated near the lake of Sempach, five miles S. of Lucern.

SURSOOTY, a town of Hindooſtan Proper, in the province of Delhi, 114 miles N.W. of Delhi.

SUS, a river of Morocco, which forms the S. boundary of that empire, and enters the Atlantic, at Meſſa. Like the Nile, its annual inundations enrich the country.

SUS, one of three grand diviſions of the empire of Morocco; bounded on the W. by the Atlantic, on the N. by Mount Atlas, on the E. by Geſula, and on the S. by the river Sus. It is a flat country, abounding in corn, ſugar-canes, and dates. The inhabitants, who are chiefly Berebers, or ancient natives, are diſtinguiſhed by their induſtry; and many of them, who live in towns, become opulent, and are much more polite than the natives of Fez and Morocco. In the mountainous part they are entirely free, and are governed by their own chiefs.

SUSA, a ſtrong town of Piedmont, capital of a marquiſate of the ſame name, with a fort. Here is a rich convent, called the abbey of St. Juſt, and a triumphal arch to the honour of Auguſtus Cæſar. It is ſeated on the Doria, among pleaſant mountains, and is called the key of Italy, being the principal paſſage out of France into Italy. It was taken by the French in 1704, but reſtored to the Duke of Savoy in 1707. It is 30 miles N.W. of Turin. Long. 7. 24. E. Lat. 45. 20. N.

SUSDAL, a town of Ruſſia, in the government of Volodimir, capital of a duchy of the ſame name, with an archbiſhop's ſee. It is built of wood, and ſeated on the Khaſma, 90 miles N.E. of Moſcow. Long. 40. 25. E. Lat. 56. 26. N.

SUSQUEHANNAH, a river of N. America, which iſſues from Lake Otſego. It croſſes three times the line which divides the ſtate of New York from Pennſylvania, and empties itſelf into the head of the bay of Cheſapeak.

SUSSAC, a town of France, in the department of Upper Vienne, 15 miles S.E. of Limoges.

SUSTER, an ancient and celebrated, but now decayed, town of Perſia, capital of Kuſiſtan. It is ſeated on the Caron, 105 miles S.W. of Iſpahan. Long. 51. 19. E. Lat. 31. 15. N.

SUSTEREN, a town of Weſtphalia, in the duchy of Juliers, two miles from the river Maeſe, and 12 S. of Ruremonde. Long. 5. 50. E. Lat. 50. 56. N.

SUTRI, a town of Italy, in the patrimony of St. Peter, with a biſhop's ſee, ſeated on the Puzzulo, 22 miles N.W. of Rome. Long. 12. 25. E. Lat. 42. 10. N.

SUWOROW (Prince Alexander Baſilowitch), ſurnamed, on account of his military achievements at Rymnik and in Italy, Rymnikſki and Italiſkoi, was born in the year 1730. His family was of the claſs of nobility, and of Swediſh origin: one of his anceſtors ſettled in Ruſſia the latter end of laſt century, and having diſtinguiſhed himſelf in the wars againſt the Tartars, was rewarded with lands and peaſants. Baſil, the father of Alexander, was godſon to Peter the Great, and at his death enjoyed the two-fold rank of general and ſenator.

He intended his ſon for the profeſſion of the law, but a preference very common in youth, impelled him to chooſe the military inſtead of the forenſic line. He was at the age of twelve inrolled in the Ruſſian army, but ſtaid at home ſome years afterwards to improve in the ſciences. He purſued the line of reading both profeſſional and hiſtorical, calculated to form a ſoldier, with great diligence and ſucceſs: he ſtudied, beſides, general hiſtory and philoſophy on an enlarged ſcale, and made himſelf maſter of moſt European languages, which he ſpoke and wrote with correctneſs and facility.

Suworow began his career as a private ſoldier, being enrolled as a fuſileer in the guards of Seimonow. In 1747 he ſerved as a corporal, and was ſoon advanced to the rank of ſerjeant. His ſubſequent promotion was rapid: in 1754 he quitted the guards with the brevet of lieutenant in the army; in 1756 the conduct of proviſions was entruſted to him: he was afterwards lieutenant to the auditor-general, and appointed to the command of Memel with the rank of lieutenant-colonel. He made his firſt campaign in the ſeven-years' war againſt the Pruſſians, and by his valour obtained the favourable notice of his commanding officer, Count Fermor, but he found no opportunity to acquire diſtinction. In 1761 he ſerved in the light troop under General Berg, and made himſelf conſpicuous in various encounters, particularly in an attack on the town of Golnau, where his horſe was killed under him, and he received a dangerous contuſion on the breaſt from the rebound of a muſket ball. General Berg, in a ſubſequent action at Naugarten, intruſted him with the command of his right, which he conducted with great bravery, though the attack was unſucceſsful. On the 16th of December, the campaign terminated by the ſurrender of Colonel de Heyde to Count Romanzow. The affairs of the King of Pruſſia were conſidered as deſperate, when he was, at length, ſaved by the death of the Empreſs Elizabeth. Her ſucceſſor, on the 5th of May, 1762, made peace, and afterwards concluded an alliance with Frederick, and the Ruſſians engaged no more in that war. Suworow was rewarded with the command of

the regiment of dragoons of Archangelgorod, and ſent to Peterſburgh with an eſpecial letter of recommendation.

After the revolution which placed the late Empreſs Catharine on the throne, Suworow was treated with many marks of confidence and kindneſs, and obtained great applauſe for his activity in teaching the troops the new exerciſe. In 1768 he was advanced to the rank of brigadier: war being commenced againſt the confederates of Poland, he was ordered to repair thither, and began his march in the unfavourable month of November. In the courſe of this war he diſtinguiſhed himſelf by his prudence in council, celerity in marching, and intrepidity in the field: the poſt of honour was always aſſigned to him, and he conſtantly maintained an eminent reputation. In the autumn of the year 1770, he fell into the Viſtula, having by accident miſſed the pontoon in leaping from the bank, and was in great danger of being drowned. A grenadier at length ſucceeded in drawing him out by the hair, but in ſo doing ſtruck his head againſt a pontoon with ſuch violence as to occaſion a contuſion, which he did not recover for ſome months. He continued on ſervice in Poland till the ſpring of 1773, and acquired the admiration of all judges of military diſcipline and tactics. The battle of Stalowitz, which he gained on the 11th of September, 1771, was peculiarly extolled by the King of Pruſſia; and the empreſs, being highly ſatisfied with Suworow's conduct, raiſed him to the rank of major-general, and conferred on him the order of St. Alexander Newſky, which ſhe accompanied with a very flattering letter.

On quitting Poland, Suworow repaired immediately to Peterſburgh, where he did not long remain, being in the ſpring of 1773 ordered to join the army which had then taken the field againſt the Turks. He reached Jaſſy in the beginning of May, and ſoon afterwards gained the famous and important battle of Turtukay, though two thouſand Coſſacs, promiſed by Potemkin, did not arrive till after the battle. Suworow's diſpatch to Romanzow, the commander-in-chief, is a ſpecimen of his uſual laconiſm: "Honour and glory to God! Glory to you, Romanzow! We are in poſſeſſion of Turtukay, and I am in it. Suworow." The empreſs, in token of approbation and gratitude, ſent him the croſs of the order of St. George, of the ſecond claſs, accompanied with many expreſſions of ſatisfaction. In June the general was obliged to retire to Buchareſt for the recovery of his health, which was aſſailed with a violent fever. Yet he attended military operations, and on the 27th of July, though in ſo weak a ſtate that he could not walk, unleſs ſupported by two men, and his voice ſo feeble that he was obliged to have an officer near him to repeat the commands, he contributed materially to another important victory near Turtukay. In September he again defeated the Turks near Niſrow.

Previouſly to his laſt engagement, Suworow had received ſeveral dangerous hurts, particularly one in his leg, and another on his back, which was occaſioned by a fall down ſtairs: his health was, in other reſpects, but partially reeſtabliſhed, and therefore, in October, he retired into Ruſſia, and paſſed the winter there. In the enſuing ſpring, he returned to the army of the Danube, being advanced to the rank of lieutenant-general, and appointed to command the ſecond diviſion. On the 11th of June he gained a great victory at Kaſludgi; but his ill health obliged him once more to return to Buchareſt, and before he completely recovered, peace was concluded.

Suworow now intended to have returned to Ruſſia, but, at Jaſſy, was met by an order to repair immediately to Warſaw, to aſſiſt Prince Wolgouſki in appeaſing the troubles in the interior of that part of the empire. He arrived at Moſcow, in Auguſt, 1774, and ſoon ſucceeded in quelling the inſurrection, and taking priſoner Pugatſchew, the chief of the inſurgents. Having performed this important ſervice, and reſtored peace, he retired to paſs ſome time on his eſtate.

From this retreat he was called in November, 1776, when he received a commiſſion for the Crimea, where the government was unſettled, the people in inſurrection, and expoſed to the inroads of the Circaſſians, and the whole peninſula in diſorder. Here he remained, with few intervals, for ſeveral years. He was in this period complimented by the empreſs with a ſnuff-box, containing her portrait ſet in diamonds; and, in 1783, the grand croſs of the equeſtrian order of Saint Wolodomir.

In 1786, Suworow was promoted to the rank of commander-in-chief. In February, 1787, the empreſs paid a viſit to the Crimea, now called Catherinoſlaw, and Taurida, of which Prince Potemkin was then governor. Suworow, on this ſplendid occaſion, was appointed to command the corps diſtributed in the environs of Kiowie and Pultawa: he was much noticed by the Emperor Joſeph II. who attended the empreſs under the title of Count Falkenſtein. The empreſs preſented Suworow with a box enriched with her cypher in diamonds. In Auguſt he aſſumed the command of the corps of Cherſon and Kinburn.

The Turks now commenced hoſtilities without a preliminary declaration, by an attempt to ſurpriſe two Ruſſian veſſels in the bay of Kinburn. After ſeveral unimportant attempts, they began to bombard the town, and, on the 1ſt of October, invaded the iſland with very ſuperior numbers. In this ſituation, Suworow had nothing to depend on but his valour and military ſkill; he gave ſtrict orders that not a ſhot ſhould be fired till the enemy were within 200 yards of the glacis. This prudent command was ſtrictly obeyed; a ſpirited fire was opened at the preciſe moment, and the garriſon ſallied: twice the Ruſſians were overpowered by numbers, and compelled to retire as far as the glacis; but, at length, after a ſanguinary conteſt of nine hours, victory declared in their favour. The Turks had ſent away their boats to prevent retreat, and therefore out of 6000 who landed, not more than 700 eſcaped; the reſt were either ſlain in battle, or drowned in the ſea. Suworow was once in imminent danger; he was diſmounted, and ſeeing a Turk leading a ſpare horſe, miſtook him for a Coſſac, and demanded the beaſt: the Turk lifted his ſabre to diſpatch him, but was, in the ſame moment, thruſt through the body with a bayonet. The general received a muſket ſhot in the arm, which, for the moment, he only waſhed in ſalt water, and bound up with his cravat: it was afterwards properly attended to. Te Deum was performed at Peterſburgh by the empreſs's order, who ſent Suworow a letter highly complimentary, and afterwards the order of Saint Andrew for himſelf, and ſix croſſes of Saint George, to be diſtributed according to his diſcretion.

He now directed a conſiderable ſhare of attention to the fortifying of Kinburn, conceiving, that although the Turks had for a time retreated, they would ſoon return. He was not deceived in this expectation: Haſſan Pacha made ſeveral attempts to deſtroy the Ruſſian fleet, but, being generally defeated, was obliged to return to Conſtantinople. Prince Potemkin then reſolved to attack Oczakow, and the ſiege began, in due form, on the 29th of Auguſt, 1788. From a ſally made by the Turks on the preceding evening, a general engagement enſued, and Suworow, being pointed out by a Greek ſlave who had deſerted, was aimed at, and wounded in the neck. He was, in conſequence, obliged to retire to Kinburn, where his ſymptoms became dangerous and alarming; he was alſo attacked by the jaundice, but recovered from both. During his convaleſcence, his life was endan-

gered by the blowing up of a magazine, full of charged bombs, grenades, and various other combuſtibles; a bomb fell in his bed-chamber, tore his bed, broke down part of the wall, and wounded him in the face, breaſt, and knee. Thus he was incapacitated from attending the further progreſs of the ſiege, and obliged to remain at Cherſon and Kremenſchuck for the recovery of his health. In the beginning of 1789 he went to Peterſburgh, where he was moſt graciouſly received; the grateful and diſcerning empreſs preſented him with a plume of diamonds for his caſque, diſtinguiſhed with the letter K in a cypher, as an acknowledgment for his defence of Kinburn.

Suworow ſhortly afterwards returned to the army, and, arriving at Berlats, eighteen miles from Jaſſy, took the command of the corps there; and, in conjunction with the Prince of Saxe-Cobourg, whom he joined by a moſt rapid and aſtoniſhing march, defeated the enemy at Forhani, and took the fortified convents of Saint Samuel and Saint John. At this period, Suworow ſuſtained conſiderable injury from a ſmall accident: a pin ran into his foot, the head broke off, and it could not be extracted. This made him rather lame, and the Turks, in deriſion, uſed to call him *Topal Bacha*, or the limping general.

After his co-operation with Cobourg, for which he received thanks in a very obliging letter from the emperor Joſeph, Suworow returned to Berlat, but was ſoon ſummoned again to join the Auſtrians, as the Turkiſh army under the grand-vizier was advancing to give them battle. He effected the required junction, by a rapid and dangerous march; and on the 22d of September, 1789, they gained an important and deciſive victory, near the river Rymnik. The Turks loſt ten thouſand men, and an immenſe booty, while the loſs of the allies did not amount to three hundred. The number of the Turkiſh army was near one hundred thouſand; that of their opponents about twenty-five thouſand. The conduct of Suworow was highly extolled by both the allied ſovereigns. The emperor Joſeph conferred on him the dignity of count of the empire; the empreſs ſent him a ſword, enriched with diamonds, and the order of Saint Andrew, decorated with brilliants: in a ſhort time after, he received the diploma of count of the empire of Ruſſia, with the title of Rymnikſki, and the order of Saint Andrew of the firſt claſs. Theſe honours were accompanied with letters replete with friendſhip and gratitude.

In 1790 ſome attempts at pacification were made, but without ſucceſs, though at length an armiſtice was agreed upon at Reichenbach. In the beginning of November, Suworow made his approaches to the important fortreſs of Iſmailow, which he was ordered by Potemkin to take *at all hazards*. This order was extremely difficult, from the advanced period of the year, and the great ſtrength of the place, which the Turks deemed impregnable. Finding, from the ſmallneſs of his army, and the want of heavy artillery, that it was in vain to attempt a regular ſiege, he only made a feint of doing ſo, and reſolved on a ſcalade. On the 9th of December, he ſent a letter of Prince Potemkin, to which he added a few lines, requiring the ſeraſkier to ſurrender: the anſwer diſplayed confidence in the ſtrength of the place, and adviſed the Ruſſians to retreat. The next day, in anſwer to a meſſage of the ſame import, the ſeraſkier declared, "that the Danube ſhould ceaſe to flow, or the heavens bow down to the earth, before Iſmailow ſhould ſurrender to the Ruſſians." Suworow ſent a third meſſage, aſſuring the ſeraſkier, on his word of honour, that unleſs he hung out a white flag on that very day, the place would be taken by aſſault, and all the garriſon put to the ſword. Many of the Ottomans were diſpoſed to ſurrender, but the ſeraſkier and the majority rejected the propoſition, and returned no anſwer.

Suworow now animated his troops by an admirable harangue, and though he received a diſpatch from Potemkin, adviſing him, if not ſure of ſucceſs, to deſiſt from the aſſault, he determined to take advantage of the ardour of his troops, and proceed. Some Coſſac deſerters appriſed the enemy of the intended operations, and they were prepared; yet, notwithſtanding the diſproportion of numbers and ſtrength, the Ruſſians at length ſucceeded on every ſide. The Turks, after the Ruſſians had entered, defended themſelves with great obſtinacy, and conteſted every foot of ground. The ſeraſkier was unfortunately killed, after he had ſurrendered. After a moſt ſanguinary aſſault, the victory was complete. The Turks defended themſelves with great rage and fury; even women and children armed with poniards, fell on the Ruſſian ſoldiers. Firing was kept up during the whole night by ſome Turks, who had ſecreted themſelves in dwelling-houſes: all who refuſed to ſurrender were put to the ſword, but thoſe who demanded quarter were ſpared. The Ottomans loſt, according to the official report, thirty-three thouſand killed or dangerouſly wounded, and about nineteen thouſand priſoners. The loſs of the aſſailants, was eighteen hundred and thirty killed, and two thouſand five hundred wounded. The dead Turks were thrown into the Danube. Of the whole garriſon, only one man eſcaped; he being ſlightly wounded, fell into the Danube, and reached the oppoſite bank. He carried the fatal news to the vizier. The plunder was eſtimated at ten millions of piaſtres: the ſoldiers, according to promiſe, were permitted to pillage for three days. Suworow would not retain for his own uſe the ſmalleſt article. His diſpatch to Potemkin was in theſe words: "The Ruſſian colours wave on the ramparts of Iſmailow." In January, 1791, Suworow returned to Peterſburgh, where he was received with a degree of cordiality proportioned to his merits: he was appointed lieutenant-general of the Preobraſchenſki guards, and a large medal in gold and in ſilver was ſtruck by the empreſs's order, in commemoration of his important victory. In December, 1791, peace was concluded, and the empreſs ſhewed her gratitude by giving Suworow a ring and a ribbon ornamented with diamonds, valued at ſixty thouſand rubles.

Suworow's military talents were not again called into exerciſe till the war in Poland in 1794, which ended in the total deſtruction of that kingdom. Many Poles had entered into the Ruſſian army, but when Koſciuſko appeared in arms in Poland, vaſt numbers deſerted in large bodies, with their arms, drums, and colours, and joined their countrymen. Suworow was ordered to proceed by forced marches to Red Ruſſia, with a corps of fifteen thouſand men; in order to diſarm the Poles who yet remained. This delicate and important ſervice he executed with great diſpatch, and without effuſion of blood. On the 14th of Auguſt, 1794, he ſet out for Poland, at the head of eight thouſand men, by forced marches. After ſeveral victories of ſmall note, and a moſt important battle in which he utterly defeated the Poles near Thereſpol, Suworow proceeded to the ſiege of Praga. Having made the neceſſary preparations, he admoniſhed the garriſon of the folly of reſiſtance, and adviſed them to accept the amneſty, as the only means of preſerving themſelves from deſtruction. Infatuated with the viſions of French licentiouſneſs, one of the Poliſh chiefs ſent him a letter couched in terms not ſufficiently reſpectful; Suworow chaſtiſed the writer by an energetic anſwer, which produced great diſmay among the confederates. On the 22d of October he advanced againſt Praga, with drums beating and colours flying. The aſſault and defence were conducted with great intrepidity,

both ſides being animated by deadly animoſity, but victory declared in favour of the Ruſſians, who at nine in the morning, after four hours' fighting, remained maſters of the place. Thirteen thouſand Poles were left dead on the field of battle, and two thouſand drowned in the Viſtula: fourteen thouſand ſix hundred and eighty were taken priſoners.

Suworow announced his victory in his uſual laconic ſtyle, in a letter to the King of Pruſſia: *Praga eſt à moi, et Varſovie tremble.* In fact, the council at Warſaw ſoon ſent a meſſage of capitulation, and obtained terms much more lenient than they expected.

After ſome delays, Suworow with his army entered Warſaw the 28th of October: when the keys were preſented, he preſſed them to his lips, and holding them up towards heaven, ſaid, "Almighty God, I render thee thanks, that I have not been compelled to purchaſe the keys of this place as dear as—" and turning his face towards Praga, burſt into tears. He ſaluted the magiſtrates with cordiality, and embraced every one whoſe countenance diſplayed ſatisfaction, eſpecially common people of an advanced age. The people, overjoyed at the expected return of order, rent the air with ſhouts of "Long live Catherine! Long live Suworow!" He had the ſatisfaction of reſtoring to liberty 1376 Ruſſian priſoners, whom a wretch named Kolontay had propoſed to the revolutionary committee to maſſacre. The termination of this unexampled campaign, the ſucceſs of which was entirely due to Suworow, was highly propitious to Ruſſia, as the Poliſh rebels were entirely defeated, diſarmed, and diſperſed, and the ſubmiſſion of the country amply ſecured. The partition of the kingdom ſpeedily enſued.

All the ſovereigns intereſted in this event vied in ſhewing gratitude to Suworow. The King of Pruſſia ſent him, by an extraordinary meſſenger, the order of the red and black eagle; the emperor preſented him with his portrait enriched with diamonds, eſtimated at fifty thouſand crowns; the empreſs wrote him a letter, announcing his elevation to the rank of field marſhal, and ſent him a batoon for the occaſion, the jewels of which were equally valuable with the emperor's preſent; ſhe alſo gave him an eſtate of 7000 peaſants of both ſexes, in the diſtrict of Kobin.

During the continuance of Catherine's reign, he was treated with conſtant attention, and undiminiſhed regard, and appointed to the government of an army of 80,000, including the command of four extenſive provinces. On the acceſſion of Paul I. Suworow entitled himſelf to his eſteem, not by the courtly mode of flattery, but by a diſplay of honeſt and frank diſintereſtedneſs and ſpirit. A great number of military officers being diſmiſſed by the emperor without a trial, the general received them kindly, employed ſeveral in his own diviſion, and liberally ſhared his houſe and table with others, till they ſhould be re-appointed. Paul was angry at this conduct, and reproached Suworow, who replied, "I know them; they are loyal and brave: ſome are entirely blameleſs, others have committed only trivial errors. But granting them to be more culpable, they are poor and neglected—Are they to turn rogues and robbers? —I ſhould not be a loyal Ruſſian, if I could ſuffer it:—I have taken them into my protection." The emperor juſtly appreciated the field-marſhal's frankneſs, and many of the officers were promoted on his recommendation.

The general events of the campaign of 1799, when Suworow gained ſo much additional renown, and was exalted to the rank of Prince, with the ſurname Italiſkoy, are too recent and too well known to be enumerated in this ſketch. The cauſes which occaſioned ſome diſaſters at the cloſe of the campaign are not yet ſufficiently underſtood. The ſtrange and unaccountable mode of conduct ſubſequently adopted by Paul. I. baffles conjecture, and is referrable to no fixed principle. The neglect and diſpleaſure he ſhewed towards Suworow from the time of his recal to Ruſſia, ſhew his character in a very unfavourable view. The brave and eſtimable veteran, who in an active and vigorous career of upwards of forty years, had rendered his country the moſt important ſervices, and contributed ſo largely to elevate her rank among the powers of Europe, died indignant at unmerited neglect, and broken-hearted at obſerving a ſyſtem of politics which tended to counteract all that the ſagacious Catherine had effected. He was buried with uncommon pomp and ſplendor, and the immenſe multitudes who with grief attended his funeral were the moſt emphatical reproach to the emperor.

In 1774 he married Barba Nanowna, princeſs Proiſrowſki, by whom he had two children who ſurvived him:—Natalia counteſs Suworow, who married Count Nicolia Zoubow; and Arcadius, who is now about 18 years of age, and ſerving in the Ruſſian army.

The peculiarities of Suworow's manners have been often deſcribed and delineated; their baſis ſeems to have been a rigid attention to health and diſcipline, and that honeſt ſimplicity of character which conſtitutes a hero: in this he was truly great. He was zealous and ſincere in religion; direct and honeſt in patriotiſm; candid and upright in his views, and no leſs alert than judicious in the uſe of his means. No mean art was practiſed by him to captivate admiration, no deluſion was exerciſed to facilitate a propoſed end. His friendſhip and his humility were alike frank and open. Riches, which he did not overvalue, though he received them from the ſovereigns whoſe cauſe he had ſerved, were not uſed by him as the means of promoting a diſhoneſt ambition, exhibiting an abſurd vanity, or encouraging an effeminate voluptuouſneſs: they were moderately enjoyed by himſelf, and generouſly diſburſed at the call of friendſhip. It is truly aſſerted by M. Seume, an intelligent German officer who publiſhed ſome anecdotes reſpecting him, that he poſſeſſed more originality, energy, ſagacity, perſonal probity, and humanity, than any other military public character of the age.

SUZANNE, St. a town of France, in the department of Maine. It has a conſiderable paper manufacture, and is 24 miles W. of Mans.

SWAFFHAM, a town in Norfolk, with a market on Saturday, ſeated on a hill, 34 miles N.N.E. of Newmarket, and 94 N.E. of London. Long. 0. 46. E. Lat. 52. 42. N.

SWALE, a river in Yorkſhire, which riſes on the confines of Weſtmoreland, and running S.E. by Richmond and Thirſk, falls into the Ouſe.

SWALLY, a town of the Deccan of Hindooſtan, in Cambaya. It has a harbour, where ſhips receive and deliver their cargoes for the merchants of Surat, being 12 miles N.W. of that place. Long. 72. 15. E. Lat. 21. 18. N.

SWANSEA, a town of the United States, in Maſſachuſets, ſituate on the Taunton, 36 miles S. of Boſton.

SWANSEY, a ſea-port and corporate town in Glamorganſhire, with a market on Wedneſday and Saturday, an old caſtle, and two churches. It is ſeated at the mouth of the Tawy, is governed by a portreve, and has plenty of coal in its neighbourhood. Of theſe it ſends great quantities to Ireland and the S. coaſt of England; and it has a conſiderable trade to Briſtol. Here are great works for the ſmelting of copper and lead ore. Many ſhips have been built here, and it is reſorted to for ſea-bathing. It is 24 miles W.N.W. of Cowbridge, and 205 W. of London. Long. 4. 0. W. Lat. 51. 38. N.

SWANSHALS, a town of Sweden, in W. Gothland, 25 miles W.S.W. of Lindkoping.

SWARTEBERG, a town of Sweden, in W. Gothland, 28 miles N.W. of Uddevalla.

SWARTSLUYS, a town and fortreſs of the United Provinces, in Overyſſel, ſeated on the Vecht, four miles from its mouth, and five N.N.W. of Haſſelt.

SWERNICH, a town of Turkey in Europe, on the confines of Servia and Boſnia, ſeated on the Drino, 70 miles S.W. of Belgrade. Long. 19. 32. E. Lat. 44. 42. N.

SWINDON, a town in Wiltſhire, with a market on Monday, ſeated on the top of a hill, near a rich vale, 28 miles N. of Saliſbury, and 83 W. of London. Long. 1. 45. W. Lat. 51. 30. N.

SYA, a town of Sweden, in Weſt Gothland, 13 miles S.W. of Lindkoping.

SYDNEY BAY, a bay on the ſouth ſide of Norfolk Iſland, in the Pacific Ocean, formed by Point Hunter and Point Roſs, which are near two miles aſunder. Here is a ſettlement of convicts from England. Long. 168. 12. E. Lat. 29. 4. S.

SYDNEY COVE, the town or ſettlement of convicts, founded at Port Jackſon, in New South Wales, in 1788. The ground about it was then covered by a thick foreſt; but, in 1790, ſome good buildings had been erected, and greateſt part of the civil and military officers were comfortably lodged. The governor's houſe is built of ſtone, and has a very good appearance, being 70 feet in front. The lieutenant-governor's houſe is of brick, as are alſo thoſe belonging to the judge and the commiſſary. The reſt of the houſes are built with logs and plaſtered, and all the roofs are either covered by ſhingles or thatched. Long. 151. 28. E. Lat 33. 50. S.

SYRIAN, a town of Pegu, ſeated near the bay of Bengal, on a river of the ſame name, which is one of the extreme branches of the Ava. Long. 96. 40. E. Lat. 16. 50. N.

SZEBEN, a town of Hungary, on the river Tareza, 30 miles N. of Caſſovia. Long. 21. 25. E. Lat. 44. 20. N.

SZEKELY, a town of Hungary, 18 miles E.S.E. of Debreczen. Long. 22. 15. E. Lat. 47. 26. N.

SZUCCA, a town of Weſtern Pruſſia, in the palatinate Culm, ſeated on the Viſtula, 12 miles S. by W. of Culm. Long. 18. 24. E. Long. 53. 14. N.

T.

TAAFE, or TAVE, a rapid river in Glamorganſhire, which enters the Briſtol Channel at Cardiff. On this river, near Caerphilly, is a ſtone bridge called Pont y Pryddal, of one arch, 140 feet in the ſpan and 34 high, planned and executed by the ſelf-taught genius of a common maſon in this county.

TAAIF, a town of Arabia, in the province of Hedjas. It has a conſiderable trade in fruits, raiſins, and almonds; and is ſituate on a lofty mountain, 60 miles S.E. of Mecca. Long. 41. 35. E. Lat. 21. 5. N.

TAAS, a city of Arabia, in the province of Yeman, where is the tomb of a ſaint, who, according to tradition, was king of the country. When M. Niebuhr was here it had a garriſon of 600 men. It is 48 miles E.N.E. of Mocha. Long. 44. 10. E. Lat. 13. 45. S.

TAATA, a town of Upper Egypt, one mile from the Nile. It is the reſidence of a governor, has many curious remains of antiquity, and is 200 miles S. of Cairo. Long. 31. 25. E. Lat. 26. 56. N.

TABAGA, an iſland in the bay of Panama, four miles long and three broad. It is a mountainous place, abounding with fruit trees. Long. 80. 16. W. Lat. 7. 50. S.

TABARIA, the ancient Tiberias, a town of Paleſtine, ſituated on the weſt ſide of a lake, formerly called the ſea of Tiberias, 50 miles N.N.E. of Jeruſalem, and 70 S.S.W. of Damaſcus. Long. 35. 45. E. Lat. 32. 40. N.

TABASCO, a province of New Spain, in the audience of Mexico; bounded on the N. by the bay of Campeachy, on the E. by Yucatan, on the S. by Chiapa, and on the W. by Guaxaca. It is 100 miles in length, and nearly as much in breadth, and its chief riches conſiſt in cocoa nuts. The air is extremely moiſt, and there are ſhowers every day for nine months in the year.

TABASCO, an iſland of New Spain, in the province of Tabaſco, formed by a river of the ſame name, and by that of St. Peter and St. Paul. It is 30 miles long and 10 broad, and is 10 miles from the bay of Campeachy.

TABASCO, a town of New Spain, capital of the province of Tabaſco. The Spaniards call it Nueſtra Senora de la Vittoria, from a great victory obtained here by Cortes, on his firſt arrival. It is ſituate in the iſland of the ſame name. Long. 58. 15. E. Lat. 17. 40. N.

TABLE ISLAND, one of the New Hebrides, in the Pacific Ocean. Long. 16. 67. E. Lat. 15. 38. N.

TABLE-MOUNTAIN, a promontory of Africa, near the Cape of Good Hope. The bay at the foot of it is called Table Bay.

TABOOYAMANOO, or SAUNDER'S ISLAND, an iſland

in the S. Pacific Ocean, near that of Huahine, to which it is ſubject.

TABOR, a town of Bohemia, in the circle of Bechin, on a mountain, which the Huſſites, under their celebrated general Ziſca, fortified and made their principal retreat. It is 25 miles N. by E. of Budweis, and 45 S. by E. by Prague. Long. 14. 56. E. Lat. 49. 23. N.

TABRISTAN, a province of Perſia, on the S. ſhore of the Caſpian Sea, bounded by Aſtrabad on the E. and Ghilan on the W.

TACHAU, or TACHOW, a town of Bohemia, in the circle of Pilſen, 28 miles W. of Pilſen. Long. 13. 27. E. Lat. 49. 45. N.

TADIVAN, or TADUAN, a town of Parſiſtan, 60 miles S. of Schiras. Long. 54. 15. E. Lat. 28. 45. N.

TADOUSAC, a town of Lower Canada, which is a place of great reſort for trading with the Indians, who bring thither furs to exchange for cloth and other European goods. It is ſituate at the mouth of the Saguenay, 98 miles N.E. of Quebec. Long. 69. 35. W. Lat. 48. 5. N.

TAFALA, or TAFALLA, a town of Spain, in Navarre, with a caſtle, ſeated on the Cidazzo, in a country producing good wine, 18 miles S. of Pampeluna. Long. 1. 36. W. Lat. 42. 29. N.

TAFILET, a kingdom of Barbary, in the empire of Morocco; bounded on the N. by Fez and Tremeſen, on the E. by the Beriberies, on the S. by the deſert of Barbary, and on the W. by Sus, Morocco, and Fez. It is divided into three provinces, Dras, Saro, and Tuet. It is a mountainous ſandy country, but produces wheat and barley by the ſides of the rivers. The inhabitants live upon camels' fleſh and dates, and they breed horſes to ſell to foreigners. The Arabs live in tents, and the Beriberies, the ancient inhabitants, dwell in villages. Tafilet, the capital, is a trading place, with a caſtle, and ſeated on a river, 275 miles S.E. of Morocco. Long. 5. 45. W. Lat. 28. 2. N.

TAGASTA, a town of Algiers, in the province of Conſtantina, formerly a conſiderable place, but now greatly reduced. It is famous for being the birth-place of St. Auguſtin.

TAGE, a town of Arabia Felix, with a caſtle on a mountain, 60 miles E. of Mecca. Long. 42. 5. E. Lat. 21. 45. N.

TAGHMON, a borough of Ireland, in the county of Wexford, ſeven miles W. of Wexford.

TAGLIACOZZO, a town of Naples in Abruzzo Ulteriore, 18 miles S.W. of Aquila, and 33 E.N.E. of Rome. Long. 12. 57. E. Lat. 45. 50. N.

TAGOST, a town of Morocco, the largeſt in the province of Sus. A great many Jews live here, who carry on a conſiderable trade. It is ſeated in a fertile plain, 37 miles S. of Tarodant. Long. 8. 5. W. Lat. 29. 23. N.

TAGUMADERT, a town of the kingdom of Tafilet, with a ſtrong caſtle on a mountain, ſeated on the river Dras. Long. 6. 43. W. Lat. 27. 10. N.

TAHOOROWA, one of the ſmalleſt of the Sandwich Iſlands, lying off the S.W. part of Mowee, from which it is diſtant three leagues. It is deſtitute of wood, and the ſoil ſeems to be ſandy and barren.

TAJO, anciently TAGUS, a river which has its ſource on the confines of Arragon, in Spain, runs through New Caſtile, by Toledo and Talavara, whence it proceeds to Alcantara, in Eſtremadura; when entering Portugal, it waſhes Santaren, below which its forms the harbour of Liſbon, and then falls into the Atlantic Ocean. This river was formerly famous for its golden ſands.

TAIN, a borough and ſea-port in Roſsſhire, remarkable for a large ſquare tower, adorned with five ſpires, and for a collegiate church, ſtill pretty entire. It is ſeated on the frith of Dornoch, 12 miles N. of Cromarty.

TAI-PING-FOU, a city of China, in the province of Kiang-nan, ſeated on the river Kiang. It has only three cities in its diſtrict. Long. 107. 15. E. Lat. 32. 20. E.

TAI-TCHEOU-FOU, a city of China, in the province of Tche-kiang. It has ſix cities in its diſtrict. Long. 121. 2. E. Lat. 28. 55. N.

TAI-TONG-FOU, a ſtrong city of China, in the province of Chang-ſi, built near the great wall. Its juriſdiction contains four cities of the ſecond, and ſeven of the third claſs.

TAI-YUEN-FOU, a city of China, capital of the province of Chan-ſi. It is eight miles in circumference, but is much decayed ſince it was the reſidence of the princes of the blood of the laſt imperial family of Tai-ming-tchao. Its diſtrict contains five cities of the ſecond, and 20 of the third claſs. It is 160 miles S.W. of Pekin.

TAILEBOURG, a town of France, in the department of Lower Charente, ſeated on the Charente, 30 miles S.E. of Rochelle. Long. 0. 40. W. Lat. 45. 46. N.

TALAMONE, a ſea-port of Tuſcany, 15 miles N. of Orbitello. Long. 11. 6. E. Lat. 42. 30. N.

TALAVERA, a town of Spain in New Caſtile, with a fort. It belongs to the Archbiſhop of Toledo, and is ſeated on the Tajo, in a valley abounding in corn, fruits, and excellent wine, 58 miles S.W. of Madrid. Long. 4. 1. W. Lat. 39. 41. N.

TALAVERUELA, a town of Spain in Eſtremadura, ſeated on the Guadiana, 14 miles E. of Badajoz. Long. 6. 34. W. Lat. 38. 34. N.

TALCAGUANA, a ſea-port of Chili, on the S.E. ſhore of the bay of Conception. It is now the only Spaniſh ſettlement in the bay, and nine miles from the new city of conception. Long. 73. 0. W. Lat. 36. 42. S.

TALLAGH, a borough of Ireland, in the county of Waterford, ſituate near the river Bride, 23 miles W.N.W. of Cork, and 32 W.S.W. of Waterford.

TALLANO, a ſea-port of Corſica, and capital of a diſtrict in the French diviſion. It is ſituate on a bay, called the gulf of Tallano, 24 miles N. of Bonifacio, and 30 S.S.W. of Corte. Long. 9. 18. E. Lat. 51. 20. N.

TALLARD, a town of France, in the department of Upper Alps, ſeated on the Durance, 47 miles S. of Grenoble. Long. 6. 20. E. Lat. 44. 28. N.

TALMONT, a ſea-port of France, in the department of Lower Charente, ſeated on a peninſula of the Gironde, 20 miles S.E. of Saintes, and 260 S.W. of Paris. Long. 0. 50. W. Lat. 45. 32. N.

TAMALAMECA, a town of Terra Firma, in the government of St. Martha, ſeated on the Rio de la Madalena. Long 74. 45. W. Lat. 9. 6. N.

TAMAR, a river of England, which runs from N. to S. divides Cornwall from Devonſhire, and forming the harbour of Hamoaze, enters Plymouth Sound.

TAMARA, a ſea-port on the N. coaſt of the iſland of Socotora, near the ſtrait of Babelmandel. Long. 52. 25. E. Lat. 11. 30. N.

TAME, a river, which riſes in Staffordſhire, and entering Warwickſhire, runs firſt E. and then N. till it re-enters into its native county of Tamworth, falling ſoon after into the Trent.

TAME, a rivulet in Oxfordſhire, which flows into the Thames, at Dorcheſter, and has been erroneouſly ſuppoſed to give name to the Thames.

TAME, a town in Oxfordſhire, with a market on Tueſday, a famous free-ſchool, and a ſmall hoſpital. It is ſeated on a rivulet of the ſame name, 12 miles E. of Oxford, and 45 W. by N. of London. Long. 0. 55. W. Lat. 51. 46. N.

TAMIEH, a town of Egypt, on a canal which runs into the Nile, 12 miles N.E. of Fayoum.

TAMWORTH, a borough in Staffordſhire, with a market on Saturday. It ſends two members to parliament, and is ſeated on the Tame, eight miles S.E. of Lichfield, and 114 N.W. of London. Long. 1. 38. W. Lat. 52. 49. N.

TANARO, a river of Piedmont, which riſes in the Apennines, and flows by Cheraſco, Alba, and Aſti, to Alexandria, in the Milaneſe, and falls into the Po.

TANASSERIM, a town of the kingdom of Siam, capital of a province of the ſame name, 220 miles S.W. of Siam. Long. 98. 0. E. Lat. 11. 50. N.

TANBOF, a government of Ruſſia, formerly a part of the government of Voronetz. Its capital, of the ſame name, is ſeated on the Zua, which falls into the Mokcha.

TANCOS, a town of Portugal, in Eſtremadura, ſeated on the Zerara, near its fall into the Tajo, 60 miles N.E. of Liſbon. Long. 8. 30. W. Lat. 39. 20. N.

TANCROWALL, a town of Vigritia, ſeated on the Gambia, where the Engliſh have a fort, 30 miles E. of James River.

TANDA, or TANRAH, a town of Hindooſtan Proper, in Bengal, of which ſoubab it was the capital in the 17th century. There is little remaining of it but the rampart; and the period when it was deſerted is not certainly known. It is ſeated on the Ganges, 120 miles N.W. of Dacca. Long. 87. 56. E. Lat. 23. 25. N.

TANGATABOO, one of the Friendly Iſlands, in the S. Pacific Ocean, the reſidence of the ſovereign and the chiefs.

TANGERMUNDE, a town of Germany in the old marche of Brandenburgh, with a caſtle, ſeated on the Tanger, where it falls into the Elbe, 24 miles N.W. of Brandenburg, and 28 N.E. of Magdeburg. Long. 13. 30. E. Lat. 52. 46. N.

TANJORE, a province of Hindooſtan, on the coaſt of Coromandel. It is an appendage of the Carnatic, but ſubject to its own rajah, who pays an annual ſubſidy to the Engliſh Eaſt-India Company.

TANJORE, a city of Hindooſtan, in the Carnatic, capital of a province of the ſame name. It is ſeated on the Cauvery, 156 miles S. by W. of Madras, and 166 S.E. of Seringapatam. Long. 79. 12. E. Lat. 10. 46. N.

TANKIA, or TINKIA-LING, a town and fortreſs of Thibet, at the foot of Mount Langur, 275 miles W. by S. of Laſſa.

TANNA, a fertile iſland, in the Pacific Ocean, one of the New Hebrides, on which is a volcano. The inhabitants are brave and hoſpitable, and their arms are bows and arrows, ſlings, ſpears, and clubs. Long. 169. 46. E. Lat. 19. 30. S.

TANNING (*Encycl.*). To what has been there offered we purpoſe to add the following experiments on the tanning principle, and reflections on the art of tanning, publiſhed by M. Guillot in the *Annales de Chimie*.

"The length of the proceſs deſcribed by M. Prouſt," ſays he, "to obtain tan, induced me to make ſome experiments, and to ſeek a more expeditious method of procuring it: the following are the reſults:

1. "I infuſed bark, reduced to a fine powder, in water; I let it ſtand ſeveral days, filtered the infuſion, and treated it with lime-water; I obtained a precipitate in conſiderable quantity, which I collected on a filter, dried it, and afterwards applied alcohol, to aſcertain whether it was ſoluble in this menſtruum; but the alcohol was not even tinged by it.

2. "Being deſirous of diſcovering if the lime poſſeſſed a greater affinity to acids than to the tan with which it was combined, I treated four grammes of the precipitate mentioned above with nitric acid diluted with water; with the aſſiſtance of a very gentle heat, a moderate effervеſcence was produced, with a ſeparation of carbonic acid; after twenty-four hours' infuſion, I filtered the liquor, which had aſſumed a very deep colour, and there remained on the filter a granulated, black, ſhining ſubſtance, having a ſour and rather bitter taſte; this reſiduum weighed ſomething leſs than two grammes.

3. "To aſcertain whether the nitric acid had diſſolved the lime, I treated the liquid which I had filtered with acidulated oxalate of potaſh, and obtained an abundant precipitate, which made me conjecture that ſince the nitric acid had diſſolved the lime, the ſubſtance which I had obtained on the filter muſt be tan, ſince the precipitate obtained by the mixture of the lime-water and infuſion of bark was produced by the union of the tanning principle and lime: to convince myſelf of this, I treated one portion with water, and the other with alcohol; I let the infuſion of theſe ſubſtances ſtand on a ſand-bath twenty-four hours, the water was deeply coloured, and the alcohol ſtill more; but all the tan (hitherto I only ſuppoſed it ſuch) was not diſſolved; the alcohol diſſolved rather more than half, and the water leſs. I treated theſe two liquids, after having filtered them, with a diſſolution of paſte, and obtained a precipitate reſembling that produced by a mixture of the infuſion of bark with the ſame ſolution, but of a deeper colour, and rather leſs elaſtic. When treated with the nitrate of tin, I obtained a precipitate that became gelatinous: when treated with lime-water, the tan united with the lime, and reproduced the tanate of lime formed before.

"Could I ſuppoſe that with theſe properties it was not the pure tan? No, becauſe it gives the ſame reſults as that obtained by M. Prouſt's proceſs.

"If purer tan be required than that obtained by the diſſolution of the lime of the tanate of this ſubſtance by an acid, the infuſion of alcohol muſt be evaporated, and tan of the pureſt quality will be left.

"Muriatic acid produced the ſame effects as nitric acid.

"The expedition with which the upper leathers are tanned, by the proceſs of M. Seguin, who, in manufacturing them, merely ſubjects them to the preparations of waſhing and finiſhing with lime-water, without afterwards ſwelling them, and then tans them, cauſed me to ſuppoſe that in this caſe a combination is formed between the tan and the lime contained in the ſkin thus finiſhed, independent of the combination of the tan with a gelatinous ſubſtance contained in the ſkin, which accelerates the fabrication. May it not hence be preſumed, that the fabrication of theſe leathers would be accelerated if, after having waſhed them and finiſhed them with lime-water, they were to be ſwelled in *juſſe*, or water in which old bark, which has been once uſed for tanning, is infuſed. Under this circumſtance the ſmall quantity of tan diſſolved in this water would combine with the lime with which the ſkin would be charged in the finiſhing, and would form a tanate of lime. The ſwelling would probably take place by this method with leſs celerity than by the ſulphuric acid; but it would perhaps be preferable, as the ſkin in ſwelling would begin to be charged with tan, whilſt, by the ſulphuric acid, the lime with which the ſkin is impregnated after having been finiſhed with this ſubſtance diſſolved in water—the lime, I ſay, combines with the ſulphuric acid employed to make it ſwell, which I preſume muſt give leather a brittle quality that it would perhaps not have by this method. Perhaps, likewiſe,

after having ſwelled the ſkins in the infuſion of old bark, their fabrication might be accelerated by putting them at firſt into an infuſion of bark, according to the method of M. Seguin, and afterwards dipping them alternately in lime-water and the infuſion of bark, always taking care to leave them but a ſhort time in the lime-water, which might perhaps alter them, if they were ſuffered to remain in it too long. Under this circumſtance the lime-water with which the leather would be charged would, when the latter is put into an infuſion of bark, produce a more ſpeedy precipitation of the tan, and its union with the lime, as well as with the gelatinous ſubſtance contained in the leather. I think, likewiſe, that by this method leather would acquire a greater weight, a quality aimed at by tanners, and would perhaps become leſs permeable to water.

" Theſe conjectures I have ventured to advance, becauſe they appear to be ſuggeſted by the theory of the art of tanning. Perhaps in this inſtance, as in many others, practice will not accord with theory. I leave it to artiſts to try this method, which I myſelf ſhall not fail to do when a favourable opportunity preſents itſelf."

The following is extracted from the ſpecification of a patent granted to Mr. Francis Brewin, of Bermondſey, in the county of Surrey, for an improved method of tanning. It is dated November 18, 1801.

" My improved proceſs of tanning," ſays Mr. Brewin, " conſiſts principally in conſolidating floaters and taps, that is by drawing the oozes for the vats, and handlers from the floaters, and working the oozes through the floaters in every reſpect as though they were a ſet of taps, and uſing them at the ſame time in the nature of floaters, by handling the greeneſt packs in them. Theſe vats I call floating taps. The proceſs I deſcribe more particularly as follows: twenty or twenty-five vats I conſider as conſtituting one complete tan-yard; and my vats being nearly of one ſize, I take two or three of the centre vats, which I uſe as ſpenders; four or ſix immediately next to theſe I make my floating taps, each containing an eye and a falſe bottom. The remainder are vats and handlers, in which I uſe all my freſh bark. One floating tap I keep empty, that it may contain the whole of the ooze and bark in a vat or handler, into which floating vat I draw the ooze and bark, from that vat or handler which I conceive moſt neceſſary to be drawn. I draw off by a pump from this floating tap, now the beſt, my oozes into the vat or handlers from which it laſt came, making up the deficiency from the ſecond floating tap, late the beſt; but working it firſt through the one now made, I put the goods down in the drawn oozes, with about three times the quantity of bark that is generally uſed with one pack. I continue to work the whole of the floating taps as though they were one ſet of taps; but firſt I throw up each pack of goods, and after the floating taps are worked through, I ſhift the floating packs as in a ſet of handlers. The bark in the late worſt floating tap, being after the whole has been worked through thrown into the ſpender, cauſes ſuch floating tap to become the empty floating tap, ready to receive the ooze and bark from the vat or handler next to be drawn. Experience perhaps may prove it to be moſt advantageous, particularly where the number of floating taps exceed ſix, to draw the oozes from one of the more backward floating taps inſtead of the beſt; in this caſe thoſe floating taps only that follow the one drawn from muſt be conſidered as floating taps, and the others worked merely as floaters, by ſhifting the packs only. In this caſe, ſome labour in pumping would be ſaved, and the goods before they go into the freſh bark would be more tanned. The preciſe number of floating taps in a yard is not very material, but more than ten I conceive will ſeldom be found moſt advantageous, or leſs than four. By diſpoſing of the ſpenders, floating taps, vats, and handlers, as before deſcribed, barrows or long ſhoots will ſeldom if ever be required to convey the bark or ooze from the vats or handlers to the floating taps, or from the floating taps to the ſpenders, as ſuch vats or handlers may be drawn as lie next to the empty floating tap, and ſuch floating tap is ſo diſpoſed as to lie next to the ſpender that has received its bark, as may be ſeen by the following plans of two of my yards.

V	H	V	H	V
H	Empty. F. T.	S 3	F. T. 1	H
V	F. T. 5	S 2	F. T. 2	V
H	F. T. 4	S 1	F. T. 3	H
V	H	V	H	V

V	H	V	H	V
H	Empty. F. T.	S 2	1 F. T.	H
V	3 F. T.	S 1	2 F. T.	V
H	V	H	V	H

" I draw ſo many vats or handlers into each floating tap, as that when the goods and oozes are out of them the bark will about one half fill them: but as I generally put as much bark into a vat or handler as will be ſufficient for this purpoſe, I do not often draw more than one vat or handler into one floating tap; one ſpender will contain two floating taps, from which, if the ſpenders are juſt half the number of the floating taps, which I conſider as a proper proportion, the whole will both be worked round, or emptied in the ſame time, of courſe the floating tap that is to be caſt will always continue to be near the ſpender, that is to receive the bark. Three or four times handling the goods after they have been regularly through the floating taps, beſides when drawn for, I find ſufficient. I ſeldom handle the floating taps but when the ooze is drawn, excepting the greeneſt pack, which I generally handle once in two or three days at leaſt. The ſize of the vats, handlers, floating taps, and ſpenders, ſhould be at

leaſt equal in ſize to the handlers and vats. This general rule ſhould be obſerved, not to draw ſo often, or more vats or handlers into a floating tap, as that the floating tap will not contain goods ſufficient to ſpend the bark to your ſatisfaction. By the above proceſs the oozes in the vats and handlers may always be kept about twice as ſtrong as ſuch oozes generally are, as ſo much more bark is uſed at one time with each pack of goods; and as each pack of goods may be drawn for while the ooze continues to be very ſtrong, and of courſe will cauſe the drawn oozes to be very ſtrong alſo, and yet by the proceſs the bark goes through in the floating taps it will be, before thrown away, more completely ſpent than by any other proceſs, from the water being made to go through the bark after it has been uſed in the vats or handlers ſo many more times than is done by the uſual proceſs before it comes to be uſed with the freſh bark, but above all from the green goods, after the oozes are drawn from it, ſpending the bark at the ſame time that it is ſpending, by the water being worked through it. The great advantages derived from this proceſs are, the leather is made of a ſuperior quality, being more ſolid and weighty than other leather, and is manufactured in leſs time, from the oozes in the vats and handlers containing double the quantity of the tanning quality than is contained in common oozes. The leather when curried will be much more waterproof than common leather, as it will take in more oil in the proceſs of currying, provided the oozes in the handlers and vats are not kept ſtronger than oozes in general are. The leather will be much tougher than other leather, as by this proceſs it is not put into old acid oozes while green, by which the texture of leather in general is much injured. The leather in manufacturing requires leſs labour than by any other proceſs, as the labour of drawing oozes from the large quantity of bark uſed in each ooze is conſiderably abridged, and there is a ſaving of bark from its being more completely ſpent than by any other proceſs, and as the quantity of bark permitted to ſtand without goods is much leſs than uſual. Elm-bark, or weaker barks than oak, may by this proceſs be uſed with particular advantages, ſince the bark is thereby ſo completely ſpent, and the labour ſo much abridged, and inaſmuch as it enables the keeping of the oozes in the vats and handlers much ſtronger than by any other proceſs; by which means the leather tanned by elm, or other weak barks, becomes as ſolid and weighty as common leather tanned by oak-bark."

TANORE, a ſea-port of Hindooſtan, on the coaſt of Malabar. Long. 75. 50. E. Lat. 10. 55. N.

TANTALLAN, a ruinous caſtle in Haddingtonſhire, two miles E. of North Berwick. It is ſeated on a high rock, waſhed on three ſides by the German Ocean. It was deſtroyed by the Covenanters in 1639.

TAOO, the moſt ſouthern of the Friendly Iſlands, in the South Pacific Ocean, about ten leagues in circuit. It has ſeveral ſprings inland, and a ſmall ſtream of good water, which reaches the ſea when the ſprings are copious. The S.E. ſide riſes with great inequalities immediately from the ſea: ſo that the plains and meadows, of which there are ſome of great extent, lie all on the N.W. ſide; and are adorned with tufts of trees, intermixed with plantations, and interſected by paths leading to every part of the iſle.

TAOUKAA, an iſland of the Pacific Ocean. Long. 145. 9. W. Lat. 14. 30. S.

TAPOOR, a town of the peninſula of Hindooſtan, in the Myſore country, 15 miles S.S.W. of Darampoory, and 83 E.S.E. of Seringapatam.

TAPTY, a river of the Deccan of Hindooſtan, which riſes at Maltoy, 84 miles to the N.W. of Nagpour, and falls into the gulph of Cambay, about 20 miles below Surat.

TAR (*Encycl.*). The following obſervations on the pine-tree, and inſtructions relative to the manner of extracting the tar, and other reſinous principles, from it, by M. Chaptal, appear in the Journal des Arts et Manufactures.

"There are few trees from the cultivation of which ſo many advantages are likely to reſult as that known by the name of the pine. It grows in dry and ſandy grounds, in the midſt of rocks; it crowns the ſummits of mountains with its agreeable verdure; it appropriates to itſelf ſoils which ſeems to be ſhunned by every other vegetable; it ſhoots up rapidly, requires ſcarcely any culture, and its uſes and products are as multifarious as they are uſeful. The young plants, and the ſhoots lopped off from the trees of all ages, furniſh a large ſupply of props for the vines. The wood of the pine affords very good fuel; its flame is briſk, and is attended with no other inconvenience than that of producing too much ſmoke. In all countries where the pine abounds, thoſe pieces of its wood which contain the moſt reſin are uſed inſtead of candles. The trunks of theſe trees are very proper for making planks: they are likewiſe employed for forming the bodies of pumps, for water-pipes, for beams, for the ſide planks of the decks of ſhips, for maſts, &c. Its fruit is an alimentary ſubſtance of ſome conſequence: many domeſtic animals are very fond of feeding upon it. Of the wood of the pine a ſpecies of charcoal is made, which is found to be very uſeful in metallurgical operations. Theſe trees, when arrived at a certain ſize, afford an annual crop of twelve or fifteen pounds of reſin. The trees which fall down with age, and thoſe which are torn out of the ground, or broken off from their roots by the wind, as alſo the chips cut from the trunks when they are made into beams, the roots, &c. afford ſtill a large quantity of tar. Proprietors of lands cannot therefore be too ſtrongly urged to cultivate ſo valuable a tree.

"It would require nothing more than to ſcatter the fruit on ſuch lands as are adapted to the nature of the tree, in order to inſure its production. We muſt take care not to ſow the pine-fruit in any other ſpots than ſuch as are ſheltered from the rays of the ſun; for expoſure to the ſun proves deſtructive to the young plants. On this account the trees in the pine-foreſts are not filled in a regular manner, but only here and there, in order to inſure an uninterrupted re-production."

The following are deſcribed to be the proceſſes for extracting the reſinous principles of the pine.

"All pines yield a reſinous juice, but ſome in larger quantities than others. Thoſe which contain the greateſt quantity of reſin are the Cyprus pine, the grey, the white, and the red pines. Soil, age, and ſize, have leſs influence upon the quantity of reſin than the expoſure of the plant, and the thickneſs of the bark: the pines expoſed to the ſouth, and to the rays of the ſun, yield it in large quantities, whilſt thoſe whoſe bark is very thick yield leſs. Pines that grow too near to each other contain ſcarcely any reſin; the interval between them ought to be twelve feet. The diſtance ought to be determined by the ſituation of the ground, and the poſition of the trees with reſpect to expoſure to the ſun. The young branches that ſhoot out from the ſtem ſhould be carefully lopped off, by which means the tree grows to a greater height, and its trunk is more expoſed to the action of the ſun. Pines become more reſinous in rich grounds, and in rainy ſeaſons; but then the reſin is not equally good. Young pines yield reſin as well as the old ones, but the extraction of it enfeebles them. The reſin flows particularly during the ſummer ſeaſon. Pines yield reſin during the ſpace of twenty or twenty-five years, and the extraction of it is generally commenced when they are twenty years old.

"The reſinous juice flows out almoſt ſolely from the woody part of the tree, and runs down between the wood and the bark; the exterior layers yield it in greater quantity than the interior ones: only a few drops of good reſin tranſude through the bark. The roots alſo yield a great quantity of juice. The knots contain more reſin than the reſt of the tree, the roots more than the branches, &c.; and the woody part in the vicinity of notches or wounds of the ſtem yields ſtill more.

"When the pines have arrived at the age of about twenty years, they have acquired a circumference of three or four feet, and are ſufficiently ſtrong to admit of the extraction of a part of the reſinous juice which circulates in the different parts of the tree. The reſinous juice begins to flow in the ſpring, and it is during this ſeaſon that inciſions are begun to be made into the trees, in order to extract their produce. The juice continues to flow till the autumn. It generally begins to flow during the month of May, and ceaſes in September.

"In order to facilitate this flow, and determine it to a ſingle point, a ſpace, three inches in breadth, and ſix or eight in length, is pitched upon at the foot of the trunk, quite near to the earth, on the ſide expoſed to the ſouth, and in a part which appears to abound moſt in reſin, and to be moſt diſpoſed to let it run off: in this place the bark is peeled off, and a chip cut out of the wood, from whence the reſin immediately begins to flow, and is ſeen tranſuding through the ligneous fibres, in ſmall tranſparent drops; it runs down upon the bark of the lower part of the trunk, and is received into a hole made at the root of the tree, or into a veſſel placed there for that purpoſe. When the flow of the reſin begins to grow languid, the wound of the tree is enlarged at its upper part, and a new layer of the woody part is cut off. The wound muſt be renewed in this manner once every fortnight. Thus the wound is progreſſively enlarged, and at the end of the year it is a foot in length. The operation is diſcontinued as ſoon as the return of the froſt hardens the reſin, and ſtops its flow.

"In the following ſpring, the wound is again renewed, and at the end of five or ſix years it has acquired a height of five or ſix feet. When it has been enlarged to this height, a new cut is made at the foot of the trunk, almoſt cloſe to the former, and is gradually carried higher up, parallel with the firſt. Whilſt the reſin is diſcharged by this ſecond wound, the firſt heals up in ſuch a manner, that the operation may be ſucceſſively performed round the whole circumference of the tree, and repeated upon the places where the former wounds had been made. In renewing the wounds, we muſt uſe the precautions, to cut the chips very thin. For this purpoſe, the workman muſt be provided with very ſharp inſtruments. Upon theſe precautions the health of the tree, and the quantity of reſin produced, materially depends.

"In this manner a ſingle perſon may manage from two thouſand five hundred to two thouſand eight hundred feet of trees. He pours into barrels the reſin collected in the veſſels placed for receiving it at the foot of the trees, and it is then fit to be introduced into commerce.

"The reſin obtained in this manner in Guienne is known by the name of *galipot;* that of Provence, is termed *Perinne vierge*. In ſome parts of Provence, it is the practice to make a ſmall hole at the bottom of that which receives the reſin, and to ſeparate the one from the other, by laying ſome twigs of roſemary over the orifice of the ſecond. By this means the more fluid part of the reſin filtrates into the ſmaller hole, and the reſin obtained in this manner is termed *bijon*.

"A healthy tree yields annually from twelve to fifteen pounds of reſin. From the autumn to the ſpring, the ſmall quantity of reſin which flows from the tree hardens upon the ſurface, from which it is detached by means of iron ſcrapers fixed to the end of a pole. This reſin is known at Bourdeaux by the name of *barras*.

"In order to form the yellow ſpecies of reſin, known in commerce by the name of *brai ſec*, and in Provence by that of *raeſe*, they place upon a ſtove a copper boiler, the ſides of which are bent into a lip, ſeveral inches in breadth, which is provided, at ſome point of its circumference, with a gutter, ſix or eight inches in length, under which is placed a trough hollowed into a piece of a pine-trunk, and filled with water.

"Both the liquid and the ſolid reſin that has been obtained from the pine is put into the boiler. This ſubſtance is melted by a moderate heat: as ſoon as it is melted, a quantity of water is poured upon it, upon which the reſin puffs up, and a part of it runs into the trough, which the workman continually pours back into the boiler, mixing the whole maſs well together; and this manœuvre he continues till the whole of the water is diſſipated. Towards the end of the operation, the melted reſin becomes more tranquil, and acquires a yellow colour, in which ſtate it is poured into another trough, where it filtrates through ſtraw, and runs thence into moulds carefully formed in the ſand. Theſe moulds are round holes, the ſides of which are rendered compact by being well beaten. The cakes of reſin, which aſſume the ſhape of theſe moulds, weigh about two hundred pounds.

"If, inſtead of boiling the reſin in an open veſſel, we boil it in an alembic with water, it forms a ſpecies of oil of turpentine, termed *eau de roſe*, which, however, is greatly inferior to the genuine oil of turpentine.

"When the *galipot* is put into troughs compoſed of ſeveral planks faſtened together, and expoſed to the ſun, the part which oozes through the crevices is known by the name of *Sun Turpentine (térébenthine de ſoleil)*. The term of *turpentine of the boiler (térébenthine de chaudrière)* is applied to the *galipot* that has been melted in one of theſe veſſels. Even the moſt liquid *galipot* has been claſſed amongſt the turpentines; but this ſpecies is the worſt of all in its qualities, being inferior to that of the larch, and ſtill more ſo to that of the fir.

"The living tree does not give out the whole of its reſin by the wounds made in its trunk; but after it is dead, it is ſubjected to an operation, by which every particle is extracted; and it is this reſinous ſubſtance, extracted from the dead tree, that is known by the name of *tar (goudron)*.

"In order to extract the tar, all that is required is, to apply to thoſe parts of the wood in which it is contained, a degree of heat ſufficient to ſoften it, and make it run, without either ſetting fire to, or volatilizing it. This end is obtained by diſpoſing the wood of the pine, previouſly cut into ſmall pieces, in a heap, the ſides of which are covered with earth, ſods, or bricks. The whole maſs is heated by means of fire applied to the upper part, and all the reſin that runs down to the bottom is carried off from the heap by gutters. The kilns, in which this ſmothered combuſtion is performed, are of different forms and dimenſions. But all the proceſſes which have hitherto been made known have certain principles and operations in common with each other, of which we ſhall give ſome account. For extracting tar, the heart of the tree, the knots, and all the reſinous veins, are choſen. The red parts of the wood are taken in preference to the reſt. The bark and leaves are rejected, as the tar which they furniſh is of an inferior quality. The tar is extracted alſo from the ſtraw, which has ſerved for filtrating the *brai ſec*.

and from the chips that have been cut off from the trunk, in order to renew the wounds of the tree.

"In preparing tar, uſe is alſo made of trees exhauſted of their reſin, and particularly of thoſe decayed by age, of thoſe that have been broken off, or rooted up by the wind, and of the chips produced in various ſpecies of labour for which this wood is employed.

"The tar is the better in proportion as the trees from which it is extracted are more reſinous, the more attention is paid to the ſeparation of the bark and young ſhoots, and the more care is taken to prevent the combuſtion and volatiliſation of the reſin. In order to obtain good tar, it is alſo of eſſential advantage to employ wood that is neither too green nor too dry; that which is in a ſtate of half-dryneſs is the beſt. The trees may be felled at any ſeaſon of the year, but it is principally during the autumn that they are hewn down for this purpoſe, and the extraction of the tar is performed during the winter. It is further neceſſary that the wood ſhould be cut into ſmall pieces, as equal as poſſible in ſize, in order that the whole of the reſin which it contains may be melted out at one and the ſame time.

"The management of the fire demands likewiſe great attention; for, 1ſt, too active a fire burns and diſſipates the reſin; 2dly, too violent a heat volatiliſes it, and produces tar of too dry a nature; and, 3dly, if the heat be too low, it extracts only a part of the reſin, and leaves combined with the tar the watery particles which exiſted in the vegetable. A kiln, filled with very red and reſinous wood, yields a quarter of its weight of tar; but this ſubſtance is generally obtained in the proportion of not more than 10 or 12 per cent. to the whole.

"Each ſpecies of kiln that has been employed for the extraction of tar appears to me to poſſeſs certain advantages and diſadvantages of its own. In the mountains of Provence, the kilns are ſhaped like large pitchers, partly ſunk into the ground; they are eighteen inches in diameter at the bottom, ſix feet in the belly, and two at the top. The wood is cut into pieces eighteen inches long, and an inch and a half wide; theſe are diſpoſed in layers of the form of a gridiron, having the interſtices filled up by other pieces placed perpendicularly.

"In the neighbourhood of Bourdeaux they dig a circular pit, thirty-ſix or forty feet in circumference, where a hearth is formed by bricks placed upon the ground, and well cemented together. A ſmall canal is made at the centre for receiving the tar, and conveying it into a receptacle, which is termed the *vault (cave)*, and in which a quantity of water is kept, in order to purify the tar. The vault is emptied as faſt as it fills, and the tar put into the barrels, in which it is tranſported from place to place. The hearth of the kiln is covered with wood cut into ſmall pieces, and piled into a heap eight or ten feet high. The ſides of the heaps are covered with ſods, and clods of earth; and the upper part of the cone, where they place a layer of wood drier than the reſt, is ſet on fire. The heat communicates itſelf to the whole maſs, and when the fire ſlackens, openings are made to increaſe the draught, by taking out ſome of the clods in different parts of the ſides. When the operation is completed, all the draught-holes are cloſed, and the charcoal that has been formed is taken out of the kiln.

"The kilns uſed in *Louiſiana* differ very little from thoſe which we have juſt deſcribed; only the ground is not covered with bricks, but the tar is made to run merely by the ſlope of the earth, which is ſtrongly beaten, and thence it is conveyed, by very long gutters, into reſervoirs dug into the ground.

"The method uſed in the *Valais*, for extracting the tar, is practiſed by all the peaſants; and as it preſents to us all the means proper to be employed for avoiding any waſte of the tar, and obtaining it of good quality, we ſhall deſcribe it with more minuteneſs than the others, introducing at the ſame time ſome variations, which, from our obſervations and experience, appear to us to be neceſſary.

"A kiln is conſtructed of a form ſimilar to that of an egg placed upon one end. Its dimenſions may be varied according to the quantity of wood we have to burn: it ought, in general, to be twice as high as it is broad. The largeſt may be ten feet in height, five in diameter, and two and a half at the ſuperior orifice. In conſtructing this kiln, the firſt operation is the marking out of its dimenſions at the baſe, after which the walls are raiſed of ſtone, to the height of two-thirds of the whole height of the kiln. The inſide is paved with free-ſtone, well joined together; or, where this cannot be procured, with bricks laid upon the ground, and well cemented. The bottom is concave, and of the form of an egg-ſhell. Six inches from the bottom an orifice is made, eighteen lines in diameter, which terminates on the outſide and at the bottom of the kiln, ſloping down ſix or eight inches, and to this is adapted a large tube, reſembling a muſket-barrel, of a large bore, for the purpoſe of conveying the tar into the barrels deſtined to receive it.

"At the diſtance of twenty or twenty-five inches from the bottom of the kiln, bars of iron are placed, parallel with each other, for ſupporting the wood, and letting the tar, which is melted out by the heat, run down to the bottom. The conſtruction of the kiln is completed with fragments of ſtone and earth, and at the top an open ſpace is left, two feet and a half in diameter, for the convenience of filling the kiln. It is plaſtered over both within and without, and any cracks or flaws that may be formed are immediately ſtopped up. It is alſo of advantage to make ſome perforations in the walls of the kiln, which may be uſed, as occaſion requires, for increaſing the draught, and graduating the heat at pleaſure.

"When a kiln of this kind has been conſtructed, a man goes into the inſide, and diſpoſes the wood, cut into billets two inches broad and eighteen long, upon the grate, and with theſe he fills up the whole cavity, taking great care to leave no empty ſpaces, and the top of the kiln he fills with dry chips. The orifice at the top is cloſed up with flat ſtones, or plates of iron or copper, ſo as to leave only one opening, or chimney, about four inches in diameter. The chips are then ſet on fire, and, when the fire is well kindled, this orifice is cloſed with a flat ſtone, which is covered over with earth. The melting now commences, and the tar runs down to the bottom, whence it is conveyed, by the tube inſerted there, into the barrel. If the melting ſhould ceaſe, the orifice muſt be opened again, and even a draught of air let in through the holes in the ſides of the kiln. If the ſmoke finds a vent through the ſides of the building, the holes muſt be ſtopped with wet earth, ſods, or other ſubſtances.

"When the kiln has cooled, it is opened, and the charcoal produced by the operation is taken out. The impurities collected at the bottom are then extracted, and the kiln is filled again.

"By a kiln of this conſtruction, which is neither laborious, expenſive, nor difficult, all unneceſſary waſte is avoided; and the tar muſt neceſſarily be more pure, as, on account of the ſolidity of the ſtructure, the materials cannot be mixed with it, beſides that the tar preſerves all thoſe principles which the other furnaces ſuffer to be diſſipated.

"The expence which attends the conſtruction of ſuch a furnace cannot be placed in competition with the advantages

which it affords. Beſides, it is built in the midſt of the foreſts, and conſequently ſurrounded with all the materials that are required. Moreover, it is a ſtable and permanent eſtabliſhment, whilſt the other one is obliged to demoliſh and rebuild for every ſingle operation.

"Another reſinous preparation, known in commerce by the name of *brai-gras*, is obtained by filling the kiln with alternate layers of green wood and reſin or dry chips, making the uppermoſt layer of dry chips. The orifice by which the juice might run out is cloſed, and fire applied to the kiln. Great care is taken to prevent the production of flame, and to produce a dead heat, which is kept up for ſeven or eight days. By this means, the reſin is melted, mixes with the ſap, and runs to the bottom of the kiln. When the operation is finiſhed, the orifice is uncloſed, and the *brai-gras* runs out. Sometimes the tar which is obtained from very reſinous wood is uſed inſtead of the *brai-gras*. By mixing *brai-ſec* with very reſinous wood, and not opening the vent hole till the reſinous ſubſtance has boiled, we obtain *brai-gras*.

"In order to make *lamp-black*, ſmall pieces of the refuſe of all theſe reſinous ſubſtances are put into iron pots, and placed in the middle of a cloſe chamber, entirely lined with canvas or paper; after which the pieces of reſin are ſet on fire. A thick ſmoke is thus produced, which ſettles upon the walls, and forms the ſubſtance termed lamp-black. The places choſen for performing this operation ought always to be in a perfectly inſulated ſituation."

TAR, or Pamlico, a river of North Carolina, which flowing by Tarborough and Waſhington, enters Pamlico Sound, 40 miles S.E. of the latter town.

TARAGALLA, a town of the kingdon of Taſilet, with a caſtle, ſeated on the Dras, 275 miles S.W. of Taſilet. Long. 6. 3. W. Lat. 27. 40. N.

TARARE, a town of France, in the department of Rhone and Loire, ſeated on the Tordive, at the foot of a mountain of the ſame name, 25 miles N.W. of Lyons. Long. 4. 43. E. Lat. 45. 52. N.

TARASCON, a town of France, in the department of the Mouths of the Rhone, with a caſtle, ſeated on the Rhone, oppoſite Beaucaire, with which it communicates by a bridge of boats. Its commerce conſiſts in oil, brandy, ſtarch, and ſtuffs that are much worn, one ſort being of coarſe ſilk, and the other of the ſame material and wool. It is 10 miles N. of Arles, and 375 S. by E. of Paris. Long. 4. 39. E. Lat. 43. 48. N.

TARASCON, a town of France, in the department of Arrierge, ſeated on the river Arrierge, ſeven miles S.E. of Foix.

TARBES, a populous town of France, capital of the department of Upper Pyrenées, with a biſhop's ſee, an ancient caſtle, and a college. It is ſeated on the Adour, 42 miles S.W. of Auch, and 112 S. by E. of Bourdeaux. Long. 0. 3. E. Lat. 43. 14. N.

TARBOROUGH, a town of the United States, in North Carolina, ſeated on the river Tar, 40 miles N.W. of Waſhington.

TARENTESIA, a province of Savoy, which is a barren country, full of dreadful mountains. Moutier is the capital.

TARGA, a town of the kingdom of Fez, on the Mediterranean, with a caſtle on a rock. It is ſeated in a plain ſurrounded by mountains and thick foreſts, which is conſidered as a deſert; but there are good wells and fine paſtures. Long. 4. 56. W. Lat. 35. 20. N.

TARGOROD, a town of Turkey in Europe, in Moldavia, 50 miles S.W. of Jaſſy. Long. 26. 29. E. Lat. 46. 49 N.

TARIFFA, a town of Spain, in Andaluſia, with a caſtle, ſeated on an eminence, on the ſtraits of Gribraltar, 17 miles W.S.W. of Gibraltar. Long. 5. 40. W. Lat. 30. 0. N.

TARKU, the capital of Dagheſtan, ſeated on the Weſt coaſt of the Caſpian Sea, 52 miles S.E. of Terki, and 300 N.E. of Tauris. Long. 47. 5. E. Lat. 45. 50. N.

TARN, a department of France, including part of the late province of Languedoc. It takes its name from a river, which has its ſource in the department of Lozhere, and having watered Mithoud, Alby, Guillac, Montaubon, and Moiſſac, falls into the Garonne. Caſtres is the capital.

TARNOWITZ, a town in Sileſia, in the principality of Oppelen, near which is a ſilver mine, 38 miles S.E. of Oppelen. Long. 18. 15. E. Lat. 50. 20. N.

TARO, or Borgo-di-Val-di-Taro, a town of Italy, in the duchy of Parma, capital of the territory of Val-di-Taro. It is ſeated on the river Taro, 25 miles S.W. of Parma. Long. 10. 9. E. Lat. 44. 36. N.

TARODANT, or Tarudant, a town of Morocco, in the province of Sus, ſeated near the Atlantic, 120 miles S.S.W. of Morocco. Long. 8. 10. W. Lat. 30. 0. N.

TARRAGA, or Tarrega, a town of Spain, in Catalonia, ſeated on a hill, near the river Cervera, 15 miles E. by S. of Lerida, and 60 W. of Barcelona. Long. 1. 3. E. Lat. 41. 28. N.

TARRAGONA, a ſtrong ſea-port of Spain, in Catalonia, with a biſhop's ſee, and a univerſity. It was built by the Phœnicians, was very powerful in the time of the Romans, and has many noble monuments of antiquity. It is ſurrounded by walls built by the Moors, and is defended alſo by regular works. It is neither ſo large nor ſo populous as it was formerly; for though there is room for 2000 houſes within the walls, there are not above 500, which are all built with large ſquare ſtones. It carries on a great trade, and is ſeated on a hill on the Mediterranean, 35 miles N.E. of Tortoſa, and 220 miles E. by N. of Madrid. Long. 1. 13. E. Lat. 41. 5. N.

TARREGA, a town of Spain, in Catalonia, ſituate on the Cervera, five miles W. of Cerbera, and 30 N. of Terragona.

TARTAS, a town of France, in the department of Landes. The Midouſe runs through it; and on one ſide of this river it riſes in the form of an amphitheatre; the other is ſeated on a plain. It is 12 miles N.E. of Dax. Long. 0. 48. W. Lat. 43. 50. N.

TARVIS, or Tarwis, a town of Germany, in the duchy of Carinthia, 28 miles W.S.W. of Clagenfurt, and 46 N.N.W. of Trieſt. Long. 13. 40. E. Lat. 46. 34. N.

TASSACORTA, a ſea-port of the iſle of Palma, one of the Canaries. It lies S.W. of St. Cruz, and being expoſed to weſterly winds is little frequented, but by boats. Long. 17. 58. W. Lat. 28. 38. N.

TASSASUDON, the capital of Bootan, a feudatory country of Thibet. It is 260 miles S. by W. of Laſſa. Long. 89. 0. E. Lat. 27. 43. N.

TASSING, an iſland of Denmark, between Funen, Langleland, and Arroe. It is ſeparated from the former by a ſtrait, and contains a few towns and villages.

TASSO, an iſland of the Archipelago, near Romania, at the entrance of the gulf of Conteſia. It is 35 miles in circumference; and was formerly famous for mines of gold, and quarries of beautiful marble. The capital, of the ſame name, has a good harbour, and ſeveral caſtles.

Tasso, a mountain of Italy, between Bergamo and Como, from which the illuſtrious family of the poet Taſſo took their name, which was originally Torregiani. They were lords of

Bergamo, Milan, and other towns in Lombardy, but being expelled by the Viſconti, they ſettled on the moſt advantageous poſts of this mountain.

TATTA, or SINDE, a city of Hindooſtan Proper, capital of the province of Sindy. It is ſeated on a branch of the river Sinde or Indus, called the Richtel River. In the 17th century, it was very extenſive and populous, poſſeſſing manufactures of ſilk, wool, and cotton; and it was celebrated for its cabinet ware. Little of theſe now remain, and the limits of the city are very circumſcribed. On the ſhores of the Indus, above the Delta, conſiderable quantities of ſaltpetre are made; and within the hilly tract, which commences within three miles on the N.W. of Tatta, are mines of iron and ſalt. The Indus, and its branches, admit of an uninterrupted navigation from Tatta to Moultan, Lahore, and Caſhmere, for veſſels of near 200 tons; and a very extenſive trade was carried on between thoſe places, in the town of Aurungzebe; but, at preſent, very little of this trade remains, owing to a bad government in Sindy, and to a hoſtile diſpoſition of the Seiks, the preſent poſſeſſors of Moultan and Lahore. Tatta is 741 miles N.W. of Bombay. Long. 67. 37. E. Lat. 24. 50. N.

TATTAH, a town on the common frontiers of Morocco, Drah, and Zanghaga, and in the route from Morocco and Sus to Tombuctou. It is 170 miles S.S.E. of Morocco.

TATTERSHALL, a town in Lincolnſhire, with a market on Friday. It was formerly of note for its caſtle, and is ſeated on the Bane near its confluence with the Witham, 20 miles S.E. of Lincoln, and 127 north of London. Long. 0. 8. W. Lat. 53. 6. N.

TAVASTUS, a town of Sweden, in Finland, capital of the province of Tavaſteland, ſeated on a river which falls into the lake Wana, 62 miles N.E. of Abo.

TAUCHEL, a town of Poland in Pomerellia, ſeated on the Verd, 30 miles N.W. of Culm, and 55 S.W. of Marienburg. Long. 18. 5. E. Lat. 53. 38. N.

TAVERNA, a town of Naples, in Calabria Ulteriore, ſeated on the Coraca, 20 miles E. of Nicaſtro, and 70 N.E. of Reggio. Long. 16. 44. E. Lat. 39. 11. N.

TAUMACO, a town of Turkey in Europe, in the province of Janna, 18 miles N.W. of Zeiton.

TAUMAGO, an iſland of the South Pacific Ocean, diſcovered by Quiros in 1606. Long. 176. 45. W. Lat. 13. 0. S.

TAUREAU, an iſle of France, in the department of Finiſterre, lying at the mouth of the river Morlaix. On this iſland is a caſtle, which defends the port of Morlaix. Long. 3. 51. W. Lat. 48. 40. N.

TAUS, a town of Bohemia, in the circle of Pilſen, 26 miles S.S.W. of Pilſen, and 50 S. of Saatz. Long. 13. 45. E. Lat. 49. 25. N.

TAVY, a river in Devonſhire, which riſes in Dartmoor Foreſt, and watering Taviſtock, enters the harbour of Hamoaze, above Plymouth.

TAW, a river in Devonſhire, which riſes in the centre of the county, flows to Barnſtaple, and joins the Towridge, at its mouth in the Briſtol Channel.

TAWY, a river in Glamorganſhire, which flows parallel to the Neath, and enters the Briſtol Channel, at Swanſey Bay.

TAY, LOCH, a lake in Perthſhire, through which flows the river Tay. It is 15 miles long, and in many parts above one broad. On the 12th of September, 1784, this lake was ſeen to ebb and flow ſeveral times in a quarter of an hour, when all at once the waters ruſhed from E. to W. in oppoſite currents, ſo as to form a ridge, leaving the channel dry to the diſtance of almoſt 100 yards from its uſual boundary. When the oppoſing waves met, they burſt with a claſhing noiſe and much foam: the waters then flowed out at leaſt five yards beyond their ordinary limits. The flux and reflux continued gradually decreaſing for two hours. A ſimilar motion was obſerved ſeveral days, but in a leſs degree. The banks of this lake are finely wooded; and it has a ſmall tufted iſland, on which are the ruins of a priory, built by Alexander I.

TEHANG-TCHA-FOU, a city of China, the capital of the S. part of the province of Hou-quang. It has one city of the ſecond and eleven of the third claſs under its juriſdiction, and is ſeated on a large river, which has a communication with an extenſive lake, called Tong-ting-hou, 625 miles S. by W. of Pekin. Long. 112. 25. E. Lat. 48. 11. N.

TCHANG-TCHEOU-FOU, a city of China, in the province of Fo-kien. It is very conſiderable, on account of its trade with Emony, Pong-hou, and Formoſa. Long. 117. 35. E. Lat. 24. 32. N.

TCHANG-TE-FOU, one of the moſt northern cities of Honan, in China. It is remarkable for a fiſh, like a crocodile, the fat of which is of ſuch a ſingular nature, that, when once kindled, it cannot be extinguiſhed. Long. 111. 5. E. Lat. 29. 2. N.

TCHE-KIANG, a province of China, one of the moſt conſiderable in that empire, in extent, riches, and population. It is bounded on the N. and W. by Kiang-nan, on the S.W. by Kiang-ſi, on the S. by Fokien, and on the eaſt by the ocean. In this province, whole plains may be ſeen covered with dwarf mulberry-trees, purpoſely checked in their growth; and prodigious quantities of ſilk-worms are bred here. Their ſilk ſtuffs, in which gold and ſilver are intermixed, are the moſt beautiful in China. The tallow tree grows here, and here are found the ſmall gold fiſh, with which ponds are ſtocked.

TCHERNIGOF, a government of Ruſſia, formerly a part of the Ukraine. Its capital, of the ſame name, is ſeated on the Deſne.

TCHING-KIANG-FOU, a ſtrong city of China, in the province of Kiang-nan, the key of the empire on the ſea-coaſt. Its ſituation and trade, and the beauty of its walls, give it a pre-eminence over the other cities of the province; but its juriſdiction is confined to three cities of the third claſs. It is 25 miles E. by N. of Nan-king. Long. 118. 55. E. Lat. 32. 14. N.

TCHING-TCHEOU-FOU, a city of China, in the province of Hou-quang, ſeated near the canal through which all barks muſt paſs in going from Sou-tcheou, to Kiang. Under it are five cities of the third claſs, in which a kind of plain earthen ware is prepared, highly valued by the Chineſe, who prefer it to the moſt elegant porcelain. It is 640 miles S.S.W. of Pekin. Long. 109. 40. E. Lat. 28. 23. N.

TCHING-TING-FOU, a large city of China, in the province of Pe-tcheli. Its diſtrict contains five cities of the ſecond and 27 of the third claſs; and it is 110 miles S. by W. of Pekin. Long. 114. 21. E. Lat. 38. 9. N.

TCHING-TOU-FOU, a city of China, the capital of Setcheuen, formerly the reſidence of the emperors, and one of the largeſt and moſt beautiful cities in the empire; but, in 1646, it was almoſt entirely deſtroyed, during the civil wars that preceded the laſt invaſion of the Tartars. Its diſtrict contains ſix cities of the ſecond and 15 of the third claſs. Long. 103. 44. E. Lat. 30. 40. N.

TCHI-TCHEOU-FOU, a city of China, in the province of Kiang-nan. It is ſeated on the river Kiang, and has under it ſix cities of the third claſs. Long. 117. 0. E. Lat. 30. 45. N.

TCHONG-KING-FOU, a city of China, one of the moſt commercial provinces of Se-tchuen. It is ſeated on a

mountain, rising in the form of an amphitheatre, at the confluence of the Hin-cha-kiang and Yang-tse-kiang. Under it are three cities of the second and 11 of the third class. It is 637 miles S.W. of Pekin. Long. 106. 20. E. Lat. 29. 42 N.

TCITCICAR, the most northern of the three departments of Eastern Chinese Tartary. Its capital, of the same name, is a modern city, built by the Emperor of China, to secure his frontiers against the incursions of the Russians. It is 450 miles N.E. of Pekin.

TEAKI, an island in the Mediterranean, 20 miles long and four broad. It is the ancient Ithaca, the kingdom of Ulysses. Long. 20. 54. E. Lat. 38. 47. N.

TEBESSA, a town of the kingdom of Tunis, with several remains of antiquity. It is seated at the foot of a mountain. Long. 8. 5. E. Lat. 34. 51. N.

TEBZA, a strong town of the kingdom of Morocco, capital of a province of the same name. It carries on a good trade, and is seated on the side of one of the mountains of Atlas. Long. 4. 55. W. Lat. 32. 50. N.

TECEUT, a town of Morocco, in the province of Sus, seated on the river Sus, in a country abounding in dates and sugar-canes, four miles E. of Messa. Long. 8. 25. E. Lat. 29. 10. N.

TECOANTEPECA, a considerable sea-port of New Spain, in the audience of Mexico and province of Guaxaca, seated on a bay of the same name, in the Pacific Ocean. It has a fortified abbey, and several handsome churches. Long. 95. 15. W. Lat. 15. 28. N.

TECORT, or TICARTE, a strong town of Barbary, capital of a kingdom of the same name, in Biledulgerid. It is seated on a mountain, 420 miles S.W. of Tripoli. Long. 7. 55. E. Lat. 29. 35. N.

TECRIT, a town of Turkey in Asia, in the government of Mosul, 139 miles S. of Mosul.

TECULET, a sea-port of the kingdom of Morocco, with an old castle, seated on the side of a mountain, at the mouth of a river of the same name. Long. 9. 5. W. Lat. 30. 45. N.

TEDELEZ, a strong town of Algiers, in a province of the same name, on the coast of the Mediterranean, with a castle, 50 miles N.E. of Algiers. Long. 3. 5. E. Lat. 47. 5. N.

TEDLA, or TADILA, a province of Morocco, which extends along the E. side of Mount Atlas, to the borders of Fez and Algiers.

TEDNEST, a large town of Morocco Proper, capital of the province of Hea. It was taken by the Portuguese in 1517, but they were driven away soon after. It is almost surrounded by a river. Long. 8. 35. W. Lat. 30. 30. N.

TEDSI, a commercial town of Morocco, in the province of Sus, seated in a plain abounding in corn, 20 miles S.E. of Tarodant.

TEFEZARA, a strong town of Algiers, in the province of Tremesen, 12 miles from the city of that name. There are a great many mines of iron in its territory.

TEGAZA, a town of Zahara, capital of a territory of that name, to the N.E. of Senegal. It is remarkable for mountains of salt. Long. 6. 30. W. Lat. 21. 40. N.

TEGLIO, a town of the country of the Grisons, capital of a government of the same name, in the Valteline. It is situate on the top of a mountain, nine miles from Tirano, and 12 from Sondrio.

TEIGN, a river in Devonshire, composed of two branches, which rise in the centre of the county, and uniting, enter the English Channel at Teignmouth.

TEIGNMOUTH, a sea-port in Devonshire, reckoned part of the port of Exeter. It sends a number of vessels to the Newfoundland fishery, and has a considerable coasting trade, especially in carrying tobacco-pipe clay to Liverpool, whence are brought back coal, salt, earthen ware, &c. This is the place where the Danes first landed, and where they committed several outrages. It was almost entirely destroyed by the French, who landed and set fire to it in 1690. It is seated at the mouth of the Teign, 12 miles S. of Exeter, and 280 W. by S. of London. Long. 3. 29. W. Lat. 50. 32. N.

TEISENDORF, a town of Bavaria, in the archbishopric of Saltzburg, 12 miles W.N.W. of Saltzburg.

TEISSE, a river of Hungary, which rises in the Carpathian mountains, passes by Tockay and Segedin, and falls into the Danube, near Titui.

TELEGRAPH (*Encycl.*). The following is the specification of a patent granted to Mr. Boaz, manufacturer in Glasgow, for an improved method of communicating thoughts, information, and intelligence, to and from different places, at a distance from each other.

This invention consists in representing, at pleasure, by means of lights or luminous bodies, and also by means of opaque bodies, or by means of both combined, any letter of the alphabet, or any numerical figure, or any apearance or appearances which it may be desirable to exhibit as a sign, symbol, or signal, such as a circle, a semicircle, a segment of a circle, a square, one side of a square, or two or three sides of a square, a cross, a triangle, and other such like. This may be effected in various ways, and a smaller or larger number of lights or bodies; but perhaps, in regard to luminous bodies, and where correct circular appearances are not necessary to be represented, as simple a mode as any is the following. Take five-and-twenty lamps, dispose of them on a board or frame, so as to form a square; that is by fixing them in five rows, and five lamps in each row, at equal distances from each other. Affix a cover or blind (made of any opaque substance) before each lamp, of a round or rather an oval shape, having a handle or neck made so as to move backwards and forwards, or up and down, round a pin, nail, or pivot, fixed in the board or frame. Fix a small line (made of small twine or rope, according to the size of the machine, or of catgut, or a small metal chain, or any other pliable and connecting substance) around the handle or neck of each of these covers or blinds. Connect each of these lines with a pulley at one side of the board or frame. Raise this board or frame perpendicularly upon a square or oblong frame. Fix in this last square or oblong frame as many thin oblong pieces of wood or metal as there are lamps and lines attached to them; such thin or oblong pieces of wood or metal moving upon two pivots in the side of the square or oblong frame in which they are placed: and these thin or oblong pieces of wood or metal being placed in their frame in such manner as that their oblong direction may run from side to side of their frame upon the pivots fixed on which they move, and so that each of these thin oblong pieces may, when not pressed upon as after mentioned, remain perpendicular to its frame, and all of them, when at rest, may be parallel to each other. One of the lines affixed to the lamp-covers, or blinds, and connected with its pulley, being fixed to the upper edge of one of these thin oblong pieces of wood or metal, that is, the one extremity of such line being affixed to the handle or neck of the lamp-cover, or blind; and the other extremity being affixed to the upper edge of one of the thin oblong pieces of wood or metal; then, upon turning the thin or oblong pieces of wood or metal, so as to make it incline, the lamp-cover, or blind, will be drawn up; and by thus making as many of the thin oblong pieces of wood or metal incline as lamps are wanted to be uncovered, the letter of the alphabet or figure wished to be represented will be made to appear. In order the more easily to give the necessary in-

clination or turning to theſe thin oblong pieces of wood or metal (which, ſeeing they act by their inclined poſitions, ſhall be called incliners), place a piece of wood or metal, nearly of the ſame ſize with the incliners, ſo as to be eaſily moved backwards and forwards (in grooves for example) in the frame in which the incliners are placed at right angles to them, and ſo that the upper edges of ſuch pieces of wood or metal may come near to the under edges of the incliners. By fixing in ſuch pieces of wood or metal pins or teeth (made of wood or metal), the piece of wood or metal having ſuch pins or teeth being puſhed in (and which ſhall be called the puſher, ſeeing it acts by being puſhed in), the pins or teeth which are fixed in it ſtriking againſt the under edge of the incliners, give them the inclined direction which is neceſſary to pull the lines affixed to the lamp-covers; and thus, by affixing in each of theſe puſhers as many pins or teeth as lamps are meant to be uncovered, and ſo that theſe pins or teeth may ſtrike againſt the under edge of the incliners (connected as they are by means of lines and pulleys with the covers, or blinds of the lamps meant to be uncovered), as many lamps will be uncovered as are neceſſary to repreſent the letter of the alphabet, or other ſign or appearance meant to be exhibited; and, by having a double ſet of lamp-covers or blinds, and lines and pulleys, that is, by having lamp-covers or blinds behind as well as in front of the board or frame, and lines and pulleys, to connect them with the incliners in the ſame manner as the covers and blinds in front are connected with the incliners, the ſame lamps may be rendered viſible behind, which are made viſible in front, of the board or frame; or other lamps may be rendered viſible behind, which are not made viſible in front, of the board or frame. Upon drawing back the puſher the lamp-covers or blinds fall down by their own weight, and cover the lamps, and the incliners alſo reſume their former poſition. For the greater facility and eaſe in producing the deſired effect, there may be a puſher, having pins or teeth fixed therein as aforeſaid for each letter of the alphabet, and for each numerical figure or other ſign or appearance wiſhed to be repreſented, and theſe puſhers may further be marked on the outſide of their frame, from whence they are puſhed in, with the letter of the alphabet or numerical figure, or other ſign or appearance, which, upon being puſhed in, they repreſent by means of the lamps which they uncover; and a handle or knob may be fixed to the end of the puſher at which the letter or figure, or ſign, is marked, for the greater convenience in puſhing it in and pulling it back; and the letter, figure, or ſign, may be marked upon the handle or knob. Cranks will do equally well as the thin oblong pieces of wood or metal, which form the incliners to which the lines are attached, which connect them with the lamp-covers or blinds; but thin oblong pieces of wood or metal are ſuggeſted as being more ſimple in their configuration and conſtruction; and theſe thin oblong pieces of wood or metal, or cranks, acting as incliners, may be placed in a perpendicular as well as in a horizontal direction. Inſtead of lines and pulleys, the lamps too might be uncovered, and again covered, by means of wires and keys preſſing upon them, as in a piano-forte: but lines and pulleys are ſuggeſted, as being more ſimple in their conſtruction, and leſs liable to go out of repair. Various other modes of conſtruction might alſo be eaſily adopted to produce the ſame effect. For inſtance, in place of having lamps with covers or blinds, and lines and pulleys, and incliners and puſhers, the lamps might be made with an opaque and a ſhining ſide; and by means of a ſcrew or ſcrews, as well as by means of lines and pulleys, the lamps may be made to turn, ſo as to exhibit their opaque or their ſhining ſide that is to be made viſible or inviſible at pleaſure. In order to comprehend this invention the more diſtinctly, a drawing is annexed (Plate 52. fig. 1) agreeably to the deſcription firſt given, in which the machine is ſuppoſed to repreſent the letter H. The black ſquare repreſents the board or frame behind which the lamps are placed, having a hole or aperture, through which each lamp ſhines; that is, having as many holes or apertures in it as there are lamps affixed behind it. The oval figures (*a*) repreſent the lamp-covers or blinds. The lines repreſent the lines attached to the lamp-covers and incliners. The five dots at the bottom of the black ſquare repreſent the pulleys (which, though only five in appearance, repreſent twenty-five pulleys, the number of pulleys being equal to the number of lamps and incliners). The oblong figures, immediately below the black ſquare, repreſent the incliners. The dark oblong figure at the bottom of the whole repreſents the puſher, with its pins or teeth, which, ſtriking againſt each of the five outward incliners and three of the middle ones, is ſuppoſed to uncover each of the five outward lamps and three of the middle ones, at right angles to the former, and thereby repreſent the letter H; the ſmall white circles repreſenting the lamps ſuppoſed to be uncovered, and the oval figures raiſed upwards, ſhewing the lamp-covers or blinds of the lamps ſuppoſed to be uncovered, while the other oval figures repreſent the other lamp-covers or blinds ſuppoſed to ſhut the holes or apertures, and cover the lamps, by remaining down from their own weight. To prevent theſe lamp-covers from going wrong by riſing too high upon being pulled up, ſmall pins are placed (repreſented by ſmall dots), to confine them to their poſition when raiſed; and other pins are placed (alſo repreſented by ſmall dots) to prevent them from falling too low. In order to give additional power or glare to the light, the lamps may be made with reflectors, or a lens or refractor may be placed before each lamp. The frame attached to the black ſquare in the annexed drawing (fig. 1), repreſents theſe lenſes or refractors ſo placed in a frame as that a lens or refractor may come before each lamp, the frame in which they are placed being attached by hinges to the back-board or ſquare in which the lamps are placed, ſo that the frame containing theſe lenſes or refractors may be opened and ſhut at pleaſure.

The annexed drawing (fig. 1) ſuppoſes the lamps to be firſt covered, and then ſuch of them to be uncovered as repreſent the letter H, which is meant to be repreſented. But it is evident that the ſame effect might be produced by having all the lamps uncovered in the firſt inſtance, and then covering all of them but thoſe neceſſary to repreſent the appearance of the letter. Five-and-twenty lamps, with their covers or blinds, are alſo here repreſented; and the ſame number of lines and pulleys, and incliners, are alſo ſuppoſed to be repreſented. But nine lamps, with their covers or blinds, and as many lines and pulleys, and incliners (as repreſented in the annexed paper of drawings in the figure marked fig. 9, where the letter H is alſo ſuppoſed to be repreſented), would produce nearly the ſame effect; and a ſimilar effect may be produced by a greater or a ſmaller number of lamps than five-and-twenty (as many puſhers being always made uſe of as there are letters of the alphabet, or ſeparate ſigns meant to be repreſented), ſo that it is not in the number of lamps made uſe of, or in the particular configuration or conſtruction of the machine, that the invention conſiſts, but it is in being able to repreſent, by means of lamps or luminous bodies (and alſo by means of opaque bodies, or by both combined, as after mentioned), any letter of the alphabet, and any numerical figure, or any appearance or appearances to be uſed as ſigns, ſignals, or ſymbols. For although lamps are ſuppoſed to be made uſe of, candles or phoſphoric ſubſtances would produce a ſimilar effect, though perhaps in an inferior degree: and one large lamp may be ſo placed or ſuſpended as to produce a ſimilar effect upon mirrors or reflectors, which might be covered or uncovered at pleaſure,

as the lamps above mentioned. It is alſo obvious, that almoſt any form, figure, or ſhape, may be repreſented by the diſpoſition or arrangement of lamps or luminous bodies, rendered viſible or inviſible at pleaſure, in the manner that has been deſcribed. But it is further obvious, that by combining the repreſentations of two or more letters or figures together, as many different varieties of ſigns or appearances may be produced as there are combinations of letters or figures, which may be repreſented ſeparately. In order the more eaſily to comprehend the form of the lamp-covers or blinds above deſcribed, two drawings are given of the ſame in the annexed paper of drawings, *viz.* fig. 5, in which a front view of the lamp-cover is ſeen, with its line attached to it, and fig. 6, in which a ſide view is given of it. A drawing is alſo given in the annexed paper of drawings of the incliner, *viz.* fig. 7. The whole figure taken together repreſents the incliner as made of a thin piece of wood or metal. The black part of it repreſents the crank, which may accompliſh its purpoſe equally well with the thin piece of wood or metal. A drawing is alſo given in the annexed paper of drawings, *viz.* fig. 8, of a ſmaller frame, in which the lamps may be firſt fixed, which ſmaller frame may be eaſily made to ſlide into a caſe, or in grooves behind or before, or may be otherwiſe attached to the larger frame in which the lamps are placed in the rows in which they are wanted. The drawing marked fig. 13, in the annexed paper of drawings, ſhews the manner in which the puſhers may be placed in their frame, running in grooves or caſes. The whole machine may, for the ſake of preſervation, be incloſed in a box or caſe, which box or caſe may, for the ſake of convenience, run on caſtors; and the machine may be raiſed to the top of its box either by means of a pulley or by the hand, if of ſmall dimenſions. A repreſentation of the machine and its box is given in fig. 10, of the annexed paper of drawings, ſhewing a front view of the ends of the puſhers, and a lateral view of the lamps. The deſcription hitherto given relates to the modes by which any letter of the alphabet, and any numerical figure, or any appearance or appearances neceſſary to be uſed, as ſigns, ſignals, or ſymbols, may be effected by means of lamps or luminous bodies.

Mr. Boaz next ſhews how theſe effects may be produced by means of *opaque* bodies. For this laſt purpoſe, take a frame, having bars or diviſions, running either in a perpendicular or horizontal direction in the frame. For inſtance, take a ſquare or oblong frame, having four rims or ſides; place horizontally in it five bars or diviſions; place at equal diſtances, on each of theſe bars, five boards, or thin pieces of wood or metal, of any ſhape or ſize, thinner than the bar to which they are to be attached, leaving a ſpace between each board or piece of metal. When the boards or pieces of metal are parallel to each other, and preſent their edge or thin ſide to the front of the frame or bars, they are not ſeen at a diſtance; the whole exhibiting at a diſtance only the appearance of the bars. The boards may be ſo conſtructed as always to remain of themſelves in this poſition; that is to ſay, let the boards be fixed, by means of pivots or hinges, to the upper ſide of the front of the bars; the pivots or hinges being placed on the board, not at its middle, but near one edge of it, ſo that the greater weight of that part of the board, the edge of which is furtheſt from the hinges or pivots, would bring that part of it downwards, and make the board hang perpendicularly, were it not for the bar below, to which it is attached; which bar below being made broader, or as broad as the breadth of that part of the board, the edge of which is furtheſt removed from the hinges or pivots, catches ſuch part of the board, and, keeping it in an horizontal poſition, prevents it from falling, as it otherwiſe would do, to its perpendicular. In order to raiſe the board, fix to it, in that part of it, the edge of which is leaſt removed from the hinges or pivots, a line (made of twine or rope, or other pliable ſubſtance, according to the ſize of the machine), and connecting it with a pulley at the under part of the frame, affix the extremity of ſuch line to the under edge of the incliner as in the preceding part of the deſcription. The puſher, upon being puſhed in, will produce its effect as in the former part of the deſcription, by bringing the incliner to its inclined poſition, which will raiſe the board with which it is connected by the line and pulley, as above mentioned; and here, as in the former caſe, there being an equal number of boards and lines, and pulleys and incliners, and as many puſhers as there are letters, numerical figures, or ſigns, meant to be repreſented, the letter, numerical figure, or ſign, wiſhed to be repreſented, may be exhibited at pleaſure by the opaque body in the ſame manner as by the luminous body, by puſhing in the puſher, and, upon pulling back the puſher, the boards will fall down by their own weight, and the incliners will then alſo reſume their former poſitions. The ſame effect may be produced by making each board turn horizontally on a pivot, in the horizontal bars; and in order to turn each board ſo as to make it preſent its flat ſurface or its thin edge at pleaſure, to the front of the frame or bars, let a ſmall wheel be fixed to the pivot; the edges of which wheel may be grooved, the better to keep the lines to be attached to them in their proper poſition. Affix at oppoſite ſides of the groove in this wheel the ends of two lines, ſo that the one line upon being pulled will turn the wheel one way, and the other line being pulled will make it turn the other way. Paſs theſe lines, the ends of which are ſo fixed in the groove of the wheel, through two pulleys, placed in ſuch manner on the bars as that the lines may be pulled oppoſite ways. The lines dropping to the bottom of the frame or bars will then be paſſed through two correſponding pulleys at the bottom thereof; and the end of the one line being fixed to the upper edge of the incliner, and the end of the other line being fixed to the under edge of the incliner, the incliner, upon receiving its inclined poſition, by means of the puſher, will turn the board ſo that its flat ſurface or its thin edge may be preſented to the front of the frame or bars at pleaſure. And in this conſtruction there being no other means to make the boards reſume their firſt poſition, the under edge of the incliner ſhould, in this mode of conſtruction, be made heavier than the upper, ſo that the puſher being pulled back, the weight of the under edge of the incliner may bring it to its perpendicular poſition, and thus turn the board to its original poſition. For the ſake of ſtrengthening the frame in which the boards are placed, perpendicular as well as horizontal bars may be uſed and fixed together as they paſs each other at right angles. And it may be eaſily perceived, without any particular deſcription, how the boards may be moved by means of pivots placed in the perpendicular bars, or be made to move round the perpendicular bars connected with the incliners by means of lines and pulleys, in the manner which has been mentioned. What has been hitherto ſtated regards the modes by which any letter of the alphabet, or any numerical figure, or any appearance or appearances neceſſary to be uſed as ſigns, ſignals, or ſymbols, may be repreſented by means of lamps or luminous bodies, or by means of opaque bodies ſeparately.

Laſtly, we are ſhewn how theſe effects may be produced by means of *luminous bodies and opaque bodies combined*. For this purpoſe, apertures muſt be made in the boards above deſcribed, and lamps muſt be placed in the apertures of the boards, in ſuch manner as that the lamps remaining ſtationary do not interfere with the movements of the boards. This may be effected by means of a ſmall ſeat or reſt attached to the bar to which the boards are fixed, as repreſented in fig. 12. The flame or light of the lamp will then be ſeen through the

aperture of the board when its flat ſurface is preſented to the front of the frame or bars; and, in order to prevent the flame or light from being ſeen when the thin edge of the board is preſented to the front of the frame or bars, let a thin piece of wood or metal, rather larger than the aperture in the board (as repreſented in fig. 11 of the annexed paper of drawings), be fixed at right angles to the board below the aperture, ſo that when the thin edge of the board is preſented to the front the thin piece of wood or metal is raiſed up, and hides the lamp; and thus the lamps are viſible through the apertures of the boards only when the flat ſurfaces of the boards are preſented to the front of the frame or bars.

In order that the nature of this invention may be the better underſtood, a drawing is given in fig. 2, of the machine, as ſhewing its combined effects by means of opaque and luminous bodies. The drawing, as in the firſt part of the deſcription, repreſents the machine as forming the letter H. The lines in this drawing, running perpendicularly and horizontally, exhibit the frame and bars. The black ſquares repreſent the boards, with their flat ſurfaces in front of the frame or bars, forming the letter H. The ſmall white oblong ſpaces in theſe black ſquares repreſent the apertures in them, through which the light or flame of the lamps is ſeen. The ſmall white lines appearing under theſe white oblong ſpaces, repreſent the thin edges of the thin pieces of wood or metal which cover the lamps when the thin edge of the boards is in front of the frame or bars. The black oblong figures repreſent the boards, having their thin edges in front of the frame or bars. The ſmall elevations ariſing from theſe black oblong figures, ſhew the thin pieces of wood or metal which hide the flame or light of the lamps when the thin edge of the boards is in front of the frame or bars. The lines repreſent the lines fixed to the boards and incliners, connected by their pulleys. The dots at the bottom of the bars repreſent theſe pulleys. The figures (*b*) immediately under theſe dots repreſent incliners; and the black oblong figure at the bottom of the whole repreſents the puſher, with its teeth or pins, which producing its effect upon the incliners connected with their lines and pulleys with the boards, exhibits, by means of the boards or lamps, or both combined, the appearance of the letter H. Two drawings are alſo given, in the annexed paper of drawings, of a board, with its lamp turning horizontally upon a pivot, *viz.* fig. 3 and fig. 4. Fig. 3, repreſents a front view of the board and lamp, ſo that when the flat ſurface of the board is in front, the flame or light of the lamp is viſible. Fig. 4, repreſents a ſide or lateral view of the board and lamp, ſo that when the thin edge of the board is in front, the light or flame of the lamp is inviſible; and the lamp, according to this mode of conſtruction, is fixed in the board, and turns with it. Theſe ſame figures, *viz.* figs. 3 and 4, alſo ſhew that lamps, with an opaque and a ſhining ſide, mentioned in a previous part of this deſcription, may be made to turn by means of lines and pulleys, ſo as to exhibit their opaque or their ſhining ſide, that is, to be made viſible and inviſible at pleaſure.

TELEMONA, a town of Tuſcany, with a ſmall harbour, and a ſtrong fort. It is ſeated at the mouth of the Oſſa, at the extremity of a point of a craggy rock, 10 miles from Orbitello. Long. 11. 11. E. Lat. 42. 28. N.

TELESCOPE (*Encycl.*). Mr. Dudley Adams, of Fleet-ſtreet, London, obtained a patent, in 1800, for a method of rendering teleſcopes and other optical glaſſes more portable.

In order to produce the peculiar degree of portability that has been effected, it was found expedient to adopt a new ſpecies of ſpring, that would, from its principle and conſtruction, occupy the leaſt poſſible ſpace, and at the ſame time render the teleſcopes, to which it was applied, ſtrong and ſteady when drawn out. This was the more neceſſary, as, according to the new conſtruction, the number of joints or tubes would be augmented conſiderably beyond the number hitherto employed. It was neceſſary alſo to deviſe ſome means by which the ſeveral glaſſes, applied to the eye-ends of teleſcopes, ſhould acquire their true poſitions and diſtances when the joints or tubes were drawn out, after having been compreſſed into a ſmall ſpace, and the ſame be retained in every ſituation wherein they might be placed by the obſerver during the time the teleſcope was being adjuſted for uſe.

The following are the references to Plate 51. in which this invention is delineated.

Fig. 1, A, repreſents the form and conſtruction of the ſpring. It conſiſts of a thin piece of metal tube, turned in a lathe ſtrictly true and cylindrical, and to fit the inſide of the drawer or tube in which it is intended to ſlide. It is then ſlit down, from the open end, in two, three, four, or more places, to give it elaſticity: this latter circumſtance is not however abſolutely neceſſary. The dotted lines at B repreſent the underſide of the ſpring perforated, in which a ſcrew is cut, of the ſize to ſcrew on the end of the tube at C, fig. 2, and made faſt there.

This inverted cylindrical ſpring, ſimple as it is in its conſtruction, affords all the advantages neceſſary; it occupies leſs ſpace than the ſprings hitherto adopted, and by that means admits of more drawers, tubes, or joints, being added than could, according to the former mode, be uſed or applied within the ſame ſpace; by its cylindrical form, that ſtrength and ſteadineſs is obtained, which is ſo eſſential to the conſtructing a good teleſcope with drawers. It preſerves the axis therefore as one uninterrupted line, in every poſition of the drawers, whether they are drawn out to the fulleſt extent, or returned in part into their ſeveral tubes. It is alſo of ſuperior advantage, and the beſt adapted to the conſtruction of plated teleſcopes, whether plated in gold or ſilver, or whether the drawers or tubes are lacquered, painted, or japanned, &c. as by its action and principle all preſſure and friction on their poliſhed, plated, or painted ſurfaces, may be obviated, and the poſſibility of thoſe ſurfaces being rubbed, ſcratched, or worn, thereby totally prevented. Fig. 3, repreſents the tube C with the ſpring thereon at D. E, repreſents the tube in which it ſlides.

The ſecond part of the invention is effected in the following manner. Fig. 4, C, repreſents the tube called the eye-tube, or that which is placed next the eye when the teleſcope is being uſed; *a*, the ſpring thereon. H and I, two tubes, that are made to ſlide into the interior of the tube C. F, a broad circular plate, ſhoulder, or flaunch. To explain the action and principle of the tubes H and I more fully, another figure, *viz.* fig. 5, has been given. C, repreſents the tube to be placed next the eye; *a*, the new-invented cylindrical ſpring thereon. D, the next tube, in which the ſaid ſpring ſlides, provided alſo with its ſpring *a*, which ſlides in the third tube E. The firſt and ſecond glaſſes are contained in the eye-tube C, and are repreſented by dotted lines G, G. The third and fourth glaſſes are inſerted in the tube H at *b c*. Theſe tubes, as have been mentioned, are made to ſlide into the interior of the eye-tube C, when the inſtrument is cloſed, but when the tubes are drawn out, they will have nearly the effect repreſented. For when the tubes C, D, and E, are drawn out, the flaunch F will ſtrike againſt the end of the tube D, and by that means the two tubes H and I will alſo be drawn out, and will retain their preſent poſition until all the tubes are nearly cloſed. For it is not until the flaunch F reaches one of the laſt tubes, that the two tubes H and I will be forced into the tube C. The glaſſes therefore contained in them will acquire and retain their true diſtances while being uſed.

The advantages of this part of the invention need not be

enlarged upon, as will appear obvious to every one who conſiders the ſubject, that by means thereof, together with the new ſpring, the utmoſt portability in teleſcopes may be effected, and their length in conſequence be conſiderably extended beyond what is uſually adopted if neceſſary.

The ſame degree of portability, and any degree of length, may be obtained by the addition of three, four, or more tubes, in the place of the two already mentioned; and the tube containing the firſt and ſecond glaſſes might be conſtructed after the ſame manner, *viz.* to conſiſt of two, three, or more tubes, and made to ſlide one within the other; and in ſome inſtances, where the teleſcopes are very long, one tube might be made perhaps to anſwer the purpoſe. Theſe and other ſimilar modes might hereafter be adopted without altering the principle of this invention, which eſtabliſhes a rule whereby the ſeveral glaſſes at the eye-ends of teleſcopes may, from the manner in which they are placed, be brought near to each other, and afterwards placed at their proper diſtances, without inconvenience or prejudice to the teleſcope. Of the many modes that have been tried, the particular one adopted has been preferred; it is the moſt ſimple, and it moreover poſſeſſes all the advantages required.

TELGEIN, or TELGA, a trading town of Sweden, in Sudermania, ſeated on the S. bank of the lake Maeler, 12 miles S.W. of Stockholm. Long. 17. 24. E. Lat. 59. 18. N.

TELLES, a ſea-port of the kingdom of Fez, 120 miles E.S.E. of Tangier.

TELLICHERRY, a ſea-port of Hindooſtan, on the coaſt of Malabar, where there is an Engliſh factory. It is 30 miles N.N.W. of Calicut. Long. 75. 50. E. Lat. 11. 48. N.

TELTSH, a town of Germany, in Moravia, ſeated on the frontiers of Bohemia, at the ſource of the river Teya, 36 miles W.N.W. of Znaim. Long. 16. 0. E. Lat. 49. 0. N.

TEMENDEFUST, a town of the kingdom of Algiers, ſeated on the Mediterranean, 10 miles E. of Algiers.

TEMESWAR, a town of Upper Hungary, capital of a territory called the bannat of Temeſwar. It formerly paſſed for impregnable; but it was taken by Prince Eugene, in a dry ſaſon, in 1716. It is ſeated in a moraſs, 60 miles N.E. of Belgrade, and 150 S.E. of Buda. Long. 22. 20. E. Lat. 45. 37. N.

TEMPLIN, a town of Upper Saxony, in the Ucker marche of Brandenburg, which has a great trade in timber. It is 15 miles S.W. of Prenzlo, and 34 N. of Berlin. Long. 13. 25. E. Lat. 53. 5. N.

TEMROCK, a ſea-port of Cuban, ſeated on the ſea of Aſoph, 20 miles E. of the ſtraits of Caffa. Long. 37. 20. E. Lat. 45. 27. N.

TENASERIM, a town of Siam, capital of a province. It is ſituate on a river, of the ſame name, which falls into the bay of Bengal. Long. 98. 8. W. Lat. 12. 12. N.

TENBURY, a town in Worceſterſhire, with a market on Tueſday, ſeated on the Teme, 15 miles W. by N. of Worceſter, and 130 W.N.W. of London. Long. 2. 13. W. Lat. 52. 16. N.

TENBY, a ſea-port in Pembrokeſhire, with a market on Wedneſday and Saturday. Its caſtle was demoliſhed in the civil wars, and its trade is inconſiderable. It is 10 miles E. of Pembroke, and 233 W. of London. Long. 5. 5. W. Lat. 51. 42. N.

TENCH'S ISLAND, an iſland in the Pacific Ocean, two miles in circumference, diſcovered by Lieutenant Ball in 1790. It is low, but entirely covered with trees, many of which are the cocoa nut. The natives obſerved in the canoes, that ventured to come ſomewhat near the ſhip, were remarkably ſtout men, quite naked, and of a copper colour; their hair reſembling that of the New Hollanders, and ſome of their beards reaching as low as the navel, with an appearance of much art having been uſed to form them into long ringlets. Two or three of the men had ſomething like a bead or bone ſuſpended to a ſtring, which was faſtened round the neck. The largeſt of their canoes appeared to be about 28 feet long, and made out of a large tree, with a long outrigger. Long. 151. 31. E. Lat. 1. 39. S.

TENDA, a town of Piedmont, capital of a county of the ſame name. It is ſeated at the foot of a mountain, on the river Boga, 52 miles S. of Turin. Long. 7. 45. E. Lat. 44. 10. N.

TENEDOS, a celebrated iſland in the Archipelago, on the coaſt of Natolia, and 10 miles S.W. of the ſtraits of Gallipoli. It is 11 miles long, and ſeven broad, inhabited almoſt wholly by Greeks, and its muſcadine wine is the beſt in all the Levant. On the E. ſide is a large town, ſeated at the foot of a mountain, with a fine harbour, commanded by a caſtle. On the 5th of June, 1794, after ſome ſevere ſhocks of an earthquake, a ſmall volcanic iſland was diſcovered to have emerged from the ſea, between this town and the Aſiatic ſhore.

TENEN, or KNIN, a town of Venetian Dalmatia, on the borders of Boſnia, with a biſhop's ſee. It has been ſeveral times taken and retaken by the Turks and Venetians. It is 48 miles S. of Bihacz. Long. 16. 30. E. Lat. 44. 5. N.

TENERIFF, a town of Terra Firma, in the government of St. Martha, ſeated on the Rio de la Madalena, 100 miles S. by W. of St. Martha. Long. 74. 15. W. Lat. 9. 47. N.

TENEZ, a town of Algiers, in the province of Tremeſen, capital of a diſtrict of the ſame name, with a ſtrong fort. It is ſeated on the ſide of a mountain, four miles from the ſea. Long. 1. 0. E. Lat. 39. 20. N.

TE-NGAN-FOU, a populous and commereial city of China, in the province of Hou-quang, with ſix cities dependent on it. It is 200 miles W. by S. of Nan-king. Long. 112. 21. E. Lat. 31. 0. N.

TENG-FONG-HIEN, a city of China, under the juriſdiction of Ho-nan-fou, in the province of Ho-nan. It is famous on account of the tower, erected for an obſervatory by the celebrated aſtronomer Tcheou-kong.

TENNASSEE, one of the United States of America, ſituate between the parallels of 35 and 36½ degrees of latitude; bounded on the S. by South Carolina and Georgia, on the W. by the Miſſiſippi, on the N. by Kentucky and Virginia, and on the E. by the Iron and Bald mountains, which ſeparate it from North Carolina, of which ſtate it was lately the weſtern part. It is upward of 400 miles in length, and 104 in breadth; and is divided into three diſtricts, and 11 counties. The diſtricts are Waſhington, Mero, and Hamilton; and the counties are Blount, Sullivan, Davidſon, Greene, Hawkins, Jefferſon, Knox, Summer, Sevier, Tennaſſee, and Waſhington. Its principal rivers are the Miſſiſippi, Tennaſſee, Cumberland, Holſton, Clinch, and Duck; and it is abundantly watered by other rivers and creeks. The Cumberland mountains, a ridge near 30 miles broad, cut this ſtate into the eaſtern and weſtern diviſions, and the latter is the largeſt part. The climate, ſoil, and produce of Tennaſſee are much the ſame as the adjoining ſtate of Kentucky. It was admitted a member of the United States in 1796; and on taking the cenſus in 1795, there appeared to be 77,262 inhabitants, of whom 66,649 were free perſons. Knoxville is the capital.

TENNASSEE, a river of North America, formerly called the Cherokee River. It riſes in the Iron mountains, on the confines of Georgia; and, after traverſing the borders of the Cherokee country northward, is joined by the Holſton branch, when it is called the Tennaſſee: thence it runs S.W. on the

E. ſide of the Cumberland mountains, into Georgia, where it makes a circuit to the W. called the Great Bend; it then re-enters the ſtate of Tennaſſee, which it paſſes quite through, directly N. into that of Kentucky: here it ſoons turns to the N.W. and then falls into the Ohio, 60 miles above the confluence of that river, with the Miſſiſippi. The Tennaſſee is 600 yards broad at its mouth, and thence navigable by veſſels of great burthen for 260 miles, to the Muſcle Shoals, in the Great Bend: here the river widens to between two and three miles, for nearly 30 miles; and theſe ſhoals can only be paſſed in ſmall boats: hence it may be navigated, by boats of 40 tons burthen, at leaſt 600 miles further, ſome trifling falls excepted.

TENNESTADT, a town of Upper Saxony, in Thuringia, near the rivers Seltenlein and Schambach, five miles from Erfurt.

TENNIS, a town of Egypt, ſituate on an iſland in a lake of the ſame name, 28 miles S.E. of Damietta. Long. 32. 15. E. Lat. 31. 2. N.

TEN-TCHEOU-FOU, a city of China, in the province of Chang-tong, with a good port, and eight cities in its juriſdiction. It is ſeated on the N. ſide of a peninſula of the Yellow Sea, 200 miles S.E. of Pekin. Long. 115. 50. E. Lat. 35. 20. N.

TENTERDEN, a corporate town in Kent, governed by a mayor, with a market on Friday. The ſteeple of the church is very lofty, and at the time of the Spaniſh invaſion, in 1588, was made uſe of as a beacon. It is 24 miles S.W. of Canterbury, and 56 E. by S. of London. Long. 0. 35. E. Lat. 51. 12. N.

TENTUGAL, a town of Portugal, in Beira, eight miles W.N.W. of Coimbra. Long. 8. 20. W. Lat. 40. 17. N.

TEPIC, a town of New Spain, in the audience of Guadalajara, 500 miles N.W. of the city of Mexico.

TEPLITZ, a town of Bohemia, in the circle of Leitmeritz, celebrated for its warm baths, 14 miles W.N.W. of Leitmeritz.

TERAMO, a town of Naples, in Abruzzo Ulteriore, with a biſhop's ſee, ſeated at the confluence of the Viciola and Tordino, 10 miles N.W. of Atri, and 25 N.E. of Aquileia. Long. 13. 39. E. Lat. 42. 37. N.

TERASSO, a decayed town of Turkey in Europe, in Caramania, with an archbiſhop's ſee. It was formerly called Tarſus, was the capital of Cilicia, and is the birth-place of St. Paul. It is ſeated on the Mediterranean. Long. 35. 55. E. Lat. 37. 10. N.

TERASSON, a town of France, in the department of Dordogne, ſeated on the Veſere, 20 miles N. of Sarlat. Long. 1. 19. E. Lat. 45. 5. N.

TERCHIZ, or TERHIZ, a town of Perſia, in the province of Choraſan, 120 miles W.N.W. of Herat. Long. 57. 25. E. Lat. 35. 5. N.

TERGOVISTO, or TERVIS, a commercial town, capital of Walachia. It has a fine palace, belonging to the waywode, and is ſeated on the Jalonitz, 30 miles N.W. of Buchareſt. Long. 25. 26. E. Lat. 45. 45. N.

TERKI, a town of Circaſſia, where a prince reſides dependent on the Ruſſians, this being their frontier town againſt Perſia. It is ſeated on a river of the ſame name, in a marſhy place, one mile from the Caſpian Sea, and 125 E. of Tefflis. Long. 47. 50. E. Lat. 43. 22. N.

TERMINI, a town on the N. coaſt of Sicily, in Val di Demona, with a ſtrong caſtle. It is famous for its mineral waters, and has a fine aqueduct. It is ſeated at the mouth of a river of the ſame name, in a territory abounding in corn, oil, and wine, 20 miles S.E. of Palermo. Long. 13. 44. E. Lat. 38. 5. N.

TERMOLI, or TERMINI, a town of Naples, in Capitanata, with a biſhop's ſee, ſeated near the ſea, 32 miles S.E. of Lanciano, and 70 N.E. of Naples. Long. 15. 20. E. Lat. 41. 59. N.

TERNATE, an iſland of the Indian Ocean, the principal of the Moluccas. It is mountainous, and has a great number of woods, which furniſh much game; but it produces a great quantity of cloves, and other fruits proper to the climate. It lies a little to the W. of Gilolo, and 100 miles E. of Celebes. Long. 129. 0. E. Lat. 1. 0. N.

TERNAVASSO, a town of Piedmont, ſix miles N.E. of Carmagnola, and eight S. of Chieri.

TERNEUSE, a ſtrong town and fort of Dutch Flanders, on the W. branch of the Scheldt, called the Hondt. It is eight miles N. of Sas-van-Ghent, and 25 W.N.W. of Antwerp. It was taken by the French in 1794. Long. 3. 45. E. Lat. 51. 20. N.

TERNOVA, an ancient town of Turkey in Europe, in Bulgaria, with an archbiſhop's ſee. It was formerly the ſeat of the princes of Bulgaria, and is ſeated on a mountain, near the Janera, 88 miles N.W. of Adrianople, and 97 N.E. of Sophia. Long. 26. 2. E. Lat. 43. 1. N.

TERRACINA, a decayed town of Italy, in Campagna di Roma, with a biſhop's ſee. It was called Anxur, was the capital of the warlike Volci, and the principal church was originally a temple of Jupiter. It is ſeated among orange and citron groves, near the ſea, on the ſide of a mountain, 46 miles S.E. of Rome. Long. 13. 15. E. Lat. 41. 24. N.

TERRANOVA, a town of Sicily, in Val di Noto. It belongs to the Duke of Monte-Leone, and is ſeated near the mouth of a river of the ſame name, 20 miles E.S.E. of Alicata. Long. 14. 10. E. Lat. 37. 9. N.

TERRA NUOVA, an ancient ſea-port, on the N.E. coaſt of Sardinia, ſeated at the bottom of a gulf of the ſame name, 65 miles N.N.E. of Saſſari. Long. 9. 35. E. Lat. 41. 3. N.

TERRE DE SALINELLE. The following obſervations concerning an earth ſo named, and which contains magneſia, are given by Berard, ex-profeſſor of chemiſtry at the Ecole de Medecine, at Montpellier, in the Annales de Chimie.

"The manufacture of artificial alum," ſays he, "in the large way, and by proceſſes both ſimple and eaſily to put in practice, has for a long time been the object of my labours. For this purpoſe, I was obliged to look out for the argills that abounded moſt in the alumine, and that were the neareſt to the place in which the manufacture was carried on.

"The earth of Salinelle, near Sommières, in the department of Le Gard, is reckoned one of the beſt kinds of argill for taking ſtains out of cloth; it is even generally known in the country by the name of Pierre de tache (fullers'-earth); and this property induced me to examine it. I procured a certain quantity of it, upon which I immediately operated with a view to obtain alum. But what was my ſurpriſe, when in the firſt experiment, which was to impregnate it with ſulphuric acid (at 40 degrees of Baume's hydrometer), I perceived, 24 hours afterwards, a very conſiderable efflorescence, and the ſmall maſs of the earth, that had been impregnated with the acid the day before, changed into a ſaline-carthy ſubſtance, full of ſmall ſhining cryſtals. I ſoon diſcovered, both by the taſte and the manner in which this firſt combination took place, that the ſalt that had been formed was not alum. Some experiments which I made led me to imagine that it was ſulphate of magneſia. In order to aſcertain this point, I immediately went to Salinelle, to examine the place from whence this earth was procured, and I afterwards ſubjected it to the experiments of which I am ſhortly to give an account.

"The village of Salinelle is ſituated at the diſtance of about

two kilometres from Sommières, upon the road from this town to Quiſſac, and almoſt cloſe to the banks of the river called Le Vidourle. The whole village is built upon a ſoil under which this earth is generally found. A ſingle individual at preſent employs himſelf in digging it, and furniſhes it, as it is called for, to ſome merchants, factors, and druggiſts. The firſt of theſe conceal the uſe which their employers make of it, and it is ſuſpected at Salinelle that ſome ſoap-manufactures make uſe of it in the preparation of this compound. The druggiſts prepare from it the ſubſtance which is known in pharmacy by the name of *Terra Sagillata*.

"The ſtratum of the terre de Salinelle is at the depth of about two metres and five decimetres from the ſurface of the ground: firſt we find ſix or ſeven decimetres of good vegetable earth; afterwards ſeveral cloſe ſtrata of white chalk; the whole about one metre five decimetres in thickneſs. In the middle of this thickneſs appears a vein of blackiſh ſemi-tranſparent ſilex, a decimetre and five centimetres thick. We afterwards meet with a ſmall layer of terre de Salinelle, mixed with fragments of the ſuperior ſtrata, and at laſt we find the vein of good terre de Salinelle, two decimetres and five centimetres in thickneſs, under which we immediately meet again with a mixed ſtratum, and afterwards thoſe of white chalk that had before been found above. The diſpoſition of all theſe ſtrata may eaſily be obſerved in digging wells, vaults, or foundations; in theſe caſes the earth of which we are ſpeaking is carefully collected.

"The terre de Salinelle, when dug out of its bed, is ſtill ſoft, very moiſt, lamellated, and ſlightly tranſparent when divided into thin plates. It has a chocolate colour, nearly reſembling that of the ſmall roots of ſome trees that grow upon the ſame ſoil. This earth when dried in the air acquires a leſs deep colour; it becomes of a light grey, ſlightly tinged with red; and by being dried in this manner it loſes about thirty parts in a hundred of its weight. It then acquires hardneſs, produces a ſtrong ſenſation of aſtringency when applied to the tongue: it does not loſe its cohefion in the water, like the argills, but when moiſtened and kneaded it forms a paſte pretty ſoft and fine to the touch; placed upon red-hot coals, it decrepitates and flies into ſplinters. In order to enable it to bear the action of the fire, I was obliged to pound it into a coarſe powder, and form it into balls, by moiſtening it with a little water; I then heated it to whiteneſs, without the ſmalleſt decrepitation taking place. By this operation 100 parts that had already been dried in the air were reduced to 68; the earth became very light, and of a very beautiful white colour, much reſembling that of the magneſia prepared in the laboratories. If we calcine it in powder, the evaporation of the water produces a bubbling even in this powder, which ceaſes as ſoon as the whole of the water is diſſipated.

"Acids poured upon this earth, after it has been dried in the air, produce no ſenſible effervefcence; they combine with a portion of its conſtituent principles, and the products are magneſian ſalts.

1. "Sulphuric acid, concentrated to 66°, becomes violently heated as ſoon as we mix it with this earth. When reduced to 40°, it does not become heated immediately; but if we form a paſte with this acid and the ſame earth in powder, a diſengagement of heat takes place at the end of half an hour, the paſte puffs up, increaſes greatly in its volume, and is at laſt reduced to a very light pulverulent ſubſtance, in which we may obſerve an infinite number of ſmall cryſtals. The ſalt thus formed has all the characters of true ſulphate of magneſia. A certain quantity of earth is left behind, which has reſiſted the action of the acid; this appeared to me to be ſilex.

2. "The nitric and muriatic acids, poured upon this earth in ſufficient quantity to form a paſte, produce no diſengagement of heat nor efflorefcence; the paſte on the contrary attracts moiſture from the atmoſphere, but nitrates and muriates of magneſia are formed. All theſe ſalts yield, by means of the alkalies, an abundant precipitate of very white, light, and pure magneſia.

"I boiled at ſeveral times, and during ſeveral hours, the terre de Salinelle, dried in the air and reduced to powder, in the three above-mentioned acids, in the proportion of 100 parts of the earth to 600 of acid. I then lixiviated it with a large quantity of water and filtrated it: the earth that remained upon the filtre, calcined to redneſs, was reduced to 45 parts: this appeared to me to be ſilex; it is very white and fine.

"The ſame acids exert a far inferior operation upon this earth, when it has been calcined to redneſs. The concentrated ſulphuric acid does not even produce any extrication of heat, and the earthy reſiduum is more conſiderable, though we take into the account the quantity of water that exiſts in the non-calcined earth.

"All the lixivia produced by combinations of any of the three acids with this earth are but ſlightly coloured, eſpecially the muriatic, and they are hardly coloured at all when the earth has been calcined; however they all yield, with the pruſſiate of lime, a precipitate of iron in the ſtate of Pruſſian blue.

"From the experiments which I have related, and from ſome others which it would be ſuperfluous to deſcribe, it appears, that 100 parts of the terre de Salinelle, dried in the air, and ſuch as it is generally found ſome time after it has been dug out of the ground, form a natural mixture of 32 parts of water, 22 of pure magneſia, 45 of ſilex, and 1 of oxyd of iron; that this earth differs greatly from the magneſian mixtures known by the names of ſteatites, albeſtes, micas, &c.; and that it ſtands in the ſame relation to magneſia as the argills do to alumine; in a word, that it is a genuine ore of magneſia, which, as far as I know, has not been hitherto deſcribed; but for giving a very accurate and detailed analyſis of it, I neither poſſeſſed proper inſtruments, nor ſufficient chemical knowledge. I therefore reſolved to ſend a quantity of this ſubſtance to Citizen Vauquelin, whoſe profound genius for the art of chemical analyſis is univerſally known, and who has engaged to aſcertain the place in which this earth ought to be ranged in natural hiſtory and chemiſtry.

"A pupil and aſſociate of Citizen Chaptal, and engaged for a long time, by profeſſion, in the application of chemiſtry to the arts, I endeavoured to apply the terre de Salinelle to an uſeful purpoſe, and from the experiments which I have made upon a large ſcale, it appears, that 100 parts of this earth, and 100 parts of ſulphuric acid, at 40°, produce, by ſimple mixture, by the lixiviation of this mixture, by condenſation of the lixivia and cryſtalliſation, 95 parts of beautiful ſulphate of magneſia in fine ſilky cryſtals. The mother-waters, which have a yellow tinge imparted to them by a ſmall quantity of ſulphate of iron, may ſtill contain 5 parts of ſulphate of magneſia. This reſult preſents the manufacturers of ſulphuric acid with an advantageous method of preparing the ſulphate of magneſia in the large way. Medicine will derive from it another advantage; namely, that of eaſily procuring this ſalt in a ſtate of purity, as well as the common magneſia; for it is univerſally known that the ſulphate of magneſia, or Epſom ſalt, ſuch as is met with in commerce, and which is obtained from the water of ſalt marſhes, is a mixture of various ſalts, ſuch as ſulphate of magneſia, ſulphate of ſoda, muriate of magneſia, muriate of lime, &c.: it is alſo known that moſt druggiſts, by uſing the ſulphate of magneſia of commerce, in order to extract the magneſia, obtain a mixture of this earth and lime. This mixture muſt neceſſarily produce

effects very different from thoſe that belong to pure magneſia or its carbonate; and we ſhall be ſure of obtaining theſe two ſubſtances pure, if we employ the ſulphate of magneſia prepared with ſulphuric acid and the terre de Salinelle."

TERREUEL, a town of Spain, in Arragon, with a biſhop's ſee, ſeated in a large fertile plain, at the confluence of the Guadalquiver and Alhambra, 75 miles S.W. of Saragoſſa, and 112 E. of Madrid. Long. 1. 0. W. Lat. 40. 25. N.

TERROUEN, a town of France, in the department of the Straits of Calais, ſeated on the Lis, ſix miles S. of St. Omer.

TERVERE, or VEERE, a town of the United Provinces, in Zealand, on the N.E. coaſt of the iſle of Walcheren, with a good harbour, and a fine arſenal, four miles N.E. of Middleburg. Long. 3. 42. E. Lat. 51. 36. N.

TESCHEN, a town of Upper Sileſia, capital of a duchy of the ſame name, ſubject to the houſe of Auſtria. It was taken by the Pruſſians in 1757, but reſtored in 1763. It was ſurrounded on all ſides by a moraſs, and ſeated near the ſource of the Viſtula. At a little diſtance from it is an old caſtle, on an eminence, where the ancient dukes reſided. The inhabitants carry on a trade in leather, woollen ſtuffs, and Hungary wines; and make pretty good fire-arms, and excellent beer. A treaty of peace was concluded here, in 1779, between the Emperor Joſeph II. and Frederic William III. of Pruſſia. It is 27 miles S.E. of Troppau, and 65 S.W. of Cracow. Long. 18. 17. E. Lat. 49. 52. N.

TESEGDELT, a town of Morocco Proper, ſurrounded by a craggy rock, which renders it impregnable. It is ſeated at the mouth of the Techubit, 200 miles W. of Morocco.

TESINO, a river of Switzerland, which has its ſource in Mount St. Gothard, flows through the country of the Griſons, and the lake Maggiore; then running through part of the Milaneſe, it waſhes Pavia, and a little after falls into the Po.

TESSET, a town and diſtrict of Zahara, 170 miles S. of Morocco. Long. 6. 56. W. Lat. 15. 24. N.

TEST, or TESE, a river, which riſes in the N.W. of Hants, and watering Stockbridge and Rumſey, falls into the bay of Southampton.

TETBURY, a town in Glouceſterſhire, with a market on Wedneſday, and a conſiderable trade in cheeſe, yarn, and wool. It is 25 miles E N.E. of Briſtol, and 99 W. of London. Long. 1. 8. W. Lat. 51. 36. N.

TETICACO, a lake of Peru, in the audience of Lima and province of Callao, above 200 miles in circumference.

TETTNANG, a town of Suabia, and the principal place of a lordſhip of the ſame name. It is eight miles N. of Lindau, and 18 E.N.E. of Conſtance. Long. 9. 50. E. Lat. 47. 46. N.

TEVERONE, a river of Italy, the ancient Anio, which riſes in the Apennines, 50 miles above Tivoli, glides through a plain till it comes near that town, when it is confined for a ſhort ſpace between two hills, covered with groves. Theſe were ſuppoſed to be the reſidence of the ſibyl Albunea, to whom a temple here was dedicated, the elegant form of which indicates its having been built when the arts were in the higheſt ſtate of perfection. The river moving with augmented rapidity, as its channel is confined, at laſt ruſhes violently over a lofty precipice; the noiſe of its falls reſounds through the hills and groves of Tivoli; a liquid cloud ariſes from the foaming water, which afterwards divides into numberleſs ſmall caſcades. Having gained the plain, it ſoon afterward receives the waters of the lake Solfatara, and flows quietly on till it loſes itſelf in the Tiber.

TEVIOT, a river of Scotland, which riſes in the mountains in the S.W. of Roxburghſhire, and paſſing almoſt through the centre of that county, unites with the Tweed, near Kelſo.

TEURART, an ancient town of the kingdom of Fez, ſeated on a mountain near the river Za.

TEUSCHNITZ, a town of Franconia, in the biſhopric of Bamberg, 34 miles N.E. of Bamberg. Long. 11. 27. E. Lat. 50. 22. N.

TEUSERA, a town of Barbary, in Biledulgerid, divided into two parts by a river. It ſtands on the confines of Tunis, in a country abounding in dates. Long. 10. 16. E. Lat. 31. 28. N.

TEYA, a river of Germany, which riſes near Teltſh, in Moravia, flows E. by Znaim, on the borders of Auſtria, and enters the Moraw, on the confines of Hungary.

TEYN, a town of Bohemia, belonging to the archbiſhop of Prague, 52 miles S.W. of that city. Long. 13. 40. E. Lat. 49. 38. N.

TEZAR, a town of the kingdom of Fez, capital of the province of Cuzi. Here is a moſque larger than that of Fez, being half a mile in circumference. It is ſeated on a ſmall river, 45 miles E. of Fez. Long. 4. 15. W. Lat. 33. 40. N.

TEZCUCO, a town of New Spain, and the capital of a large government. Here Cortez cauſed a canal to be dug, where he built 18 brigantines, to carry on the ſiege of Mexico. It is ſeated near the lake of Mexico, 30 miles E. of the city of that name. Long. 100. 4. W. Lat. 20. 3. N.

TEZELA, a town of the kingdom of Algiers, in Tremeſen, with a caſtle, 15 miles from Oran. Long. 0. 25. E. Lat. 35. 25. N.

TEZOTE, a town of the kingdom of Fez, ſeated on the point of a rock, eight miles from Melilla. Long. 1. 55. W. Lat. 44. 40. N.

THAINEE, a town of the kingdom of Tunis, near the mouth of a river of the ſame name, 120 miles S. of Tunis. Long. 10. 15. E. Lat. 34. 50. N.

THAMSBRUCK, a town of Upper Saxony, in Thuringia, eight miles S.E. of Mulhauſen, and 16 W.N.W. of Erfurt. Long. 10. 52. E. Lat. 51. 20. N.

THANHAUSEN, a town of Suabia, ſituate on the Mindel, 14 miles N. of Mindelheim, and 22 E. of Ulm. Long. 9. 50. E. Lat. 48. 17. N.

THASO, an iſland of the Archipelago, on the coaſt of Macedonia, at the entrance of the gulf of Conteſſa. It is 12 miles long, and eight broad, and abounds in all the neceſſaries of life. The fruits and wine are very delicate; and there are mines of gold and ſilver, beſide quarries of fine marble. The chief town, of the ſame name, has a harbour frequented by merchants. Long. 24. 32. E. Lat. 40. 59. N.

THAXTED, a corporate town in Eſſex, with a market on Friday. It is governed by a mayor, and ſeated near the ſource of the Chelmer, 20 miles N.W. of Chelmsford, and 43 N.E. of London. Long. 0. 21. E. Lat. 51. 56. N.

THEBAID, a country of Upper Egypt, reaching from Fayoum to the Red Sea. It is the leaſt fertile, and the thinneſt of people, of any province in Egypt, being full of deſerts, and celebrated for the retreat of a great number of Chriſtians, who lived here in a ſolitary manner. It is now inhabited by Arabs, who are robbers by profeſſion.

THEBES, the ancient name of a city of Upper Egypt. It was celebrated for having 100 gates; and there are many magnificent remains of antiquity. Three villages, named Carnack, Luxor, and Gournou, are ſeated among its ruins, which are hence called the antiquities of Carnack and Luxor.

THENGEN, a town of Suabia, ſituate on the Hegau, eight miles N. of Schaffhauſen, and 22 N.W. of Conſtance. Long. 8. 40. E. Lat. 47. 46. N.

THERMIA, an iſland of the Archipelago, S. of the iſland of Zia, and near the gulf of Engia, 12 miles long and five

broad. The ſoil is good and well cultivated, and it has a great deal of ſilk. The principal town, of the ſame name, is the reſidence of a Greek biſhop. Long. 24. 59. E. Lat. 37. 31. N.

THETFORD, a borough in Norfolk, with a market on Saturday. It is ſeated on the Little Ouſe, and there is a high mount, which has been walled round, and fenced with a double rampart. It is governed by a mayor, ſends two members to parliament, and has three churches, a good free-ſchool, and a town-hall. The lent aſſizes for the county are kept here. The river, which here divides Suffolk from Norfolk, is navigable from Lynn; and a good deal of wool-combing is carried on here. It formerly had upwards of 40 churches, and was a biſhop's ſee; but it was deſtroyed in the time of the Danes. It is 30 miles S.S.E. of Lynn, and 80 N.E. of London. Long. 0. 50. E. Lat. 52. 28. N.

THEUX, a village three miles N.W. of Spa, in the biſhopric of Liege, where the French obtained a victory over the Auſtrians, in 1794.

THIBET, or GREAT THIBET, a country of Aſia, lying between 81 and 102° E. long. and 25 and 40° N. lat. bounded on the N.W. and N. by the Deſert of Kobi, in Tartary, on the E. by China, on the S. by Aſſam and Burmah, and on the W. and S.W. by Hindooſtan Proper and Bootan. This country is one of the higheſt in Aſia: it being a part of that elevated tract which gives riſe not only to the rivers of India and China, but alſo to thoſe of Siberia and Tartary. Its length from E. to W. cannot be leſs than 1000 miles; its breadth is very unequal. It is divided into three parts, Upper, Middle, and Lower Thibet. The Upper lies toward the ſources of the Ganges and Burrampooter; the Middle is that in which Laſſa, the capital, is ſeated; and the Lower, that which borders on China. Little Thibet is ſituate between Upper Thibet and Caſhgur. But Major Rennell, who conſiders the geography of the whole country as very obſcure, is very uncertain whether Little Thibet is ſubject to Laſſa or not. Notwithſtanding the very rough and ſterile ſtate of Thibet, and the ſeverity of its climate, from its wonderful elevation, its inhabitants are in a high ſtate of civiliſation; their houſes lofty and built of ſtone; and the uſeful manufactures in ſome degree of improvement. The Thibetians are governed by the grand lama, who is not only ſubmitted to, and adored by them, but is alſo the great object of adoration for the various tribes of pagan Tartars, who walk through the vaſt tract of continent which ſtretches from the river Volga to Corea. He is not only the ſovereign pontiff, the vicegerent of the deity on earth, but by the more remote Tartars is abſolutely regarded as the deity himſelf. They believe him to be immortal, and endowed with all knowledge and virtue. Every year they come from different parts to worſhip, and make each offerings at his ſhrine. Even the Emperor of China, who is of a Tartar race, does not fail to acknowledge the lama, in his religious capacity, although, as a temporal ſovereign, the lama himſelf is tributary to that emperor. The opinion of the moſt orthodox Thibetians is, that when the grand lama ſeems to die, either of old age or infirmity, his ſoul, in reality, only quits a crazy habitation, to look for another younger or better; and it is diſcovered again in the body of ſome child, by certain tokens known only to the lamas or prieſts, in which order he always appears. In 1774, the grand lama was an infant, who had been diſcovered ſome time before by the tayoſhoo lama, who, in authority and ſanctity of character, is next to the grand lama, and, during his minority, acts as chief. The lamas, who form the moſt numerous, as well as the moſt powerful body in the ſtate, have the prieſthood entirely in their hands; and they conſtitute many monaſtic orders, which are held in great veneration among them. Beſide the religious influence and authority of the grand lama, he is poſſeſſed of unlimited power throughout his dominions. His reſidence is at Patoli, a vaſt palace, on a mountain, near the banks of the Burampooter, ſeven miles from Laſſa. In 1774, the Engliſh Eaſt-India Company made a treaty with the lama. The religion of Thibet, though, in many reſpects, it differs from that of the Indian bramins, yet, in others, has a great affinity to it. The Thibetians have a great veneration for the cow, and highly reſpect alſo the waters of the Ganges, the ſource of which they believe to be in heaven. The ſunniaſſes, or Indian pilgrims, often viſit Thibet as a holy place; and the lama always maintains a body of near 300 of them in his pay.

THIEL, or TIEL, a ſtrong town of Dutch Guelderland, taken by the French in 1794. It is ſeated on the Waal, 20 miles W. of Nimeguen. Long. 5. 16 E. Lat. 51. 56. N.

THIELT, a town of Auſtrian Flanders, in the chatellany of Courtray, 10 miles N. of Courtray.

THIERS, a town of France, in the department of Puy de Dome, famous for its ſtatuary, hardware, and cutlery. It is ſeated on the ſide of a hill, 22 miles E. of Clermont, and 220 S. by E. of Paris. Long. 3. 38. E. Lat. 45. 51 N.

THIONVILLE, a ſtrong town of France, in the department of Moſelle. It was taken by the Prince of Condé in 1643. The Auſtrians bombarded it in 1792, but were obliged to raiſe the ſiege. It is ſeated on the Moſelle, over which is a bridge defended by a hornwork, 14 miles N. of Metz, and 195 N.E. of Paris. Long. 6. 15. E. Lat. 49. 21. N.

THIRSK, or THURSK, a borough in the north riding of Yorkſhire, with a market on Monday. It ſends two members to parliament; and was formerly noted for its ſtrong caſtle. It is 20 miles N.W. of York, and 230 N. by W. of London. Long. 1. 16. W. Lat. 54. 15. N.

THIVE, or THEBES, a celebrated city of Livadia, with a biſhop's ſee. It is nothing now to what it was formerly, and yet it is four miles in circumference, but ſo full of ruins, that there are not above 4000 Turks and Chriſtians in it. It is famous for a ſort of white clay, of which bowls for pipes are made after the Turkiſh faſhion; they are never burnt, but dry naturally, and become as hard as ſtone. Here are two moſques, and ſeveral Greek churches. It is ſeated between two rivers, 20 miles N.W. of Athens, and 280 S.W. of Conſtantinople. Long. 23. 40. E. Lat 38. 17. N.

THIVIERS, a town of France, in the department of Dordogne, 18 miles N.N.E. of Perigueux. Long. 0. 55. E. Lat. 45. 25. N.

THOISSEL, a town of France, in the department of Ain, with a handſome college. It is ſeated in a fertile country, near the Saone and Chalerone, 10 miles N. of Trevoux, and 200 S.E. of Paris. Long. 4 50. E. Lat. 46. 13. N.

THOMA, ST. an iſland of Africa, lying under the equator, in 8° E. long. It was diſcovered in 1429, and is almoſt round, about 30 miles in diameter. The ſoil is fertile, and produces plenty of ſugar-canes. On the ſame vine are bloſſoms, and green and ripe grapes, all the year round. It is a very unwholeſome country, poſſeſſed by the Portugueſe, and few live to a great age. It conſiſts chiefly of hills, intermixed with valleys, which are conſtantly filled with a thick ſtinking fog; but it agrees very well with the cattle, which are larger and finer here than on the Gold Coaſt of Guinea.

THOMAS, ST. one of the Virgin Iſlands, in the Weſt Indies, with a harbour, a town, and a fort. After the capture of St. Euſtatia, in 1781, it became the mart of that part of the Weſt Indies. It is 15 miles in circumference, and belongs to the Danes. Long. 64. 51. W. Lat. 18. 21. N.

THOMAS, ST. a town of Hindooſtan, on the coaſt of Co-

romandel, with an archbiſhop's ſee. It is ſubject to the Portugueſe, and three miles S. of Madras. Long. 80. 25. E. Lat. 13. 2. N.

THOMAS, ST. a town of Guiana, ſeated on the Oronoko, and ſubject to Spain. In 1618, it was taken and burnt by Sir Walter Raleigh. Long. 63. 30. W. Lat. 7. 6. N.

THOMDAMM, a town of Lower Saxony, in the duchy of Saxe-Lauenburg, ſituate on the Elbe, 25 miles S.E. of Lauenburg, and 58 S.E. of Hambnrg. Long. 11. 5. E. Lat. 53. 10. N.

THONON, a town of Savoy, capital of Chablais, with a palace, and ſeveral convents. It is ſeated on the lake of Geneva, at the mouth of the river Drama, 13 miles S.W. of Lauſanne, and 16 N.E. of Geneva. Long. 6. 44. E. Lat. 46. 19. N.

THORN, or THOREN, a town of Weſtphalia, in the biſhopric of Liege, with a noble abbey, ſeven miles S.W. of Ruremonde.

THORN, a town in the weſt riding of Yorkſhire, with a market on Wedneſday, ſituate on a marſhy ſoil, near the river Don, 10 miles N.E. of Doncaſter, and 167 N. by W. of London. Long. 1. 2. W. Lat. 53. 39. N.

THORNBURY, a corporate town of Glouceſterſhire, with a market on Saturday. It is governed by a mayor, and ſeated near the Severn, 24 miles S.W. of Glouceſter, and 121 W. of London. Long. 2. 31. W. Lat. 51. 35. N.

THORNEY, a ſmall iſland in the bay of the Engliſh Channel, near the coaſt of Suſſex, with a village of the ſame name, at the mouth of the Lavant, ſeven miles S.W. of Chicheſter.

THOUARS, a conſiderable town of France, in the department of Two Sevres. The capital of its ancient dukes is on a rock, ſurrounded by walls 120 feet high, which, from the whiteneſs of the ſtone, might be ſuppoſed not more than ten years old. It is ſeated on a hill by the river Thoue, 32 miles S.E. of Angers, and 162 S.W. of Paris. Long. 0. 15. W. Lat. 46. 59. N.

THRAPSTON, a town in Northamptonſhire, with a market on Thurſday, ſeated on the Nen, over which is a bridge, ſeven miles N. of Higham-Ferrers, and 75 N.N.W. of London. Long. 0. 36. W. Lat. 52. 26. N.

THREE HILLS ISLAND, an iſland, one of the New Hebrides, in the South Pacific Ocean, lying to the S. of Malicollo.

THUIN, a town of Auſtrian Hainault, but ſubject to the biſhop of Liege. It is ſeated on the Sambre, eight miles S.W. of Charleroy, and 15 S.E. of Mons. Long. 4. 22. E. Lat. 50. 21. N.

THUN, a lake of Switzerland, in the canton of Bern, five leagues long and one broad. Its borders are richly variegated, and covered with numerous villages. The river Aar paſſes through it, and at the north-weſt extremity is the town of Thun.

THUN, a town of Switzerland, in the canton of Bern, with a caſtle, where the avoyer reſides. It is ſeated on a lake of the ſame name, where the river Aar iſſues from it, partly in a ſmall iſland, and partly on a hill, 15 miles S.S.E. of Bern. Long. 7. 20. E. Lat. 46. 45. N.

THUNDER BAY, a bay nine miles broad, at the north-weſt corner of Lake Huron, in North America; ſo called from the continual thunder that is heard there.

THUR, a river of Switzerland, which riſes in the ſouth part of the county of Toggenburg, and runs into the Rhine, ſeven miles S.S.W. of Schaffhauſen.

THURGAU, a bailiwic of Switzerland, which lies along the river Thur, bounded on the eaſt and north by the lake, town, and biſhopric of Conſtance; on the ſouth by the territory of the abbot of St. Gallen; and on the weſt by the canton of Zurich. It is the largeſt bailiwic in Switzerland, as well as the moſt pleaſant and fertile; and is extremely populous. The ſovereignty belongs to the eight ancient cantons. Frauenfield is the capital.

THURSO, a borough in Caithneſsſhire, at the mouth of the river Thurſo, on the weſt ſide of Dunnet Bay. It has a conſiderable trade, and a manufacture of woollen and linen cloth. Long. 3. 16. W. Lat. 58. 36. N.

TIAGAR, a town of Hindooſtan, in the Carnatic, 50 miles W.S.W. of Pondicherry, and 75 S. of Arcot. Long. 79. 0. E. Lat. 11. 25. N.

TIANO, a town of Naples, in Terra di Lavoro, with a famous nunnery. Near it is a mineral ſpring, ſaid to be excellent for the ſtone. It is 15 miles N.W. of Capua. Long. 14. 8. E. Lat. 41. 14. N.

TIBUROON, a cape, at the moſt weſtern extremity of the iſland of St. Domingo, with a town, on an open road, oppoſite Port Antonia in Jamaica. It was taken by the Engliſh and royaliſts in 1794, but retaken by the republicans the next year.

TICKELL, a town in the weſt riding of Yorkſhire, with a market on Friday. It had a caſtle and fortifications, demoliſhed in the civil wars, of which ſome ruins remain. It has a diſtinct liberty, called the Honour of Tickell, which is part of the duchy of Lancaſter. It is five miles S. of Doncaſter, and 155 N. by W. of London. Long. 1. 11. W. Lat. 53. 27. N.

TICKELY, a town of the peninſula of Hindooſtan, in the circar of Cicacole, 30 miles N.E. of Cicacole, and 70 S.W. of Ganjam. Long. 84. 30. E. Lat. 43. 50. N.

TICONDEROGO, a fort of the United States, in New York, built by the French in 1756, on the narrow paſſage or communication between the lakes George and Champlain It had all the advantages that art or nature could give it. It was taken in 1759 by General Amherſt, and in 1779 by General Burgoyne, but evacuated ſoon after the convention at Saratoga. It is 110 miles S of Montreal, and 185 N. of New York. Long. 73. 25. W. Lat. 43. 45. N.

TIDESWELL, a town in Derbyſhire, on the ſouth confines of the Peak, with a market on Wedneſday. It is remarkable for a well that ebbs and flows two or three times in an hour after great rains; the waters guſhing from ſeveral cavities at once, for the ſpace of five minutes: the well is three feet deep and broad, and the water riſes and falls two feet. It is deemed one of the wonders of the Peak. Tideſwell is 22 miles N.W. of Derby, and 158 N.N.W. of London. Long. 1. 46. W. Lat. 53. 15. N.

TIDOR, an iſland in the Indian Ocean, one of the Moluccas, to the eaſt of Gilolo, and to the ſouth of Ternate. It is 17 miles in circumference, and produces cloves and flax. The Dutch are maſters of the iſland, though it has a king of its own. The woods and the rocks that ſurround it, render it a place of defence. Long. 126. 0. E. Lat. 0. 50. N.

TIENGEN, a town of Suabia, ſituate on the Wutach, 29 miles E. of Baſle, and 36 W. of Conſtance. Long. 8. 5. E. Lat. 47. 40. N.

TIERRA DEL ESPIRITU SANTO, the moſt weſtern and largeſt iſland of the New Hebrides, in the Pacific Ocean, being 40 leagues in circuit. The land is exceedingly high and mountainous, and in many places the hills riſe directly from the ſea. Except the cliffs and beaches, every part is covered with wood, or laid out in plantations. Beſide the bay of St. Philip and St. Jago, on the north ſide of it, the iſles which lie along the ſouth and eaſt coaſt, form ſeveral good bays and harbours. Long. 165. 0. E. Lat. 16. 0. S.

TIERRA DEL FUEGO, ſeveral iſlands at the ſouthern extremity of America. They take their name from a volcano on the largeſt of them, and are all very barren and mountainous. Upon the lower grounds and iſlands, that were ſheltered by the high mountains, Mr. Forſter found ſeveral ſorts of trees and plants, and a variety of birds. Among the trees was Winter's bark-tree, and a ſpecies of arbutus, loaded with red fruit of the ſize of ſmall cherries, which were very well taſted. In ſome places there is alſo plenty of celery. Among the birds was a ſpecies of large duck, which ran along the ſea with amazing velocity, beating the water with its wings and feet: at the Falkland Iſlands it is called the loggerhead-duck. There are alſo plenty of geeſe and falcons. The rocks of ſome of the iſlands are covered with large muſcle-ſhells, the fiſh of which is well flavoured. The natives of this country are ſhort in their perſons, not exceeding five feet ſix inches, their heads large, their faces broad, their cheek-bones prominent, and their noſes flat. They have little brown eyes, without life; their hair is black and lank, hanging about their heads in diſorder, and beſmeared with train-oil. On the chin they have a few ſtraggling ſhort hairs inſtead of a beard. The whole aſſemblage of their features forms the moſt loathſome picture of miſery to which human nature can be reduced. They had no other clothing than a ſmall piece of ſeal-ſkin, which hung from their ſhoulders to the middle of the back, being faſtened round the neck with a ſtring: the reſt of their body was perfectly naked. Their natural colour ſeems to be an olive brown, with a kind of gloſs, reſembling that of copper; but many of them diſguiſe themſelves with ſtreaks of red paint, and ſometimes, though ſeldom, with white. Their whole character is a ſtrange compound of ſtupidity, indifference, and inactivity. They have no other arms than bows and arrows, and their inſtruments for fiſhing are a kind of fiſh-gigs. They live chiefly on ſeals' fleſh, and like the fat oily part moſt. There is no appearance of any ſubordination among them, and their mode of life approaches nearer to that of brutes, than that of rational creatures.

TILBURY, East, a village in Eſſex, near the mouth of the Thames, eaſt of Tilbury Fort. It is ſuppoſed to be the place where the Emperor Claudius croſſed the Thames, in purſuit of the Britons. In this pariſh is a field, called Cave Field, in which is a horizontal paſſage to one of the ſpacious caverns in the neighbouring pariſh of Chadwell. Of theſe Camden has given a ſketch in his Britannia; and he deſcribes them as in a chalk cliff, built very artificially of ſtone, to the height of ten fathoms. Dr. Derham meaſured three of the moſt conſiderable of them, and found the depth of one of them to be 50 feet, of another 70 feet, and of the third 80 feet. Their origin is too remote for inveſtigation.

Tilbury, West, a village in Eſſex, ſituate on the Thames, north of Tilbury Fort. Here the four Roman proconſular ways croſſed each other, and, in 630, it was the ſee of Biſhop Ceadda, or St. Chad, who converted the Eaſt Saxons. The marſhes here feed a great number of Lincolnſhire and Leiceſterſhire ſheep, for the London market. In this pariſh is a celebrated ſpring of alterative water, diſcovered in 1717. When the Spaniſh armada was in the Channel, in 1588, Queen Elizabeth had a camp here, which was where the windmill now ſtands, and ſome traces of it are viſible.

TILBURY FORT, in Eſſex, ſituate on the Thames, oppoſite Graveſend, a regular fortification, which may be termed the key to London. It has a double moat, the innermoſt of which is 180 feet broad; with a good counterſcarp, a covered way, ravelins, and terails. Its chief ſtrength on the land ſide conſiſts in its being able to lay the whole level under water. On the ſide next the river is a ſtrong curtain, with a noble gate, called the Water-gate, in the middle; and the ditch is palliſaded. Before this curtain is a platform in the place of a counterſcarp, on which are planted 106 guns, from 26 to 46 pounders each, beſide ſmaller ones planted between them; and the baſtions and curtains are alſo planted with guns. It is 28 miles E. by S. of London.

TILLAGE, in agriculture, the proceſs of moving and ſtirring land with a view to promote the growth of uſeful vegetables. This is effected in a great variety of ways, as the plough, ſpade, &c. The following deſcription of an implement in Huſbandry, called a CULTIVATOR, by the inventor, Mr. William Leſter, of Northampton, is publiſhed in the Tranſactions of the Society for the Encouragement of Arts, Manufactures, and Commerce, who preſented their ſilver medal to Mr. Leſter for his invention.

"As," ſays he, "health and luxuriance of corn depend, in a great meaſure, on the pulveriſation of the ſoil, previous to the ſeed being ſown, the Society of Arts will, I am perſuaded, give every encouragement in their power to the introduction of any implement that promiſes an abridgment of labour; and as all the tenacious ſoils are pulveriſed in the beſt manner in dry weather, when their particles are the moſt diſjointed, and their contact broken, the propriety of taking the advantage of working them in that ſtate will be obvious: and at the ſame time it follows, that an improved implement for the abridgment of labour would be a deſirable thing, in a climate like England, where the ſeaſons are ſo uncertain.

"In working on a rough fallow, my cultivator ſhould be ſet at its greateſt expanſion, and contracted in proportion as the clods are reduced. I am confident that one man, a boy, and ſix horſes, will move as much land in a day, and as effectually, as ſix ploughs; I mean land in a fallow ſtate, that has been previouſly ploughed.

It will be requiſite in ſome ſtates of the ſoil to alter the breadth of the ſhares; but of this, I preſume, the farmer will always be a proper judge. By the expanſion and contraction of the cultivator, the points of the ſhares are, in a ſmall degree, moved out of the direct line; but this is ſo trifling, that it is no impediment to its working."

The following is a deſcription of the Cultivator as repreſented in Plate 53.

A, the beam; B, B, the handles; C, C, a croſs-bar, of a ſemi-circular form, containing a number of holes, which allow the two bars D, D, to be placed nearer or further from each other; D, D, are two ſtrong bars, moveable at one end, upon a pivot E, and extending thence in a triangular form to the croſs-bar C. In theſe bars are ſquare holes, which allow the ſhares F, placed therein, to be fixed to any height required. The ſeven ſhares marked F are ſhaped at their lower extremities like ſmall trowels: the upper parts of them ſquare iron bars. G, G, G, are three iron wheels, on which the machine is moved; they may be raiſed or lowered at pleaſure. H, the iron hook, to which the ſwingle-tree and horſes are to be fixed.

When the machine is firſt employed on the land, the bars D, D, are expanded as much as poſſible. As the ſoil is more looſened, they are brought nearer to the centre: the ſhares then occupy a leſs ſpace, and the ſoil will conſequently be better pulveriſed.

A certificate from Mr. William Shaw, of Cotton-End, near Northampton, accompanied this letter; in which he ſtates that he had uſed Mr. Leſter's cultivator upon a turnip fallow laſt ſummer, and that he believes it to be a very uſeful implement for cultivating the land in a fallow ſtate, by its working or ſcuffling off ſeven acres per day with ſix horſes.

He adds, that from its property of contracting and expanding, it is calculated to work the ſame land in a rough or fine ſtate, by which means it unites the principles of two implements in one; and, by the index on the axis, it may be worked at any given depth required.

A model of the above-deſcribed cultivator is reſerved in the Society's repoſitory, at which place it may be inſpected by any one who pleaſes.

TILLIERES, a town of France, in the department of Eure, ſix miles N.E. of Verneuil, and 12 W. of Dreux. Long. 1. 3. E. Lat. 48. 46. N.

TILSIT, a town of Pruſſia, in the Lithuanian department. It has a conſiderable trade in linſeed, butter, and other proviſions; and the number of inhabitants is about 7000. It is ſituate on the Memel, 50 miles N.E. of Konigſberg, and 95 S.S.W. of Mittau. Long. 22. 8. E. Lat. 55. 8. N.

TIMANA, a town of Terra Firma, in Popayan, capital of a territory of the ſame name, which abounds in fruits and paſtures. It is ſeated on a river, 130 miles E.S.E. of Popayan. Long. 73. 55. W. Lat. 1. 35. N.

TIME-KEEPER (*Encycl.*). The following hints on the improvement of time-keepers, by David Rittenhouſe, LL.D. Preſident of the American Philoſophical Society, appear in their Tranſactions.

"The invention and conſtruction of time-keepers may be reckoned among the moſt ſucceſsful exertions of human genius. Pendulum clocks eſpecially have been made to meaſure time with aſtoniſhing accuracy; and if there are ſtill ſome cauſes of inequality in their motions, the united efforts of mechaniſm, philoſophy, and mathematics, will probably in time remove them.

"The laſt and leaſt of thoſe cauſes, which perhaps may be worthy of notice when all others of more importance are removed, is that ariſing from unequal denſity of the air, which by varying the actual weight of the pendulum will accelerate or retard its motion. The effects ariſing from this cauſe will be found very ſmall: for if we ſuppoſe the greateſt range of the barometer to be three inches, which indicates a change of denſity in the air of above one tenth of the whole; and ſuppoſing lead, of which pendulums are generally made, to be 8,800 times heavier than air, the variations of the actual weight of a pendulum may be one 88,000th part of its whole weight, and conſequently the change in its rate of going one 176,000th part. And, as there are 86,400 ſeconds in a day, the clock may vary in its rate of going, from this cauſe, about $\frac{1}{2}$ a ſecond in 24 hours. Mentioning the barometer ſeems naturally to point out a remedy for this cauſe of irregularity by means of that inſtrument. But my deſign at preſent," ſays Dr. Rittenhouſe, "is to deſcribe a very different and extremely ſimple method, which, though only a matter of curioſity at preſent, may at ſome future time perhaps be found uſeful; eſpecially as the variation above mentioned is governed ſolely by the actual denſity of the ſurrounding air, and the barometer can only give the weight of an entire column, which does not ſtrictly correſpond with the denſity of its baſe; whereas the method I propoſe depends on the real denſity of the air ſurrounding the pendulum, and nothing elſe.

"Let A B (Plate 46. fig. 1) be a pendulum vibrating on the point A, and removed from the perpendicular line D E. Let the inflexible rod be continued from B A to C, and let a body C, of equal dimenſions with the pendulum B, but hollow and light as poſſible, be fixed on the rod, making A C equal to A B. Now it is evident that B will be preſſed upwards by a force equal to the weight of its bulk in air, and its deſcent retarded. But the body C will be equally preſſed upwards, and conſequently the motion of the pendulum towards the perpendicular will be as much accelerated. Theſe two forces therefore will deſtroy each other, and the pendulum will perform its vibrations in equal times, whether the air be light or heavy, denſe or rare.

"I have for greater perſpicuity deſcribed the moſt ſimple caſe, but perhaps not the moſt eligible, for if we can enlarge the veſſel or body C, in any proportion, the diſtance of its centre from A may be diminiſhed at the ſame rate.

"However plauſible the above may appear in theory, no doubt difficulties will occur when we attempt to reduce it into practice. But I am perſuaded they will not be found inſuperable.

"The only experiment I have hitherto made on this ſubject has been merely to ſhew that a pendulum can be made in this manner which ſhall vibrate quicker in a denſe medium than in one more rare, contrary to what takes place with common pendulums.

"I made a compound pendulum on the principles above mentioned, of about one foot in its whole length. This pendulum, on many trials, made in the air 37 vibrations in a minute. On immerſing the whole in water it made 59 vibrations in the ſame time, ſhewing evidently that its motion was quicker in ſo denſe a medium as water than in the air. When the lower bob or pendulum only was plunged in water it made no more than 44 vibrations in a minute; the remaining 15 being ſolely the effect of the preſſure of the water againſt the upper veſſel C."

TIMERYCOTTA, a town and fortreſs of the Decean of Hindooſtan, in the province of Golconda, 64 miles S.E. of Hydrabad, and 95 W. of Maſulipatam. Long. 79. 26. E. Lat. 15. 20. N.

TIMORLAND, an iſland in the Indian Ocean, between Timor and New Guinea. Long. of the S. point 131. 54. E. Lat. 8. 15. S.

TIN (*Encyl.*). The following obſervations concerning the tin extracted from bell-metal, and the fixity which antimony acquires when it has been uſed as an alloy for tin, by M. Le Sage, are inſerted in the Journal de Phyſique.

In order to ſeparate the copper from bell-metal, recourſe has been had to operations which ſcorify the tin, and a part of the copper. Metal was calcined in the reverberatory furnace; this oxyd was ſpread upon bell-metal kept in a ſtate of fuſion: the fire was kept up, the fuſed metal was run off, and pure copper was obtained in the proportion of 60 lbs. to the quintal of bell-metal; there remained blackiſh ſcoria intermixed with vitreous matter of a greeniſh colour. For want of means of reducing them, the ſcoria was abandoned to the purpoſes of mending roads and conſtructing dykes, as has been done at Romilly, near Rouen: however, the ſcoria contained ſtill from 30 to 40 lbs. of tin and copper per quintal, as has been aſcertained by the experiments of Citizen Anſry, a pupil of the firſt Academy of Mines, who has been able to turn them to ſuch great advantage, that he has reproduced at leaſt fifteen hundred thouſand weight of tin, and two millions of pure copper.

This chemiſt reduces the ſcoria by fuſing it with a pretty conſiderable quantity of charcoal: he obtains a metallic alloy with ſhining facettes, compoſed of copper, tin, and antimony; it is ſurmounted with an enamel of a greeniſh grey colour, which contains a quarter of its weight of tin. This metallic alloy he fuſes in the reverberatory furnace, takes away every hour what is oxydated, which is in the form of a dirty white powder, and which he ſeparates from the copper by lixiviation. There remains in the furnace an alloy of copper and tin, the fracture of which is not in facettes, but ſimilar to that of the bell-metal.

The copper is ſeparated from the tin by the proceſs indicated in the preceding paragraph.

The calx, or oxyd of copper, of a dirty white colour, when it has been reduced by the charcoal, produces an alloy of tin and copper; its colour is yellow, like that of the pyrites of copper, and its fracture exhibits ſtriated lamina, or cryſtals. This alloy, when in the ſtate of fuſion, is ſurmounted by a mixture of tin and the oxyd of this metal, which, when it has cooled, produces ſolid maſſes of a yellowiſh grey colour, the fracture of which preſents a ſhining grain like the irregular martial pyrites.

The vitreous matter, which floats upon this metallic alloy, is of a yellowiſh-grey colour when it has cooled; it is a glaſs or rather an enamel of tin, in which three layers are diſtinguiſhed; that which is in contact with the metal in a ſtate of fuſion, is grey, ſhining, contains a large quantity of tin in the metallic ſtate; the intermediate layer preſents an enamel of a yellowiſh-grey colour; and the ſuperior layer, which was expoſed to the contact of the air and fire, is ſcoriform of a blackiſh colour. Theſe three ſtates in which the tin preſents itſelf, depend upon the quantity of charcoal, as Citizen Anfry has obſerved. The oxyd, or white calx of tin, cannot be nitrified without the addition of a little charcoal, and cannot be reduced unleſs with the aid of ten parts.

During all theſe operations a very fine ſublimate is formed of the oxyd, or white calx of tin, which is extracted out of the chimneys of the reverberatory furnaces, in which the calcinations and reductions are performed.

It has been remarked, that the tin, which is extracted from the ſcoria of bell-metal, has more ſolidity than pure tin; that it is brittle, and exhibits a greyiſh metallic grain, which is not exhibited by pure tin. It owes this property to a portion of antimony which is employed by the pewterers in order to give durability to this metal. When this alloy has once been made, it is almoſt impoſſible to effect the ſeparation of the two metals. As the bell-founders employ the tin of commerce, it is not to be wondered at that the tin which is extracted from the ſcoria of bell-metal contains antimony; perhaps alſo the founders themſelves introduce ſome of it.

Being well convinced, by obſerving the ſolutions and effects of re-agents, that the tin extracted from bell-metal did not contain iron or copper in any perceptible quantity, and not being able to ſeparate the antimony from it, Mr. Le Sage made alloys of this ſemi-metal with tin, in different proportions, and found, that tin, alloyed with a ſixth part of antimony, was rendered ſimilar to that extracted from bell-metal by the proceſs of Anfry; that it had the ſame grain, the ſame durability, the ſame ſound, and that it had alſo loſt a part of its ſhrilneſs.

Though the tin extracted from bell-metal contains antimony, it may be employed in the fabrication of tin-plates, as he found by experience; it is more difficult to form into blocks than pure tin; it is more proper for tinning utenſils than the tin employed by the pewterers for ſpoons, &c. which is beſides alloyed with lead, biſmuth, and copper.

The experiments quoted ſhew that the bell-metal does not conſiſt merely of copper and tin, but that it alſo contains antimony.

The following are the mixtures employed by pewterers:
Beat tin.—Tin 100 lbs. copper 4 lbs. biſmuth 8 oz.
Pewterers metal.—Tin 100 lbs. copper 6 lbs. biſmuth 1 lb. 8 oz.
Common tin.—Tin 100 lbs. braſs 6 lbs. lead 15 lbs.

The pewterers always alloy this metal with more or leſs antimony.

TINA, a town of Turkey in Europe, in Boſnia, on the river Tis, 37 miles N.W. of Spalatro. Long. 17. 9. E. Lat

TINA, or TINOS, the ancient Tenos, an iſland of the Archipelago, one of the Cyclades, to the weſt of Nicaria. It is 17 miles long and eight broad, and is ſubject to the Venetians. This iſland produces 16,000 pounds of ſilk every year, and the ſtockings made of it are very good; but nothing can equal the gloves which are knit here for the ladies. The fortreſs ſtands on a rock; and here is a biſhop's ſee of the Latin church, though the Greeks have 200 papas or prieſts. St. Nicolo is the principal town. Long. 25. 24. E. Lat. 37. 30. N.

TINIAN, an iſland in the Pacific Ocean, one of the Ladrones, 12 miles in length and ſix in breadth. The ſoil is dry; and, being ſomewhat ſandy, is the leſs diſpoſed to rank and over-luxuriant vegetation. The land riſes in gentle ſlopes from the ſhore to the middle of the iſland, intermixed with valleys of an eaſy deſcent; which are beautifully diverſified with the mutual encroachments of the woods and lawns. The woods conſiſt of tall and well-ſpread trees, and the lawns are covered with clean and uniform turf, producing fine trefoil, and variety of flowers. Here are at leaſt 10,000 cattle, all milk white, except their ears, which are brown or black; alſo a vaſt number of fowls, which are eaſily caught, and plenty of wild hogs. In the woods are prodigious quantities of cocoa-nuts, cabbage-trees, guavoes, limes, ſweet and ſour oranges, and bread fruit. Here are alſo vegetables proper for the ſcurvy; ſuch as water-melon, dandelion, creeping purſlain, mint, ſcurvy-graſs, and ſorrel. Here are ſome ruins of a particular kind, conſiſting of two rows of ſquare pyramidical pillars, each pillar being about ſix feet from the next, and the diſtance between the rows is 12 feet; on the top of each there is a ſemi-globe, with the flat ſurface upward, and they are compoſed of ſand and ſtone cemented together. The climate is extremely healthful, for the rains are not continual, but fall in frequent refreſhing ſhowers. There are no ſtreams, but the water of the wells and ſprings is excellent. The principal inconvenience ariſes from the number of muſkitoes, and other kinds of flies; and there are likewiſe inſects called ticks, which faſten upon the limbs and bodies of men, and bury their heads under their ſkins. The road is inconvenient, and, in ſome ſeaſons, there is little ſecurity for a ſhip at anchor. Long. 146. 0. E. Lat. 15. 0. N.

TINMOUTH, a ſea-port in Northumberland, at the mouth of the Tyne, nine miles eaſt of Newcaſtle. It has a caſtle, ſeated on a high rock, inacceſſible on the ſea-ſide, and well mounted with cannon. There is a bar acroſs the mouth of the river, which is not above ſeven feet deep at low water. There are dangerous rocks about it, called the Black Middins; but there are light-houſes to guide the ſhips by night. Here ſhips take in their loading of coal, and of goods brought from Newcaſtle. Long. 1. 16. W. Lat. 55. 6. N.

TINTAGEL, a village in Cornwall, one mile weſt of Boſſiney, noted for the remains of a remarkable fortification called King Arthur's caſtle. It is ſeated on a bold promontory, in the Briſtol Channel; and is ſaid to have been the birth-place and royal reſidence of Arthur.

TINTO, a river of Spain, which riſes in the province of Seville, and has its name from the water being tinged of a yellow colour. Near its ſpring it has a petrifying quality, no trees or plants will grow on its banks, nor will any fiſh live in it; which properties continue till other rivulets run into it and alter its nature; for when it paſſes by Niebla it is not different from other rivers. It falls into the Atlantic about 18 miles below Niebla.

TINZEDA, a town of Barbary, in Biledulgerid. It is ſeated on a river of the ſame name, in a country fertile in

dates and barley, and abounding in indigo. Long. 6. 13. W. Lat. 27. 30. N.

TINZULIE, a ſtrong town of Barbary, in Biledulgerid, ſeated on the river Dras. Long. 5. 43. W. Lat. 28. 15. N.

TIORN, an iſland on the weſt coaſt of Sweden, about 27 miles in circumference, and abounding in excellent paſtures. Long. 11. 29. E. Lat. 58. 0. N.

TIPERAH, or TIPRAH, a kingdom of Aſia, in the dominions of the King of Burmah, lying under the tropic of Cancer, to the eaſt of Hindooſtan Proper.

TIPPERARY, a town of Ireland, in the county of the ſame name, nine miles S.S.W. of Caſhel.

TIRANO, a town of the country of the Griſons, capital of the Upper Terzero. It contains ſeveral handſome buildings, but from the narrowneſs of the ſtreets, and many ruinous houſes, its general appearance is deſolate. The river Adda divides it into two parts, which are joined by a ſtone bridge of a ſingle arch. There are ſome remains of the ſtone walls by which it was formerly ſurrounded, and which, with an adjoining fortreſs, was built by Ludovico Sforza, againſt the incurſions of the Griſons, but were diſmantled by the latter, when they acquired poſſeſſion of the Valteline. The ſtaple commerce of this town conſiſts in the exportation of wine and ſilk. Near the town on the other ſide of the Adda, is the magnificent church of the Madona, or Virgin Mary, much viſited by the Catholic pilgrims. The maſſacre of the Proteſtants of the Valteline, in 1620, began in this town. It is 17 miles S.W. of Bormio. Long. 9. 46. E. Lat. 46. 12. N.

TIREE, a ſmall but rich iſland of Scotland, one of the Hebrides, lying to the S.W. of Col, and noted for its marble quarry and a handſome breed of little horſes.

TIREH, a town of Turkey in Aſia, in Natolia, ſituate on the Meinder, 32 miles S.S.E of Smyrna. Long. 27. 30. E. Lat. 38. 10. N.

TIRLEMONT, a village of Auſtrian Brabant, formerly one of the moſt conſiderable places in that duchy, but ruined by the wars. It is ſeated on the river Geet, over which are ſeveral bridges, 12 miles E.S.E. of Louvain, and 25 E. of Bruſſels. Long. 4. 41. E. Lat. 50. 48. N.

TIRNAU, a ſtrong and conſiderable town of Upper Hungary, in the county of Neitra. It is ſeated on the Tirna, five miles W. of Leopoldſtadt, and 22 N.E. of Preſburg. Long. 17. 39. E. Lat. 48. 24. N.

TITAN, or CABAROS, an iſland of France, the moſt eaſtern of the Hieres, in the Mediterranean.

TITICACA, or CHUCUITO, an iſland of Peru, in the audience of Los Charcos. It is ſituate in a lake of the ſame name, which is one of the largeſt in South America.

TITLISBERG, one of the higheſt mountains in Switzerland, at the foot of which is the greateſt part of the valley of Engelberg.

TITTMAINING, or DITTMAINING, a town of Germany, in the archbiſhopric of Saltzburg. It was almoſt deſolated by the plague in 1310, and was reduced to aſhes by lightning in 1571; but it has been ſince rebuilt. It is ſeated on the Saltza, 24 miles N.W. of Saltzburg. Long. 12. 46. E. Lat. 47. 54. N.

TITUL, a ſtrong town of Upper Hungary, in the county of Bodrog. It is ſeated on the Teiſſe, near its confluence with the Danube, 23 miles E. of Peterwaradin, and 20 N.W. of Belgrade. Long. 20. 34. E. Lat. 45. 30. N.

TIVERTON, a borough in Devonſhire, with a market on Tueſday. It is ſeated on the Ex, over which is a ſtone bridge, is governed by a mayor, and ſends two members to parliament. It has a noble free-ſchool (founded by a clothier of this town), which has an endowment alſo for the maintenance of eight ſcholars at Baliol College, Oxford, and Sidney Suſſex College, Cambridge. Tiverton has ſuffered very ſeverely by fire, particularly in 1598, 1612, 1731, and 1794. This town has been noted for its great woollen manufacture, and is 14 miles N.N.E. of Exeter, and 161 W. by S. of London. Long. 3. 38. W. Lat. 50. 54. N.

TIUMEN, a town of Siberia, in the province of Tobolſk, on the Tura, 125 miles W. of Tobolſk.

TIVOLI, a celebrated town of Italy, in Campagna di Roma, with a biſhop's ſee. It is now wretchedly poor; but boaſts, however, of greater antiquity than Rome itſelf, being the ancient Tibur, which, Horace ſays, was founded by a Grecian colony. It was the favourite country reſidence of the ancient Romans, as Freſcati is of the moderns. Near the bottom of the eminence on which Tivoli ſtands, are the ruins of the vaſt and magnificent villa built by Emperor Adrian. Other illuſtrious Romans had alſo their villas here; as Julius Cæſar, Caius Caſſius, Auguſtus, Catullus, Propertuis, Mæcenas, &c. Horace is thought to have compoſed great part of his works in this favourite retreat. Near Tivoli are a celebrated caſcade, a temple of Veſta, and another of the ſybil Albunea, a magnificent villa belonging to the Duke of Modena, called the Villa Eſtenſe, and the remarkable lake of Solfatara. Tivoli is ſeated on the Teverone, 12 miles E.N.E. of Rome, and 15 N.N.E. of Freſcati. Long. 12. 43. E. Lat. 41. 59. N.

TIZZANO, a town of Italy, in the duchy of Parma, 13 miles S. of Parma.

TLASCALA, a province of New Spain, in the audience of Mexico; bounded on the N. by Panuco, on the E. by the gulf of Mexico, on the S. by Guaxaca and the Pacific Ocean, and on the W. by the audience of Mexico. In the weſt part of this province is the mountain of Tlaſcala, 12 miles in circumference: it is well peopled and cultivated, except on the ſummit, which is always covered with ſnow. There are alſo other mountains, covered with trees, in which are tigers and monkeys.

TLASCALO, a town of New Spain, capital of a province of the ſame name. It is ſeated on a river, partly on a mountain, and partly on a plain, 82 miles E.S.E. of Mexico. Long. 99. 22. W. Lat. 19. 30. N.

TOCAYMA, a town of New Granada, ſeated on the Pati, in a country abounding in fruit and ſugar-canes. Here are hot-baths between two cold ſprings; and near the town is a volcano. Long. 73. 50. W. Lat. 4. 3. N.

TOCKAY, a ſtrong town of Upper Hungary, in the county of Zimplin, with a caſtle. It is celebrated for its excellent wine; but being produced only by one vineyard, it is ſcarce even at Vienna. At ſome diſtance from it are large ſalt-works. It is ſeated at the confluence of the Bodrog and Teiſſe, 75 miles N.W. of Great Waradin, and 90 N.E. of Buda. Long. 21. 25. E. Lat. 48. 10. N.

TOCORT, or TUGGURT, a town of the kingdom of Algiers, 240 miles S.S.E. of Algiers. Long. 4. 40. E. Lat. 32. 40. N.

TODI, a town of Italy, in the duchy of Spoletto, with a biſhop's ſee; ſeated on a hill, near the Tiber, 22 miles S. of Perugia, and 50 N. of Rome. Long. 12. 32. E. Lat. 42. 44. N.

TOGGENBURG, a county of Switzerland, depending on the abbey of St. Gallen. It is a narrow country, ſituate between high mountains, is fertile in corn and fruit, and is divided into the Upper and Lower. It contains 30 pariſhes, and upwards of 46,000 inhabitants. There are more Proteſtants than Catholics, but both religions are bound by oath to maintain reciprocal harmony.

TOISSEY, a town of France, in the department of Ain, feated near the confluence of the Saone and Chalarogne, 25 miles N. of Lyons. Long. 4. 52. E. Lat. 45. 20. N.

TOLAGA BAY, a bay of the iſland of New Zealand. Long. 178. 33. E. Lat. 38. 21. S.

TOLEN, a town of the Dutch Netherlands, in Zealand, in an iſland of the ſame name, ſeparated by a narrow channel from Dutch Brabant. It is five miles N.W. of Bergen-op-Zoom. Long. 4. 20. E. Lat. 51. 30. N.

TOLENTINO, a town of Italy, in the marquiſate of Ancona, with a biſhop's ſee. It is the place where the relics of St. Nicholas are kept, and is ſeated on the river Chiento, eight miles S.E. of St. Severino, and 88 N.E. of Rome. Long. 13. 11. E. Lat. 43. 14. N.

TOLESBURG, a ſea-port of Ruſſia, in the government of Riga, ſeated on the gulf of Finland, 60 miles W. of Narva. Long. 26. 4. E. Lat. 59. 38. N.

TOLFA, a town of Italy, in the patrimony of St. Peter. In the environs are mines of alum and iron, with warm baths, and quarries of alabaſter and lapis lazuli. It is four miles from the ſea coaſt, and 25 N.W. of Rome. Long. 12. 40. N. Lat. 42. 10. N.

TOLHUYS, a town of Dutch Guelderland, ſeated on the Rhine. Here the French army paſſed the Rhine in 1672. It is eight miles E. of Nimeguen. Long. 6. 0. E. Lat. 51. 56. N.

TOLMEZZO, a town of Italy, in Venetian Friuli, 30 miles N.E. of Belluno. Long. 12. 50. E. Lat. 46. 30. E.

TOLMINO, a town of Germany, capital of a diſtrict in the duchy of Carniola, 12 miles N. of Goritz.

TOLNA, a town of Lower Hungary, capital of a county of the ſame name. It is ſeated on the Danube, in a country producing excellent wine, eight miles S.W. of Colocza, and 45 S. of Buda. Long. 19. 28. E. Lat. 46. 33. N.

TOLNANI, a town of the Deccan of Hindooſtan, in the country of Baglana, 70 miles W. of Burhampour, and 124 E. of Surat. Long. 75. 3. E. Lat. 21. 15. N.

TOLOSA, a town of Spain, the capital of Guipuſcoa, ſeated in a valley, between the Araxis and Oria, over which are two bridges, and near them ſeveral natural caſcades. It is inhabited by a great number of artiſts, who make ſword blades in high eſteem. It was taken by the French in 1794. It is 37 miles S.W. of Bayonne, and 47 S.E. of Bilboa. Long. 2. 5. W. Lat. 43. 10. N.

TOMAR, a town of Portugal, in Eſtremadura, ſeated on the river Naboan, at the foot of the mountains, where there is a caſtle belonging to the knights of Chriſt. It is 40 miles S.E. of Coimbra, and 65 N.E. of Liſbon. Long. 7. 55. W. Lat. 39. 30. N.

TOMBEC, a town of Auſtrian Brabant, eight miles S. of Louvain, and 10 E. of Bruſſels. Long. 4. 49. E. Lat. 50. 45. N.

TOMBELAINE, a ſmall iſland of France, with a town of the ſame name, on the coaſt of Normandy, in a ſmall gulf between Avranches and St. Malo. This iſland, as well as that of St. Michael, in which there is a monaſtery, are every day joined, at low water, to the main land.

TOMBUCTOO, a kingdom of Nigritia, which lies to the ſouth-eaſt of the great deſert of Zahara, and weſt of the empire of Caſhna. It produces great plenty of corn, cattle, milk, and butter. The king has 300 horſemen, beſide a great number of foot, who frequently take captives, and ſell them to the merchants for ſlaves. The houſes are built like bells, with walls of hurdles plaſtered with clay, and covered with reeds. The better ſort of women have their faces covered, their religion being Mahometaniſm. Both men and women are very fond of dancing, and ſpend a great part of the night in that exerciſe.

TOMBUCTOO, the capital of a kingdom of the ſame name, in Nigritia, with a ſtately moſque built of ſtone, and a royal palace. Here is a great number of weavers of cotton cloth; and hither the cloth and other merchandiſe are brought by caravans from Barbary. Inſtead of money, they make uſe of ſhells and ſmall bits of gold. In the proceedings of the African Aſſociation, this place is mentioned as a luxurious, opulent, and flouriſhing city, ſubject to a ſevere police, and, as ſuch, attracting the merchants of the moſt diſtant ſtates of Africa. It is ſeated near the Niger, 270 miles S.W. of Moorſook. Long. 0. 8. W. Lat. 19. 59. N.

TOMEBAMBA, a town of Peru, in the audience of Quito, where was a temple of the Sun, whoſe walls, as the Spaniards aſſert, were covered with gold. It is 120 miles S. of Quito. Long. 77. 50. W. Lat. 2. 16. S.

TOMINA, a government of South America, in the vice-royalty of Buenos Nyres, and archbiſhopric of La Plata.

TOMINI, a town on the eaſt coaſt of the iſland of Celebes, in a bay to which it gives name. Long. 119. 0. E. Lat. 0. 45. S.

TOMSK, a town of Siberia, in the province of Tomsk. On the higheſt part ſtands a wooden caſtle, defended by 14 pieces of cannon; and in it are a cathedral built of wood, the chancery, and an arſenal. The inhabitants carry on a great trade, this town lying on the great road through all the eaſt and north parts of Siberia. It contains above 2000 houſes, and is ſeated on the river Tom, 105 miles E.S.E. of Tobolsk. Long. 84. 59. E. Lat. 55. 45. N.

TONDEREN, or TUNDEREN, a town of Denmark, in the duchy of Sleswick, capital of a bailiwic of the ſame name, with a fort. It is ſeated in a fertile country, on the river Widaw, and on a bay of the German ocean, 25 miles S.E. of Ripen, and 30 N.W. of Sleswick. Long. 9. 40. E. Lat. 54. 58. N.

TONGATABOO, or AMSTERDAM ISLAND, one of the Friendly Iſlands, 20 leagues in circuit. It has the beſt harbour or anchoring-place to be found among theſe iſlands. It is wholly laid out in plantations, with roads or lanes for travelling; and is the ſeat of government for all the other iſlands, and the ordinary reſidence of all the principal chiefs. Long. 175. 5. W. Lat. 21. 8. S.

TONGRES, a town in the biſhopric of Liege, formerly one of the richeſt and moſt flouriſhing cities in the Roman province of Gallia Belgica. It has ſeverely ſuffered by the calamities of war; the firſt time by Attila, king of the Huns, and the laſt by the French in 1673 and 1677. It is ſeated on the Jecker, 12 miles S.W. of Maeſtricht, and 15 W. of Liege.

TONG-TCHANG-FOU, a city of China, in the province of Chang-tong, containing in its diſtrict, three cities of the ſecond, and 15 of the third claſs. It is 150 miles S. of Pekin. Long. 115. 25. E. Lat. 36. 30. N.

TONG-TCHUEN-FOU, a fortified city in China, in the province of Se-tchuen. The inhabitants are all ſoldiers, who have followed the profeſſion of arms from father to ſon. It is 867 miles S.W. of Pekin. Long. 101. 30. E. Lat. 25. 56. N.

TONGUSIANS, a people who inhabit the eaſt part of Siberia, and are ſubject to the Ruſſians. They are all Pagans, and chiefly ſubſiſt by grazing and hunting of ſables. They live in huts, which, when they remove their dwellings, they take down and ſet up elſewhere. Theſe huts are compoſed of wooden poles, covered all over with hair and rubbiſh, except a hole left at the top to let out the ſmoke. Their fire is made in the middle, and they all ſit round it upon turfs. Both ſexes are very ſtrong, and broad-

faced, and they all ride on horseback, not excepting the girls. Both men and women dress alike in a sort of frock, with boots of skins on their legs, and their common drink is water.

TONNA, a town of Upper Saxony, in the principality of Gotha, six miles N. of Gotha.

TONNAY BOUTONNE, a town of France, in the department of Lower Charente, seated on the river Boutonne, 17 miles N. of Saintes. Long. 0. 34. W. Lat. 45. 56. N.

TONNAY CHARENTE, a town of France, in the department of Lower Charente, with a castle and a small port. It is seated on the Charente, three miles from Rochefort, and 253 S.W. of Paris. Long. 0. 46. W. Lat. 45. 56. N.

TONNIENS, a town of France, in the department of Lot and Garonne, seated on the Garonne, two miles from its junction with the Lot, and seven E. of Marmande.

TONNERRE, a town of France, in the department of Yonne, famous for its good wines. It is seated on the Armancon, 27 miles S. of Troyes, and 102 E. of Paris. Long. 4. 4. E. Lat. 47. 51. N.

TONNINGEN, a town of Denmark, in the duchy of Sleswick, capital of a territory of the same name. It is seated on a peninsula formed by the river Eyder, where there is a commodious harbour, 25 miles S.W. of Sleswick, and 58 N.W. of Hamburg. Long. 9. 10. E. Lat. 54. 30. N.

TONSBERG, a sea-port of Norway, in the province of Aggerhuys, 30 miles W. of Frederickstadt. Long. 10. 20. E. Lat. 58. 50. N.

TOOBOUAI, an island in the Pacific Ocean, discovered by Captain Cook. It is not in any direction above six miles over; but there are hills in it of considerable elevation, covered with herbage, except a few rocky cliffs, with patches of trees interspersed to their summits. It is plentifully stocked with hogs and fowls, and produces several kinds of fruits and roots. Long. 149. 23. W. Lat. 23. 25. S.

TOOTH-ACH. See ODONTALGIA, *Supp.*

TOPCLIFF, a town in the North Riding of Yorkshire, seated on a considerable ascent on the Swale, 24 miles N. of York.

TOPEL, or TOPL, a town of Bohemia, in the circle of Pilsen, 24 miles N.W. of Pilsen, and 56 W. of Prague. Long. 14. 10. E. Lat. 50. 10. N.

TOPOLITZ, a town of Bohemia, in the circle of Leutmeritz, near which the Austrians defeated the Prussians in 1762. It is 14 miles W.N.W. of Leutmeritz. Long. 14. 10. E. Lat. 50. 36. N.

TOPOLITZA, a town of Turkey in Europe, in Moldavia, 12 miles S.W. of Niemecz. Long. 26. 9. E. Lat. 46. 51. N.

TOPOLTZAU, a town of Hungary, 42 miles N.E. of Presburg, and 68 E. of Vienna. Long. 17. 30. E. Lat. 48. 35. N.

TOPSHAM, a town of Devonshire, with a market on Saturday. It is seated on the Ex, five miles S.E. of Exeter (of which it is the port), and 170 S.W. of London. Long. 3. 26. W. Lat. 50. 39. N.

TOR, or ELTOR, a town of Arabia Petrea, seated on the Red Sea, with a good harbour defended by a castle. Here is a Greek convent, in the garden of which are fountains of bitter water, pretended to be those which Moses rendered sweet, by throwing in a piece of wood. Long. 33. 45. E. Lat. 28. 27. N.

TORBIA, a town of Piedmont, in the county of Nice. Here is an ancient tower, of Gothic architecture, and in the environs are found many remains of Roman monuments. It is seven miles E. of Nice.

TORBOLE, a town of Italy, in the Trentino, 14 miles S E. of Trent. Long 11. 39. E. Lat. 45. 56. N.

TORCELLO, a town of Italy, in the territory of Venice. It is thin of people, on account of the unwholesome air, and seated in a small island, seven miles N. of Venice. Long. 12. 9. E. Lat. 45. 32. N.

TORDA, or TORENBURG, a town of Transylvania, famous for its salt-works. The Hungarian language is said to be spoken with the greatest purity in this town. It is 15 miles W.N.W. of Clausenburg, and 48 N.W. of Hermanstadt. Long. 23. 13. E. Lat. 46. 50. N.

TORDESILLAS, a fortified town of Spain, in Leon, with a magnificent palace, where Queen Joan, mother of Charles V. ended her melancholy days. It is seated in a country fertile in corn and wine, on the river Douero, 24 miles W. of Valladolid, and 75 S.E. of Leon. Long. 4. 56. W. Lat. 41. 48. N.

TORGAU, a town of Upper Saxony, in Saxony Proper. It has a castle, the staircase of which is built in such a manner, that a person may ride in a chaise to the top of it. The inhabitants brew excellent beer, which they send to other places on the Elbe, on which the town is seated. Here the King of Prussia obtained a great victory over the Austrians in 1760. It is 27 miles N.E. of Leipsic, and 35 N.W. of Dresden. Long. 13. 3. E. Lat. 51. 34. N.

TORIGNY, a town of France, in the department of the Channel, with a magnificent castle, seated on a rivulet, seven miles S.E. of St. Lo. Long. 0. 42. W. Lat. 49. 0. N.

TORMES, a river of Spain, which rises in the mountains of Avila, in Castile, passes by Alva, Tormes, and Salamanca, and falls into the Douero, below Mirande-de-Douero.

TORNA, or TORNAW, a fortified town of Upper Hungary, capital of a county of the same name, with a castle. It is seated on an eminence, on the river Sayo, 22 miles W. of Cassovia. Long. 20. 43. E. Lat. 48. 50. N.

TORNE, a river of Sweden, which rises in the mountains of Norway, forms a lake of the same name, and flowing S.E. falls into the gulph of Bothnia, at Tornea.

TORNEA, a town of Sweden in West Bothnia, capital of a territory of the same name, with a good harbour. It is a place of some trade, because all the Laplanders in those parts come and exchange their skins and other articles, for what they want. The houses are low, and the cold so severe, that sometimes people lose their fingers and toes. It is seated at the mouth of the Torne, at the N. extremity of the gulf of Bothnia, 180 miles N.E. of Uma, and 420 N.N.E. of Stockholm. Long. 24. 17. E. Lat. 65. 51. N.

TORNOVA, a town of Turkey in Europe, in Jama, with a bishop's see. It is seated at the foot of Mount Dragoniza, on the river Salempria, 10 miles N.W. of Lariss. Long. 22. 36. E. Lat. 39. 52. N.

TORO, a town of Spain, in Leon, seated on a hill, on the river Douero, in a country fertile in corn and fruits, and whose vineyards yield excellent red wine. It is 37 miles N. by E. of Salamanca, and 100 N.W. of Madrid. Long. 5. 2. W. Lat. 41. 39. N.

TORELLA-DE-MONGRIS, a sea-port of Spain, in Catalonia, famous for a battle gained by the French over the Spaniards, in 1694. It is seated near the mouth of the Tor, in the Mediterranean, at the foot of the Pyrenées, 19 miles E. by S. of Gironna, and 60 N.E. of Barcelona. Long. 3. 18. E. Lat. 41. 55. N.

TORPERLEY, a town in Cheſhire, nine miles E. of Cheſter It was formerly a borough, and had a market.

TORRE-DEL-GRECO, a town of Naples, in Terra di-Lavoro, ſeated at the foot of Mount Veſuvius, on the bay of Naples, five miles S.E of that city. It was deſtroyed by an eruption of Veſuvius in 1631; and in 1794 was overwhelmed by a torrent of lava, from that volcano. The inhabitants, however, to the amount of 18,000, eſcaped with their lives, about 15 excepted; and the town is now rebuilding on the lava that covered the former habitations.

TORRE DE MONCORVO, a town of Portugal, in Tra los Montes, ſurrounded with a wall, and defended by a baſtion and a caſtle. It is 27 miles S.E of Mirandela, and 42 S.S.W. of Braganza. Long. 5. 55. W. Lat. 41. 0. N.

TORRE DE LAS SALINAS, a town of Spain, in Valencia, near the coaſt of the Mediterranean, which carries on a great trade in ſalt, procured from a ſmall lake formed by ſaline ſprings. This is the moſt conſiderable ſalt-work in all Spain. It is 20 miles S.E. of Origuela, and 37 N.N.E. of Carthagena. Long. 0 50. W. Lat. 37. 58. N.

TORREJO, a town of Spain, in New Caſtile, 15 miles S. of Madrid. Long. 3. 21. W. Lat. 40. 10. N.

TORRES, a ſea-port of Spain, in Granada, ſeated on the Mediterranean, 45 miles S.W. of Granada. Long. 3. 56. W. Lat. 36. 39. N.

TORRES NOVAS, a ſtrong town of Portugal, in Eſtremadura, with a caſtle. It is ſurrounded by walls, and ſeated in a fertile plain, on the river Almonda. 55 miles N.E. of Liſbon. Long. 8. 8. W. Lat. 39. 10. N.

TORRES VEDRAS, a town of Portugal, in Eſtremadura, with a caſtle, ſeated near the Atlantic, in a country abounding in corn, fruits, and good wine, 17 miles S. of Liſbon.

TORRIGLIA, a town of Italy, in the territory of Genoa, 10 miles N. of Genoa. Long. 8. 44. E. Lat. 44. 34. N.

TORRINGTON, a corporate town in Devonſhire, with a market on Saturday. It has two churches, a manufacture of ſtuffs, and is governed by a mayor. Some remains of a caſtle are ſtill viſible. It is ſeated on the Towridge, over which is a bridge, 11 miles S. by W. of Barnſtaple, and 194 W. by S. of London. Long. 4. 0. W. Lat. 51. 4. N.

TORSIL, a town of Sweden, in Sudermania, ſeated on the S. bank of the lake Maeler, 43 miles W. of Stockholm. Long. 17. 20. Lat. 59. 20. N.

TORTOLA, the principal of the Virgin Iſlands, in the Weſt Indies, 18 miles long and ſeven broad. It formerly belonged to the Dutch, who built a ſtrong fort, from which they were expelled by the Engliſh in 1666. It produces excellent cotton, ſugar, and rum, and of late years has undergone great improvements. Its fruits, of which there are no great variety, are but indifferent; ſome apples excepted. The entrance into the harbour is at the E. end of the iſland. Long. 63. 0. W. Lat. 18. 33. N.

TORTONA, a fortified town of Italy, in the duchy of Milan, capital of the Tortoneſe, with a biſhop's ſee, and a caſtle on an eminence. It is deemed a conſiderable frontier place; was taken by the allies in 1744, by the Spaniards in 1745, and by the French in 1796. It is ſeated on the Scrivia, 28 miles S.E. of Caſal, and 27 S.W. of Milan. Long. 8. 58. E. Lat. 45. 8. N.

TORTORELLA, a town of Naples, in Principato Citeriore, five miles N.E. of Policaſtro.

TORTOSA, a city of Spain, in Catalonia, with a biſhop's ſee, a univerſity, and a citadel. It is divided into the Old and New Town, both ſurrounded by modern fortifications. The entrance is over a large bridge of boats, on the river Ebro, whoſe head is fortified. It has a great number of churches and religious houſes; among which the cathedral, the royal college of Dominicans, and the convent of the Carmelites, are the moſt remarkable. It is ſituated in a country fertile in corn and fruits, and abounding with quarries and mine of ſilver, iron, alabaſter, jaſper of divers colours, and ſtones with veins of gold. Here is a great deal of ſilk and oil, and very fine potters-ware, which reſembles porcelain. It is ſeated partly on a plain, and partly on a hill, 35 miles S.W. of Tarragona, and 180 E. of Madrid. Long. 0. 35. E Lat. 40. 53. N.

TORTUGA, an uninhabited iſland near the coaſt of Terra Firma, 40 miles W. of the iſland of Margaretta, and about 30 miles in circumference. The E. end is full of bare rugged broken rocks, which ſtretch a little way out to ſea. At this end is a large ſalt pond, where the ſalt begins to kerm in April; and there have been 20 ſhips here at a time for ſalt. At the weſt end is a ſmall harbour with freſh water; and it is full of low trees. There are a few goats on it; and the turtles or tortoiſes come upon the ſandy banks to lay their eggs, whence this iſland has its name. It was formerly much frequented by the bucaniers. Long. 64. 50. W. Lat. 11. 30. N.

TORTUGA, an iſland of the Weſt Indies, near the north coaſt of the iſland of Hiſpaniola, where the French bucaniers uſed to fortify themſelves. It is about 80 miles in circumference, and has a ſafe harbour, but difficult of acceſs. Long. 75. 10. W. Lat. 20. 10. N.

TOSA, a ſea-port of Spain, in Catalonia, ſeated at the bottom of a bay, which forms a good harbour, where veſſels are ſheltered from all winds, except the S.W. It is built partly on a plain, and partly on a ſteep hill, which projects into the ſea. On the top of the hill, nearer the ſea, is a ſtrong citadel, with other fortifications. It is 37 miles N.E. of Barcelona. Long. 2. 54. E. Lat. 41. 42. N.

TOSCANELLA, a town of Italy, in the patrimony of St. Peter, 35 miles N. of Rome. Long. 12. 35. E. Lat. 42. 29 N.

TOSENA, a town of Sweden, in Weſt Gothland, 20 miles W.N.W. of Uddevalla. Long. 12. 2. E. Lat. 58. 33. N.

TOSSO, a town of Sweden, in Weſt Gothland, 42 miles N.N.E. of Uddevalla. Long. 12. 15. E. Lat. 58. 51. N.

TOTNESS, a borough in Devonſhire, with a market on Saturday. It is ſeated on the river Dart, on the ſide of a hill, and had formerly a caſtle and walls. It ſends two members to parliament, is governed by a mayor, and has a manufacture of ſerges. It is 27 miles S.W. of Exeter, and 196 W. by S. of London. Long. 3. 44. W. Lat. 50. 24. N.

TOUL, a town of France, in the department of Meurthe. Before the revolution it was a biſhop's ſee, and the cathedral and late epiſcopal palace are handſome ſtructures. It was an imperial town of Germany, till taken by the French in 1552. It is ſeated on the Moſelle, in a plain almoſt ſurrounded by mountains, 10 miles weſt of Nanci, and 167 S.E. of Paris. Long. 6. 2. E. Lat. 48. 40. N.

TOULOMBA, or TULMABINI, a fortreſs of Hindooſtan Proper, in Lahore, ſeated on the Rauvee, 70 miles E N.E. of Moultan.

TOUR, a town of France, in the department of Puy de Donne, 22 miles S. of Clermont. Long. 3. 10. E. Lat. 45. 25. N.

TOUR DE ROUSILLON, a town of France, in the department of Eaſtern Pyrenées, ſeated on a hill near the river Tet, two miles below Perpignan.

TOUR DU PIN, a town of France, in the department

of Iſere, ſeated on a river of the ſame name, 24 miles S. of Vienne.

TOUR LA BLANCHE, a town of France, in the department of Dordogne, 15 miles N.W. of Perigueux. Long. 0. 40. E. Lat. 45. 18. N.

TOUR LA VILLE, a town of France, in the department of Charente, ſeparated from Cherbourg by a river.

TOURANCOURCHY, a town of Hindooſtan, in the Carnatic, 35 miles S.S.W of Tritchinopoli. Long. 78. 36. E. Lat. 47. 50. N.

TOURINE, a town of Germany, in the biſhopric of Liege, 13 miles N.E. of Namur. Long. 5. 0. E. Lat. 50. 36. N.

TOURNAN, or TOURNANS, a town of France, in the department of Seine and Marne, 22 miles E. by S. of Paris. Long. 2. 45. E. Lat. 48. 43. N.

TOURNAY, a conſiderable city of Auſtrian Flanders, capital of the Tournayſis, with a biſhop's ſee, and a ſtrong caſtle. It has ſeveral fine manufactures, and is particularly famous for good ſtockings. The cathedral, and the abbey of St. Martin, are very magnificent. It was taken by the allies in 1709, and ceded to the houſe of Auſtria by the treaty of Utrecht; but the Dutch were allowed to place a garriſon in it, as one of the barrier towns. It was taken in 1745, by the French, who demoliſhed the fortifications, but reſtored it in 1748. In 1781, the Emperor Joſeph obliged the Dutch to withdraw their garriſon. It was again taken by the French in 1792: they were obliged to abandon it in 1793, but re-entered it again, on the final conqueſt of Auſtrian Flanders, in 1794. It is ſeated on the Scheld, which divides it into two parts, that are united by a bridge, 14 miles S.E. of Liſle, 30 S.W. of Ghent, and 135 N. by E. of Paris. Long. 3. 28 E. Lat. 50. 33. N.

TOURNEHEM, a town of France, in the department of Straits of Calais, nine miles N.W. of St. Omer.

TOURNIQUET *(Encycl.)*. A patent was lately granted to Mr. Savigny, of King's-ſtreet, Covent-garden, for an improved tourniquet. The conſtruction of it will be underſtood from the following deſcription:—In a braſs frame are placed two braſs rollers, the one fixed, the other moveable on its axis. To the former of theſe rollers is faſtened the bandage, which is to encircle the limb, and which, being drawn over the moving roller, is faſtened by a kind of buckle. A plate of braſs, being in ſhape a ſegment of a circle, is preſſed againſt the limb by the turning of a ſcrew, till it produce the requiſite degree of tightneſs.

TOURNON, a town of France, in the department of Ardeche, with a fine college, and a caſtle. It is ſeated on the declivity of a mountain, near the river Rhone, 40 miles W. of Grenoble, and 280 S. by E. of Paris. Long. 4. 50. E. Lat. 45. 6. N.

TOURNUS, a town of France, in the department of Saone and Loire, ſeated on the Saone, in a country fertile in corn and wine, 15 miles S. of Chalons, and 202 S. by W. of Paris. Long. 5. 0. E. Lat. 46. 34. N.

TOURS, a conſiderable city of France, capital of the department of Indre and Loire. From an archiepiſcopal ſee it has been lately reduced to a biſhopric, ſuffragan to that of Bourges. It is ſeated on the Loire, and near the Cher. Over the former is one of the fineſt bridges in Europe, conſiſting of 15 elliptic arches, each 75 feet diameter: three of theſe were carried away by the breaking-up of ice in 1789. The principal church is remarkable for the delicacy of its ſtructure, its curious clock, its moſaic pavement, and its rich library of manuſcripts. Under the miniſtry of Cardinal Richelieu, 27,000 perſons were here employed in the ſilk manufacture; but now the whole number of inhabitants is only 22,000. The red wines of Tours are much eſteemed. In one of the ſuburbs is the late abbey of Marmoutier, reputed the moſt ancient in the Weſt. Near the city is Pleſſis-les-Tours, a late royal palace, built by the profligate and ſuperſtitious Lewis XI. who died here, in 1483, notwithſtanding he had the precaution to be covered all over with relics. Tours is 52 miles N.N.E. of Poitiers, 54 E. of Angers, and 127 S.W. of Paris. Long. 0. 47. E. Lat. 47. 24. N.

TOUSERA, a town of Barbary, capital of Biledulgerid, ſeated in a country abounding in dates, and dependent on the kingdom of Tunis. Long. 10. 55. E. Lat. 32. 30. N.

TOWCESTER, a town in Northamptonſhire, with a market on Tueſday. It was once ſtrongly fortified, and is ſeated on a ſmall river, 52 miles S.E. of Coventry, and 60 N.W. of London. Long. 1. 15. W. Lat. 52. 4. N.

TOWTON, a village in the Weſt Riding of Yorkſhire, S.E. of Tadcaſter. It is famous for that bloody battle between the forces of the houſes of York and Lancaſter, ſo fatal to the latter, on Palm-Sunday, 1461.

TOWY, a river of S. Wales, which riſes in Cardiganſhire, enters Carmarthenſhire at its N.E. extremity, and paſſing by Carmarthen, enters the Britiſh Channel.

TRAARBACH, a town of Germany, in the circle of Upper Rhine and county of Sponheim, 20 miles E.N.E. of Treves, and 34 S.W. of Coblentz. Long. 6. 45. E. Lat. 50. 2. N.

TRACHENBURG, or DRACHENBURG, a town of Germany, in Sileſia, and capital of a principality of the ſame name. It is ſeated on the Bartch, 12 miles N.E. of Wolaw, and 26 N. of Breſlaw. Long. 17. 15. E. Lat. 51. 30. N.

TRAJANAPOLI, a town of Turkey in Europe, in Romania, with a Greek archbiſhop's ſee, though it is ſmall and thin of people. It is ſeated on the Marica, 37 miles S.W. of Adrianople, and 112 N.W. of Conſtantinople. Long. 26. 18. E. Lat. 41. 15. E.

TRAJETTO, a town of Naples, in Terra di Lavoro, built on the ruins of the ancient Minturna. Here are the ruins of an amphitheatre and an aqueduct. It is ſeated near the mouth of the Garigliano, in the Mediterranean, 25 miles N.W. of Capua. Long. 14. 4. E. Lat. 41. 20. N.

TRAIN, a town of Germany, in Upper Bavaria, ſituate on the Ambs, five miles S. of Abenſperg, and 20 E. of Ingoldſtadt. Long. 11. 52. E. Lat. 48. 40. N.

TRAINA, a town of Sicily, in Val di Demona, ſeated on a high mountain, at the ſource of the river Traina, 22 miles W. of Mount Etna, and 70 S.W. of Meſſina. Long. 14. 30. E. Lat. 37. 46. E.

TRALEE, a borough and ſea-port of Ireland, in the county of Kerry, ſeated near a bay of the ſame name, ſeven miles S.S.E. of Ardfert. Long. 9. 36. W. Lat. 52. 12. N.

TRALLEBORG, a ſea-port of Sweden, in the province of Schonen, near the Baltic, 19 miles S. of Uund. Long. 13. 5. E. Lat. 55. 20. N.

TRANCHIN, a town of Upper Hungary, capital of a county of the ſame name. The caſtle ſtands ſo high, that it may be ſeen at the diſtance of near 30 miles. There are two warm baths within a mile of this place, and a great number of mineral ſprings in the adjacent country. It is ſeated on the Waag, 50 miles N.E. of Preſburg. Long. 17. 50. E. Lat. 49. 56. N.

TRANCON, a town of Portugal, in Tra los Montes, with a caſtle, ſeated in a fertile country, 14 miles W. by S. of Pinnel. Long. 7. 0. E. Lat. 40. 44. N.

TRANI, a ſea-port of Naples, in Terra di Bari, with a caſtle, and an archbiſhop's ſee. It is the uſual reſidence of the governor of the province; but is much decayed ſince the harbour has been choked up with mud. It is ſeated on the gulf of Venice, 20 miles W. of Bars, and 125 N. by E. of Naples. Long. 16. 36. E. Lat. 41. 18. N.

TRANQUEBAR, a town of Hindooſtan, on the coaſt of Coromandel, with a fort and factory, belonging to the Danes. It is ſeated at the mouth of the Cauvery, 165 miles S. of Madras. Long. 79. 57. E. Lat. 10. 44. N.

TRANSPLANTER, an inſtrument calculated for expeditiouſly raiſing plants with their roots, and conſigning them to other parts of the field in which they grow. Notwithſtanding every precaution, it frequently happens in turnip-fields that large ſpots remain barren. In Pl. 54. we have given a repreſentation of a ſimple inſtrument invented by Mr. Gray, of South Repps, Norfolk, for the purpoſe of filling up ſuch vacant ſpaces from the adjoining parts of the ſame field; and which has alſo been employed for tranſplanting other vegetables.

The handle A, muſt be held with the left hand; and the ſhort handle B, drawn up with the right. The tranſplanter ſhould next be put over the vegetable intended to be taken up, and forced into the ground with the foot: it is then to be twiſted round, and carefully drawn up, ſo that the earth may adhere to the root. A hole ſhould, in the mean time, be made by an aſſiſtant, furniſhed with a ſimilar inſtrument, for the reception of the turnip; the root may be conveyed in the firſt tranſplanter, and depoſited in the cavity; after which, the right hand being kept ſteady, the left muſt be gradually raiſed; when the earth and plant will be left in the hole undiſturbed.

TRAON, or TRAU, a ſtrong town of Venetian Dalmatia, with a biſhop's ſee. It is ſeated on the gulf of Venice, in a ſmall iſland, joined to the mainland by a long bridge of wood, and to the iſle of Bua by another of ſtone, 27 miles S.E. of Sebenico. Long. 17. 52. E. Lat. 44. 0. N.

TRAPANI, or TRAPANO, a ſea-port on the W. ſide of Sicily, in Val di Mazara, with a fort, and an excellent harbour, in the form of a ſickle, whence its ancient name Drepanum. It contains 20,000 inhabitants, and is a trading place, famous for its ſalt-works, and fiſheries of tunnies and coral. It is ſeated on a ſmall peninſula, 20 miles N. of Mazara, and 45 W. of Palermo. Long. 12. 20. E. Lat. 38. 10. N.

TRAPPE, a once celebrated monaſtery of France, in the department of Orne, ſituate in a large valley, ſurrounded by mountains. The monks were famous for their auſterity, and keeping perpetual ſilence.

TRARBACH, a town of Germany, in the palatinate of Lower Rhine, and country of Spanheim, ſeated on the Moſelle. Its fortreſs, which is on a mountain, and commands the paſſage of the Moſelle, was taken by the French in 1794. It is 22 miles N.E. of Treves, and 28 S.W. of Coblentz. Long. 7. 7. E. Lat. 49. 55. N.

TRAVANCORE, a province of Hindooſtan, extending along the coaſt of Malabar from Cape Comorin to 10. 15. N. lat. and bounded on the N. by Myſore, and on the E. by the Carnatic. It is ſubject to a rajah, who is an ally of the Engliſh Eaſt-India Company, and in defence of whom they engaged, in conjunction with the Mahrattas and the nizam of the Deccan, in the war againſt Tippoo Sultan.

TRAVANCORE, the capital of a province of the ſame name, in the peninſula of Hindooſtan, 100 miles S.S.E. of Cochin. Long. 77 8. E Lat. 8. 15. N.

TRAVEMUNDE, a ſtrong town of Germany, in the duchy of Holſtein, ſeated at the mouth of the Trave. It is the port of Lubec, to which it belongs, and is 12 miles N.E. of that city. Long 10. 55. E. Lat. 54. 1. N.

TRAVERS, a town of Switzerland, in the county of Neufchatel, 11 miles W. of Neuchatel. Long. 6. 50. E. Lat. 47. 6. N.

TRAUNSTEIN, a town of Germany, in Upper Bavaria, ſeated on the river Traun. Near it are ſprings of ſalt-water.

TRAUTENAU, a town of Bohemia, in the circle of Konigſgratz, 21 miles north of Konigſgratz. Long. 16. 10. E. Lat. 50. 45. N.

TRAGUYERA, a town of Spain, in Valencia, 30 miles S. of Tortoſa. Long. 0. 30. E. Lat. 40. 26. N.

TREBBIN, a town of Upper Saxony, in the middle marche of Brandenburg, 10 miles S.S.E. of Potſdam, and 20 S.S.W. of Berlin. Long. 13. 50. E. Lat. 52. 44. N.

TREBIA, a river of Italy, which riſes in the territory of Genoa, waſhes Bobio in the Milaneſe, and falls into the Po, above Placentia. On the banks of this river the Romans, under the conſul Sempronius, were defeated by Hannibal.

TREBIGNI, or TREBIGNA, a town of Turkiſh Dalmatia, with a biſhop's ſee. The inhabitants are partly Turks and partly Greeks, and there are ſome Papiſts. It is ſeated on the gulf of Venice, on the river Trebenſka, 14 miles N. of Raguſa. Long. 18. 11. E. Lat. 43. 4. N.

TREBISSIACI, a town of Naples, in Calabria Ulteriore, ſeated on the Tarento, five miles E. of Caſſano.

TREBISOND, a large and ſtrong ſea-port of Turkey in Aſia, in Natolia, with a Greek archbiſhop's ſee, and a caſtle. It is ſeated at the foot of a very ſteep hill. The walls are ſquare and high, with battlements; and are built with the ruins of ancient ſtructures, on which are inſcriptions not legible. The town is not populous; for there are more woods and gardens in it than houſes, and theſe but one ſtory high. The caſtle is ſeated on a flat rock, with ditches cut in it. The harbour is at the E. end of the town, and the mole built by the Genoeſe is almoſt deſtroyed. It ſtands on the Black Sea, 104 miles N.N.W. of Erzerum, and 440 E. of Conſtantinople. Long. 40. 25. E. Lat. 40. 45. N.

TREBITZ, a town of Germany, in Moravia. It has a manufacture of cloth, and is ſeated on the Iglaw, 21 miles S.E. of Iglaw, and 52. N.W. of Budweis. Long. 16. 12. E. Lat. 49. 4. N.

TREBNITZ, a town of Germany, in Sileſia, with a large nunnery. Near it is a hill conſiſting of a ſoft clay, or ſtone, which is immediately formed into veſſels of all kinds; and on being expoſed to the air, they become as hard as if they had been baked. It is 12 miles N. of Breſlaw. Long. 17. 15. E. Lat. 51. 15. N.

TREFFURT, a town of Upper Saxony, in the landegravate of Heſſe, with a caſtle. It belongs to the elector of Mentz, and is ſeated near the Verta, 22 miles W. of Saxe-Gotha. Long. 10. 19. E. Lat. 51. 8 N.

TREGANNON, a corporate town in Cardiganſhire, with a market on Thurſday. It is governed by a mayor, and ſeated on the Tyvy, 15 miles S.E. of Aberyſtwith, and 202 W. by N. of London. Long. 3. 56. W. Lat. 52. 13. N.

TREGONY, a borough in Cornwall, with a market on Saturday. It is much decayed, has no church, and only 150 houſes poorly built, but is governed by a mayor, and ſends two members to parliament. It is ſeated on a creek by Falmouth haven, 41 miles W. by S. of Plymouth, and 245 of London. Long. 4. 43. W. Lat. 50. 16. N.

TREGUIER, a ſea-port of France, in the department of

the North Coaſt, ſeated near the Engliſh Channel, 22 miles N.W. of St. Brieux. Long. 3. 10. W. Lat. 48. 47. N.

TREILEBURG, a ſea-port of Sweden, in the province of Schonen, ſeated on the Baltic, 30 miles S.E. of Copenhagen. Long. 13. 26. E. Lat. 55 26 N.

TREMESEN, or TLEMSEN, a province of the kingdom of Algiers, 370 miles long and 125 broad: bounded on the N. by the Mediterranean, on the E. by the province of Africa, on the S. by the deſert of Zahara, and on the W. by the kingdom of Fez. It is dry, barren, and mountainous, except on the N. ſide, where there are plains abounding in corn, fruits, and paſtures. The capital, of the ſame name, is ſurrounded by ſtrong walls, and inhabited by poor Arabs, Moors, and Jews. Long. 1. 29. W. Lat. 34. 40. N.

TREMITI, three iſlands of Italy, in the gulf of Venice, 15 miles from the coaſt of Naples. They are called Capraria, St. Nicolo, and St. Domino.

TREMOUILLE, a town of France, in the department of Vienne, ſeated on the Bennaile, 23 miles E. by S. of Poitiers. Long. 1. 10. E. Lat. 46. 29. N.

TREMP, a town of Spain, in Catalonia, ſeated on the river Noguera Pallareſa, 85 miles N.W. of Barcelona.

TREPTOW, a town of Upper Saxony, in Pruſſian Pomerania. It has a manufacture of ſtockings and woollen ſtuffs, and is ſeated on the Rega, near its mouth, in the Baltic, 43 miles N.E of Stetin. Long. 15. 19. E. Lat. 54. 10. N.

TREPTOW, a town of Upper Saxony, in Anterior Pomerania, 50 miles S. of Stralſund, and 50 W.N.W. of Stetin. Long. 13. 12. E. Lat. 53. 39. N.

TRESEN, or TROSA, a ſea-port of Sweden, in Sudermania, ſeated on the Baltic, 35 miles S.W. of Stockholm. Long. 17. 29. E. Lat. 53. 0. N.

TRETHIMROW, a ſtrong town of Poland, in Volhinia, ſeated on the Dnieſter, 45 miles below Kiof.

TREUCENBRIETZEN, a town of Upper Saxony, in the middle marche of Brandenburg, 20 miles S. of Brandenburg, and 34 S.W. of Berlin. Long. 12. 43. E. Lat. 52. 5. N.

TREVI, a town of Italy, in Umbria, 23 miles S.E. of Perugia. Long. 11. 51. E. Lat. 42. 54. N.

TREVIGLIO, a town of Italy, in the duchy of Milan, 17 miles E.N.E. of Milan. Long. 9. 28. E. Lat. 45. 35. N.

TREVIGO, a town of Naples, in Principato Ulteriore, with a biſhop's ſee, 23 miles E. of Benevento. Long. 15. 20. E. Lat. 42. 6. N.

TREVINO, a ſtrong town of Spain, in Biſcay, with a citadel, ſeated on a hill, near the river Aguda, 10 miles S.W. of Vittoria. Long. 3. 4. W. Lat. 42. 48. N.

TREVISANO, a marquiſate of Italy, in the republic of Venice; bounded on the E. by Friuli and the gulf of Venice, on the S. by that gulf, the Dogado, and the Paduano, on the N. by the Feltrino and the Bellunefe, and on the W. by the Vicentino. The ſoil is fertile, and produces corn, wine, and wood: and they export cattle, ſilk, and woollen cloth. Treviſo is the capital.

TRIEST, a ſtrong ſea-port of Germany, in Carniola, with a biſhop's ſee. The harbour is ſpacious, but not good; being open to the W. and S.W. winds. The inhabitants have a good trade in ſalt, oil, almonds, iron, &c. brought from Laubach; and they make good wines. It is ſeated on the ſide of a hill, on the gulph of Venice, eight miles N. of Capo d'Iſtria, and 80 N.E. of Venice. Long. 14. 4. E. Lat. 45. 56. N.

TRIM, the county-town of E. Meath, in Ireland, ſeated on the Boyne, 23 miles N.W. of Dublin.

TRINCOMALE, a town on the E. ſide of the iſland of Ceylon, with a harbour, reckoned the fineſt in the Eaſt Indies. It was taken from the Dutch, by the Engliſh, in January, 1782; retaken by the French in Auguſt following; reſtored to the Dutch by the peace of 1783; and again taken by the Engliſh in Auguſt, 1795. It is ſeated on a gulf of the ſame name, 100 miles N.E of Candy. Long. 81. 52. E. Lat. 8. 45 N.

TRING, a town in Hertfordſhire, with a market on Friday, 22 miles W. of Hertford, and 31 W.N.W. of London. Long. 0. 36. W. Lat. 51. 46. N.

TRINIDAD, a ſea-port of New Spain, in the audience of Guatimala, ſeated on the Pacific Ocean. It is an open town, but very important, there being no other harbour on this coaſt. A mile and a half hence is a place which the Spaniards call one of the Mouths of Hell; becauſe it is continually covered by a thick ſmoke, and emits flames from time to time. It is 70 miles S.E. of Guatimala. Long. 89. 30. W. Lat. 12. 50. N.

TRINIDAD, a town of New Granada, ſeated on the Rio de la Madalena, 58 miles N.W. of St. Fé de Bogota. Long. 73. 45. W. Lat. 4. 45. N.

TRINITY, or LA TRINITE, a ſea-port of Martinico. The harbour is ſpacious and ſafe, and the town carries on a conſiderable trade. Long. 61. 8. W. Lat. 14. 53. N.

TRINO, a fortified town of Italy, in Montferrat, ſubject to the King of Sardinia. It was taken, in 1704, by the French, who abandoned it in 1706. It is ſeated near the Po, eight miles N.W. of Caſal, and 35 N.E. of Turin. Long. 8. 30. E. Lat. 45. 26. N.

TRINOMALY, a town of Hindooſtan, in the Carnatic, near which the troops of Hyder Ally were defeated by the Britiſh under Colonel Smith in 1768. It is 45 miles S.S.W. of Arcot, and 52 W.N.W. of Pondicherry. Long. 78. 35. E. Lat. 12. 2. N.

TRIST, a ſmall uninhabited iſland of New Spain, on the coaſt of Tabaſco, in the bay of Campeachy, ſeparated by a narrow channel, on the E. from the iſle of Port Royal. Long. of the E. point 92. 45. W. Lat. 18. 0. N.

TRISTAN D'ACUNHA, an iſland in the South Atlantic Ocean, 15 miles in circumference. The land is extremely high, and riſes gradually toward the centre of the iſland (where there is a lofty conical mountain) in ridges covered with trees of a moderate ſize and height. The coaſt is frequented by ſea-lions, ſeals, penguins, and albatroſſes. Long. 11. 43. W. Lat. 37. 8. S.

TRITCHINOPOLY, a ſtrong town of Hindooſtan, in the Carnatic, 208 miles S.S.W. of Madras. Long. 78. 46. E. Lat. 10. 49. N.

TRIVENTO, a town of Naples, in Moliſe, with a biſhop's ſee, ſeated on a hill, near the river Trigno, or Trino, 15 miles N. of Bogano, and 62 E. of Naples. Long. 15. 37. E. Lat. 40. 50. N.

TROCHTELFINGEN, an imperial town of Suabia, 16 miles N.W. of Buchau, and 29 S. of Stutgard. Long. 9. 7. E. Lat. 48. 18. N.

TROGEN, a town of Switzerland, and the chief place of the Proteſtant part of the canton of Appunzell. It is celebrated for its manufacture of cloth. Near it is a mineral ſpring containing copper, ſulphur, and alum, uſed externally for ſeveral complaints. It is ſeven miles N. of Appenzell, and ſeven S.E. of St. Gall.

TROJA, a fortified town of Naples, in Capitanata, with a biſhop's ſee, immediately under the pope. It is ſeated at the foot of the Apennines, on the river Chilaro, 32 miles N.E. of Benevento, and 60 N.W. of Naples. Long. 15. 15. E. Lat. 42. 21. N.

TROIS RIVIERES, a town of Upper Canada, on the river St. Lawrence, 55 miles S.W. of Quebec. Long. 71. 20. W. Lat. 46. 35. N.

TROKI, a town of Lithuania, capital of a palatinate of the ſame name. It is ſeated among moraſſes, 15 miles W. of Wilna, and 85 N.N.E. of Grodno. Long. 25. 13. E. Lat. 54. 38. N.

TRON, St. a town of Germany, in the biſhopric of Liege, with a famous Benedictine abbey, 21 miles W.N.W. of Liege. Long. 5. 22. E. Lat. 50. 48. N.

TROPEA, a populous town of Naples, in Calabria Ulteriore, with a biſhop's ſee. It was half ruined by an earthquake in 1638, and is ſeated on the top of a rock, on the E. coaſt, 10 miles N.W. of Nicotera, and 45 N. by E. of Reggio. Long. 16. 24. E. Lat. 38. 42. N.

TROPES, St. a ſea-port of France, in the department of Var, with a citadel. It is ſeated on the bay of Grimauld, in the Mediterranean, 12 miles S.W. of Frejus, and 58 E. of Marſeilles. Long. 6. 44. E. Lat. 43. 16. N.

TROPPAU, a ſtrong and conſiderable town of Germany, in Upper Sileſia, capital of a duchy of the ſame name, with an ancient caſtle. It was taken by the Pruſſians in 1741 and 1756, but reſtored to the houſe of Auſtria by a treaty ſubſequent to each capture. It is ſeated in a pleaſant plain, on the rivers Oppa and Mohra, 40 miles N. by E. of Olmutz, and 72 S. by E. of Breſlaw. Long. 17. 40. E. Lat. 50. 1. N.

TROWBRIDGE, a town in Wiltſhire, with a market on Saturday. The inhabitants are principally clothiers, who make ſuperfine broad-cloth and kerſeymere, in a great degree by machinery. It is ſeated on a hill, 23 miles S.W. of Marlborough, and 98 W. of London. Long. 2. 6. W. Lat. 51. 19. N.

TROYES, a conſiderable city of France, in the department of Aube, with a biſhop's ſee. It is ſurrounded by good walls, but almoſt all the houſes are of wood, and good water is wanting. Among the objects of curioſity are St. Stephen's, the principal church; the public library of the late Cordeliers; and the caſtle in which the ancient counts of Champagne reſided. Its commerce, once very flouriſhing, now conſiſts only in ſome linens, dimities, fuſtians, wax-chandlery, candles, and wine. It is ſeated on the Seine, 30 miles E.N.E. of Sens, and 90 E.S.E. of Paris. Long. 4. 10. E. Lat. 48. 13. N.

TRUGILLO, a town of Terra Firma, in Venezuela, 120 miles S. of the lake Maracaybo. Long. 7. 40. W. Lat. 9. 46. N.

TRUNS, a town of the country of the Griſons, where the independence of the Grey League was firſt ratified, and an alliance concluded between the chiefs and communities. It is ſeated on the Rhine, ſeven miles W. of Ilantz.

TRURO, a borough in Cornwall, with a market on Wedneſday and Saturday. It has the benefit of the coinage of tin, and its chief buſineſs is in ſhipping tin and copper ore, found in abundance in its neighbourhood. Here, after the battle of Naſeby, the forces of Charles I. under Lord Hopeton, ſurrendered to General Fairfax. Truro is ſeated in a vale, between the rivers Kenwyn and St. Allen, and at the very head of Falmouth Haven, 10 miles N. of Falmouth, and 257 W. by S. of London. Long. 4. 55. W. Lat. 50. 16. N.

TRUXILLO, a conſiderable town of Spain, in Eſtremadura, ſeated amoung mountains, on the ſide of a hill, at the top of which is a ſtrong citadel. It is the birth-place of the noted Francis Pizarro, and ſituate near the river Almont, 65 miles S.W. of Toledo, and 117 S.E. of Madrid. Long. 5. 23. W. Lat. 39. 6. N.

TRUXILLO, a rich commercial ſea-port of Peru, in the audience of Lima, built by Francis Pizarro, in 1553. In its territory are above 50,000 native Americans, who are tributary to Spain. It is ſeated in a fertile country, on a ſmall river, near the Pacific Ocean, 300 miles N.W. of Lima. Long. 78. 35. W. Lat. 8. 1. S.

TRUXILLO, a ſtrong ſea-port of New Spain, in the province of Honduras, ſeated on a gulf of the ſame name, between two rivers, and ſurrounded by thick groves. Long. 85. 50. W. Lat. 16. 20. N.

TRUXILLO, or NUESTRA SENORA DE LA PAZ, a town of Terra Firma, in Venezuela, 220 miles S. of Maracaybo. Long. 69. 15. W. Lat. 9. 21. N.

TSCHOFA, a town of Upper Saxony, in the circle of Erzeburg, celebrated for its blue manufactures, ſeven miles S.E. of Chemnitz.

TSCHUTSKI, a country in the E. extremity of Aſia, oppoſite the N.W. of America, bounded by the Anadir on the S. The attention of the natives is confined chiefly to their deer, with which their country abounds. They are a well-made, courageous, warlike race, and are formidable neighbours to the Koriacs, who often experience their depredations. The Ruſſians have long endeavoured to bring them under their dominion; and though they have loſt a great number of men, in their different expeditions to accompliſh this purpoſe, they have never yet been able to effect it.

TSI NAN-FOU, a celebrated city of China, the capital of Chang-tong. It was once the reſidence of a long ſeries of kings, whoſe tombs, riſing on the neighbouring mountains, afford a beautiful proſpect. In its diſtrict are four cities of the ſecond and 26 of the third claſs. It is ſeated S. of the river Tſi or Tſing-ho, 160 miles S. by E. of Pekin. Long. 117. 25. E. Lat. 36. 30. N.

TSI-NING-TCHEOU, a city of China, in the province of Chang-tong, and diſtrict of Yen-tcheou-fou. From its ſituation on the grand canal, it is little inferior to the capital of the province, either in extent, population, riches, or commerce.

TSONG-MING, an iſland of China, on the coaſt of the province of Kiang-nan, to which it belongs, and from which it is ſeparated by an arm of the ſea, 13 miles broad. It is 50 miles long and 13 broad. It was formerly a ſandy deſert, to which criminals were baniſhed: thoſe that firſt landed on it began to till the ground, that they might not periſh with hunger; ſome poor Chineſe families emigrated thither afterward; and, in leſs than ten years, the iſland was peopled and cultivated. Its principal revenue ariſes from ſalt, which is made in ſuch abundance that it can ſupply moſt of the neighbouring countries. In this iſland is only one city of the third claſs; but villages are ſo numerous, that they ſeem to touch each other, and to form one continued city. The country is delightful, and interſected by many canals. Long. of its S.E. end 121. 55. E. Lat. 30. 15. N.

TSUEN-TCHEOU-FOU, a city of China, in the province of Fo-kien. In its diſtrict are ſeven cities of the third claſs; and its ſituation, extent, commerce, triumphal arches, temples, and well-paved ſtreets, ſecure it a diſtinguiſhed rank among the moſt beautiful cities in the empire.

TUBAN, one of the ſtrongeſt towns in Java, with a harbour, and a king of its own. It is ſeated on the N. coaſt of the iſland. Long. 111. 51. E. Lat. 6. 0. S.

TUBE (*Encycl.*). The following remarks on the phenomena of capillary tubes, by M. Milon, is taken from the *Journal de Phyſique*.

The phenomena of capillary tubes are as follow: 1ſt, If one of theſe tubes be plunged in a fluid, ſuch as water, alcohol, &c. the fluid riſes within it above its external level; and this

elevation is in direct proportion to the ſmallneſs of the tube. 2d, But if it be plunged in mercury, inſtead of riſing as above deſcribed, it is depreſſed; and this depreſſion is alſo in direct proportion to the ſmallneſs of the tube.

In times, when the ſciences were cultivated with leſs accuracy than at preſent, and when chemiſtry in particular was not enriched with that beautiful theory which now forms its baſis, philoſophers have long debated on the cauſe of this phenomenon now generally attributed to molecular attraction; the only point on which they differ being, that ſome admit both the phenomena of aſcenſion and thoſe of depreſſion, while others only admit thoſe of aſcenſion.

The celebrated Hauy, in the third volume of the firſt part of the *Séances de l'Ecole Normale*, p. 40, after having deſcribed the firſt of the above-mentioned phenomena, ſays, "Mercury on the contrary remains below the level, and its depreſſion is in inverſe proportion to the diameter of the tube. But theſe effects preſuppoſe that the tube is applied without preparation; for we ſhall preſently ſee, that by means of certain precautions, the elevation of mercury above the level may in like manner be obtained." And in ſupport of this aſſertion, he quotes, page 50 of the ſame volume, an experiment made at Metz, by Citizen Caſbois, from which it appears, that the depreſſion of the mercury ariſes merely from the moiſture contained in the mercury and the tubes employed; which moiſture, interpoſing itſelf between the mercury and the glaſs, neutralizes the attraction which the glaſs may have for that fluid; and that, on removing this moiſture, mercury is governed by the general law above ſtated, and riſes in capillary tubes in the ſame manner as other fluids.

On the other hand, Citizen Libes, in his new and excellent *Traité élémentaire de Phyſique*, vol. II. page 23, &c. explains the depreſſion of mercury by obſervations to the following effect: "That although the glaſs may have ſome attraction for the mercury (a fact, which he proves, by a very ſimple experiment), the mutual attraction of the molecules of this fluid for each other is more conſiderable." This is proved by the following experiment: if a globule of mercury adhering to a plate of glaſs be preſented to a maſs of that metal, the globule abandons the glaſs and unites with the mercury. Hence he draws ſeveral very juſt inferences.

This contrariety of opinions muſt neceſſarily give riſe to doubts, which it is important to clear up. The following is the proceſs which has contributed to fix the opinion of M. Milon on this ſubject.

"I firſt," ſays he, "made the ordinary experiment with pure mercury, when the fluid was as uſual depreſſed. I then poured the mercury into a ſmall long-necked matraſs, and expoſed it to the fire of a ſimple furnace by means of a ſand bath. I placed this apparatus out of a window, which I ſhut, in order to obſerve what paſſed without expoſing myſelf to the dangerous influence of the mercurial vapour. After a while, the mercury began to boil, and then becoming volatile, it collected about the ſides of the matraſs in ſmall drops, which fell down again in proportion as their weight increaſed. This continued about a quarter of an hour, after which I thought I might conſider the mercury as deprived of all moiſture. I then heated to a white heat the capillary tubes I intended to employ, and having only allowed time for theſe as well as the mercury to return to the temperature of the place where I performed the experiment, I plunged them in the mercury thus deprived of its moiſture, and obſerved the ſame depreſſion as in my former experiment.

"To aſcertain that the depreſſion of the mercury did not ariſe from the moiſture that might remain in the tubes, notwithſtanding the precautions I had taken, I placed two of theſe tubes perpendicularly in the mercury, and, approximating them to each other, I perceived the ſame reſult as before; for the nearer they approached, the more was the mercury depreſſed between them.

"It may be replied, perhaps, that the mercury had already attracted the humidity of the air. But I would anſwer, 1ſt, That the weather was then very dry: a circumſtance by no means indifferent. 2d, That although the attraction of mercury for a certain portion of moiſture may be conſiderable, it is not ſudden; and that its union with ſurrounding water only takes place after a conſiderable interval of time, as, for inſtance, eight or ten hours, and that I was careful to perform the experiment with great diſpatch.

"Hence I think I am authoriſed to believe, that the depreſſion of mercury is conſtant, that the moiſture of the mercury makes no alteration in this phenomenon which is peculiar to it; and that, if it roſe above the level in the experiment of Citizen Caſbois, which, though very different from mine as to the proceſs purſued, ought to lead to the ſame reſult, the ſucceſs of that experiment certainly depends on peculiar circumſtances, which it would be well to examine: for, if the phenomenon of aſcenſion took place with mercury when well purified from water, it would follow, that it has a ſtronger affinity to glaſs than to itſelf, which is contrary to experience."

TUBINGEN, a fortified town of Suabia, in the duchy of Wirtemburg, with a univerſity, and a caſtle. Here is a large houſe called New Bau, where a certain number of ſtudents in law are lodged and boarded gratis; and in the town-houſe is a very curious clock. It is ſeated on the Neckar, in a country abounding in corn and wine, 20 miles S. of Stutgard, and 50 E. by S. of Straſburg. Long. 9. 4. E. Lat. 48. 30. N.

TUCUYO, a town of Terra Firma, in Venezuela, and in a valley of the ſame name. A river runs through the middle of the valley, and the ſoil abounds in ſugar-canes, cotton, and all the neceſſaries of life. Long. 69. 2. W. Lat. 7. 31. N.

TUDDINGTON, a town in Bedfordſhire, with a market on Saturday, five miles N. of Dunſtable, and 38 N.N.W. of London. Long. 0. 32. W. Lat. 52. 0 N.

TUDELA, a conſiderable town of Spain, in Navarre, with a caſtle. It is ſeated in a country that produces good wine, on the river Ebro, over which is a handſome bridge, 45 miles N.W. of Saragoſſa, and 140 N.E. of Madrid. Long. 1. 10. W. Lat. 42. 9. N.

TVER, a government of Ruſſia, once an independent principality, united to the empire by Ivan Baſilowitz, in 1490, and compriſed in the government of Novogorod, from which it has been ſeparated. The population has increaſed to a ſurpriſing degree; a circumſtance evincing the advantage ariſing from the new code of laws of Catharine II. It was the firſt province newly-modelled according to that code; and it has experienced the beneficial effects of theſe excellent regulations. The country produces abundantly all kinds of corn and vegetables. Its foreſts yield the moſt valuable timber. The quadrupeds, and the feathered race, are the ſame as in all the N. of Europe; and, beſide the fiſhes common to moſt lakes and rivers, there is a fiſh peculiar to the waters of theſe northern regions, called the ſterlet, the *acipenſer ruthenus* of Linnæus, and is a ſpecies of ſturgeon, highly eſteemed for the flavour of its fleſh, and for its roe, of which the fineſt caviare is made.

TVER, a commercial city of Ruſſia, capital of a government of the ſame name, ſeated at the confluence of the Tverza and Volga, along which is conveyed all the merchandiſe ſent by water from Siberia, and the S. provinces, toward Peterſburgh. It is divided into the old and new town: the former,

ſituate on the oppoſite ſide of the Volga, conſiſts almoſt entirely of wooden cottages: the latter having been deſtroyed by a dreadful conflagration, in 1763, has riſen with luſtre from its aſhes. Catherine II. ordered a regular and beautiful plan of a new town to be made. At her own expence, ſhe raiſed the governor's houſe, the epiſcopal palace, the courts of juſtice, the exchange, the priſon, and ſome other public edifices; and to every perſon who engaged to build a houſe of brick, ſhe offered a loan of 300l. for a year, without intereſt. The ſtreets are broad and long; extending in ſtraight lines, from an octagon in the centre; and the plan, when completed, is to compriſe two octagons. The houſes are of brick; ſtuccoed white, and make a magnificent appearance. Here is an eccleſiaſtical ſeminary, which admits 600 ſtudents. In 1796 the empreſs founded a ſchool for the inſtruction of 200 burghers' children; and, in 1779, an academy for the education of 120 of the young nobility of the province. Tver is 99 miles N.N.W. of Moſcow. Long. 36. 5. E. Lat. 56. 7. N.

TUGGURT, a country of Barbary, lying S. of Algiers, and W. of Biledulgerid. The capital, of the ſame name, is 310 miles S.S.E. of Algiers. Long. 5. 10. E. Lat. 33. 0. N.

TULA, a government of Ruſſia, formerly a province of the government of Moſcow. Its capital, Reſan, is ſeated on the Trubeſh, 118 miles S.E. of Moſcow. Long. 40. 45. E. Lat. 55. 25. N.

TULEBRAS, a town of Spain, in Navarre, ſituate on the Queios, ſeven miles W. of Tudela.

TULLAMORE, a town of Ireland, in King's County, ſituate on a river of the ſame name, 44 miles W.N.W. of Dublin.

TULLES, a commercial town of France, in the department of Correze, with a biſhop's ſee. The cathedral is famous for its ſteeple, which is very high and curious. It is ſeated at the confluence of the Borreze and Solane, partly on a mountain, and partly below it, in a country ſurrounded by mountains and precipices, 37 miles S.E. of Limoges, and 62 S.W. of Clermont. Long. 1. 42. E. Lat. 45. 23. N.

TULLOW, a town of Ireland, in the county of Carlow, eight miles E.S.E. of Carlow, and 38 S.S.W. of Dublin.

TULN, a town of Auſtria, near the Wienarwald, or wood of Vienna, with a biſhop's ſee. It is ſeated near the river Tuln, in a country abounding in corn and wine, 15 miles W. of Vienna. Long. 16. 6. E. Lat. 48. 14. N.

TULSK, a borough of Ireland, in the county of Roſcommon, nine miles N. of Roſcommon.

TUMBEZ, a town of Peru, in the audience of Quito, where the Spaniards firſt landed on their diſcovery of that country. It was then a place of ſome note, diſtinguiſhed by a ſtately temple, and a palace of the incas or ſovereigns of the country. It is ſeated on the Pacific Ocean, 270 miles S. by W. of Quito. Long. 79. 51. W. Lat. 3. 40. S.

TUMBREL, a machine employed chiefly in the county of Lincoln; for the purpoſe of giving food to ſheep, during the winter.

In the 4th vol. of the *Repertory of Arts*, &c. we meet with a deſcription of a contrivance which is equally ſimple and uſeful: we have, therefore, been induced to give a figure of it in Pl. 54.

It conſiſts of a circular cage or crib, which may be made of willow, oſiers, or ſimilar pliant bruſhwood. The whole is ten feet in circumference, being cloſely watled to the height of one foot, above which it is left open for the ſpace of about eighteen inches; when it is again wattled to the height of eight or nine inches; an opening, eighteen inches broad, being left at the top for the purpoſe of putting in turnips, or other provender. The ſtaves, forming the ſkeleton of the machine above deſcribed, are ten inches apart, ſo that twelve ſheep may feed at one time from each tumbrel.

Conſiderable advantages are derived from this method of feeding ſheep; as it greatly reduces the expence of provender, which is thus prevented from being ſoiled with dung, or trodden under foot. In ſuch a ſtate of ſeparation, the ſtronger animals cannot drive away the weaker ſheep; each being ſecured by the head, while they are eating. Further, the conſtruction of the tumbrel being attended with no difficulties, it may be readily procured, and be daily conveyed to any part of a farm: if proper care be taken, this utenſil may be preſerved in conſtant uſe, for eight or ten years.

TUMEL, a rapid river in Perthſhire, which, after exhibiting many beautiful cataracts, forms itſelf into a lake, called Loch Tumel, and then falls into the Garry.

TUMEN, a town of Siberia, in the province of Tobolſk, 125 miles W. of Tobolſk,

TUMPACH, a town of Bavaria, in the Upper Palatinate, 17 miles N.N.W. of Amberg, and 32 E.N.E. of Nuremburg. Long. 11. 55. E. Lat. 49. 40. N.

TUNGINSKOI, a town of Ruſſia, ſituate on the Irkut, 80 miles S.W. of Irkutſk. Long. 103. 15. E. Lat. 51. 18. N.

TUNJA, a town of New Granada, capital of a diſtrict of the ſame name. It is ſeated on a high mountain, in a country where there are gold and emeralds, 30 miles S.W. of Truxillo. Long. 73. 5. W. Lat. 5. 0. N.

TURA, a town of Germany, in the county of Tyrol, 24 miles S.W. of Trent.

TURKHEIM, a town of France, in the department of Upper Rhine, remarkable for a victory gained here by Turenne, over the Auſtrians, in 1675. It is ſeated near the river Colmar, one mile N.W. of Colmar.

TURCOMANS, TEREKEMENS, or TRUKHMENIANS, a people of Aſia, who ſpeak the Turkiſh dialect of the Tartar language, and inhabit the eaſtern ſlope of Mount Caucaſus, the coaſt of the Caſpian about Boinak, Derbent, and Uteniſh, and the ſouthern promontories between the ſea and the river Alazan. Some of them are ſubject to the khan of Cuba; others to a chief who reſides at Nukhu; and a third to the ſovereign of Georgia.

TURENNE, a town of France, in the department of Correze, with a caſtle, 42 miles S. of Limoges. Long. 1. 30. E. Lat. 45. 9. N.

TURINGE, a town of Sweden, in the province of Sudermanland, 24 miles W.S.W. of Stockholm. Long. 17. 54. E. Lat. 59. 10. N.

TURINSK, a town of Ruſſia, in the government of Tobolſk, 144 miles W. of Tobolſk. Long. 63. 44. E. Lat. 58. 5. N.

TURKIN, a town of Ruſſia, in the government of Caucaſus, ſituate on the Caſpian Sea, 140 miles S. of Aſtracan. Long. 47. 15. E. Lat. 44. 15. N.

TURNDORF, a town of Bavaria, in the Upper Palatinate, 21 miles N.N.W. of Amberg, and 32 N.E. of Nuremburg. Long. 11. 55. E. Lat. 49. 42. N.

TURNHOUT, a town of Auſtrian Brabant. Here, in 1596, Prince Maurice of Naſſau, at the head of only 800 cavalry, totally defeated the Spaniards, conſiſting of 6000 horſe. It is 24 miles N.E. of Antwerp. Long. 5. 0. E. Lat. 51. 22. N.

TURNIP-DRILL, an agricultural implement, by means of which turnip-ſeed may be ſown after the manner of the drill culture. The following account of ſome experiments to determine the comparative advantage of the drill or broadcaſt method in the cultivation of turnips, and deſcription of a new invented drill, by the Rev. T. C. Munnings, of Eaſt Dereham, in Norfolk, is publiſhed in the Tranſactions of the

Society for the Encouragement of Arts, Manufactures, and Commerce, who conferred on the author their ſilver medal and ten guineas.

" Reſiding in a country," ſays Mr. Munnings, " in which the turnip-crop is very deſervedly conſidered as the baſis of its huſbandry, I have, for ſome time, directed my attention, and made ſome experiments, relative to the improvement of the cultivation of that valuable vegetable; conceiving that in whatever degree I could more advantageouſly produce turnips, or when produced could provide for a more economical expenditure of the crop, I might fairly be regarded as in the ſame degree promoting the general and laſting intereſts of the community. With this view I have made repeated trials, to aſcertain the comparative advantage of the drill or broad-caſt method in the cultivation of turnips; and as the reſult of an experiment which I made laſt year has not only been ſatisfactory to myſelf, but alſo to all who have witneſſed the effects of it, I am induced to offer myſelf a candidate for the premium held out by the ſociety.

" But, before I proceed to a detail of my experiments, I think it right to obſerve, that I have, *by way of preparation for turnips*, given my land a *deeper* ploughing in the winter than is cuſtomary with the neighbouring farmers. For this purpoſe, I made uſe of a Scotch foot-plough; and I think that by *ſuch* ploughing I bring land into action, which has been for ſome time *dormant*; and which is therefore better ſuited to the turnip than land which has been exhauſted by the production of other crops. In every other reſpect my previous management of my land correſponds with the common practice of my neighbours.

" My land being thus prepared, inſtead of ſowing the turnips *broad-caſt* in the uſual method, I invented a drill for this purpoſe, ſimple in its conſtruction, and of eaſy management. It conſiſts of a tin box, in the ſhape of a barrel, affixed to the axis of a wheel, about twenty-two inches in diameter, vertical with the ſame, and its revolutions dropping the ſeed through ſmall apertures in the middle of the barrel. The holes through which the ſeed falls are diſtant from the wheel about fourteen inches. (See Plate 53. figs. 1, and 2.)

" I began by having the tops of the different ridges ſet out with the common Norfolk *two-horſe plough*; and, when the ſame plough took up the furrow next to the top, I immediately followed with my drill, and dropped the ſeeds upon the freſh mould the inſtant it was turned up. I was then followed by a one-horſe plough, the over ſhot mould of which as quickly buried the ſeeds. I was thus enabled to ſow my ſeeds as faſt as the land was ploughed, and to depoſit them in regular and ſtraight rows, at equal diſtances of about eighteen inches; after which I harrowed or rolled my land, in the ſame direction in which it was ploughed; and the conſequence has been, that my crop has grown as regularly as a gardener could plant cabbages. Nearly ſix acres of my field were thus drilled, and on the ſame day (in the third week of June) the remainder of the field, or ſomething more than three acres, was ſown broad-caſt, after the uſual practice of the country, and preciſely at the ſame time when the farmers around me were ſowing their lands in a ſimilar manner.

" In the courſe of my obſervations on the turnip-crop, I had frequently lamented that, when the crop was indeed abundant, the advantages derived from its expenditure were far from correſpondent, becauſe no effectual method has yet been adopted, to protect the turnips from the ſeverity of a winter's froſt. This, in the common method of *broad-caſt* ſowing, I conſidered as impracticable, and therefore reſolved to attempt it in my drilled crop; and in that crop I have been enabled by pulling up the alternate rows to leave regular rows about a yard apart, and have had the land ſo ploughed, with a one-horſe plough, as to mould up the turnips, on each ſide, moſt effectually, and to aſſume the appearance of what is called *two-furrow work*. I have therefore half my crop ſo buried, as to leſſen very materially, if not abſolutely to prevent, the danger ariſing from the frequently fatal effects of a cutting froſt.

" I am truly happy that the mildneſs of the preſent ſeaſon prevents my ſpeaking with greater confidence, as to the ſucceſs of this part of my experiment, though the very complete manner in which the turnips are now buried, leaves me without much doubt but that it fully anſwers my expectations. Many very experienced farmers, who have witneſſed my proceedings, honour them with their entire approbation, and look upon my method of protecting my plants as a grand diſcovery in the management of the turnip-crop. I am certainly aware, that I am not the firſt perſon who has drilled turnips; but I know of no one who has before done it in ſo ſimple a manner—in a manner attended with leſs expence—in a manner admitting of ſo much eaſe, in future operations, for the defence of the plants—or in a manner more likely to be clearly underſtood by all who may be deſirous of making ſimilar experiments. Of the ſuperior produce of the drilled crop over the broad-caſt, on equal quantities of land, every experiment that I have made has moſt powerfully convinced me; and I have the univerſal opinion of all who have viewed my preſent crop, to confirm my ſentiments. It has been obſerved by Mr. Kent, in his General View of the Agriculture of the County of Norfolk, that the ground does not reliſh turnips ſo well as formerly: and he ſuppoſes (in my opinion, with much juſtice), that the preſent comparative ignorance of the uſe of turnips amongſt the Hanoverians, has ariſen from the ground in that country being injured by repeated crops of them. It is certainly a very obvious truth, that turnips will grow in the greateſt abundance on land not accuſtomed to bear them: but it has frequently occurred to me, that one material reaſon of failure, in a crop of turnips ſown broad-caſt, has ariſen from the ſeed not being ſown ſoon enough after the plough; as I have, in numberleſs inſtances, taken notice of turnips vegetating very partially, when only a few furrows have been ploughed between one ſowing and another; and, in ſuch caſes, I have always thought that, if the ſeed could have been depoſited immediately after the plough, it would not have failed to grow uniformly. I truſt it will be found that my experiment powerfully tends to confirm this concluſion.

" In a part of my field, from which the alternate rows have not yet been taken, I have, with very great effect, uſed the hoe-plough, and have not only cut and deſtroyed whatever weeds were growing between the rows, but have alſo partially moulded up the apples of the turnips; and I am induced to believe that even ſo partial a moulding up, executed in the autumnal months, would have a ſtrong tendency to protect the plants, to facilitate a more complete moulding-up when part of the crop is removed, and to admit the full benefit reſulting from the expoſure of the earth to a winter's froſt. I am perſuaded that ſuch uſe of the hoe-plough ſerves likewiſe to retain neceſſary moiſture, and to produce future pulveriſation with much leſs than common labour. But I have more particularly noticed the very ſuperior verdure of the moulded-up plants, compared with what are not ſo, and with the larger and almoſt uninjured

tops of the former, in compariſon with the latter; for, during ſome late froſts, the effects of which were very perceptible in the expoſed plants, thoſe moulded up have continued to grow, and to branch luxuriantly, with all the vigour of vernal vegetation. I attribute this to the bulbs of ſuch plants not having their juices ſtagnated by the keenneſs of the weather.

"As I am anxious to have this ſubject fully ſubmitted to the Society for the Encouragement of Arts, &c. allow me to ſay, that I conſider my drill for turnips as much ſuperior to any other, from the ſingle circumſtance of its depoſiting the ſeed ſo *inſtantly* after the plough, as entirely to preſerve the good effects of the firſt evaporation; and that I conceive ſuch evaporation produces the uniform vegetation of ſuch minute ſeeds. So remarkably uniform was the vegetation laſt year, that in the ſix acres of my drilled plants, I believe there was not a deficiency of ſix ſquare yards; though on three acres of broad-caſt, before rain fell, not one half, perhaps not one-third part of the ſeeds vegetated. I am indeed fully perſuaded that the drill method, in the cultivation of turnips, will in all ſeaſons be ſuperior to the broad-caſt; but that the very great and ſtriking difference between the two methods will moſt effectually be perceived in a ſeaſon of uncommon drought; and it is for this reaſon that I am ſolicitous to procure for the drill-method an extenſive and impartial trial, that agriculturiſts in general may be ſatisfactorily convinced of its important advantages.

"Of the following advantages attending my method of drilling turnips, I am ſatisfactorily perſuaded:—in a dry time, as was the caſe laſt ſeaſon, the ſeed, by being immediately dropped upon the freſh turned up mould, has conſequently an increaſed probability of ſucceſsful vegetation. By being buried ſomewhat deeper than in the broad-caſt method, it receives more moiſture in its infant ſtate of vegetation; and by having, if I may ſo ſay, new hold of the earth, is leſs liable to injury, from the effects of continued drought. In confirmation of theſe perſuaſions I muſt ſtate, that turnips ſown on the ſame day, in the ſame field, broad-caſt, on land in every other reſpect treated previouſly in the ſame way, have not produced one half or one third of a crop, and that the ſame has been very generally the caſe with turnips ſown broad-caſt; but that every row of my drilled plants has ſucceeded to admiration. The advantages in the ſubſequent management of the crop I have already ſpoken of. If therefore it be deſirable to grow turnips to advantage, if it be deſirable to protect them when grown, and by ſuch protection be enabled to give ſtock, ſound, uninjured turnips, inſtead of what may be more than half-rotten, or froſt nipt almoſt to putrefaction; I would willingly flatter myſelf that the Society for the Encouragement of Arts, &c. will be convinced that, as far as any concluſion can be drawn from a ſingle experiment in favour of one method rather than another, I have, beyond diſpute, eſtabliſhed the ſuperiority of the drill-method of cultivating turnips.

"Of my previous experiments I am not able to furniſh the Society with any ſatisfactory particulars; yet I would by no means omit to declare, that each has been the mean of perſuading me, that the broad-caſt method of cultivating turnips can never be ſo advantageous as that of the drill, when properly managed; and I have much ſatisfaction in aſſuring the Society, that, from the extraordinary ſucceſs of my laſt year's experiment, many of my neighbours have expreſſed a reſolution to drill, and to protect their turnips for the time to come.

"In addition to the advantages I have before ſtated, that my drilled plants growing in ſuch ſtraight and equidiſtant rows, any noxious weeds, ſuch as charlock, thiſtles, or redweed, may be deſtroyed in the infant ſtate of the plants, by hoeing the intermediate ſpaces; that when the alternate rows are removed, and the land ploughed for the defence of the remaining rows, it receives moſt of the benefits of a winter's froſt, and is very much forwarded in preparation for the barley-crop; and that, above all, from my complete ſucceſs, I have rouſed a ſpirit of emulation in the cultivation of turnips, among the farmers of the county of Norfolk.

"With regard to my turnips, it would be eaſy to multiply certificates, and be diffuſe in my obſervations, becauſe no agriculturiſt has viewed them without being ſurpriſed both at the abundance of the crop (conſidering the quality of my land), and at the very obvious ſimplicity of my management of it, from beginning to end. I ſhall only further obſerve, that it is now in my power to ſow my ſeed at equal diſtances of nine, eighteen, twenty-ſeven, thirty-ſix inches, or at any given diſtance of inches, of which nine are an aliquot part; and that I conſider this as no trifling convenience."

The following will explain the references to the figure in Plate 53. fig. 1. A is the wheel, with an iron rim. B, the tin barrel, or ſeed-box, fixed to the axis of the above wheel. C, the aperture by which the ſeed is introduced into the box:—this aperture is afterwards cloſed by a cover. D, a ſemicircular plate of tin, to prevent any dirt falling upon the ſeed-box. E E, the two handles of the machine.

Fig. 2. F repreſents the ſeed-box on a larger ſcale. G, the holes in the tin box, through which the ſeed falls upon the land. H, part of the axis of the wheel, to which the ſeed-box is fixed.

A drill machine for ſowing turnip-ſeed has alſo been invented by T. A. Knight, eſq. of Elton, near Ludlow. The following account of it appears in the Tranſactions of the Society for the Encouragement of Arts, &c. who voted Mr. Knight their ſilver medal.

"The ſmall inſtrument for ſowing turnips," ſays Mr. Knight, "which I have ſent to the Society, I have tried on ſeveral different ſoils, and think I can venture to aſſert, that it will ſow the ſeed, and cover it perfectly well, in any ſoil that is nearly in a proper ſtate to receive it. It is neceſſary either to harrow the ground acroſs, or to roll it, previouſly to the inſtrument being uſed, that the labourer may ſee the rows he has made; but I have always found the crop to ſucceed better after the roller than the harrow, though the ground has been very ſtrong.

"In Plate 53. A is the iron wheel, which, running on its edge, formed by two concave ſides, makes the groove into which the ſeeds fall. I have ſometimes uſed a wheel with ſtraight ſides; but I think that concave ſides, when well executed, are to be preferred in ſtrong ſoils, and indeed in any ſoil. B is a wheel, moving on the ſame axis with A, and turning the wheel C (which gives out the ſeed) by means of a ſtrap. I have ſeveral ſizes of the wheel B, in order to increaſe or diminiſh the rapidity of C; and conſequently to ſow more or leſs ſeed. D, the tube through which the ſeed paſſes, and falls into the channel made by the iron wheel. E, the feet of the inſtrument. F, ſix lengths of jack-chain; which I find cover the ſeed remarkably well. The chain is perhaps preferable to any kind of harrow, becauſe it can never become incumbered with looſe ſtraw, which is almoſt always found on, or cloſe to, the ſurface, when the ground has been manured; and the iron cutting-wheel has a ſimilar advantage over any kind of ſhare. G, the ſeed-box. H H, the handles of the machine.

" The labour of uſing the inſtrument is very ſmall. My workman uſually accompliſhes four ſtatute acres, or ſomething more, in a day: and one night, with the one I ſend, he ſowed an acre and a half after ſix o'clock in the evening. There are two holes before the axis of the great wheel, which point out the proper width of the intervals between the rows. I uſually place my rows at eighteen or twenty inches diſtance; and I wiſh my plants to ſtand at not more than ſix inches apart in the row; for I find that three ſmall turnips weigh about as much as one large turnip, are more ſolid, and I think more nutritious, and certainly are much leſs apt to ſuffer by unfavourable weather. The ground between the rows is, of courſe, worked with the hoe.

" The angle which forms the edge of the wheel A, muſt be made more or leſs acute; and the inſtrument more or leſs heavy, proportional to the ſtrength of the ſoil. I have ſometimes added weights of lead over the axis of the wheel, but it will rarely be found neceſſary. I have tried the inſtrument on different ſoils, and I think it will anſwer on any. A great advantage may be derived by ſowing turnips with it, at a time when horſes, now commonly uſed for the ſame purpoſes, are engaged in other employments. A few days are frequently of importance in ſowing turnips, which, by fortunate rains, have got a wonderful ſtart of thoſe which have been ſown a day or two later.

" Fig. 3, is a ſection, on a larger ſcale, of the ſeed-box G, in fig. 2. The wheel, marked C, is alſo the ſame as in that figure: it is fixed upon the axis of the cylinder I, which is pierced upon the ſurface with holes at K, for the ſeed. This cylinder turns round within a groove at the bottom of the box, and is ſo well fitted therein, that no ſeed falls from the box but what is delivered by the holes K. A ſmall bruſh, marked L, rubs againſt the cylinder, to clear out any ſeeds which may remain in the holes. M is a front-view of the wheel, exhibiting its edge.

" The ſeeds fall into the tube underneath the cylinder, and thence into the channel, made by the indenting rim of the iron wheel. The looſe chains which follow cover the ſeeds with earth, as before mentioned."

Both theſe drill machines are placed in the Society's repoſitory for the inſpection of the public. We cannot conclude this article without noticing the patent granted to Mr. Jackſon, of Eaſingwold, in the county of York, for a machine or drill for turnips, which is to be fixed to a plough-beam. The patent is dated Nov. 3, 1801. Mr. Jackſon declares his invention to be according to the following deſcription:

Fig. 1 (Plate 53.) conſiſts of a braſs plate or frame, wherein the braſs roller A is fixed with two caps and ſcrews at B, B. The braſs roller hath three, four, or more ſets of holes, conſiſting of different numbers, viz. from ſix to eighteen in each ſet or circumference.

Fig. 2 is a ſliding cover, whoſe inſide cloſely fits the roller A. The opening B moved over any of the different numbers of holes, and ſcrewed faſt by the two ſcrews A, A, in one revolution will diſcharge different numbers of ſeeds. The row of holes with ſix in it will ſow the ſeed at ſixteen inches diſtance from each other; and the row with eighteen holes in it will ſow the ſeed five inches diſtance from each other: but the holes may be varied in their numbers, at the will of a purchaſer. At C is a braſs ſcrew, hollowed at the lower end, and cemented, full of horſe-tail hair, and of the diameter of the aperture B, in the centre of fig. 2.

Fig. 3 is a ſection of fig. 2, with the ſeed-box upon it.

Fig. 4, A is a ſliding bar of wood, two feet long, two inches broad, and one inch and a half thick. B, is a caſt-iron or wood wheel, thirty-one inches diameter, and faſtened by a ſquare hole and nut upon the end of the iron axletree C, which axletree runs, and is fixed, to the ſliding-bar A, by the two collars at D, D. The axletree hath a ſquare hole in the end at E, where it receives the ſquare end of the arbor E, in fig. 1. F F F is the ſide view of the ſeed-box ſprout, and fixing to the end of the ſliding box, by means of the cock E, part of the plate or frame, as at D, in fig. 1, is ſcrewed, ſo as to be in a direct line with the axletree of the wheel B. G is a ſliding cap or box, through which the ſliding-bar A moves backwards and forwards from D to D, and may be fixed in any part between, to ſuit the breadth of the furrow intended to be ploughed, through the upper part of the ſame. The wood frame B, fig. 6, ſlides likewiſe to and fro, and may be fixed by the ſame ſcrew (H, fig. 4); by which motion the ſeed may be dropped either under the furrow or upon the ſurface of the ground.

Fig. 6, A, the ſtud to go through the plough-beam as near the counter-hole as convenient, on the left-hand ſide of the beam. The frame B, two feet ſix inches in length, and three inches ſquare, ſlides through the box or cap as at I, in fig. 4. At E, the wheels, axletree, and the arbor of the drill-roller, join and couple by means of a male and female ſquare, or an univerſal joint.

Fig. 7, A, the ſtud, as at A, fig. 6, to put through the plough-beam, as near the coulter-hole as convenient, on the right-hand ſide. The ſame frame B, fig. 6. The ſame drill F and wheel B as deſcribed in fig. 4.

Figs. 8, 8, is a frame with two arms and two bolts, as at A A. The upper part of the wheel's axletree goes through the arm and frame at B, and riſes and falls to ſuit the depth you plough, ſecured by the ſcrew C, and in ſome meaſure anſwers the purpoſe of a ſingle-wheel plough. The ſame wheel, and the ſame drill, as deſcribed above, upon each centre or contrate wheel, are fixed of equal ſizes; and a rolling-ſhaft D, with a nut upon each end to ſuit each wheel: and, by varying the numbers of the nuts upon the ſhafts, you vary the quantity of ſeed to be ſown. This drill may be uſed advantageouſly in ſowing of rape and other ſmall round ſeeds.

TURON, a town of Cochin-china, ſituate at the bottom of a bay of the ſame name. Long. 107. 30. E. Lat. 15. 15. N.

TURSI, a town of Naples, in Baſilicata, ſeated on the river Sino, eight miles from the gulf of Tarento, and 50 S.W. of Bari. Long. 16. 50. E. Lat. 40. 36. N.

TUSIS, a town and community of Switzerland, in the country of the Griſons, ſeated near the torrent Nolla, at the beginning of the valley of Tomliaſca, 16 miles S. by W. of Coire.

TUTBURY, a town in Staffordſhire, with a market on Tueſday. It had a large caſtle, which ſtood on an alabaſtar hill; ſeveral of the towers and a ſmall part of the wall ſtill remain. It is 15 miles E. of Stafford, and 134 N.E. of London. Long. 1. 40. W. Lat. 53. 0. N.

TUTACORIN, a town of Hindooſtan, in the Carnatic, oppoſite the iſland of Ceylon. Here the Dutch have a factory. It is 60 miles N.E. of Cape Comorin. Long. 76. 40. W. Lat. 8. 15. N.

TUTURA, a town of Ruſſia, in the government of Irkutſk, ſituate on the Lena, 160 miles N. of Irkutſk. Long. 105. 40. E. Lat. 54. 40. N.

TUXFORD, a town in Nottinghamſhire, with a market on Monday; ſeated in a clayey ſoil, 13 miles N.N.W. of Newark, and 137. N. by W. of London. Long. 0. 50. W. Lat. 53. 16. N.

TUY, a town of Spain, in Galicia, with a biſhop's ſee. It is ſurrounded by ſtrong walls and ramparts, and well furniſhed with artillery, being a frontier town toward Portugal. It is ſeated on the top of a mountain, near the river Minho, in a fertile and well cultivated country, 62 miles S. of Compoſtella, and 254 W. of Madrid. Long. 8. 12. W. Lat. 42. 4. N.

TUZLA, a town of Turkey in Aſia, in Caramania, ſituate at the weſtern extremity of a lake to which it gives name, 28 miles N. of Cogni. Long. 35. 55. E. Lat. 38. 20. N.

TYCOKZIN, a town of Poland, in Polachia, with a caſtle and a mint. It is ſeated on the Narew, 22 miles N.W. of Bielſk. Long. 23. 40. E. Lat. 53. 0. N.

TYNE, a river in Northumberland, formed of a branch from the county of Durham, and another from the hills on the borders of Scotland. Theſe uniting a little above Hexham, form a large river, which flows to Newcaſtle, and enters the German Ocean at Tinmouth.

Tyne, a river which riſes in the mountains in the S. of Haddingtonſhire, waters Haddington, and enters the German Ocean to the W. of Dunbar.

TYPE. See Stereotype, *Supp.*

TYRNAW, a large fortified town of Upper Hungary, in the palatinate of Trentſchin, 30 miles N.E. of Preſburg. Long. 17. 33. E. Lat. 48. 23. N.

TYSTED, a town of N. Jutland, in the territory of Alberg, with a citadel, ſeated on the gulf of Limford, 44 miles N.W. of Wiburg, and 46 W. of Alburg. Long. 8. 25. E. Lat. 56. 54. N.

TYVY, or Teivy, a river in Cardiganſhire, which iſſues from a lake on the E. ſide of the county, waters Tregannon and Llanbeder, and enters the bay of Cardigan, below the town of that name.

TZADURILLA, a town of Natolia Proper, near the river Sangar, or Aclu, 63 miles S E. of Iſnic. Long. 31. 8. E. Lat. 39. 0. N.

TZARITZYN, a town of Ruſſia, in the government of Saratof, ſeated on the Volga, 120 miles N.W. of Aſtracan. Long. 45. 25. E. Lat. 48. 0. N.

TZERNITZ, a town of Turkey in Europe, in Romania, near a river of the ſame name, 32 miles N.N.E. of Adrianople. Long. 26. 40. E. Lat. 42. 5. V.

TZIVILSK, a town of Ruſſia, in the government of Kaſan, 56 miles W. of Kaſan. Long. 47. 25. E. Lat. 55. 40. N.

V. U.

VAD

VAAST, St, a town of France, in the department of the Channel, five miles from Harfleur, and eight from Valogne.

VABRES, a town of France, in the department of Aveiron. Though an epiſcopal ſee before the revolution, it is little better than a village; but has ſome manufactures of ſerges, dimities, and cottons. It is ſeated at the confluence of two ſmall rivers that fall into the Tarn, 30 miles S.E. of Rodez, and 32 E. of Alby. Long. 2. 55. E. Lat. 43. 57. N.

VACHA, a town of Germany, in the landgravate of Heſſe-Caſſel, 40 miles S.E. of Caſſel. Long. 10. 12. E. Lat. 50. 55. N.

VACHE, an iſland of the Weſt Indies, off the S. coaſt of St. Domingo, oppoſite St. Louis. It was formerly a rendezvous of the bucaniers, who began a ſettlement here in 1673.

VADA, a town of Italy, in Tuſcany, ſeated on the Tuſcan Sea, 20 miles S. of Leghorn. Long. 10. 20. E. Lat. 43. 15. N.

VADAGARY, a town of the peninſula of Hindooſtan, in the province of Madura, 64 miles S.S.W. of Madura.

VADIN, a town of Turkey in Europe, in Baſſarabia, ſituate on the Danube, 32 miles W. of Nicopoli. Long. 25. 0. E. Lat. 44. 25. N.

VADO, a ſea-port of Italy, in the territory of Genoa, with a fort; taken by the French in 1795. It is three miles W. of Savona, and 24 S.W. of Genoa. Long. 8. 8. E. Lat. 44. 15. N.

VADSTEIN, a town of Sweden, in Eaſt Gothland, where the kings of Sweden had formerly a palace, now in ruins. It is ſeated on the E. ſide of the lake Wetter, near the river Motala, 32 miles W. of Nordkioping. Long. 15. 55. E. Lat. 58. 12. N.

VAL

VADUTZ, a town and caſtle of Suabia, in the principality of Lichtenſtein, 26 miles S. Lidau, and 34 S.S.E. of Conſtance. Long. 9. 22. E. Lat. 47. 7. N.

VAENA, a town of Spain, in Andaluſia, ſeated at the ſource of the Caſtro, 23 miles. S.E of Cordova. Long. 3. 50. W. Lat. 37. 40. N.

VAIHINGEN, a town of Suabia, in the duchy of Wurtemburg, ſeated on the Neckar, 34 miles S.W. of Hailbron. Long. 9. 3. E. Lat. 48. 58. N.

VAISON, a decayed town of France, in the department of Vaucluſe, with a biſhop's ſee. It was lately ſubject to the pope, and is ſeated on a mountain, on which there is a caſtle, near the river Oreze, and the ruins of ancient Vaiſon, which was one of the largeſt cities of the Gauls. It is 15 miles E.N.E. of orange, and 22 N.E. of Avignon. Long. 5. 6. E. Lat. 44. 15. N.

VAL DI DEMONA, a province in the N.E. angle of Sicily. It means the valley of demons, and is ſo called becauſe Mount Etna is ſituate in this province, which occaſioned ignorant and ſuperſtitious people, at the time of its fiery eruptions, to believe it was a chimney of hell. The capital is Meſſina.

VAL DI MAZARA, a province in the W. angle of Sicily, ſo called from the town of Mazara. It contains Palermo, the capital of the whole iſland.

VAL DI NOTO, a province at the S.E. extremity of Sicily; ſo called from the town of Noto, its capital.

VALCKOWAR, a town of Sclavonia, ſeated on the Walpo, near its confluence with the Danube, between Eſſeck and Peterwaradin, 70 miles N.W. of Belgrade. Long. 19. 51. E. Lat. 45. 55. N.

VALDAI, a town of Ruſſia, in the government of Novogorod, on the ſide of a lake of the ſame name. It con-

tains ſeveral brick buildings; and even the wooden houſes are more decorated than the generality of Ruſſian cottages. Its environs riſe into a variety of gentle eminences, and abound with beautiful lakes, ſprinkled with woody iſlands, and ſkirted by foreſts, corn-fields, and paſtures.

VALDASNES, a town of Portugal, in Tra los Montes, nine miles E.S.E. of Mirandola.

VALDEBURON, a town of Spain, in the province of Leon, 34 miles N.N.E. of Leon, 34 miles N.N.E. of Leon. Long. 4. 55. W. Lat. 43. 5. N.

VALDECONA, a town in Spain, in Catalonia, 15 miles S. of Tortoſa. Long. 0. 35. E. Lat. 11. 15. N.

VALDIGEM, a town of Portugal, in Beira, ſituate near the Duero, four miles N.E. of Lamego.

VALENCE, a city of France, in the department of Drome, with a biſhop's ſee, a citadel, and a ſchool of artillery. It is ſurrounded by good walls, and the greateſt part of the public places, and many private houſes, are adorned with fountains. Beſide the handſome cathedral, there are many other churches, as well as late convents, that are worthy of notice. It is ſeated on the Rhone, 30 miles N. by E. of Viviers, 335 S. by E. of Paris. Long. 4. 52. E. Lat. 44. 56. N.

VALENCE, a town of France, in the department of Lot and Garonne, ſituate on the Garonne, 12 miles S.E. of Agen.

VALENCA D'ALCANTARA, a conſiderable town of Spain, in Eſtremadura, with an old caſtle. It is ſurrounded by walls after the antique manner, flanked by ſome ſmall baſtions, and a few towers; is very ſtrong by ſituation, being built on a rock, near the river Savar, 20 miles S.W. of Alcantara, and 40 N. of Badajoz. Long. 6. 30. W. Lat. 39. 26. N.

VALENCEY, a town of France, in the department of Indre, with a caſtle, ſeated on the Nabon, 15 miles S. of Romorentin.

VALENZO-DO-MINHO, a fortified town of Portugal, in Entre-Minho-e-Douero, ſeated on an eminence, near the river Minho, three miles S. of Tuy. Long. 8. 11. W. Lat. 42. 2. N.

VALENTINE, a town of France, in the department of Upper Garonne, nine miles N.E. of St. Bertrand. Long. 0. 57. E. Lat. 43. 1. N.

VALENZA, or VALENTIA, a ſtrong town of Italy, in the Milaneſe, capital of the Lomaline, and ſubject to the King of Sardinia, to whom it was ceded in 1707. It has been often taken and retaken, and is ſeated on a mountain, near the river Po, 12 miles E. of Caſal, and 35 S.W. of Milan. Long. 8. 56. E. Lat. 44. 58. N.

VALESTRA, a town of Italy, in the duchy of Modena, 12 miles S.W. of Modena. Long. 10. 52. E. Lat. 44. 26. N.

VALETTE, a town of France, in the department of Charente, 10 miles S. of Angoulême. Long. 0. 15. E. Lat. 45. 30. N.

VEDENSKOI, a town of Ruſſia, in the government of Archangel, ſituate on the Vokſcha, 200 miles E.S.E. of Archangel. Long. 46. 44. E. Lat. 58. 45. N.

VEGA, a town of Spain, in the province of Aſturias, 84 miles N.W. of Oviedo. Long. 6. 5. W. Lat. 43. 45. N.

VEGLIA, an iſland in the gulf of Venice, on the coaſt of Dalmatia, with a biſhop's ſee, a good harbour, and a citadel. It is the moſt populous iſland on this coaſt, abounds in wine and ſilk, and has ſmall horſes in high eſteem. The only town, of the ſame name, is ſeated on the ſea, on a hill commanded by two mountains, 17 miles N.W. of Arbe, and 110 S.E. of Venice. Long. 14. 56. E. Lat. 45. 22. N.

VEGLIANA, a town of Piedmont, in the marquiſate of Suſa, ſeated on an eminence, near the river Doria, 12 miles N.W. of Turin. Long. 7. 34. E. Lat. 45. 7. N.

VEIROS, a town of Portugal, in Alentejo, with a caſtle, ſeated on the Anhaloura, 10 miles S.S.W. of Portalegre. Long. 7. 34. W. Lat. 38. 57. N.

VEIT, ST. a ſtrong town of Germany, in Carinthia, with an old caſtle, ſeated at the confluence of the Glan and Wunich, eight miles N. of Clagenfurt, and 173 S.W. of Vienna. Long. 14. 20. E. Lat. 47. 1. N.

VELA, a cape of the N. coaſt of Terra Firma, 160 miles E.N.E. of St. Martha. Long. 71. 25. W. Lat. 12. 30. N.

VELDEN, a town of Bavaria, in the principality of Neuburg, 22 miles N.W. of Ratiſbon. Long. 11. 50. E. Lat. 40. 10. N.

VELDENTZ, a town of Germany, in the palatinate of the Rhine, capital of a county of the ſame name, with a caſtle. It is ſeated on the E. ſide of the Moſelle, 13 miles N.E. of Treves. Long. 7. 3. E. Lat. 49. 52. N.

VELETRI, or VELLETRI, a town of Italy, in Campagna di Roma. It is the reſidence of the Biſhop of Oſtia, whoſe palace is magnificent; and there are large ſquares adorned with fine fountains. It is ſeated on an eminence, ſurrounded by hills, eight miles E.S.E. of Albano, and 20 S.E. of Rome. Long. 12. 56. E. Lat. 41. 46. N.

VELEZ, a town of Spain, in New Caſtile, with a caſtle, 45 miles N.E. of Toledo, and 50 S.E. of Madrid. Long. 2. 22. W. Lat. 40. 0. N.

VELEZ MALAGA, a town of Spain, in Granada, with a caſtle, ſeated in a large plain, near the Mediterranean, 12 miles N.E. of Malaga, and 52 S.W. of Granada. Long. 3. 24. W. Lat. 36. 42. N.

VELIKA, a town of Sclavonia, ſeated on the river Bakawa, 10 miles E. of Cruetz, and 60 N.W. of Poſega. Long. 16. 50. E. Lat. 46. 18. N.

VELIKI USTIUG, a province of Ruſſia, in the government of Vologda. Uſtiug is the capital.

VELORE, a town of Hindooſtan, in the Carnatic. It is a poſt of great importance, commanding the great road from Myſore into the Carnatic. It conſiſts of three ſtrong forts on as many hills, and is deemed impregnable to an Indian army. During the laſt war againſt Hyder Ally, it was relieved by Sir Eyre Coote, in the face of the whole army of that chief. It is 90 miles W. of Madras.

VENA, or MONTI-DELLA-VENA, mountains of Carniola, on the confines of Iſtria, on the S. of the lake Czernic.

VENAFRO, a town of Naples, in Terra di Lavoro, with a biſhop's ſee, ſeated near the Volturno, 27 miles W. of Capua, and 43 N. of Naples. Long. 14. 19. E. Lat. 43. 32. N.

VENAISSIN, a ſmall but fertile territory of France, lately depending on the pope, but now decreed a part of the republic of France, and included in the department of Vaucluſe.

VENANT, ST. a town of France, in the department of the Straits of Calais. It can be laid under water at any time, which is its chief defence, and is 27 miles S.E. of Dunkirk, and 22 N.W. of Arras. Long. 2. 39. E. Lat. 50. 38. N.

VENASQUE, a town of Spain, in Arragon, in a valley of the ſame name, with a ſtrong caſtle. It is ſeated on the Eſſara, in a country producing good wine, 35 miles E. of Balbaſtro. Long. 0. 25. E. Lat. 41. 58. N.

VENEATIGHERY, a town of the peninſula of Hindooſtan, in the Myſore country, 51 miles E. of Bangalore, and 54 W. of Arcot. Long. 78. 38. E. Lat. 13. 5. N.

VENCE, a town of France, in the department of Var. Before the revolution, it was a biſhop's ſee. It is eight miles from the Mediterranean, and 10 W. of Nice. Long. 7. 13. E. Lat. 43. 43. N.

VENDEE, a department of France, including part of the late province of Poitou. It is ſo called from a ſmall river of the ſame name. Fontenay-le-Compte is the capital.

VENDEN, a town of Ruſſia, in the government of Riga, ſituate on the Aa, 36 miles N.E. of Riga. Long. 25. 15. E. Lat. 57. 12. N.

VENDOME, a town of France, in the department of Loir and Cher, ſeated on the river Loir, 30 miles N.E. of Tours, and 95 S.W. of Paris. Long. 1. 8. E. Lat. 47. 50. N.

VENDRELL, a town of Spain, in Catalonia, 25 miles W.S.W. of Barcelona. Long. 1. 50. E. Lat. 41. 12. N.

VENZUELA, a province of Terra Firma, bounded on the N. by the Caribbean Sea, on the E. by Caraccus, on the S. by New Granada, and on the W. by St. Martha. When the Spaniards landed here in 1499, they obſerved ſome huts built upon piles, in an Indian village, in order to raiſe them above the ſtagnated water that covered the plain: and this induced them to give it the name of Venezuela, or Little Venice. Near the ſea-coaſt are high mountains, the tops of which are barren, but the lower parts in the valley are fertile, producing plenty of corn, rich paſtures, ſugar, tobacco, and fruits. There are alſo plantations of cocoa-nuts, which are exceedingly good; and gold is found in the ſands of the rivers. This province was beſtowed by the Emperor Charles V. on the Velſers of Augſburg, the moſt opulent merchants, at that time, in Europe, in conſideration of large ſums they had advanced to him. They were to hold it as an hereditary fief of the crown of Caſtile, on condition of conquering the country and eſtabliſhing a colony within a limited time. Unfortunately, they committed the execution of their plan to ſome of the ſoldiers of fortune with which Germany abounded in the 16th century, by whoſe rapacity and extortion the country was ſo deſolated, that it could hardly afford them ſubſiſtence, and the Velſers were obliged to relinquiſh their property. The Spaniards immediately reſumed poſſeſſion of it; but, notwithſtanding its many natural advantages, it is ſtill one of their moſt languiſhing and unproductive ſettlements.

VENEZUELA, the capital of a province of the ſame name, in Terra Firma, with a biſhop's ſee. It ſtands on a peninſula, on the E. ſide of the gulf of Venezuela, 70 miles N.E. of Maracaybo. Long. 70. 15. W. Lat. 10. 43. N.

VENEZUELA, a gulf on the N. coaſt of Terra Firma, which communicates with the lake of Maracaybo, by a narrow ſtrait.

VENLO, a ſtrong town of Dutch Guelderland, formerly in alliance with the Hanſeatic towns. It was more than once taken and retaken in the wars beween the Dutch and Spaniards. In 1752 it ſurrendered to the allies, and was confirmed to the ſtates-general by the barrier treaty in 1715. It was taken by the French, October 28, 1794. It is ſeated on the E. ſide of the Maeſe (on the oppoſite ſide of which is Fort St. Michael), 19 miles N. of Ruremonde, and 35 N.W. of Juliers. Long. 5. 50. E. Lat. 51. 20. N.

VENOSA, a town of Naples, in Baſilicata, with a biſhop's ſee. It is ſeated in a fertile plain, at the foot of the Apennines, 13 miles N.W. of Accrenza, and 72 N.E. of Naples. Long. 15. 52. E. Lat. 40. 54. N.

VENTA-DE-CRUZ, a town of Terra Firma, in the iſthmus of Darien, ſeated on the river Chagre. Here the Spaniards uſed to bring the merchandiſe of Peru and Chili on mules from Panama, and embark it on the river for Porto Bello. Long. 79. 0. W. Lat. 9. 20. N.

VENZONE, a town of Italy, in the country of Friuli, ſituate on the Tajamento, 18 miles W.N.W. of Friuli, and 32 E.N.E. of Belluno. Long. 13. 40. E. Lat. 46. 22. N.

VERA, a ſea-port of Spain, in Granada, with a biſhop's ſee. It is 43 miles N.E. of Almeria, and 32 S.W. of Carthagena. Long. 1. 30. W. Lat. 37. 15. N.

VERA PAZ, a province of New Spain, in the audience of Guatimala; bounded on the N. by Jucatan, on the E. by the bay and province of Honduras, on the S. by Guatimala Proper, and on the W. by Chiapa. It is 88 miles in length, and nearly as much in breadth, and is full of mountains and foreſts; but there are many fertile valleys, which feed a great number of horſes and mules. There are alſo many towns and villages of the native Americans. The capital, of the ſame name, has a biſhop's ſee, but is inconſiderable. It is 120 miles N.E. of Guatimala. Long. 89. 0. W. Lat. 15. 10. N.

VERBERIE, an ancient town of France, in the department of Oiſe, ſeated on the river Oiſe, 10 miles N.E. of Senlis. Long. 2. 51. E Lat. 49. 22. N.

VERCELLI, a ſtrong town of Piedmont, capital of a lordſhip of the ſame name, with a biſhop's ſee, a citadel, and a caſtle. The town-houſe, the governor's palace, and the hoſpital, are handſome ſtructures. It is ſeated at the confluence of the Seſſia and Cerva, 10 miles N.W. of Caſal, and 40 N.E. of Turin. Long. 8. 24. E. Lat. 45. 31. N.

VERCHOLENSK, a town of Ruſſia, in the government of Irkutſk, ſeated on the Lena, 120 miles N. of Irkutſk. Long. 105. 35. E. Lat. 54. 0. N.

VERCHOTURE, a town of Ruſſia, in the government of Perm, with a biſhop's ſee. This was the firſt town the Ruſſians built in Siberia. It is ſituate 120 miles N. of Catharinenburg. Long. 60. 15. E. Lat. 58. 45. N.

VERDEN, a duchy of Germany, in the circle of Lower Saxony, 28 miles long and nearly as much broad; bounded on the E. and S by the duchy of Lunenburg, on the W. by the Weſer and the duchy of Bremen, and on the N. by the duchies of Bremen and Lunenburg. It conſiſts chiefly of heaths and high dry lands; but there are good marſhes on the river Weſer and Aller. In 1712, the Danes wreſted this duchy from Sweden, and, in 1715, ceded it to the Elector of Hanover; which ceſſion, in 1718, was confirmed by the Swedes. The inhabitants are Lutherans.

VERDEN, a town of Lower Saxony, capital of a duchy of the ſame name. It contains four churches, and is ſeated on a branch of the Aller, 26 miles S.E. of Bremen. Long 9. 0. E. Lat. 53. 10 N.

VERDUN, a town of France in the department of Meuſe, with a biſhop's ſee, and a ſtrong citadel. Its fortifications were conſtructed by the Chevalier de Ville and Marſhal de Vauban; the latter of whom was a native of this place. In 1755 great part of the cathedral was deſtroyed by lightning. Verdun was taken by the Pruſſians in 1792, but retaken ſoon after. The inhabitants are noted for making fine ſweatmeats: It is ſeated on the Meuſe, which runs through the middle, 42 miles S.W. of Luxemburg, and 150 E. of Paris. Long. 5. 22. E. Lat. 49. 9. N.

VERDUN, a town of France, in the department of Upper Garonne, ſeated on the Garonne, 22 miles N.W. of Toulouſe. Long. 1. 20. E. Lat. 43. 54. N.

VEREA, a town of Turkey in Europe, in the province of Macedonia, and the ſee of a Greek metropolitan. It is 48 miles W. of Salonichi, and 115 E. of Valona. Long. 22. 18. E. Lat. 40. 40. N.

VERERIA, a town of Ruſſia, in the government of Moſcow, 56 miles W.S.W. of Moſcow. Long 25. 50. E. Lat. 55. 18. N

VERINA, a town of Terra Firma, in the province of Comana, celebrated for its tobacco. It is ſituate on a gulf of the Atlantic, 45 miles E. of Comana. Long. 63. 44. W. Lat. 10. 8. N.

VERMANDOIS, a late territory of France, in Picardy; which, with the late province of Soiſſonnois, is now included in the department of Aiſne. It abounds in corn, and excellent flax.

VERMANTON, a town of France, in the department of Yonne, ſeated on a river, 10 miles S.E. of Auxerre. Long. 3. 49. E. Lat. 47. 40. N.

VERMONT, one of the United States of America; bounded on the N. by Canada, on the E. by the river Connecticut, which divides it from New Hampſhire, on the S. by Maſſachuſets, and on the W. by New York. It is 157 miles long and 65 broad, and divided into eleven counties. A chain of high mountains, running N. and S. divides the ſtate nearly in the centre, between the river Connecticut and lake Champlain. The natural growth upon this chain is hemlock, pine, ſpruce, and other ever-greens: hence it has always a green appearance, and obtained the deſcriptive name of Vermont, from the French *Verd Mont*, Green Mountain. The country is generally hilly, but not rocky. It is finely watered, the ſoil is very fertile, and there is not a better climate in the world. The inhabitants have lately been eſtimated at 100,000. The principal town is Bennington.

VERNEUIL, a town of France, in the department of Eure, ſeated on the Aure, 22 miles S.W. of Evreux, and 65 W. by S. of Paris. Long. 0. 59. E. Lat. 48. 42. N.

VERNEUIL, a town of France, in the department of Allier, three miles from the river Allier, and 15 S. of Moulins. Long. 3. 25. E. Lat. 46. 20. N.

VERNON, a town of France, in the department of Eure, with an ancient caſtle, and a fortreſs at the end of the bridge, over the Seine, 27 miles S.E. of Rouen, and 42 N.W. of Paris. Long. 1. 42. E. Lat. 49. 6. N.

VERNOIS, a conſiderable town of Ruſſia, in the government of Rezan, ſeated on a mountain, near a river of the ſame name, which a little lower falls into the Don. Long. 42. 29. E. Lat. 53. 15. N.

VEROLI, an ancient and populous town of Italy, in Campagna di Roma, with a biſhop's ſee. It is ſeated on the Coſa, at the foot of the Apennines, 45 miles S.E. of Rome. Long. 13. 15. E. Lat. 41. 28. N.

VERREZ, a town of Piedmont, in the duchy of Aoſta, with a fortreſs deemed impregnable. It is 15 miles S.S.E. of Aoſta, and 35 N. of Turin.

VERRIERES, a town of Switzerland, in the principality of

Neuchatel. The environs are celebrated for excellent cheeſe. It is ſix miles E.N.E. of Pontarlier, and 20 W.S.W. of Neuchatel.

VERSOI, a village of France, in the department of Ain, ſeated on the lake of Geneva, near the mouth of the river Verſoi, ſix miles S.E. of Gex, and ſeven N. of Geneva. It goes by the name of *Choiſeul's Folly*; for Geneva having fallen under the diſpleaſure of France, the Duke de Choiſeul (then prime-miniſter) endeavouring to take advantage of the troubles in 1768, formed a plan to ruin that city, and monopolize the whole trade of the lake. With this view, he fixed on Verſoi as a proper ſituation for a large town, and began to ſink a pier, to make a harbour, &c. But when the harbour was nearly completed, and 125,000l. had been expended on the project, it was ſuddenly relinquiſhed.

VERTUS, a town of France, in the department of Marne, ſeated in a plain, at the foot of a mountain, on which are vineyards, producing very good wines, 17 miles S.W. of Chalons, and 78 N.E. of Paris. Long. 4. 2. E. Lat. 48. 53. N.

VERUN, or VERRUA, a town of Piedmont, in the county of Aſti. It was beſieged in 1705, by the French, who did not carry it till after ſix months, when it was reduced to a heap of ruins, becauſe the commander had blown up all the fortifications. It was afterward reſtored to the Duke of Savoy. It is ſeated on a hill, near the river Po, 20 miles W. of Caſal, and 23 N.E. of Turin. Long. 8. 2. E. Lat. 45. 13. N.

VERVIERS, a town of the Netherlands, in the biſhopric of Liege, ſeated on the Weze, four miles S.W. of Limbourg, and 17 S.E. of Liege.

VERVINS, a town of France, in the department of Aiſne, famous for a treaty, in 1598, between Henry IV. of France and Philip II. of Spain. It is ſeated on the Serre, 110 miles N.E. of Paris. Long. 4. 0. E. Lat. 49. 50. N.

VERULAM, the veſtiges of a celebrated Roman town in Hertfordſhire, cloſe by St. Alban's. In the time of Nero it was a *municipium*, or town, the inhabitants of which enjoyed the privileges of Roman citizens. By Tacitus it is called *Verulamium*, and by Ptolemy *Urolamium*. After the departure of the Romans, it was entirely ruined in the wars between the Britons and Saxons; and nothing remains of it but the ruins of walls, teſſelated pavements, and Roman coins, which are ſtill ſometimes dug up.

VERZUOLO, a town of Piedmont, in the marquiſate of Saluzzo, with a caſtle. It is ſurrounded with an ancient wall, flanked with towers; and is three miles S. of Saluzzo.

VESLEY, a town of France, in the department of Aiſne, ſeated on the river Aiſne, 10 miles E.N.E. of Soiſſons.

VESOUL, a town of France, in the department of Upper Saone. Since the revolution it has been created a biſhop's ſee. In its vicinity is a well, ſimilar to that near Ornans. It is ſeated at the foot of a mountain, called Motte de Veſoul, near the river Durgeon, 22 miles N. of Beſançon, and 200 S.E. of Paris. Long. 6. 8. E. Lat. 47. 36. N.

VESPERIN, or WEISBRAIN, a ſtrong town of Lower Hungary, capital of a county of the ſame name, with a caſtle, and an epiſcopal ſee, whoſe biſhop is chancellor to the King of Hungary, and has a right to crown him. It is ſeated on the lake Balaton, at the mouth of the river Sarwiſe, 50 miles S.W. of Strigonia, and 83 S.E. of Vienna. Long. 17. 57. E. Lat. 47. 14. N.

VEVAY, the ancient Vibuſcum, a town of Switzerland, capital of a baſiliwic of the ſame name, in the canton of Bern. The famous General Ludlow retired to this place, on the reſtoration: here he died in 1693, and is interred in the church. Vevay is ſurrounded by vineyard hills, and the wine is in great eſtimation. It ſtands in a ſmall plain, on the edge of the lake of Geneva, 37 miles S.W. of Bern. Long. 7. 4. E. Lat. 46. 28. N.

VEUDRE, a town of France, in the department of Allier, ſeated on the river Allier, 17 miles N.W. of Moulins.

VEZELAY, a town of France, in the department of Nievre. In 1560, this town, being in the poſſeſſion of the Calviniſts, was beſieged by the troops of Charles IX. without ſucceſs, after the loſs of 1500 men. Theodore Beza was a native of Vezelay. It is ſeated on the top of a mountain, near the river Cure, 20 miles S. of Auxerre, and 117 S. by E. of Paris. Long. 3. 42. E. Lat. 47. 26. N.

VEZELIZE, a town of France, in the department of Meurthe, ſeated on the Brenon, 12 miles S. of Nanci, and 14 S.E. of Toul. Long. 6. 10. E. Lat. 48. 39. N.

UFA, a government of Ruſſia, formerly included in the government of Orenburgh. It is divided into the two provinces of Ufa and Orenburgh.

UFA, a town of Ruſſia, capital of a government of the ſame name. It is ſeated on the Bielaid, below the mouth of the Ufa, 760 miles from Moſcow. Long. 57. 0. E. Lat. 54. 40. N.

UFFENHEIM, a town of Franconia, in the principality of Anſpach, 18 miles S.S.E. of Wurtburgh, and 22 N.N.E. of Anſpach.

UGENTO, a town of Naples, in Terra d'Otranto, with a biſhop's ſee, eight miles W. of Alceſſano, and 20 S.W. of Otranto.

UGLIANI, a town of Piedmont, in the duchy of Aoſta, nine miles N. of Ivrea, and 16 E.S.E. of Aoſta. Long. 7. 47. E. Lat. 25. 30. N.

UGOCZ, a town of Upper Hungary, capital of a county of the ſame name, with a caſtle. It is ſeated on a ſmall river that falls into the Neiſſe, 15 miles N. of Zatmar. Long. 22. 34. E. Lat. 48. 5. N.

UGOGNA, a town of Italy, in the duchy of Milan, ſeated on the Toſa, 16 miles N. of Varallo, and 45 N.W. of Milan. Long. 8. 24. E. Lat. 45. 52. N.

VIADANA, a town of Italy, in the duchy of Mantua, ſeated on the Po, eight miles N. of Parma, and 17 S. of Mantua. Long. 10. 35. E. Lat. 44. 58 N.

VIANA, a town of Spain, in Navarre, ſeated near the Ebro, three miles N. of Logronno, and 46 S.W. of Pampeluna. Long. 2. 20. E. Lat. 42. 32. N.

VIANA, a town of Portugal, in Entre-Douero-e-Minho, ſeated at the mouth of the Lima, with a good harbour, defended by a fort, 15 miles W. of Braga, and 36 N. of Oporto. Long. 8. 29. W. Lat. 41. 39. N.

VIANDEN, a town of Auſtrian Luxemburgh, capital of a county of the ſame name. It is divided into two towns by the river Uren. In the one is a caſtle, on an inacceſſible mountain. It is 22 miles N. of Luxemburg, and 22 N.W. of Treves. Long. 6. 13. E. Lat. 49. 55. N.

VIANEN, a town of the United Provinces, in Holland, with a caſtle. It was taken, in 1672, by the French, who demoliſhed the fortifications. It is ſeated on the Leck, ſeven miles S. of Utrecht. Long. 5. 8. E. Lat. 52. 0. N.

VIATKA, a government of Ruſſia, which was formerly a province of Kaſan. It takes its name from the river Viatka, which runs through it.

VIATKA, a town of Ruſſia, capital of a government of the ſame name, with a biſhop's ſee, and a caſtle. It was formerly called Khlynof, and is ſeated on the river Viatka, 100 miles N. of Kaſan. Long. 54. 15. E. Lat. 57. 25 N.

VIC, a town of France, in the department of Meurthe, ſeated on the Seille, 12 miles E.N.E. of Nanci, and 197 E. of Paris. Long. 6. 38. E. Lat. 48. 47. N.

VIC, a town of France, in the department of the Upper Pyrenées, ſituate on the Adour, 12 miles N. of Tarbes. Long. 0. 9. E. Lat. 43. 24. N.

VIC, or VICQ, a town of Spain, in Catalonia, with a biſhop's ſee. The cathedral is adorned with a fine portico,

ſupported by large pillars; and the market-place is very ſpacious. It is ſeated in a fertile plain, on a ſmall river that falls into the Tar, 30 miles N. of Barcelona, and 265 E.N.E. of Madrid. Long. 2. 13. E. Lat. 41. 55. N.

VIC-FEZENSAC, a town of France, in the department of Gers, ſeated on the Douze, 15 miles W. of Auch.

VIC-LE-COMPTE, a town of France, in the department of the Puy de Dome, with a palace, where formerly the counts of Auvergne reſided, and about a mile from it are mineral ſprings. It is ſeated near the Iſſoire, 15 miles S.E. of Clermont, and 130 S. of Paris. Long. 3. 22. E. Lat. 45. 36. N.

VICEGRAD, or VIZEGRAD, a ſtrong town of Lower Hungary, with a caſtle on the top of a rock, where the kings of Hungary formerly reſided. It was taken from the Turks, in 1684, by the Auſtrians. It is ſeated on the S. ſide of the Danube, eight miles S.E. of Gran, and 16 N.W. of Buda. Long. 19. 7. E. Lat 47. 35. N.

VICENTINO, a territory of Italy, belonging to the Venetians; bounded on the N. by Tretino and Feltrino, on the E. by Treviſano and Paduano, on the S. by Paduano, and on the W. by the Veroneſe. It is 35 miles long and 27 broad; and ſo very pleaſant and fertile, that it is called the garden of Venice. The wine is excellent, and the butter and cheeſe very good. Here are alſo great numbers of mulberry-trees, for ſilkworms; and there are mines of ſilver and iron, and quarries of ſtone, almoſt as fine as marble.

VICENZA, a ſtrong town of Italy, the capital of Vicentino, with a biſhop's ſee. It is without walls, but is a large place, adorned with ſeveral palaces, and has a fine ſquare, with piazzas under the houſes. There are alſo ſeveral other ſquares, and fine churches. Here is an academy, whoſe members meet in the Olympic theatre, a maſterpiece of workmanſhip by Palladio. It is ſeated between the rivers Bachiglione and Rerone, and two mountains, in a fertile plain, 13 miles N.W. of Padua, 31 W. of Venice, and 135 N. of Rome. Long. 11. 43. E. Lat. 45. 26. N.

VICHY, a town of France, in the department of Allier, famous for the mineral waters near it. It is ſeated on the Allier, 15 miles S.E. of Gennat, and 180 S. by E. of Paris. Long. 3. 22. E. Lat. 46. 0. N.

VICO, a town of Naples, in Terra di Lavora, with a biſhop's ſee. It was almoſt ruined by an earthquake in 1694, and is ſeated near the bay of Naples, 15 miles S. by E. of Naples. Long. 14. 28. E. Lat. 40. 38. N.

VICO, a town of Naples, in Principato Citeriore, 17 miles S.S.E. of Naples. Long. 14. 30. E. Lat. 40. 43. N.

VICO, a town of Corſica, in which is the cathedral of the biſhop of Sagona, a town now in ruins. It is 15 miles S.W. of Corte, and 30 S. of Calvi. Long. 9. 16. E. Lat 41. 55. N.

VICOVARO, a town and principality of Italy, in the province of Sabina, ſeated near the Teverone, eight miles E. of Tivoli, and 40 N.E. of Rome. Long. 13. 8. E. Lat. 42. 30. N.

VIELSK, a town of Ruſſia, in the government of Vologda, ſituate on the Vaga, 156 miles N.N.E. of Vologda. Long. 41. 45. E. Lat. 61. 40 N.

VIENNE, a conſiderable town of France, in the department of Iſere. It is ſeated on the Rhone, over which it had formerly a bridge, of which only ſome piers remain, that render the navigation dangerous. Under the Romans it was the capital of a colony, and the ſeat of a ſenate. In the 5th century, the Burgundians made it the capital of their kingdom. Its commerce conſiſts in wines, ſilk, and ſword-blades, which laſt are highly eſteemed. Before the revolution, it was the ſee of an archbiſhop. The cathedral is a handſome Gothic ſtructure. In 1311, a general council was held here, at which Pope Clement V. preſided, and Philip the Fair of France, Edward II. of England, and James II. of Arragon, aſſiſted. This council is famous for the ſuppreſſion of the order of the Knights Templars of Jeruſalem. Near Vienne, on the banks of the Rhone, are produced the excellent wines of Côte-Rôtie, in a ſoil where the grape, as the name imparts, is almoſt parched up by the ſun; and, a little further, are grown the famous hermitage wines, ſo called, becauſe a hermit had his grotto there. Vienne is 15 miles S. of Lyons, and 265 S.E. of Paris. Long. 4. 55. E. Lat. 45. 31 N.

VIENNE, a department of France, formed of part of the late province of Poitou. It takes its name from a river which riſes in the department of Correze, and falls into the Loire between Chinon and Saumur. Poitiers is the capital.

VIENNE, UPPER, a department of France, compriſing the late province of Limoſin. Limoges is the capital.

VIERARDEN, a town of Germany, in the marche of Brandenburg, ſeated on the Veſſe, near its confluence with the Oder, 24 miles S.E. of Prenzlo, and 30 N.W. of Cuſtrin. Long. 14. 20. E. Lat. 53. 2. N.

VIERZON, an ancient town of France, in the department of Cher, famous for its forges. It is ſeated on the Cher and Yevre, in the moſt fertile part of the department, 17 miles N.W. of Bourges, and 100 S.W. of Paris. Long. 2. 10. E. Lat. 47 12. N.

VIESTI, a town of Naples, in Capitanata, with an archbiſhop's ſee. It is ſeated on the gulf of Venice, in the place called the Spur of the Boot, and at the foot of Mount Garden, 25 miles N.E. of Manfredonia, and 117 of Naples. Long. 16. 40. E. Lat. 41. 51. N.

VIGAN, a town of France, in the department of Gard, 25 miles W. of Alais, and 25 N.W. of Niſmes.

VIGEVANO, a town of Italy, in the duchy of Milan, capital of the Vigevenaſco, with a biſhop's ſee, and a ſtrong caſtle on a rock. It was formerly the reſidence of the dukes of Milan, but is now ſubject, with its territory, to the King of Sardinia. It is ſeated near the Teſino, 12 miles S.E. of Novaro, and 15 S.W. of Milan. Long. 8. 54. E. Lat. 45. 22. N.

VIGNAMONT, a town of the Netherlands, in the biſhopric of Liege, two miles N. of Huy. Long. 5. 22. E. Lat. 48. 46. N.

VIGNOT, a town of France, in the department of Meuſe, ſituate on the Meuſe, 16 miles E. of Bar le Duc, and 24 S.S.E. of Verdun. Long. 5. 25. E. Lat. 48. 46. N.

VIGNUOLA, or VIGNOLA, a town of Italy, in the duchy of Modena, 15 miles S.E. of Modena.

VIHIERS, a town of France, in the department of Maine, ſeated on a lake, 20 miles S. of Angers, and 162 S.W. of Paris. Long. 0. 29. W. Lat. 47. 8. N.

VILAINE, a river of France, which riſes in the department of Maine, waters Vitré and Rennes, divides the department of Morbihan from that of Lower Loire, and enters the bay of Biſcay, below Roche Bernard. When Sir Edward Hawke defeated the French fleet, in 1759, ſeveral of their men-of-war took ſhelter in this river, in which they were obliged to lie ſeveral months.

VILLA-ARAGONESE, a town of Sardinia, 17 miles N.E. of Saſſari. Long. 8. 50. E. Lat. 40. 56. N.

VILLA-BOHIM, a town of Portugal, in Alentejo, 10 miles S.W. of Elvas

VILLA-DEL-REY, a town of Spain, in Eſtremadura, on the frontiers of Portugal, taken by the allies in 1706. It is ſeated on the Guadiana, 17 miles N.W. of Badajoz. Long. 7. 10. W. Lat. 38. 43. N.

VILLA-DE-CONDE, a ſea-port of Portugal, in the province of Entre-Douero-e-Minho, at the mouth of the Ava, 10 miles E. of Barcelos, and 20 N.W. of Oporto. Near it is an ancient aqueduct. Long. 8. 23. W. Lat. 41. 14. N.

VILLA-DE-HORTA, the capital of the iſland of Fayal, one of the Azores. It is ſeated on the W. coaſt, and has a harbour, land-locked on every ſide except the E. and N.E. and defended by ſeveral forts. Long. 28. 36. W. Lat. 38. 32. N.

VILLA-FLOR, a town of Portugal, in the province of Tra-los-Montes, ſeated on a river, that falls into the Douero. It is 40 E. of Villa Real.

VILLA-REAL, a town of Portugal, in the province of Tra-los-Montes, and capital of Comarca. It is ſea ed at the confluence of the Corgo and Ribera, 15 miles N.E. of Lamego, and 45 S.E. of Braga. Long. 7. 20. W. Lat. 41. 9. N.

Villa-Real, a town of Spain, in the province of Valencia, 26 miles N. of Valencia. Long. 0. 20. E. Lat. 39. 46. N.

Villa-Real, a town of Spain, in Guipuſcoa, ſix miles S.S.W. of Placentia.

VILLA-VICIOSA, a fortified town of Portugal, in Alentejo, with an old caſtle, and a palace, where the dukes of Braganza formerly reſided. In the ſuburb is an ancient temple, originally built to the honour of Proſerpine. The ſoil about this town is extremely fertile, and there are quarries of fine green marble. It ſuſtained a famous ſiege againſt the Spaniards, in 1667; which occaſioned a battle in a neighbouring plain, the event of which placed the crown of Portugal on the head of the Duke of Braganza. It is 16 miles S.W. of Elvas, and 83 S.E. of Liſbon. Long. 7. 16. W. Lat. 38. 36. N.

Villa-Vicioſa, a ſea-port of Spain, in Aſturia d'Oviedo, ſeated on the bay of Biſcay, 22 miles N.E. of Oviedo. Long. 5. 24. W. Lat. 43. 22. N.

Villa-Vicioſa, a town of Spain, in New Caſtile. Here, in 1710, General Staremberg defeated the French and Spaniards under the Duke of Vendome, although they were twice his number; but, from want of proviſions, he was obliged to leave to the vanquiſhed all the advantages of a complete victory, which, accordingly, they aſcribed to themſelves. Villa Vicioſa is ſix miles N.E. of Brihuega, and 49 N.E. of Madrid.

VILLAC, a town of Germany, in the ducky of Carinthia, belonging to the Biſhop of Bamberg, with a caſtle. It carries on a great trade with the Venetians; and near it are the baths of Toplitz. It is ſeated at the confluence of the Drave and Geil, ſurrounded by mountains, 12 miles S.W. of Clagenfurt, and 88 N.E. of Brixen. Long 14. 3. E. Lat. 46. 50. N.

VILLAGER, the ſame as cottager, a village being only an aſſemblage of cottages or mean habitations. See Village, and alſo the article Cottager in this Supplement.

VILLE DIEU, a town of France, in the department of the Channel, 12 miles N.N.E. of Avranches, and 18 S.E. of Coutances. Long. 1. 8. W. Lat. 48. 52. N.

VILLEFORT, a town of France, in the department of Lozere, 18 miles E. of Mende, and 19 N. of Alais. Long. 3. 50. E. Lat. 44 27. N.

VILLA-FRANCA, a ſea-port of Italy, in the county of Nice, with a caſtle and fort. In 1744 it was taken by the French and Spaniards, but reſtored: and was again taken by the French in 1792. It is three miles E. of Nice. Long. 7. 25. E. Lat. 43. 42. N.

Villa-Franca, a town of Italy, in the Veroneſe, with a ſilk manufacture, 10 miles S. of Verona. Long. 11. 23. E. Lat. 45. 36. N.

Villa-Franca, the capital of the iſland of St. Michael, one of the Azores. Long. 25. 35. W. Lat. 37. 50. N.

VILLEMUR, a town of France, in the department of Upper Garonne, ſeated on the Tarn, 12 miles N.N.E. of Toulouſe.

VILLENA, a town of Spain, in the province of Murcia, with a caſtle, formerly of great ſtrength. It is 55 miles N.W. of Murcia, and 175 S.E. of Madrid. Long. 0. 49. W. Lat. 38. 40. N.

VILLENEUVE, a town of France, in the department of Lot and Garonne, ſeated on the river Lot, 17 miles N. of Agen.

Villeneuve, a town of France, in the department of Gard, 23 miles N.W. of Niſmes.

Villeneuve, a town of Switzerland, in the canton of Bern, celebrated for its trout fiſhery. It is ſituate on the eaſt extremity of the lake of Geneva, three miles from the mouth of the Rhone, 15 E.S.E. of Lauſanne, and 38 S.S.W. of Bern. Long. 6. 58. E. Lat. 46. 24. N.

VILLENEUVE-DE-BERG, a town of France, in the department of Ardeche, 10 miles N.W. of Viviers.

VILLERS COTERETS, a town of France, in the department of Oiſe, with a caſtle, 10 miles S.E. of Compiegne. Long. 3. 12. E. Lat. 49. 14. N.

VILLINGEN, a town of Suabia, in the Briſgaw, ſeated in the Black Foreſt, between the ſources of the Danube and Neckar, 28 miles E. by S. of Friburg. Long. 8. 37. E. Lat. 48. 8. N.

VILSHOFEN, a town of Lower Bavaria. In 1703 it was taken by the Imperialiſts; and in 1745, the Auſtrians took it by ſtorm. It is ſituate at the confluence of the Vils and Danube, 11 miles W. of Paſſau, and 72 E.N.E. of Munich. Long. 13. 20. E. Lat. 48. 29. N.

VILVORDE, a town of Auſtrian Brabant, ſeated on the canal from Bruſſels to the Scheldt, ſeven miles N.E. of Bruſſels. Long. 4. 31. E. Lat. 50. 56. N.

VIMIOSO, a town of Portugal, in the province of Tra-los-Montes, 15 miles W.N.W. of Miranda-de-Douero, and 17 S.E. of Braganza. Long. 6. 30. W. Lat. 41. 29. N.

VINCENT, Cape St. the moſt ſouthern promontory of Portugal, 25 miles W. by S. of Cape Lagos. Long. 9. 0. W. Lat. 36. 44. N.

VINCENT, St. one of the Cape Verd Iſlands, on the coaſt of Africa. It is uninhabited; but on the N.W. ſide of it is a good bay, where ſhips may wood and water, and wild goats be ſhot. It is ſaid that more turtle is caught near this iſland than round all the reſt, and that it abounds with ſaltpetre.

Vincent, St. a province of Braſil, extending along the coaſt of the Atlantic, from the province of Rio Janeiro in the N.E. to that of Del Rey in the S. The capital, of the ſame name, has a good harbour. Long. 46. 30. W. Lat. 24. 15. S.

Vincent, St. a town of Spain, in Old Caſtile, with a caſtle, ſeated on a hill, near the river Ebro, 138 miles N.E. of Madrid. Long. 2. 40. W. Lat. 42. 30. N.

VINEGAR *(Encycl.)*. To what has been there offered we wiſh to add the following important obſervations on vinegar, by Cit. Parmentier, publiſhed in the *Annales de Chimie*.

Vinegar, conſidered with a view to its economical pharmaceutical, and chemical uſes, is at preſent of ſuch general utility, that it may be looked upon as an article of the firſt neceſſity.

Simple as the proceſs by which it is prepared may appear to be, it is by no means unattended with difficulty; but it is principally when we wiſh to obtain this acid in its greateſt perfection, that we find reaſon to acknowledge how much its qualities may be influenced by art, and how neceſſary it conſequently is, that we ſhould make ourſelves well acquainted with what happens during the proceſs of acetous fermentation, in order that we may be enabled to direct its progreſs, and calculate its product.

Influenced by theſe motives, the authors of the tenth and laſt volume of the *Cours complet d'Agriculture*, conceived that an Eſſay on Vinegar, as forming a natural appendix to

that which Chaptal had publiſhed on the manufacture of wine, would afford their readers an inſight into the different changes which are experienced by liquors ſuſceptible of the vinous and acetous fermentation, and thus enable them the better to appreciate the comparative worth of the proceſſes followed in the common routine of manufacture, and thoſe founded upon practice, enlightened by theory.

It is to Citizen Parmentier, one of the fellow-labourers of Roſier in the *Cours d'Agriculture*, that we are indebted for the eſſay on vinegar, of which we are about to preſent our readers with an extract.

Before entering upon this ſubject, the author has thought fit to inform us, that it is not the art of the vinegar-manufacturer that he means to publiſh; this art, he ſays, is fully explained in the Collection of Arts and Manufactures, printed in 4to. at Neufchâtel; but as the very copious and intereſting details which it contains would be out of their place in a ſimple eſſay, which ought only to exhibit general views and the principal facts, he has thought it better to dwell upon the formation, preparation, preſervation, and properties of the different ſorts of vinegar moſt uſed in Europe, and to compriſe, within a ſmall treatiſe, all the advantages which may accrue from the employment of this acid to the arts, to pharmacy, and to economy.

In order to give a greater perſpicuity to his treatiſe, Cit. Parmentier has divided it into ſeveral paragraphs: in the firſt, he preſents us with general reflections on the theory of acetification.

It appears that the ancients had but very confuſed ideas concerning the cauſe of converſion of wine into vinegar. And how, in fact, could they form any accurate notions upon this ſubject, when we know that they were far from being acquainted with the nature of the principles which act ſo important a part in the proceſs of acetous fermentation?

We muſt acknowledge, that it is only ſince the gaſes and their properties have been diſcovered, that we have learnt to reaſon with greater preciſion concerning this ſpecies of fermentation; and it is alſo particularly ſince we have carefully obſerved all that happens during its different ſtages, that we have ſucceeded in eſtabliſhing a theory, which lays the greater claim to adoption, as it is founded upon facts, the reality of which can no longer be called in queſtion.

At the preſent day it cannot be diſputed that oxygene, hydrogene, and carbone, are the principal agents that contribute to the formation of vinegar. Theſe three principles, which are alſo found in the greater part of the other vegetable acids, cannot form vinegar, unleſs when combined in proportions ſo conſtant and ſo rigorouſly determined, that be they varied never ſo little, they immediately afford new products.

It is to this cauſe that we ought to attribute the frequent changes that take place in vinegar when the requiſite precautions are not taken for maintaining, between the three principles which we have juſt mentioned, that ſpecies of equilibrium upon which the exiſtence of this acid depends.

If the acetous fermentation exhibits phenomena analogous to thoſe which accompany the vinous fermentation, it can alſo not be denied, that there are certain phenomena peculiar to each of theſe kinds of fermentation, and ſo open to obſervation, that it is very eaſy to diſtinguiſh them.

For example, it is very certain that, during the courſe of vinous fermentation, there conſtantly takes place an extrication of elaſtic fluids, which are formed at the expence of the liquid itſelf, which is ſubjected to the fermentation: whilſt, in the acetous fermentation, the production and diſengagement of aëriform fluids take place only during certain ſtages of the proceſs, and that at one period during its courſe a very ſenſible abſorption may be obſerved.

Roſier, the firſt who inſiſted upon this fact, conceived that it was atmoſpherical air that was abſorbed in this caſe; but it has ſince been proved, to demonſtration, that the oxygene contained in the atmoſpherical air is the only principle that enters into combination with the other principles of the fermenting liquid, and that it eſſentially contributes to the formation of the acid which conſtitutes vinegar.

This being aſcertained, we cannot be at a loſs what to think of the aſſertion of Becher, who pretends that he has converted wine into very ſtrong vinegar, by merely letting it digeſt for a long time over the fire, in a bottle hermetically ſealed. If he really has ſucceeded, it could only be owing to his having operated upon a very ſmall quantity of wine contained in a ſpacious veſſel.

Amongſt the number of operations formerly practiſed for converting wine into vinegar, many were uſeleſs or defective, the greater part did not anſwer the purpoſe for which they were intended; and it was undoubtedly for this reaſon that the neceſſity was felt of ſimplifying them, and ſubſtituting other more advantageous ones. *Carthauſer*, *Boerhaave*, *Demachy*, *Guyton-Morveau*, *Prozet*, &c. &c. have principally employed themſelves on this ſubject. By pointing out the improvements which ought to be adopted, and the only operations which were proper to be employed, they rendered almoſt univerſally known the art of making vinegar, which was formerly practiſed only by a few individuals, whoſe proceſſes were always concealed under a veil of myſtery.

It muſt however be admitted, that the improvements propoſed by the above-mentioned learned men, were not ſo generally adopted as was to have been wiſhed. In many of the departments of France the ancient proceſſes are ſtill in uſe, and it is undoubtedly to the careleſſneſs which exiſts with reſpect to this ſubject, that we have to aſcribe the defective vinegars often met with in commerce, the quality of which is generally ſo bad as to render them altogether uſeleſs.

In the ſecond paragraph, Citizen Parmentier points out the moſt general conditions requiſite for the formation of good vinegar.

Theſe are four in number:

1. The acceſs of the external air into the veſſel which contains the liquid intended to become acid.
2. A temperature higher than that of the atmoſphere.
3. The addition of ſubſtances which perform the office of a ferment.
4. The preſence of a certain quantity of alkali.

The acceſs of the atmoſpherical air is ſo indiſpenſably neceſſary to the formation of vinegar, that this acid cannot be produced without it. What has been ſaid in an earlier part of this eſſay, concerning the manner in which this aëriform fluid acts during the acetous fermentation, is ſo well known at the preſent day, that it ſeems unneceſſary to revert to it. Neither can the neceſſity of the concurrence of heat be called in queſtion; but the heat ought to be moderate. In general it ought not to exceed 18,20 degrees of Reaumur's thermometer: if a higher temperature is applied, it injures the quality of the product.

The following is a ſtriking inſtance of the inconvenience which reſults from employing a higher degree of temperature than that which we have indicated.—A vinegar-manufacturer of Orleans, conceiving that the higher he raiſed the temperature in his workſhop, the ſtronger his vinegar would turn out, heated his ſtove to ſuch a degree as to raiſe the temperature of the atmoſphere to 30°; but, upon examining the vinegar which he had obtained, he found, to his no ſmall ſurpriſe, that it was not only very weak, but

alſo of a bad quality. He then applied to Citizen Prozet, who acquainted him with the proper degree of temperature, and ſince that time he has always obtained vinegar of very good quality.

But even though ſo concluſive an experiment ſhould not be thought to prove the neceſſity of moderating the heat in the places where vinegar is manufactured, we need only reflect for a moment upon what happens in the proceſs of acetous fermentation, to be convinced that if it be neceſſary to determine the formation of the different combinations from which, in their turn, an acid is to be produced, it is alſo neceſſary that, when theſe combinations have once been produced, we ſhould prevent their ſeparating from the liquid in which they are contained: now the ſureſt means of preſerving them is to avoid a too high degree of temperature, and it is preciſely for this reaſon that pains have been taken to aſcertain the degree at which we ought to deſiſt from augmenting the temperature, which has been fixed at between 18° and 20° of Reaumur's thermometer.

The addition of ſubſtances proper for forming ferments, is a condition ſo indiſpenſably neceſſary to the production of acetous fermentation, that it would be difficult to prove that it can be omitted without detriment. It is well known that the great art of the manufacturer of vinegar conſiſts in eſtabliſhing, at one and the ſame time, in the whole maſs of vinous fluid, an internal motion, which agitates its conſtituent principles, compelling them to ſeparate from each other, and afterwards re-unite into combinations different from thoſe in which they previouſly exiſted. It would be in vain for us to expect to obtain ſuch a motion by leaving the wine to itſelf; a part of this fluid might indeed become at length acidifiſed, but before the whole could become completely ſo, it would require a great length of time, and then the firſt portions of acid that had been formed would be very near to a ſtate of decompoſition. Be that as it may, the choice of the ſubſtances proper for forming ferments is by no means a matter of indifference, and this choice ought always to be determined according to the quality of the fluid upon which one operates. The author enters into details relative to this ſubject, which are the more intereſting as being the reſult of experience and obſervation.

Finally, the obligation impoſed upon us, as the fourth condition, to employ wines of good quality if we wiſh to obtain excellent vinegar, is naturally deduced from the ſtate of the conſtituent parts of theſe wines; it is eaſily conceived, that the more they poſſeſs of a ſpecies of perfection, the more they will alſo influence that of the new product which is about to be formed. Moreover, in this caſe experience entirely accords with theory, for it is univerſally admitted that the beſt kinds of vinegar are thoſe that have been manufactured from generous wines.

The third paragraph preſents us with a deſcription of the operations requiſite for the manufacture of different kinds of vinegar.

The author has not contented himſelf with deſcribing the proceſſes for making wine-vinegars; but he has alſo deſcribed thoſe employed for obtaining the vinegars of cyder, of perry, of malt-liquors, of the bran of wheat, with ſuch preciſion, that whoever may wiſh to repeat them may be ſpared the trouble of making any trials that may prove unſucceſsful.

In the ſame paragraph, the author makes mention of ſeveral other acids, which, in certain places, are employed as ſubſtitutes for ordinary vinegar.

Such are verjuice, the acid of milk, that of honey, &c. &c.; though theſe acids, chemically conſidered, are ſomewhat different from thoſe furniſhed by wine, it is no leſs true that they afford great reſources, and that in ſome departments of the republic, where they are principally conſumed, they are in daily uſe, without producing any bad effects upon the health of the inhabitants.

The fourth paragraph is entitled, *Of the Acids uſed as Subſtitutes for Vinegar.*

The greater part of the vegetable acids ſtands in the ſame predicament with thoſe that have been treated of in the preceding paragraphs. Though eſſentially different from wine-vinegar, they have, in certain reſpects, ſo great an analogy with the latter, that people have not heſitated to make uſe of them in its ſtead. It is for this purpoſe, undoubtedly, that the juice of the currant, barberry, &c. are expreſsly ſubjected to the acetous fermentation. The liquors procured by theſe means afford very uſeful ſubſtitutes for vinegar; but they have the diſadvantage that they will not keep. In general they ſoon become covered with mould, ſoon after they have been prepared, and at length are entirely decompoſed.

Before the revolution, vinegar formed a very important article of commerce with certain nations; the Dutch in particular carried on a very conſiderable traffic with it. The vinegars which they manufactured were exported to their colonial poſſeſſions, and, as they were of good quality, they bore long voyages without ſpoiling.

Citizen Parmentier imagines that this branch of commerce might alſo become very productive in the *Department de la Seine*, and that the inhabitants, by their commercial genius, might eaſily increaſe their exports, and thus add to the great advantages which they derive from their geographical poſition.

The manner of preſerving vinegar forms the ſubject of the fifth paragraph.

Vinegar, be it ever ſo well prepared, is ſubject to the lot of all compound fluids; namely, that at the end of a certain period it undergoes ſenſible alterations.

There are however means by which theſe alterations may be retarded; they conſiſt in defending the vinegar againſt the influence of the external air, by keeping it in proper veſſels, well cloſed and placed in a cool ſituation.

Its alteration may alſo be retarded by depriving it of a portion of the water which it contains; for which purpoſe nothing more is neceſſary than to let it boil for an inſtant; but the veſſels which are employed in this operation muſt not be made of copper.

The proceſs propoſed by Scheele, with a ſimilar intention, is very ſimple: it conſiſts in filling, with this acid, glaſs veſſels, which are placed in boilers full of water. The water is then made to boil for a full quarter of an hour, after which the vinegar is taken out, and may then be kept for ſeveral years without undergoing any alteration.

Diſtillation has alſo been recommended as a means of preſerving vinegar; but, beſides that it is a tedious and difficult proceſs, it deprives the acid of the agreeable ſmell and taſte peculiar to it in its natural ſtate, and which one always wiſhes to find in it.

In fact, diſtilled vinegar is not ſuſceptible of alteration, and it is partly on this account, and partly alſo becauſe it contains no ſubſtance foreign from its compoſition, that it is reſerved for chemical operations, and employed in preference to the other in many pharmaceutical preparations.

The ſame is the caſe with vinegar that has been concentrated by freezing. The acid, by this ſimple proceſs, becomes much ſtronger, and may be kept for a greater length of time; but it acquires an empyreumatic ſmell and taſte, which render it unfit for being employed as a ſeaſoning for aliments. This vinegar, like the diſtilled, is almoſt ſolely employed in chemical laboratories.

Finally, ſea ſalt, or muriate of ſoda, which ſome have recommended to be added to vinegar, as being able to preſerve this acid, ſometimes ſucceeds well enough; however it is not without its inconveniences; for the vinegars that contain this ſaline ſubſtance grow turbid, and at length loſe their primitive qualities.

However, this proceſs ought not to be neglected; and though it may not ſucceed quite ſo perfectly as we could wiſh, we may ſtill employ it in certain caſes with advantage, eſpecially if the quantity of ſalt added to the vinegar be not too conſiderable.

The ſigns by which we may diſcover whether the vinegar be good, adulterated, or ſpoiled, form the ſubject of the ſixth paragraph.

Nothing is more common than to meet, in commerce, with vinegars of bad quality. Two cauſes principally contribute to their being in that ſtate: the firſt, that they have been manufactured with weak wines, or ſuch as are already ſpoiled; the ſecond, that they have either been mixed with acrid ſubſtances, ſuch as pimento, &c. or mineral acids, ſuch as the ſulphuric and muriatic, have been added to them.

When the buyer, unacquainted with the fraud, taſtes theſe kinds of vinegar, he imagines that the effect which they produce upon his palate is to be aſcribed to the ſtrength of the vinegar, and frequently that alone is ſufficient to make him conclude that the vinegar is of good quality. How groſsly he is miſtaken is very evident.

However, nothing is more eaſy than to detect ſuch a fraud; it being ſufficient to ſaturate a given quantity of potaſh with the vinegar that is ſuſpected of being adulterated, and to compare the quantity of vinegar that we have been obliged to employ before we could obtain a complete ſaturation with that conſumed in a ſimilar experiment made with vinegar, the good quality of which we are aſſured of.

We ought afterwards to evaporate a portion of this vinegar till a pellicle is formed upon it, and examine if, when it has cooled, it has not depoſited ſome ſaline precipitate. If it has, the form of the cryſtals will ſhew us what ſpecies of acid has been uſed for adulterating the vinegar.

As to the acrid vegetable ſubſtances that may have been mixed with it, they will readily be recognized by their taſte, which will be altogether different from that of vinegar, and which will become the more perceptible the more the acid has been concentrated by evaporation.

In general, vinegar that has not been adulterated, or which has not been ſpoiled by an incipient decompoſition, is readily known by its acid taſte, its tranſparency, and its agreeable ſmell, a ſmell which becomes ſtill more developed when we rub ſome of the vinegar between the hands.

In the ſeventh and eighth paragraphs, the author treats of the uſe of vinegar in preſerving freſh meat, fruits, and eſculent vegetables.

Every one is acquainted with the great utility of vinegar in preſerving fleſh from the change which it ſpeedily undergoes, particularly during the heat of the ſummer; it is alſo known that this acid, which is daily employed in our kitchens, has the property of giving to certain kinds of fleſh meat an agreeable taſte, and rendering them more tender, and conſequently more fit to be eaten: but, in order to produce theſe effects, it is neceſſary that the vinegar ſhould be of good quality; otherwiſe the reſult would be directly contrary to that which we hoped to obtain.

As to the preſervation of fruits and eſculent vegetables in vinegar, it is a practice almoſt univerſally in uſe: but in this caſe alſo it is neceſſary that the vinegar ſhould be good; otherwiſe the fruits become ſoft, and at length unfit to be eaten.

The *aromatic vinegars* form the ſubject of the ninth paragraph.

The author dwells, in this article, upon the property which vinegar poſſeſſes of imbibing the aroma of plants; he mentions ſeveral aromatic vinegars, which are the moſt in uſe, both for the table and the toilet, and he points out the precautions that muſt be taken in order to make them keep for a long time. But this acid alſo imbibes the more active properties of the vegetables, and it is upon this that the art of making medicated vinegars is founded; the method formerly practiſed with the intention of forming ſuch vinegars, by letting the medicinal plants ferment together with the wine, is now known to be grounded in an error.

In the tenth and laſt paragraph, Citizen Parmentier treats of the medicinal and economical uſes of the vinegar itſelf: he ſhews the great utility of this acid in putrid and contagious diſeaſes, whether adminiſtered internally, or applied externally. He quotes, under this head, the regulations by which the marine of France commands the captains of ſhips not to put to ſea without a quantity of vinegar ſufficient for waſhing their decks, cabins, &c. at leaſt once every five days. He proves that it is frequently owing to a ſimilar uſe of vinegar that crews have been preſerved from the diſeaſes prevalent in fleets, and that on this account alone more attention than ever ought to be paid to the execution of the regulations mentioned above.

Finally, the author dwells upon the utility of vinegar in the arts, and the impoſſibility of ſupplying its place by any other known acid.

From the expoſition which we have given, it may be eaſy to ſee that the treatiſe on Vinegar in the *Cours complet d'Agriculture* fulfils all the conditions that were to be deſired in ſuch a treatiſe. If Citizen Parmentier has not thought it neceſſary to treat his ſubject with all the detail of which it was ſuſceptible, it will at leaſt be admitted, that he has dwelt upon thoſe points which it was moſt eſſential to know, and that in this reſpect he has completely fulfilled the views propoſed to themſelves by the authors of the work for which this article was intended. We therefore have no doubt that the labours of Citizen Parmentier will be favourably received, and that, as we have already ſaid, they will form a worthy counterpart to the article on wine by Citizen Chaptal, which, according to the avowal of all who have read and ſtudied it, deſerves to be ranked amongſt the beſt productions of that chemiſt.

VINGORLA, a Dutch ſettlement in the peninſula of Hindooſtan, on the coaſt of Concan, a little N. of Goa. Long. 73. 22. E. Lat 15. 57. N.

VINGORLA ROCKS, rocks lying about ſeven miles from the coaſt of Concan, in the peninſula of Hindooſtan, and 10 miles S.S.W. of the iſland of Melundy, or Sunderdoo. They are poſſeſſed by the Malwaans, a piratical tribe. Long. 73. 16. W. Lat. 15. 52 N.

VINTIMIGLIA, a town of Italy, in the republic of Genoa, with a biſhop's ſee, a ſmall harbour, and a ſtrong caſtle on a high rock. It has been often taken and retaken, and is ſeated on the Mediterranean, at the mouth of the Rotta, 20 miles E.N.E. of Nice, and 70 S.W. of Genoa. Long. 7. 37. E. Lat. 43. 53. N.

VIRE, a town of France, in the department of Calvados, with ſeveral manufactures of coarſe woollen cloths. It is ſeated on the Vire, 30 miles S.E. of Courances, and 150 W. of Paris. Long. 0. 45. W. Lat. 48. 48. N.

VIRGIN ISLANDS, about thirty iſlands and keys in the Weſt Indies, between St. Juan de Puerto Rico and the Leeward Caribbee Iſlands. They were called *Las Virgines* by the Spaniards, in honour of the 11,000 virgins of the legend. They are poſſeſſed by the Engliſh and Danes. In

the firſt diviſion, belonging to the Engliſh, is Tortola, the principal, to which belongs Joſt Van Dyke's and Little Van Dyke's, Guana iſle, with Beef and Thatch Iſlands. In the ſecond diviſion is Virgin Gorda, to which belong Anegada, or Drowned Iſle, Nicker, Prickly Pear, and Muſkito Iſlands, the Commanoes, Scrub and Dog Iſlands, the Fallen City (two rocky iſlets, cloſe together, at a diſtance reſembling ruins), the Round Rock, Ginger, Cooper's Salt Iſland, Peter's Iſland, and the Dead Cheſt. Of the Daniſh diviſion, the principal iſlands are St. Thomas and St. John. Long. from 63. 45. to 64. 55. W. Lat. from 17. 10. to 18. 30. N.

VIRNENBERG, a town and citadel of Weſtphalia, the capital of a county to which it gives name. It is 20 miles W. of Coblentz. Long. 7. 5. E. Lat. 50. 27. N.

VIRTON, a town of Auſtrian Luxemburg, 22 miles W. of Luxemburg. Long. 5. 41. E. Lat. 49. 36. N.

VISAGAPATAM, a town of the peninſula of Hindooſtan, in the Circar of Cicacole, 50 miles S.W. of Cicacole, and 100 N.E. of Rajamundry. Long. 83. 40. E. Lat. 17. 45. N.

VISCHMA, a town of Ruſſia, in the government of Tobolſk, 268 miles S.W. of Tobolſk. Long. 61. 22. E. Lat. 62. 36. N.

VISET, a town of the Netherlands, in the biſhopric of Liege, ſeated on the Maeſe, ſeven miles N. of Liege. Long. 5. 40. E. Lat. 50. 44. N.

VISHNEI-VOLOTCHOK, a town of Ruſſia, in the government of Tver, one of the imperial villages enfranchiſed by Catherine II. It has a canal, which, by uniting the Tverza and the Maſta, connects the inland navigation between the Caſpian and the Baltic; and the inhabitants, raiſed from the ſituation of ſlaves to that of freemen, ſeem to be awakened to a ſenſe of their commercial advantages. The town is divided into regular ſtreets. All the buildings are of wood, except the court of juſtice erected by the late empreſs, and four brick houſes belonging to a rich burgher. It is ſeated on the river Zua, 50 miles N.W. of Tver. Long. 35. 0. E. Lat. 57. 23. N.

VISIAPOUR, or Bejapour, a conſiderable city of the Deccan of Hindooſtan, once the capital of a large kingdom of the ſame name, but now ſubject to the Poonah Mahrattas. It is 136 miles S.E. of Poonah, and 234 S.E. of Bombay. Long. 75. 19. E. Lat. 17. 26. N.

VISOGOROD, a town of Poland, in Maſovia, with a caſtle, ſeated on the Viſtula, 50 miles N.W of Warſaw.

UIST, North and South, two iſlands of the Hebrides, on the W. coaſt of Scotland; each about 20 miles in length, and of conſiderable breadth. They contain about 6,000 inhabitants. Kelp is the ſtaple commodity, of which about 1100 tons are annually manufactured in theſe iſlands. North Uiſt is about 15, and South Uiſt 20 miles W. of the Iſle of Skye.

VITERBO, a town of Italy, in the patrimony of St. Peter, with a biſhop's ſee. It contains 10,000 inhabitants, 16 pariſh-churches, and many palaces and fountains. Near it is a ſpring, ſo hot, that it will boil an egg, and even fleſh. It is ſeated at the foot of a mountain, from the top of which, the city of Rome and the Mediterranean Sea may be ſeen; the latter at the diſtance of near 50 miles. It is 20 miles S.E. of Orvieto, and 35 N. by W. of Rome. Long. 12. 26. E. Lat. 42. 25. N.

VITRE, a town of France, in the department of Iſle and Vilaine. It has a trade in linen cloth, and knit ſtockings and gloves. It is ſeated on the Vilaine, 20 miles N.E. of Rennes, and 52 S.E. of St. Malo. Long. 1. 13. W. Lat. 48. 14. N.

VITRI-LE-BRULE, a village of France, two miles N.E. of Vitri-le-François. It was formerly a conſiderable town, but was burnt (as its name imports) by Lewis VII.

VITRI-LE-FRANCOIS, a conſiderable town of France, in the department of Marne. It is well built, though the houſes are of wood; and there is a fine ſquare, in which the church ſtands. It has a great trade, particularly in corn; and is ſeated on the Marne, 15 miles S.E. of Chalons, and 100 E. of Paris. Long. 4. 38. E. Lat. 48. 44. N.

VITRING, a town of Germany, in the duchy of Carinthia, with an abbey of Ciſtertians. It is ſituate on a lake, called the Wordtſee, four miles S.W. of Clagenfurt.

VITRIOL, the name by which ſalts, produced by combining vitriolic (now called *ſulphuric*) acid with different metals, has heretofore been diſtinguiſhed. Thus we had *blue* vitriol, *green* vitriol, &c. according to the colour of the ſalt. The chemiſts of the new ſchool call theſe ſubſtances *ſulphates*, as the *ſulphate* of copper; *ſulphate* of iron, &c. (ſee Table of Nomenclate, Chemistry); but the London College of Phyſicians call theſe ſubſtances by the name of *vitriolated*, and denominate the foregoing combinations, *vitriolated* copper, *vitriolated* iron, &c.

VITTEAUX, a town of France, in the department of Côte d'Or, ſeated on the river Braine, among the mountains, where there are quarries of marble, 12 miles S.E. of Semur, and 27 W. of Dijon. Long. 4. 27. E. Lat. 57. 20. N.

VITTORIA, or Victoria, a conſiderable town of Spain, capital of the province of Alaba, in Biſcay. It is ſurrounded by double walls, and in the principal ſquare are the town-houſe, two convents, and a fine fountain. The large ſtreets are bordered with fine trees, which are a good defence againſt the heat of the ſun. It has a great trade in hardware, particularly in ſword-blades, which are made here in large quantities. It is ſeated on an eminence, at the end of a plain, fertile in corn and grapes, 32 miles S.E. of Bilboa, and 155 N. of Madrid. Long. 2. 56. E. Lat. 42. 55. N.

VIVARAIS, a late ſmall province of France, part of that of Dauphiny, and now included in the department of Ardeche.

VIVERO, a town of Spain, in Galicia, ſeated at the foot of a ſteep mountain, near the river Landrova, whoſe mouth forms a large harbour on the Atlantic, 30 miles N.W. of Mondonnedo. Long. 7. 34. W. Lat. 43. 50. N.

VIVIERS, a town of France, in the department of Ardeche, with a biſhop's ſee. It is ſeated among rocks (on one of which the cathedral is built) on the river Rhone, 20 miles N. of Orange, and 70 N.E. of Montpellier. Long. 4. 46. E. Lat. 44. 20. N.

VIZA, a town of Turkey in Europe, in Romania, with a Greek archbiſhop's ſee. It is ſeated at the foot of a mountain, at the ſource of the river Glicenero.

UKENSKOI, a town of Ruſſia, in the government of Tobolſk, ſituate at the confluence of the Irtiſch and Oby, 196 miles N. of Tobolſk. Long. 69. 15. E. Lat. 61. 10. N.

ULEA, or Ulaborg, a ſea-port of Sweden, in Eaſt Bothnia. It is the largeſt town in Eaſt Bothnia, and ſituate at the mouth of a river of the ſame name, 320 miles N. of Abo. Long. 22. 20. E. Lat. 65. 40. N.

ULIERBECK, a town of Auſtrian Brabant, two miles E. of Louvain, and 11 S.E. of Mechlin. Long. 4. 52. E. Lat. 50. 53. N.

ULLSWATER, a lake of Weſtmoreland, 10 miles N. of Ambleſide, and 14 S.W. of Penrith. It is eight miles long, and abounds with char, and a variety of other fiſh. The navigators of this lake find much amuſement by diſcharging guns, or ſmall cannon, in certain ſtations. The report is reverberated from rock to rock, promontory, cavern, and hill, with every variety of ſound; now dying away upon the ear, and again returning like peals of thunder, and thus re-echoed ſeven times diſtinctly.

ULMEN, a town of Germany, in the archbiſhopric of Mentz, 30 miles N.E. of Treves. Long. 7. 8. E. Lat. 50. 7. N.

ULOTHO, or VLOTHOW, a town of Weſtphalia, in the county of Ravenſberg, near which is a medical ſpring. It is ſix miles S. of Minden.

ULRICSHAMN, a town in Sweden, in Weſt Gothland, formerly called Bogeſund, the preſent name being given it, in 1741, in compliment to Queen Ulrica Eleanora. It is 24 miles W. of Jonkioping, and 47 E. of Gotheborg. Long. 14. 22. E. Lat. 57. 10. N.

ULTZEN, or VELTZEN, a town of Lower Saxony, in the duchy of Lunenburg. It was formerly a hanſeatic town, has now a conſiderable trade in wool, and is ſeated on the Ilmenau, 22 miles S. of Lunenburg. Long. 10. 38. E. Lat. 52. 55. N.

ULVERSTONE, a town in Lancaſhire, with a market on Monday. The country people call it Ouſton, and it is ſeated at the foot of a ſwift deſcent of hills to the S.E. near a ſhallow arm of the Iriſh Sea. It is the port of the diſtrict of Furneſs. The principal inns are kept by the guides, who regularly paſs the ſands, to and from Lancaſter, every Sunday, Tueſday, and Friday. It is 18 miles N.W. of Lancaſter, and 267 N.N.W. of London. Long. 3. 12. W. Lat. 54. 14. N.

UMA, or UMEA, a town of Sweden, in Weſt Bothnia, ſeated on the river Uma, in the gulf of Bothnia. The houſes are built of wood; and it was twice burnt by the Ruſſians. It is the reſidence of the governor of Weſt Bothnia, and 280 miles N. of Stockholm. Long. 19. 9. E. Lat. 63. 58. N.

UMAGO, a ſea-port of Venetian Iſtria, ſeated between the gulf Largona and the mouth of the river Quieto.

UMBRIATICO, a town of Naples, in Calabria Citeriore, with a biſhop's ſee, though now reduced to a ſmall place. It is ſeated on the Lipuda, 15 miles N. by W. of St. Severina. Long. 17. 10. E. Lat. 38. 29. N.

UNDERSWEN, or UNDERSEEN, a handſome town of Switzerland, in the canton of Bern, near which is the famous cavern of St. Pat. It is ſeated on the lake Thun, 25 miles S.S.E. of Bern, and 30 S.E. of Friburg. Long. 7. 32. E. Lat. 46. 32. N.

UNGHWAR, a town of Upper Hungary, capital of a county of the ſame name, in an iſland formed by the Ungh. It is ſtrong from its ſituation among the mountains of Crapach, and is 47 miles E. of Caſſovia. Long. 22. 23. E. Lat. 48. 48. N.

UNION (*Encycl.*). This term ceaſes to be applied excluſively to the political connection between England and Scotland; Ireland having, in 1800, experienced a ſimilar fate. In Plate 51. we have given a ſketch of *the enſigns armorial of the united kingdom of Great Britain and Ireland*, as ſettled by the king in council. Theſe are quarterly, firſt and fourth, England; ſecond, Scotland; third, Ireland: on an eſcutcheon of pretence, the arms of his majeſty's German dominions, enſigned with the electoral bonnet.

The union badges—the roſe, thiſtle, and ſhamrock—iſſuant from the ſame ſtalk; namely, the roſe between the thiſtle and ſhamrock, and alternated by the roſe between the ſhamrock and thiſtle; both enſigned with the imperial crown.—See the plate.

The union flag combines the ſaltiers of St. Andrew and St. Patrick, ſurmounted by the croſs of St. George, as repreſented alſo in the plate.

The creſt of Ireland is a tower, triple-towered proper; in the portal a hart, lodged, argent, attired, and hooſed, or.

The badge of Ireland is a ſhamrock enſigned with the imperial crown.

The badge of the ſhamrock to be within the collar of St. Patrick, enſigned with the imperial crown.

The ſtyle of his majeſty is as follows:—"*Georgius Tertius Dei Gratia Britanniarum Rex, Fidei Defenſor, et in Terrâ Eccleſiæ Anglicanæ et Hibernicæ ſupremum Caput.*" In Engliſh, "*George the Third, by the Grace of God, of the united Kingdom of Great Britain and Ireland, King, Defender of the Faith, and of the united Church of England and Ireland on Earth, ſupreme Head.*"

The ſupporters, creſt, and crown, remain without any alteration.

UNION, the county town of Fayette, in Pennſylvania, 14 miles from the Monongohela, and 58 S. of Pittſburg. Long. 79. 48. W. Lat. 39. 54. N.

UNNA, a town of Weſtphalia, in the county of March, formerly a conſiderable Hanſeatic town. It is ſeated on a brook called Kottelbeck, 10 miles N.E. of Dortmund, and 35 S. of Munſter. Long. 7. 49. E. Lat. 51. 28. N.

UNNA, a river of Turkey in Europe, which runs through Croatia, paſſes by Wihitſch and Dubitza, and falls into the Save.

UNNARY, a town of Sweden, in the province of Smoland, 43 miles W. of Wexio.

UNST, the moſt remote of the Shetland Iſlands, extending beyond 61° N. lat. It is eight miles long, and four broad.

UNTERSEEN, a town of Switzerland, in the canton of Bern, ſituate between the lakes of Brientz and Thun, 23 miles S.S.W. of Lucern, and 26 S.E. of Bern. Long. 7. 28. E. Lat. 46. 35. N.

UNZA, or UNSHA, a town of Ruſſia, in a province of the ſame name, in the government of Koſtroma. It is ſituate on the river Unza, 92 miles E.N.E. of Koſtroma. Long. 44. 15. E. Lat. 57. 56. N.

VOERDEN, a town of the United Provinces, in Holland. It was taken by the French in 1672 and 1795. It is ſeated on the Rhine, 10 miles W. of Utrecht, and 20 S. of Amſterdam. Long. 4. 58. E. Lat. 52. 6. N.

VOGHERA, a fortified town of Italy, in the duchy of Milan and territory of Pavia. It is ſeated on the Staffora, 14 miles S.S.W. of Pavia, and 30 S. by W. of Milan. Long. 9. 10. E. Lat. 44. 59. N.

VOGLABRUCK, a town of the archduchy of Auſtria, which enjoys the privilege of granting protection to all ſlaves; and its burghers and merchants, together with their wares, are toll-free through all the Auſtrian countries. It is 27 miles S.S.E. of Paſſau. Long. 13. 40. E. Lat. 48. 1. N.

VOID, a town of France, in the department of Meurthe, ſeated on a rivulet of the ſame name, 10 miles from Toul.

VOIGTLAND, a territory of Upper Saxony, one of the four circles of the marquiſate of Miſnia; bounded on the E. by Bohemia, on the N. by the duchy of Altenburg, and on the W. by Thuringia and Franconia. Plawen is the capital.

VOIGTSBERG, a town and citadel of Upper Saxony, belonging to the Elector of Saxony, 18 miles S.S.W. of Zurickau.

VOKELMARK, or WOLICKMARCK, a town of Germany, in Carinthia, ſeated on the Drave, 26 miles S.E. of Clagenfurt. Long. 14. 56. E. Lat. 46. 45. N.

VOLANO, a ſea-port of Italy, in the Ferrareſe, ſeated on the gulf of Venice, at one of the mouths of the Po, 40 miles E. of Ferrara. Long. 12. 36. E. Lat. 44. 52. N.

VOLCANO, one of the moſt conſiderable of the Lipari Iſlands, in the Mediterranean, lying S. of the iſland of Lipari, from which it is ſeparated by a deep channel, a mile and a half broad. It is 12 miles in circumference, and is a volcano, in the form of a broken cone, but now emits ſmoke only. Volcano, as well as all the reſt of theſe iſlands, is ſuppoſed to have been originally the work of ſubterranean fire. Of the production of this iſland, in particular, Fazzello ſays, that it happened in the early time of the Roman republic, and is recorded by Pliny and others.

VOLGA, the largeſt river in Europe, which has its ſource in two ſmall lakes, in the government of Pleſkof, in Ruſſia, about 80 miles W. of Tver. It begins to be navigable a few miles above that town, and is conſiderably augmented here by the junction of the Tverza, which is a broader, deeper, and more rapid river. By means of the Tverza, a communication is made between the Volga and the Neva, or, in other words, between the Caſpian and the Baltic. This river waters ſome of the fineſt provinces in the Ruſſian empire, paſſes by Yaroſlaf, Koſtroma, Niſhnei-Novogorod, Kaſan, Simbirſk, and Saratof, entering the Caſpian Sea, by ſeveral mouths, below Aſtracan.

VOLHYNIA, a palatinate of Ruſſian Poland, 300 miles long and 150 broad; bounded on the N. by Poleſia, on the E. by Kief, on the S. by Podolia, and on the W. by Auſtrian Poland. It conſiſts chiefly of plains watered by a great number of rivers. Lucko is the capital.

VOLLENHOVEN, a town of the United Provinces, in Overyſſel, capital of a territory of the ſame name, with a caſtle. It is ſeated on the Zuider Zee, eight miles S.W. of Steenwich, and 12 N.W. of Zwol. Long. 5. 42. E. Lat. 52. 44. N.

VOLO, a town of Turkey in Europe, in Janna, with a citadel and a fort. It was taken, and almoſt ruined, in 1655, by the Venetians. It is ſeated on a gulf of the ſame name, where there is a good harbour, 30 miles S.E. of Lariſſa. Long. 22. 55. E. Lat. 39. 21. N.

VOLODIMIR, or VLADIMIR, a government of Ruſſia, formerly a province of the government of Moſcow. The ſoil is extremely fertile, and in the foreſts are innumerable ſwarms of bees.

VOLODIMIR, or VLADIMIR, a town of Ruſſia, capital of a government of the ſame name, and once the metropolis of the empire. It is ſeated on the Kliaſma, 110 miles E. by N. of Moſcow.

VOLOGDA, a government of Ruſſia, divided into the two provinces of Vologda and Veliki-Uſtiug. It is a marſhy country, full of foreſts, lakes, and rivers, and noted for its fine wool.

VOLOGDA, a town of Ruſſia, capital of a province of the ſame name, and the ſee of an archbiſhop. It has a magnificent cathedral, ſeveral churches, a caſtle, and a fortreſs; and carries on a conſiderable trade. It is ſeated in a marſh, on the river Vologda, which falls into the Sukhona, 257 miles N. by E. of Moſcow. Long. 39. 46. E. Lat. 59. 20. N.

VOLSK, a town of Ruſſia, in the government of Saratof, ſituate on the Volga, 76 miles N.E. of Saratof. Long. 47. 45. E. Lat. 52. 15. N.

VOLTA, a river of Guinea, which runs from N. to S. and falls into the Atlantic Ocean, E. of Acra.

VOLTERRA, a town of Tuſcany, in the territory of Piſa, with a biſhop's ſee. It is ſurrounded by walls, contains ſeveral antiquities, is noted for its medicinal waters, and is ſeated on a mountain, 30 miles S.W. of Florence, and 32 S.E. of Piſa. Long. 10. 42. E. Lat. 43. 26. N.

VOLTRI, a town of Italy, in the Genoeſe, near which the Auſtrians were defeated by the French in 1796. It is ſix miles W. of Genoa.

VOLTURNO, a river of Naples, which riſes in the Apennines, paſſes by Iſernia and Capua, and falls into the gulf of Gaieta.

VOLTURARA, a town of Naples, in Capitanata, with a biſhop's ſee. It is ſeated at the foot of the Apennines, 20 miles W. of Lucera, and 52 N.E. of Naples. Long. 15. 14. E. Lat. 41. 26. N.

VOLVIC, a town of France, in the department of Puy de Dome. Here are immenſe quarries, formed by a current of lavas, which furniſh materials for the buildings of the adjacent towns. The ſculptors have employed no other for the ſtatues in the churches, which are all of a black colour. Volvic is two miles from Riom.

VOORN, a fort of Dutch Guelderland, on an iſland formed by the junction of the Wahal and the Maeſe, at the E. end of the Bommel Waert.

VOORNLAND, a territory of the United Provinces, anciently part of Zealand. It conſiſts of the iſlands of Voorn, Goree, and Overflackee.

VORALBERG, or VORARLBERG, a diſtrict of Upper Auſtria; bounded on the W. by the lake of Conſtance, on the E. by the mountains of Arlberg, which ſeparates it from Tyrol, on the S. by the country of the Griſons, and on the N. by Suabia. It compriſes the four counties of Feldkirch, Bregentz, Pludentz, and Sonnaberg.

VORDEN, a town of Weſtphalia, in the biſhopric of Oſnaburg, 10 miles E.N.E. of Oſnaburg. Long. 8. 24. E. Lat. 52. 20. N.

VORINGEN, a town of Suabia, in the principality of Hohenzollern, ſituate on the Lauchart, 10 miles S.E. of Hohenzollern. Long. 9. 12. E. Lat. 48. 15. N.

VORONETZ, a government of Ruſſia, the capital of which, of the ſame name, is ſeated on the Voronetz, below its junction with the Don, 217 miles S. by E. of Moſcow. Long. 39. 14. E. Lat. 51. 36. N.

VOSGES, a department of France, including that part of Lorrain, which was lately a province of the ſame name. It is ſo called from a chain of mountains, covered with wood, that ſeparates this department from the department of Upper Saone and Upper Rhine.

VOU-HOU-HIEN, a city of China, in the province of Kiang-nan, and juriſdiction of Tay-ping-fou; the moſt conſiderable, in point of riches, in that juriſdiction. It is 52 miles S.W. of Tay-ping-fou.

VOUILLE, a village of France, in the department of Vienne, 10 miles W. of Poitiers. Here Clovis gained a battle, in 507, againſt Alaric, king of the Viſigoths, which extended the French empire from the Loire to the Pyrenées.

VOU-TCHANG-FOU, the capital of the province of Hou-quang, in China; the rendezvous, as it were, of all the commercial people in the empire. As every branch of trade is carried on here, its port, ſeated on the Yang-tſe-kiang, is always crowded with veſſels; the river being ſometimes covered with them to the diſtance of two leagues. The beautiful cryſtal found in its mountains, the plentiful crops of fine tea, and the prodigious ſale of the bamboo paper made here, contribute no leſs to make it famous than the continual influx of ſtrangers. Its extent is compared to that of Paris. Its diſtrict contains one city of the ſecond claſs, nine of the third, a fortified town, and ſeveral fortreſſes. It is 875 miles S. of Pekin. Long. 112. 25. E. Lat. 30. 30. N.

VOU-TCHEOU-FOU, or FOU-TCHEOU-FOU, a city of China, in the province of Kiang-ſi, formerly one of the moſt beautiful in the empire; but, ſince the invaſion of the Tartars, it has been a heap of ruins, which, however, ſtill convey ſome idea of its ancient magnificence. Its diſtrict contains ſix cities of the third claſs. It is 250 miles S. by W. of Nanking. Long. 116. 25. E. Lat. 27. 30. N.

UPPINGHAM, a town of Rutlandſhire, with a market on Wedneſday; ſeated on an eminence, ſix miles S. of Oakham, and 90 N. by W. of London. Long. 0. 45. W. Lat. 52. 36. N.

UPTON, a town in Worceſterſhire, with a market on Thurſday; ſeated on the Severn, 11 miles S. of Worceſter, and 109 W.N.W. of London. Long. 1. 55. W. Lat. 51. 59. N.

URACH, a town of Suabia, in the duchy of Wirtemburg. Here are conſiderable manufactures of damaſk and other linens. It is 21 miles S.S.E. of Stutgard, and 24 W. of Ulm. Long 9. 15. E. Lat. 48. 27. N.

URAL, a river of Ruſſia, which riſes in Mount Caucaſus, and watering Orenburg, Uralſk, and Gurief, falls by three mouths into the Caſpian Sea. See the next article.

URALIAN COSSACS, a Tartar tribe that inhabit the Ruſſian province of Orenburg, on the S. ſide of the Ural. Theſe Coſſacs are deſcended from thoſe of the Don; and are a valiant race. They profeſs the Greek religion; but there are diſſenters from the eſtabliſhed religion, whom the Ruſſians called *Roſkolniki*, or Separatiſts, and who ſtyle themſelves *Staroverſki*, or Old Believers. Theſe conſider the ſervice of the eſtabliſhed church as profane, and have their own prieſts and ceremonies. The Uralian Coſſacs are all enthuſiaſts for the ancient ritual, and prize their beards almoſt equal to their lives. A Ruſſian officer having order a number of Coſſac recruits to be publicly ſhaved in the town of Yaitſk, in 1771, this wanton inſult excited an inſurrection, which was ſuppreſſed for a time; but, in 1773, the impoſtor Pugatchef, having aſſumed the name of Peter III. appeared among them, and, taking advantage of this circumſtance, rouſed them once more into open rebellion. This being ſuppreſſed by the defeat and execution of the impoſtor, in order to extinguiſh all remembrance of this rebellion, the river Yaik was called the Ural; the Yaik Coſſacs were denominated Uralian Coſſacs; and the town of Yaitſk was named Uralſk. Theſe Coſſacs are very rich, in conſequence of their fiſheries in the Caſpian Sea. Their principal fiſhery is for ſturgeons and beluga, whoſe roe ſupplies large quantities of caviare; and the fiſh, chiefly ſalted and dried, afford a conſiderable article of conſumption in the Ruſſian empire.

URALSK, a town of Ruſſia, in the government of Caucaſus and province of Orenburg. It was formerly called Yaitſk (ſee the preceding article), and is ſeated on the river Ural, 375 miles N.N.E. of Aſtracan. Long. 50. 10. E. Lat. 52. 0. N.

URANIENBURGH, once a magnificent caſtle of Denmark, in the iſland of Huen. It was built by Tycho Brahe, a celebrated aſtronomer, who called it Uranienburgh, or Caſtle of the Heavens, and here made his obſervations. It is now in ruins. Long. 12. 52. E. Lat. 55. 54. N.

URBANEA, a town of Italy, in the duchy of Urbino, with a biſhop's ſee. It was built by Pope Urban VIII. on the river Metro, 12 miles S. of Urbino. Long. 12. 40. E. Lat. 43. 34. N.

URBANNA, a town of Virginia, on the river Rappahannoc, 70 miles N.E. of Richmond.

URBINO, a duchy of Italy, in the Eccleſiaſtical State, 55 miles long and 45 broad; bounded on the N. by the gulf of Venice, on the S. by Perugino and Spoletto, on the E. by Ancona, and on the W. by Tuſcany and Romagna. The air is not very wholeſome, nor is the ſoil fertile.

URBINO, a town of Italy, capital of the duchy of Urbino, with a citadel, an archbiſhop's ſee, and a palace, where the dukes formerly reſided. Great quantities of fine earthen ware are made here; and it is famous for being the birth-place of the illuſtrious painter Raphael. It was taken by the French in 1796. It is ſeated on a mountain, between the rivers Metro and Foglia, 18 miles S. of Rimini, 58 E. of Florence, and 120 N.E. of Rome. Long. 12. 40. E. Lat. 43 46. N.

VREDEN, a town of Weſtphalia, in the biſhopric of Munſter, 26 miles W.N.W. of Munſter, and 26 S.W. of Bentheim. Long. 7. 8. E. Lat. 52. 8. N.

URGANTZ, or JURGANTZ, a town of the country of the Turcomans, formerly a conſiderable place, four miles in circumference, but now in ruins, and no public buildings remain but a moſque. It is 240 miles E. of the Caſpian Sea, and 70 S. of the lake Aral. Long. 60. 25. E. Lat. 40. 55. N.

URGEL, a town of Spain, in Catalonia, capital of a county of the ſame name, with a biſhop's ſee. It is ſeated on the river Sagra, in a fertile plain, ſurrounded by mountains, planted with vineyards, 60 miles W. of Perpignan, and 75 N. by W. of Barcelona. Long. 1. 44. E. Lat. 42. 32. N.

URI, the moſt ſouthern canton of Switzerland, and the fourth in rank. It is 30 miles long and 12 broad; bounded on the N. by the canton of Schweitz and the Lake of the Four Cantons, on the E. by the country of the Griſons and the canton of Glarus, on the S. by the bailiwics of Italy, and on the W. by the cantons of Underwalden and Bern. See SCHWEITZ.

URMUND, a town of Weſtphalia, in the duchy of Juliers, 10 miles N.N.E. of Maeſtricht.

URSEL, a town of Germany, in the circle of Upper Rhine and county of Konigſtein, five miles E.N.E. of Konigſtein, and 18 N.E. of Mentz. Long. 8. 28. E. Lat. 50 9. N.

URSEREN, a town of Switzerland, in the canton of Uri, ſituate on the Reuſs, in a valley to which it gives name, 17 miles S S.E. of Altorf. Long. 11. 20. E. Lat. 49. 8. N.

URSITZ, St. a town of Switzerland, in the biſhopric of Baſle, capital of an extenſive and populous though hilly bailiwic of the ſame name, in which ſteel is manufactured with great ſucceſs. The town is indebted for its origin to a hermitage, built in the ſeventh century by St. Urſinius. It is ſeated on the Doubs, over which is a ſtone bridge, ſeven miles S. of Porentru.

USBEC TARTARY, a vaſt country of Weſtern Tartary, bounded on the N. by the country of the Kalmucks, on the E. by Thibet, on the S. by Hindooſtan, and on the W. by Perſia and the Caſpian Sea. Theſe Tartars are divided into ſeveral tribes, governed by their reſpective khans, or princes. When under one ſovereign, they were the moſt powerful of all the Tartarian nations. The principal khans pride themſelves in being deſcended from Tamerlane, whoſe birth-place was the ancient city of Samarcand, the preſent capital of the country. The Uſbecs, in their perſons, are ſaid to have better complexions and more engaging features than the Kalmucs. Their religion is Mahometaniſm; and they differ, in general, very little from the people of the northern provinces of Hindooſtan.

USEDOM, an iſland of Pruſſian Pomerania, at the mouth of the river Oder, in the Baltic Sea, between which and the iſland of Wollin, is a paſſage called the Swin. It had formerly a conſiderable town of the ſame name, which was almoſt reduced to aſhes in 1473. Long. 14. 11. E. Lat. 54. 6. N.

USERCHE, a town of France, in the department of Correze, ſeated on a ſteep craggy rock, at the foot of which flows the Vezere, 37 miles S.E. of Limoges, and 217 S. of Paris. Long. 1. 37. E. Lat. 45. 27. N.

USINGEN, a town of Germany, in the circle of Upper Rhine and principality of Naſſau Weilburg, 22 miles N.E. of Mentz. Long. 8. 25. E. Lat. 50. 10. N.

USK, a town in Monmouthſhire, with a market on Monday; ſeated on the river Uſk, 12 miles S.W. of Monmouth, and 140 W. by N. of London. Long. 2. 56. W. Lat. 51. 41. N.

USSEL, a town of France, in the department of Correze, 32 miles N E. of Tulles. Long. 2. 15. E. Lat. 45. 32. N.

USTANIO, a town of Italy, in the Cremoneſe, ſeated on the Oglio, 12 miles N.E. of Cremona. Long. 10. 8. E. Lat. 45. 17. N.

USTARITZ, a town of France, in the department of

Lower Pyrenées, ſix miles S. of Bayonne. Long. 1. 30. W. Lat. 43. 23. N.

USTIUG, a town of Ruſſia, in the government of Vologda, and capital of the province of Veliki-Uſtiug. It is ſeated on the Sukhona, 464 miles N.E. of Moſcow. Long. 16. 30. E. Lat. 60. 56. N.

UTOXETER, a town in Staffordſhire, with a market on Wedneſday; ſeated on a riſing ground, near the river Dove, 13 miles N.E. of Stafford, and 136 N.N W. of London. Long. 1. 50. W. Lat. 53. 10. N.

UTRERA, a town of Spain, in the province of Seville, 20 miles S. of Seville. Long. 5. 20. W. Lat. 37. 12. N.

UTZNACH, a town of Switzerland, in a baliwic belonging to the cantons of Schweitz and Glarus. It was almoſt entirely burnt in 1762, but has ſince been elegantly rebuilt. It is three miles E. from the lake of Zuric, and 29 S.E. of the city of that name.

VURLA, a ſea-port of Turkey in Aſia, in Natolia, ſituate on the S. ſide of the gulf of Smyrna, on a bay to which it gives name, 21 miles W. of Smyrna. Long. 27. 58. E. Lat. 38. 27. N.

UXBRIDGE, a corporate town in Middleſex, with a market on Thurſday. The Coln runs through it in two ſtreams, and over the main ſtream is a ſtone bridge. A treaty was carried on here between Charles I. and the parliament, in 1644; and the houſe in which the plenipotentiaries met, is ſtill called the Treaty Houſe. Near this town are the remains of an ancient camp. Uxbridge is 15 miles W. by N. of London. Long. 0. 23. W. Lat. 51. 31. N.

UZEDA, a town of Spain, in New Caſtile, capital of a duchy of the ſame name, with a caſtle. It is ſeated on the Cogolludo, 20 miles N. by W. of Alcala, and 26 N.N.E. of Madrid. Long. 3. 13. W. Lat. 40. 46. N.

UZEL, a town of France, in the department of the North Coaſt, 17 miles S.W. of St. Brieux. Long. 2. 52. W. Lat. 48. 16. N.

UZES, a town of France, in the department of Gard, ſeated in a country abounding in corn, oil, ſilk, and good wine, 12 miles N. of Niſmes, and 20 S.W. of Orange. Long. 4. 27. E. Lat. 44. 2. N.

W

WAI

WAACKHAUSEN, a town of Lower Saxony, in the duchy of Bremen, 12 miles N. of Bremen.

WACHENHEIM, a town of Germany, in the palatinate of the Rhine, 15 miles W. of Manheim, and 31 E. of Deux Ponts. Long. 8. 16. E. Lat. 49. 20. N.

WACHOVIA, a tract of land in North Carolina, ſituate between the rivers Dan and Yadkin, 10 miles S. of Pilot Mountain, in the county of Surrey. It conſiſts of 100,000 acres, purchaſed by the Moravians, in 1751, and named by them from an eſtate of Count Zinzendorf's in Auſtria. In 1755, by an act of aſſembly, it was made a ſeparate pariſh, called Dobb's Pariſh, and it now contains ſeveral flouriſhing ſettlements, of which Salem is the principal.

WACHTENDONCK, a town of Pruſſian Guelderland, ſeated on a moraſs, on the river Niers, five miles S. of Gueldres. Long. 6. 7. E. Lat. 51. 23. N.

WADSTENA, a town of Sweden, in the province of Eaſt Gothland, remarkable for its caſtle, built by Guſtavas Vaſa, in 1544, and inhabited by his ſon Magnus, who was inſane. It is ſeated on the E. ſide of the lake Wetter, 160 miles S.W. of Stockholm. Long. 15. 37. E. Lat. 58. 18. N.

WAGENINGEN, a town of Dutch Guelderland, ſeated on the Leck, 10 miles N.W. of Nimeguen. Long. 5. 31. E. Lat. 52. 0. N.

WAGERIA, or WAGERLAND, a fertile territory in the duchy of Holſtein, 20 miles in length, and 15 in breadth. Lubec is the capital.

WAHREN, a town of Germany, in the duchy of Mecklenburg, ſeated on the lake Malcho, 10 miles S. of Malchin.

WAIHLINGEN, a town of Suabia, in the duchy of Wurtemburg, ſeven miles E.N.E. of Stutgard.

WAINFLEET, a town in Lincolnſhire, with a market on Saturday. It is ſeated near the ſea, in a fenny part of the country, and on the river Witham, 14 miles N.E. of

WAL

Boſton, and 130 N. by E. of London. Long. 0. 20. E. Lat. 53. 10. N.

WAITZEN, or WAITZ, a town of Hungary, with a biſhop's ſee. A large annual fair is kept here. It has frequently been taken by the Turks, and retaken by the Imperialiſts. It is ſituate on the Danube, 72 miles E.S.E. of Preſburg. Long. 18. 38. E. Lat. 47. 29. N.

WALCOT, a village in Lincolnſhire, on the borders of the fens, within one mile of Folkingham. It has a chalybeate ſpring, formerly much frequented.

WALCOUR, a town of the Auſtrian Netherlands, in the county of Namur, between the Meuſe and Sambre. In 1615 it was entirely deſtroyed by fire. The French attempted to take it in 1689, but were defeated, and compelled to retire with great loſs, by the Prince of Waldeck. It is ſeated on the Heura, 12 miles S. of Charleroy, and 27 S.W. of Namur. Long. 4. 30. E. Lat. 50. 10. N.

WALDBURGH, a town of Suabia, in a barony of the ſame name, 24 miles W. of Kempten. Long. 9. 50. E. Lat. 47. 49. N.

WALDECK, a principality of Germany, in the circle of Upper Rhine, 30 miles long and 20 broad; bounded on the E. and S. by Heſſe-Caſſel, and on the W. and N. by Weſtphalia. It is a mountainous country, covered with woods; and has mines of iron, copper, quickſilver, and alum.

WALDECK, a town of Germany, capital of a principality of the ſame name, with a caſtle, ſeated on the Steinbach, 25 miles W.S.W. of Caſſel. Long. 9. 4. E. Lat. 51. 10. N.

WALDENBURG, a town of Upper Saxony, ſituate on the Muldau. The old town of Waldenburg, which is directly oppoſite it on the other ſide of the Muldau, is famous for its brown and white earthen ware. It is nine miles N. of Zwickau, and 44 W. of Dreſden. Long. 12. 30. E. Lat. 50. 49. N.

WALDENBURG, or WALLENBURG, a town of Switzerland, in the canton of Baſle, with a caſtle on a high rock. It is ſeated at the foot of Mount Jura, 15 miles S. of Baſle, and 15 N.E. of Soleure. Long. 7. 35. E. Lat. 47. 22. N.

WALDKIRK, a town of Suabia, in Auſtrian Briſgaw, and in an iſland formed by the river Eltz, five miles from Friburg. Long. 8. 3. E. Lat. 48. 9. N.

WALDSCHUT, a ſtrong town of Suabia, and one of the four Foreſt Towns, ſubject to the houſe of Auſtria. It is ſeated oppoſite the place where the Aar falls into the Rhine at the entrance of the Black Foreſt, eight miles N.E. of Lauffenburg, and 17 W. of Schaffhauſen. Long. 8. 12. E. Lat. 47. 38. N.

WALDSTÆDTE, a name given to the Swiſs cantons of Lucern, Uri, Schweitz, and Underwalden. It ſignifies *Foreſt Towns*; theſe cantons containing a great number of foreſts. This diſtrict muſt not be confounded with the Waldſtædte, or Foreſt Towns of Suabia, which are Lauffenburg, Waldſchut, Seckingen, and Rheinfelden.

WALDSTÆTTER SEE, or LAKE OF THE FOUR CANTONS, one of the fineſt lakes in Switzerland. It conſiſts of three principal branches, called the lakes of Lucern, Schweitz, and Uri. The upper branch, or lake of Lucern, is in the form of a croſs; the ſides of which ſtretch from Kuſſnatcht to Dullenwal, a village near Stantz. It is bounded toward the town by cultivated hills ſloping gradually to the water, contraſted on the oppoſite ſide by an enormous maſs of barren and craggy rocks; Mount Pilate, one of the higheſt mountains in Switzerland, riſing boldly from the lake. Toward the E. of this branch, the lake contracts into a narrow creek, ſcarcely a mile acroſs. Soon after, it again widens, and forms the ſecond branch, or lake of Schweitz; on the W. ſide, the canton of Underwalden, on the E. that of Schweitz. Here the mountains are more lofty, and infinitely varied; ſome covered to the very ſummits with verdure, others perpendicular and craggy; here forming amphitheatres of wood; there jutting into the water in bold promontories. Near Brumen, commences the third branch, or lake of Uri, which takes a S.E. direction. It is deep and narrow, about nine miles long, bordered on both ſides by rocks uncommonly wild and romantic, with foreſt of beech and pine growing down their ſides to the very edge of the water.

WALHOF, a town of the duchy of Courland. In the year 1626 the Poles were defeated near this town by Guſtavus, king of Sweden. It is 34 miles E. of Mittaw. Long. 24. 25. E. Lat. 56. 35. N.

WALKENREID, a town of Upper Saxony, in Thuringia, ſeated on the Sorge, 20 miles S.W. of Halberſtadt. Long. 21. 5. E. Lat. 51. 33. N.

WALLENSTADT, a town of Switzerland, in the canton of Appenzel; incorporated into the bailiwic of Sargans, but enjoying many diſtinct privileges. It derives its exiſtence from the paſſage of the merchandiſe tranſported from Germany, through the country of the Griſons, to Italy. The communication occaſions the frequent reſort of Italian merchants; and that language is underſtood by many of the inhabitants. This town is ſeated at the E. end of a lake of the ſame name, nine miles W. of Sargans, and 15 N.W. of Coire. Long. 9. 14. E. Lat. 47. 1. N.

WALLENSTADT, a lake of Switzerland, 12 miles long and two broad, bounded by high mountains, except to the E. and W. On the ſide of the canton of Glarus, the mountains are chiefly cultivated; enriched with wood or fine meadows; and ſtudded with churches, cottages, and ſmall villages; the Alps of Alarus riſing behind, their tops covered with ſnow. On the other ſide, for the moſt part, the rocks are groteſque, craggy, inacceſſible, and perpendicular: but here and there a few cultivated necks of land are formed at the very edge of the lake, and at the bottom of theſe very rocks; exhibiting a beautiful contraſt to the barrenneſs above and around them. Numberleſs waterfalls, occaſioned by the melting of the ſnows, fall down the ſides of the mountains from a very conſiderable height, and with an almoſt inconceivable variety. Through this lake flows the Mat, which, ſoon after, joining the Linth, forms the river Limmat.

WALLERSTEIN, a town of Suabia, with a caſtle belonging to the counts of Oettingen, ſix miles S.W. of Oettingen.

WALLINGFORD, a borough in Berkſhire, with a market on Thurſday and Saturday. It was once ſurrounded by a wall, and had a caſtle, now demoliſhed, and four churches, of which one only is now in uſe. It is ſeated on the Thames, over which is a ſtone bridge, 14 miles N.W. of Reading, and 46 W. of London. Long. 1. 1. W. Lat. 51. 36. N.

WALLINGFORD, a town of the United States, in Connecticut, 13 miles N.E. of Newhaven.

WALNEY, an iſland on the coaſt of Lancaſhire. It is long and narrow, and ſerves as a bulwark to the hundred of Furneſs, againſt the waves of the Iriſh Sea.

WALPO, a town of Sclavonia, capital of a county of the ſame name, with a caſtle. It is ſeated on the river Walpo, 20 miles W. of Eſſeck, and 110 S. of Buda. Long. 19. 22. E. Lat. 45. 35. N.

WALPOLE (Horace), earl of Orford, was the youngeſt ſon of the celebrated Sir Robert Walpole, afterwards earl of Orford, by his firſt wife, Catherine, daughter of Robert Shorter, eſq. of Bybrook in Kent. He was born 1716; and was educated, firſt at Eton ſchool, and afterwards at Cambridge. At Eton he formed an intimate acquaintance with the celebrated poet Gray; and they went together on the tour of Europe, in the years 1739, 1740, and 1741. Unhappily they had a diſpute in the courſe of their travels, which produced a ſeparation.

Mr. Walpole was able to make a ſplendid figure during the remainder of his deſtined courſe; but poor Gray, after the ſeparation, was obliged to obſerve a very ſevere economy. "This difference aroſe from the difference of their tempers: the latter being, from his earlieſt years, curious, penſive, and philoſophical; the former, gay, lively, and inconſiderate. This, therefore, occaſioned their ſeparation at Reggio. Mr. Gray went before him to Venice; and ſtaying there till he could find means of returning to England, he made the beſt of his way home, repaſſing the Alps, and following almoſt the ſame route, through France, which he had before gone to Italy. In juſtice to the memory of ſo reſpectable a friend, Mr. Walpole (ſays Mr. Maſon, Life of Gray, 4to. p. 41) enjoins me to charge him with the chief blame in their quarrel, confeſſing that more attention, complaiſance, and deference, to a warm friendſhip, and ſuperior judgment and prudence, might have prevented a rupture that gave much uneaſineſs to them both, and a laſting concern to the ſurvivor; though in the year 1744 a reconciliation was effected between them, by a lady who wiſhed well to both parties."—This event took place after their return to England; but the *wound* in their friendſhip left a *ſcar* that never was totally effaced.

We do not, indeed, think that Horace Walpole and Mr. Gray were formed, either by nature or by habits, to continue long in a ſtate of intimate friendſhip. Gray appears to have been a man of the pureſt moral principles, a friend to religion, penſive, and at leaſt ſufficiently conſcious of his in-

tellectual powers and intellectual attainments. Walpole's morality was certainly of a looſer kind; he ſeems to have had no religion; he was often unſeaſonably gay; and to an equal ſhare of intellectual pride, though without equal reaſon, he added the pride of birth. It can therefore excite no ſurpriſe that a man of Gray's independent ſpirit could not bear the ſupercilious freaks of ſuch a character.

Mr. Walpole was nominated to repreſent the city of Norwich, when his father viſited it July 3d, 1733, having acquired conſequence, not only as the ſon of the miniſter, but as having attended the Prince of Orange to England in that year. He was choſen member for Callington, in Cornwall, in the parliament which met June 25th, 1741; was a ſecond time in parliament as repreſentative for Caſtle-Riſing, in Norfolk, in 1747; and for King's Lynn in 1754 and 1761; and at the expiration of that parliament he finally retired from the ſtage of politics, and confined himſelf wholly to literary purſuits. He held to his death the office of uſher of his Majeſty's exchequer, comptroller of the pipe, and clerk of the eſtreats. Upon the death of his nephew, George, third earl of Orford, in 1791, he ſucceeded to the title and eſtates; but that event made ſo little alteration in his mode of living, that we know not whether he ever took his ſeat in the houſe of peers. During almoſt the whole courſe of his life he was the victim of the gout, which at laſt reduced him to a cripple: but it never impaired his faculties; and, to the very moment of death, his underſtanding ſeemed to bid defiance to the ſhock of nature. He died at his houſe in Berkeley-ſquare, in 1796, having juſt entered his 80th year; and was interred in the family vault at Houghton, in a private manner, agreeably to his particular directions.

Horace, lord Orford, was never married, and, by one of his biographers, his chief miſtreſs through life is ſaid to have been the muſe. It is certain that he devoted the greater part of his life to *belles-lettres* and *virtú*, though he ridiculouſly affected, in his letters to his friends, to deſpiſe learning and learned men, for which he was very properly reprimanded both by Gray and Hume. It was an affectation peculiarly abſurd in him, who was conſtantly publiſhing ſomething, and who wrote with uncommon acrimony againſt all who preſumed to call in queſtion the fidelity of the picture which he had drawn of Richard III. or indeed to controvert any of his opinions. Hence his antipathy to Johnſon, becauſe he was a tory, a Chriſtian, and a rigid moraliſt; whilſt he himſelf was a whig, an infidel, and ſuch a moraliſt as could retail, without bluſhing, all the ſcandalous anecdotes, whether true or falſe, of that auguſt family, from whom he acknowledged his whole fortune to be derived. He had, indeed, another reaſon for diſliking Johnſon. Lord Orford ſhone in converſation, and ſurpaſſed all his contemporaries in that kind of talk, which, without dazzling by its wit, always delighted: while Johnſon, when rouſed, knocked down, as by a flaſh of lightening, his lordſhip, and every one elſe who had the confidence before him to talk profanely. Johnſon's wit was original: Lord Orford's conſiſted of ludicrous ſtories, and of literary and political anecdotes. His works, of which by far the moſt valuable part has long been in the hands of the public, were collected in 1798, and publiſhed in five volumes, 4to. They reſemble his converſation, being rather amuſing than profound or inſtructing.

WALPOLE, a town of the United States, in New Hampſhire, ſituate on Connecticut River, 108 miles W. of Portſmouth.

WALLSALL, a corporate town in Staffordſhire, with a market on Tueſday and Friday. It has ſeveral manufactures in iron, ſuch as nails, bridlebits, ſtirrups, ſpurs, buckles, &c. and is governed by a mayor. It is ſeated on the ſide of a hill, 15 miles S. of Stafford, and 116 N.W. of London. Long. 1. 56. W. Lat. 52. 46. N.

WALSHAM, NORTH, a town in Norfolk, with a market on Tueſday, 10 miles E. of Norwich, and 125 N.N.E. of London. Long. 1. 31. E. Lat. 52. 40. N.

WALTHAM, or BISHOP'S WALTHAM, a town in Hampſhire, with a market on Friday. It obtained this laſt name from a palace of the Biſhop of Wincheſter, once ſituate here; and here are the ruins of an abbey, called by the country people, the Biſhop's Abbey. The ſtatute 9 George I. commonly called the Waltham Black Act, was occaſioned by a party of the inhabitants of this town, who had retired to a recluſe dell in the New Foreſt, whence, being in diſguiſe, or with their faces blacked, they iſſued in the night, committing great depredations, killing deer, ſheep, &c. for their ſubſiſtence. Hence they were called the Waltham Blacks. The place of their retreat was acceſſible only by a ſubterraneaan paſſage: they dreſſed like foreſters, and the croſsbow was their weapon. They were diſperſed, at laſt, by the activity of the neighbouring gentlemen. Waltham is eight miles S. of Wincheſter. and 65 W. by S. of London. Long. 1. 20. W. Lat. 50. 57. N.

WALTHAM ABBEY, or WALTHAM HOLY CROSS, a town in Eſſex, with a market on Tueſday. It received its ſecond appellation from a holy croſs, pretended to have been miraculouſly conveyed here; and it obtained its firſt name from a magnificent abbey, founded, in honour of this croſs, by King Harold, ſome fragments of which remain. Harold, and his two brothers, after the battle of Haſtings, were interred here. A plain ſtone is ſaid to have been laid over him, with this inſcription, Haroldus Infelix; and a ſtone coffin, ſuppoſed to have been his, was diſcovered in the reign of Elizabeth. At Waltham Abbey are ſome gunpowder mills, and ſome manufactures of printed linens and pins. It is ſeated on the river Lea, which here forms ſeveral iſlands, 12 miles N. by E. of London. Long. 0. 3. E. Lat. 51. 42. N.

WALTHAM CROSS, or WEST WALTHAM, a village in Hertfordſhire, which takes its firſt appellation from a croſs erected here by Edward I. in honour of his queen Eleanor; and has its ſecond name from its ſituation W. of Waltham Abbey. It it ſeated near the river Lea, 12 miles N. by E. of London.

WALTHAM ON THE WOULD, a town of Leiceſterſhire, with a market on Thurſday, almoſt diſuſed. It is 19 miles N.E. of Leiceſter, and 113 N. by W. of London. Long. 0. 46. W. Lat. 52. 51. N.

WALTINBRUCH. a town of Suabia, in the duchy of Wurtemburg, ſeated on the river Aich.

WANDERSLEBEN, a town of Upper Saxony, in the principality of Altenburg, nine miles S.W. of Erfurt.

WANDIWASH, a town of Hindooſtan, in the Carnatic, 27 miles S.S.E. of Arcot, and 38 N.N.W. of Pondicherry.

WANGEN, an imperial town of Suabia. The inhabitants are papiſts, and carry on a great trade in paper and hardware. It is ſeated on the Overarg, 17 miles N.E. of Lindau, and 30. E. of Conſtance. Long. 9. 56. E. Lat. 47. 38. N.

WANGEN, a town of Switzerland, capital of the bailiwic of Wangen, in Upper Argau. It is ſeated on the Aar, 10 miles E. of Soleure, and 23 N.N.E. of Bern. Long. 7. 30. E. Lat. 47. 16. N.

WANGEN, a town of France, in the department of Lower Rhine, ſeated on the ſide of a mountain, and ſur-

rounded by a wall. It is eight miles N.W. of Straſburg. Long. 7. 42. E. Lat. 48. 38. N.

WANGFRIED, a town of Germany, in the circle of Upper Rhine and principality of Heſſe Rhinfels, ſituate on the Werra, 13 Miles W. of Mulhauſen, and 30 S.S.E. of Caſſel. Long. 9. 58. E. Lat. 51. 5. N.

WANTAGE, a town of Berkſhire, with a market on Saturday. It is famous for being the birth-place of King Alfred, and is ſeated on a branch of the Ock, 12 miles S. by W. of Oxford, and 60 W. of London. Long. 1. 16. E. Lat. 51. 35. N.

WANTZENAU, a town of France, in the department of Lower Rhine. It was taken by the Auſtrians in October, 1793. It is ſix miles N. of Straſburg.

WANZLEBEN, a town of Lower Saxony, in the principality of Magdeburg, 10 miles W.S.W. of Magdeburg.

WARADIN, GREAT, a ſtrong town of Upper Hungary, capital of a county of the ſame name, with a citadel, and a biſhop's ſee. It was taken by the Turks in 1660, but the Auſtrians retook it in 1692. It is ſeated on the Sebes Keres, 117 miles N.E. of Peterwaradin, and 150 E.S.E. of Buda. Long. 21. 50. E. Lat. 47. 5. N.

WARADIN, LITTLE, a ſtrong town of Sclavonia, capital of a county of the ſame name. It is ſeated on the Drave, 28 miles W.S.W. of Kamiſca, and 34 N. by E. of Zagrad. Long. 16. 15. E. Lat. 46. 48. N.

WARANGOLE (the Arinkill of Feriſhta), once the capital of Golconda, in the Deccan of Hindooſtan. The ſite of it is ſtill evident from the old ramparts, which are amazingly extenſive. A modern fortreſs is conſtructed within it, and is in the poſſeſſion of the Nizam of the Deccan. Its 62 miles N.N.E. of Hydrabad. Long. 79. 30. E. Lat. 18. 6. N.

WARBURG, a ſea-port of Sweden, in the province of Halland, with a caſtle, 30 miles S. of Gottenburg. Long. 11. 46. E. Lat. 57. 12. N.

WARBURG, a town of Germany, in the biſhopric of Paderborn, formerly imperial and hanſeatic. It is ſeated on the Dymel, 20 miles S.E. of Paderborn. Long. 9. 19. E. Lat. 51. 33. N.

WARDE, a town of Denmark, in North Jutland, near the mouth of a river of the ſame name, 15 miles N. of Ripen.

WARDHUYS, a ſea-port of Daniſh Lapland, on a ſmall iſland of the ſame name, near the continent. It has an old fort, where the governor reſides, and is 120 miles S.E. of the North Cape. Long. 31. 6. E. Lat. 70. 22. N.

WARBRIDGE, or WARDBRIDGE, a town in Cornwall, with a market on Saturday. It has a bridge over the river Camel, which is the handſomeſt in the county, and ſupported by 20 arches. It is 13 miles S.W. of Camelford, and 241 W. by S. of London. Long. 5. 9. W. Lat. 50. 36. N.

WAREHAM, a borough and ſea-port in Dorſetſhire, with a market on Saturday. It is ſeated between the Frome and Piddle, at their fall into Lochford Lake, the W. part of Poole harbour. It had ſeveral churches, now reduced to three; alſo a wall and caſtle; but has ſuffered much by the various turns of fortune, and the harbour is almoſt choked up. In 1762, two thirds of the town was deſtroyed by fire, but has been rebuilt. Above the bridge, over the Frome, is a good ſalmon fiſhery; and in the neighbourhood fine tobacco-pipe clay is dug, of which nearly 10,000 tons are annually exported to London, Liverpool, &c. Wareham is governed by a mayor, ſends two members to parliament, and is 20 miles E. of Dorcheſter, and 114 W. by S. of London. Long. 2. 16. W. Lat. 50. 43. N.

WARKA, a town of Poland, in the palatinate of Maſovia, ſeated on the river Pilſa. Long. 21. 15. E. Lat. 51. 35. N.

WARMINSTER, a town in Wiltſhire, with a market on Saturday, ſeated on the ſource of the Willybourn, 22 miles N.W. of Saliſbury, and 97 W. by S. of London. Long. 2. 15. W. Lat. 51. 11. N.

WARNEMUNDE, a ſea-port of Germany, in the duchy of Mecklenburg. The Swedes had a houſe here to take toll; but, in 1710, when their affairs were upon the decline, the Duke of Mecklenburg put a garriſon in it. It is ſeated on the Baltic, at the mouth of the Warne, 26 miles N.E. of Wiſmar. Long. 12. 26. E. Lat. 50. 4. N.

WARNETON, a town of Auſtrian Flanders, on the river Lis, eight miles N.W. of Liſle. Long. 3. 4. E. Lat. 50. 45. N.

WARRINGTON, a town in Lancaſhire, with a market on Wedneſday, and large manufactures of ſailcloth, ſacking, cotton, pins, and glaſs. It is ſeated on the Merſey, over which is a bridge, 18 miles E. of Livepool, and 183 N.N.W. of London. Long. 245. W. Lat. 53. 23. N.

WARRIORE, a town of Hindooſtan, in the Carnatic, 32 miles N.N.E. of Tanjore, and 55 S.S.W. of Pondicherry.

WARTA, a town of Great Poland, in the palatinate of Siradia, ſeated on the river Warta, 12 miles N. of Siradia, and 57 S.E. of Poſnania. Long. 18. 0. E. Lat. 51. 41. N.

WARTENBURG, a town of Sileſia, capital of a lordſhip of the ſame name. In 1742 it was entirely reduced to aſhes, except the caſtle. It is 22 miles N.E. of Breſlaw. Long. 17. 42. E. Lat. 51. 19. N.

WARTON (Joſeph, D. D.), was born either towards the end of the year 1721, or in the beginning of the year 1722. He was the eldeſt ſon of Thomas Warton, B. D. who had been fellow of Magdalen College, Oxford; poetry profeſſor from the year 1718 to 1728, and vicar of Baſingſtoke in Hampſhire, and of Cobham in Surrey. Where the ſubject of this memoir was born we have not learned, though, were we to hazard a conjecture, we would ſay that it was in Oxford, as his father probably reſided in that city during his profeſſorſhip.

Our knowledge of the private hiſtory of Dr. Warton is indeed extremely limited. We do not even know at what ſchool, or in what college, he was educated; though it was probably at Winchester ſchool, and certainly in ſome of the colleges in the univerſity of Oxford. For many years, he was ſucceſſively under and upper maſter of Winchester college; but reſigned the laſt of theſe offices when he found the infirmities of age coming upon him; and was ſucceeded by Dr. Goddard, the preſent excellent maſter. He was likewiſe prebendary of the cathedral church of Winchester, and rector of Wickham in Hampſhire, where he died, aged 78.

His publications are few, but valuable. A ſmall collection of poems without a name, was the firſt of them, and contained the Ode to Fancy, which has been ſo much and ſo deſervedly admired. They were all of them afterwards printed in Dodſley's Collection. He was alſo a conſiderable contributor to the Adventurer, publiſhed by Dr. Hawkeſworth; and all the papers which contain criticiſms on Shakſpeare were written by him and his brother Thomas Warton, the ſubject of the next article.

The firſt volume of his Eſſay on the Life and Writings of Pope was publiſhed, had paſſed through ſeveral editions,

and an interval of between twenty and thirty years had elapſed before he gave a ſecond volume of that elegant and inſtructive work to the world. He had not only meditated, but had collected materials for a literary hiſtory of the age of Leo X.; and propoſals were actually in circulation for a work of that kind; but it is probable that the duties of his ſtation did not leave him the neceſſary leiſure for an undertaking which required years of ſecluſion and independence. His laſt and late work, which he undertook for the booksellers at a very advanced age, was an edition of Pope's Works, that has not altogether ſatisfied the public expectation. He retained, with great propriety indeed, many of the notes of Warburton; but is ſeverely reprehended by the author of the Purſuits of Literature for ſuppreſſing the name of that prelate on his title-page, or including it only, as ſubordinate to his own, in the general expreſſion *others*.

Dr. Warton was cheerful in his temper, convivial in his diſpoſition, of an elegant taſte and lively imagination: with a large portion of ſcholarſhip, and a very general knowledge of the belles-lettres of Europe, it may be preſumed that Dr. Warton poſſeſſed, beyond moſt men, the power of enlivening claſſical ſociety. He was the intimate friend of Dr. Johnſon; was ſeen at the parties of Mrs. Montague, as well as at the table of Sir Joſhua Reynolds, and was an original member of the Literary Club. He poſſeſſed a liberal mind, a generous diſpoſition, and a benevolent heart. He was not only admired for his talents, and his knowledge, but was beloved for thoſe qualities which are the beſt gifts in this imperfect ſtate.

Warton (Thomas), the brother of the preceding, was born in the year 1728. He received, as we have reaſon to believe, the firſt part of his education at Wincheſter; and at the age of 16 was entered a commoner of Trinity College, Oxford, under the tuition of Mr. Geering.

He began his poetical career at an early age. In 1745, he publiſhed five paſtoral eclogues, in which are beautifully deſcribed the miſeries of war to which the ſhepherds of Germany were expoſed. Not long after, in the year 1748, he had full ſcope afforded for the exertion of his genius. It is well known that Jacobite principles were ſuſpected to prevail in the univerſity of Oxford about the time of the rebellion in the year 1745. Soon after its ſuppreſſion, the drunkenneſs and folly of ſome young men gave offence to the court, in conſequence of which a proſecution was inſtituted in the court of King's Bench, and a ſtigma was fixed on the vice-chancellor and ſome other heads of colleges in Oxford. Whilſt this affair was the general ſubject of converſation, Mr. Maſon publiſhed his Iſis, an elegy, in which he adverts to the above-mentioned circumſtances In anſwer to this poem, Mr. Warton, encouraged by Dr. Huddesford, the preſident of his college, publiſhed, in 1749, The Triumph of Iſis, which excelled more in manly expoſtulation and dignity than the poem that produced it did in neatneſs and elegance. With great poetical warmth, and a judicious ſelection of circumſtances, he characteriſes the eminent men who had been educated in Oxford, and draws a ſtriking and animated portrait of Dr. King, the celebrated public orator of that time. The whole poem ſhews the early maturity of his genius, and is finiſhed with happy diligence.

In the year 1751 he ſucceeded to a fellowſhip of his college, and was thus placed in a ſituation eaſy and independent, and particularly congenial with his habits of retirement and ſtudy. In 1753 appeared his Obſervations on The Faery Queene of Spenſer, in 8vo, a work which he corrected, enlarged, and republiſhed, in two volumes crown octavo, in the year 1762. He ſent a copy of the firſt edition to Dr. Johnſon, who, in a letter to him upon the ſubject, expreſſed this handſome compliment: "I now pay you a very honeſt acknowledgement for the advancement of the literature of our native country: you have ſhewn to all, who ſhall hereafter attempt the ſtudy of ancient authors, the way to ſucceſs, by directing them to the peruſal of the books which theſe authors had read."

In 1754 Dr. Johnſon viſited Oxford for the firſt time after he had quitted reſidence there. Much of his time was ſpent with Mr. Warton; and there appeared to have been a conſiderable degree of confidential intercourſe between them upon literary ſubjects, and particularly on their own works. A pleaſing account of this viſit was communicated by Mr. Warton to Mr. Boſwell, afterwards inſerted in his Life of Johnſon.

In 1755 Mr. Warton exerted himſelf to procure for his friend the degree of maſter of arts by diploma from the univerſity of Oxford; an honour which Johnſon eſteemed of great importance to grace the title-page of his dictionary which he was about to publiſh. In 1756 Mr. Warton was elected profeſſor of poetry, which office he held for the uſual term of ten years. His lectures were remarkable for elegance of diction and juſtneſs of obſervation. One of them, on the ſubject of paſtoral poetry, was afterwards prefixed to his edition of Theocritus. In 1758 he contributed to and aſſiſted Dr. Johnſon in the ſubſcription to his edition of Shakſpeare, and furniſhed him with ſome valuable notes. The doctor remarks, in a letter to him, when ſoliciting his further aid, "It will be reputable to my work, and ſuitable to your profeſſorſhip, to have ſomething of yours in my notes."

From the Clarendon preſs, in the year 1766, he publiſhed Anthologiæ Græcæ, a Conſtantino Cephalâ conditæ, Libri tres, in two vols, 12mo. He concludes the learned and claſſical preface to this work, which is replete with accurate remarks on the Greek epigram, in the following words, which mark this publication for his own: "Vereor ut hactenus in plexendis florum corollis otium nimis longum pertraxerim. Proximè ſequetur, cui nunc omnes operas et vires intendo Theocritus. Interea quaſi promulſidem convivii Lectoribus meis elegantias haſce vetuſtatis eruditæ propino."

In 1770 the academical preſs produced his Theocritus, in two vols. 8vo. He undertook this work by the advice of Judge Blackſtone, then fellow of All-Souls College, and an ardent promoter of every publication that was likely to do credit to the Clarendon preſs. This elaborate publication reflects no ſmall credit on the learning, diligence, and taſte of the editor.

In 1771 he was elected a fellow of the Antiquarian Society, and was preſented by the Earl of Lichfield to the ſmall living of Kiddington, in Oxfordſhire, which he held till his death. He likewiſe in this year publiſhed an improved account of "The Life of Sir Thomas Pope, Founder of Trinity College, Oxford. In compoſing theſe memoirs, he beſtowed much labour and reſearch, and ſhewed great judgment in the arrangement of his materials. But poſſibly, in his ardour to pay a debt of gratitude, he has not ſufficiently conſidered what was due to his own fame. The ſame ſtrength of deſcription and vigour of remark would have better ſuited the life of ſome eminently diſtinguiſhed character, and extended the reputation of the author as a biographer beyond the circle of thoſe academical readers who are influenced by the ſame feelings of veneration, reſpect, and gratitude, which prompted Mr. Warton to compoſe this work. The preface contains ſome excellent remarks on biographical writing.

The plan for a hiſtory of Engliſh poetry was laid by Pope, enlarged by Gray: but to bring an original plan nearly to a completion was reſerved for the perſeverance of Warton. In 1774 appeared his firſt volume; in 1778, the ſecond and third; which brings the narrative down to the commencement of the reign of Elizabeth in 1581. This work diſplays the moſt ſingular combination of extraordinary talents and attainments. It unites the deep and minute reſearches of the antiquary with the elegance of the claſſical ſcholar and the ſkill of the practiſed writer. The ſtyle is vigorous and manly; the obſervations acute and juſt; and the views of the ſubject are extenſive and accurate.

In 1777 he collected his poems into an octavo volume, containing miſcellaneous pieces, odes, and ſonnets. This publication may be conſidered in ſome meaſure original; there being only ſeven pieces that had before appeared, and near three times that number which were then printed for the firſt time.

In vindication of the opinion he had given in his ſecond volume of The Hiſtory of Poetry, relative to the ingenious attempt of Chatterton to impoſe upon the public, he produced, in 1782, An Enquiry into the Authenticity of the Poems attributed to Rowley. In this excellent pamphlet the principles of true criticiſm are laid down, an appeal is properly made to the internal evidence of the poems; and upon theſe grounds it is proved, in the moſt ſatisfactory manner, that they could not have been written by a monk of the fourteenth century.

The year 1785 brought him thoſe diſtinctions which were no leſs honourable to thoſe who conferred than to him who received them. He was appointed poet-laureat on the death of Whitehead, and elected Camden profeſſor of ancient hiſtory on the reſignation of Dr. Scott. His inauguration-lecture was delivered in a clear and impreſſive manner from the profeſſorial chair. It contained excellent obſervations on the Latin hiſtorians, and was written in a ſtrong, perſpicuous, and claſſical ſtyle. In his odes, the vigour and brilliancy of his fancy were not proſtituted to an inſipid train of courtly compliments: each preſents an elegant ſpecimen of deſcriptive poetry, and as all of them have only a ſlight relation to the particular occaſion on which they were written, and have always a view to ſome particular and intereſting ſubject, they will be peruſed with pleaſure as long as this ſpecies of compoſition is admired.

He made occaſional journeys to London to attend the Literary Club, of which he was ſome years a member; and to viſit his friends, particularly Sir Joſhua Reynolds. At his houſe he was ſure to meet perſons remarkable for faſhion, elegance, and taſte.

His laſt publication, except his official odes, conſiſted of Milton's ſmaller poems. A quarto edition appeared in 1790, with corrections and additions. The great object of theſe notes is to explain the alluſions of Milton, to trace his imitations, and to illuſtrate his beauties.

Until he reached his ſixty-ſecond year, he continued to enjoy vigorous and uninterrupted health. On being ſeized with the gout, he went to Bath, and flattered himſelf, on his return to college, that he was in a fair way of recovery. But the change that had taken place in his conſtitution was viſible to his friends. On Thurſday, May the 20th, 1790, he paſſed the evening in the common room, and was for ſome time more cheerful than uſual. Between ten and eleven o'clock he was ſtruck with the palſy, and continued inſenſible till his death, which happened the next day at two o'clock. On the 27th, his remains were interred in the college chapel with the moſt diſtinguiſhed academical honours. The inſcription upon the flat ſtone which is placed over his grave contains only an enumeration of his preferments.

The following is a liſt of Mr. Warton's works: 1. "Five Paſtoral Eclogues," 4to. 1745. Reprinted in Pearch's Collection of Poems. 2. "The Pleaſures of Melancholy," written in 1745; firſt printed in Dodſley's Collection, and afterwards in the Collection of Mr. Warton's Poems. 3. "Progreſs of Diſcontent," written in 1746. Firſt printed in the Student, a periodical paper. 4. "The Triumph of Iſis, a Poem," 4to. 1750. 5. "Newmarket, a Satire," folio, 1751. 6. "Ode for Muſic," performed at the theatre in Oxford, 1751. 7. "Obſervations on the Faerie Queene of Spenſer," 8vo. 1754. 8. "Inſcriptionum Metricarum Delectus," 4to. 1758. 9. "A Deſcription of the City, College, and Cathedral, of Wincheſter," 8vo. no date. 10. "The Life of Sir Thomas Pope," in the 5th volume of the Biographia Britannica, republiſhed in 1772. 11. "The Life and literary Remains of Ralph Bathurſt, M.D. Dean of Wells, and Preſident of Trinity College in Oxford," 1761. 12. "A Companion to the Guide, and a Guide to the Companion," 12mo, 1762. 13. "The Oxford Sauſage," in which are ſeveral Poems by Warton. 14. "Anthologiæ Græcæ a Conſtantino Cephalâ conditæ Libri tres," 2 tom. 1766. 15. "Theocritis Syracuſii quæ ſuperſunt, cum Scholiis Græcis," &c. 2 tom. 4to. 1770. 16. "Hiſtory of Engliſh Poetry, from the Cloſe of the 11th to the Commencement of the 18th Century," 4to. vol. I. 1774.; vol. II. 1778.; vol. III. 1781. 17. "Poems," 8vo. 1777. 18. "Specimen of a Hiſtory of Oxfordſhire," 1783. 19. "An Enquiry into the Authenticity of the Poems attributed to Thomas Rowley," 8vo. 1782. 20. "Verſes on Sir J. Reynolds's painted Window in New College Chapel," 4to. 1782. 21. "Poems on ſeveral Occaſions, by John Milton, with Notes critical and explanatory," 8vo. 1785.

WARWICK, a town of the ſtate of Rhode Iſland, the chief town of Kent County. It is ſituate at the head of Narraganſet Bay, eight miles S. of Providence.

WARWICK, a town of Maryland, in Cecil County on the eaſt ſhore of Chefapeak Bay, 57 miles S.W. of Philadelphia.

WARWICKSHIRE, a county of England, 47 miles long and 30 broad; bounded at its N. extremity by a point of Derbyſhire, on the N.W. by Staffordſhire, on the N.E. by Leiceſterſhire, on the W. by Worceſterſhire, on the E. by Northamptonſhire, on the S.W. by Glouceſterſhire, and on the S.E. by Oxfordſhire. It lies partly in the dioceſe of Lichfield and Coventry, and partly in that of Worceſter; contains four hundreds and one liberty, one city, 12 market towns, and 158 pariſhes; and ſends ſix members to parliament. The air is very mild, pleaſant, and healthy. The north part, called the Woodlands, is divided from the ſouth, called the Feldon, by the river Avon; and the ſoil of both is rich and fertile. It produces corn, malt, wood, wool, cheeſe, coal, iron, and limeſtone. The principal rivers are the Avon, Tame, and Arrow. The capital is Warwick, but Birmingham is the largeſt town.

WASHING-MACHINE, an invention calculated to render more expeditious and effectual the neceſſary periodical operation of cleanſing family linen, with the help of ſoap and alkaline ſolutions. Many of theſe have been invented, though few are free from ſome objection or other. We ſhall only, therefore, deſcribe (from the *Domeſtic Encyclopædia*) a waſhing machine that has lately been invented in Germany by M. M. Fiſcher and Kerzig; and which promiſes to be ſuperior to any ſimilar contrivance hitherto ſuggeſted.

In Pl. 54. fig. 1. is a ſection of the waſhing cylinder, with its 16 ladles, projecting four inches; but of theſe ladles only

4 jut out internally, as repreſented by the dotted line *b, b, b, b*. *c*, the iron roller, which is on the outſide, fixed to the bottom of the cylinder, by means of an iron croſs at *d, d, d, d*, with ſcrews or nails: it reſts on the beam *e*, ſo as to be upheld in the four excavated columns or poſts *f, f, f, f*, by the lever *g*, and to be either raiſed or lowered, and afterwards ſecured by the pins *h, h*, according to the greater or leſs depth of water: *i*, the ciſtern, at the ſides of which the four poſts are firmly inſerted.

Fig. 2, is a plan or bird's-eye view of the machine. The laths between the ladles may be here diſtinctly ſeen, together with the roller *c, c*, as it reſts on the beam or ſupporter *e, e, e, e*, and is ſecured by a cap, K: *l*, the boarded floor above the ciſtern or reſervoir of water, on which the perſon ſtands, when the cylinder is to be placed higher or lower.

By means of this excellent contrivance, we underſtand from the inventors, by whom it was firſt uſed for cleanſing the felts in an extenſive paper-mill, that from 14 to 18 ſhirts may be completely waſhed within one hour; and that the friction is far leſs than in performing that operation by the hand; while the foul water is not ſuffered to flow back into the linen, but is continually renewed. If table-cloths, &c. happen to be greaſy, they muſt be whirled round in the machine for the ſpace of from 20 to 30 minutes; when it will be neceſſary to take them out; and, after rubbing them well with ſoap, to expoſe them again to the action of the engine for half an hour, when they will be found thoroughly cleaned. Fine linen may be incloſed in a bag, and waſhed in a ſimilar manner, ſo as to prevent it from being injured by friction. There are, however, two points which ought to be ſtrictly attended to; namely, the agitation of the water ſhould not be too violent; and a ſufficient quantity of foul linen muſt be thrown in at a time, in order to amount to ſuch weight as will cauſe it to deſcend, after having been carried to the uppermoſt part of the cylinder. The only obſtacle to the general introduction of this machine is, that it cannot be adopted in thoſe ſituations which are not provided with a current or ſtream of water to work it; but, wherever a brook or rivulet occurs, ſuch apparatus will be found highly ſerviceable in work-houſes, great ſchools, priſons, and hoſpitals, not leſs than in private families; as 200 ſhirts may be waſhed by one perſon in the ſpace of 12 hours. It may be erected in a mill-reach, ſo as to be ſet in motion by the immediate preſſure of the water; or by connecting its mechaniſm with the main cylinder of the water-wheel.

WASHINGTON (George), whoſe name is likely to live as long as that of any monarch, was born on the 11th of February, 1732, in the pariſh of Waſhington, Virginia. He was deſcended from an ancient family in Cheſhire, of which a branch had been eſtabliſhed in Virginia about the middle of the 17th century. We are not acquainted with any remarkable circumſtances of his education or his early youth; and we ſhould not indeed expect any marks of that diſorderly prematureneſs of talent, which is ſo often fallacious, in a character whoſe diſtinguiſhing praiſe was to be regular and natural. His claſſical inſtruction was probably ſmall, ſuch as the private tutor of a Virginian country gentleman could at that period have imparted; and if his opportunities of information had been more favourable, the time was too ſhort to profit by them. Before he was twenty he was appointed a major in the colonial militia, and he had very early occaſion to diſplay thoſe political and military talents, of which the exertions on a greater theatre have ſince made his name ſo famous throughout the world.

The plenipotentiaries who framed the treaty of Aix-la-Chapelle, by leaving the boundaries of the Britiſh and French territories in North America unfixed, had ſown the ſeeds of a new war, at the moment when they concluded a peace. The limits of Canada and Louiſiana, negligently deſcribed in vague language by the treaties of Utrecht and Aix-la Chapelle, becauſe the greater part of theſe vaſt countries was then an impenetrable wilderneſs, furniſhed a motive, or a pretext, for one of the moſt ſucceſsful, but one of the moſt bloody and waſteful wars in which Great Britain had ever been engaged.

In the diſputes which aroſe between the French and Engliſh officers on this ſubject, Major Waſhington was employed by the governor of Virginia, in a negociation with the French governor of Fort du Queſne (now Pittſburgh), who threatened the Engliſh frontiers with a body of French and their Indian allies. He ſucceeded in averting the invaſion; but hoſtilities becoming inevitable, he was in the next year appointed lieutenant-colonel of a regiment raiſed by the colony for its own defence; to the command of which he ſoon after ſucceeded. The expedition of Braddock followed in the year 1755; of which the fatal iſſue is too well known to require being deſcribed by us. Colonel Waſhington ſerved in that expedition only as a volunteer; but ſuch was the general confidence in his talents, that he may be ſaid to have conducted the retreat. Several Britiſh officers are ſtill alive who remember the calmneſs and intrepidity which he ſhewed in that difficult ſituation, and the voluntary obedience which was ſo cheerfully paid by the whole army to his ſuperior mind. After having acted a diſtinguiſhed part in a ſubſequent and more ſucceſsful expedition to the Ohio, he was obliged by ill health, in the year 1758, to reſign his military ſituation. The ſixteen years which followed of the life of Waſhington ſupply few materials for the biographer. Having married Mrs. Cuſtis, a Virginian lady of amiable character and reſpectable connections, he ſettled at his beautiful ſeat of Mount Vernon, of which we have had ſo many deſcriptions; where, with the exception of ſuch attendance as was required by his duties as a magiſtrate and a member of the aſſembly, his time was occupied by his domeſtic enjoyments, and the cultivation of his eſtate, in a manner well ſuited to the tranquillity of his pure and unambitious mind. At the end of this period he was called by the voice of his country from this ſtate of calm and ſecure though unoſtentatious happineſs.

For almoſt half a century ſymptoms of diſaffection to the mother-country had been ſo viſible in the New England provinces, that ſo early as 1734 the celebrated Biſhop Berkeley had predicted a total ſeparation of North America from Great Britain. That prelate, when a private clergyman, had lived three years in Rhode Iſland, and was an attentive and ſagacious obſerver of the manners and principles of the people, among whom he perceived the old leaven of their forefathers fermenting even then with great violence. The middle and ſouthern provinces, however, were more loyal, and their influence, together with perpetual dread of the French before the peace of 1763, put off the ſeparation to a more diſtant day than that at which, we have reaſon to believe, the biſhop expected it to take place. Virginia, the moſt loyal of all the colonies, had long been in the habit of calling itſelf, with a kind of proud pre-eminence, *his Majeſty's ancient dominion*; and it was with ſome difficulty that the demagogues of New England could gain over that province when the time arrived for effecting their long-meditated revolt. At laſt, however, they ſucceeded; and we find Mr. Waſhington as a delegate from Virginia in the Congreſs which met at Philadelphia on the 26th of October, 1774. As no American united in ſo high a degree as he did, military experience with reſpectability of character, he was appointed to the command of the army which had aſſembled in the New England provinces, to hold in check the Britiſh army which was then encamped under General Gage at Boſton.

At this period there is ſome reaſon to believe that neither Mr. Waſhington nor his conſtituents entered heartily into the views of the New Englanders; but afraid leſt the army of thoſe rebellious fanatics, after ſhaking off the yoke of Great Britain, might give law to the continent, he took upon himſelf the command of that army in the month of July, 1775. To detail his conduct in the years which followed, would be to relate the hiſtory of the American war, which has been already related in a great variety of ways. Within a very ſhort period after the declaration of independence, the affairs of America were in a condition ſo deſperate, that perhaps nothing but the *peculiar* character of Waſhington's genius could have retrieved them. Activity was the policy of invaders. In the field of battle the ſuperiority of a diſciplined army is diſplayed. But delay was the wiſdom of a country defended by undiſciplined ſoldiers againſt an enemy who muſt be more exhauſted by time than he could be weakened by defeat. It required the conſummate prudence, the calm wiſdom, the inflexible firmneſs, the moderate and well-balanced temper of Waſhington to embrace ſuch a plan of policy, and to perſevere in it: to reſiſt the temptations of enterprize; to fix the confidence of his ſoldiers without the attraction of victory; to ſupport the ſpirit of the army and the people amidſt thoſe ſlow and cautious plans of defenſive warfare which are more diſpiriting than defeat itſelf; to contain his own ambition and the impetuoſity of his troops; to endure temporary obſcurity for the ſalvation of his country, and for the attainment of ſolid and immortal glory; and to ſuffer even temporary reproach and obloquy, ſupported by the approbation of his own conſcience and the applauſe of that ſmall number of wiſe men, whoſe praiſe is an earneſt of the admiration and gratitude of poſterity. Victorious generals eaſily acquire the confidence of their army. Theirs, however, is a confidence in the *fortune* of their general. That of Waſhington's army was a confidence in his *wiſdom*. Victory gives ſpirit to cowards, and even the agitations of defeat ſometimes impart a courage of deſpair. Courage is inſpired by ſucceſs, and it may be ſtimulated to deſperate exertion even by calamity; but it is generally palſied by inactivity.—A ſyſtem of cautious defence is the ſevereſt trial of human fortitude; and by this teſt the firmneſs of Waſhington was tried. It muſt not, however, be concealed, that ſome of the Britiſh commanders gave him advantages, which he ſurely did not expect; for more than once, as it appears to us, they had it in their power to annihilate his army, merely by following up their victories. The iſſue of the conteſt is known.

Much has been ſaid by the Britiſh and American democrats of the magnanimity of Waſhington during the ravages of a civil war, in which he acted ſo conſpicuous a part; and we feel not ourſelves inclined to refuſe him the praiſe which he may have merited on this or any other account. But granting that duty required him to execute as a ſpy the accompliſhed *André*, true magnanimity would have prevented him from inſultingly erecting, in the view of that unfortunate officer, the gallows on which he was to be hung, ſeveral days before his execution! When Earl Cornwallis was overpowered by numbers, and obliged at York-town to ſurrender to the united armies of America and France, a magnanimous conqueror would not have maliciouſly claimed, contrary to the uſage of civiliſed war, the ſword from the hands of that gallant nobleman. On theſe two occaſions, and on ſome others, the conduct of Waſhington agreed ſo ill with his general character, that we are inclined to believe that he muſt have been influenced by the leaders of the French army, Rochambeau and Fayette. One thing is certain, that he was ſo little pleaſed either with his own conduct on particular occaſions, or with the general principle of the American revolution, that he never could be forced to talk on the ſubject. An Italian nobleman, who viſited him after the peace, had often attempted, in vain, to turn the converſation to the events of the war. At length he thought he had found a favourable opportunity of effecting his purpoſe; they were riding together over the ſcene of an action where Waſhington's conduct had been the ſubject of no ſmall animadverſion. Count —— ſaid to him, "Your conduct, Sir, in this action has been criticiſed." Waſhington made no anſwer, but clapped ſpurs to his horſe: after they had paſſed the field, he turned to the Italian and ſaid, "Count ——, I obſerve that you wiſh me to ſpeak of the war; it is a converſation which I always avoid. I rejoice at the eſtabliſhment of the liberties of America. But the time of the ſtruggle was a horrible period, in which the beſt men were compelled to do many things repugnant to their nature." This, we think, is the language of a good man not altogether ſatisfied with the part which he had been compelled to act, and who, though he rejoiced at the eſtabliſhment of the *liberties* of America, probably foreſaw that ſhe would reap no benefit from her favourite *independence*.

The concluſion of the American war permitted Waſhington to return to thoſe domeſtic ſcenes, from which no views of ambition ſeem to have had the power to draw him. But he was not allowed long to enjoy this privacy. The ſupreme government of the United States, haſtily thrown up, in a moment of turbulence and danger, as a temporary fortification againſt anarchy, proved utterly inadequate to the preſervation of general tranquillity and permanent ſecurity. The confuſions of civil war had given a taint to the morality of the people, which rendered the reſtraints of a juſt and vigorous government more indiſpenſably neceſſary. Confiſcation and paper money, the two greateſt ſchools of rapacity and diſhoneſty in the world, had widely ſpread their poiſon among the Americans. One of their own writers tells us, that the whole ſyſtem of paper money was a ſyſtem of public and private frauds. In this ſtate of things, which threatened the diſſolution of morality and government, good men ſaw the neceſſity of concentrating and invigorating the ſupreme authority. Under the influence of this conviction, a convention of delegates was aſſembled at Philadelphia, which ſtrengthened the bands of the Federal Union, and beſtowed on Congreſs thoſe powers which were neceſſary for the purpoſes of good government. Waſhington was the preſident of this convention, as he, in three years after, was elected preſident of the United States of America, under what was called "The New Conſtitution," though it ought to have been called a *reform* of the republican government, as that republican government itſelf was only a *reform* of the ancient colonial conſtitution under the Britiſh crown. None of theſe changes extended ſo far as an attempt to new-model the whole ſocial and political ſyſtem.

Events occurred during his chief magiſtracy which convulſed the whole political world, and which tried moſt ſeverely his moderation and prudence. The French revolution took place; Waſhington, who had experienced the evils of one revolution, augured, from the beginning, no good from the daring ſpeculations of inexperienced viſionaries; and the progreſs of the revolution was not calculated to cure his diſtruſt. When, in the year 1793, France, then groaning under the moſt intolerable and hideous tyranny, became engaged in war with almoſt all the governments of the civilized world, it is ſaid to have been a matter of deliberation with the Preſident of the United States, whether the republican envoy or the agent of the French princes ſhould be received in America as the diplomatic repreſentative of France. But whatever might be his private feelings of repugnance and horror, his public

conduct was influenced only by his public duties. As a virtuous man, he muſt have abhorred the ſyſtem of crimes which was eſtabliſhed in France. But as the firſt magiſtrate of the American commonwealth, he was bound only to conſider how far the intereſt and ſafety of the people whom he governed were affected by the conduct of France. He ſaw that it was wiſe and neceſſary for America to preſerve a good underſtanding and a beneficial intercourſe with that great country, in whatever manner ſhe was governed, as long as ſhe abſtained from committing injury againſt the United States. Guided by this juſt and ſimple principle, uninfluenced by the abhorrence of crimes which he felt, and which others affected, he received M. Genet, the miniſter of the French Republic. The hiſtory of the outrages which that miniſter committed, or inſtigated, or countenanced, againſt the American government, muſt be freſh in the memory of all our readers. The conduct of Waſhington was a model of firm and dignified moderation. Inſults were offered to his authority in official papers, in anonymous libels, by incendiary declaimers, and by tumultuous meetings. The law of nations was trampled under foot. His confidential miniſters were ſeduced to betray him, and the deluded populace were ſo inflamed by the arts of their enemies, that they broke out into inſurrection. No vexation, however galling, could diſturb the tranquillity of his mind, or make him deviate from the policy which his ſituation preſcribed. With a more confirmed authority, and at the head of a longer eſtabliſhed government, he might perhaps have thought greater vigour juſtifiable. But in his circumſtances, he was ſenſible that the nerves of authority were not ſtrong enough to bear being ſtrained. Perſuaſion, always the moſt deſirable inſtrument of government, was in his caſe the ſafeſt. Yet he never overpaſſed the line which ſeparates conceſſion from meanneſs. He reached the utmoſt limits of moderation, without being betrayed into puſillanimity. He preſerved external and internal peace by a ſyſtem of mildneſs, without any of thoſe virtual confeſſions of weakneſs, which ſo much diſhonour and enfeeble ſupreme authority. During the whole of that arduous ſtruggle, his perſonal character gave that ſtrength to a *new magiſtracy* which in other countries ariſes from ancient habits of obedience and reſpect. The authority of his virtue was more efficacious for the preſervation of America than the legal powers of his office.

During this turbulent period, he was re-elected to the office of the Preſidency of the United States, which he held from April 1789 till September 1796. Probably no magiſtrate of any commonwealth, ancient or modern, ever occupied a place ſo painful and perilous. Certainly no man was ever called upon ſo often to ſacrifice his virtuous feelings (he had no other ſacrifices to make) to his public duty. Two circumſtances of this ſort deſerve to be particularly noticed. In the ſpring of 1794 he ſent an ambaſſador to Paris with credentials, addreſſed to his "dear friends the citizens compoſing the Committee of Public Safety of the French Republic," whom he prays God "to take under his holy protection." Fortunately the American ambaſſador was ſpared the humiliation of preſenting his credentials to theſe bloody tyrants. Their power was ſubverted, and a few of them had ſuffered the puniſhment of their crimes, which no puniſhment could expiate, before his arrival at Paris. Readily as we admit the purity of the motives which induced him to ſend this embaſſy to Paris, we cannot poſſibly approve of his conduct in deviating ſo far from the uſual diplomatic ſtyle, as to call Robeſpierre his friend: but he was beſet by an abſurd, though formidable, faction at home.

He had another ſtruggle of feeling and duty to encounter, when he was compelled to ſuppreſs the inſurrection in the weſtern counties of Pennſylvania by force of arms. But here he had a conſolation. The exerciſe of mercy conſoled his mind for the neceſſity of having recourſe to arms. Never was there a revolt quelled with ſo little blood. Scarcely ever was the baſeſt daſtard ſo tender of his own life, as this virtuous man was of the lives of his fellow-citizens. The value of his clemency is enhanced by recollecting that he was neither without provocations to ſeverity, nor without pretexts for it. His character and his office had been reviled in a manner almoſt unexampled among civilized nations. His authority had been inſulted:—his ſafety had been threatened. Of his perſonal and political enemies ſome might, perhaps, have been ſuſpected of having inſtigated the inſurrection; a greater number were thought to wiſh well to it; and very few ſhewed much zeal to ſuppreſs it. *Is habitus animorum fuit, ut peſſimum faſcinus auderent pauci, plures vellent, omnes paterentur.* But neither reſentment, nor fear, nor even policy itſelf, could extinguiſh the humanity of Waſhington. This ſeems to have been the only ſacrifice which he was incapable of making to the intereſt of his country.

Throughout the whole courſe of his ſecond Preſidency, the danger of America was great and imminent almoſt beyond example. The ſpirit of change, indeed, at that period, ſhook all nations. But in other countries it had to encounter ancient and ſolidly eſtabliſhed power; it had to tear up by the roots long habits of attachment in ſome nations for their government; of awe in others; of acquieſcence and ſubmiſſion in all.—But in America the government was new and weak. The people had ſcarce time to recover from the ideas and feelings of a recent civil war. In other countries the volcanic force muſt be of power to blow up the mountains, and to convulſe the continents that held it down, before it could eſcape from the deep caverns in which it was impriſoned:—in America it was covered only by the aſhes of a late convulſion, or at moſt by a little thin ſoil, the produce of a few years' quiet.

The government of America had none of thoſe ſalutary prejudices to employ, which in every other country were uſed with ſucceſs to open the eyes of the people to the enormities of the French revolution. They had, on the contrary, to contend with the prejudices of the people in the moſt moderate precautions againſt internal confuſion, in the moſt meaſured and guarded reſiſtance to the unparalleled inſults and enormous encroachments of France. Without zealous ſupport from the people, the American government was impotent. It required a conſiderable time, and it coſt an arduous and dubious ſtruggle, to direct the popular ſpirit againſt a ſiſter republic, eſtabliſhed among a people to whoſe aid the Americans aſcribed the eſtabliſhment of their independence. It is probable, indeed, that no policy could have produced this effect, unleſs it had been powerfully aided by the crimes of the French Government, which have proved the ſtrongeſt allies of all eſtabliſhed governments; which have produced ſuch a general diſpoſition to ſubmit to any *known* tyranny, rather than ruſh into all the unknown and undefinable evils of civil confuſion, with the horrible train of new and monſtrous *tyrannies* of which it is uſually the forerunner. But of theſe circumſtances Waſhington availed himſelf with uncommon addreſs. He employed the horror excited by the atrocities of the French revolution for the moſt honeſt and praiſe-worthy purpoſes;—to preſerve the internal quiet of his country; to aſſert the dignity, and to maintain the rights, of the commonwealth which he governed, againſt foreign enemies. He avoided war without incurring the imputation of puſillanimity; he cheriſhed the deteſtation of Americans for anarchy, without weakening the ſpirit of liberty; and he maintained, and even conſolidated, the authority of government, without abridging the privileges of the people.

The reſignation of Waſhington in 1796 was certainly a meaſure of prudence, and we doubt not of patriotiſm; but the conduct of his ſucceſſor has been ſuch as to give the Americans reaſon to regret that the reins of government were thrown up by the only hand, perhaps, that was fit to guide them during ſo unſettled a ſtate of public affairs. When he retired, he publiſhed a valedictory addreſs to his countrymen, as he had before done when he relinquiſhed the command of the army in 1783. In theſe compoſitions, the whole heart and ſoul of Waſhington are laid open. Other ſtate papers have, doubtleſs, ſhewn more ſpirit and dignity, more eloquence, greater force of genius, and a more enlarged comprehenſion of mind; but none ever diſplayed more ſimplicity and ingenuouſneſs, more moderation and ſobriety, more good ſenſe, more prudence, more honeſty, more earneſt affection for his country and for mankind, more profound reverence for virtue and religion; or more ardent wiſhes for the happineſs of his fellow-creatures, and more juſt and rational views of the means which alone can effectually promote that happineſs.

From his reſignation till the month of July, 1798, he lived in retirement at Mount Vernon. At this latter period, it became neceſſary for the United States to arm. They had endured with a patience, of which there is no example in the hiſtory of ſtates, all the contumely and wrong which ſucceſſive adminiſtrations in France had heaped upon them. Their ſhips were every-where captured, their miniſters were detained in a ſort of impriſonment at Paris; while incendiaries, clothed in the ſacred character of ambaſſadors, ſcattered over their peaceful provinces the fire-brands of ſedition and civil war. An offer was made to terminate this long courſe of injuſtice, for a bribe to the French miniſters. This offer was made by perſons who *appeared* to be in the confidence of M. Talleyrand, who *profeſſed* to act by his authority; who have been ſince, indeed, diſavowed by him; but who never will be believed not to have been his agents, till he convict them of impoſture by legal evidence, and procure them to be puniſhed for ſo abominable a fraud.

The United States reſolved to arm by land and ſea. The command of the army was beſtowed on General Waſhington; which he accepted, becauſe he was convinced that "every thing we hold dear and ſacred was ſeriouſly threatened;" though he had flattered himſelf "that he had quitted for ever the boundleſs field of public action, inceſſant trouble and high reſponſibility, in which he had long acted ſo conſpicuous a part." In this office he continued during the ſhort period of his life which ſtill remained. On Thurſday the 12th December, 1799, he was ſeized with an inflammation in his throat, which became conſiderably worſe the next day; and of which, notwithſtanding the efforts of his phyſicians, he died on Saturday the 14th of December, 1799, in the 68th year of his age, and in the 23d year of the independence of the United States, of which he may be conſidered as the founder. The ſame calmneſs, ſimplicity, and regularity, which had uniformly marked his demeanor, did not forſake him in his dying moments. He ſaw the approaches of death without fear:—he met them without parade—Even the perfectly well ordered ſtate of the moſt minute particulars of his private buſineſs, bore the ſtamp of that conſtant authority of prudence and practical reaſon over his actions, which was a diſtinguiſhing feature of his character. He died with thoſe ſentiments of piety which had given vigour and conſiſtency to his virtue, and adorned every part of his illuſtrious life.

WASHINGTON, the name of ſeveral counties in the United States of America: namely, in Rhode Iſland, in New York, in Pennſylvania, in Maryland, in Virginia, in Tenaſſee, in North Carolina, in South Carolina, and in Georgia. Theſe, and ſeveral towns of the ſame name, take their denomination from the illuſtrious General Waſhington, who was elected the firſt preſident of the United States in 1788.

WASHINGTON, a commercial town of the United States, in North Carolina, ſeated on the river Tar, 38 miles N. by E. of Newbern. Long. 77. 3. E. Lat. 34. 40. N.

WASHINGTON, a town in the State of Georgia, in the county of Wilkes. A mile and a half from this town, is a medicinal ſpring which has been found very beneficial in rheumatic caſes: it riſes from a hollow tree, the inſide of which is covered with a coat of nitre, an inch thick; and the leaves around the ſpring are incruſted with a ſubſtance as white as ſnow. It is 50 miles N.W. of Auguſta. Long. 82. 30. W. Lat. 33. 12. N.

WASHINGTON, a town of Pennſylvania, capital of a county of the ſame name, 300 miles W. of Philadelphia. Long. 80. 20. W. Lat. 40. 11. N.

WASSENBERG, a town of Weſtphalia, in the duchy of Juliers, nine miles E.S.E. of Ruremonde.

WASSERBURG, a town of Bavaria, with a caſtle. It is ſeated among mountains, 25 miles E. by S. of Munich, and 28 N.W. of Saltzburg. Long. 12. 13. E. Lat. 48. 4. N.

WATCHET, a town in Somerſetſhire, with a market on Saturday, ſeated on the Briſtol Channel, at the mouth of a good harbour, much frequented by coal ſhips, which are freighted hence with lime-ſtone, alabaſter, and kelp. It is 14 miles N.W. of Bridgewater, and 153 W. by S. of London. Long. 3. 25. W. Lat. 51. 12. N.

WATEEOO, an iſland in the Pacific Ocean, diſcovered by Captain Cook. It is ſix leagues in circuit, compoſed of hills and plains, and the ſurface covered with verdure. The ſoil, in ſome parts, is light and ſandy; but further up the country, a reddiſh caſt was ſeen on the riſing grounds, where the iſlanders build their houſes, which are long and ſpacious. The manners of the people, their general habits of life, and their method of treating ſtrangers, greatly reſemble thoſe of Otaheite, and its neighbouring iſlands. There is alſo a great ſimilarity between their religious opinions and ceremonies. Long. 158. 15. W. Lat. 21. 1. S.

WATER (*Encycl.*). The following method of preſerving freſh water ſweet during long voyages at ſea, by Samuel Bentham, eſq. appears in the Tranſactions of the Society for the Encouragement of Arts, Manufactures, and Commerce, who conferred on the author their gold medal.

"The mode in which I conceived freſh water might be preſerved ſweet," ſays Mr. Bentham, "was merely by keeping it in veſſels of which the interior lining at leaſt ſhould be of ſuch a ſubſtance as ſhould not be acted upon by the water, ſo as to become a cauſe of contamination. Accordingly, on board two ſhips, the greater part of the water was kept, not in caſks, but in caſes or tanks, which, though they were made of wood, on account of ſtrength, were lined with metallic plates, of the kind manufactured by Mr. Charles Wyatt, of Bridge-ſtreet, under the denomination of *tinned copper-ſheets*; and the junctures of the plates or ſheets were ſoldered together, ſo that the tightneſs of the caſes depended entirely on the lining, the water having no-where acceſs to the wood. The ſhape of theſe caſes was adapted to that of the hold of the ſhip, ſome of them being made to fit cloſe under the platform, by which means the quantity of water ſtowed was conſiderably greater than could have been ſtowed, in the ſame ſpace, by means of caſks; and thereby the ſtowage-room on board ſhip was very much increaſed.

"The quantity of water kept in this manner on board

each ſhip, was about forty tons divided into ſixteen tanks; and there was likewiſe, on board each of the ſhips, about thirty tons ſtowed in caſks as uſual.

"As the ſtowing the water in tanks was conſidered as an experiment, the water in the caſks was uſed in preference; that in the tanks being reſerved for occaſions of neceſſity, excepting that a ſmall quantity of it was uſed occaſionally for the purpoſe of aſcertaining its purity, or when the water in the caſks was deemed, when compared with that in tanks, too bad for uſe.

"The water in thirteen of the tanks, on board one ſhip, and in all the tanks on board the other, was always as ſweet as when firſt taken from the ſource; but in the other three of the tanks, on board one ſhip, the water was found to be more or leſs tainted as in the caſks. This difference, however, is eaſily accounted for, by ſuppoſing that the water of theſe tanks was contaminated before it was put into them; for in fact the whole of the water was brought on board in caſks, for the purpoſe of filling the tanks, and no particular care was taken, to taſte the water at the time of taking it on board.

"After the water kept in this manner had remained on board a length of time which was deemed ſufficient for experiment, it was uſed out, and the tanks were repleniſhed as occaſion required: but in ſome of the tanks, on board one ſhip at leaſt, the original water had remained three years and a half, as appears by the certificates herewith incloſed. About twenty-five gallons of the water, which had remained this length of time in the ſhip, are ſent to the Society, in two veſſels made of the ſame ſort of tinned copper with which the tanks were lined."

A certificate from Capt. Bolton, commander of the veſſel, accompanied this letter, ſtating that the water delivered to the Society was taken from a tank holding about ſeven hundred gallons, and which his predeceſſor, Capt. Portlock, had informed him had been poured into the tank in December, 1796, except about thirty gallons added in 1798, and had remained good during the whole time.

In a letter, dated January 27, General Bentham alſo ſtates, that the water which had been preſerved ſweet on board his Majeſty's ſloops Arrow and Dart, and of which he had ſent ſpecimens to the Society, was taken from the well at the king's brew-houſe, at Weevil, from whence ſhips of war, lying at or near Portſmouth, are uſually ſupplied with water for their ſea-ſtore, as well as for preſent uſe.

WATERLAND (*Encycl.*). Into the ſhort account there given of Dr. Waterland, we wiſh to introduce a correction, equally neceſſary in all biographical works which we have yet ſeen. All ſay he was born at *Waſeley*, in Lincolnſhire. His baptiſm, however, is regiſtered in the pariſh of *Wailſby*, near Rasen, of which his father, Eraſmus Waterland, had been rector and reſident many years. We believe there is not any ſuch place in the county of Lincoln as *Waſeley*.

WATER-POTS, in Spain known by the name of *Alcarrazas*, are earthen veſſels, extremely porous, deſtined to cool the water for drinking, by means of the continual evaporation which takes place on their whole ſurface. Every houſe in Madrid is provided with theſe veſſels, which are known to have been introduced into the country by the Arabs, and to be equally uſed in Syria, Perſia, China, Egypt, &c. Thoſe of Madrid are made of a kind of marly earth, found on the banks of the river Tanuſoro, near the town of Auduxar, in Andaluſia. On being carefully analyſed, it is found to contain about one third of calcareous earth, a third of alumine, a third of ſilex, and a very ſmall portion of iron.

The proceſs for manufacturing the *alcarrazas* is as follows: After the earth has been dried, it is ſeparated into ſmall lumps about the ſize of wainuts, which are thrown into a tub or vat, covered with water, and left to ſoak during twelve hours, after which it is kneaded. After it has been well wrought, it is ſpread in layers of about ſix fingers depth on a ſmooth ſurface covered with brick, over which has been ſprinkled a ſmall quantity of ſifted aſhes.

Here it is ſuffered to remain until it has become chapped: it is then cleared from the aſhes, carried to a clean flagged floor, where it receives the addition of about the twentieth part of its weight of ſea-ſalt if intended for the fabrication of large jars, or only a fortieth if deſtined to be made into veſſels of ſmaller ſize. An obſervant traveller ſays, that a quantity of ſand is alſo added.

This mixture is kneaded anew with the feet, and then wrought on the wheel, after having been firſt carefully cleaned from any bits of ſtraw or gravel which might have adhered to it. The veſſels, when made, are placed in the potter's oven, but not more than half baked. It is to this circumſtance, and to the marine ſalt which they contain, that they are indebted to their poroſity: for the very ſame earth is wrought into common pottery, without the addition of the ſalt, or the diminution of the baking.

In the hotteſt weather, water put into one of theſe veſſels, and placed in the open air, more particularly in a current of air, becomes in a very ſhort time agreeably cool.

In Eſtremadura, at a place called Salvatierra, are made red vaſes called *bucaros*, which ſerve alſo to preſerve water cool. They impart to it a diſagreeable clayey taſte, which is, however, much admired by the women of Madrid. Girls are ſaid to be particularly fond of this ſpecies of pottery, and eat it in the green-ſickneſs. Nearly ſimilar vaſes are uſed in Portugal for moiſtening ſnuff, which is done by placing them in water after they have been filled with the ſnuff.

WATER-PROOF, a term applied to thoſe ſtuffs which have undergone certain chemical or mechanical proceſſes, and thus become impermeable to moiſture.

In 1801, a patent was granted to Meſſrs. Ackermann, Suardy, and Co. for their invention of a proceſs, by which every ſpecies of cloth may be rendered *water-proof*.—As the patentees have not thought proper to publiſh the particulars of their proceſs (though ſuch concealment is contrary to the nature of *Letters Patent*), we ſhall briefly remark, from our own obſervation, that their method appears to be a ſimple impregnation of cloth with wax previouſly diſſolved, and incorporated with water, by the addition of pure vegetable alkali, or pot-aſh. This being the cheapeſt and moſt expeditious mode of reducing wax to a fluid ſtate, we are further inclined to believe that our conjecture is well founded; becauſe all the woollen cloth prepared in the manufactory of Meſſrs. Ackermann, Suardy, and Co. *feels* ſomewhat harder than ſuch as has not been *waxed*: for the ſame reaſon, it will ſtand a ſhower of rain only ſo long as it has not been ſubject to friction; and we underſtand from thoſe who have worn *patent water-proof coats*, that, in the ſleeves particularly, they are very apt to admit moiſture through the different folds. Nevertheleſs, their proceſs is entitled to attention; and it deſerves to be adopted principally in thoſe caſes where the manufacture is not liable to be impaired by friction; ſuch as coverings for tents; for horſes expoſed to the rain when at reſt; and eſpe-

cially for paper in which gunpowder, or ſteel and other goods, are to be packed.

The following ſimple proceſs is ſtated to be that employed by the Chineſe, for rendering cloth *water-proof*: Let an ounce of white wax be diſſolved in one quart of ſpirit of turpentine, the cloth be immerſed in the ſolution, and then ſuſpended in the air, till it be perfectly dry. By this method, the moſt open muſlin, as well as the ſtrongeſt cloths, may be rendered impenetrable to the heavieſt ſhowers: nor will ſuch compoſition fill up the interſtices of the fineſt lawn; or in the leaſt degree affect the moſt brilliant colours.

WATERSAY, one of the Hebrides, on the weſt coaſt of Scotland, about one mile ſouth from South Uiſt, from which it is ſeparated by a channel called Chiſamul Bay.

WATER-WORKS *(Encycl.)* In a communication to the Editor of the Philoſophical Magazine, Mr. Buchanan has juſtly obſerved, that there are many caſes in which it is of importance to know the proportion of power neceſſary to give different degrees of velocity to a mill. But as the conſtruction of mills, and the purpoſes they ſerve, are various, it is perhaps impoſſible to find any law of univerſal application. Mr. Banks, in his Treatiſe on Mills, pages 17, 18, 144, 145, 146, has drawn a concluſion, which he appears to conſider as invariable, namely, that 'when a wheel acts by gravity, its velocity will be as the cube root of the quantity of water it receives.'

"But," ſays Mr. Buchanan, "if we ſuppoſe a wheel raiſing water, by means of cranks and pumps, on Mr. Banks's principle, it might eaſily, I think, be demonſtrated, that, by reducing the velocity of the wheel to a certain degree, the wheel would raiſe more water than would be neceſſary to move it at that velocity; a thing evidently impoſſible.

"In this view, it would ſeem there is no actual caſe in which Mr. Banks's concluſions will hold true. But, however they may apply to other mills, the experiments which I am going to mention ſeem to me to prove, at leaſt, that they do not apply to cotton mills. On the ground of theſe experiments, made at different times, and with all the attention in my power (and not from any abſtract conſideration), have I preſumed to call in queſtion an authority for which I entertain the higheſt reſpect.

"In January 1796 I meaſured the quantity of water the old Rothesay cotton mill required, 1ſt, when going at its common velocity; and, 2dly, when going at half that velocity. The reſult was, that the laſt required juſt half the quantity of water which the firſt did. It is to be obſerved, that in theſe experiments the quantities of water were calculated from the heads of water and apertures of the ſluices.

"From theſe experiments I inferred, 'that the quantity of water neceſſary to be employed in giving different degrees of velocity to a cotton mill, muſt be nearly as that velocity.'

"I was ſatisfied with this experiment, and the inference I drew from it, till ſome gentlemen, well acquainted with the theory and practice of mechanics, expreſſed their doubts on the ſubject. I had then recourſe to another experiment, which I conſidered as leſs liable to error than the former.

"The water which drives the old cotton-mill, falls, a little below it, into a perpendicular-ſided pond, which ſerves as a dam for a corn-mill. To aſcertain, therefore, the proportional quantities of water uſed by the old mill, nothing more was neceſſary than to meaſure the time the water took to riſe to a certain height in that pond; and accordingly, on the 1ſt of May, 1793, I made the experiments noted in the following table:

1	2	3	4	Number of experiments.
46	46	24	23	Revolutions of one of the upright ſhafts per minute.
5	5	5	5	Riſe of water in the pond in inches
9.58	6.57	14.45	15.0	Time in minutes and ſeconds.

"The firſt and ſecond experiments were made with the mill at its common velocity; the third and fourth at nearly half that velocity.

"The time which the mill required to uſe the ſame quantity of water in theſe experiments may be taken in round numbers; the proper velocity at ſeven minutes, and half that velocity at fifteen minutes.

"The reſult of theſe experiments approaches very nearly to that of 1796. The difference may be accounted for by the ſmall degree of leakage which muſt have taken place at the ſluices on the lower end of the pond; and the time being greater in the third and fourth experiments, the leakage would, of courſe, be greater.

"Mr. Smeaton and others have proved, in a very ſatisfactory manner, that 'the mechanical power which muſt be employed in giving different degrees of velocity to the ſame body, muſt be as the ſquare of that velocity.' But it appears to me that the reſult of the above experiments may be eaſily reconciled to this propoſition by conſidering what Mr. Smeaton ſays immediately afterwards:—'If the converſe of this propoſition (ſays he) did not hold true, viz. that if a body in motion, on being ſtopped, would not produce a mechanical effect equal or proportional to the ſquare of its velocity, or to the mechanical power employed in producing it, the effect would not correſpond with its producing cauſe.' Now, it is to be obſerved, that Mr. Smeaton's experiments were made on the *velocity* of heavy bodies *free from friction* and *other cauſes of reſiſtance*; but in mills there is not only friction, but obſtacles to be removed: and experiments made on friction have proved that the frictions of many kinds of bodies increaſe in direct proportion to their velocity. But the velocity of a cotton-mill at work may be conſidered as a mechanical effect, and, if ſo, muſt correſpond with its producing cauſe."

The latest contrivance, within our knowledge, for facilitating the motion of machinery, is the *undershot water-wheel*, invented by the late Mr. Beſant, of Brompton; on whoſe widow the Society for the Encouragement of Arts, &c. in 1801, conferred a reward of ten guineas: and, as it promiſes to be of great ſervice in many ſituations, we have given a repreſentation of it, in Pl. 54.

Fig. 1. A, repreſents the body of the water-wheel, which is hollow, in the form of a drum, and is ſo conſtructed as to reſiſt the admiſſion of water. B, is the axis on which the wheel turns. C, the float-boards, placed on the periphery of the wheel, each of which is firmly fixed to its rim, and to the body of the drum, in an oblique direction. D, is the reſervoir, that contains the water. E, the pen-ſtock, for regulating the quantity of water which runs to the wheel. F, repreſents the current that has paſſed ſuch wheel.

Fig. 2, is a front view of the water-wheel, exhibiting the oblique direction in which the float-boards, C, are placed on the face of the wheel.

In the common water-wheels, more than half the quantity of that fluid paſſes from the gate through the wheel, without affording it any aſſiſtance: the action of the floats

is resisted by the incumbent atmosphere, at the moment when these leave the surface of the tail-water; and, as a similar proportion of water with that which passed between the floats at the head, necessarily flows between them at the tail, the motion of the wheel is greatly impeded. On the contrary, by Mr. Besant's contrivance, no water can pass, excepting that which acts with all its force on the extremity of the wheel; and, as the floats emerge from the water in an oblique direction, the weight of the atmosphere is thus prevented from taking any effect. Although his new wheel is considerably heavier than those constructed on the old plan, yet it revolves more easily on its axis; the water having a tendency to float it. Lastly, repeated experiments have proved Mr. Besant's wheel to be so decidedly superior, that, when working in deep tail-water, it will carry weights in the proportion of three to one; on which account it will be particularly serviceable to tide-mills.

A machine, which is constructed on the principle of Hiero's Fountain, forms the subject of a plate in Dr. Darwin's admirable work, entitled "*Phytologia:*" it is designed to raise water to a great perpendicular height, for the irrigation of land, in such situations as have the advantage of a small fall.

a b (Pl. 55.), is the stream of water; *b c c*, represents the water-fall, supposed to be ten feet; *d e*, are two leaden or iron vessels, containing a certain quantity of water, which may be computed to be about four gallons each; *f g h i k l*, are leaden vessels, each holding about two quarts; *o p*, two cocks, each of which passes through two pipes, opening the one and closing the other; *q r*, is a water-balance, that moves on its centre, *s*, and by which the two cocks, *o* and *p*, are alternately turned; *t u*, and *w x*, are two air-pipes of lead, both internally one inch and a quarter in diameter; *y z*, *y z*, *y z*, are water-pipes, each being one inch in diameter.

The pipe, *b c c*, is always full from the stream, *a b*; the small cisterns, *g i l*, and the large one, *d*, are supposed to have been previously filled with water. The fluid may then be admitted by turning the cock, *o*, through the pipe, *c e*, into the large cistern, *e*. This water, Dr. Darwin remarks, will press the air, confined in the cistern, *e*, up the air-pipe, *w x*, and will force the fluid out of the cisterns, *g i l*, into those marked *h k*, and C. At the same time, by opening B, the water and condensed air, which previously existed in the large cistern, *d*, and in the smaller ones, marked *f h k*, will be discharged at B. After a short time, the water-balance, *q r s*, will turn the cocks, and exclude the water, while it opens the opposite ones: the cisterns, *f h k*, are emptied in their turns by the condensed air from the cistern, *d*, as the water progressively enters the latter from the pipe, *b c*.

A curious machine, of which the figure, in Pl. 55. will convey an accurate idea, was executed at Oulton, in Cheshire, by Mr. Whitehurst, for the service of a brewhouse, and other offices, belonging to Philip Egerton, esq. Its design is, to raise water by the *momentum*, or force, which this fluid acquires when confined: it having effectually answered the purpose, we have been induced to give a description of its constituent parts, from the sixty-fifth volume of "The Philosophical Transactions of the Royal Society," for 1774.

A, represents the original reservoir, or spring; the upper surface of which corresponds with the horizontal line, B C, and also with the bottom of the reservoir, K. D, the main pipe, which is one inch and a half in diameter, and nearly two hundred yards in length. E, is a branch-pipe of similar dimensions, for the use of the kitchen-offices.—Mr. Whitehurst observes, that these offices are situated at eighteen or twenty feet, at the least, beneath the surface of the reservoir, A, and that the cock, F, is about sixteen feet below it. G, represents a valve-box; and *g* exhibits the valve. H, is an air-vessel; *o o*, represent the ends of the main pipe, which are inserted in the air-vessel, and are bent downwards, to prevent the air from being driven out, when the water is forced into it. W, denotes the surface of the water.

Mr. Whitehurst remarks, that, as water discharged from an aperture beneath a pressure of sixteen feet perpendicular height, moves at the rate of thirty-two feet in one second of time, its velocity from the cock, F, will be in a similar ratio. And, though the aperture of such cock be not nearly equal to the diameter of the pipe, D, yet the pressure of the fluid contained in the pipe will be very considerable: so that if a column of water, two hundred yards high, be thus set in motion, and then suddenly stopped by the cock, F, its great force will open the valve, *g*, and condense the air in the box, H. as often as the water is drawn from the cock. This condensation was sufficient to force the water into the reservoir, K, and even to burst the vessel, H, within a few months after its first construction; though it was made of sheet-lead, in the proportion of nine or ten pounds to one square foot, and was apparently very firm. Hence it may be rationally concluded, that the impetus of the water is far superior to the simple pressure of the column, I K, and is therefore equal to a greater resistance (if it were required) than a pressure of four or five feet perpendicular height.

This ingenious contrivance is now applied to a variety of machinery, by Mr. Boulton, of Soho, near Birmingham; who obtained a patent, in December, 1797, for an improved apparatus, and methods of raising water and other fluids. —Mr. Boulton has substituted valves for cocks, and manufactures the pipes of such materials as are calculated to prevent accidents from bursting.

WATFORD, a town in Hertfordshire, with a great corn-market on Tuesday. It is seated on the river Coln, seven miles S. by W. of St. Alban's, and 14 N.W. of London. Long. 0. 17. W. Lat. 51. 41. N.

WATLINGTON, a town in Oxfordshire, with a market on Saturday. It is seated on the Chiltern Hills, on a brook, which, with the continued ridge, divides the county from Buckinghamshire. It is 14 miles S.E. of Oxford, and 46 W. of London. Long. 1. 0. W. Lat. 51. 37. N.

WATTEN, a town of France, in the department of the North, seated on the river Aa, five miles from St. Omer.

WATTON, a town in Norfolk, with a market on Wednesday, 18 miles S.W. of Norwich, and 90 N.N.E. of London. Long. 0. 53. E. Lat. 52. 36. N.

WAVEREN, a town of the duchy of Brabant, situated on the Dyle, 12 miles S. of Louvain.

WAXHOLM, a fortress on the coast of Sweden, in the Baltic, situated on a small island at the entrance of the lake Malar, where all homeward-bound ships are searched. It is 16 miles E. of Stockholm.

WAYNESBOROUGH, a town of the state of Georgia, in the county of Burke, 30 miles S. of Augusta. Long. 82. 46. W. Lat. 33. 45. N.

WEAR, a river, which rises in the west part of the county of Durham, and divides it into two parts; flowing S.E. by Stanhope to Bishop Auckland, and thence N.E. by Durham to Sunderland, where it falls into the German Ocean.

WEARMOUTH, a village in Durham, on the N. side of the mouth of the river Wear, opposite Sunderland. It is also called Monk Wearmouth, having, before the dissolution, belonged to the monks. Here is an iron bridge over the Wear, of one arch, 236 feet span, erected in 1796, and the first ever constructed of parts so formed as to unite in the manner of key-stones.

WEARMOUTH, Bishop, a village in Durham, one mile S.W. of Sunderland. It has a manufacture of sail-cloth.

WEATHERSFIELD, a town of the United States, in Connecticut, noted for raising onions. It is five miles S. of Hartford.

WEDDENSCHWEIL, a town of Switzerland, in the canton of Zuric. Near it is a remarkable water-fall. It is seated on the W. side of the lake of Zuric, 10 miles S.E. of that city.

WEERT, a town of Dutch Brabant, taken by the French in 1794. It is 12 miles W. of Ruremonde. Long. 5. 38. E. Lat. 51. 7. N.

WEEVER, a river, which rises in the N. part of Shropshire, runs across Cheshire, and receiving the Dane from the E. enters the estuary of the Mersey. It is navigable to Winsford, some miles above Northwich in Cheshire.

WEGELEBEN, a town of Germany, in the circle of Lower Saxony, and county of Halberstadt: five miles N. of Quedlingburg, and four E. Halberstadt.

WEGGIS, a town of Switzerland, in the canton of Lucerne, and capital of a bailiwic, situated on the north side of the Lake of Lucerne: seven miles E. Lucerne.

WEIBSTADT, a town of Germany, in the bishopric of Spire, 20 miles S.E. of Heidelberg. Long. 9. 23. E. Lat. 49. 19. N.

WEICHTERBACH, a town in Germany, in Weteravia, and in the county of Isenberg, seated on the river Kintz, with a castle, where the count resides.

WEIDEN, a town of Germany, in the upper palatinate of Bavaria, seated on the Nab, 10 miles N.W. of Leuchstenberg. Long. 12. 10. E. Lat. 49. 34. N.

WEIGHTS *(Encycl.)*. Some account of these has been given under Measures *(Supp.)*; but the following, we have no doubt, will be acceptable to our readers.

The principal measure of length is the *metre*, which is equal to 39.404 English inches: it is multiplied by prefixing the Greek numeral adjectives to the word metre: thus, the *decametre* signifies 10 metres; *hectometre*, 8; *kilometre*, 1000; and *myriametre*, 10,000 metres. The measures below a metre are named in a similar manner; the Latin numeral adjectives being substituted for those of the Greek: hence, a *decimetre* denotes the tenth part; *centimetre*, the hundredth part; and *millimetre*, the thousandth part of a metre.

The standard measure of capacity is denominated a *litre*, which is equivalent to 61.1816 English cubic inches, or about 1 5-7ths of a pint, ale-measure, and 2 1-10th of a pint, wine-measure. Its multiplication and submultiplication are performed in a similar manner.

The *gramme* is adapted to weighing bodies, and is equal to 15.4457 English grains, troy weight. Its divisions and subdivisions correspond with those of the metre.

The French *are* is employed for measuring the superficies of land, and is equal to 1076 2-5ths square feet, or 119 3-5th square yards, or about one fortieth part of an acre.

Lastly, the *stere* is used in measuring wood for fuel: it is equal to 35.31467 cubic feet.

The following is a Comparative Table of the Unities of the French Metres, Litres, and Grammes, with their corresponding English Inches, Gallons, and Grains.

Fr. Meas.	Metres in English Inches.	Litres in English. Cubic Inches.	Ale Gall. 282 Inch.	Wine Gall. 231 Inch.	Grammes in English Grs Troy.
1	39.404	61.1816	0.21695	0.26485	15.4457
2	78.808	122.3632	0.43390	0.52970	30.8914
3	118.212	183.5448	0.65085	0.79455	46.3371
4	157.616	244.7264	0.86780	1.05940	61.7828
5	197.020	305.9080	1.08475	1.32425	77.2285
6	236.424	367.0896	1.30170	1.58910	92.6742
7	275.828	428.2712	1.51865	1.85395	108.1199
8	315.232	489.4528	1.73560	2.11880	123.5656
9	354.636	550.6344	1.95255	2.38365	139.0113
10	394.04	611.816	2.1695	2.6185	154.457
20	788.08	1223.632	4.3390	5.2970	308.914
30	1182.16	1835.448	6.5085	7.9455	463.371
40	1576.16	2447.264	8.6780	10.5940	617.828
50	1970.20	3059.080	10.8475	13.2425	772.285

80	3152.32	4894.528	17.3560	21.1880	1235.656
90	3546.36	5506.344	19.5255	23.8365	1390.113
100	3940.4	6118.16	21.695	26.485	1544.57

From the table here given, the English weights and measures, corresponding with those used in France, may be easily ascertained, by multiplying the hundreds, and adding the tenths and units, as circumstances may direct; or, if the number be less than one hundred, by adding the units to the tens. After the number required is thus found, it may be reduced to English feet or inches, to quarts or pints, to pounds, ounces, drachms, or grains, by means of the common rules of arithmetic.

A more ample specification of these weights and measures is published in the third volume of Mr. Nicholson's Journal; and which is abstracted from a report published in 1799, at Paris, by authority of the French government.

WEIL, or Weyll, a free imperial town of Suabia, in the duchy of Wirtemburg. The inhabitants are Roman-catholics. It is seated on the Worm, 12 miles W. of Stutgard, and 20 N. of Tubingen. Long. 8. 50. E. Lat. 48. 46. N.

WEILBURG, a town of Germany, in the circle of Upper Rhine, and county of Nassau. It is seated on the Lohn, 22 miles N.E. of Nassau, 22 N.W. of Francfort, and 29 E. of Mentz. Long. 8. 26. E. Lat. 50. 18. N.

WEILHEIM, a town of Suabia, in the duchy of Wirtemburg, seated on the river Laurer.

WEILNAU, a town of Germany, in the circle of the Upper Rhine, and principality of Nassau Weilburg: thirteen miles S. Weilburg, and eighteen N.E. Mentz.

WEILTINGEN, a town of Germany, in the circle of Swabia, and duchy of Wurtemburg, on the Warnitz: forty miles S.W. Nuremburg, and fifty-four E.N.E. Stuttgart.

WEIMAR, a town of Upper Saxony, in Thuringia, with a magnificent castle, the residence of the Duke of Saxe-Weimar. It is seated on the Ilm, 20 miles N.E. of Erfurt, and 20 W.S.W. of Naumburg. Long. 11. 52. E. Lat. 51. 6. N.

WEINGARTIN, a town of Germany, in the palatinate

of the Rhine, ſeated on the Printza, four miles N.E. of Dourlach, and nine S. of Philipſburg. Long. 9. 30. E. Lat. 49. 5. N.

WEINHEIM, a town of Germany, in the palatinate of the Rhine, 10 miles N. of Heidelberg. Long. 8. 46. E. Lat. 49. 35. N.

WEISBADEN, a town of Germany, in the electorate of Mentz, where there are hot baths in high eſteem. It is eight miles N.E. of Mentz, and 13 W. of Francfort. Long. 8. 20 E. Lat. 49. 56. N.

WEISELMUNDE, a fortreſs of Weſtern Pruſſia, ſeated at the mouth of the Viſtula, below Dantzic, whoſe harbour it defends Long. 18. 40. E. Lat. 54. 24. N.

WEISSEMBURG, a town of France, in the department of Lower Rhine. Between this place and Lauterburg, are the famous lines from which the French drove the Auſtrians in 1744; and, in 1793, the Pruſſians drove the French from the ſame ſituation. It is ſeated on the Lauter, 10 miles S.W. of Landau, and 22 N.E. of Straſburg. Long. 8. 11. E. Lat. 48. 53. N.

WEISSEMBURG, a free imperial town of Franconia, in the biſhopric of Aichſtadt. The inhabitants are Proteſtants. It is ſeated on the Rednith, five miles N. of Pappenheim, and 30 S.W. of Nuremburg. Long. 11. 2. E. Lat. 49. 4. N.

WEISSEMBURG, a town of Germany, in the duchy of Saxony, 20 miles N. by W. of Wittemburg, and 20 N.E. of Deſſaw. Long. 12. 31. E. Lat. 52. 8. N.

WEISSEMBURG, or ALBA JULIA, a city of Tranſylvania, capital of a county of the ſame name, with a biſhop's ſee, and a univerſity. It is ſeated on the ſide of a hill, near the river Ompias, 35 miles W. of Hermanſtadt. Long. 24. 0. E. Lat. 46. 26. N.

WEISSEMBURG, or STUHLWEISSEMBURG, a town of Lower Hungary, ſeated at the W. end of the Platten Sea, 36 miles S.W. of Buda. Long. 18. 30. E. Lat. 47. 22. N.

WEISSENFELS, a town of Upper Saxony, in Miſnia, remarkable for a victory which the Swedes gained here over the Auſtrians. Above the town is a fine citadel, called Auguſtuburg, the reſidence of the Duke of Saxe-Weiſſenfels. It is ſeated on the Sala, 17 miles S.W. of Leipſic. Long. 12. 15. E. Lat. 51. 9. N.

WEILR, or WEDEL, a ſea-port of Denmark, in N. Jutland, ſituate on a bay in the Little Belt, 35 miles S.S.W. of Arhuſen, and 38 N.E. of Ripen. Long. 9. 30. E. Lat. 55. 45. N.

WEILTINGEN, a town of Suabia, in the duchy of Wirtemberg, ſituate on the Warnitz, 40 miles S.W. of Nuremberg, and 14 E.N.E. of Stutgard. Long. 10. 21. E. Lat. 48. 58. N.

WEINSBERG, a town of Suabia, in the duchy of Wirtemberg. The valley in which it is ſituate is famous for its wine. It is 25 miles N. of Stutgard. Long. 9. 15. E. Lat. 49. 15. N.

WELL (*Encycl.*). The following method of procuring water, in almoſt every ſituation, has lately been ſuggeſted by M. Cadet de Vaux.—He directs the ſoil to be perforated with a borer: a wooden pipe is then to be placed in the hole, and driven down with a mallet; after which the boring muſt be continued, in order that a pipe may be driven to a greater depth. As the auger becomes filled with earth, it ought to be drawn up, and emptied; ſo that, by the addition of freſh portions of the pipe, the boring is carried to a conſiderable extent under ground, and water is in moſt inſtances obtained. Wells, thus formed, are preferable to thoſe dug in the uſual manner; being leſs expenſive, while the ſupply of water is both copious and certain. Indeed, it often happens, in the common practice of digging for wells, that the workmen are obliged to fix the windlaſs, in order to prevent the ſprings from gaining on them: by this practice, a ſmall quantity of water is the neceſſary conſequence, and it is apt to fail during dry ſummers. Hence, M. de Vaux adviſes the earth to be perforated; a cylindrical pipe to be inſerted; and to ſearch for that element at a greater depth, in the manner before ſuggeſted —This method is ſtated to be very uſeful in camps, or fortreſſes; and, in caſe the fluid near the ſurface be neither ſufficiently ſweet, nor of a good quality, he ſuppoſes his expedient to be the beſt that can be adopted, for obtaining water of a purer kind, at a greater depth.—Further, when wells have, in large towns, been rendered unfit or uſeleſs, in conſequence of the ground having been tainted by privies, church-yards, &c. he very properly recommends ſuch reſervoirs to be emptied, and the bottom perforated in a ſimilar manner, ſo as to reach the lower ſheet of water; which, being thus contained within the cylindrical pipe, will riſe in a pure ſtate into the body of the pump fixed for this purpoſe.—For an account of the relative ſalubrity of *well-water*, the reader will revert to the article WATER.

If wells be diſuſed for a conſiderable time, the water generally becomes foul: the ambient atmoſphere is corrupted; and thus ariſe mephitic vapours which have often proved fatal to animal life. Hence it has been ſuggeſted, to employ a pair of ſmith's bellows and a tube; but as theſe are too bulky to be conveniently carried to any diſtance, and frequently cannot be procured on the ſpur of the occaſion, Mr. Salmon, of Canterbury, has invented the following apparatus, for diſperſing noxious air from wells.—We are induced to recommend this ingenious contrivance to the notice of our country readers; as it is not very expenſive, and will prevent many fatal accidents.

A, B, C, D, E, F (Plate 46.), repreſent ſix *lengths* of a metal pipe, each being eight feet long, and two inches in diameter: all theſe joints (except that marked F, which is made of copper, for the better ſupport of heat) are manufactured of tin-plate. G, is a tin-kettle, or veſſel (containing about two gallons), that is faſtened to the upper pipe F, and the ſides of which are perforated for the admiſſion of air, and conſequently for ſupporting the fire. This veſſel muſt be fixed in ſuch a direction as to have at leaſt five feet of the pipe above its top. H, is a conical cap, deſigned to confine the heat to the ſides of the tube.

When the machine is applied to the well, a wire muſt be paſſed through the holes *a*, *a*, in the upper part of the *length* A, and in the lower extremity of B, the joint ought to be luted with *oil-putty*, to render it air-tight; the upper end of each joint ſhould be covered with wire, to prevent it from bending; and to form a receptacle for the putty. The other lengths are then to be managed in a ſimilar manner, till that marked A, reach nearly to the ſurface of the water. The veſſel G, ought to be placed on two pieces of timber laid acroſs the well.

The apparatus, being now fixed, will ſpeedily be filled with the foul air extracted from the well: and as the gravity of the external and internal air is equal, they become ſtationary. Burning coal or wood muſt next be put into the kettle G; by which the copper tube, F, is heated; and, the internal air being rarefied, while the external air preſſes downward, the noxious vapours are gradually diſſipated; and a purer element is introduced into the well, whence it iſſues during the continuance of the fire.

Mr. Salmon remarks, that however ſmall the current of air paſſing out of the funnel or pipe, F, may appear, the effect is conſiderable; becauſe ſuch diſcharge conſiſts wholly of noxious vapour; whereas ten gallons of freſh air are probably

blown into the well, by means of the common bellows and leather pipe, before two gallons of mephitic vapour are removed. Such purification will be ſtill more effectual, if the fire-kettle G, be placed at D, when the internal air becomes more rarefied: it ought, however, to be remarked, that this advantage is over-balanced by the atmoſphere being rendered unfit for reſpiration, in conſequence of the ſuffocating properties of the charcoal.

In the year 1794, the Society for the Encouragement of Arts, &c. conferred their ſilver medal on George Butler, eſq. for his invention of a *bucket for drawing water from deep wells*. It conſiſts of a common barrel, the head of which is taken out: acroſs the top are fixed two thin bars of iron, having in the centre a ſmall piece of the ſame metal, which Mr. Butler terms a *ſtandard*. This is furniſhed with a collar, which has four moveable arms; and above it, there are a mortiſe containing a ſmall braſs pulley, and a loop to which the well-rope is ſecured: further, a cord is tied to one extremity of the collar, which, after paſſing over the pulley, communicates with a valve applied to the lower head of the veſſel.—The bucket, thus conſtructed, when let down into the well by a rope, is filled through ſuch valve; and, on being drawn up, the iron croſs above mentioned is preſſed againſt two parallel bars, ſo that the valve is opened, and the water diſcharged into a trough, or veſſel, prepared for its reception.—The principal advantage ariſing from this contrivance is, that the bucket is not only filled expeditiouſly, but it is alſo brought up ſteadily, ſo that no water is ſpilt; and, if any of it accidentally drop, it falls directly from the valve into the well, without wetting the deſcending rope, a circumſtance of conſiderable importance; for, by ſuch continual moiſture (which is neceſſarily occaſioned by the common buckets), it ſpeedily decays, while the veſſels are ſeldom drawn up completely filled.

The following method of procuring good water from wells, appears in the *Decade Philoſophique*, &c.

"If you wiſh the water of a well to be clear, and free from any diſagreeable taſte," ſays the writer, "the excavation ſhould be made conſiderably larger than is uſually done. If, for example, you wiſh to conſtruct a well five feet in diameter, the excavation ought to be from twelve to fifteen feet. A falſe well is made ten or twelve feet in diameter; in the middle of this large well the real well is conſtructed with a diameter of about five feet, but in ſuch a manner that the water may filter through the interſtices left between the ſtones, which form the outſide of the inner well: the falſe well is then filled with ſand and pebbles, ſo that the water muſt firſt filter through them before it reaches the real well. By this method you are ſure of having filtered water perfectly clear and fit to drink. This operation is rather expenſive, it is true; but the expence is amply compenſated by the advantage of having limpid and wholeſome water."

WELLAND, a river which riſes in Northamptonſhire, and ſeparates that county from Leiceſterſhire, Rutlandſhire, and Lincolnſhire; it paſſes by Market Harborough to Stamford, and is thence navigable to the Foſsdike waſh, which it enters below Spalding.

WELLINGBOROUGH, a town in Northamptonſhire, with a market on Wednesday. A fire happened here in 1738, which conſumed above 800 houſes. It is ſeated on the ſide of a hill, on the river Nen, 12 miles N.E. of Northampton, and 68 N. by W. of London. Long. 0. 59. W. Lat. 52. 16. N.

WELLINGTON, a town in Shropſhire, with a market on Thurſday, ſeated near Wrekin hill, 12 miles E. of Shrewſbury, and 152 N.W. of London. Long. 2. 30. W. Lat. 52. 40. N.

WELLINGTON, a town in Somerſetſhire, with a market on Thurſday, ſeated on the Tone, 15 miles N.E. of Exeter, and 147 W. by S. of London. Long 3. 25. W. Lat. 50. 57. N.

WELLS, a ſea-port in Norfolk, which has a large church, and a conſiderable corn trade. It is 27 miles N. of Swaffham, and 121 N.N.E. of London. Long. 1. 1. E. Lat. 53. 1. N.

WELLS, a town of the United States, in the diſtrict of Maine, ſituate on a bay of the ſame name, 20 miles S.W. of Portland, and 88 N.E. of Boſton. Long. 70. 32. W. Lat. 43. 20. N.

WELLS, a town of Upper Auſtria, ſeated on the Trawn, 18 miles S. of Lintz. Long. 13. 53. E. Lat. 48. 4. N.

WELSHPOOL, a town in Montgomeryſhire, with a market on Monday. It is the principal trading town in the county, being the great mart for Welſh cottons, flannels, &c. The caſtle, called Powis caſtle, is built of a reddiſh ſtone, and is a large ſtately ſtructure. It is ſeated in a rich vale, on the river Severn, nine miles N of Montgomery, 19 W. of Shrewſbury, and 169 N.W. of London. Long. 3. 5. W. Lat. 52. 33. N.

WEM, a town in Shropſhire, with a market on Thurſday, ſeated on the Roden, nine miles N. of Shrewſbury, and 164 N.W. of London. Long. 2. 40. W. Lat. 52. 10. N.

WENDLINGEN, a town of Suabia, in the duchy of Wirtemburg, ſituate on the Neckar, 12 miles S.E. of Stutgard, and 28 N.W. of Ulm. Long. 9. 18. E. Lat. 48. 38. N.

WENDOVER, a borough in Buckinghamſhire, with a market on Thurſday. It ſends two members to parliament, and is ſeven miles S.E. of Aileſbury, and 35 W. by N. of London. Long. 0. 35. W. Lat. 51. 46. N.

WENLOCK, a borough in Shropſhire, with a market on Monday. It ſends two members to parliament, and is twelve S.E. of Shrewſbury, and 147 N.W. of London. Long. 2. 30. W. Lat. 52. 36. N.

WENNER, the largeſt lake of Sweden, in W. Gothland, to the N.W. of the lake Wetter. It is 100 miles in length, and, in ſome places, 40 in breadth.

WENNERSBURG, a town of Sweden, in W. Gothland, which is the ſtaple for all the iron ſent from the province of Wermeland to Gotheborg. It is ſeated at the S.W. extremity of the lake Wenner, 15 miles E. of Uddevalla.

WENSYSSEL, a peninſula of Denmark, which makes the N. part of N. Jutland; bounded on the S. by the canal of Alburg, on the E. by the Categate, and on the N. and W. by the German Ocean.

WENSYSSEL, a town of Denmark, in N. Jutland, capital of a prefecture of the ſame name. It is ſeated on the Ryaa, 17 miles N.W. of Alburg. Long. 9. 40. E. Lat. 57. 4 N.

WEOBLY, an ancient borough in Herefordſhire, with a market on Tueſday. It ſends two members to parliament, and is eight miles N.W. of Hereford, and 141 W.N.W. of London. Long. 2. 41. W. Lat. 52. 9. N.

WERBEN, a town of Germany, in the old marche of Brandenburg, formerly a ſtrong paſſage on the river Elbe, but now all the fortifications are ruined. It is ſeated at the place where the Habel falls into the Elbe, 60 miles N.W. of Berlin. Long. 12. 12. E. Lat. 53. 5. N.

WERCHTERN, a town of Auſtrian Brabant, ſeated at the confluence of the Demer and Dyle, nine miles E. of Mechlin. Long. 4. 49. E. Lat. 51. 0. N.

WERDEN, a town of Weſtphalia, in the country of Marck, with an abbey. The inhabitants are Proteſtants, un-

der the protection of Pruſſia. It is ſeated on the Roer, 10 miles N.E. of Duſſeldorf, and 10 E. of Duiſburg. Long. 7. 1. E. Lat 51. 17. N.

WERDENBERG, a town of Switzerland, ſubject to the canton of Glarus, and capital of a county of the ſame name, which is ſeparated from the canton by the county of Sargans, and bounded on the S. by the Rhine. It has a ſtrong caſtle, the reſidence of the bailiff, ſeated on an eminence, commanding a beautiful proſpect It is 16 miles N.E. of Glarus. Long. 9. 25. E. Lat. 46. 58. N.

WERDENFELDS, a town and caſtle of Bavaria, which gives name to a county in the biſhopric of Freiſingen. It is 20 miles S. of Weilheim.

WERDOHL, a town of Weſtphalia, in the county of Marck, 31 miles N.E. of Cologne. Long. 7. 22. E. Lat. 51. 14. N.

WERFEN, a town and fortreſs of Bavaria, in the archbiſhopric of Saltzburgh, ſituate on the Saltza, 15 miles N.W. of Raſtadt.

WERLE, a town of Weſtphalia, in the biſhopric of Munſter, ſeated on the river Siſek, 30 miles S. of Munſter. Long. 7. 20. E. Lat. 51. 35. N.

WERMELAND, or WARMELAND, a province of Sweden, in W. Gothland, 100 miles long and 50 broad; bounded on the N. by Dalecarlia, on the E. by Weſtmania and Nericia, on the S. by the lakes Wenner and Dalia, and on the W. by the mountains of Norway, It is fertile, and diverſified by mountains, rocks, hills, and dales, clothed with foreſts of birch, poplar, mountain aſh, pine, and fir. It alſo abounds with lakes, which ſucceed each other almoſt without intermiſſion: they are from four to forty miles in circumference; ſome ſo narrow as to appear like broad rivers, and others of a circular ſhape; their ſhores, in ſome parts, ſteep and rocky; in others gently ſloping, and feathered with hanging wood to the margin of the water. Numerous rivulets flow from theſe lakes, and form, ſometimes, ſmall pictureſque cataracts. Carlſtadt is the capital.

WERN, a town of Weſtphalia, in the biſhopric of Munſter, with a monaſtery, ſeated near the Lippe, 28 miles S. by W. of Munſter. Long. 7. 30. E. Lat. 51. 35. N.

WERNIGERODE, a town of Upper Saxony, capital of a county of the ſame name, with a caſtle. The principal buſineſs of the town conſiſts in brewing, diſtilling, and manufactures of cloth and ſtuff. It is 10 miles W. of Halberſtadt, and 27 S.S.E. of Wolfenbuttle. Long. 11. 10. E. Lat. 52. 2. N.

WERTHEIM, a town of Franconia, capital of a county of the ſame name. It is ſeated at the confluence of the Tauber and Maine, 20 miles W. of Wurtzburg. Long. 9. 53. E. Lat. 49. 46. N.

WERWICK, a town of Auſtrian Flanders, taken by the French in 1793. It is ſeated on the Lis, eight miles S.E. of Ypres. Long. 2. 58. E. Lat. 50. 46. N.

WESEL, a town of Weſtphalia, in the duchy of Cleves, with a ſtrong citadel, near the confluence of the Rhine and Lippe. Here are two Calviniſt churches, one for the Lutherans, and another for the papiſts; but the regency of the town is in the hands of the Calviniſts. It was formerly an imperial and Hanſeatic town, but it now belongs to the King of Pruſſia. It was taken by the French in 1759, but reſtored in 1762. It is 25 miles S.E. of Cleves, and 45. N. of Cologne. Long. 6. 37. E. Lat. 51. 27. N.

WESEL, a town of Germany, in the archbiſhopric of Treves, 20 miles S. of Coblentz, and 46 E.N.E. of Treves. Long. 7. 30. E. Lat. 50. 4. N.

WESENBURGH, a fortified town of Ruſſia, in the government of Eſthonia, ſeated on the Wiſs, 55 miles S.E. of Revel, and 55 N.W. of Narva. Long. 25. 48. E. Lat. 59. 10. N.

WESER, a conſiderable river of Germany, which riſes in the county of Henneburg, being then called the Werra. It paſſes by Smalkald, croſſes a corner of Thuringia, enters the duchy of Brunſwick, and receives the Fulde at Munden. It then aſſumes the name of Weſer, runs along the confines of the circles of Weſtphalia and Lower Saxony, waters Hamelin, Minden, and Hoye; receives the Aller below Verden; and paſſing by Bremen, enters the German Ocean.

WESTBURY, a borough in Wiltſhire, with a market on Friday. It ſends two members to parliament, and is 26 miles N.W. of Saliſbury, and 101 W. of London. Long. 2. 13. W. Lat 51. 16. N.

WESTERHAM, a town in Kent, with a market on Wedneſday. It is the birth-place of Biſhop Hoadley and General Wolfe: the latter is interred in the church. It is ſeated on the river Darent (which riſes from nine ſprings near this town), 14 miles N.W. of Tunbridge, and 22 S.S.E. of London. Long. 0. 6. E. Lat. 51. 18. N.

WESTEROS, a town of Sweden, capital of Weſtmania, with a biſhop's ſee, a citadel, and a famous college. It carries on a conſiderable commerce with Stockholm, acroſs the lake Maeler; particularly in copper and iron from the neighbouring mines. Here are the ruins of an ancient palace, formerly inhabited by the kings of Sweden. The cathedral, built of brick, is celebrated for its tower, eſteemed the higheſt in the kingdom. In this cathedral is the tomb of the unfortunate Eric XIV. Weſteros is ſeated on the lake Maeler, 45 miles N.W. of Stockholm. Long. 17. 0. E. Lat. 59. 38. N.

WESTERBURG, a town of Germany, in Wetteravia, with a caſtle. It is the capital of a lordſhip of the ſame name, and 35 miles N. of Mentz. Long. 8. 18 E. Lat. 50. 26. N.

WESTERN TERRITORY, a country in North America, comprehending all that part of the United States which lies to the N.W. of the river Ohio. It is bounded on the W. by the Miſſiſippi, on the N. by the Lakes, on the E. by Pennſylvania, and on the S.E. and S. by the Ohio. It contains 11,000 ſquare miles, equal to 263,040,000 acres; from which, if we deduct 43,040,000 for water, there will remain 220,000,000 acres, belonging to the federal government, to be ſold for the diſcharge of the national debt. This country, which is intended to be divided into ſeveral new ſtates, is affirmed to be the moſt healthy and fertile ſpot in America, that is yet known to Europeans.

WESTERWICK, a ſea-port of Sweden, in Smoland, ſeated on the Baltic, 50 miles N. of Calmar, and 120 S.W. of Stockholm. Long. 16. 0. E. Lat. 57. 40. N.

WESTHOFEN, a town of Germany, in the palatinate of the Rhine, five miles N.N.W. of Worms, and 20 N.W. of Manheim.

WESTHOFEN, a town of France, in the department of Lower Rhine, 12 miles W. of Straſburg.

WESTMANIA, or WESTMANLAND, a province of Sweden Proper, between Sudermania, Geſtricia, Nericia, and Upland. It is 75 miles long and 45 broad, and abounds in copper and iron mines. The face of the country is diverſified like Wermeland. Weſteros is the capital.

WESTPORT, a ſea-port of Ireland, in the county of Mayo, ſeated at the mouth of a ſmall river, which runs into Clew-Bay, eight miles W. of Caſtlebar. Long. 9. 22. W. Lat. 13. 48. N.

WESTRA, one of the Orkney iſlands, eight miles long, and from one to three broad. The number of inhabitants is about 1,500. It is nine miles N.N.E. of Mainland.

WETHERBY, a town in the weſt riding of Yorkſhire, with a market on Thurſday, ſeated on the Wharf, 14 miles W. of York, and 177 N. by W. of London. Long. 1. 20. W. Lat. 53. 57. N.

WETTER, a lake of Sweden, in Gothland, S.E. of the lake Wenner. It is 100 miles from N. to S. and 25 from E. to W.

WETTING, a town of Lower Saxony, in the duchy of Magdeburg ſituate on the Saale, 34 miles S. of Magdeburg. Lon 11. 40 E. Lat. 11. 31 N.

WETTINGEN, a town of Switzerland, on the Limmat, one mile S. of Baden. Its wooden bridge is a beautiful piece of mechaniſm, 240 feet long, and ſuſpended 20 feet above the ſurface of the water. It is the laſt work of Grubenman, the ſelf-taught architect, and is far more elegant than his bridge at Schaffhauſſen.

WETZLAR, a free imperial town of Germany in Wetteravia, ſurrounded by ditches and walls flanked with towers. The inhabitants are Proteſtants, and have a council of 24 members. In 1693, the imperial chamber was transferred hither from Spire, on account of the wars which ravaged the palatinate. It is ſeated at the confluence of the Lahn, Diſle, and Dillen, five miles S. of Solms, and 78 N. by E. of Spire. Long. 8 32. E. Lat. 50. 26 N.

WEXIO, a ſea-port of Sweden, in Smoland, ſeated on a lake, which contains a group of woody iſlands. Though a biſhop's ſee, it is very ſmall, and the houſes moſtly of wood. It is 50 miles W. of Calmar and 155 S.W. of Stockholm. Long. 14. 57. E. Lat. 56. 51. N.

WEY, a river, which riſes in Hampſhire, flows through Surrey by Godalming and Guildford, and enters the Thames at Weybridge.

WEYMOUTH, a town in Dorſetſhire, incorporated with that of Melcomb-Regis, but a diſtinct borough. It is ſeated on the W. ſide of an inlet of the ſea: but its port is injured by the ſand, ſo that its trade, which was once conſiderable, is much reduced, a few ſhips only being ſent hence to Newfoundland. This decline is, in ſome degree, compenſated by the great reſort of perſons of all ranks, for the purpoſe of ſea-bathing, for which it is excellently fitted by its remarkable fine beach; and their majeſties and the royal family have often honoured it with their reſidence for many weeks. A few plain and ſtriped cottons are made here. Weymouth is 130 miles W.S.W. of London.

WHEAT (*Encycl.*). The following important obſervations on the ſmut in wheat, blights, and the manner in which plants are nouriſhed, by Sir John Call, bart. M.P. appear in the Communications to the Hon. Board of Agriculture.

"Having often reflected," ſays Sir John, "upon the nature of ſmut in wheat, and conſidered the various propoſitions and ſuggeſtions which had been made from time to time, for cleanſing the grain, ſo as to prevent its affecting the flour, as alſo to prevent the ſmut from being propagated into the ſeed wheat ſo affected, I was led to deliberate in my mind whether the ſmut was a diſorder, or diſeaſe, inherent in the ſeed, or an adventitious effect from the atmoſphere, or ſome animalcula depoſited in the ears of corn during their growth. In reaſoning on this ſubject, it occurred to me, that if the diſorder, or diſeaſe, called the ſmut, was inherent in, or latent in the ſeed grain, and that all ſuch grain, when ſown, would produce only ears full of ſmut; then, unleſs the diſorder could be cured by ſome previous application, there would be a riſk of having all the crops rendered abortive, where a remedy was not applied; or if, as ſome perſons had ſuppoſed, that the nature of the ſoil had contributed to produce the ſmut in wheat, then ſuch ſoil, unleſs it could be corrected, would become unfit for, or dangerous to tillage. To ſatisfy myſelf at leaſt how far the ſmut was a diſorder liable to be propagated by ſeed grain taken out of ſmutty ears, or other grain mixed up with, and rubbed in ſmut, I reſolved to make the following experiment.

"In the year 1797, when my men were threſhing out my wheat, I deſired them, as well as ſome of my neighbours, to ſave all the ears they met with affected with the ſmut; having collected all I could get, previous to the beginning of October, I found ſome ears wholly decayed, ſome with one, two, or more grains, apparently perfect, all which I cauſed to be rubbed out with the hand in a bag of paper, ſmut and all together; and after mixing and rubbing the grain in the ſmut, all I could get perfect out of ſmutty ears amounted to ſeventy-two grains, which were carefully dipped in, and marked in a ridge amongſt other wheat, in a field then under tillage. Their growth from the firſt was ſimilar to the reſt of the field. The certificate which I deliver herewith, and the ſpecimens of about ſixty ears, gathered from the produce of the ſeventy-two grains, among which are contained every ear that appeared diſcoloured, or was thought by the examiners to be tending to ſmut, will ſerve to corroborate my opinion; which, as I obſerved before, is, that certain animalcula are depoſited in the huſks which cover each grain, about the time the wheat is in bloſſom, which are fed and brought to perfection by devouring the juice, or milky ſubſtance which riſes at the root [*i. e.* the *root of each grain* in the huſk], and that if not intercepted would form a complete grain: inſtead of which, as in many other caſes of vegetation, the vegetable life, if I may ſo call it, is deſtroyed. And as a further proof that this is the caſe, and that the effect is not by the juices iſſuing from the earth, or riſing through the tubes of the ſtalk, I need notice no other effect, than, that ſome grains periſh and become ſmutty, while others flouriſh and become perfect in the ſame ear of corn; whereas, was the diſeaſe, which is ſuppoſed to occaſion the ſmut, radical in the original grain of ſeed wheat, or infectious from the juice ariſing through the pores and tube of the ſtalk, all the grains in each ear would be affected, or thoſe more particularly at the lower part; whereas the grains decayed are often found intermixed with others quite perfect, and diſperſed throughout the ear. I therefore truſt, that the prejudice conceived, that the ſmut in wheat is an inherent diſorder, will be relinquiſhed; or that another idea, that one kind of ground is more likely to produce ſmut than another, will be abandoned. I do not deny that a conſiderable degree of ſmutty wheat threſhed out, and the ſmut of it mixed with other purer grain, will injure and prejudice the white caſting of the flour, and that it may be neceſſary to waſh and cleanſe ſuch wheat, previous to its being ground, where the ſmut evidently prevails; but I think my opinion of the origin of ſuch ſmut is much ſtrengthened by its prevailing more in one year than in another, and that it ſeldom happens the ſame complaint is made by farmers in the two ſucceeding years, notwithſtanding there is no precaution taken, or remedy applied to the ſeed grain to prevent it; and with regard to my own experience, during twenty-nine years, I have neither mixed up my wheat with lime, nor ſteeped it in brine, nor waſhed it in any other liquid to prevent the growth of ſmut: nor do I believe any of my neighbours have made uſe of any ſuch precautions.

"Analogous to this idea which I have juſt endeavoured,

to explain, I am tempted, from obſervation, to hazard another reſpecting the bloſſoms and ſetting of young fruit, on fruit trees, but more particularly that of apple trees, in which a failure of fruit happens one, two, or three years together, and which is ſo detrimental to the produce of the orchards in Devon and Cornwall, that in the pariſh of Stoke Climſland, where I reſide, there have not been made, during the three laſt years, 500 hogſheads of cyder, whereas in a good bearing year there are uſually made from 1500 to 2000 hogſheads. This defect is generally aſcribed to froſty mornings, cold winds, and blights, particularly to the latter; and I am apt to believe that it is in, and from the latter, where the miſchief ariſes; not from any ſimple effect of the atmoſphere, but from the animalcula with which it is replete in ſuch fogs, and which are depoſited in the bloſſom, as in a nidus, and there brought to perfection by feeding on, and deſtroying the vegetable life by which they were originally nouriſhed. Hence it is, that bunches of young fruit, ſet, and grown as big as hazle nuts, fall off from the branches of the tree at the ſtem, which ſeem to be eaten off, and deprived of the reception or conveyance of all nouriſhment, and often crumpled up by a kind of web and dry leaves. To prevent the ſuppoſed effect of blight, cold wind, and hoar froſt, on wall-fruit, a net is often hung up before them, ſtuck full of dry fern, or other branches, to ſhelter the trees, without obſtructing the air; and others ſtick in among the fruit trees, branches of fir, to cover and protect the bloſſoms, both which modes probably have ſome good effect, by intercepting and preventing the animalcula from taking poſt in the bloſſoms, or attaching themſelves to the root of the young fruit.

"It is now three years that I have repeated the experiment of dibbling in, and ſowing ſome of the beſt ſeed wheat, and ſome of the moſt ſhrivelled grains, or tail part of the ſame wheat, after winnowing; and from the reſult of the experiments, I am ſatisfied that a gallon of ſhrivelled grains of wheat, retaining the power of vegetation, will produce a return of as good wheat in quality, and probably more in quantity, than a gallon of the fineſt grain of the ſame ſort that can be ſeparated by winnowing, or any other ſelection. The only advantage that I am diſpoſed to grant, to fair, clean, and well ſcreened ſeed wheat, is, that it will be more free from cockle, or any other extraneous ſeed, than the tail winnowings, or ſhrivelled ſeed, is likely to be; but on the other hand, a gallon of the ſhrivelled ſeed will contain three grains to two of the other, and probably will not be ſo much an object to be devoured by inſects, birds, and vermin, as the more plump and full grains are; hence if my hypotheſis is well founded, the advantage in favour of produce at the harveſt will be in the ſhrivelled grains.

"The concluſion which I am diſpoſed to draw from theſe experiments goes much beyond the advantage of converting the beſt kind of wheat, or other grain, to flour, and making uſe of an inferior ſort for ſeed. I have been led to conſider and revolve in my mind how far, and in what manner, any kind of manure contributes to the production of the crop: that it does ſo in the moſt eſſential manner, I do not entertain a doubt; but I differ from thoſe who think that any kind of manure mixed with the earth, riſes up through the roots, and forms any conſiderable part of the plant, fruit, or grain whatſoever: it may contribute to break the tenacity of the ſoil, to render it warm, open, and eaſy of perforation; ſo that the tender fibres and roots of any plant may find an eaſy paſſage and genial protection therein; but I conceive that all the nouriſhment and juices neceſſary for the growth of the plants, and formation of their fruits and ſeeds, isderived from the atmoſphere, that it enters and deſcends by the buds and heart of all vegetables, and the earth is only a protecting matrix to retain and ſupport all vegetable matter in a poſition to receive its nouriſhment. It is in forming, collecting, or attracting this nouriſhment, that manures are of ſuch importance to all kinds of vegetation, either by attracting and fixing the circulating atmoſphere, to hover over the earth where they are, ſo that the plants may imbibe what is proper for them; or by cauſing ſuch a fermentation, or ſecretion in the earth, that by the attraction of heat it ſhould throw up ſuch a ſpecies of food and nouriſhment as is moſt congenial to that kind of vegetation for which the earth is cultivated.

"I will not pretend to enter into a nice diſcuſſion of the cauſe and powerful effects of vegetation, or attempt to controvert any opinions which have been long held on the ſubject; all I deſire is, thattheideas I have thrown out may be favourably conſidered, or the experiments fairly repeated, and that I may be allowed to think that a large turnip, weighing five or ſix pounds, with a very ſtrong and large top, held only to the earth by a ſmall tap root, and a few little fibres; or that a cabbage weighing twenty or thirty pounds, ſtanding high on a ſmall ſtalk; were not wholly formed and grew to that ſize by moiſture or ſubſtance riſing through their roots out of the earth."

WHITCHURCH, a decayed borough in Hampſhire, with a market on Friday. It ſends two members to parliament, and is 24 miles E. by N. of Saliſbury, and 58 W. by S. of London. Long. 1. 10. W. Lat. 51. 15. N.

WHITCHURCH, a town in Shropſhire, with a market on Friday, 20 miles N. of Shrewſbury, and 161 N.W. of London. Long. 2. 40. W. Lat. 52. 0. N.

WHITEHORN, a royal burgh of Scotland, in Wigtonſhire, governed by a provoſt. It is a place of great antiquity, and ſaid to have been the firſt biſhop's ſee in Scotland. It is eight miles S. of Wigton.

WHITEHORN, an iſland of Scotland, near the S.E. coaſt of the county of Wigton. Long. 4. 20. W. Lat. 54. 46. N.

WHITE MOUNTAINS, the higheſt part of a ridge of mountains, in the ſtate of New Hampſhire, in North America. They extend N.E. and S.W.; and their height above an adjacent meadow, is 5500 feet; and the meadow is 3500 feet above the level of the ſea. The ſnow and ice cover them nine or ten months in the year; and during that time they exhibit the bright appearance from which they are denominated the White Mountains. Although they are ſeventy miles inland, they are ſeen many leagues off at ſea, and appear like an exceedingly bright cloud in the horizon. Their higheſt ſummit is in lat. 44° N.

WHITE-WASHING, a cheap kind of colouring of fair white given to brick or plaſtered walls by waſhing them over with a ſolution of quick-lime. The proceſs is the ſimpleſt imaginable. Some lumps of quicklime are plunged into a bucket of cold water, and ſtirred about till they are diſſolved and mixed, after which a bruſh with a large head, and a long handle to reach the ceiling of the room, is uſed to ſpread it thinly on the walls, &c. When dry it is beautifully white, but its *known cheapneſs* has induced the plaſterers to ſubſtitute a mixture of glue ſize and whitening for the houſes of their opulent cuſtomers; and this, when once uſed, precludes the employment of *lime-waſhing* ever after; for the latter, when laid on whitening, becomes yellow.

White-waſhing is an admirable means of rendering the dwellings of the poor clean and wholeſeme, as will be evident from the following account of the expence and benefit of frequently white-waſhing the rooms of a poor-houſe, by Wm. Emm, eſq. publiſhed by the Society for Bettering the Condition of the Poor.

" The poor-houſe of Biſhop Auckland has been, during the preceding ſummers," ſays the account, " white-waſhed every ſix weeks. The method of preparing the lime (which is rock or ſtone-lime from Coxhoe, about ten miles from Auckland, and coſts, including carriage, four pence a buſhel) is as follows:—a large tub is procured to ſlake it in, and this is filled with lime nearly to the top, cold water being poured upon it by degrees, and it being ſtirred with a ſtick that is broad at one end, until the tub is filled with lime: when the lime and water are well incorporated, and of the conſiſtence of mud, it is to be taken out of the tub with a wooden ſcoop, and ſtrained through a hair or fine wire ſieve into another veſſel, where it ſettles to the bottom in a ſolid maſs of white-waſh. There will be ſome water at the top, not imbibed by the lime; this ſhould be ſkimmed off. It is then to be mixed with cold water, till it is of the conſiſtence of thin paint, being ſtirred occaſionally while it is uſing. In this ſtate it is laid on with a whitening bruſh by the man and his wife who have the care of the houſe.

" The quantity uſed for white-waſhing the fifteen rooms at Aukland poor-houſe, is half a buſhel, which coſts two pence; the expence of the four white-waſhings being, in the whole, not quite *eight pence a-year*. This trifling expenditure has produced a very great benefit to the poor in the work-houſe, to thoſe who viſit it, and indeed to the pariſh in general, that is not eaſily to be calculated.—I have the pleaſure of being able to ſay, that there is neither diſeaſe nor vermin in our poor-houſe at preſent; but that the inhabitants are very comfortable and happy.

" It would be well for the inhabitants of cottages, as well as poor-houſes, if the cuſtom of very frequently white-waſhing them were prevalent throughout the kingdom. Clean white-waſhed walls not only contribute to prevent the exiſtence of vermin, but induce habits of cleanlineſs in thoſe who reſide within them. It was obſerved by the late Mr. Howard, in his work on Lazarettos, that in the cottages on his eſtate in Bedfordſhire, which had been made comfortable, ' *and white-waſhed both within and without*, the very ſame families, which were before ſlovenly and dirty, had upon this change of habitation, become neat in their perſons, their houſes, and their gardens.'

" When it is generally known that the four white-waſhings of Auckland poor-houſe have produced the moſt beneficial effects, and have coſt only a little trouble, and *the ſum of eight pence a-year*, I flatter myſelf that there will be very few poor-houſes in England * which will not be frequently white-waſhed.—The price and quality of lime is very different in different parts of the kingdom. In London, and in ſome other places, it is as high as a ſhilling a buſhel, and the lime chiefly in uſe is chalk lime, which does not anſwer ſo well as ſtone lime. The difficulty and expence, however, of obtaining the beſt ſtone lime, for this purpoſe, in any part of the kingdom, muſt be too inconſiderable to prevent its general uſe, if moſt approved of. In the neighbourhood of Manchester, a horſe load of lime, which is ſufficient to white-waſh about a dozen cottages, coſts fourteen pence; which for each cottage would be two pence halfpenny a year, ſuppoſing them regularly white-waſhed in ſpring and autumn. In ſome places the expence may be increaſed, perhaps as high as a ſhilling a cottage; but, as a general average for each cottage, two pence or three pence a year, expended by the landlord or the pariſh, in ſupplying the cottager with the materials for white-waſhing his cottage, would wonderfully contribute to the cleanlineſs and health of the poor throughout the kingdom.

" If the lime-waſh is prepared with lime already ſlaked, it may, in many inſtances, require ſize to be mixed with it; but if the *quick lime* is uſed, and in the metropolis, and in moſt towns, it may be obtained at all times in the ſmalleſt quantities, it will not be neceſſary to mix ſize with it; and the good effects of the white waſhing in deſtroying vermin and removing infection will be much increaſed. The ſooner, indeed, the lime is uſed after it is ſlaked, the better; eſpecially if there is any apprehenſion of infection in the houſe. In that caſe, it is proper that the walls ſhould be frequently waſhed with quick lime, freſh ſlaked in water, and put on while it continues bubbling and hot, as is the practice of the Houſe of Recovery at Manchester.

" I ſuppoſe the maſter of the poor-houſe to do the work himſelf. If a workman is employed to put it on, the additional expence would be about 6d. a room, which for the fifteen rooms would be 7s. 6d. a time, or 1l. 10s. a-year.—If indeed the overſeer's brother or nephew is to be employed in the *job* by the yard, the increaſe of expence would be very conſiderable: and might, inſtead of eighteen pence a-year, amount to an annual expenditure of ſeveral pounds, and the coſt prove almoſt equal to the benefit of the work being done."

WHITTLEBURY FOREST, a foreſt in the S. part of Northamptonſhire, nine miles in length, and, in ſome parts, above three in breadth. Here the wild cat is ſtill found. In

---

* The penitentiary houſe in Cold-Bath Fields was white-waſhed in 1796. The charge for the work was fairly made, according to the ordinary courſe of trade, and amounted to *one hundred and one pounds*. In 1797 it was white-waſhed again; the materials were bought, and a priſoner in the houſe employed in the work; which, as far as one could judge, was extremely well done: the expence of the materials was 1l. 7s. 6d.; the donation to the man for his trouble 2l. 12s. 6d.; in all four pounds.—In the Foundling Hoſpital, they have tried the experiment of white-waſhing ſome of the rooms. The greater kitchen is thirty-four feet by twenty-one, and twelve high; and the leſſer kitchen, is twenty-one feet by ſeventeen; both of them arched, and containing a great deal of extra work: the materials, for white-waſhing both of them twice, coſt 3s. Of the girls' dining-room over it, being 102 feet long by twenty-four feet wide, and twelve feet high; the expence of the materials, for white-waſhing the ceiling and cornice, and colouring of a ſtraw colour that part of the ſides of the room which was ſtucco, was 4s. 10d.: the workmanſhip, 5s. The two wards above this floor are, one of them 129 feet long by twenty-four feet wide, and twelve feet high, and the other 111 feet long by eighteen wide, and twelve feet high; all plain walls, without dado or ſurbaſe: the expence of white-waſhing the ceilings and cornice of both of theſe, and colouring the ſides of the rooms, was, for the materials, 16s.; for the workmanſhip, 24s. In both inſtances ſize was uſed; which is included in the account, and was neceſſary, becauſe the walls were not new plaſtered walls, but had been ſo white-waſhed or coloured before.—When it is known at how ſmall a price the benefit of white-waſhing may be attained in poor-houſes, and other public buildings, we truſt the conductors of them will take care that they do not want thoſe means of preventing vermin, filth, and infection among them.

1685, the firſt Duke of Grafton was appointed hereditary ranger of this foreſt, in which the preſent duke has a fine ſeat, called Wakefield Lodge.

WIBLINGEN, a town of Auſtrian Suabia, where is a Benedictine abbey. It is ſeated near the confluence of the Iller and Danube, three miles S.S.W. of Ulm.

WIBURG, a government of Ruſſia, formerly Ruſſia Finland, and compriſed in Carelia. It was ceded by the Swedes to the Ruſſians, partly by the peace of Nyſtadth in 1721, and partly by the treaty of Abo in 1743. Beſide paſtures, the country produces rye, oats, and barley, but not ſufficient for the inhabitants. It retains its own civil and criminal courts of juſtice: in general caſes, not capital, the puniſhments preſcribed by the provincial judicature are inflicted; but whenever a criminal is condemned to death, the Ruſſian laws interpoſe, and reprieving him from the ſentence of beheading or hanging, as enjoined by the Swediſh code, conſign him to the knoot and tranſportation to Siberia. In the governor's court, buſineſs is tranſacted in the Swediſh, German, and Ruſſian tongues. The peaſants talk only the Finniſh dialect; but the inhabitants of the towns underſtand Swediſh alſo, and many of them German. Lutheraniſm is the eſtabliſhed religion; but the Greek worſhip has been introduced by the Ruſſians.

Wiburg, a commercial ſea-port of Ruſſia, capital of a government of the ſame name, with a biſhop's ſee, and a ſtrong citadel, It contains about 9000 inhabitants. A few houſes are conſtructed with brick; but the greateſt part are of wood. It is ſeated on the N.E. point of the gulf of Finland, 110 miles N.N.W. of Peterſburg, and 250 N.E. of Riga. Long. 29. 10. E. Lat. 60. 56. N.

WICK, a borough and ſea-port in Caithneſsſhire, ſeated on an inlet of the German ocean, S. of Noſe Head. Long. 3. 2. W. Lat. 58. 30. N.

Wick, a fortified town of Dutch Limburg, ſeated on the Maeſe, oppoſite Maeſtricht, with which it communicates by a bridge. Long. 5. 41. E. Lat. 50. 52. N.

WICK-BY-DUERSTEDE, a town of the United Provinces, in Utrecht, with a ſtrong caſtle. It is ſeated at the place where the Leck branches off from the Rhine, nine miles W. of Rhenen, and 15 S.E. of Utrecht. Long. 5. 22. E. Lat. 52. 0. N.

WICKWARE, a corporate town in Glouceſterſhire, governed by a mayor, with a market on Monday. It is 17 miles N.E. of Briſtol, and 111 W. of London. Long. 2. 16. W. Lat. 51. 36. N.

WIDDIN, a fortified town of Turkey in Europe, with an archbiſhop's ſee. It has often been taken and retaken by the Turks and Auſtrians. It is the ſeat of the government of the pacha, Paſwan Oglou, who was lately, for ſeveral years, in open rebellion againſt the Porte, and repeatedly defeated all the Turkiſh forces ſent againſt him, till at length the Porte thought proper to conclude a treaty with him almoſt on his own terms. Widden is ſeated on the Danube, 88 miles N.E. of Niſſa, and 150 S.E. of Belgrade. Long. 24. 27. E. Lat. 44. 12. N.

WIED, a ſmall principality of Germany, in the circle of Upper Rhine. The capital is Neuwied.

WIEDENBRUCK, a town of Weſtphalia, in the biſhopric of Oſnaburg, 32 miles S.S.E. of Oſnaburg. Long. 7. 50. E. Lat. 51. 48. N.

WIELUN, a town of Great Poland, in the palatinate of Siradia. It was ruined by the Swedes in 1656, but has been ſince rebuilt, and has a good caſtle. It is ſeated on a river which falls into the Warta, 20 miles S. of Siradia. Long. 18. 55. E. Lat. 51. 12. N.

WIELITSKA, a village of Poland, lately included in the palatinate of Cracow, but now compriſed in the Auſtrian kingdom of Lodomeria. It is celebrated for its ſalt-mines, which lie eight miles S.E. of Cracow. In theſe inexhauſtible mines, are ſeveral ſmall chapels excavated in the ſalt, in which maſs is ſaid on certain days of the year. One of theſe chapels is 30 feet long and 25 broad; the altar, crucifix, ſtatues, and ornaments, all carved out of the ſalt. Theſe mines are of a moſt ſtupendous extent and depth, and perfectly dry. There is, however, one ſmall ſpring of water, which is impregnated with ſalt, as it runs through the mine. Theſe mines have been worked above 600 years. Before the partition of Poland, in 1772, they furniſhed a conſiderable part of the revenue of the king, who drew from them an average profit of about 97,000l. ſterling.

WIESENTEIG, a town of Suabia, capital of a lordſhip of the ſame name. It is 16 miles N.W. of Ulm, and 25 S. of Stutgard. Long. 10. 2. E. Lat. 48. 35. N.

WIGAN, a borough in Lancaſhire, with a market on Monday and Friday. It is governed by a mayor, and ſends two members to parliament. Here the ſtrongeſt checks are made, and other articles of linen and cotton manufacture. That elegant ſpecies of coal, called Cannel, is found in plenty and great perfection in the neighbourhood. The river Douglas is made navigable hence to the Ribble; and it is joined by a canal from Liverpool. Wigan is 30 miles S. of Lancaſter, and 196 N.N.W. of London. Long. 2. 50. E. Lat. 53. 34. N.

WIGHTON, a town in the E. riding of Yorkſhire, with a market on Wedneſday, ſeated at the ſource of the Skelſler, 16 miles S.E. of York, and 192 N. by W. of London. Long. 0. 40. W. Lat. 53. 52. N.

WIGTON, a town in Cumberland, with a market on Tueſday, ſeated among the moors, 12 miles S.W. of Carliſle, and 304 N.N.W. of London. Long. 3. 4. W. Lat. 54. 50. N.

Wigton, a borough and ſea-port, the county-town of Wigtonſhire. On the S. ſide are the veſtiges of an ancient caſtle, and to the N.E. is a great moraſs, called the Moſs of Cree. It is ſituate on a hill, which overlooks the bay of Wigton, 95 miles S.W. of Edinburgh. Long. 4. 43. W. Lat. 55. 0. N.

WIGTONSHIRE, a county of Scotland, ſometimes called Upper, or West Galloway; bounded on the N. by Ayrſhire, on the E. by Kircudbrightſhire, and on the S. and W. by the Iriſh Sea. Its greateſt extent, in any direction, does not exceed 30 miles. The N. part, called the Moors, is naked and mountainous. Great numbers of ſheep and black cattle are raiſed here; and they have a ſmall breed of horſes peculiar to this country: they are called galloways, and are very ſtrong and gentle.

WIHITSCH, a frontier town of Turkey in Europe, in Coſnia, ſeated on a lake formed by the river Unna, 40 miles S.E. of Carlſtadt. Long. 16. 10. E. Lat. 45. 34. N.

WILDBAD, a town of Suabia, in the duchy of Wirtemburg, celebrated for its warm baths, 24 miles W. of Stutgard, and 30 N.E. of Straſburg. Long. 8. 35. E. Lat. 48. 43. N.

WILDBERG, a town of Suabia, in the duchy of Wirtemburg, ſituate on the Nagold, 19 miles S.W. of Stutgard. Long. 8. 38. E. Lat. 48. 33. N.

WILDEHAUSEN, a town of Weſtphalia, capital of a ſmall bailiwic, united to the duchy of Bremen. It is ſeated on the Hunde, 18 miles S.W. of Bremen. Long. 8. 27. E. Lat. 52. 55. N.

WILKESBOROUGH, a town of Pennſylvania, capital of the county of Luzerne. It is ſituate on the N. branch of

the Suſquehannah, 118 miles N.W. of Philadelphia. Long. 75. 59. W. Lat. 41. 13. N.

WILKOMIER, a town of Lithuania, in the palatinate of Wilna, ſeated on the Sweita, 45 miles N.W. of Wilna. Long. 24. 54. E. Lat. 55. 19. N.

WILLIS' ISLAND, a rocky iſland at the N. end of the iſland of Southern Georgia. It was diſcovered in 1775, and contained the neſts of many thouſand ſhags. Long. 38. 29. W. Lat. 54. 0. S.

WILLISAW, a town of Switzerland, in the canton of Lucern, ſeated among high mountains, on the river Wiger, 25 miles N.W. of Lucern.

WILMANSTRAND, a town of Ruſſia, in the government of Wiburg. In 1741, an obſtinate battle was fought about a mile from this town, between 3,000 Swedes and 16,000 Ruſſians; but, at laſt, the former were obliged to yield to ſuperiority of number. It is ſeated on the S. ſide of the lake Saima, 40 miles N.N.W. of Wiburg, and 100 N.N.W. of Peterſburg. Long. 27. 54. E. Lat. 61. 20. N.

WILMINGTON, the largeſt town of the ſtate of Delaware, ſituate on Chriſtiana Creek, near two miles W. of the river Delaware, and 28 of Philadelphia.

WILMINGTON, a town of N. Carolina, ſituate on the E. ſide of the E. branch of Cape Fear River, 34 miles N. of Cape Fear, and 85 S.W. of Newburn.

WILNA, a commercial city of Lithuania, in a palatinate of the ſame name, with a biſhop's ſee, an univerſity, an ancient caſtle, and a palace. The houſes are all built of wood. It was taken by the Ruſſians in 1794; and is ſeated at the confluence of the Villa and Wilna, 15 miles E. of Troki, and 215 N.E. of Warſaw. Long. 25. 39. E. Lat. 54. 38. N.

WILSDRUF, or WILSDORF, a town of Upper Saxony, in the margravate of Meiſſen, nine miles W. of Dreſden, and 9 S. of Meiſſen. Long. 13. 28. E. Lat. 51. 5. N.

WILSHOVEN, a town of Germany, in Bavaria, ſeated at the confluence of the Wils and Danube, 30 miles N.W. of Paſſau.

WILSNACH, a town of Germany, in the margravate of Brandenburg, ſeated on a rivulet that falls not far from it into the Elbe.

WIMMIS, a town of Switzerland, in the canton of Bern, ſeated on the Sibnen, 18 miles S. of Bern. Long. 7. 8. E. Lat. 46. 34. N.

WIMPFEN, a free imperial town of Suabia, ſeated on the Neckar, eight miles N. of Hailbron, and 22 E. of Heidelberg. Long. 9. 25. E. Lat. 49. 20. N.

WINBORN, or WINBORN MINSTER, a town in Dorſetſhire, with a market on Friday. It had a monaſtery, in which were interred the Weſt Saxon kings Etheldred and Sigeforth, and Queen Ethelburga. Its noble church, called the Minſter, was formerly collegiate. It is ſeated between the Stour and Allen, ſix miles N. of Poole, and 102 S.W. of London. Long. 2. 1 W. Lat. 50. 47. N.

WINCAUNTON, a town in Somerſetſhire, with a market on Wedneſday, ſeated on the ſide of a hill, 24 miles S. of Bath, and 100 W. by S. of London. Long. 2. 18. W. Lat. 51. 1. N.

WINCHCOMB, a town in Glouceſterſhire, with a market on Saturday. It was formerly noted for its abbey, whoſe mitred abbot ſat in parliament. It is ſeated in a deep bottom, 16 miles N.E. of Glouceſter, and 93 W.N.W. of London. Long. 2. 0. W. Lat. 51. 55. N.

WINCHENDON, a town of the United States, in Maſſachuſets. In October 1795 it ſuffered conſiderable damage by a dreadful tornado. It is ſituate on Miller's River, 60 miles N.W. of Boſton.

WINDAW, a town of the duchy of Courland, with a caſtle, and a harbour at the mouth of the Wetaw, in the Baltic, 70 miles N.W. of Mittaw, and 100 N. of Memel. Long. 22. 5. E. Lat. 57. 20. N.

WINDERMERE-WATER, or WINANDER-MERE, the moſt extenſive lake in England, lying between Weſtmoreland and Lancaſhire. It extends 10 miles from N. to S. but in no part broader than a mile; and exhibits a greater variety of fine landſcapes than any lake in England. It is famous for its fine char, and abounds alſo with trout, perch, pike, and eel. It has a communication on the W. with Eſtwaite-water; and its principal feeders are the rivers Rothay and Brathay. This lake is frequently interſected by promontories, and ſpotted with iſlands. Among theſe, the Holme, or Great Iſland, an oblong tract of 30 acres, croſſes the lake in an oblique line ſurrounded by a number of inferior iſles, finely wooded. Not one bulruſh, or ſwampy reed, defiles the margin of this lake.

WINDHAM, a town of the ſtate of Connecticut, capital of a county of the ſame name. It is ſeated on the Shetucket, 31 miles E. of Hartford.

WINDISMERK, a territory of Germany, forming the E. part of Carniola. Metling is the capital.

WINDLINGEN, a town of Suabia in the duchy of Wirtemburg, ſeated on the Neckar, 12 miles from Stutgard.

WIND-MILL *(Encycl.)*. As wind-mills eſſentially contribute to agricultural and domeſtic convenience, we preſent our readers with a delineation of a ſpecimen of thoſe employed in the vicinity of Lisbon; becauſe the conſtruction of their ſails is in ſome reſpects different from, and, in the opinion of Lord Somerville, ſuperior to, thoſe uſed in Britain (ſee Pl. 56).

The advantages of mills on this conſtruction are ſtated by his lordſhip to be the following: 1. That the broad part of the ſail is at the end of the lever, or branch, and thus an equal reſiſtance may be overcome with leſs length of branches, or arms. Theſe being conſequently ſhortened a conſiderable weight of timber will be rendered unneceſſary, and a material ſaving of expence be obtained, in the height, prime coſt, and ſubſequent repairs of the mill. 2. The ſails, conſtructed on the plan above repreſented, may be *ſet* to draw in a manner ſimilar to the *ſtay-ſails* of a ſhip; and, as they are ſwelled more than thoſe of common mills, Lord S. remarks, that they will render it unneceſſary to bring the mill ſo frequently to the wind; a practice which, in machines of the uſual conſtruction, is always attended with conſiderable trouble.

Pariſh WIND-MILL, a mill of the common kind, thus called becauſe it is employed, under the inſpection of benevolent individuals, ſolely for the advantage of the poor in the *pariſh*, in times of ſcarcity. The following excellent examples are taken from the Reports of the Society for bettering the Condition of the Poor.

The ſcarcity of wheat in the ſummer of 1795, led many of the inhabitants of Chiſlehurſt into a wiſh, that they might have a mill on their common, under ſuch regulations that each perſon might be certain of having his own corn fairly ground, and returned to him in due meaſure, and of its being dreſſed to ſuch a degree of fineneſs as he ſhould chooſe; or that he might be able to purchaſe, at a fair price, ſuch kind of flour, mixed or unmixed, as he wiſhed.

The building of one at the expence of the pariſh was there firſt thought. But they were diſſuaded from that, by its being pointed out to them, that ſuch an expence would fall very heavy upon many perſons, who could already barely ſupport the weight of the preſent rates. For, whether the principal were to be raiſed upon the pariſh in the firſt inſtance, or the money to be obtained by granting life annuities

out of the rates, which last requires a special authority, in either case it would be felt as a very great burthen. It was therefore proposed to the parishioners, that if they would give their consent to the granting of a part of the common for that purpose, a set of ladies and gentlemen (the number of them being at last settled to be ten) would undertake the whole at their own expence, and build a parish mill. Two particular days in each week should be allotted to the working for the poor; or for such persons as should bring but small quantities of corn to be ground: the person who brought it should be allowed, if he chose, to stay and see it ground; and, after having it dressed just as he might choose, should take it away with him, upon paying in ready money 4*d.* per bushel for the grinding, and 2*d.* for the dressing, where it should be dressed: but that on other days, or when there was no grist-work sent in, the mill might be worked for the benefit of the proprietors; or it might be let by them to a tenant, under the same restrictions.—On these conditions the ground was granted: and on the failure of the conditions, it was agreed that it should be forfeited, and revert to the parish.

The original idea of the proprietors was to erect a mill, such as had been built a few years before on Dartford Brent. The basement of brick, the mill itself of timber, with the head alone turning to the wind. The cost of that at Dartford was said to have been 800*l.* The sum of 200*l.* more was intended to be added for a house for the miller; the shares being estimated at 100*l.* to each proprietor. Mr. John Hall of Dartford, who had been employed in the mill at that place, was consulted: and at last it was agreed that he should build that at Chislehurst. No precise terms were drawn up in writing concerning it. He offered to undertake it for 1000*l.*; or to build it as should be directed, and to be paid by measure and value when it was completed. The last proposal was preferred.

Orders were given to him accordingly; and he promised to lay the foundation early in the spring of 1796: and in the mean time to prepare every thing in forwardness, so as for the mill to work by the Michaelmas following.

The foundation was laid as had been proposed, and the outer frame was erected early in the summer of 1796: but the mill cannot be said to have worked till the end of April 1797; nor was it completed till September in that year.

In the mean time a neat miller's house was finished; and about 2 acres of land inclosed for his use. The work certainly appears to be well executed. The mill carries 3 pair of stones. Two pair of French ones for wheat; and one bed-stone, French, with a runner of Peak-stone, for barley, or hogs' meat. There is also a machine for dressing the meal; in which the revolution of the brushes is easily reversed, for their preservation; as also a boulting machine for cloths of any kind. The mill itself draws up the sacks, and sets them down on any of the floors. The wind-shaft, and the cross, are of cast-iron. The head turns itself into the wind, by a fan-tail and rack work. The cap is a hemisphere very curiously formed, both for beauty, and for keeping out the weather, by means of bent planks. The weather boarding of the mill itself is also unusually good; every part being covered doubly. The joints at each angle (for the body of the mill is octagonal) are covered with sheet lead: which helps to form part of a metallic communication from the top to the earth, as a security against lightning.

The mill carries 3 pair of stones. But the wind seldom serves for working them all together; especially when the dressing machines are at work too. Yet it is reported that the proprietors of the Barham mill, which has but 2 pair of stones, wish their mill had been upon a larger scale. If that be really the case, it may deserve consideration, whenever a parish mill is undertaken, whether a mill of an intermediate size may not upon the whole be more advisable.

The design of the proprietors in erecting the mill, never was to undersell the fair dealer in any respect; or to let even the poor have their meal at a price below the market: but to put it in the power of each person, in every station of life, to obtain such flour of any sort of grain as he might choose; and to obtain it of a good quality.

This it is imagined that they have now done. Those who choose to send their own corn, may do it; and may see to its being fairly returned to them. On Mondays and Tuesdays, in every week, the smallest quantities are not to be refused to be ground for the poor: and each person may have his meal dressed in any manner he may desire. Those of any condition in life who choose to buy, may buy at the mill, of a good quality and at a fair price. All the effect intended to be produced on other millers, or on the retail dealers of the shops, was to make it their interest to deal fairly by their customers.

The mill at Chislehurst, certainly, is a convenience to the neighbourhood. It is not apprehended that it has, in any degree, hurt the millers around the place; though it has already almost as much work as it can perform. This seems to shew that a mill was really wanted: and it has put other millers, the shopkeepers, and bakers, on their guard, at the same time that it has injured nobody.

One effect intended by it has answered: the certainty of obtaining meal of what quality, of what degree of mixture with other kinds of grain, or of what fineness you choose; and the having the produce of your own corn returned fairly to you. This last may sometimes be doubtful at other mills; and probably sometimes is doubted where the return is fairly made. Here any one may assure himself that it is so, if he pleases.

It is proper to caution the reader against an error, into which the proprietors have fallen, and from which those of the mill at Barham Downs * have been exempt;—the want of sufficient care as to the *expence* of the undertaking.

The mill at Chislehurst has certainly been not only more expensive than was intended, but more so than was necessary. The builder offered to undertake it for 1000*l.*; or to build it as should be directed, and to be paid by measure and value, when it was completed; which last proposal was preferred.—The proprietors did not attend to the progress of the work, in the same manner as those would have done, who had *their own profit* in view; so that when the bills were sent in, they contained a charge of above 470*l.* for day work; all of it for articles, which the proprietors understood were to be charged by measure. In the whole, the mill-wright's bill has amounted to 1765*l.*; besides 214*l.* the cost of the house, and 44*l.* for the fencing.

During the five months, from April to September, 1797, while the miller was interrupted by the workmen completing the mill, he paid the proprietors at the rate of 4 per cent. on 1000*l.* the money then advanced. From Michaelmas, 1797, he undertook it at the rate of 3½ per cent. on 1700*l.* and from Ladyday last at 73*l.* 10*s.* a-year, being 3½ per cent.

* The mill at Barham Downs cost only 336*l.*; the scales and utensils of different kinds 17*l.*; in all 353*l.*; only 33*l.* beyond the sum originally proposed.

on 1200*l.* the whole money expended. He seems to have no doubt but that he will be able by and by to pay a larger interest; but the fact is, that they cannot now let it to produce above four per cent.

It seems necessary to state these circumstances; in order that those who are desirous of benefiting their neighbourhood by a parish mill, may be cautioned against unguarded and extraordinary expence.—Parish mills are at present much wanted: the erection of them will be very useful in most parts of England; and, with a proper degree of attention, they will pay a sufficient interest upon the money to be expended in the erection of them.

WINDOW (*Encycl.*). In 1802, soon after the termination of the war with France, a considerable addition was made to the duties formerly imposed on windows. These will be best shewn by the following

TABLE OF THE DUTY ON WINDOWS.

Number of Windows.	Duties payable by 38 Geo. III. cap. 40.						Additional Duties payable by 42 Geo. III. c. 34.			Total Duties to be charged in one Sum for every Dwelling-house.

And for every such dwelling house which shall contain more than 180 windows or lights, for every window or light exceeding the number of 180, 2*s.* 6*d.* each.

The said duties to be charged in respect of every inhabited dwelling-house, with the household and other offices, without any other exemptions being allowed than such as are contained in this act, notwithstanding any former statute. 42 Geo. III. c. 34.

The following *clauses* are included *in the act* 38 Geo. III. c. 40.

Every assessment shall be in force for one year, and charged upon the occupiers of houses, cottages, or tenements; and shall be paid without any new assessment, notwithstanding any change in the occupation.

No duty shall be levied for any cottage or tenement containing not more than six windows, the occupier whereof, by reason of poverty only, not for any other cause, is exempted from church and poor rates.

Every chamber in any inns of court or chancery, or in any college or hall in the universities, or in any hall or office belonging to any person or persons, body or bodies politic or corporate, or any public hospital, being severally in the tenure of any person chargeable to the said duties, containing eight windows or under, shall be charged thereto at the rate of [42 Geo. III. c. 40.] three shillings for every window; and every such chamber, which shall contain more than eight windows, shall be subject to the duties as if the same was an entire house.

Nothing herein shall charge any licensed chapel; nor any windows in dairies.

That is to say, by the stat. 36 Geo. III. c. 117. no duty shall be charged on any windows or lights in any dairies, or in any room or places kept and used for the sole purpose of drying and keeping cheese, or of making cheese or butter, and for no other purpose, whether the same shall be attached to, or detached from, the dwelling-house or not, and which shall be occupied by any person who shall sell, or be in any manner concerned in selling, the produce of dairies, or any kind of cheese.

But such windows or lights must be made with splines or wooden laths, or iron bars, and wholly without glass; also the dairies or rooms aforesaid must not be used to dwell or to sleep in, and on the doors thereto there must be painted, in large Roman black letters, of two inches in height, the words "Dairy and Cheese Room," or some of them, as the case shall require, otherwise such dairies and rooms shall be charged with the duties.

No window shall be deemed to be stopped up, unless stopped with stone or brick, or with the same materials as

the outſide walls; but this is not to extend to any ſtopped up window in roofs, if ſtopped with like materials as the outſide. And no window ſhall be newly made in any dwelling-houſe, or office belonging thereto; or if ſtopped up, be reſtored; nor ſhall any window be ſtopped up, without giving ſix days' previous notice thereof in writing, to the ſurveyor, on pain of ten pounds for every window newly made, reſtored, or ſtopped up.

If any ſurveyor ſhall receive any ſuch notice, or diſcover that any window hath been newly made or reſtored, he ſhall certify the ſame by way of charge to the commiſſioners, who are to cauſe the aſſeſſment to be rectified according to ſuch certificate; but ſuch amended aſſeſſments may be appealed againſt.

No aſſeſſment to be ſubject to appeal or abatement unleſs it ſhall be proved that the windows were ſtopped up previous to the making of the aſſeſſment.

The following are *clauſes in the act 42 Geo. III. c. 34.*

Every dwelling-houſe, cottage, or tenement, occupied at the time of making the aſſeſſment, ſhall be brought into charge by the aſſeſſors, according to the number of windows therein; and if any aſſeſſor ſhall omit to charge the occupier according to the number of windows, whether the occupier ſhall be entitled to be diſcharged from the ſame, in manner herein-after mentioned, or not, ſuch aſſeſſor ſhall forfeit five pounds.

Where any houſe, cottage, or tenement, in England, containing not more than ſix windows, ſhall be brought into charge, and the occupier ſhall receive parochial relief, or ſhall, by reaſon of poverty only, and not for any other cauſe, be exempted from payment of the uſual taxes towards church and poor, the aſſeſſors ſhall, on the certificate of aſſeſſments, ſet oppoſite the ſum charged on the occupier, the fact of his receiving parochial relief, or from being exempted from payment of taxes, and ſhall return ſuch facts, together with the aſſeſſments, to the commiſſioners; and the commiſſioners, before the allowance of any aſſeſſment, ſhall examine the aſſeſſor touching the return; and if the commiſſioners ſhall from ſuch examination be ſatisfied that any occupier receives parochial relief, or is *bona fide*, by reaſon of poverty only, and not from any other cauſe, exempted from the payment of the uſual taxes, it ſhall be lawful for the commiſſioners to ſtrike out the charge againſt ſuch occupier; and where any houſe, cottage, or tenement, in Scotland, containing not more than ſix windows, ſhall be brought into charge, and the occupier ſhall be poor, and ſhall receive relief from the kirk ſeſſion, and ſhall keep no ſervant, carriage, horſe, mule, or dog, the aſſeſſor ſhall, on the certificate of aſſeſſment, ſet oppoſite the ſum charged the fact of his being poor, and of not having any ſervant, carriage, horſe, mule, or dog, and ſhall return ſuch facts, together with the aſſeſſments, to the commiſſioners; and in caſe the ſurveyor of the diſtrict ſhall be ſatisfied with the facts, and ſhall certify the ſame to the commiſſioners, the commiſſioners ſhall ſtrike out the charge againſt the occupier; and in caſe the ſurveyor ſhall be diſſatisfied, then the commiſſioners ſhall examine into the truth of ſuch facts in like manner as the commiſſioners in England.

Every houſe unoccupied ſhall be inſerted as ſuch in the aſſeſſment, with the number of windows therein; and the aſſeſſors, and in their default the ſurveyors and inſpectors, ſhall cauſe the ſame to be certified to the commiſſioners, from the time of ſuch houſe coming into the occupation of any perſon, and ſuch perſon ſhall cauſe notice thereof to be given to ſuch ſurveyor or inſpector within twenty days after his coming into the occupation of ſuch houſe; and every perſon neglecting ſo to do ſhall forfeit five pounds, and ſhall be liable moreover for ſuch neglect to be charged to the ſaid duties for the whole year in which ſuch houſe became occupied, but on giving ſuch notice ſhall be chargeable only from the time of his coming into the occupation.

Nothing herein ſhall ſubject any hoſpital, charity ſchool, or poor-houſe, to the payment of the duties, except ſuch apartments therein as are occupied by the officers or ſervants thereof, which ſhall be ſubject to the d[illegible] (according to the number of windows in each), provided that every ſuch hoſpital, charity-ſchool, or poor-houſe, ſhall be brought into charge by the aſſeſſors, and ſhall be ſtated on the certificate of aſſeſſments as ſuch; and on proof of the fact the commiſſioners are to diſcharge ſuch hoſpital, charity ſchool, and poor-houſe, except as aforeſaid, from the ſaid duties.

No window ſhall be deemed to be ſtopped up, unleſs ſtopped up effectually with ſtone or brick, or with the ſame kind of materials whereof the outſide walls doth conſiſt.

Nothing herein ſhall charge any window in the roof of any dwelling-houſe, which ſhall be ſtopped up effectually with materials of the like nature of which the outſide of the roof ſhall conſiſt, nor any window which ſhall have been ſtopped up before, with other materials than herein deſcribed, and which ſhall not at any time ſince have been reſtored.

No window ſhall be newly made in any houſe, nor ſhall any window ſtopped up, be reſtored, or ſtopped up, without ſix days' previous notice in writing given by the occupier to the ſurveyor or inſpector, on pain that the occupier ſhall forfeit ten pounds for every window.

If any ſurveyor or inſpector ſhall receive notice, or otherwiſe diſcover, that any window hath been newly made or reſtored, which hath not been charged in the aſſeſſment, ſuch ſurveyor or inſpector ſhall certify the ſame, by way of charge, to two commiſſioners, and ſhall ſtate to what amount the perſon liable to the duties hath been under-rated, and thereupon the commiſſioners ſhall cauſe ſuch aſſeſſment to be amended, and the duties to be charged ſhall be levied from the commencement of the year. But if the commiſſioners ſhall be of opinion that any window reſtored ſhall have been ſtopped up when the aſſeſſment was made, with intent to evade the duties, they ſhall charge the occupier double the ſum by which the aſſeſſment ſhall be increaſed by reaſon of ſuch certificate; and every ſuch aſſeſſment, when amended, ſhall be liable to be appealed againſt.

No aſſeſſment ſhall be ſubject to appeal, nor any abatement of the duties allowed in any year, by reaſon of any windows being ſtopped up, unleſs it ſhall be proved that the ſame windows were ſtopped up, according to the directions of this act, previous to the 5th of April next, before the making the aſſeſſment, in England, or in Scotland, previous to the term of Whitſunday; and that the ſame windows, if reſtored, were reſtored after ſix days' notice thereof, as before directed.

The pariſh in which any aſſeſſment ſhall be made, ſhall be anſwerable for the amount of the duties, and for the duties being duly demanded of the perſons charged, within ten days after the ſame are payable, by the collectors, and alſo for ſuch collectors' duly paying the ſums received to the receiver-general; and if any collector ſhall neglect or refuſe to demand payment of the duties of the perſons charged, or leave a demand in writing at their laſt place of abode within the time limited, or, in caſe of default of payment thereof, upon ſuch demand, ſhall neglect or refuſe to execute the warrant of the commiſſioners for recovering the ſame, within two calendar months after the duties are payable, it ſhall not be lawful for ſuch collector to inſert in the ſchedule, to be by the receiver-general returned into the exchequer, the name of ſuch perſon having made default, but the pariſh ſhall be

anſwerable; and no collector ſhall be allowed to inſert in any ſchedule the name of any perſon as not having paid the duties, unleſs ſuch collector ſhall make oath that the ſum is wholly unpaid, either to ſuch collector, or to any other perſon, to the beſt of his knowledge and belief; and that ſuch perſon became inſolvent or a bankrupt before the day on which the duties became payable, and had not goods ſufficient whereon to levy within the pariſh, or that ſuch perſon removed from the pariſh before the day on which the duties became payable; and that there was not nor are any goods of any perſon liable to the duties in arrear, whereby the ſame could be levied.

Any arrear of the ſaid duties, ariſing by default aforeſaid, or by the failure of any collector, ſhall be re-aſſeſſed upon the pariſh or place.

If any wilful delay or failure ſhall happen in demanding, receiving, or recovering, or paying over any of the duties, through the default or neglect of any collector, it ſhall be lawful for the commiſſioners to revoke the appointment of the collectors in default or neglecting, and by indorſement of the ſame precept of appointment, to appoint other collectors in their ſtead, for the remainder of the year.

Collectors in default, to deliver up certificates of their aſſeſſments, &c. on penalty of 20l. And if any two or more of the inhabitants, or the churchwardens or overſeers, or guardians of the poor of any deſcription, or two or more of them, or the ſelect veſtry, or any ſeven or more of them, where a ſelect veſtry ſhall be authoriſed to act for any pariſh, ſhall require ſecurity to be taken of the collectors, and ſhall name proper perſons to be collectors, who ſhall reſpectively give ſecurity, it ſhall not be lawful for the commiſſioners to appoint collectors, until ſuch ſecurity be given; and if the perſons returned to the commiſſioners, ſhall not give ſecurity, then the ſaid commiſſioners are to appoint ſuch perſons, and no other, who ſhall have been named to them. And the collectors, when required by the churchwardens, &c. ſhall deliver an account of the ſums received, &c. on penalty of 20l.

If any perſon ſhall remove out of the limits of the collector without paying the duties, or without leaving ſufficient goods, he ſhall forfeit 20l.

No goods to be taken by virtue of any execution, or other proceſs, except at the ſuit of the landlord for rent, or of the king, unleſs the party ſhall pay the arrear of duty, not exceeding a year's, but in caſe of refuſal, the collector may diſtrain and ſell the goods.

One moiety of all penalties hereby impoſed ſhall, if ſued for within 12 calendar months, be to his majeſty, and the other moiety thereof, with full coſts, to the perſon who ſhall ſue, and all ſuch penalties exceeding twenty pounds ſhall be ſued for in the ſuperior courts. But his majeſty's attorney-general in England, and advocate in Scotland, may ſtay proceedings, as well as to the ſhare of the informer as to the ſhare of his majeſty. And in default of proſecution within the time before limited, no ſuch penalty ſhall be afterwards recoverable, except in the name of his majeſty's attorney-general, or advocate in Scotland.

Penalties not exceeding twenty pounds ſhall be recoverable before two commiſſioners, who may mitigate the ſame, not being in any caſe leſs than one moiety, and they are to aſſeſs the ſame upon the party, and charge the ſame in the aſſeſſment, in addition to the duty.

WINDSHEIM, an imperial town of Franconia, 28 miles S.W. of Wurtzburg, and 36 S.S.W. of Bamberg. Long. 10. 25. E. Lat. 49 25. N.

WINDSOR, a town of Vermont, in the county of Windſor, where the aſſembly commonly holds its ſeſſion, although Bennington is the principal town. It is ſeated on the river Connecticut, 98 miles N.E. of Bennington.

WINDSOR, a town of the ſtate of Connecticut, ſituate on the river Connecticut, three miles N. of Hartford.

WINDSOR, a town of North Carolina, ſituate on the Cuſhai, 23 miles W. of Edenton.

WINDWARD ISLANDS, ſuch of the Caribbean Iſlands, in the Weſt Indies, as commence at Martinico, and extend to Tobago.

WINDWARD PASSAGE, the ſtrait between Pont Maizi, at the E. end of the iſland of Cuba, and Cape St. Nicholas, at the N.W. extremity of St. Domingo.

WINNENDEN, a town of Suabia, in the duchy of Wirtemburg, 12 miles E.N.E. of Stutgard. Long. 9. 16. E. Lat. 48. 49. N.

WINNICZA, a ſtrong town of Poland, in Podolia, capital of a territory of the ſame name, with a caſtle. It was taken by the Coſſacs in 1658, but retaken ſoon after. It is ſeated on the river Bog, 35 miles N. of Bracklaw. Long. 28. 12. E. Lat. 49. 23. N.

WINSCHOTEN, a town of the United Provinces, in Groningen. Here, in 1568, was fought the firſt battle between the revolted Dutch and the Spaniards, who were defeated by Prince Lewis, brother to William I. prince of Orange. It is ſix miles S.W. of Dollart Bay, and 16 S.E. of Groningen. Long. 6. 58. E. Lat. 53. 3. N.

WINSEN, a town of Lower Saxony, in the duchy of Lunenburg, ſeated at the confluence of the Elbe and Ilmenau, 13 miles N.W. of Lunenburg. Long. 10. 11. E. Lat. 53. 24. N.

WINSHEIM, an imperial town of Franconia, in the margravate of Anſpach. It is ſurrounded by a good rampart, a double ditch, and thick walls flanked with 20 towers. The inhabitants are Proteſtants. In 1730, a fire reduced almoſt the whole town to aſhes. It is ſeated on the Aiſch, 30 miles N.W. of Nuremburg. Long. 10. 31. E. Lat. 49. 32. N.

WINSLOW, a town in Buckinghamſhire, with a market on Tueſday, ſeven miles N.W. of Aileſbury, and 50 W.N.W. of London. Long. 0. 45. W. Lat. 51. 57. N.

WINSTER, a town in Derbyſhire, which has a meeting for the ſale of proviſions on Saturday. It is five miles N.W. of Derby, and 152 N.N.W. of London.

WINTERBERG, a town of Weſtphalia, 37 miles S. of Paderborn, and 60 E. of Cologne. Long. 8. 15. E. Lat. 51. 5. N.

WINTERBURG, a town of Germany, in the circle of Lower Rhine and county of Sponheim, 10 miles W.N.W. of Creutznach.

WINTERINGHAM, a corporate town in Lincolnſhire, governed by a mayor, who is choſen only out of one ſtreet. It has no market; and is ſeated near the Humber, 33 miles N. of Lincoln.

WINTERTHUR, a town of Switzerland, in the canton of Zuric, where there is a rich library and a mineral ſpring. It is ſeated in a fertile plain, on the river Ulach, 15 miles N.E. of Zuric. Long. 8. 45. E. Lat. 47. 31. N.

WIPPERFURT, a town of Weſtphalia, in the duchy of Berg, ſeated near the ſource of the Wipper, whoſe water is of a peculiar quality for bleaching, 36 miles E.S.E. of Dreſſeldorf.

WIPRA, a town of Upper Saxony, in the county of Mansfeldt, ſituate on the Wipper, 10 miles W.N.W. of Eiſleben, and 20 E. of Nordhauſen. Long. 11. 20. E. Lat. 51. 30 N.

WIRKSWORTH, a populous town in Derbyſhire, with a market on Tueſday. It is ſeated in a valley, near the ſource of the Ecclesborn, and remarkable for having the greateſt lead

market in England. It is 13 miles N. by W. of Derby, and 139 N.N.W. of London. Long. 1. 30. W. Lat. 53. 6. N.

WISBADEN, a town of Germany, in the principality of Naſſau, capital of a lordſhip of the ſame name, ſubject to the Prince of Naſſau-Saarbruck. It is famous for its warm baths, which were known to the ancient Romans, and is five miles N. of Mentz. Long. 8. 20. E. Lat. 49. 56. N.

WISBEACH, a town in Cambridgeſhire, with a market on Saturday. It is ſeated in the iſle of Ely, between two rivers, and poſſeſſes a conſiderable trade in the export of corn, and of oil preſſed from ſeeds at mills in its neighbourhood. Barges only can come up its river, large veſſels ſtopping ſix miles below. It is 18 miles N. of Ely, and 89 N. by E. of London. Long. 0. 6. E. Lat. 52. 38. N.

WISBY, a ſea-port of Sweden, in the iſle of Gothland, with a caſtle. It is ſeated on the ſide of a rock, on the Baltic, 88 miles S.E. of Stockholm. Long. 18. 41. E. Lat. 57. 36. N.

WISCASSET, a town of the United States, in the diſtrict of Maine, which carries on a conſiderable trade. It is 56 miles N.W. of Portland. Long. 70. 5. W. Lat. 44. 47. N.

WISET, a fortified town of the Netherlands, in the duchy of Limburg, ſeated on the Maeſe, ſeven miles N. of Liege, and 20 N.W. of Limburg. Long. 5. 40. E. Lat. 50. 41. N.

WISCHGROD, a town of Poland, in the palatinate of Plockſko, ſeated on the Viſtula, 18 miles E. by S. of Plockſko, and 58 N.W. of Warſaw. Long. 19. 50. E. Lat. 52. 44. N.

WISLOCHE, a town of Germany, in the palatinate of the Rhine, ſeated on the Elſatz, eight miles S. of Heidelberg. Long. 8. 48. E. Lat. 49. 18. N.

WISMAR, a ſtrong ſea-port of Germany, in the duchy of Mecklenburg, ſeated at the bottom of a bay of the Baltic, 36 miles E. of Lubec, and 66 W. by S. of Stralſund. Long. 11. 44. E. Lat. 53. 54. N.

WISTON, a corporate town in Pembrokeſhire, with a market on Wedneſday. It is governed by a mayor, and was formerly ſtrengthened with a caſtle, which is now a gentleman's ſeat. It is 10 miles N. of Pembroke, and 235 W.N.W. of London. Long. 4. 52. W. Lat. 51. 53. N.

WITCHWOOD, a foreſt in Oxfordſhire, between Burford and Charlbury; the only conſiderable one now remaining in that county.

WITEPSKI, a town of Lithuania, capital of a palatinate of the ſame name, with a caſtle. The fortifications are ſo good, that the Ruſſians beſieged it ſeveral times in vain. It is ſeated in a moraſs, at the confluence of the Dwina and Widſba, 65 miles E. of Polotſk, and 80 W.N.W. of Smolenſko. Long. 29. 40. E. Lat. 55. 43. N.

WITHAM, a town in Eſſex, with a market on Tueſday. Its church, an ancient Gothic ſtructure, ſtands one mile from the town, at a place called Chipping Hill. It is eight miles N.E. of Chelmsford, and 37 E.N.E. of London. Long. 0. 41. E. Lat. 51. 51. N.

WITHAM, a river in Lincolnſhire, which waters Lincoln, and enters the German Ocean, below Boſton. From Lincoln it has a communication with the Trent, by a navigable canal, called the Foſsdike, cut by King Henry I.

WITLISTH, a town of Germany, in the archbiſhopric of Treves, with a caſtle, ſeated on the river Leſer.

WITNEY, a town in Oxfordſhire, with a market on Thurſday. Here are manufactures of the fineſt blankets, and other thick woollens, called bearſkins and kerſeys. It is eight miles N.W. of Oxford, and 64 W.N.W. of London. Long. 1. 18. W. Lat. 51. 52. N.

WITSHAUSEN, a town of Germany, capital of a territory of the ſame name, in the landgravate of Heſſe Caſſel. It is ſeated on the Weſer, eight miles E.N.E. of Caſſel. Long. 9. 46. E. Lat. 51. 24. N.

WITTENBERGEN, a town of Upper Saxony, in the mark of Prignitz, 60 miles N.W. of Berlin. Long. 11. 48. E. Lat. 53 2. N.

WITTENSTEIN, a town of Ruſſia, in the government of Livonia, 40 miles S.E. of Revel. Long. 24. 39. E. Lat. 58. 47 N.

WITTIMUND, a town of Weſtphalia, in Eaſt Frieſland, ſeated near the German Ocean, 15 miles N.E. of Embden. Long. 7. 4. E. Lat. 53. 41. N.

WITTLESEA-MERE, a lake in the N.E. part of Huntingdonſhire, ſix miles long and three broad. It is four miles S. of Peterborough.

WITTLICH, a town of Germany, in the electorate of Treves, 16 miles N.E. of Treves, and 38 S.W. of Coblentz. Long. 6. 27. E. Lat. 50. 7. N.

WITTSTOCK, a town of Upper Saxony, in the mark of Prignitz, 43 miles N. of Brandenburg, and 47 N.N.W. of Berlin. Long. 12. 30. E. Lat. 53. 10. N.

WIVLESCOMB, a town in Somerſetſhire, with a market on Tueſday, 20 miles N.N.E. of Exeter, and 155 W. by S. of London. Long. 3. 28. W. Lat 51. 4. N

WLOSIMEITZ, a town of Little Poland, capital of a duchy of the ſame name, in Volhinia, with a caſtle. It is ſeated on the Luy, which falls into the Bug, 36 miles W. of Lucko, and 56 N. of Lemburg. Long. 24. 30. E. Lat. 51. 3. N.

WOBURN, a town in Bedfordſhire, with a market on Friday. It is ſeated on a riſing ground, and was formerly famous for its abbey, which now belongs to the Duke of Bedford, and is his country ſeat. Woburn was burnt down in 1724, but has been neatly rebuilt, and has a free-ſchool, and a charity-ſchool, founded by a duke of Bedford. Near it is found great plenty of fullers'-earth. It is 12 miles S. of Bedford, and 42 N.N.W. of London. Long. 0. 32. W. Lat. 52. 2. N.

WODNAY, a town of Bohemia, in the circle of Prach, ſeated on the Bianitz, 12 miles N.W. of Budweis, and 56 S. of Prague. Long. 14. 50. E. Lat. 42. 9. N.

WOERDEN, a town of the United Provinces, in Holland, ſeated on the Rhine, 18 miles S. of Amſterdam. It was taken by the French in 1672 and 1794. Long. 4. 51. E. Lat. 52. 6. N.

WOKEY, or OKEY, a village in Somerſetſhire, on the S. ſide of the Mendip Hills, two miles W. of Wells. Here is a famous cavern, called Wokey Hole, the mouth of which is only ſix feet high; but it ſoon expands into a ſpacious vault, 80 feet in height, reſembling the inſide of a cathedral; the roof compoſed of pendant rocks, whence a clear water, of a petrifying quality, continually drops. From this grotto a narrow paſſage deſcends to another of leſs height; and beyond a ſecond narrow paſſage is a third grotto. The extremity is above 200 yards from the entrance.

WOLBECK, or WOLDECK, a town of Weſtphalia, in the biſhopric of Munſter, ſeven miles S.S.E. of Munſter.

WOLFERSDIKE, an iſland of the United Provinces, in Zealand, between North Beveland and South Beveland.

WOLKOSKOI, a town of Ruſſia, in the government of Novogorod, 100 miles S.E. of Novogorod. Long. 34. 20. E. Lat. 57. 30. N.

WOLKOWSKA, a town of Lithuania, in the palatinate of Novogrodeck, ſeated on the Ros, 23 miles S.E. of Grodno. Long. 24. 46. E. Lat. 53. 4. N.

WOOLER, a town in Northumberland, with a market on Thurſday. In a plain near this town the Scots, under the command of Earl Douglas, were defeated by Lord Percy and

Earl March, on Holyrood-day, 1402. The battle was ſo bloody, that it gave the name of Redriggs to the place where it was fought. Wooler is ſeated on the Till, near the Cheviot hills, 14 miles S. of Berwick, and 318 N. by W. of London. Long. 1. 46. W Lat. 55. 34. N.

WOLLIN, a ſea-port of Germany, in Pruſſian Pomerania, capital of an iſland of the ſame name, in the mouth of the Oder. It is 10 miles W. of Cammin. Long. 14. 39. E. Lat. 54. 4 N.

WOLMAR, a town of Ruſſia, in the government of Livonia, ſeated on the Aa, 38 miles N. of Riga. Long. 24. 25. E. Lat. 57. 32. N.

WOLSINGHAM, a town in the county of Durham, 16 miles S.W. of Durham, and 259 N N.W. of London.

WOLVERHAMPTON, a town in Staffordſhire, with a market on Wedneſday. It has an ancient collegiate church, annexed to the deanery of Windſor, and a handſome chapel. Here is a great iron manufacture, conſiſting of locks, hinges, buckles, corkſcrews, and japanned ware. It is ſeated on a hill, 13 miles S. of Stafford, and 124 N.W. of London. Long. 2. 0. W. Lat. 52. 47. N.

WOODBRIDGE, a town in Suffolk, with a market on Wedneſday, ſeated on the E. ſide of a ſandy hill, on the river Deben, eight miles from the ſea. It has docks for building ſhips, has a great corn trade, and is famous for refining ſalt. It had an abbey, of which there are no remarkable ruins. It is ſeven miles E.N.E. of Ipſwich, and 76 N.E. of London. Long. 1. 25. E. Lat. 52. 11. N.

WOODBUBY, a town of New Jerſey, on the E. ſide of the river Delaware, nine miles S. of Philadelphia.

WOODS, Lake of the, a lake of North America, which makes part of the N boundary of the Weſtern Territory of the United States. It is 150 miles long, and 60 where broadeſt, but is very irregular in its ſhape.

WOOLLEN-CLOTH, a kind of manufacture of which an account is given under the article Cloth. The following is the ſpecification of a patent granted to Mr Harmar, of Sheffield, for a machine for raiſing a ſhag on all ſorts of woollen cloths, and cropping or ſhearing them, which, together, come under the deſcription of *dreſſing woollen cloths*, and alſo for cropping or ſhearing of fuſtians. It is dated March 29, 1794. See Pl. 56.

Fig. 1. exhibits a ſide and end view of ſhearing cloth from liſt to liſt. A, is the frame, with its pillars, legs, and rails. B, is the cuſhion or ſhear-board over which the cloth is extended. C, the cropper's ſhears in their ſituation for working, with their bobs or levers. D, the harneſs or breeches fitted to each end of the riding blade of C; at the near end is hollowed the bow of C, and at both ends faſtened with ſcrews paſſing through the blade, or elſe is grooved to admit the blade, and is faſtened with wedges. It is compoſed of two ſtrong pieces of plank, with holes to admit ſcrews through to nut-ſcrews faſtened to their upper ſurface, and ſquare holes through which paſs ſmall pillars; other two pieces of plank are frames for wheels turning on pins (as in drawing) ſituated under the pieces faſtened to the riding blade; here the lower ends of ſcrews are rivetted to plates, but ſo as to turn, which plates are ſcrewed to the wheel-frames; alſo, in theſe lower pieces, ſmall pillars are fixed, which, paſſing through the upper pieces, ſteady the harneſs; thoſe ſcrews turned to right or left bring the edges of C to the angle of B, for the work of ſhearing. E, the inclined planes down which the wheels of D roll when the machine is working. F, is the working axle, with its rods or rails; the gudgeons of this axle reſt on the croſs rails of A; the axle has the inclination of B and E, as in drawing. Its rods, fixed to the ſides of it by projecting pieces, are about four inches from its centre, and the thimbles of G ride down them to keep pace with C in its progreſs. G, is the line communicating at the lower end by a thimble with the rods of F, and at the upper end with the bob or lever of C, as in drawing. H, is an axletree, with its handle, cog-wheel, and ſtop, fixed by ſtops, on which it turns, to the pillars of A. I, the lines communicating with the extremities of K at one end, and the other with H. K, levers, turning on their pins, and, by the action of K and I, work againſt E, to raiſe C from B, for all neceſſary purpoſes. L, pulleys in their frames, to give a proper direction to I, that the turning of H may have the effect before named. M, is a crank attached to the lower gudgeon of F; the crank handle has an eye in it, through which a ſquare leg paſſes, againſt which works the lower end of a ſcrew, the nut of which is one ſide of the ſaid eye. This ſcrew, turned to right or left, looſens or faſtens the leg in the eye at pleaſure. The ſaid leg at the other extremity has a handle where the near end of the catch N is fitted on. Now, as the leg is ſhifted by means of its eye and ſcrew in that end where the handle is further from the centre of F, N works O with more ſpeed. N, is the catch that works O O, is the cog-wheel of N, with its ſcrew pinion on its axle. P, is an iron axle, with pulleys near both ends, with a cog-wheel. R, is a ſmall ſword, fitted into the mortiſe of the projection on the lower extremity of F, and pinned, and the other end is fitted to the crank handle of S. S, is the crank axle and pulley that carries the band which goes to the power that works the machine. The ſituation for R, as to that end that fits on the crank of S, is directly behind the lower end of F, and under the further extremity of B, where the crank end of S rides on a ſtop fixed to the further rail of A; the pulley end where the ſtop is rides on X. Now the crank S being put in motion, gives R the neceſſary vibration, and R works F, which alternately raiſing or falling its rods or rails by G, C works, and, to effect the progreſſion of C, F being in a working ſtate, M works N, and O works P, and C is carried forwards by T, and to carry C forwards faſter or ſlower, as neceſſary. For the due performance of ſhearing cloth, the handle of the leg of M, where N is fitted on, muſt be brought nearer to the centre of F for ſlacking, and more diſtant from the ſaid centre to increaſe the ſpeed, as then N will take more or leſs teeth in O. Or the progreſſion in this frame may be effected by the method deſcribed in the progreſſion of fig. 3, under the letters M, N, O, P. T, the lines for carrying forwards C by P. U, is a projection faſtened to D, and works againſt U when C is about to ſtop. V, is a rail and ſmall ſword paſſing through a mortiſe fixed to one of the legs of A, at nearly one end, and, by a working joint, goes up to near the extremity of W. W, is a lever, paſſing through its fulcrum, and pinned to the upper end of X; and near the other end reſts on a ſmall notch, ſunk in the inſide of the upper end of one of the pillars of A, and weighted in the extremity with lead or iron. X, is the ſtep of the pulley end of S, and, by a ſmall ſword, goes up to W, on the near ſide of one of the pillars of A, through which X goes, and moves on a pin, and is the ſtep of one end of O; and the further ſide of the ſaid pillar, where the letter X ſtands, is the ſtep of the pulley end of S. Now when U or D works againſt U or V, W is thrown from its notch, and W, ſinking, raiſes X, and ſlackens the band on the pulley of S; then the machine ſtops, and X, raiſing the ſtep of S on the further ſide of the pillar of A, on the near ſide of it ſinks the ſtep of O, and the ſcrew-pinion is thrown out of the large cog-wheel of P. Y, is a ſmall axle on ſteps, faſtened to

D, with its handle and bands going to near the extremity of Z. Z, two small rails, with catches at their extremities, which fall into notches in D to fasten both the shears of C together. Now when the machine stops, by the means already described, the pressure of the handle of Y raiseth the catches of Z, from their notches in D, and the shears of C are at liberty, and may be driven by the hand to the necessary situation for shifting the cloth, first turning H to the right, to clear them from B. The cloth being shifted, bring the said shears of C to their proper situation, and the catches of Z will fasten them; then turn H to the left, throwing back its catch, and the shears of C are brought to their work: when lift up to its notch, the extremity of W, and the band on S, is tightened, and the machine works.

Fig. 2, a side and the two end views of shearing the length-way of the cloth. A, the frame, with its pillars, legs, and rails. B, a circular cushion, or shear-board, formed to the angle of the cropper's shears, and at each end resting on steps fixed to the top rail of A, to be moved round, as occasion shall require. C, the cropper's shears in its harness, or working position. D, the harness, attached to both ends of the ledger blade of the shears C, as particularly described in fig. 1, under the letter D; but this mode of shearing requires that the strong pieces, attached by screws to the ends of C, should be framed together near the back of the said laid ledger blade, to take the weight of the ends of the shears. When the whole width of a narrow cloth is shorn, the second shear of C is placed behind that in drawing, and has another, B, for it to work upon, and I, to be worked by. And that part of D attached to the heel of C and letter E, are lengthened as described (fig. 3) under the letter C; so in like manner the shears are situated behind each other in taking the width of a broad cloth. Here it must be noted, as in this mode of shearing the cloth having the progression, the wheels of D are omitted, and pieces of wood, half rounded, supply their place. E, is a small frame in its steps, with its arms and lines. The situation of E is seen under letter D, fig. 3; it is attached to the heel part of the harness, as there seen by the drawing. One of the lines of E goes down to the working-rail of E, in the aforesaid, fig. 3; and the other line communicates with the lever or bob of D. F, the roller, with its handle, on which the cloth to be shorn is wound. G, the small rollers, to guide the cloth to B; the middle one which swells riding on it, lighteneth the lists of the cloth as it rides forwards: the swells are moveable, for the purpose of suiting cloths more or less long-listed. H, the rod, cranked on every side, with the pulley for the progression, and that also which carries a band to the working power situated at the upper end of A, near Q. I, is the thimble fitted on the crank, with the line going up to near the extremity of the bob working C. K, an axle, with its cog-wheel and stop, as particularly described (fig. 1) under the letters H, I, K, L, and produce a like effect, and must be fixed to this figure the same as in that. L, the cheek to F, fastened by a pin at the near end, and passing under F, being hollowed to it, the further extremity (being carried under C and B) having a weight suspended on it. M, the roller, with a cog-wheel, to which the end of the cloth is attached; and being tightened by the handle of F, the weight on L keeps it in that tight state as it is carried through the work. N, an iron axletree, carrying a large pulley with one groove, and a five-groove pulley with its steps, that out of sight lies under A on a cross rail. O, an iron axletree, carrying a five-groove pulley and screw pinion on steps, as in drawing. P, bands going from the small pulley of H to the large pulley of N; and from the five-groove pulley of N to the five-groove pulley of O. Now these five-grooved pulleys gradually descend in their dimensions from fourteen inches to three inches in one, and the other may be the same dimensions, or very considerably smaller; or it may be reduced to a pulley of three inches diameter with one groove. These five-groove pulleys stand, in respect to each other, in contrary directions. Now when the crank by a band on the pulley on its upper extremity is set to work, the band B, from the other pulley, puts O and P in motion, and carries forward M. That M may have different speed, the band of the five-groove pulleys must be shifted for that purpose to the different grooves, which give them more or less speed.

The Stop-Frame.—Q, the step where rides the upper end of H, which step at one end is tenoned into the pillar of A, and pinned. R, is a small sword, at the lower end tenoned into the extremity of Q, and pinned; and at the upper end is mortised, so as to admit the further end of S. S, is the lever, tenoned into the mortise of R, and pinned, and passing through a mortise in the pillar of A. Now to stop the machine, the near extremity of the lever S must be pressed down, and that slackeneth the band communicating from the acting power to the pulley of H. When set a-going the said extremity of S must be lifted up, and pinned there. To work this machine, put the cloth to work as directed under letter M; then throw back the stop of G, and the shears are brought to their work; then raise the extremity of S, and the machine works.

Fig. 3, shews a second mode of shearing cloth the length way: a side and end view. A, is the frame, with its pillars, legs, and side and end rails. B, the inclined planes, as fig. 1, under E. C, the shear boards, over which the cloth is stretched from H to H: every shear has its board, and is placed by the side of each other, so as to take the width of the cloth; and the shears, situated for the like purpose on them, the harness H, and small working frame E, fig. 2, are lengthened accordingly. D, the cropper's shears in its harness, and bob or working lever, with E, fig. 2, in its proper situations, attached by the steps to the harness of D. E, the axle, with the line communicating with the bob at one end, and at the other with one of the axle rods, by a thimble, described under F and G, fig. 1. F, the line and thimble before named. G, a small axle, with its lines, levers, pulleys, &c. particularly described under letters H, I, K, L, fig. 1. H, rollers for the cloth, and their cog-wheels and stops. I, a lever, with its catch and stop to the wheel of H, which is on the other side of the pillar of A, near the middle of it, and falls into the cog-wheel of H, which line communicates with the lower end of the catches on H and L, and passeth through small pulleys, fixed under the catches, on the inside of the frame A, that, by the pressure of the upper extremity of the said lever, the catches are raised out of the cogs of their wheels, to give liberty for winding the cloth when shorn on the roller of H, situated near to I. K, a roller to guide the cloth, when wound forwards, that it may keep its situation on the surface of C: it is placed near the axle G, on steps, in the same direction fixed to the pillars of A. L, an axle, with its handles, cog-wheel, and stop, resting on B, with its near stop. This axle has an aperture through the middle of it lengthwise, to admit the cloth through. Now when the cloth is stretched from one of the rollers of H to the other, by turning L to the right, more regular tightness is given to the cloth, and better fits it for the action of shearing.

For effecting the progression in shearing and working the shears, M is a small sword, fitted on the handle of the projection of E at one end, and at the other on the crank handle of N. N, a crank, with its pulley with one groove, and a small five-groove pulley. Or this may be reduced to a small one-groove pulley, of about three inches diameter. The larger one-groove pulley carries a band to the power that drives the machine. The situation of this crank is nearly the same as S, fig. 1, and produces the like effect. O, is an axle, with a large five-groove pulley and screw pinion. These pulleys of N and O have their bands, and descend in their dimensions, as particularly described under letter P, fig. 2. P, a roller, with its cog-wheel, on which the bands wind that carry forward D, with all the other shears, more or less, fastened together by a rail, at their proper distances from each other (as in drawing), that each may take its proper share of cloth, being situated as described under letter C. Bands from P to D carry forward the shears of D.

For stopping this frame, the stop part of fig. 1, under letters U, V, W, X, must be put to it, fixed to the rails and pillars of A. Q, is a projection attached to D, and will stop this frame when the parts above directed are fixed to it in the manner directed, fig. 1. R, is a line attached to the shears of D, and passing through a small pulley fixed in the back rail of A, runs through another pulley fixed in a convenient situation over the frame of this said fig. 3, and by pulling its extremity draws back the shears of D when they have cut their board of cloth.

For working this machine, the cloth is wound on the upper roller of H, and round a small roller at the upper end of A, and extended down C, and under K, and to the other roller of H, where it is attached; the stop of the upper roller falling into its wheel, the cloth is tightened by the lower roller and the handles of the roller. L, their respective catches falling into the cogs of their wheels, which keep the cloth in a tight state, then throwing back the catch of G, the shears of D are let down to their work, when, by means of R, they are brought to their proper situation on B. Then lift up the lever of the stop-frame into its notch, as directed under letter S, fig. 2, and the machine works. When the machine stops, as before directed, and particularly described, fig. 1, under X, to shift the cloth for cutting another length, press down the near extremity of I of this third figure, and wind the cloth that is cut on H. When lifting up the said extremity of I, the cloth may be tightened as above described, and the shears of D shifted to continue their work.

Fig. 4. For raising a shag on cloth preparatory to shearing A, the side and end rails, legs, and pillars, with its treasle, frames, and cotters. B, the frames, one open and the other shut, which turn on hinges, and, when shut ready for work, are fastened by buttons screwed loosely to C. C, is a frame mortised, to fit four sides of B, when shut; and by small projections, or slides fixed to its four corners, rides in the groove of a third frame, fixed to the rails of F. D, a third frame in the inner grooves, or two sides of it; C rides this frame, is attached to F, its projection slides through the gutters or flutes of L, when working E, the double crank, with its large pulley, which by a band goes to the working power. These cranks stand in contrary directions, on the same axle, that the frame may work alternately. F, working rails, fitted on the crank handles, and fastened on by screws. These rails have a working joint near the side of G, and on the further side of G are attached, by screws, to each end of D; and as E works the frames of D, which carry C and B, works round L, and so raise the shag. G, the pulleys, fixed in their frames, over which F rides. H, the board for raising, in its inclined posture, with the cloth passing over it from one roller of I to the other. I. the rollers, situated before and behind H, and attached to the legs of A, by screws, the gudgeons riding on steps; and at the upper end of H is a small roller, to guide the cloth round the end of H, with swells for both lists of the cloth, after the manner of fig. 2, under the letter G. K, the check to the fore roller I, which at one end is attached to one of the legs of A, and near that end lies over the same roller, and hollowed to fit it, and at the other end carries a weight, as in drawing. L, two pieces of plank, situated on both sides H, at the upper termination of M. The inside of the said planks are fluted or guttered to the angles of L, which stands at the foot of A. The small projection at the top of L is a pattern of the slides fixed to the sides of D, which pass through the aforesaid angle when the frames are working, which raise them to and from the cloth. To effect the revolution of the slides that carry C, the top piece of L is fastened to the side of its plank, at or near the upper end, by a screw, on which it moves, and at or near the bottom end it is fastened to its plank, but with the liberty to play. Now when D, by its slides, has passed through the gutter, the lower end of the top piece of L falls, and forms a bridge, to carry the slides of L to the top of the gutter, for the making of another revolution. M, are small swords, terminating in L, and fastened with pins, and passing through sockets fixed to the rail of A, and mortised at the lower extremity into N, where they move on pins. N, a strong rail, extending along the side of A, having a joint in it, and turning on pins in a mortise fixed to the pillars of A. O, an axle, with small projections at its ends, in steps, lying on the lower rail of A, extending from one side of the machine to the other. P, small swords, one tenoned into the projection of O, and the other admitting the near extremity of N, through a mortise where it moves upon a pin. Q, an upright leg, fastened at the lower end to the axle of O, near the lower rail of A. Now by turning this leg to right or left, it moves O, and O, by its projection, raises and lowers the near extremity of N, and N raises and sinks L, which has a like effect on B, C, D; so that, by these mediums, B is brought into contact with H in all necessary degrees. R, is a cog-wheel, its situation is on the further extremity of the back roller of I. S, two catches, for carrying forwards R, attached to I at one end in mortises, and moving on pins, and the other working the cogs of R. T, the working leg, fixed to the further pillar of A by a screw, as in drawing. The upper extremity of the said leg goes through a socket, fixed to the further rail of F, near the upper part of it. Now, by the vibration of this said extremity of T, in its socket, by E working F, S carries round R, and by varying the pins of S nearer to, or more distant from, the centre of its motion, the said R is carried forwards either faster or slower.

For shifting B and C to right and left of H, for the purpose of raising more regularly, U, a cog-wheel and stop of the under-side, with a handle near the periphery of the said cog-wheel, to act as a crank on the top-side. V, three rails. The rail that crosses the top of H is tenoned into the extremities of those that form or lie to the right and left of it. W, the steps on which V rides, with pins to keep the rails of V in their place. X, bands fastened at one end to C, and the other extremity passing through nuts fixed to V, where they are fastened by the end screws working through the side of their nuts against them. Y, two legs, fastened together at the lower end by a working joint at the upper ends. The further is attached to the near rail of F,

and that nearer works upon a pin, a little short of its extremity, with a catch falling into the teeth of W; and as it works U round, there is another catch on the same side, which prevents the said U from working back. Now F works Y, and Y works U, and U works by its crank V, and X shifts C from right to left by turns in the degree necessary by tightening and slackening the band X. Z, is the near step of E, screwed to a short rail at one end, tenoned into the near pillar of A, near which the step of A is situated. The other extremity of the said rail is fixed under a pin, on a short upright leg, which at the lower is screwed to the inside of the near rail of A, near which the step of A is situated.

Now to set this machine to work, or stop it when working; for the latter, move the said rail from under its pin, and by raising it the band on E slackens, and the machine stops; and having extended the cloth from the near roller I, on which it is wound, to that behind H, and fixed the handles in B, with its cutters, and buttoned them down, you must then bring the extremity of Z under its said pin, and the machine works.

WOOLPIT, a town in Suffolk, supposed to be the ancient Sitomagus, and noted for making the best white bricks. It is eight miles E. by S. of Bury St. Edmund's, and 75 N.E. of London.

WORCESTER, the county town of Worcester, in the state of Massachusets, and the largest inland town in New England. It is 47 miles W. of Boston.

WORCUM, a town of Dutch Brabant, seated on the S. side of the Maese, just below its junction with the Wahal, eight miles N.N.W. of Heusden, and 22 E. of Rotterdam. Long. 4. 52. E. Lat. 51. 52. N.

WORCUM, a sea-port of the United Provinces, in Friesland, situated on the Zuider Zee, 18 miles S.W. of Lewarden. Long. 5. 15. E. Lat. 53. 0. N.

WORDEN, a town of Lower Saxony, in the duchy of Holstein, situated on the Elbe, ten miles N.W. of Gluckstadt.

WORDEN, GROSSEN, a town of Lower Saxony, in the duchy of Bremen, ten miles N.N.W. of Stade.

WORDINGBERG, a sea-port of Denmark, on the S. coast of the island of Zealand, 43 miles S.W. of Copenhagen. Long. 11. 58. E. Lat. 55. 3. N.

WORINGEN, a town of Germany, in the electorate of Cologne, seated on the Rhine, eight miles from Cologne.

WORKHOUSE *(Encycl.)*. We have in that article, as well as under the article HOUSE *of Industry (Supp.)*, pointed out some of the defects which render these receptacles of little benefit either to the poor themselves, or to the community at large. The following extract, however, from the Rev. Mr. Gilpin's account of the new poor-house at Boldre, in Hampshire, will shew how these defects are to be remedied.

The old poor-house of Boldre being a wretched place, and having been managed at a great expence, it was determined at a vestry, held in the year 1792, to build a new one on a better site: to put in a respectable master and mistress; and to give the overlooking of it to a monthly committee of the gentlemen and farmers of the parish.

Accordingly they borrowed the sum of 800l. and bought a piece of ground, about two acres and a half; elevated, dry, and airy; here they erected the house, at a little distance from the road; and yet near enough to be under the constant eye of observation. It is built substantially of brick; single, that the air may have free passage through it, and extending about eighty-two feet in front, and twenty in breadth. These dimensions give an excellent work-room on the right, as you enter; and, on the left, a kitchen and back-kitchen: the master's room, which is also the committee-room, about eighteen feet by fourteen, occupies the centre, and has a window on one side, inspecting the work-room; and another, on the opposite side, inspecting the kitchen. Above stairs, the sleeping chambers are separated nearly as those are below; only, as there are commonly more women and children in a poor-house than men, a room at the end of the men's apartment is taken off for a sick room, with a separate staircase. Over the chambers are excellent garrets; behind the kitchen part of the house, are the pantries and other conveniences, among which is a store-room thirty feet long.

The ground between the house and the road, which is a falling space of about sixty yards, is divided, first, into a dry convenient play-yard for the children; and the remainder, about half an acre, running down to the road, is a garden; the larger garden, which is an acre, lies behind the house.

The house being finished, and sufficiently dry, the inhabitants of the old house, consisting of nine or ten men and women, and between twenty and thirty children, were brought into it, on the 19th of May, 1793; and the whole put under the care of Mr. and Mrs. Salter, who are both of them well acquainted with the whole business of spinning and weaving. He has set up a couple of looms, and a number of spinning wheels, and generally presides over this part of the business himself; Mrs. Salter attending to the economy and management of the house The inhabitants are all employed according to their capacities; some of the old women in cooking, mending, and washing; the old men in the garden; the children, and some of the women, in spinning and weaving; children even of four or five years of age are employed, and earn about a penny a-day. In summer they come into the work-room at six; in winter as soon as it is light. At breakfast they have an hour's respite, and the same at dinner. They have all tasks; but so easy, that, if they work hard, they can finish them by two in the afternoon; and, without any exertion, by six.

Their table of diet is as follows:—on Sunday, meat, with plenty of vegetables and bread; the allowance of which is four ounces for grown persons, and three for children; on Monday, the remains of Sunday's dinner warmed with vegetables and bread; on Tuesday, each grown person has a pound of pudding, and the children three quarters of a pound; on Wednesday, the same as on Sunday; on Thursday, the same as on Monday; on Friday, ox-head stew with vegetables and bread; on Saturday, a clearance is made of all the remains in the house; and, if they fall short, the deficiency is made up with bread and cheese. For breakfast, beef broth, or milk porridge and bread, are provided; except for a few old women, who, having been in the habit of drinking tea all their life-time, are allowed that indulgence, on account of their good behaviour. At supper, the regular meal is six ounces of bread, and an ounce of cheese, for every grown person; and for children, four ounces of bread, and three quarters of an ounce of cheese; this is sometimes varied with potatoes, which the children like better. The children, including all under the age of fifteen years, sit at one table, and the grown persons at another. Every thing is good in its kind: the children seldom eat up all that is provided, and the remainder is fried up again the next day among the remains. During the late scarcity of bread-corn, Mrs. Salter used a less proportion of wheat, and a larger of potatoes, particularly for supper; and during the winter of the year 1795, she boiled potatoes and onions, and mixing them well together, fried them up with

a little lard; the people were in general fonder of this dish than of their usual meal.

Four bushels and a half of malt are allowed each month for beer. We must add, that the master and mistress generally fare as the family does, though it is not required by the committee.

The clothing of the poor is equally good; every one has a new suit for Sunday, generally spun and woven in the house. It is carefully hung up at night, and the old clothes produced for the week.

Thus the poor are well lodged, well fed, and well clothed; and yet (on deducting their earnings) at *less than half the expence* that they cost the parish before, being about nine pence a-head weekly; whereas in the old house, with continual complaint, the allowance was double that; though provisions, at that time, were much cheaper than they are now.

In the article of clothing, much more is saved. Though the poor are now so decently clad, yet, by care and management, the whole expence of the clothing in the year 1795, including shoes, amounted only to 17l. 6s. 8d.; whereas the expence of clothing the poor in the old house, did not amount to less, one year with another, than 70l. annually. In one year it reached 90l.; for as no care was taken to keep the clothes in repair, nor any distinction made between old and new, they were always in rags, and yet always craving for new clothes.

Another article of saving is in the health of the poor; arising from the airiness and cleanliness of the present house, the good clothing, the wholesomeness and plenty of provisions, and from the care that is taken to keep the family clean. No epidemical, nor indeed any disorder, has appeared among them, since the new house has been opened.

By this alteration in the management of the house, a saving in the poor's-rates of the parish was made in the year 1795, of 157l 1s. 6d. notwithstanding the then advanced price of provisions, and the variety of expences incident to a new establishment; and the average diminution in the rates, from Easter 1793 to the present time, has been 164l. a-year. The gardens belonging to the house are in high cultivation, and bear such quantities of potatoes and cabbages, the chief vegetables used in the family, that in general they are abundantly supplied. During the scarcity of the year 1795, they were obliged, indeed, to purchase potatoes.

But nothing is so delightful in the institution as the cheerfulness with which every thing is conducted. The old women, who behave well, have their little indulgences of tea and snuff; and the men, of tobacco. The children's tasks are made pleasing to them, by little gratuities out of their earnings. The master has the art of turning even their play-hours to use, and yet making them more happy than if they were left to themselves.

Punishment in Boldre work-house is rare and gentle; and consists chiefly in confining the delinquent in a room by himself, and abridging him of a meal: if, however, the master is under the necessity of correcting a boy corporally, the punishment is always inflicted in the presence of some respectable person.—For devotion and religious instruction, the family assembles in the kitchen, every morning when the bell rings for breakfast. The master reads, and generally explains, some easy and practical part of the New Testament; after which they all join in prayer. On Sunday morning and evening, these exercises are enlarged, and accompanied with singing hymns, in which all the children join. They regularly attend church on Sundays: and it is a pleasing sight to see so many well-clothed figures, happy faces, and healthy countenances, issuing from a parish work-house. In the afternoon, on Sunday, the children attend the school, where they are catechised with the other children of the neighbourhood: the old people also attend with them.

The advantages of a *well-regulated poor-house* consist in superior comfort of the aged, the education of the young, the reform of the dissolute, and the diminution of poor's-rates. All these benefits have attended the new regulation of the poor-house at Boldre; so that a happy and useful society has been thereby formed out of the very dregs of the parish. The old people having all their wants supplied, and their wishes attended to, feel themselves more comfortable than they ever did before; and are glad to render cheerfully, in return, what little services they can: the children*, bred to industry and Christian virtue, promise to become useful members of society; and the penitence and good conduct of some persons in the house, who, for want of education and early good habits, had been involved in idleness and profligacy, do infinite credit to the institution. Mr. Gilpin adds, that the poor's-rate has been reduced from 654l. 12s. to 490l. a-year, at the same time that the comfort and happiness, the industry, and the moral and religious habits of the poor, and in its consequences to the whole parish, have been increased, with a reasonable confidence of still greater improvement and saving to the parish, by its effects and example on the rising generation.

WORKINGTON, a sea-port in Cumberland, seated on the Derwent, over which is a stone-bridge. From this port a large quantity of coal is exported. This was the landing-place of Mary queen of Scots, when she was driven to take refuge in England. In the neighbourhood is a large iron foundry. Workington is seven miles W. of Cockermouth, and 307 N. of London. Long. 3. 35. W. Lat. 53. 42. N.

---

* It should be observed that, in Boldre work-house, the children are kept separate and distinct from the adults; and that Mr. Gilpin has founded a school of industry and education, that provides for a great many of the children of the poor in that parish. Nothing less than such circumstances, with very good management, could render a poor-house, as at Boldre, a fit residence for children. The common occurrences of a parish will make it necessary to receive into a poor-house those whom idleness and vice have made very improper examples for youth; and children in work-houses are generally the subject of uneasiness and unpleasantness to the aged poor, who are too frequently the butt and sport of the thoughtless and uneducated little creatures which are to be found in most poor-houses. If all of them, above seven years of age, were to be removed from the work-house to some cottage, and there boarded, as in a parish-school, at a certain sum (the mistress having the benefit of their work), they would be more cheaply kept, and better educated; a parochial school might thereby be provided, and a deserving family supported; they would also get out at an earlier age, and into better services, than they do now; the objection to taking children into any family, out of a poor-house, being general, and almost insurmountable. A work-house, if well conducted, might be made as comfortable a retreat to the aged poor, who have no domestic connections, as any charitable foundation whatever; and that at less than the present expence.

WORKSOP, a town in Notinghamſhire, with a market on Wedneſday. It is noted for a magnificent ſeat of the Duke of Norfolk. Here was once an abbey, the gate of which remains, and the room over it is converted into a ſchool. On the weſt ſide of the town is a circular hill, which was the ſite of a catile. Quantities of licorice are grown in its vicinity, which is alſo peculiarly remarkable for the number of noblemen's ſeats. The canal from the Trent to Cheſterfield paſſes near this place. It is 24 miles N. of Nottingham, and 146 N. by W. of London. Long. 1. 0. W. Lat. 53. 20 N.

WORSTED, a town in Norfolk, with a market on Saturday. It is noted for being the place where worſteds were firſt made. It is 12 miles N. of Norwich, and 120 N.E. of London. Long. 1. 26. E. Lat. 52. 52. N.

WOTTON-BASSET, a borough in Wiltſhire, with a market on Friday. It ſends two members to parliament, and is 30 miles N. of Saliſbury, and 89 W. of London. Long. 1. 54. W. Lat. 51. 31. N.

WOTTON-UNDER-EDGE, a corporate town in Glouceſterſhire, with a market on Friday. The inhabitants are principally clothiers, and it is governed by a mayor. It is ſeated under the hills, 20 miles N.E. of Briſtol, and 108 W.N.W. of London. Long. 2. 11. W. Lat. 51. 40. N.

WRAGBY, a town in Lincolnſhire, with a market on Thurſday, 11 miles E.N.E. of Lincoln, and 144 N. of London. Long. 0. 10. W. Lat. 53. 18. N.

WRATH, CAPE, a vaſt promontory in Southerlandſhire, which form the N.W. point of Great Britain. Againſt its rugged and lofty cliffs the rapid tide burſts with incredible fury.

WREKIN, a noted mountain in Shropſhire, eight miles E.S.E. of Shrewſbury.

WREXHAM, a town in Denbighſhire, with a market on Monday and Thurſday. It is the moſt populous town in all North Wales, and a place of conſiderable traffic. It retains the language and appearance of an Engliſh town, and has a Gothic church, the lofty ſteeple of which is the boaſt of this part of the country. Near Wrexham is a large foundry for cannon and other articles. It is ſeated on a river, which falls into the Dee, in a country affording plenty of lead, 13 miles S. by W. of Cheſter, and 188 N.W. of London. Long. 3. 10. W. Lat. 53. 2. N.

WRINTON, a town in Somerſetſhire, with a market on Tueſday. The moſt noted mines for calamine are in its neighbourhood. It is the birth-place of Mr. Locke, and ſeated among the Mendip-hills, 11 miles N.N.W. of Wells, and 125 W. of London. Long. 2. 38. W. Lat. 51. 21. N.

WROTHAM, a town in Kent, with a market on Tueſday. It has a large church in which are 16 ſtalls, ſuppoſed to have been made for the clergy attending the Archbiſhop of Canterbury, who had a palace here, till Archbiſhop Ipſley, in the 14th century, demoliſhed it, and built another at Maidſtone. It is 11 miles W.N.W. of Maidſtone, and 24 S.E. of London. Long. 0. 24. E. Lat. 51. 18. N.

WROXETER, a town in Shropſhire, five miles S.E. of Shrewſbury. It is ſaid to have been built by the Britons, on the banks of the Severn, over which are the traces of a bridge, diſcernible at low water. The circumference was three miles, environed by a wall three yards broad, with a deep trench on the outſide, which may be traced in ſeveral places. Roman coins are frequently found here, but none of the Saxon, which is looked upon as a proof that it was deſtroyed before their arrival.

WUNNENBERG, a town of Weſtphalia, in the biſhopric of Paderborn, which received its name from a victory gained by Charlemagne over the Saxons in 974. It is 14 miles S. of Paderborn. Long. 8. 15. E. Lat. 51. 26. N.

WUNSIEDEL, a town of Franconia in the principality of Bayreuth. Near it are mines of copper and iron, and quarries of marble. It is 16 miles W. of Egra, and 34 E. of Bayreuth. Long. 12. 24. E. Lat. 50. 10. N.

WUNSTORF, a town of Lower Saxony, in the principality of Calenberg, 10 miles W.N.W. of Hanover.

WURZACH, a town of Suabia, in the county of Waldburg, ſituate on the Aitrach, 17 miles N. of Wangen, and 26 N.W. of Kempten. Long. 10. 5. E. Lat. 48. 6. N.

WURZEN, or WURTZEN, a town of Upper Saxony, in the territory of Leipſic, with a citadel. It was formerly a biſhop's ſee. The principal trade is in beer, of which great quantities are exported. It is ſituate on the Muldaw 14 miles E. of Leipſic, and 44 N.W. of Dreſden. Long. 12. 40. E. Lat. 51. 19. N.

WUSTERHAUSEN, a town of Upper Saxony, in the middle marche of Brandenburg, ſeated on the Doſſe, 27 miles N. of Brandenburg, and 36 N.W. of Berlin. Long. 12. 30. E. Lat. 52. 53. N.

WUSTERHAUSEN, a town of Upper Saxony, in the middle marche of Brandenburg, 11 miles S.S.E. of Berlin.

WYCOMB, CHIPPING, or HIGH WYCOMB, a borough in Buckinghamſhire, with a market on Friday. In 1744, a Roman teſſellated pavement was diſcovered in an adjacent meadow; and in its neighbourhood are many corn and paper mills. This town is governed by a mayor, and ſends two members to parliament. It is ſeated on the Wyck, 12 miles S.S.E. of Aileſbury, and 31 W.N.W. of London. Long. 0. 39. W. Lat. 51. 37. N.

WYE, a town in Kent, with a market on Thurſday, ſeated on the Stour, 10 miles S. of Canterbury, and 56 S.E. of London. Long. 1. 4. E. Lat. 51. 10. N.

WYE, a river of South Wales, which iſſuing out of Plynlimmon Hill, very near the ſource of the Severn, croſſes the N.E. corner of Radnorſhire, giving name to the town of Rhyadergowy [Fall of the Wye], where it is precipitated in a cataract. Then flowing between this county and Brecknockſhire, it croſſes Herefordſhire, and dividing the counties of Glouceſter and Monmouth, falls into the mouth of the Severn, below Chepſtow. The romantic beauties of the Wye, which flows in a deep bed, between lofty rocks clothed with hanging woods, and here and there crowned by ruined caſtles, have employed the deſcriptive powers of the pen and pencil.

WYE, a river in Derbyſhire, which riſes in the N.W. part, above Buxton, and flowing S.E. falls into the Derwent, below Bakewell.

WYE, a town of Switzerland, in a territory of the abbey of St. Gallen, with a palace. It is built on an eminence, 16 miles S.S.W. of Conſtance. Long. 9. 4. E. Lat. 47. 34. N.

WYMONDHAM, or WINDHAM, a town in Norfolk, with a market on Friday. The ſteeple of the church is very high, on it was hung Ket, the rebel, in the reign of Edward VI. It is nine miles S.S.W. of Norwich, and 100 N.N.E. of London. Long. 1. 6. E. Lat. 52. 36. N.

WYNENDALE, a town of Auſtrian Flanders, where General Webb, in 1708, with 6000 men only, defeated 24,000 French. It is eight miles E.N.E. of Dixmude.

WYRE, a river in Lancaſhire, which riſes near Wyreſdale, ſix miles S.E. of Lancaſter, and paſſing by Garſtang, enters the Iriſh Sea below Poulton.

X.

XABEA, a sea-port of Spain, in Valencia, 38 miles N.E. of Alicant, and 54 S.S.W. of Valencia. Long. 0. 25. E. Lat. 38. 40. N.

XACCA, or Sacca, a sea-port of Sicily, with an old castle. It is seated on the S. coast of the island, at the foot of a mountain, 20 miles S.E. of Mazara, and 41 S.S.W. of Palermo. Long. 13. 2. E. Lat. 37. 41. N.

XAGUA, a sea-port on the S. coast of the island of Cuba, one of the finest in America, 84 miles S.E. of Havanna. Long. 80. 45. W. Lat. 22. 10. N.

XALAPA, a town of New Spain, in the province of Tlascala, with a bishop's see. It contains about 2000 inhabitants. This town is said to give name to the purgative root called jalap, or xalap. It is 60 miles E. of Angelos. Long. 98. 20. W. Lat. 19. 32. N.

XALISCO, a town of New Spain, in the province of Guadalajara Proper, seated on the Pacific Ocean, 400 miles W. of Mexico. Long. 110. 5. W. Lat. 22. 30. N.

XATIVA, a town of Spain, in Valencia. Having taken the part of Charles III. in 1707, Philip V. ordered it to be demolished, and a new town to be built, called St. Philip. It is seated on the side of a hill, at the foot of which runs the Xucar, 32 miles S.W. of Valencia, and 50 N.W. of Alicant. Long. 0. 14. W. Lat. 39. 4. N.

XAVIER, or Sabi, the capital of the kingdom of Whidah, on the Slave Coast of Guinea. It is noted for its great market, which is held at the distance of a mile from the walls. The market-place is surrounded by sutlers' booths, which are only permitted to sell certain sorts of meat, as beef, pork, and the flesh of goats and dogs. Here slaves of both sexes are bought and sold, as well as oxen, sheep, dogs, hogs, fish, and birds. Here are to be found various commodities of Whidah manufacture, and every thing of European, Asiatic, or African production. Xavier is seated one mile from the river Euphrates.

Xavier, a town of Spain, in Navarre, noted as the birth-place of the celebrated Romish saint and missionary of that name. It is 35 miles S.E. of Pampeluna.

XAVIEQ, St. a town of Paraquay, in the province of La Plata, 200 miles W. of Rio Janeiro. Long. 50. 6. W. Lat. 24. 0. S.

XENIL, a river of Spain, which rises in Grenada, and falls into the Guadalquiver, three miles below Ecya.

XERES-DE-BADAJOZ, a town of Spain, in Estremadura, and in the territory of Tra-la-Guadiana, seated on the rivulet Ardilla, 27 miles S.E. of Badajoz. Long. 6. 32. W. Lat. 38. 9. N.

XERES-DE-GUADIANA, a town of Spain, in Andalusia, seated on the Guadiana, 18 miles N. of Ayamonte. Long. 7. 15. W. Lat. 37. 30. N.

XERES-DE-LA-FRONTERA, a town of Spain, in Andalusia. It is famous for excellent wine; and hence, it is thought, is derived the name of that we call Sherry. It is called *de la Frontera*, because, when the Moors possessed Cadiz, it was the frontier of the Christians. It is seated on the Guadaleta, five miles N. of Port St. Mary, and 110 S. by W. of Madrid. Long. 5. 59. W. Lat. 36. 42. N.

Xeres-de-la-frontera, a town of New Spain, in the audience of Guadalajara. Long. 104. 25. W. Lat. 22. 35. N.

XERES-DE-LOS-CABALLEROS, a town of Spain, in Estremadura, 51 miles S.W. of Merida, and 72 N.N.W. of Seville. Long. 6. 25. W. Lat. 38. 17. N.

XERUMENHA, a town of Portugal, in Alentejo, 18 miles S.W. of Badajoz, and 36 E. of Evora. Long. 6. 9. W. Lat. 38. 35. N.

XICOCO, an island of Japan, between Niphon, and Saikoka.

XIMO, an island of Japan, the second in size, an eminence, situate to the S.W. of Niphon, from which it is divided by a narrow channel. It is 300 miles in circumference.

XIXONA, a town of Spain, in Valencia, and in the territory of Segura, with a strong castle. It is seated among mountains, in a country that produces excellent wine, 15 miles S.W. of Alicant. Long. 0. 10. W. Lat. 38. 6. N.

XUCAR, a river of Spain, which rises in New Castile, in the Sierra-de-Cuenza. It passes by Cuenza, and entering the province of Valencia, runs into the gulf of Valencia, at the town of Cullera.

XUDNOGROD, a town of Turkish Croatia, 17 miles N. of Sebenico, and 37 E. of Kzara. Long. 16. 51. E. Lat. 40. 34. N.

Y.

Y an arm of the Zuider Zee, which enters that sea, five miles E. of Amsterdam. It forms the boundary between N. and S. Holland, and is pronounced *Ey*.

YAKUTSK, one of the four provinces of the Russian government of Irkutzk, in the eastern part of Siberia.

YAKUTSK, a town of Siberia, capital of a Russian province of the same name, seated on the river Lena. Long. 129. 53. E. Lat. 62. 1. N.

YALE, the capital of a province of the same name, in the island of Ceylon.

YAMBO, a sea-port of Arabia, with a castle, on the coast of the Red Sea, 60 miles S.W. of Medina. Long. 40. 10. E. Lat. 23. 40. N.

YAMBURG, a town of Russia, in the government of Petersburg, situate on the Luga, 20 miles E. of Narva. Long. 28. 16. E. Lat. 59. 15. N.

YANG-TCHEOU, a populous city of China, in the province of Kiang-nan. Being intersected by a number of canals, it has 24 stone bridges, each consisting of several arches. It is 45 miles N.E. of Nanking.

YANG-TESE-KIANG, a great river of China, which rises in the province of Yun-man, and having crossed Houquang and Kiang-nan, enters the Eastern Ocean, opposite the isle of Tsong-ming, which is formed by the sand accumulated at its mouth.

YARN-MILL. The following is extracted from the specification of a patent granted in 1787 to Mr. Kendrew, and Mr. Porthouse, of Darlington, for a mill or machine, upon new principles, for spinning yarn from hemp, tow, flax, or wool. It may be worked by water, or as a horse-mill, or in any other way, and is made and used in the following way: There is a cylinder, marked A in the drawing, fig. 1 (Plate 56.), three feet diameter, and ten inches broad, made of dry wood or metal, turned true, and covered on its circumference with a smooth leather, upon which are placed the rollers marked D, covered with leather, and supported in their situations by the slits in the covered piece of wood marked K, in which the iron axes of the rollers turn, but suffers them to press on the wheel marked A. There must be another piece similar to the above to support the other end of the rollers. These rollers are of different weights. The upper roller marked D 1 is two stone, the rest decreasing to the last, which is only two pounds weight and one half. There is an iron fluted roller, marked F, furnished with a toothed wheel at each end, and a wood one, marked G, covered with cloth, and over it a smooth leather. There is an assisting roller, marked H, of fluted iron. These rollers are supported by their axes, turning in the slit, marked 2, of the piece of wood marked M (fig. 3), which is here separated from the end of the frame marked 8, to shew the rollers and wheelwork. The rollers marked G and F are squeezed together by means of the lever marked *p*, and its weight marked *w* (fig. 3). The roller marked H is pressed to the mark G by its axis, acting upon the inclined plane marked *x* (fig. 3). There is a rubbing roller covered with woollen cloth, and on its axis is a small wheel, marked I, driven by the wheel marked S. This roller rests upon the roller marked G, and by it motion prevents any dirt or fibres from adhering to it. There is a cloth, marked N, revolving over two rollers marked O, O, which has motion given to it from the wheel marked C, by means of another wheel marked P. This cloth moves at the same pace as the surface of the wheel marked A. There is a supporter, marked Y, of the axis of the wheels marked O, P, but is removed, in order to shew them; it is fixed by its tenons in the mortises marked Z, Z. The roller marked B is kept in action by its endeavour to slip down the inclined plane at the top of the piece marked Y, thereby pressing against the revolving cylinder; and another piece, similar to this, must be understood to support the other end of the roller's axis. By the side of this revolving cloth is a table placed, of the same length and breadth as the cloth is, to which belong two smooth cloths or leathers, of the same size as the table. The machine being thus prepared, the attendant or workman must take a quantity of hemp, tow, flax, or wool, more or less, according to the fineness of the thread to be made, and lay or spread it evenly upon one of the smooth cloths on the table, then place it on the revolving cloth marked N, motion being communicated to the roller marked F, by wheel-work, as usual, from a water, horse, or other kind of mill, which wheel-work is communicated to the wheel marked Q, on whose axis is a nut, which turns the wheel marked C; and thereby the cylinder marked A moves, and with it all the rollers, by which motion the hemp, tow, flax, or wool, is drawn forward. The cloth turns down, but the hemp, tow, flax, or wool, go upon the cylinder marked A, under the roller marked B, and so forward under all the rollers marked D, then falls in between the rollers marked G, F, turns under the roller marked G, and over the roller marked H, which, as it gives the rollers hold of the hemp, tow, flax, or wool, in two places, enables them to draw forward the long fibres thereof, though many of them are to draw from under the marks 4 or 5 of the pressing rollers, marked D; it then falls into a cannister, marked R, and as by the wheel-work the rollers marked F, G, H, move three times faster than the cloth and cylinder, the sliver must be three times longer than when presented. By the time this is drawing, the other cloth is filled with hemp, tow, flax, or wool, as before, and laid upon the revolving roller, laying the hemp, tow, flax, or wool, over the end of the other, which goes forward as before, and thus a continued sliver is produced as long as the machine continues its motion. But in order that this sliver may come out of the cannister marked R, without entanglement, it must pass through an instrument marked 5 (fig. 3), placed over the rollers marked F, G, its open side marked T, to the cylinder at mark 4, supported by its ends marked V, V, in the slits marked W, of the before-described pieces marked K. The aperture X is so small as to press the fibres close to each other in their passage through it previous to their passing the rollers, by which means they remain pressed side by side in the sliver, and will not entangle. These thick slivers are drawn smaller by a similar process, and in the same manner as used for cotton, but the machines for drawing are all of the same structure as the above, except that they have no revolving cloth. The sliver is applied to the

cylinder under the roller marked B, which draws it forward under all the rollers, as before described, drawing it out, or lengthening it, every fresh machine through which it presses, till it be small enough for the spinning machine. It must be remarked, that the cylinders are made less in diameter, according to the different smallness of the sliver intended to be drawn upon them at the first; whilst the sliver is at its greatest thickness, the cylinder is required to be three feet diameter, as above described, the next rather less, and so on to the last, which is only two feet. The aperture of the bottom of the contractor belonging to each machine is also made one third part smaller than another in succession, from the greatest to the smallest cylinder; as also the drawing rollers marked F, G, H are furthest from the pressing roller marked D in the longest cylinder, and nearest at the smallest cylinder. At the largest cylinder the distance is about nine inches, and the smallest about four inches; but their distance cannot in all cases be fixed, as it depends on the different length of the fibres of the hemp, tow, flax, or wool; long ones requiring the distances mentioned, and short ones requiring the distances much shorter than is here specified.

The following several letters or marks are in the machine figured 2. The spinning machine, as to its drawing principle, is the same as the drawing machine. The slivers are presented to it in cannisters marked A, and drawn over a cylinder marked B, covered with rollers marked D. The fibres which are to form the thread are drawn from the cylinder by the rollers marked C, the under roller of which is made of fluted iron, the other of wood, covered with leather; they move six or eight times faster than the cylinder marked B; are enabled to draw the hemp, tow, flax, or wool, forward from under the pressing rollers marked D, by being squeezed together with the weights and crooks marked *a*, *a*, locked to the small part of the rollers marked C. There is a belt of smooth cloth, marked E, moving on two rollers, which are turned by the wheel marked F, on the axis of the fluted roller; at the opposite end of which, as at the mark G, is a nut, which turns the wheel marked H, on whose axis is another nut, turning the wheel marked I, and thereby the cylinder marked B, with all its rollers. These rollers move in curved pieces of wooden metal, marked K, which, to prevent confusion, are not represented in their places: they have slits in them, in which the rollers' axes are guided, but so deep as at all times to suffer the rollers to press upon the cylinder. These rollers are covered with cloth and leather. The top roller is about ten pounds weight, decreasing to the sixth roller, which is only about one pound weight: the yarn is turned by the spindles marked L, and rubbed over the wet cloth belt if spinning linen yarn, but if spinning worsted yarn the belt must be removed, that it may not touch it as it passes to the spool, which it coils round as fast as the rollers let it out. The spindles marked L, are turned by a belt from the wheel marked M, which derives its motion from the mill, and by a wheel on its axis communicates it to the roller under the mark C by the wheel marked F, and so to the rest, as above described. The hemp, tow, flax, or wool, is twined in the same manner as cotton is by mills.

YAROSLAF, a government of Russia, formerly a province of the government of Moscow.

YAROSLAF, a town of Russia, capital of a government of the same name. It is seated at the confluence of the Volga with the Kotorosl, 140 miles N.E. of Moscow. Long. 38. 59. E. Lat. 57. 35. N.

YARUM, a town in the N. riding of Yorkshire, with a market on Thursday. It is seated on the Tees, over which is a stone bridge, 40 miles N.N.W. of York, and 238. N. by W. of London. Long. 1. 12. W. Lat. 54. 31. N.

YAXLEY, a town in Huntingdonshire, 14 miles N. of Huntingdon, 78 N. by W. of London.

YELLOW RIVER, or HOANG-HO, a large river of Asia, which, after a course of nearly 600 leagues across Tartary and China, enters the Eastern Sea, to the N. of the mouth of the Yan-tse-kiang. It is very broad and rapid, but so shallow, that it is scarcely navigable. It is called the Yellow River, because the clay and sand which it washes down, especially in time of rain, make its water appear of a yellow colour.

YELLOW SEA, a gulf of China, between the provinces of Pe-tcheli and Chang-tong on the W. and the peninsula of Corea on the E.

YENISEI, or JENISA, a river of Siberia, which running from S. to N. enters the Frozen Ocean, to the E. of the bay of Oby.

YENISEISK, or JENISKOI, a large and populous town of Siberia, in the province of Tomsk, seated on the river Yenisei. Long. 92. 35. E. Lat. 57. 46. N.

YEN-PING-FOU, a city of China, in the province of Fokien. It has in its district seven cities of the third class, and is seated on the brow of a mountain, at the foot of which is the river Minho. It is 275 miles S. of Nan-king.

YEN-TCHEOU-FOU, a city of China, in the province of Chang-tong. Its district contains four cities of the second, and 23 of the third class; and it is seated between two rivers, 275 miles S.E. of Pekin.

YEN-TCHING, a city of China, in the province of Chang-tong, and jurisdiction of Tsi-nan-fou. Here a kind of glass is made, so delicate and brittle, that it cracks when exposed to the smallest injuries of the air.

YEOVIL, or IVEL, a corporate town in Somersetshire, with a market on Friday. Here is a manufacture of cloth, but the principal one is of gloves. It is seated on the Ivel, 20 miles S. of Wells, and 123 W. by S. of London. Long. 2. 37. W. Lat. 50. 55. N.

YESD, a town of Persia, in Irac Agemi, on the road from Kerman to Ispahan. It has a silk manufacture; and here are made the finest carpets in the world. It is 200 miles E S.E. of Ispahan. Long. 56. 50. E. Lat. 32. 0. N.

YONNE, a department of France, containing part of the late province of Burgundy. It is so called from a river that rises in the department of Nievre, and passing by Chateau Chinon, Clameci, Auxerre, Joigny, and Sens, falls into the Seine. Auxerre is the capital.

YORIMAN, a province of Guiana, about 150 miles in length, on the river Amazon. The native inhabitants are strong, robust, and active, and both sexes go naked.

YO-TCHEOU-FOU, a commercial city of China, in the province of Hou-quang. Its district contains one city of the second, and seven of the third class; and it is seated on the Yang-tse-kiang, 275 miles S.W. of Nan-king.

YOUGHALL, a town of Ireland, in the county of Cork. It is surrounded by walls, has a very commodious harbour, with a well-defended quay, and sends two members to parliament. It has a manufacture of earthen ware, and is seated on the side of a hill, at the mouth of the river Blackwater, 28 miles E. by N. of Cork. Long. 7. 45. W. Lat. 51. 59. N.

YPRES, a large city of Flanders, with a bishop's see. It has a considerable manufacture of cloth and serges; and every year in lent there is a well-frequented fair. It was one of the barrier towns belonging to the Dutch, till 1781, when Emperor Joseph II. obliged them to withdraw their

garrison. It has been often taken and retaken; the last time by the French in 1794. It is seated on the Yperlee, 12 miles W. of Courtray, 15 N.W. of Lisle, and 130 N. of Paris. Long. 2. 48. E. Lat. 50. 51. N.

YRIEX, St. a town of France, in the department of Upper Vienne. It derives its name from a saint who built a monastery here, and is seated on the river Isle, 20 miles S. of Limoges.

YSENDYCK, a strong town of Dutch Flanders, in the isle of Calsand, seated on a branch of the river Scheld, called Blie, eight miles E. of Sluys, and 18 N.W. of Ghent. Long. 3. 38. E. Lat. 51. 20. N.

YSSELBURG, a town of Dutch Guelderland, 12 miles E. of Cleves, and 22 N.E. of Gueldres. Long. 6. 15. E. Lat. 51. 42. N.

YSSELMOND, an island of Holland, situate between the Merwe on the N. and another branch of the Maese on the S. It has a town of the same name, near three miles W. of Rotterdam.

YSSELSTEIN, a town of the United Provinces, in Holland, with a castle, seated on the river Yssel, five miles S.W. of Utrecht. Long. 5. 5. E. Lat. 52. 7. N.

YSSENGEAUX, a town of France, in the department of Upper Loire, 10 miles N.E. of Puy.

YSTAD, or Ystad, a sea-port of Sweden, in the province of Schonen, 26 miles S.E. of Lund. Long. 13. 44. E. Lat. 55. 22. N.

YUEN-YANG-FOU, a city of China, in the province of Hou-quang. Its district contains one city of the second, and six of the third class. It is 300 miles W. of Nan-king.

YVERDUN, a strong town of Switzerland, in the Pays de Vaud, capital of a bailiwic of the same name, with a castle. It is seated at the head of a lake of the same name, on the rivers Orbe and Thiele, 30 miles S.W. of Bern. Long. 6. 50. E. Lat. 46. 50. N.

YVETOT, a town of France, in the department of Lower Seine, five miles N.E. of Caudebec.

YU-HING-FOU, a city of China, in the province of Ho-nan. Its district contains two cities of the second, and 12 of the third class. It is 175 miles N.W. of Nan-king.

YUMA, one of the Bahama Islands, in the West Indies, lying to the N. of Cuba, 55 miles in length, and 17 in breadth.

YUMETO, one of the Bahama Islands, in the West Indies, to the N. of the isle of Yuma, lying under the tropic of Cancer. It is 37 miles in length.

YUN, the largest canal in China, called also The Imperial Canal. This celebrated canal, which extends from Canton to Pekin, forms a communication between the N. and S. provinces. The traffic upon it is exceedingly great, and it is, in various other respects, an object of wonder and admiration to Europeans.

YUN-PING-FOU, a city of China, in the province of Pe-tcheli. Its district contains one city of the second, and five of the third class; and it is 87 miles E. of Pekin.

YUNG-NAN, one of the most fertile and opulent provinces in China; bounded on the N. by Se-tcheuen and Thibet, on the E. by Quang-si and Koei-tcheou, on the S. by the kingdoms of Laos and Tonquin, and on the W. by those of Burmah and Pegu. Its gold, copper, and tin mines; its amber, rubies, sapphires, agates, pearls, marble, musk, silk, elephants, horses, gums, medicinal plants, and linen; have procured it the highest reputation. Its commerce and riches are immense.

YUN-NAN-FOU, the capital of the province of Yun-nan, in China, once remarkable for its extent and the beauty of its public buildings, all which have been destroyed by the Tartars, in their different invasions. Its district contains four cities of the second and third class. It is 430 miles N.W. of Canton.

YURCUP, a town of Turkey in Asia, in Caramania, 125 miles N.E. of Cogni, and 270 E. of Constantinople. Long. 34. 30. E. Lat. 39. 40. N.

YVOY, a town of France, in the department of the Ardennes, seated on the Cher, 10 miles S. of Sedan. Long. 5. 4. E. Lat. 49. 32. N.

Z.

ZABERN, a town of Germany, in the palatinate of the Rhine, 15 miles W. of Philipſburg. Long. 8. 10. E. Lat. 49. 11. N.

ZABOLA, a town of Tranſylvania, on the confines of Moldavia, five miles S.W. of Neumark.

ZABURN, a town of France in the department of Lower Rhine, 15 miles N. of Straſburg. Long. 7. 50. E. Lat. 48. 50. N.

ZACATECAS, a city of New Spain, in the audience of Guadalajara. It is ſurrounded by very rich ſilver mines, and 312 miles N.E. of Mexico.

ZACHAN, or SOCHAN, a town of Upper Saxony, in Hinder Pomerania, 14 miles E. of Stargard, and 52 S. of Colberg. Long. 15. 16. E. Lat. 53. 18. N.

ZAFRA, a town of Spain, in Eſtremadura, with a caſtle. It is ſeated at the foot of a mountain, near the river Guadaxiera, 20 miles S.W. of Medina. Long. 6. 12. W. Lat. 38. 19. N.

ZAGATULLA, a town of New Spain, in the audience of Mexico, 200 miles S.W. of that city, at the mouth of a river of the ſame name. Long. 104. 35. W. Lat. 17. 50. N.

ZAGARA, a famous mountain of Turkey in Europe, in Livadia, on the Gulf of Corinth, near mount Parnaſſus, and almoſt always covered with ſnow. It was the ancient Helicon, from which iſſued the fountain Hippocrene, and was ſacred to the Muſes, who had here a temple.

ZAGRAD, a ſtrong town of Sclavonia, capital of a county of the ſame name, with a biſhop's ſee. It is ſeated on the Save, 25 miles N.E. of Carlſtadt, and 137 S.W. of Buda. Long. 15. 41. E. Lat. 46. 20. N.

ZAHARA, a ſtrong town of Spain, in Andaluſia, ſeated on a craggy rock, and defended by a citadel. It is 47 miles S.E. of Seville. Long. 4. 55. W. Lat. 36. 52. N.

ZAHARA, or THE DESERT, a vaſt country of Africa, bounded on the N. by Barbary, on the E. by Fezzan and Caſhna, on the S. by Tombuctoo, and on the W. by the Atlantic Ocean. The air is very hot, but wholeſome to the natives. The ſoil is generally ſandy and barren, inſomuch that the caravans croſſing it to and from Negroland are often reduced to great extremities. The inhabitants are wild and ignorant. They have a number of petty princes; and the Mahometan religion is profeſſed throughout the country.

ZAHNA, a town of Upper Saxony, 34 miles S.S.W. of Potzdam. Long. 12. 40. E. Lat. 51. 53. N.

ZAIRE, a large river of Africa, which, riſing in the kingdom of Macoco, divides the kingdoms of Loango and Congo, and falls into the Atlantic Ocean, below Sogno.

ZALAMEA, a town of Spain, in Seville, 12 miles N. of Niebla, and 38 W.N.W. of Seville. Long. 5. 55. W. Lat. 37. 38. N.

ZAMORA, a ſtrong town of Spain, in Leon, with a biſhop's ſee. In its environs fine turcois ſtones are found. It is ſeated on a hill, on the river Douero, over which is a bridge of 17 arches, 35 miles N. of Salamanca, and 150 N.W. of Madrid. Long. 5. 18. W. Lat. 41. 41. N.

ZAMORA, a town of Peru, in the audience of Quito. In its neighbourhood are rich mines of gold, and it is ſeated near the Andes, 230 miles S. of Quito. Long. 75. 55. W. Lat. 5. 6.

ZAMORA, a town of Spain, in the province of Guadalajara, 30 miles S.E. of Guadalajara. Long. 104. 30. W. Lat. 20. 30. N.

ZAMORA, a town of Algiers, in the province of Conſtantine, 250 miles W. of Hamamet. Long. 6. 25. E. Lat. 36. 20. N.

ZAMOSKI, a ſtrong town of Poland, in Red Ruſſia, now the Auſtrian kingdom of Lodomeria. It has a citadel, and is 37 miles N.W. of Lemburg. Long. 23. 26. E. Lat. 50. 52. N.

ZAMPANGO, a town of New Spain, in the province of Mexico Proper, 25 miles N. of Acapulco.

ZANFARA, a kingdom of Negroland, to the W. of the kingdom of Zegzeg. The inhabitants are tall in ſtature, of a very black complexion, with broad faces, and ſavage diſpoſitions. It is very little known to Europeans.

ZANZIBAR, an iſland of Africa, on the coaſt of Zanguebar, between the iſlands of Pemba and Monfia, with the title of a kingdom tributary to Portugal. It abounds in ſugar-canes and citrons. The inhabitants are Mahometans. Long. 38. 25. E. Lat. 6. 0. S.

ZARA, a ſtrong city of Venetian Dalmatia, capital of a county of the ſame name, with an archbiſhop's ſee, a citadel, and a harbour. It was formerly much more conſiderable, the circumference of the walls being now but two miles, and the inhabitants not above 6000. Near the church, which the Greeks call St. Helia, are two fluted columns of the Corinthian order, ſuppoſed to have been part of the temple of Juno. There are fine paintings in the churches, done by the beſt maſters; and they pretend to have the body of St. Simeon, brought from Judea, and kept in a ſhrine, with a cryſtal before it. Zara is ſeated on a ſmall peninſula, in the gulf of Venice, 80 miles S.W. of Jaicza, and 150 S.E. of Venice. Long. 16. 6. E. Lat. 44. 30. N.

ZARENG, or SEGESTAN, a town of Perſia, the capital of the province of Segeſtan, celebrated for its beautiful pottery. It is 220 miles W. of Candahar.

ZARIK, a town of Turkey in Europe, in the Morea, 22 miles E. of Miſitra. Long. 22. 8. E. Lat. 37. 5. N.

ZARNATE, a ſtrong town of Turkey in Europe, in the Morea, ſeated on an eminence, 20 miles W. of Miſitra.

ZARNAW, a town of Little Poland, in the palatinate of Sandomir, 63 miles N. of Cracow. Long. 19. 56. E. Lat. 51. 13. N.

ZASLAW, a town of Poland, in Volhinia, ſeated on the Horin, 15 miles S.E. of Oſtrog. Long. 27. 11. E. Lat. 50. 20. N.

ZATMAR, a ſtrong town of Upper Hungary, capital of a county of the ſame name. It is ſeated on a ſmall lake formed by the river Samos, 50 miles E. by S. of Tockay, and 130 E. of Buda. Long. 22. 34. E. Lat. 47. 50. N.

ZATOR, a town of Poland, capital of a ſtarosty of

the same name, in the palatinate of Cracow, with a castle. It is seated on an eminence, near the river Vistula, 20 miles S.W. of Cracow, and 50 S.E. of Ratibor. Long. 19. 42. E. Lat. 49. 54. N.

ZAWEH, a town of Persia, in the province of Khorasm, situate on the Tedjen, about 20 miles from the Caspian Sea, 80 miles N. of Mesched, and 135 N.N.E. of Astrabad.

ZBARAZ, a town of Poland, in Podolia, 70 miles N. by W. of Kaminieck.

ZBOROW, a town of Austrian Poland, in the palatinate of Lemburg. Here, in 1649, John Casimir, king of Poland, with 20,000 men, was attacked in his camp by 110,000 Cossacs and Tartars, for three days successively, but defended himself so bravely, that the latter were glad to consent to terms of accommodation. Zborow is 25 miles W. of Zbaraz, and 52 E. by S. of Lemburg. Long. 25. 46. E. Lat. 49. 46. N.

ZEBID, a city of Arabia, in the province of Yemen, 52 miles N. of Mocha. Long. 43. 15. E. Lat. 14. 13. N.

ZEBU, or Cebu, one of the Philippine islands in the Indian Ocean, between those of Leyte and Negroes. It is 140 miles long and 30 broad.

ZEDIC, a town of Barbary, principal place of a district, in the country of Tripoli. It is seated on a bay of the Mediterranean, to which it gives name, 180 miles E.S.E. of Tripoli.

ZEGEDIN, or Szeged, a strong town of Hungary, situate near the confluence of the Maros and Theisse, 60 miles N.W of Temeswar, and 68 N. of Belgrade. Long. 21. 5. E. Lat. 46. 8. N.

ZEGZEG, a kingdom of Negroland, lying on the river Niger, by which it is separated, on the north, from the empire of Cashna. On the east it is bounded by Zanfara, on the south by Benin, and on the west by unknown deserts. It consists partly of plains and partly of mountains. The latter are extremely cold, while the former are intolerably hot; but abound with water, and are exceedingly fruitful.

ZEIGHENHEIM, a town of Germany, in the landgravate of Hesse Cassel, 30 miles S. of Cassel. Long. 9. 19. E. Lat. 50. 52. N.

ZEIL, a town of Suabia, capital of a county of the same name, in the Algau, with a castle. It is seated on the little river Aitrach, 70 miles S. of Ulm.

ZEITON, a town of Turkey in Europe in Janna, with a castle and an archbishop's see. It is a small place, and seated on a hill, by a gulf of the same name, near the river Eaylada, 50 miles S.E. of Larissa.

ZEITZ, a town of Upper Saxony, in the duchy of Naumburg, with a castle and a well-frequented college. It is seated on the Ester, 25 miles S.W. of Leipsic, and 45 E. of Erfurt. Long. 12. 8. E. Lat. 50. 59. N.

ZELL, a town of Lower Saxony, capital of a duchy of the same name, which devolved to the house of Hanover by marriage. It is surrounded by ditches and ramparts, on which are planted chesnut and lime trees. It is a small town, without trade or manufactures; but the high courts of appeal for all the territories of the electoral house of Brunswick-Lunenburg are held here, and the inhabitants derive their principal means of subsistence from this circumstance. The castle, a stately building, surrounded by a moat, was formerly the residence of the dukes of Zell; and was repaired by George III. king of Great Britain, for the residence of his unfortunate sister, the queen of Denmark, who died here. In 1757 the French reduced the suburbs of Zell to ashes, and even set fire to the orphan hospital, in which a great number of helpless children are said to have perished. Zell is seated on the Aller, 31 miles N.W. of Brunswick, and 47 S. by W. of Lunenburg. Long. 10. 12. E. Lat. 52. 49. N.

Zell, an imperial town of Suabia, seated on the Kintzig, 28 miles S. of Baden, and 52 W.S.W. of Stutgard. Long. 8. 8. E. Lat. 48. 22. N.

Zell, an imperial town of Suabia, seated on a lake of the same name, otherwise called the Zeller See, or lower lake of Constance, 14 miles N.W. of Constance.

Zell, a town of Germany, in the electorate of Treves, seated on the Moselle, 33 miles N.E. of Treves.

ZELL-IN-THE-PINZGAU, a town of Germany in the archbishopric of Saltzburg, seated on a lake 37 miles S.W. of Saltzburg.

ZELLERFELD, a town of Lower Saxony, in the Hartz forest. Silver to the value of 20,000 imperial crowns is annually coined here. It is six miles S.S.W. of Goslar.

ZEMLIN, or Zemplin, a town of Upper Hungary, capital of a county of the same name. It is seated on the Bodrog, 25 miles S.E. of Cassovia, and 27 N.E. of Tockay. Long. 21. 35. E. Lat. 48. 36. N.

ZENGAN, a town of Persia, in the province of Irac, 80 miles N.N.E. of Amadan.

ZENGUIA, a town of Turkey in Asia, in the pachalic of Aleppo, situate on the Euphrates, 55 miles N.N.E. of Aleppo, and 90 E. of Alexandretta. Long. 37. 50. E. Lat. 36. 25. N.

ZENTA, a town of Hungary, memorable for a signal victory gained in 1697 by Prince Eugene over the Turks, commanded by Emperor Mustapha II. It is 52 miles N. of Belgrade, and 52 W. of Temeswar. Long. 21. 30. E. Lat. 46. 5. N.

ZERBST, a town of Upper Saxony, capital of a district of that name, in the principality of Anhalt, with a castle, where the princes commonly reside. The inhabitants are partly Lutherans and partly Calvinists, and are famous for brewing good beer. It is 27 miles N.W. of Wittemberg. Long. 12. 13. E. Lat. 52. 0. N.

ZEREA, a town and fortress of Persia, in the province of Farsistan, 18 miles N.N.E. of Schira. Long. 54. 30. E. Lat. 29. 52. N.

ZERIGA, a town of Persia, in Irac-Arabia, seated in a narrow plain, between mountains. It has produced several very famous Arabian horses.

ZIA, an island of the Archipelago, one of the Cyclades, to the south-west of Negropont, 15 miles long and eight broad. It abounds in barley, wine, and silk; also a fine sort of oak, whose fruit, called Villam, is the best trading commodity of the island, it being used by dyers and tanners. The principal town, of the same name, is seated on an eminence, 30 miles from the harbour, at the further end of a valley. It resembles an amphitheatre, and contains 2500 houses, all flat at the top. It belongs to the Turks, but most of the inhabitants are Greeks, and have a bishop.

ZIBIT, a territory in Arabia Felix, extending from the principality of Mecca to that of Mocha, being bounded on the east by the principality of Tehama, and on the west by the Red Sea. The Turks were formerly masters of this country, but it now belongs to an Arabian prince.

Zibit, a trading town of Arabia Felix, capital of a territory of the same name. It is seated on the Zibit, 150 miles N.W. of Aden.

ZIEGENHAYN, a town of Germany, in the circle of the Upper Rhine and principality of Hesse, 26 miles S. of Cassel. Long. 9. 5. E. Lat. 50. 42. N.

ZIGET, a strong town of Hungary, which has been several times besieged and taken by the Turks and Imperialists. It is 44 miles S.E. of Canischa, and 130 S.S.E. of Vienna. Long. 17. 42. E. Lat. 46. 21. N.

ZINC *(Encyd.)*. The following is extracted from the specification of the patent granted to Mr. Browne, of Derby, for the method of making extract of zinc. He says, "the extract of zinc is made or composed of the vegetable or animal acid, saturated with the oxyd of zinc, in whatever state it may be found, whether in the state of ore, as calaminaris of every description, blend, or black-jack, or by whatever other name it may be called, or in the state of flowers, or soot from furnaces where brass or spelter is made, called tutty-pompholix, or oven-bruck, or the flowers or oxyd made directly from the ore, or in its metallic state, by heat, or any kind of acid. The acid necessary for this purpose may be made by acetous fermentation, as common vinegar, either in its natural or distilled state, or any acid produced from any vegetable, by chemical acid, or any vegetable or animal oil, whether disengaged by any process, or used in the state of oil; all or any of the above being saturated with the oxyd of zinc, produce extract of zinc."

ZIRICZEE, a strong town of the United Provinces in Zealand, and the principal of the isle of Schowen. It was the ancient residence of the counts of Zealand, and was then a place of much more consequence, the port having been since filled with sand. It was taken by the Spaniards in 1676. It is 12 miles N.E. of Middleburg, and 18 S.W. of Briel. Long. 4. 10. E. Lat. 51. 36. N.

ZITTAW, a fortified town of Germany, in Lusatia, subject to the elector of Saxony. Besides the suburbs and handsome gardens that surround it on all sides, there are a number of fine villages that depend on it. The principal business of the inhabitants is brewing beer; but there are above 100 clothiers, and in the neighbouring villages above 1000 weavers. Its merchants trade with those of Prague and Leipsic, and extend their commerce as far as Holland. The cathedral of Rittaw has three organs and two high steeples. Near it is a college, where the languages, drawing, and other arts, are taught gratis. Joining to the cloisters is a library, the finest in all Lusatia; and at a small distance from it, is the orphan-house. Zittaw being occupied by the Prussians in 1757, was taken by the Austrians, who pillaged the town, and almost entirely destroyed it, notwithstanding the inhabitants were the subjects of their ally, the Elector of Saxony. It is seated on the Neisse, 17 miles S.W. of Gorlitz, and 25 S.E. of Dresden. Long. 15. 5. E. Lat. 50. 59. N.

ZNAIM, a strong town of Germany, in Moravia, with a castle, in which are a great many Pagan antiquities. It is seated on the river Teya, 24 miles S.W. of Brinn, and 32 N. of Vienna. Long. 16. 40. E. Lat. 48. 38. N.

ZOARA, a fortified town on the coast of Barbary, with a good harbour, 60 miles W. of Tripoli. Long 11. 55. E. Lat. 32. 45. N.

ZOBLITZ, a town of Upper Saxony, in the territory of Erzgeburg. The inhabitants subsist principally by working the serpent stone, which is found in the neighbourhood, into pitchers, bowls, tea and coffee cups, &c. A red species of this stone is also found here, which is considered as the finest, and therefore claimed by the sovereign as his property. It is 17 miles S. of Freyburg.

ZOBTEN, a town of Silesia, in the principality of Schweidnitz, nine miles E.N.E. of Schweidnitz.

ZOFFINGEN, a town of Switzerland, in the canton of Bern, with an elegant church and a public library, containing several curious manuscripts. The inhabitants, about 2000, have their own magistrates, and what is peculiar, their own courts of justice, both civil and criminal, which decide in the last resort, without an appeal to Bern. It is seated near a large forest, which contains the best pine-trees in all Switzerland, three miles from Arburg. Long. 7. 6. E. Lat. 47. 3. N.

ZOLNOCK, a town in Upper Hungary, capital of a county of the same name. It was taken by the Turks in 1554, and retaken in 1685. It is seated on the Teysse, where the Sagelia falls into it, 62 miles N.E. of Colocza, and 62 E. of Buda. Long. 20. 50. E. Lat. 47. 10. N.

ZONS, a town of Germany, in the archbishopric of Cologne, with a castle, 13 miles N.N.W. of Cologne. Long. 6. 55. E. Lat. 51. 8. N.

ZORNDORF, a village in Germany, in the new marche of Brandenburg, one mile north of Custrin. Here in 1758 the King of Prussia, after a dreadful conflict, totally defeated the Russians.

ZOUT PAN, a curious salt lake in the country of the Hottentots, a few miles north of Point Padron. It is in a plain, much above the level of the sea, and three miles in circumference. At some seasons it is formed into an entire mass of fine white salt.

ZUCKMANDEL, a town of Silesia, in the principality of Neisse, with a bishop's see, 10 miles S. of Neisse.

ZUEELA, a town of the kingdom of Fezzan, situate in a district of remarkable fertility, in which the remnants of ancient buildings, the number and size of the cisterns, and the construction of the vaulted caves, intended perhaps as repositories of corn, exhibit wonderful vestiges of ancient splendour. It is 140 miles E. of Moorzook. Long. 16. 34. E. Lat. 27. 59. N.

ZVENIGOROD, a town of Russia, in the government of Moscow, situate on the Moskva, 28 miles W. of Moscow. Long. 37. 2. E. Lat. 55. 40. N.

ZUG, a town of Switzerland, capital of a canton of the same name, seated on a beautiful lake, in a fertile valley, abounding with corn, pasture, and wood. In 1435, a street which was on the side of the lake was swallowed up. There are several handsome churches, and a good town-house. It is remarkable that Oswald, a saxon king of Northumberland, in the seventh century, is the tutelar saint of this place. Zug is 12 miles N.E. of Lucern, and 42 S.E. of Basil. Long. 8. 16. E. Lat. 47. 10. N.

ZUIDER-ZEE, a great bay of the German Ocean, which extends from south to north in the United Provinces, between Friesland, Overyssel, Guelderland, and Holland.

ZUILLICHAU, a town of Silesia, in the province of Crossen, 16 miles N.E. of Crossen. Long. 16. 12. E. Lat. 52. 12. N.

ZULPHA, a town of Persia, almost close to Ispahan, to which it is a sort of suburb, and separated from it by the river Sanderon. It is peopled by a colony of Armenians, who were brought into Persia by Shah Abbas. It is an archbishop's see, and contains several churches and monasteries.

ZULPICH, or ZULCH, a town of Germany, in the duchy of Juliers, belonging to the archbishop of Cologne. It is seated on the Nassel, 10 miles S. of Juliers, and 10 W. of Bonn. Long. 6. 10. E. Lat. 50. 46. N.

ZURITA, a town of Spain, in Old Castile, with a castle, seated on the Tajo, very near Toledo. Long. 3. 17. W. Lat. 39. 50. N.

ZURZACH, a town of Switzerland, in the county of Baden, remarkable for two fairs much frequented by the merchants of Germany and France. It is seated on

the Rhine, just above the junction of the Aar with that river.

ZUTZ, a town of Switzerland, in the country of the Grisons. Though not the largest, it is the principal of the district of Upper Engadina, because it contains the criminal court of justice.

ZUYST, a village of the United Provinces, five miles from Utrecht. It abounds in plantations and shady walks, and is greatly ornamented by the spacious buildings which Count Zinzendorf appropriated to the fraternity of Hurrenhuters or Moravians. The brethren are employed in various kinds of manufacture; and as many of them have been either educated in England, or have worked there, their workmanship far exceeds that of any other part of Holland; but the articles are proportionably dearer. Zuyst is much frequented, in the summer months, by a substantial class of Dutch merchants (particularly from Amsterdam) who have no country seats of their own.

ZWETL, a town of the archduchy of Austria, at the confluence of the Zwetl and Kamp, 26 miles W.N.W. of Krems, and 56 W.N.W. of Vienna. Long. 15. 2. E. Lat. 48. 30. N.

ZWICKAU, a town of Upper Saxony, in Misnia, formerly imperial, but now subject to the Elector of Saxony. The place where the inhabitants are buried is in Voigtland; and therefore it is commonly said, that they are Misnians while alive, but Voigtlanders after they are dead. Zwickau is seated on the Muldaw, 15 miles S. of Altenburg, and 20 N.E. of Plawen. Long. 12. 26. E. Lat. 50. 45. N.

ZWINENGBERG, a town of Germany, in the landgravate of Hesse Darmstadt, eight miles S. of Darmstadt, and 12 N. of Worms.

ZWITTAU, a town of Moravia, in the circle of Olmutz, 30 miles N.W. of Olmutz, and 84 E. of Prague.

ZWOLL, a town of the United Provinces, in Overyssel, and in the district of Zailant. It is defended by some fortifications, and the canal, which begins near this place, and extends to the river Yssel, is defended by several forts. Near it is the mountain of St. Agnes, where there was formerly an Augustin convent, in which Thomas Kempis lived 71 years, and died in 1471. It was formerly an imperial and hanseatic town, and is seated on an eminence on the rivers Aa and Yssel, five miles S. of Hasselt, and eight S.E. of Campen. Long. 6. 10. E. Lat. 52. 33. N.

ZWONIGRAD, a town of Imperial Dalmatia, capital of a district. It is 36 miles S. of Bihacs, and 60 S.E. of Segna. Long. 14. 40. N. Lat. 44. 42. N.

ZWORNICK, a town of Bosnia, 60 miles N. of Seraio, and 68 S.W. of Belgrade. Long. 18. 45. N. Lat. 44. 24. N.

ZYGETH, a strong town of Lower Hungary, capital of a county of the same name, with a citadel. It was besieged in 1566, by Solyman II. emperor of the Turks, and taken three days after his death; but was afterwards retaken by the Austrians. It is seated in a morass, made by the river Alma, 50 miles N.W. of Esseck. Long. 18. 58. F. Lat. 46. 17. N.

ZYTOMIERZ, a town of Poland, in Volhinia, seated on the Ciecirief, 70 miles W. of Kiof, and 120 E. of Lucko. Long. 29. 22. E. Lat. 50. 35. N.
